You have to understand, we were more scared after the storm stopped than before. Before then, we had a purely natural fear, the fear that we could quite possibly die. That was fear enough — I don't mean to downplay it — but afterwards we had a purely supernatural fear, the fear that stemmed from watching a ?man? issue commands to inanimate nature and be immediately obeyed. Vulgar and base fears are about what harm can be done. There is a deeper fear that is a kind of awe, the kind of fear we sometimes experience in diminished form when we enter the presence of someone we respect. And at that point we were absolutely terrified. I don't think we would have been any less scared had he already told us that he was God the Son, clothed in flesh just like you or me; at that point, it was as if a veil was lifted, and we got a tiny glimpse into the glory, the splendor, the light that were hidden in this friend who we ate with, who we talked with, and who could pin any two of us in wrestling. Tiny glimpse as it was, it seared our eyes; in retrospect, I'm surprised nobody fainted.

After Nathaniel let us have a couple of minutes to watch the storm dissipate and let us become properly terrified, he did one of the strangest things you could think of. He rebuked us for our lack of faith. At the time, I just sat there, stunned (so did everyone else), but afterwards, I began to have a glimpse into who he was, into his world, into the world that he invited me and invites you.

I am a metacultural, which means in part that I am able to

think of my culture, and shift my own position in relation to it and other cultures. One of the things I had been thinking about is the strength of scientism in Western culture as it is now and has been for some time (not all of its history — not by a long shot). Many cultures have been cultures in which people can see ghosts, even if they're not there — they are open to the supernatural; it is real to them. American culture is a culture in which people can't see ghosts, even if they're really there — we are closed to the supernatural; it isn't real to us. Contemporary American culture is the result of monumental efforts to shut out the tiniest glimmer of anything supernatural; this affects not only how people think, but on a more fundamental level what they are and are not able to do. And metacultural awareness, and conscious rejection, of the effects of scientism does not translate into an immediate freedom in one's emotions to believe in miracles.

The sobriety of a recovering alcoholic — hard-earned, the result of swimming upstream — is qualitatively different from the sobriety of someone who has never had a problem with alcohol. For the latter person, sobriety is something that flows easily, something that is almost automatic; for the former, it is something that is difficult, possible only as the result of vigilance. Something of the quality of this difference exists between many cultures of days gone by (and other parts of the world) and our own culture, with regards to belief in the supernatural. There have been places that have breathed the supernatural in ways that are not naturally open to us — and Nathaniel was at least a step beyond that. Sometimes I wondered — still do — at the task before us — as if we were recovering alcoholics, and he brought a bottle of 151, gave us each a shot glass, and said, "You are all going to drink some

amount of this beverage and then stop, and not slip into drunkenness." That's something you do with people who don't have a problem with alcohol. It's not something you do with alcoholics. But then, it was just like Nathaniel to believe that we could do things we never would have been able to do by ourselves. And I trust him enough to believe that there was method in what seemed either madness or else the most profound naïveté: "C'mon. I as God incarnate can easily stop a tornado. Why could you possibly be afraid?" Over time, I have even been able to catch glimpses of the method to this divine madness. Beauty is forged in the eye of the beholder; when someone like that trusts you, he makes you worthy of his trust, even if you are not worthy of such trust to begin with.

Anyways, we got to the camp without (further) event, and went into a room; Nathaniel jumped up into the top bunk of the bed in the corner, and curled up so that he was sitting Indian style with his back in the corner, moving his fingers about as if he were playing a keyboard. (This is one of many facets of his private world that people who met him in public might never guess at, but he let his guard down around people who knew him. I'm not even going to try to document all his eccentricities; suffice it to say that this sort of thing was as natural with him as sitting on a chair.)

After changing my pants, I asked him, "What are you working on?"

He thought for a second, and said, "I'm trying to make a free translation of Bach's Little Fugue in G Minor into English. I think there's more of a connection between the muses than we think, enough so to make translation possible in some cases, if not nearly as easy or universal as translation between natural languages. Have you ever had a basic insight that could have

found expression in different forms? I am not exactly trying to translate the finished product of Bach's fugue, as to express in language what Bach chose to express in music."

I asked, "What do you have so far?"

He played the theme and said, "Not much. I'm still trying to figure out whether to translate it as poetry or logic." He paused, and said, "What's on your mind?"

I said, "I was just thinking about church last Sunday. Most of the time I can ignore bad music, but this time the music was bad enough to be a distraction to worship. Why is it that most of the time-honored tunes we use to worship God were never intended to be sung sober, and most contemporary music does not reach even that standard? I don't want to impose a burden on people of 'You must appreciate highbrow music to worship here,' but it seems that there is already a burden of 'You must endure terrible music to worship here.' I know that good music does not make worship, but it seems to me that bad music can break worship. If that music were translated into words, the result would be poorly written and poorly thought out."

Nathaniel looked at me and said, "Sean, the brokenness of this world makes things goofy. I am setting something in motion that will rock the world. Until my work is consummated, until I have returned in glory, there will always be problems. You can see these things perhaps a little more readily than most people; you suffer from them too. You are right to be grieved; the same things grieve me. But you can still live in a world where worship is diminished, where there are laws punishing beggars for begging.

The just have always walked by faith with a pure heart, regardless of how much vice is in the world around them. And they have never left my Father's care."

It was after that that we had a really good talk, and I viewed

my metaculture differently after that point. I had seen it as a separation between myself and most of mankind; I started to see it as a way of being human, and a part of the catholic plan of salvation, even a part of the tools God was choosing to limit himself to in bringing salvation to the world. And I was able to understand how and why Nathaniel respected the monocultural majority as easily as he did.

In the morning, after a night's dream-thought about metaculture, monoculture, and catholicity, I punched his bunk and said, "Hey, Nathaniel! How many metaculturals does it take to screw in a light bulb?"

He said, "I don't know, Sean. How many?"

I said, "It takes fifteen:

- One to evaluate the meaning of the custom of replacing burnt out light bulbs and think of possible alternatives,
- one to drive off to a store to buy a fluorescent replacement to an incandescent heat bulb, judging the higher price worth the lessened environmental degradation and longer time to replace the bulb with one like it,
- one to read McLuhan and light a small votive candle, preferring the meaning of a candle to that of a light bulb,
- one to go outside under God's light and God's ceiling to see as men have seen for the other two million, four hundred ninety-nine thousand, and nine hundred years of human existence,
- one child to pull up a ladder, unscrew the bulb, and then dissect it to see how it works and whether he can get it working again,
- one tinkerer to assemble a portable light center with ten 120-watt bulbs, wired in parallel, powered by an

- uninterruptable power supply and a backup generator,
- five Society-for-Creative-Anachronism style re-enactor-ish metaculturals to try to use the occasion to grasp problem solving as understood by the monocultural mindset — one of them holding the bulb, and the other four turning the ladder,
- one critic to point out that, of the last two segments, one wastes an excessive amount of money that could be put to better use, and the other is elitist and demeaning, monoculturalism being a legitimate and God-given form of human existence that has merits metaculturals cannot share in,
- one to observe the variety of facets of the process of changing a bulb into a list, to become an immortal e-mail forward among metaculturals,
- one to say, 'This joke is taking way too long and is far too complex,' and change the light bulb, and
- one to stick her tongue out at him and say, 'Spoilsport!'"

Without missing a beat, Nathaniel asked, "How many monoculturals does it take to screw in a light bulb?"

I thought for several minutes, trying to think of a good answer, and said, "I give up. How many?"

"One. You're making things far too complex and missing what's in front of your nose."

The problem with people like Nathaniel is that they're just too smart.

We went to breakfast in the dining hall, and after breakfast Nathaniel went up to speak. He cleared his throat and said, "Good morning. Do we have any feminists here? Good. In what I have to say, I'm going to draw heavily on a concept feminism has

articulated, namely that rape happens and it should be worked against.

"The human psyche exists in such a way that rape is a devastating psychological wound. It's not just like the sting of a scorpion, where you have a terrible pain for part of a day and then life goes on as it was before; it is a crushing blow after which things are not the same. Perhaps with counseling there can be healing, but it's not something that gets all better just because time passes. Rape is worse than any physical pain; it is a different and fundamentally deeper, more traumatic kind of pain, a pain of a different order.

"I don't know of anyone, feminist or not, who believes in rape because he wants to, because he hopes to live in a world where such things exist. Everyone I've talked with would much rather believe that there is nothing so dark. But it does exist, and disbelief won't make it go away. That is why feminists are going to heroic efforts to promote awareness of rape, to tell people to be careful so that at least some rapes can be prevented.

"I am here tonight to warn you about a place, which I will call Rape because I know of no more potent image to name it. In fact, it is worse than rape, beyond even how rape is worse than a sting. I have given up much, more than you can imagine, to come here, and I will endure much, more than you can imagine, to finish my work, for one reason: to save you all from Rape. If you believed as I believe, you would crawl across America on broken glass to save people.

"You were created spotless, without flaw, and then you wounded yourselves and began to die. It is a fatal wound, one that causes your bodies to lose their animation after seventy years or so, and one that has far worse effects than the destruction of your bodies. Your consciousness will not end when

you die; it will rot in a fashion that is beyond death, beyond rape, and it will rot forever. You are all headed for Rape, every one of you, unless you believe in me.

"There is much more I have to tell you, much more that I would like to tell you, grander things about a place of light and love. But that comes only after passing through this doorway.

There is a place called Rape, and it is real, and it is more wretched than any vision of torment you can imagine, and I have come to save you from it. Follow me if you want to live."

There was a fairly long and stunned silence after that point; all of the feminists were enraged that a man would take the concept of rape which belonged to feminism and trivialize it like that. All but one. Cassandra neither regarded the concept of rape as belonging to feminism in the sense of an exclusively owned property that others dare not tread on, nor regarded Nathaniel's speech as trivializing rape. At all. This earned censure from the other feminists. She began to follow Nathaniel after that point; she didn't quite believe his conclusions yet, but she had real insight into what would prompt a man to dare to say something like that.

As I reflect back, I can see how someone like Cassandra could live a very lonely life.

That night, Cassandra asked Nathaniel, "What is your favorite movie?"

Nathaniel thought for a second and said, "I don't really have a favorite movie, but I was just thinking for a second about a movie idea that nobody has produced."

Cassandra asked, "What's that?"

Nathaniel said, "Opening scene, there is a prisoner shackled inside a dungeon cell, with armed guards posted around. Then it shows the hero and his assistants, armed with M-16 assault

rities and one silenced sniper rifle. They sneak up to the complex, the sniper neutralizing three watchmen along the way.

One of the men knocks over a glass bottle, and chaos breaks loose when someone hears them and sounds the alarm. There is a big firefight, villainous henchmen dropping like flies. The hero releases the prisoner, and radios for a helicopter to come and pick them up.

"As the last of the hero's friends jump on board the helicopter, one last henchman comes running out, firing a shotgun at the helicopter. The hero takes a .45 caliber handgun, and blasts away his knee.

"The rest of the movie slows down from the action-adventure pace so far, and follows the henchman. For the remaining hour and a half, the movie explores exactly what that one gunshot means to him for the remaining forty years of his life."

Cassandra stood silent for a moment. I could see in her eyes that she was seeing the movie. Nobody said anything for a while; then Nathaniel said, "I want to talk with you more. I need some time by myself now, and then we can really talk."

Nathaniel would depart from us, heading off where nobody could find him, to pray and be with God. This time it was over a month before he returned, and when he did, he looked like a skeleton with skin on — but he had this glow. He was very quiet, and it was a few days before he talked with us about what had happened.

He walked into the wilderness, until he came to a place under some evergreens, by a lake, and by a large stone. He slept on the stone at night, sitting and standing and wandering around in the forest during the day, and praying all the while. He had a sense that something was going to happen — something big, something that would take all of his strengths.

At the end of that time, he was standing and facing God.

AT THE END OF THAT TIME, he was starving, and (on a TITTY degree day) hypothermic. He sat there, hungry, shivering, when the Slanderer appeared before him and said, "If you are God and not just a man, strengthen your body so that it will never be touched by hunger or cold, and then you will be freed from physical distractions to pursue your ministry."

Nathaniel said, "I have come as a real man, with real flesh that feels real pain. My ministry is not furthered by selling it out. I would rather die as a real man than have a long ministry by having an inconsistent make-believe body that only affects me so far as is convenient."

The Slanderer said, "You know, that movie idea of yours was something deep. How would you like to be able to make as many movies as you want, to have whatever influence over television and radio, newspapers, magazines, books and internet you care to have? How would you like — no strings attached — to have as much media influence as you want?"

Nathaniel said, "If my mission could have been accomplished by blasting pictures on the sky, I would have done that. That isn't the type of influence I want. I want a real, personal influence where I teach people face to face and touch them. I want to give my friends hugs and kisses. I want something your media can never give."

The Slanderer said, "My, you are picky about my gifts. Here's a suggestion that should interest you. You are coming to offer a salvation, but a salvation that people can only have if they choose it — else they will suffer a torment beyond rape. Why not make everybody accept your gift?"

Nathaniel glared at the Slanderer and said, "Never! I have come to call brothers and sisters, not make computers. My world can be broken as it is only because my Father and I would rather see it broken than break our creature's free will. The mother

see it broken than break our creatures' tree will. The metaphor of Rape is inaccurate in this, that it describes coercion from outside. The Place of Torment is self-chosen, and its doors are bolted and barred from the inside. Rape stands as the final testament to human free will, that my Father would rather see his creatures in everlasting torment than force them into Paradise. Get away from me!"

When Nathaniel said this, the Slanderer left him and angels attended him.

The next few days on the road were interesting. Several of the students at the camp went and followed us. We were on the road to a campustown, and I was beginning to perceive something different about him, something different in his awareness. He was putting weight back on, and there was something new in his eyes.

We arrived at a college campus; we were walking across the quad, and a young woman came up to us and said, "Help me! I am terribly sick, and neither the doctors nor Wicca have been able to make me better. I don't know how much longer —"

There are times when you want to be someplace else, anywhere but where you are now. This was one of those times. The woman became very pale, and lost consciousness; Nathaniel caught her and lay her down on the ground. Then her body became stiff, and from her still, unmoving lips came an ugly, raspy, man's voice, cursing and blaspheming God. Nathaniel alone was not afraid, but his face bore infinite gravity. He looked, and said, "What is your name?"

The demon said, "Our name in English is Existential Angst.

Our name in our own language is —"

"Stop!" Nathaniel said. "I know that name, and I know that language, and you are not to utter either of them here."

"Our name is Existential Angst," the demon continued, "and

Our name is Existential Angst, the demon continued, and she is ours, all ours, and so is this age."

"She is not yours any more, nor is this age. I have come to set the captives free. Come out of her!"

The voice said nothing more, but there was an unholy presence so powerful it could be felt, and a stench like the stench of rotten eggs, and then they left.

The woman opened her eyes, slowly, as if awakening for the first time, and then looked at Nathaniel. She didn't say anything, just looked, her eyes searching, filled with wonder. Finally, when she had seen what she was looking for, she said, "Thank you."

Nathaniel didn't reply. He didn't need to.

By this time, a crowd had gathered, and Nathaniel told Duncan to get a blanket from the van and buy her some bread and some Sprite. Then he looked around — the crowd was very quiet, with everybody looking at him — and Nathaniel stood up, and said, "You can plainly see that I have given something to this woman. What is no less true is that I have something to give each one of you, and you need it.

"Techies sometimes talk about a group of people they call 12:00 flashers. They call them 12:00 flashers, because their houses are filled with appliances with a flashing 12:00. What they mean by the term '12:00 flasher' is something deeper than just 'someone whose appliance clocks happen not to be set'.

"What they mean by '12:00 flasher' is someone who wants the benefits of technology, but is not willing to try to understand how technology works or how to use it. Their appliances flash 12:00 because they will not in a million years spend five minutes experimenting with the buttons or read the manual to see how to set a clock. This mindset affects every bit of technology they own, and invariably something will break — quite possibly because it was misused — and then they will

quite possibly because it was misused — and then they will invariably wait until the last minute, when there is an emergency, and ask a techie to "just tell me how to fix it." The 12:00 flasher is involved in a desperate attempt to cut a steak with a screwdriver, and when a techie begins to try to explain why he needs to set down the screwdriver and get a knife, the 12:00 flasher tensely replies, 'I don't have time to put down this screwdriver and go get a knife! I just need you to tell me how to cut this steak!'

"Friends, I am here to tell you that the 12:00 flasher phenomenon doesn't just exist in technology. It exists in human relationships. And it exists in spirituality.

"It's possible to get by as a 12:00 flasher. Nobody died because his living room was perpetually dark because he wouldn't sit down and figure out how to unscrew the top of his lamp and replace the bulb. And, when technological disasters become unlivable, it's usually possible to grab a techie, to the rescue. Never mind what it does to their blood pressure, techies usually can reduce an unlivable disaster to a tolerable disaster. But that isn't how we were meant to live, especially not in relationship with God.

"What is a spiritual 12:00 flasher like? Well, they take many forms, but one thing they all have in common is that, consciously or unconsciously, the question they ask of religion is 'What is the least I can do and still get by?' That question is the wrong question. It's like asking what the least a person can eat and still not starve. Never mind the fact that the experiment is quite dangerous; God did not make or want us to live just barely eating enough not to starve. He made us for rich, abundant live, far from starvation.

"Don't be a 12:00 flasher. Don't ask, 'What is the least I can do and still get by?' Don't run to God in times of crisis, and then

do and still get by? Don't run to God in times of crisis, and then when the crisis is over, forget him and go back to life without him. If you have a crisis, by all means, run to God for help. He welcomes that, and sometimes he uses crises to draw people to him as never before. But don't wait for a crisis to seek him out.

Seek him out, prepare your spirit, work at a state of right relations with other people, while the going is easy. Don't wait until you're on a sinking boat to learn how to swim. Learn how to swim when you have free time and a swimming instructor.

"I was at the deathbed of an old man, a quiet member of the community who knew everybody by name, who always had time to listen to little children's tales and who would tell his own stories to anybody who wanted to hear. When he was on his deathbed, someone asked him if he would like to hear some Bible verses. He smiled, and to everyone's surprise, said, 'No.' Someone asked him, 'Why not?' He smiled again and said, 'I thatched my hut when the weather was warm.'

"Dear friends, thatch your hut when the weather is warm. You might not be able when there is storm or cold. What is there to do? I wish to mention two things; they are a lifetime's learning, and have been for me. Those two things are love and prayer.

"God loves you, and you are to love him with your whole being. You are to love everybody. Even your enemies? Especially your enemies.

"Physicists are in search of a grand unified theory, where all of the laws covering all physical phenomena boil down to a few equations that can be written on one side of a sheet of paper. In spirituality, religion, and morality, love is that grand unified theory. There are great teachings — of Creation, of repentance, of worship, of Heaven, of grace, of moral law — and for each of them, if you cut into them, cut below the surface, the lifeblood

that they bleed, the hidden lifeblood that keeps them alive, is love.

"One of the most important expressions of love, one of the most important incubators for love to grow in, is prayer. The Slanderer laughs at our plans, and scoffs at our power, but trembles at our prayers. Wrap yourselves in a cloak of prayer; pray for other people even as you look at them in passing; pray continually. Prayer is a place where God transforms us, and where God and we working together transform the world. It is a time to step out of time and into eternity, and it refreshes and renews us. Pray incessantly, until you have callouses on your knees from unanswered prayers. You cannot change the world, at least not for the better, on your own power. Prayer is how God makes you into his children and prepares you for results, and then (on his own time — not yours) makes a lasting mark.

"Follow me, each of you, and I will draw you into love and prayer, into wisdom and truth, into live everlasting."

The people were impressed with his teaching. He spoke as if he knew the truth, not as if he were just sharing his own perspective, his own personal opinion.

It was perhaps because of this that, when we sat down at dinner, a young man approached him and said, "You spoke unlike anyone else I've heard. Do you claim to know absolute truth?"

Nathaniel said, "Yes."

The man said, "But we cannot know absolute truth, only relative perspectives. The quest for absolute truth has failed; all of the major thinkers of our era have renounced it. Who do you think you are to know absolute truth, God? Don't try the old 'You cannot make absolute statements against absolute truth' card; we have perspectives we expect to be binding without being absolute."

Nathaniel said, "As it turns out, I am God, but that is rather beside the point at the moment. You say that we cannot know absolute truth. I respond with a dilemma: are you making that claim as absolutely true, or as your own personal opinion? If you are making that claim as absolute truth, then it is self-contradictory, and therefore false, and therefore something I do not need to subscribe to; if you are making that claim as a mere statement of personal opinion, like your preference in ice cream flavors, it is therefore something I do not need to subscribe to. Before you respond, let me add nuance to this dilemma. I know that you would not say that your claim is absolutely true or a personal attribute, but somewhere in between. This dilemma gives you the freedom to choose a position somewhere between the two poles of absolute truth and personal opinion. Most dilemmas have a forced choice, one or the other. Not this one. On this dilemma, you may fall at a mixture of the two horns, that is, you are making a statement that is held to be 80% absolutely true, and 20% your own personal perspective.

In which case, it is 80% incoherent, and 20% a personal attribute I can safely ignore. Or is it 30% absolutely true, and 70% your own personal perspective? Then it is only 30% incoherent, but it is 70% a personal attribute I can safely ignore. This dilemma offers you infinite flexibility in choosing how it affects you; the end result, however, is that your perspective is 100% a perspective I am free to ignore."

The young man had nothing to say to this.

There were a number of people who were beginning to follow him at that point, and I began to see a strand running through his teaching. Perhaps the best way to begin with it is by voicing the intuitions it runs counter to.

An obvious reading of what he says is that mankind has

earned everlasting torment in Rape, and he comes through and offers a way of escape — believing in him, and accepting a sacrifice that I didn't understand at the time — and it is worth any amount of earthly effort and sacrifice to save one soul from Rape. So there are these people who have the good fortune to know about the escape, and they should devote their lives to making a difference, to saving as many people as they can.

That is true, and it is deeply true, and there is an opposite insight that is a deeper truth, one that is everlasting.

That insight says that the Father is omnipotent and is drawing people to himself, drawing people to share in the glory that God had before the worlds began, not only in a Paradise after death but here and now, in this world. In following Nathaniel, the escape from Rape is almost incidental in importance to communion with God, and our time on earth is as (Nathaniel was very emphatic about this) apprentice gods, whose time on earth is a time of preparation for the time when we will reign in Paradise.

The primacy of the second, mystical interpretation over the first, pragmatic interpretation is something Nathaniel was very emphatic about, and that has changed my whole way of viewing things. I didn't understand it fully until a moment came when I slapped my head: "How could I not have seen this before?" I had been listening to the stories of a number of incredibly devout and incredibly dedicated people who were operating in the first mode, who were trying to make the biggest difference, and fell flat on their faces hitting futile barrier after futile barrier. It made no sense. Then I heard stories of people — Wesley, for one — who were like this, and fell on their knees and cried, feeling like utter failures, and in a beggarly, ragged, ragamuffin way, became mystics, sought communion with God. And God gave them

that mysticism. Then, sometimes, if he chose, on his time, in his ways, he took some of them and gave them power within the context of that mysticism, and those people shook the world with a force unlike anything they could have ever imagined.

What I came to realize through this is that God wants communion with us, and he wants it so badly that he would rather see a devout, dedicated son working in utter futility, with no results for his toils and watching souls perish, than let some of his children act as mere tools without being drawn first and foremost into communion with him. Drawing people into his presence, not just in the future but here and now, is that important to him. God does not want tools. All the angels in a thousand galaxies are his, and if he needed help, he would not tell us. He wants sons and daughters, and he will have us be that and nothing less. My head still spins a little when I think of this.

This account is written so that you may know Nathaniel and the abundant life that he brings, that you may be drawn into communion with God, not just in the world to come but in this world. Therefore I ask you, when you reach the end of this paragraph, to close your eyes, thank God for ten things you're thankful for, and spend five minutes contemplating God's glory.

Do it now.

Did you do it? If you did, wasn't that wonderful? Wasn't that the best part of the text? Didn't you want to linger? If you didn't — you're not going to get to Paradise if you won't let Paradise interrupt your reading of a text. This text exists to draw you into communion with God, and if you put the flow of reading ahead of that communion, you still have something to learn.

I've been thinking about how to explain what I want to say next, particularly to most Americans... perhaps the best way is to

say that, to the American mind, 'nice' and 'good' mean almost exactly the same thing, and this is a perspective which Nathaniel did not share. Nor do I. 'Nice' is what is left of 'good' after 'good' has been flattened by a steamroller.

Nathaniel was, at times, very nice. He was someone who would look you in the eye and ask, "How are you?" — slowly, because he wanted to hear the answer. He wouldn't just do this with close friends — he was just as ready with strangers whom he could see needed it. But there was something about him that most definitely would not be cut down to fit into being nice. He met with members of the religious community, but his interactions could rarely be described as diplomatic. He lambasted Evangelicals and Catholics on equal terms. He didn't attack mainline Protestants, though. Never. Most of the time, when I mentioned them, he just shook his head and wept.

I'm not going to give a full list of the groups that Saint Nasty offended, primarily because my hard drive only has about nine gigabytes of free space. I do wish, however, to give an illustrative list. There are many more.

- The gay community. After a thousand voices had droned on about how AIDS patients are the outcast lepers of our society, Nathaniel said, "The status of AIDS patients in our society is not that of pariahs, but that of sacred cows." He challenged head-on the status of people who die from sexually transmitted diseases as martyrs, and furthermore laid bare how the movement lumps together acceptance and care of homosexuals, acceptance of them as humans, with a political agenda and lifestyle which kept them dead and miserable in their sins. "Come to me," he said, "and I will give you freedom and vitality such as your movement would never

dream and offer." He loved gays too much not to strike down a whitewashed wall.

- Business. Nathaniel asked, "Was economic wealth created for man, or man for economic wealth?" He called advertising a modern fusion of manipulation, propaganda, and porn, and took it to be the emblem of a mindset in which a business exists, not to serve customers, but to manipulate them into whatever will bring the most money into corporate coffers.
- Consumers. He accused them of entering into a sorcerer's bargain to have wealth in our technology, being concerned with little as long as they had personal peace and affluence, and misusing wealth. He developed an argument, which I am not going to reproduce here, that both individual citizens and communities should take a good look at the Amish, not because they have a perfect solution, but because they are the one major group in America that does not automatically use every technology and service that comes out and that they can afford.
- The tobacco industry. To quote him: "You do something that kills people, for the mere purpose of obtaining profit. You are the largest assassins' guild in history."
- Feminists. His interactions with feminists were a little more complex than with some other groups, perhaps because of how deeply feminism has impacted not just a self-identified minority but the whole fabric of American culture, and because of how deeply he shared the concern of women's status. Some of his remarks were flat-out incendiary. He said that, if feminism has to identify an enemy, a feminism that identified men as the enemy could be tolerable, but a feminism that identified non-feminist women as the enemy was inexcusable. "Any feminism worthy of the name,"

Nathaniel said, "must make the sisterhood of all women a central thesis." I think I saw him weeping over feminism more than any other group: when we talked, I began to see them through his eyes: not Rush Limbaugh-style feminazis, but lost sheep without a shepherd, women struggling to work against a curse and doomed to futility and backfire from the start, because they did not understand the nature of the curse, and so were like a doctor, giving higher and higher doses of medicine for the wrong condition, and wondering why the patient looked worse and worse. He tried to explain the remedy to that curse, and tried to explain it to a great many feminists — a few of them believed him, but the vast majority were offended.

- Academia. The most striking comment I remember him making was, "Hitler now stands as our culture's single most essential symbol of evil, not because he slaughtered six million Jews, but because he does not have any advocates left in academia. There is another ideology more vile than National Socialism, an ideology that exceeds the Nazi body count by a factor of ten and has made blood flow like a river in every single country where it has come into power. Its name is Marxism, and it is considered perfectly acceptable to be a Marxist in academia, a breeding ground of every heresy and intellectual filth our society has to offer."
- Environmentalists. To them, he said, "You have defiled a concern for God's earth not only with nature worship but also with racist, eugenic Malthusianism."
- Media, especially television. Most of what he said there were footnotes to Postman, Mander, and Muggeridge, and the rest wasn't that important.
- Sensitivity police. Nathaniel criticized them for "using

gasoline to extinguish a fire."

- The pro-choice forces. Nathaniel criticized them for making a convenient redefinition of the boundaries of humanity and taking an attitude of "it's not really there if you can close your eyes to it." He said that on any biological perspective even, what grows inside a woman's womb is an organism of the species homo sapiens, and that the question of whether a fetus is human or unwanted tissue is a philosophical question only in the sense that whether a woman is human or just a convenient rape object is a philosophical question — that is, if you deliberately set out to make yourself stupider than you are and tarnish the name of philosophy by making it a smokescreen to hide what is obvious to common sense, then and only then can you satisfy yourself by saying "that is a philosophical question to which my answer is unwanted tissue." Nathaniel had other criticisms — one of them beginning by saying, "A real pro-choice scenario would be an undoubted improvement on the status quo," — but I do not wish to repeat them here.
- The pro-life movement. Nathaniel criticized them "for defending the sanctity of life from conception to natural birth."

Anyone who has not been offended by Nathaniel has failed to understand him.

There are many events which happened which I will not attempt to narrate. Nathaniel was healing people of all kinds of brokenness — physical, mental, emotional, spiritual. He had begun to teach us that he was giving us his authority — even over demons. He was explaining that he would need to die and rise from the dead, although none of us understood — or wanted to

understand — what he was saying. And, through all of that, there were moments, precious, timeless moments, when we could have glimpses of who he was.

To begin explaining one of those moments, let me say that I am not affected by stage magic. It isn't just that I can (sometimes) see how a trick works; the actual illusion is only a tiny part of illusionism. It's indispensable, but it is unbelievably tiny — I know, because I was once an amateur magician, and I disappointed my audiences by performing an uninterrupted display of clever tricks that were nothing more. The real life's blood of a magic show is showmanship, something that is normally invisible: one of the marks of good showmanship is that the audience is oblivious to showmanship and instead wonders how on earth the magician did it. (It is incidentally true that, however much a good magic show makes audiences wonder "How did he do that?", a good magician never tells his audience how it happened.

It's not protection of an initiate brotherhood's closely kept secrets — all such "secrets" are perfectly accessible to someone with a library card and a little spare time, just as the substitution-cipher-weak verification algorithm used for credit card numbers is available to anyone who can go to a search engine and type "mod10" in the query box — but basic entertainment principle: people who find out how magic tricks work are invariably disappointed. That is why I never tell other people how tricks at a magic show work, even when I do know; figuring out one or two minor tricks makes someone feel smug and clever, but knowing how the big trick worked simply ruins it.)

I have spoken as if showmanship's illusion is one-sided, as if it's all up to the magician. And it is, in a sense. But in another sense, it isn't. If I had been better as a stage magician and gotten farther, I would have experienced firsthand the

difference between an audience that is excited, eager to see what is going on, or in high spirits, and one that is hostile, cranky with low blood sugar, or doesn't really want to be there. The illusion is not one-sided; it is the creation of both parties, performer and audience, the result of their cooperation — only the performer's cooperation is conscious and intentional, and the audience's cooperation is unconscious and unwitting.

There is something that happened with me, something that has broken the illusion by breaking my end of the creation — conscious uncooperation instead of unconscious cooperation — something that was closely related to my learning what is actually going on in television, and why I don't watch it. Now magic shows don't work on me. It's not that the illusion is broken because I can see how tricks work; rather, I see how tricks work because the illusion is broken. In Madeleine L'Engle's *A Wrinkle in Time*, on the nightmarish planet Camazotz, the man with red eyes gives Meg, Calvin, and Charles Wallace food. To Meg and Calvin it tastes like a wonderful turkey dinner. To Charles Wallace it tastes like wet sand. The man with red eyes can get into the chinks of Meg's mind, and Calvin's, enough to make an illusion mask how ghastly the food is. With Charles Wallace it doesn't work; the illusion doesn't work for him. I have been told I am very like Charles Wallace. I count it worthwhile that I am no longer automatically pulled by showmanship, particularly in an age where showmanship has taken a bloated role far beyond what any sane society would allow it. I count it my loss that I cannot now cooperate with the illusion even if I want to. (Nathaniel understands me on this score, and indeed has experienced the same awakening, but he can cooperate with the illusion. He also watches television for a couple of hours a month, only some of the time as a sociologist would.)

For these reasons, I was less than enthusiastic when Nathaniel showed me a flyer announcing a magic show for "children of all ages" in the bandstand at the park. I told him, "You go; I'll stay home and pray." He said, "Trust me."

We went about half an hour early. Parents were sitting in the bleachers, and kids were running about on the stage. We sat and talked for a few minutes, and then Nathaniel poked a little girl who was running by. She giggled, and he chased her on to the stage, and then started playing with another child, and another. He began to tell stories, ask questions, talk with them, hold them.

It seemed only a moment that the sky turned lavender and fireflies danced, and I looked down at my watch and realized that over an hour had passed. The magician never showed up, but not one of the children went home disappointed.

Whatever Nathaniel had, it was better than showmanship, better than illusion. He had a pull, a charisma, that drew people to him — something that arose out of the love that flowed in his heart. I am no longer drawn by television because television is fake, because television does a spectacular job of covering how empty its center was. Nathaniel wasn't like that. His charisma was an overflow of how full his center was. The meaning of this moment grew on me when I understood what moment it was, what time it was, that he had chosen to spend simply playing with children.

As the sky began to grow dark and mothers called their children home, I could begin to see — why hadn't I noticed it before? Nathaniel was afraid, and emotions of — what? expectation? imminence? trepidation? — were emotions that I could begin to feel as well. There was a sense that something important would happen. He purchased a loaf of bread and a

DOTTIE OT wine, and called all OT us TO come INTO a deserted IOTT. We talked — really talked, about love, about too many things to mention, and then as there was a height of tension, he took the bread, and said, "Take this, and eat it. This is my body, which is broken for you. Do this in memory of me." Then he took the cup of wine, and said, "Take this, all of you, and drink. This is the new accord in my blood, poured out for the forgiveness of sins." Then he passed them around.

I talked with the others, years later; I was the only one who realized the significance of what was going on. There are still many people who have difficulty believing it, which is fine; there are a lot of things about Nathaniel that take a lot of believing.

When I ate his body, I was taking, was drawn into, his community; when I drank his blood, I drank the divine life. The latter especially was precious to me in a way I cannot describe; I am a mystic, and there is something about the blood, hidden in the flesh, that... it is best not to talk too much about these things. I think some of them are things that it takes a child's heart to understand.

He asked us to be with him, not exactly to pray with him (although I am sure he also wanted that), but just to have the human presence of someone who loved him, perhaps just to have any human presence — and all I know I could think about was how long a day it had been, and how much I needed to get to sleep. We were awoken by a knock on the door, and Nathaniel looked at me — ooh! That look broke my heart. He did not say anything. He did not need to.

Nathaniel was shaking when he walked out in front of a veritable mob, and asked, "Who do you want?" Someone in the crowd said, "Nathaniel." He said, "I am the person you want. Get away from the building; you want me, not the others."

*I was watching from the window, and I watched in stupor*

I was watching from the window, and I watched in stunned disbelief what the mob began doing to him. Then I climbed down, and ran as if there was no tomorrow. I had no shoes on, only socks, and when I collapsed, in exhaustion, my feet were bleeding.

Somehow (providence?) the others managed to find me, and we were huddling in a room, the doors locked, bolted, and barred with furniture, all shades drawn, glued to the TV, demoralized, defeated, in abject bewilderment. I had thrown up all I could, and felt sometimes dizzy, sometimes hot, sometimes nauseated, sometimes all three. I was leaning against the window, desperately praying that my head would stop spinning, and that if there were any way possible for Nathaniel to have survived that assault —

Someone knocked twice on the window, right next to my head, and my head cleared.

I was struck with terror, pulled back from the window, and prayed aloud that whoever it is would go away.

I heard Cassandra's voice loudly outside, saying, "It's me, Cassandra! I've seen Nathaniel! He's alive!"

I knew her voice, and my terror turned to rage, turned to what the damned call 'righteous indignation'. I said, "Of all the sick jokes, of all the unholy blows that the lowest schoolyard bully would not dream of stooping to," and poured out a stream of invective unlike any I have uttered before or since. I did not stop, did not even falter, when I heard her crying, nor when her tears turned to wailing. At the climax I said, "Unless Nathaniel stands before me, unless I feel the bones that have been crushed, I will never believe your sick joke."

I felt a tap on my shoulder, and when I turned around, Nathaniel looked into my eyes, gazing with both love and sorrow, and said, "Seen Tom here before you. Tough everyone of my

and said, "Sean, I am here before you. Touch every one of my wounds." Then he touched me, and healed me of the sickness I had been feeling.

What could I do? I fell to the ground, and wept, and when I could stand I immediately left to go out and beg Cassandra's forgiveness. She forgave me — instantly. She gave me a hug, and said, "I had difficulty believing it, too. You are forgiven." I can not tell the depths of love that are in that woman's heart. Then I returned, with Cassandra, and Nathaniel looked at me and said, "Sean, you are a metacultural, but you are also an American. What is real to you is largely what you have seen and what The Skeptical Enquirer says is real. You believe after having seen. God's blessing is on those who can rise above your culture's sin and believe these miracles without seeing."

Nathaniel said and did many other things, far too numerous for me to write down. I have not attempted a complete account, nor a representative account, nor even to cover all the bases.

(Other writers have already done the last of those three.)

Rather, I have written to show you the fresh power of Nathaniel's story, a story that is and will always be here and now. Do you understand him better?

# The Mindstorm

**The Alumnus:** Hello. I was in town, and I wanted to stop in for a visit.

**The Visionary:** How good to see you! What have you been up to? We're all interested in hearing what our alumni are doing.

**The Alumnus:** Well, that would take a bit of explaining. I had a good experience with college.

**The Visionary:** That's lovely to hear.

**The Alumnus:** Yes, and I know that some alumni from our [Illinois Mathematics and Science Academy](#), also known as [IMSA](#), didn't. I got through college the same way I got through gradeschool, playing by the law of the jungle. I stopped and thought about how to approach college. I realized soon that higher numbered courses were easier than lower numbered courses, and how to find professors I could work with. And I understand why one alumna said, "IMSA didn't prepare me for college. It prepared me for graduate school." College will not automatically be a good experience for IMSA students, but there are choices the college won't advertise but could be made.

**The Visionary:** I wish you could speak to some of our

students.

**The Alumnus:** I'd like the opportunity. There are a lot of things to say—that there's a normal scale of elementary-junior high-high school-undergraduate-graduate school, and IMSA doesn't fit on it. It has high school aged students, but it's not a modified high school; it's close in ways to graduate school, but there's something about it that is missed if you put it at any one point on the scale. And this has the result that IMSA students need to realize that when they enter college, they are not going from high school to the next step after high school; they're going from IMSA to something that was not meant to follow IMSA. But something that has opportunities if they knock on back doors and take advantage of some things the university doesn't know they need.

**The Visionary:** If you're serious about talking to our students, I mean talking with our students, I can introduce you to the appropriate people.

**The Alumnus:** Thank you. I was mentioning this to lead up to a gem of a class I took, one on what you need to know to make user-friendly computer programs, i.e. usability. There was something that set me thinking, nettled me, when I was reading through some of the jargon file's Hell desk slang, um, I mean help desk slang. The term "pilot error" meant much the same thing as "ID ten T error".

**The Visionary:** I know what "pilot error" means in some contexts, but what does "ID ten T error" mean?

**The Alumnus:** It's easiest to see if you write it out.

**The Visionary** [goes to a markerboard and writes, "I D 1 0

T" ]: Um... I assume there's a reason you started to say, "Hell desk." Aren't they just blowing off steam?

**The Alumnus:** Yes. Unfortunately, one of the ways many help desk employees have blown off steam is to say, "Ok. If you'll hold for a minute, I'm going to transfer you to my supervisor. Would you tell her that you appear to have an 'eye dee ten tee' error?" And they all gloat over what they've gotten the customer to say. No, seriously, you don't need to keep a straight face.

But what really struck me was the entry for PEBKAC, acronym for "Problem Exists Between Keyboard and Chair." There was an example given of, Did you figure out why that guy couldn't print?

Yeah, he kept canceling the print operation before it could finish. PEBKAC.

This was philosophically interesting.

**The Visionary:** How?

**The Alumnus:** In a computer, you get these time wasting messages where a little window pops up and you can't do any useful work until you click on the button. It becomes noise for the sake of noise; like the boy who cried, "Wolf!", we have the computer that cries, "Worth your attention." After a while, the normal thing most people do is click on the button automatically so they can get back to their work. It's a waste of time to try to decipher the cryptic messages.

So when people go to print, another one of these waste-of-time windows pops up, except that this time, when you do the right thing and click on the button and make it go away, your print job fails. And this specific

example is chosen as a paradigm example of PEBKAC.

For a lot of these errors, there is a problem between a keyboard and chair. But the problem isn't between the user's keyboard and chair. The problem is between the programmer's keyboard and chair.

**The Visionary:** Ouch.

**The Alumnus:** That course was what led to what I did for my Ph.D.

**The Visionary:** And that was?

**The Alumnus:** My discipline of record is philosophy of mind/cognitive science.

**The Visionary:** "Discipline of record?" I'm curious to hear you drop the other shoe.

**The Alumnus:** Usability is connected to cognitive science—an amalgam of computer science, psychology, philosophy, neuroscience, linguistics, and other areas, all trying to understand human thought so we can re-implement it on a computer. It's a fascinating area for interdisciplinary study, and usability draws on it, just from a different angle: instead of making computers intelligent, it tries to make computers friendly to people who don't understand how they are built. And a lot of things which are clear as day if you built the system aren't automatically clear to customers. A system which is usable lets the user have an illusory cognitive model of how the system works that is far, far simpler than how a programmer would understand it. And programmers don't consciously believe that customers understand the innards of their system, but there's an assumption that creeps in, an assumption of, "My way of thinking about it is how a person thinks about it."

**The Visionary:** That way of putting it makes the programmers sound ego-centric.

**The Alumnus:** I wouldn't put it in such crude terms as that; they are thinking in a way that is human.

With languages, there is a lot of diversity. Aside from the variety of languages, there's a difference between the U.S., where the majority only speak one language, and Sénégal, where it is common for people to speak five or six languages. There's a difference between Italy, where people speak one national language in a fairly pure form, and India, where English and Hindi are spliced together seamlessly. For that matter, there's the deaf outlet of speaking with your hands instead of your mouth. But with all these differences, language itself is not something which is added to being human. Language is not a custom that cultures may happen to include. There are exceptional cases where people do not learn a language, and these are tragic cases where people are deprived of a human birthright. The specifics of language may vary, but language itself is not adding something to being human. It is something that is basically human. The details and even diversity of languages are details of how language works out.

And a lot of things are like that. Understanding something that you're working on is not something added to being human; it's an interpretation of something basic. How one thinks, about technology and other things, is not something added to being human.

It's something basically human.

One very natural tendency is to think that "I" or "we" or "people like us" are just being human; we just

have what is natural to being human. The "them" group has all sorts of things that are added to being human, but "we" are just being human. So we expect other people to think like us. We assume it so deeply and unconsciously that we are shocked by their perversity when they violate this expectation.

**The Visionary:** Wow. I hadn't thought of it in those terms before. Do you think IMSA provided a safe haven from this kind of lockstep thinking for its students?

**The Alumnus:** I think it provides a safe haven for quite a lot of its students. But getting back to my Ph.D. program—

**The Visionary:** Yes?

**The Alumnus:** So I began, encouraged by some initial successes, to try and make the first artificial mind. For a while I thought I would succeed, after overcoming some obstacles that couldn't have been that bad.

**The Visionary:** What were these obstacles?

**The Alumnus:** Just a special case here and there, an unrepresentative anomaly. But when I worked, I had a sneaking suspicion dawn on me.

Freshman year, I had a college roommate who was brilliant and eccentric. He turned out stunning proofs in math classes. He was also trying to build a perpetual motion machine. He was adjusting this and that; I listened, entranced, when he traced the history of great experiments in physics, and talked about how across the centuries they went from observing obvious behavior to find subtle ways to trick nature into showing you something you weren't supposed to see.

Think of the ingenuity of the Millikan oil drop experiment. And so he went on, trying to adjust this and

that, seeking to get things just right for a perpetual motion machine. There were times when he seemed to almost have it. It seemed there were ten things you needed for a perpetual motion machine, and he had an almost working machine for any nine of them. But that tenth one seemed never to fall into place.

And I had a sneaking suspicion, one that I was going to try awfully hard to ignore, that for a long time I convinced myself I didn't know what I was expecting. But *deja vu* kept creeping in. I had just succeeded with a project that met every clearly defined goal I set for it... but I had just found another way not to make artificial intelligence.

The crusher was when I read von Neumann's 1958 *The Computer and the Brain*. Then I stopped running from *deja vu*. Here was crass confidence that in 1958 we discovered the basis for all human thought, and all human thought is add, subtract, multiply, and divide. Here was an assumption in lieu of argument. And here was the air I breathed as a cognitive science.

**The Visionary:** But I've looked at some reports, and artificial intelligence seems to be just around the corner.

**The Alumnus:** Full artificial intelligence is just around the corner, and it's been just around the corner since at least the fifties—arguably much longer, because for a hundred years before the brain was a computer, it was a telephone exchange. (I think that's why we talk about a person being "wired" a particular way.) The brain is always understood as the state of the art technology we're most proud of.

I hit rock bottom after thinking about how I had convinced myself I was creating a working artificial intelligence by obtaining results and reinterpreting results as success. It's very seductive, and I was thinking about what some skeptics had said about magic.

What emerged was... The effort to make computers think has found ways that the human mind is much more interesting than we thought. And I began to push in a new direction. Instead of trying to understand human intelligence to make computers more intelligent, I began to try to understand human intelligence to make humans more intelligent.

**The Visionary:** What exactly do you mean?

**The Alumnus:** There are a lot of disciplines that teach you how to think. I think scholars in many disciplines see their discipline as the discipline that teaches you how to think, where truly different disciplines are a sort of no-man's land that doesn't qualify as "how to think." But these are a coupled subject matter and how to think about the subject matter. This was, in abstracted, crystalline, and universal form, "How to think." The analogy I used at the time was that it was the elementary school number line (1, 2, 3, ...), abstracted from sets of one physical object, two physical objects, three physical objects...

**The Visionary** [pausing]: It sounds like you're pioneering a new academic discipline. Would you like IMSA to highlight this?

**The Alumnus:** I am working that out. Not exactly whether what I am doing would qualify as an academic discipline—I'm pretty sure of that—but whether going down that

route would be the wisest choice. For now, I'd rather wait.

**The Visionary:** Are you sure you wouldn't want the prestige? Hmm... on second thought, I can see that. What are the scientific underpinnings of your discipline?

**The Alumnus** [pause]: That question is one of the first ones people ask me. It's automatic.

In tandem with what you might call my loss of faith in cognitive science, I began to question the cultural place of science. Including that in a question like this, the nearly immediate question people ask is one that assumes the answers are fed by science. Three of the most difficult mental accomplishments I've made are learning to think like a scientist, crafting this discipline of how to think, and learning to genuinely ask "How else could it be?" when people automatically go charging in with science.

**The Visionary:** But don't you think it's important to understand what's going on in the body?

**The Alumnus:** Both your questions, "What are the scientific underpinnings of your discipline?" and "But don't you think it's important to understand what's going on in the body?" are examples of the tendency I'm talking about. Your latter question assumes that "understanding the body" and "study the science of the body" are interchangeable terms; they often are treated that way in Western culture, but they need not be.

**The Visionary:** But how else could it be?

**The Alumnus:** In journalism and some writing classes, students are taught a technique of cubing, which asks

six questions, one for each side of the cube. The six questions are all "w" words: who, what, when, where, and how.

In most aboriginal cultures, for instance, people ask more than one question, but the big question is, "Why?" The stories provide explanations for why the world is as it is.

In science, the big question is, "How?" Laws and theories provide mechanisms for how things happen. "Why?" isn't just de-emphasized; it's something people learn not to ask, something that is subtly stamped out like much of a child's creativity. Asking "Why?" is a basic error, like asking how much an idea weighs. One philosopher of science I read gave an example of a father asking a teenaged son, "Why is the living room light on?" and getting the answer, "Because the switch is in the 'on' position, closing the circuit and causing electricity to flow through the bulb." That isn't why, that's how. And if students are taught science without being taught how to be independent from science, or for that matter if they are in a culture influenced by science as ours has been, they'll come to share the assumption that this is the one and only serious answer to, "Why is the living room light on?"

That puts things too simply, but my point is that science does not represent the full range of inquiry. Science has cast a powerful shadow, not just in that science is scientific (which is as it should be) but in that non-scientific inquiry is not as independent as it should be.

But I'm getting off topic. What I was meaning to say

was that I use science, but my discipline is dependent on an independence from science as well.

**The Visionary:** Could I backtrack a fair distance?

**The Alumnus:** Sure, to what?

**The Visionary:** There was something in the back of my mind when you answered my question about IMSA shielding its students from a lockstep environment. May I ask a more specific question?

**The Alumnus:** Certainly.

**The Visionary:** Did IMSA shield you from a lockstep environment?

**The Alumnus:** IMSA was unquestionably a better environment for me than a mainstream school.

**The Visionary:** You're being diplomatic.

**The Alumnus:** Ok. IMSA tries to be a magnet school serving the gifted population. Instead of memorization, it tries to produce critical observers, right?

**The Visionary:** Yes, and this isn't just for IMSA. We want to be a beacon of hope, for educational progress to the state and to the world.

**The Alumnus:** IMSA still doesn't have a football program, right?

**The Visionary:** IMSA students still don't really want one. If there was enough demand, we'd have one.

**The Alumnus:** What would you say to a football coach who wanted to liberate the tough, aggressive quarterback struggling to get out of every IMSA bookworm?

**The Visionary:** I think I see where you're going. Let me play devil's advocate for the moment. Our society has recognized football as an endeavor for some. But don't we recognize that education is a goal for all?

**The Alumnus:** All analogies break down, and I can't force you to see my point if you don't want to. My reason for drawing that analogy is that the average mind learns by memorization of given material, and that mind is ill-served by trying to liberate that critical observer just as many bookworms would be ill-served by trying to liberate that hidden quarterback. The kind of student that does well at IMSA doesn't do so well with the memorization that serves the average student. But it's a two-way street.

**The Visionary:** And I think I see a connection to what you said about programmers assume that how they think about a product is how everybody will think about it.  
And...

**The Alumnus:** Yes. But there's something else.

**The Visionary:** So how do you think IMSA's outreach should be changed? Should we stop outreach?

**The Alumnus:** I'd want to give that some thought. That isn't why I brought this up. I brought up this two-edged sword to make it easier to see another two-edged sword.

The two-edged sword I've suggested is that, just as IMSA students tend to be uncomfortable with the instructional methods at most schools, average students would be uncomfortable with instruction that seeks to liberate a hidden critical observer. It's a bad match both ways. The other two-edged sword has to do with the nature of giftedness. How would you define giftedness?

**The Visionary:** I try not to, at least in not as strong terms as you do. IMSA is trying to liberate the genius of

every child.

**The Alumnus:** I think your actions are wiser than your rhetoric. How much thought goes into your admissions decisions?

**The Visionary:** Our admissions staff give a great deal of thought! Do you think we're careless?

**The Alumnus:** I would have been disturbed if IMSA made a random choice from among the students whose genius would be nurtured. Are you sure you don't want to define giftedness?

**The Visionary:** Every child has some talent.

**The Alumnus:** I agree, although your words sound suspiciously like words that many IMSA parents have learned to wince at. There are a lot of parents who have bright children who have learned that "All of our children are gifted." means, in practical terms, "Your daughter will be educated according to our idealization of an average student, no matter how much it hurts her, and we won't make accommodation."

But you are, unlike me, an administrator whom everybody blames for problems, and you know that there are many occasions where coming out and expressing your candid opinions is an invitation to disaster. I groused about the administration to no end as a student; it is only as an adult that I've come to appreciate the difficult and delicate task of being an administrator, and what kind of performance on an administration's part lets me focus on my work.

I'm going to put on my suspicious and mistrustful observer cap and read into your actions that it would be politically dangerous for you to say "This is the kind of

gifted student we look for at IMSA." But I am not an administrator. I am more of a private person than you can afford to be, and there are more degrees of freedom offered to me. Would you mind my giving my opinion on a matter where you in particular need to be very careful in what you say?

**The Visionary:** I'm always open to listen, and I'm not just saying this as an administrator.

**The Alumnus:** I should also say that because something is politic, I don't automatically translate "politic" to "insincere." I believe you've been as successful as you have partly because you sincerely want to hear what people have to say. When someone says, "political sensitivity," I've learned to stop being a cynic and automatically hearing, "Machiavellian intrigue."

But when I teach, I try to have a map that accomodates itself to terrain, both old and new to me. There are surprisingly many things I believe that are human universals, although I won't discuss them here. But diversity is foundational to how I communicate, and in particular teach.

By "diversity" I don't just mean "affirmative action concerns." I read what I can about minority cultures, and how Asperger's or ADD minds tick. That much is important, and I'm not just jumping on the bandwagon. But diversity doesn't begin when a student labeled as "minority," "different," or "disadvantaged" sits down in your classroom. Diversity begins much earlier. Diversity is every person. I'm fond of books like David Kiersey's *Please Understand Me II* which explore what temperament and Myers-Briggs types mean for

personhood. I want to appreciate learning styles. I absolutely love when students come in during office hours, because then I can see exactly where a student is, and exactly how that student is learning and thinking, and give an explanation that is tailored to the student's specific situation. I like to lecture too, but I'm freest to meet student needs when students visit me in my office.

And one very important facet of that diversity is one that is unfashionable today, more specifically IQ.

**The Visionary:** I remember seeing a report that your IQ was so high it was untestable by normal means. I've heard that polite drivers value politeness, skillful drivers value skill, and safe drivers value safety. Is there...?

**The Alumnus:** If you want to dismiss what I'm saying because of speculation about my motives, there's a good case to do so. I know that. But please hear and accept or dismiss my arguments on their merits, and if you read books like James Webb's *Guiding the Gifted Child*, you'll see this isn't just my idea. I accept multiple intelligence theory as a nuance, but I would point my finger to the idea that a single IQ was an adjustment in theory, made by people who started by assuming multiple intelligences.

But with all the debates, and in particular despite the unfashionability of "IQ", there is excellent reason to discuss giftedness in terms of IQ. IQ may not be the whole story, but you're missing something big if it is treated as one factor among others.

Several caveats deleted, I would point out that

giftedness is not a binary attribute, any more than being tall is binary. There may be some people who are clearly tall and others who clearly aren't, but regardless of where you draw the line, you can't divide people into a "tall" group of people who are all exactly 190 centimeters tall and a "non-tall" group of people who are 160 centimeters tall. There is diversity, and this diversity remains even if you restrict your attention to tall people.

**The Visionary:** So then would you say that most high schools serve an average diversity, and IMSA serves a gifted diversity?

**The Alumnus:** Umm...

**The Visionary:** Yes?

**The Alumnus:** An average high school breaks at both ends of its spectrum...

**The Visionary:** Yes?

**The Alumnus:** Um...

**The Visionary:** Yes?

**The Alumnus:** And IMSA breaks at both ends of its spectrum.

**The Visionary:** If there are some students who the administration overestimates, this is unfortunate, but—

**The Alumnus:** That's not my point. Ignoring several other dimensions of diversity, we don't have two points of "average" and "gifted" defining a line. Giftedness, anyway, is not "the same kind of intelligence as most people have, only more of it and faster"; it's a different kind of intelligence. It diverges more the further you go.

Instead of the two points of "average" and "gifted",

there are three points to consider: "average", "gifted",  
and "profoundly gifted."

I think it is to IMSA's great credit that you have a  
gifted education, not a pullout tacked on to a nongifted  
education. Serving gifted needs isn't an adjustment;  
it's the fabric you've woven, and it is impressive.

But "profoundly gifted" is as different from the  
"moderately gifted" as "moderately gifted" is from  
"average"...

...and IMSA attracts a good proportion of the  
profoundly gifted minority...

...and the position of the profoundly gifted at IMSA  
is exactly the position many IMSA students had in TAG  
pullouts.

**The Visionary:** May I say a word in IMSA's defense?

**The Alumnus:** Certainly.

**The Visionary:** IMSA began as a dream, a wild, speculative,  
powerful, risky vision. From the beginning, its place was  
tentative; some of the first classes did math problems  
before the state government because IMSA was  
threatened with closing. IMSA makes things happen  
that wouldn't happen anywhere, and for all we've done,  
there are still people who would remove us from the  
budget. I've talked with alumni, both those who like and  
dislike the school, and I see something in them which I  
didn't see in other places.

**The Alumnus:** And IMSA is a safe place to learn and grow,  
and IMSA alumni are making a powerful contribution to  
the world. All of this I assume. And IMSA seems like  
the kind of place that could grow, that does grow.  
IMSA could offer the world certain extraordinarily

talented individuals that have been stretched to their limit, who have spent certain very formative years doing things most people don't even dream of, and doing so not in isolation but guided and supported as powerfully, and as gently for their needs, as IMSA already offers to so many of its students.

**The Visionary:** If you have any plans, I would like to hear them.

**The Alumnus:** Before I give the plans as such, I would like to give a brief overview, not just of the average, moderately gifted, and profoundly gifted mind, but of the average, moderately gifted, and profoundly gifted spirit. Keep in mind that this is not a trichotomy, but three reference points on a curve.

The average mind is concrete. It deals in practical, concrete matters. There was one study which posed isomorphic problems to people, one of which was stated abstractly, and one of which asked in concrete terms who the "cheaters" were. The average respondent did poorly on the abstract isomorph, but was astute when it was put concretely. The average mind is more practical, and learns by an understanding which gradually emerges by going over things again. The preferred learning style is oriented towards memorization and is relatively slow, concrete, and (on gifted terms) doesn't make connections. This person is the fabric with which society is woven; a person like this tends to understand and be understood by others. The average mind concentrates on, and becomes reasonably proficient, in a small number of skills.

The moderately gifted mind, around an IMSA IQ of

140, deals with abstractions. It sees interconnections, and this may be related to why the moderately gifted mind learns more skills with less effort. (If this is true, an average mind would be learning from scratch, while a moderately gifted mind would only make adaptations from similar skills.) This person is likely to have a "collection of skills", and have a low self-assessment in those skills. (Today's breathtaking performance is, tomorrow, marginally adequate.) Self-actualizing concern for becoming a particular kind of person is much more common. The moderately gifted mind enjoys an advantage over the average mind, and is different, but still close enough to connect. This person learns more quickly, and most of society's leaders are moderately gifted. (Some have suggested that this is not just because people above that range are much rarer, but because they can easily connect.

There is controversy about how isolated the profoundly gifted person is, with an IQ around 180. Some researchers believe that the greater gap is bridged by the greater ability to connect; Webb suggests otherwise, saying that children with an IQ above 170 feel like they don't fit in anywhere. He asks what the effects would be if a normal child grew up in a world where most people had an IQ of 50-55. Some profoundly gifted have discussed the feeling that there's an instruction manual to life that everyone but them has. The unusual sense of humor that appears in the moderately gifted is even more pronounced in the profoundly gifted. Average people tend to believe some tacit and naively realistic philosophy. Moderately gifted

people tend to believe some conscious and creative reinterpretation of realism. Profoundly gifted people tend to believe an almost automatic anti-realism. The realism assumed by most people doesn't resonate with them. And I need to explain what I mean by "believe" here. I don't mean that someone engaged them in a discussion and are convinced by logic or eloquence that an anti-realist philosophy is true. I mean something close to experience, as we believe that a radiator is hot after we touch it. Realism is obvious for someone of average intelligence. For someone profoundly gifted, coming to that perspective represents a significant achievement.

Furthermore, where the moderately gifted person has a "skill collection", the profoundly gifted individual has what might as well be magic powers—

**The Visionary:** You mean is involved with the occult or psychic phenomena?

**The Alumnus:** Not exactly. Profoundly gifted individuals have been known to do things like reinventing the steam engine at age six. Some of them can walk into a room and in an instant infer what kind of presentation is going to be given, and what kind of organization is going to give it. They have been known to make penetrating observations of connections between vastly different disciplines. Some have written a book in a week. Others remember everything they have read. Verbatim. Another still has invented a crude physics and using it to solve problems before she was old enough to talk. It's entirely plausible for a profoundly gifted individual to think for a few hours about a philosophical school

he's just read about, and have a better grasp of the assumptions and implications surrounding that school than scholars who have studied the discipline for years.

Many accomplishments are less extreme than that. Some are more extreme. I said that they might as well be magic powers because they are no more believable to many people than levitation or fairies granting wishes. Moderately gifted achievements are envied. Profoundly gifted achievements are disbelieved, and one social lesson the profoundly gifted learn is that there are certain accomplishments that you don't talk about... which feels the way most people would feel if people were shocked and offended when they tried to say, "I can read," or for that matter, "I can breathe."

These people do not think of themselves as having magic powers. Their impressive abilities are no more breathtaking or astonishing to them than our impressive abilities of walking through an unfamiliar room or understanding a children's book are to us—and if you don't believe that walking through an unfamiliar room or understanding a children's book is an astonishing mental feat, just spend a year in artificial intelligence. Artificial researchers know what kind of achievement is represented by these "basic" tasks. The rest of us misunderstand them as mundane. If you can understand how you can be better at understanding emotions than any computer in the world, and not think of yourself as gifted, you have a good start on understanding what it's like to feel that it's natural to tinker with your hands, imagine who you're going to be when you grow up, enjoy cooking, and have dreams where your brain creates

languages on the fly.

It's a commonplace that the gifted can have a rough time of school. What IMSA does is place the profoundly gifted in the position of fixed pace classes designed for people significantly less intelligent than them.

It's easier to criticize than it is to give a positive alternative; let me give a positive alternative.

First of all, profoundly gifted students can pick things up much more rapidly even than most IMSA students. Something like a factor of four speedup can happen again and again. Many of these students would tear through textbooks if you let them.

**The Visionary:** But at IMSA we don't dump textbooks on students. We provide an environment where they can discover things for themselves.

**The Alumnus:** They will discover things for themselves. But if you look at learning styles, the profoundly gifted are some of the most able to understand a crystallized abstraction, and the most likely to work ahead in their textbooks.

IMSA may have a dozen or so profoundly gifted individuals at any one time.

**The Visionary:** And we've provided accommodation for a bright sophomore physics class.

**The Alumnus:** Yes, it is possible for students to lobby for accommodation on a specific point.

But it's possible to go further, as IMSA has gone further than TAG pullouts.

There could be a small number of people who serve as tutors, in a sort of tutorial system as can be seen in Oxford's and Cambridge's history. They would be like

thesis advisors, less responsible for knowing what the students need to learn than offering direction and referrals.

**The Visionary:** What would you have them do if they tear through IMSA's curriculum sophomore year?

**The Alumnus:** Students that bright are likely to have their own axes to grind—good axes, axes which they should be encouraged. I really have trouble imagining a student flying through IMSA's normal curriculum and then wanting to watch TV for two years. The problem of motivating these students is like the problem of defending a lion: the first thing is to get out of the way.

The teachers themselves should offer the kind of individualized instruction that is basic to special education, and deal with the "magic powers" that the main curriculum doesn't know how to deal with.

**The Visionary:** Would the teachers have to be profoundly gifted?

**The Alumnus:** I don't know. I would place more emphasis on understanding profoundly gifted students than necessarily being profoundly gifted oneself.

Furthermore, as well as standing in need of conceptual education, profoundly gifted students could benefit from personal development to help them meet the rest of the world. I don't know whether it would be correct to say that average education should be about knowledge, gifted education should be about how to think, and profoundly gifted education should be about personal development. I think the idea is worth considering. And I would try to develop some things that aren't needed in average education and less

needed in moderately gifted education, such as how to bridge the gap and meet the rest of the world.

**The Visionary:** I'll think about that. I would be delighted to say you've shown me how to solve this problem.

**The Alumnus:** I'd be surprised if I've shown you how to solve this problem. If I were asked what I could guarantee for this model, it would be that some part of it is wrong. I would ask you to consider what I've presented you as a rough draft. In my opinion it is a rough draft worth revising, changing course in midstream if need be, but it is a rough draft.

**The Visionary:** This is all very well for office hours, but how do you teach a class? You don't try to individualize a lecture twenty different ways, do you?

**The Alumnus:** I believe what I said about diversity as foundational, but I also believe there are things that are common. I believe there are significant commonalities as well as significant differences.

What would you say is the dominant educational philosophy at IMSA?

**The Visionary:** There are several philosophies we draw on, and several things vary from teacher to teacher. But if I were to pick one school, it would be constructivism.

**The Alumnus:** Does constructivism see the student as an empty pot, to be filled with knowledge?

**The Visionary:** Quite the opposite. Constructivism sees the students as agents, trying to actively construct their models of the world, not as empty pots to be filled, or as formless clay for the teachers to shape. We see the teacher as supporting the student in this active task.

**The Alumnus:** And I agree that students should be active

and encouraged by teachers. A related question—do you believe mathematics is something that research mathematicians invent, or something that they find out?

**The Visionary:** Well, the obvious answer would be that it's something constructed.

**The Alumnus:** I disagree with you, at least about the "obvious" part.

**The Visionary:** Then I'll trust your judgment that it's something mathematicians discover. You've probably thought about this a lot more than I have.

**The Alumnus:** You don't need to agree with me here. There are a lot of good mathematicians who believe mathematics is something invented.

**The Visionary:** Are you saying I should believe mathematics is constructed?

**The Alumnus:** No. There are also a lot of mathematicians who understand mathematics and say mathematics is something that's found out.

**The Visionary:** Now I'm having trouble seeing where you're going.

**The Alumnus:** There's a debate among mathematicians as to whether mathematics is invented or discovered, with good mathematicians falling into either camp. The word 'discover' itself is ambiguous; one can say "I discovered the TV remote under the couch" and have "discover" mean "dis-cover" or "find out," but one can also say, "I discovered a way to build a better mousetrap," and have "discover" mean "invent". "Invent" derives from the Latin "invenire," which means "come into", i.e. "find," so that it would be more natural in Latin to say "I just invented my car keys" than "I invented a useful tool."

**The Visionary:** I think I see what you are saying... Are you saying that there is a single reality described both by discovery and invention?

**The Alumnus:** Yes. Now to tie in with constructivism... What are students doing when they are constructing models?

**The Visionary:** They are shaping thought-stuff, for lack of a better term, in a way that's different for each learner.

**The Alumnus:** And this is to break out of the Enlightenment/Diderot encyclopedia mindset which gives rise to stuffing the learner with facts?

**The Visionary:** Absolutely.

**The Alumnus:** Where would you place Kant? Was he a medieval philosopher?

**The Visionary:** He was one of the Enlightenment's greatest philosophers.

**The Alumnus:** And Kant's model of ideas was unchanged from Plato.

**The Visionary:** Um...

**The Alumnus:** Yes?

**The Visionary:** What Plato called "Ideas" and Kant's "ideas" are two different things. For Plato, the Ideas were something strange to us: a reality outside the mind.

**The Alumnus:** Um... Plato and Kant would equally have affirmed the statement, "Ideas are internal."

**The Visionary:** I don't think so. Plato's Allegory of the Cave suggests that the Ideas are part of something that is the same for all people.

**The Alumnus:** If I may digress for a moment, I think that famous passage should be called "the Allegory of the

Television." I appreciate your limiting the place of television at IMSA. But back to the topic, for Plato the Ideas were internal, but were not private.

**The Visionary:** Huh?

**The Alumnus:** Kant was a pivotal figure in our—the Enlightenment's—idea that the only real stuff outside our head is matter. When Kant says "internal," he says "private," and when we say "internal," we say "private." If you think this way, then you believe that thought is something done in a private corner. This privacy may be culturally conditioned, but it is privacy. And yet, however self-evident this seems to us, a great many philosophers and cultures have believed otherwise.

There is a private aspect to thought, but my research into how to think has led me to question the Enlightenment model and believe that we all think on the same contoured surface. We can be on different parts and move in different ways, but in thinking we deal with a reality others deal with as well. And I'm going to sound like a kooky philosopher and say that you have a deficient cosmology, and therefore a deficient corollary understanding of how humans are capable of learning, if you believe that everything is either inside the mind or else something you can kick.

**The Visionary:** But we're questioning the Enlightenment model, and rejecting parts of it that have problems!

**The Alumnus:** I know you are. And I would encourage you to question more of it.

**The Visionary:** How does this belief affect teaching for you?

**The Alumnus:** Most immediately, it helps me say ways to

identify with students—connect with their thought. There are some things that pay off long term. But in the short run, when a student makes a mistake, the student is not bad, nor is the mistake is not an anomaly to push away. A mistake is an invaluable opportunity for me to understand how a student is thinking and draw the student to a better understanding.

In terms of base metaphor, if you look at Dewey's foundationalism, what it is that bothers many IMSA teachers and IMSA teachers are working to change, the basic idea is that the teacher is building up knowledge, from its foundations, in the student's mind. If I were to try and capture it in a metaphor, I would say that the student is an empty lot, and the teacher is building a house on it. The teacher is actively doing teaching to the student.

The constructivism that resonates with many IMSA teachers doesn't like the idea of the teacher being active and the student being the passive receptacle of teaching. It's fine for the teacher to be active, but they don't believe the student is passive because they were quite active learners themselves. Constructivist writers don't refer to 'students' so much as 'learners;' they emphasize that the learner is active. The basic idea is that people are actively trying to build their own unique understandings of the world, and a constructivist teacher is trying to support learners in this endeavor.

If foundationalism is crystallized in the image of a teacher building a house on an empty lot, constructivist learning theory is crystallized in the image of learners picking up what they can to build their own private

edifices of thought, their interior castles.

**The Visionary:** What do you think of those?

**The Alumnus:** I think we're comparing a hammer with a screwdriver. If you read debate on the web, you'll see people who think constructivism is a hazy and incomprehensibly bad version of foundationalism, and people who think foundationalism is a hazy and incomprehensibly bad version of constructivism. The truth is neither; good foundationalist teaching like Direct Instruction is doing one thing well, and good constructivist learning is doing another thing well, and different people learn differently.

**The Visionary:** But do you have an alternative?

**The Alumnus:** Yes, and it is again suggested by basic metaphor. Instead of building a house, or helping learners construct their private models, I would suggest looking at a single word, *katalabein*. I am using a Greek word without an exact English equivalent, because it ties together some things that are familiar—part of the shared inner human reality which we can recognize. It can be translated 'overcome' or 'understand', and it provides for a basic metaphor in which what is understood is actively acquired, achieved even, but it is not necessarily idiosyncratic and private. We still have an active learner, and implications for how a teacher can support that active learner...

**The Visionary:** Go on.

**The Alumnus:** But it's different. I was fascinated with one constructivist learning page that recast the teacher as a sort of non-directive counselor. They facilitated learning experiences, but they realized that students

came in with beliefs, like "Weeds are not plants because they don't need to be nurtured," and what really fascinated me was that some of them found themselves in an ethical quandary about the appropriateness of using a science class to influence student beliefs, say to agree with a botanist that dandelions are plants.

**The Visionary:** None of the IMSA teachers are that squeamish about influencing student beliefs.

**The Alumnus:** One alum made a comment that "looney liberals" seemed to him to offer a similar service to coal miner's canaries. It wouldn't be fair to accuse most liberals of their excesses, but it was still worth keeping an eye on them: they could be a warning that it was time to rethink basic ideas. Even if those web pages may fall more into the "canary" category than anything else...

**The Visionary:** But what do you have instead of helping students build private world-pictures?

**The Alumnus:** Instead of helping students build private world-pictures, helping students grapple with, in the overcoming that is understanding and the understanding that is overcoming, the katalabein of material. And this is material that always has a personal touch, but is understood to be internal in a way that is not simply how one has arbitrarily exercised privacy, but connects with a sort of inner terrain that is as shared as the outer terrain. No two people are at—no two people can be at—the exact same place in the external, physical world, nor can two people see the same thing, because their personal bodies get in the way. But that does not mean we inhabit our own private physical universes. I can tell

you how to drive to my house because to get there, you would be navigating some of the same reality as I navigate. But somehow we believe that our bodies may touch the same doorknobs and our shoes may touch the same carpets... Somehow we believe that when we turn inside, the "reality" becomes impenetrably private, influenced by culture perhaps but shared to so little an extent that no two people shares the same inner sun and moon.

**The Visionary:** But that's the external world! You're not talking about when people can make up anything they want.

**The Alumnus:** Hmm... As part of your job, you field criticism from people who want IMSA to be shut down, right?

**The Visionary:** Yes.

**The Alumnus:** And a good portion of that criticism comes from people who are certain you've never considered the objection they raise, right?

**The Visionary:** You've been reading my mail!

**The Alumnus:** And how many years has it been since one of those letters contained a criticism that was new to you?

**The Visionary:** You've been reading my... um... [pause] Wow.

**The Alumnus:** The introduction to the Handbook of Special Education tries to make a point by quoting the opening meeting of the International Council for the Education of Exceptional Children. The meeting had in all respects a typical (for today) discussion of how one should define special needs children. And the meeting was in 1923.

The point was made that special educators assume they're the first people to address new issues, when neither the issues nor their thoughts are new. An old

internet denizen, writing about "the September that never ended", talked about how each year in September new college students would flood newsgroup discussions with "new, new, new" insights that were, in the denizen's words, "exactly the same tripe" that had been posted the previous year.

There is really not that much that is new, and this is tied to another observation. There is really not that much that is private. There is some. Even in the outer world there are some things that are private to each person. But in the inner world—and I am not talking about your inner world, or mine, but a real world, the inner world, a place that has contours of its own and laws of its own and terrain of its own and substances of its own which are no more the subject of an idiosyncratic private monopoly than the outer world's sun and moon. Perhaps it has a private dimension, but to assume that an inner world is by definition someone's most private possession is almost like answering the remark "The Atlantic Ocean is getting more polluted," with "Whose Atlantic Ocean?"

**The Visionary:** Is there a way to integrate the inner world with the outer world?

**The Alumnus:** I am guilty of a rhetorical fault. I have spoken of the outer world as if it were separate from the inner world, and the inner world as if it were separate from the outer world. The real task is not one of integration but desegregation, and that is a lesson I've been wrestling with for years. The biggest lesson I took from my Ph.D. thesis, where I achieved a fascinating distillation of how to think from learning as

we know it, is that how to think cannot be distilled from learning, and learning cannot be distilled from the rest of life. It is all interconnected. It's like a classic plot in fantasy literature where a hero is searching for a legendary treasure, and goes to strange places and passes amazing trials. We're there learning with him, until there is an end where "nothing" happens, but by the time that "nothing" takes place, we've been with the hero all along and we have been transformed just as much as he is, and we see through the "nothing" to recognize the treasure that has been all around the hero—and us—all along.

The real world has an internal and an external dimension, and there is nothing like trying to crystallize purer and purer internal knowledge to see the interpenetration of the internal and the external. I learned that the internal is not self-contained.

**The Visionary:** Is there anything that has been written which deals with this connection?

**The Alumnus:** Are you asking me if you can borrow a truckload of books? There are some cultures where it's hard to find material which doesn't relate the connection in some form.

But let me tie this in with education. Postmodernism is fragmented, so much so that postmodern scholars tend to put "postmodern" in ironic quotes and add some qualifier about whether it's even coherent to talk about such a movement. From the inside, there isn't a single postmodern movement; talking about a postmodern movement is like talking about a herd of housecats. But this is not because talking about being "postmodern" is

meaningless; it's because one of the characteristics is fragmentation, and so if there is anything called postmodern, then it will be much more of a grab bag than something called modern.

Constructivism is postmodern, not in that anything called postmodern must resemble it, but because it can be placed on a somewhat ad hoc spectrum. It is internally fragmented, in that it is not helping students navigate the world of ideas, but in trying to reckon with learners' development of private models of the world.

In typical postmodern fashion, the movement shows exquisite sensitivity to ways in which student constructed models are parochial, and does not inquire into ways in which students may be grappling with something universal. (At best learners' constructs are culturally conditioned.)

In what I am suggesting, learners are active, but students are working with something which is not so much clay to be shaped in the privacy of one's mind. I am aware of the parochial dimension—as a culture, we've been aware of it to death—but I'm trying to look at something we don't pay as much attention to today. I suggest, instead of a basic metaphor of learners constructing their own models, learners struggling to conquer parts of the world of ideas. Conquer means in some sense to appropriate; it means in part what we mean when we say that a mountain climber physically conquered an ascent and mastered its terrain. And this is not a cookie cutter, but it provides serious place for something that doesn't have soil to root itself in in constructivism.

I suspect that this is a lot less exotic than it sounds. Would you say that IMSA teachers often understand their students?

**The Visionary:** I think they often try.

**The Alumnus:** I think they often succeed.

Communication in general draws on being able to identify with the other. It says, "Even if I disagree with you, I understand what it means that you believe differently from what I do." You know what it's like when someone is talking with you and simply cannot identify with where you are coming from. It feels clumsy. Good communicators can identify with other people, and even a partial understanding is much better than no understanding at all.

I think the teachers I had at least showed something wiser than constructivism. Read something like Kuhn's *The Structure of Scientific Revolutions* and you will see appreciation of incommensurability and a communication divide between opposing camps; unlike the later Kuhn, you will also see that this claim of incommensurability, where opposing sides invariably argue past each other in debates, is applied to both major and minor paradigm shifts. Now if we look at a constructivist approach, where this kind of thinking is applied to individual peoples' models as well as models that are shared across a camp, then we have an excellent reason not to teach.

We have an excellent reason to say that teachers' and students' models are not only conflicting but incommensurable, that the teacher may have more power but in a fair debate they would argue past each

other, and that the basis for the teacher understanding and therefore successfully influencing the student is at very least questionable. In the end, we have something which affects the concept of teaching more profoundly than the observation that students will see things that teachers don't realize. If you look at Kuhn, you will see a remark that the winning side of a scientific paradigm shift will naturally view the shift as progress. This contributes to an account for people thinking science progresses without science actually progressing.

Science shifts. But the shift is not a step forward from less developed science to more developed science. It is a step sideways, from one reigning paradigm to another. And in like fashion, if you follow a natural constructivist path, you have an alternative to saying that the teacher knows more about science than the students. The teacher is more powerful, but there is a way out for someone who wants to deny that the teacher has more desirable knowledge that the students should learn. Not only can we argue that "teaching" communication is impossible, but we can argue that "teaching" communication is undesirable even if it were possible.

**The Visionary:** But that can't be what our teachers believe! You have to be misunderstanding constructivism. That's not how it works out.

**The Alumnus:** I agree with you that that can't be what many IMSA teachers believe. It is only what they say. And what they think they believe.

**The Visionary:** You mean...

**The Alumnus:** Foundationalism is a bad account of how most IMSA teachers learn. They learn actively, and IMSA

students learn actively. And constructivism offers a compelling metaphor for active learning. But teachers at IMSA don't believe all its implications. Like the character in a George MacDonald book who was fond of saying, "Marry in haste, repent at leisure," and had married in haste, but hadn't really thought about repenting, even though she'd had plenty of leisure in which to repent. If constructivism may undercut the possibility of communication, and the possibility of the teacher drawing students to join her in expert practice, this is not yet a problem. In practical terms, teachers believe they can communicate, and they have something to share. And they do this. There may be problems where this goes down the road, but in practical terms IMSA teachers live a philosophy with communication that is often excellent.

And, as far as metaphors go, I think that the katalabein metaphor offers something valuable that the constructivist metaphor doesn't. In particular, the fact that teachers can communicate, and leave students better off, doesn't just happen to be true; it's something that one can delve into. You don't just take the metaphor into consideration when you communicate on a basis that doesn't come from the model; the metaphor itself gives you a basis to communicate. And it's different enough to compete in an interesting way. Or complement constructivism in an interesting way. Even if it's not perfect.

**The Visionary:** Yes, I know. Do you regret the fact that it's so messy?

**The Alumnus:** I regret the fact that it's not messy enough.

When we describe a rainbow, we say that the colors are red, orange, yellow, green, blue, indigo, and violet. But those aren't the colors of the rainbow. If you pick a color at random on the rainbow, there's a zero percent chance that you will exactly pick one of those colors. A rainbow is a spectrum, and if you have a wavelength for each of those colors, you have seven reference points for a spectrum with infinitely many colors. And a reference point can help you understand a spectrum, but a reference point is not a spectrum.

I've done, I think, a decent job of describing one reference point on a spectrum. But teachers rarely follow one educational theory in pure form; they tend to draw on several, and this is intended not to be a complete theory, but a reference point in a pluralistic theory. Most theories are a single point. This theory is meant to be a spectrum, but isn't there yet.

And as much as a robust theory of education needs to be pluralistic, sensitive to the diversity that is every student, there also needs to be a sensitivity to the diversity of knowledge. English is cursed to only have one word for knowledge.

**The Visionary:** But we have well enough established division of knowledge into subjects. In fact that's what we're trying to teach our students to get past.

**The Alumnus:** That's not quite what I meant.

In most of the languages I know, there's more than one word for knowledge. In French, there is *savoir*, which is the knowledge one has about facts, and *connaissance*, which is the knowledge one has of a person. It's a different kind of thing to know about a

fact and to know of a person, and this is reflected in different words. Conscience is not simply the French word for conscience; it means consciousness, and some of the more ethereal and personal aspects of knowledge. The Latin eruditio and notitia have other nuances. In English we do have "wisdom," "knowledge," and "information," which are as different from each other as an apple, an orange, and a pear.

And this is without treating ways of thought. One of the things I learned was that knowledge and ways of thought could be distinguished but not separated. If you look at Eastern ways, whether they are religions like Hinduism or Eastern Orthodoxy, or martial arts like Kuk Sool Won or Ninpo, you will find quite a different pedagogy from what we assume in the West. Instead of trying to open the mind and dump in knowledge, they begin by training the body, in actions, and then this begins to affect the soul and transform the spirit.

**The Visionary:** Isn't constructivism more like that?

**The Alumnus:** It is. But instead of reinventing experiential learning, Eastern ways preserve a Tao, or for a Western word, a matrix. Most recently in the West, Matrix is the name of a trilogy where each movie was better than the next. But before that, a matrix was a mathematical construct, and are you familiar with what "matrix" meant before that? It was the Latin word meaning "womb." And this concept of a womb, or a matrix, is something which has become alien to Western thought.

A matrix is the medium in which you move, the air in which you breathe. It has the authority of your culture and your mother tongue. It is a very different kind of

authority from the authority of a single leader, or a written rule; a matrix does not consciously command you, but provides you with the options which shape your choice. And the Eastern ways all preserve a matrix, a way, that provides their pedagogy. In a sense the difference between constructivist experiential learning and Eastern experiential learning is the difference between non-native speakers trying to speak a language and a community of native speakers continuing to use their language. Except to make the comparison more fair, constructivists are trying to construct a language, and put together something that works, and Eastern pedagogues have inherited something that works. The difference is kind of like the difference between an experimental kind of baseball glove that someone is trying out and a glove that is not only traditional but already broken in.

**The Visionary:** Um... I'll have to think about what you have said about a "matrix." Ok, you've given me a lot to think about. It would be premature for me to respond now. I'm going to need to think about what you've said. But let me change the subject. What other ideas do you have about teaching, especially concrete ones?

**The Alumnus:** It's a bit like a light—it makes other things easier to see. But let me talk about other ways of teaching, such as listening.

**The Visionary:** I know how you can listen if a student asks a question, but how do you listen when lecturing?

**The Alumnus:** Listening is about trying to understand the other person as a basis for communication. Apart from the feedback that's in student questions—if you look

for it—a person's face is a window to what is going on inside, and a teacher sees student faces frequently. I know the ominous silence when the class is so lost that students are afraid to ask questions. I don't just charge on because it's important to cover the remaining material. I try to stop, back up, and help the students to genuinely understand, and then proceed from genuine understanding. Homework offers implicit feedback on what I succeeded in communicating, and what I did not succeed in. And there's an implicit listening mindset behind trying not to inundate students with too much information at once.

There's a book of little stories, and in one of them, a sage was asked, "What is your name?" He pondered for a moment and said, "My name used to be... Me. But now it's... You." I didn't like that story at first, because I didn't understand it. Now I understand enough of it to see that it has a profound truth. Talking is about "me", and listening is part of a lifelong journey of learning to think in terms of "you." Listening has far more to offer a teacher than a better understanding of student questions.

There are a lot of things I like about how IMSA works—your belief that the needs of the mind cannot be met if the needs of the body are neglected. How this you fit this in with Arbor food service is not clear to me

—

**The Visionary:** Thanks, Dear...

**The Alumnus:** Any time. But I really like the understanding you have of the human person as interconnected on multiple levels, including the body and mind. I also take

that as axiomatic, and teach so that students will understand concepts and preferably their connections, and many other things. Just as I haven't read what I just said about listening in anything that came out of IMSA, but the teachers I had at IMSA were all examples of good listening.

**The Visionary:** Thank you.

**The Alumnus:** You're welcome.

But another part of the Enlightenment I reject is its depersonalization of knowledge and teaching. Have you read any Polanyi?

**The Visionary:** Not yet. Should I put him on my reading list?

**The Alumnus:** I don't know. He writes hefty, if understandable, material. It takes time to understand him, but he's worth understanding.

Michael Polanyi was a philosopher of science, and his big work was on tacit and personal knowledge. The core idea is that scientific knowledge (I would say knowledge in general) is not a set of dessicated constructs that can be understood without reference to people; it is enfleshed in people who know it. He talked about how competing swimmers inhale a little more air and exhale a little less, so they always have more air in their lungs and therefore buoyancy than we would, but this knowledge is never thought of in so many words by the coach or by the student who "picks it up" from the coach, wordlessly. I don't know if it's a fair reading to say that the knowledge we can articulate is the just tip of the iceberg, but what I do think is a fair reading is to say that the knowledge we can put into so many words is not the whole picture. I think he would have

liked IMSA trying to avoid teachers mindlessly regurgitating material so students can learn to mindlessly regurgitating material.

In tandem with the Enlightenment depersonalization of knowledge, is a depersonalization of the concept of teaching and a teacher. About two thousand years ago, one teacher tried to demote teachers from being human gods (who were superior to everyone else) to being human like the rest of us. Then, in connection with the Enlightenment there came a second demotion. A teacher was no longer someone responsible for initiating those in their care into humanity, but only a part of a person imparting a skill to another partial person.

That is an illusion; no matter how much keep our mouths shut on certain matters, we are humans teaching. The question is not whether or not teachers will be an ethical force; the question is whether, given that teachers will be an ethical force, whether they will be a positive force or a negative force. Because students are affected by what kind of people their teachers are—as well as what they say—a teacher should try to be a positive force. This means things like a humility that listens and appreciates other people, and caring, and is willing to listen both to "I don't understand partial differentiation," and "I've had a lousy week."

This means that a teacher who sees past the present, and sees students as the concert pianists, research scientists, and ballerinas they can become, will by that very respect help make that potential a reality.

**The Visionary** [looks at watch]: Thank you. I need to be

somewhere in a few minutes; do you have any closing comments?

**The Alumnus:** I think that one aspect of how we speak of teaching is unfortunate. We speak of the active teacher who teaches, and the presumably passive student who is taught. Nothing of this manner of speaking suggests a dialog, a two-way street—but if teaching succeeds, it must be because of a cooperation between student and teacher. Even with constructivist understanding of learning, we're just looking at what the teacher can do.

I spend most of my time thinking about how I can see to my end of the partnership, not how students can handle their job. But there is something I would love to say to students, reinforced by a handout, on the first day of class, some toned-down version of:

Steal knowledge.

Prometheus stole fire. Your job is to steal knowledge.

The wrong way to think is that my job is to teach you, and you just sit there and be taught, and after enough teachers have taught you, you'll be educated.

You will get a much better education if you think that whatever I do, however well or poorly I teach, is simply the baseline, and you can start from there and see what you can do to take as much knowledge as you can.

Listening in class and asking questions is one way to steal knowledge. Is there something I said that doesn't quite make sense? If you just let my teaching wash over you, you've

missed an opportunity to steal knowledge.

If you listen to my words, that's good. It's even better if you think about why I would say what I am saying. There may be a clue, maybe a little whisper in your intuition that something more is going on than you realize. That is a key that you can use to steal knowledge.

When you read the textbook, it will tell you more if you push it harder. Look at the problems. What are they asking you to know?

What are they asking you to think about?

There's a powerful clue about what's important and what's going on, if you're adept enough to steal it.

What do I assume about the material? I make assumptions, and some of those are assumptions I make because of what I know. If you're willing to ask why I assume something, you may steal knowledge of how people think when they understand the material.

My office hours are meant for you. Come in and discuss the material. If I see you make a mistake, that's good. It means you're learning and I have an opportunity to clarify. If you don't understand something, and all of us don't understand things from time to time, it will cost you points to wait until the test to find out that you don't understand it. It won't cost you anything if you come in during my office hours, and I'll be glad you visited. And you might steal some knowledge.

Steal knowledge. There'll be some days when you're a little tired, and you can't look for all the extra knowledge you can steal. That's OK; just try to take the knowledge I clearly set out before you. But steal knowledge when you can.

You've gotten into IMSA, which is one of the best and one of the worst places in the world. Take advantage of opportunity. Learn to steal knowledge. And when you graduate from IMSA... Steal knowledge.

**The Visionary:** I definitely have some food for thought to take into the meeting. Do come and visit again! Goodbye!

**The Alumnus:** That I shall. Goodbye!

# The Minstrel's Song: A Complex Mathematical Model

This model represents a mathematician's second attempt at making a mathematical model, and as such is very detailed, complex, and at times hard to keep track of. It is being kept on the web primarily as a courtesy to people who are already using it. If you are not a heavy gamer, and are not used to complex mathematical models, I strongly suggest that you use [this simpler model](#). This document may still be useful, as a wealth of detail about mechanical devices and other creations, but newcomers are warned that using this as an actual model for game play may be difficult.

---

Section I: *General model*  
Section I A: *Getting Started*

---

The parts of this document are as follows:

Another document, "From zero", introduces the concept of role play and deals with all of the non-numerical parts of getting started; this document tells how to deal with numbers and dice.

For basic introduction and getting the feel for the model:

Section I B attempts to explain some of the basic concepts. Section IV develops a sample character sheet, a sheet used to store basic information useful to play; it demonstrates what a player goes through in order to set things up. Section II F gives some numbers to use as reference points, for questions like "What should be the difficulty for thus-and-such?" Section III gives a quick key to abbreviations used throughout the work.

For developing a character sheet:

Section II A tells how to generate a character's attributes — numerical ratings that tell how talented a character is in various areas — and section II B tells how to adjust them for age, gender, and race. Section II D gives the basic list of skills and tells how they are to be adjusted by attributes. Section II H gives starting experience, and section II G tells how much experience it takes to raise a skill to a certain level.

For modelling play:

Section II I tells how, when a character attempts an action, to roll dice to decide whether the character, with skill A, succeeds at an action with difficulty B. Section II J deals with combat and damage. Section II K deals with random encounters of animals and people, and describes what animals are in the world. Section II L deals with equipment.

Optional rules and Other:

There are several optional rules which may be used to enhance play and give it more detail. Section I C is the first such

section, dealing with skills ratings. Section II C gives miscellaneous numbers about the races. Section II E gives numbers referenced in II C. Section II M gives rules about the time taken for various actions, and performing actions simultaneously. Section V comments on the model.

---

## Section I B: The Basic Idea

---

This is essentially a skill-based model, a modified version of another model to use dice. It requires the use of two six-sided dice of different colors — for the sake of simplicity, the two dice will be referred to as r (red) and b (blue), and read as producing numbers ranging from 1 to 6. For example,  $6*r+b$  would be read as ten times the number on the red die, plus the number on the blue die, which would in effect produce a random number from 7 to 42. It is, while not necessary, helpful in some cases to have two ten-sided dice.

In general for skills, attributes, ratings, etc., a 0 is average, and the number (positive or negative) tells how far above or below average that creature is. The scale is exponential; 10 points correspond to doubling/halving. So someone with a strength of 20 and a dexterity of -10 would have a strength of  $2*2=4$  times average, while someone with a dexterity of -10 would be half as dexterous as the average person. The game generally uses the attributes in the form given — essentially, how to adjust an average ability — and doesn't really deal with an absolute scale.

A character's skill will have an av (adjusted value), equal to the bs (base skill), minus the skill's dl (difficulty of learning), plus the character's al (ability to learn), plus the gaa (governing attributes addend). When the character attempts an action, the skill's difficulty will be subtracted from the av, and then dice will be rolled to see if the attempt was successful.

If an action is being taken against another character (for example, haggling), that person's av is the difficulty.

---

## Section I C: Additional Rules

---

Some skills are related to each other by an Id (learning difference). If skill X and skill Y are related by an Id of 5, then a character's bs (exclusive of experience) in skill x is at least the number five less than his bs in skill Y. So a character who had a bs of 15 in skill X would have a minimum bs of 10 in skill Y. The Id's are additive (if X and Y have Id 5 and Y and Z have Id 10, X and Z have Id 15), but explicitly listed differences supercede the values that are calculated from additivity. If there are two or more Id's contributing point values to a specific skill, and/or a nonzero untrained base, the total is not the sum of the point values. It is the maximum.

Learning may take place under a tutor who has a skill of at least the skill level that the character is training to; in that case, the learning is at half price. The experience given starting characters takes this tutelage into account.

---

Section II: Charts  
Section II A: Attributes

---

Several random numbers generated as  $r - b$ : the number on the red die, less the number on the blue die.

These values are numbered  $n_1$  through  $n_{36}$ .

The attributes are read roughly as how far above or below the average they are: a +10 would be a fair amount above average (twice the average), while -10 would be moderately below average (half the average), with zero being average. The maximum possible is 25, and the minimum -25.

Here are the calculated attributes:

ag (Agility)	$n_1+n_2+n_3+n_4+n_5$
al (Ability to Learn)	$n_1+n_6+n_7+n_8+n_9$
ch (Charisma)	$n_1+n_6+n_{10}+n_{11}+n_{12}$
co (Constitution)	$n_{13}+n_{14}+n_{15}+n_{16}+n_{17}$
de (Dexterity)	$n_1+n_2+n_3+n_{18}+n_{19}$
in (Intelligence)	$n_1+n_6+n_7+n_{20}+n_{21}$
kn (Knowledge)	$n_1+n_6+n_7+n_{22}+n_{23}$
me (Memory)	$n_1+n_6+n_7+n_{24}+n_{25}$
pe (Perception)	$n_1+n_6+n_{26}+n_{27}+n_{28}$
sp (Speed)	$n_1+n_2+n_{29}+n_{30}+n_{31}$
st (Strength)	$n_{13}+n_{14}+n_{32}+n_{33}+n_{34}$
wi (Wisdom)	$n_1+n_6+n_7+n_{35}+n_{36}$

---

## Section II B: Attribute Adjustments

---

All adjustments are addends: they are added to a character's base attribute. All adjustments are 0 unless otherwise specified.

Attribute:      ag   al   ch   co   de   in   kn   me   pe   sp   st   wi

Race: Nor'krin 0 0 0 0 0 0 3 5 0 0 5 0 Tuz 0 0 0 5 0 0 0 0 0  
10 0 Urvanovestilli 0 0 2 0 5 5 2 3 0 0 -10 0 Yedidia 0 0 5 0 0 3 0  
0 10 0 0 0 Jec 0 0 0 0 0 0 0 0 0 0 0 0 Shal 0 0 0 0 0 2 0 0 0 -5 0  
5 Janra 20 0 5 0 0 4 0 0 2 5 5 0

Gender: Male 0 0 0 0 0 0 0 0 0 5 0 Female 0 0 0 0 2 0 0 5  
0 -5 0

Age: Child 5 10 2 10 0 -8 5 0 10 10 -4 -10 Young Adult 5 5 0 5  
5 0 -4 0 5 5 5 0 Middle Aged 0 0 0 0 0 0 0 0 0 0 0 3 Old -4 -4 0  
-4 -4 -3 5 -3 -4 -4 -4 5 Extremely Old -10 -10 0 -10 -10 -5 5 -8  
-10 -10 -10 10

---

Section II C: Racial Non-Attribute Statistics.

A character's actual lifespan is calculated by multiplying the racial base by his constitution (constitution not adjusted for race, gender, or age), except for the border between child and young adult, which is not adjusted. For example, a Janra with a non-adjusted log of constitution of .8 would become a young adult at 16, middle aged at 41, old at 73, and extremely old at 89. A character will die of old age at an age of his maximum adjusted lifespan times the square root of  $x_1$ , where  $x_1$  is uniformly distributed over [0,1].

Age:	Child	Young Adult	Middle Aged	Old	Extremely Old
Nor'krin	0-15	16-30	31-60	61-90	91
Tuz	0-15	16-25	26-40	41-50	51
Urvanovestilli	0-30	31-100	101-300	301-400	401
Yedidia	0-20	21-50	51-120	121-160	161
Jec	0-15	16-30	31-60	61-90	91
Shal	0-50	51-200	201-600	601-800	801
Janra	0-15	16-50	51-90	91-110	111

Speed of movement is given in both miles per hour and feet per second. A character's speed of movement is equal to the racial base multiplied by his speed, adjusted for age and gender but not race. Females suffer a 10% speed penalty.

Speed: mph:	Walk	Jog	Sprint	fps:	Walk	Jog	Sprint
Nor'krin	2	4	14	2	5	21	
Tuz	1	2	8	2	3	12	
Urvanovestilli	3	5	20	4	7	29	
Yedidia	2	3	12	2	4	18	
Jec	2	4	14	2	5	21	
Shal	1	2	6	1	2	9	
Janra	5	7	30	7	11	44	

Adult height is normally distributed with mean  $m$  and standard deviation  $s$ .

Height: Male:	$m$	$s$	Female: $m$	$s$
Nor'krin	6'6"	3"	5'8"	3"
Tuz	4'6"	2"	4'3"	2"

Tuz	4'0"	2"	4'3"	2"
Urvanovestilli	5'2"	1.5"	4'8"	1.5"
Yedidia	5'4"	2.5"	4'6"	2"
Jec	5'6"	2.5"	5'2"	2"
Shal	5'6"	2"	5'2"	1.5"
Janra	6'0"	3"	5'6"	3"

**As is adult weight:**

Weight: Male:	m	s	Female: m	s
Nor'krin	200#	29#	150#	25#
Tuz	200#	28#	150#	22#
Urvanovestilli	100#	9#	70#	7#
Yedidia	150#	22#	100#	14#
Jec	130#	18#	110#	13#
Shal	145#	16#	125#	11#
Janra	150#	23#	130#	22#

---

## Section II D: Skills

---

Here is a listing of skills/areas of knowledge/abilities. It is meant to be illustrative rather than exclusive. (Partially borrowed from AD&D)

Following most skills are: untrained base (general, and then with values for specific races following, separated by commas if need be: (N)or'krin, (T)uz, (U)rvanovestilli, (Y)edidia, Je(C), (S)hal, and (J)anra); dl; base time (s=seconds, m=minutes, h=hours, d=days; w=weeks; y=years. A hyphen ('-') for untrained base means that an untrained character is incapable of attempting that skill. A trailing c means that an action is continuous and must be checked with that frequency — for example, moving silently); gaa elements.

An untrained attribute of 0 does not mean that a character is incapable of performing that action. It means that he has no special training above what is common.

The gaa element is the number of times that an attribute is to be added. For example, st 2, co 1 would mean that the gaa is twice the character's strength plus his constitution.

(Other comments may follow as appropriate.)

Acquisition, 0, J 10; 0; 1d; ch 1, pe 1

Acrobatics/Tumbling 0, Y 10, J 20; 0; 2 s; ag 1, st 1

Acting 0; 0; 30 m; ch 1

Ambidexterity costs 5 points

Animal Handling 0, Y 20, C 10; 0; 5 m; ch 1

Animal Lore 0, Y 20; 0; 1 m; kn 1

Animal Training 0, Y 10; 0; 3 w; -

Anatomy 0, U 10, Y 10; 0; 1 m; kn 1

Anthropology -, U 10; 0; 1 m; in 1, kn 1, me 1

Appraisal 10, U 20; 0; 1 m; pe 1

Artistic Skill (Specific Medium) 0; 0; 1 d; in 1

Attack (Specific Weapon) 0, N Axe 10, N Knife 10, N Longbow 20, T Crossbow 10, T Dagger 20, J Dagger 10; 0; Axe 2 s, Crossbow 30 s, Dagger (Hand to Hand) 2 s, Fist 1 s, Halberd 8 s, Lance 15 s, Longbow 5 s, Longsword 5 s, Mace 7 s, Rapier 3 s, Shortsword 3 s, Two-Handed Sword 10 s; Hand to Hand de 1, sp 1, st 1 (Lance strength of mount), Missile de 1, sp 1 — Note: Hand to Hand and Missile are each generalizations of attack; if a character wishes to generalize to all weapons, the cost is dl 15 instead of 10.

Balance 0, J 20; 0; 1 s; ag 1

Biology 0, U 10; 0; in 1; 1 m; kn 1, me 1

Blacksmith 0; 0; 1 h; de 1

Blind Action 0, Y 10, S 20, J 10; 0; pe 1 — if a check is made for blind action, an action may be taken blind at twice the normal difficulty.

Bowyer/Fletcher 0; 0; 1 d; de 1

Brewing 0; 0; 1 w; -

Building 0; 0; 5 w; de 1

Carving 0; 0; 30 m; de 1

Carpentry 0; 0; 1 w; de 1

Catch 0; 0; 1 s; de 1

Ceremonies 0, U 10; 0; 1 h; kn 1

Charioteering 0; 0; 5mc; ag 1

Chemistry 0, U 10, Y 10; 0; 30 m; in 1, kn 1, me 1

Climbing 0, J 10; 0; 1 m(c); ag 1, st 1 — this must be checked every 20 feet.

Clockwork Device Craftsmanship/Engineering 0, U 20; 0; 1 d; de 1, in 1

Cobbling 0; 0; 1 h; de 1

Cooking 0; 0; 1 h; -

Cold Tolerance 0, N 20, C 10, J 10; 0; 1 wc; co 1

Cultures (specific culture) 0, U 5, J 10; 0; 1 m; kn 1

Dancing 0, U 10, Y 20, J 15; 0; 5 mc; ag 1

Dodge 0, Y 10, J 10; 0; 1 s; ag 1, sp 1 — if a character attempts to dodge in the middle of an action, that action is lost. Dodging may, of course, be executed concurrently with other actions with both actions at double difficulty. The difficulty of hitting a dodging creature is the difficulty of normally hitting the creature plus the creature's dodge value.

Doublejointedness costs 5

Endurance 0, N 20, T 10, J 10; 0; 15mc; st 1, co 1 — if a character fails an endurance check after fifteen minutes of vigorous activity, he is exhausted and will have all actions at double difficulty until he has rested (not sleep necessarily — sitting or other inactivity) for twice the duration of the exercise. If a second endurance check is failed, all actions are at four times normal difficulty until aforementioned rest time is taken; if a third check is failed, the character falls asleep and sleeps for five times the duration of activity.

     wins the check.

---

## Section II E: Learning Differences

---

Learning differences are an optional rule which players may take advantage of to gain higher skills. Calculating every possible attribute is not necessary; players may simply use what they choose to look for and find in order to gain higher effective skills.

Below are Ids for skills, in dictionary order. Unlisted pairs of skills have no Id except as possibly calculable through chains.

The format is skill, skill, Id.

Acquisition, Persuasion, 15  
Acrobatics/Tumbling, Balance, 10

## Section II F: Skill Levels and Sample Difficulties

---

An unadjusted skill is as follows:

Untrained: 0

Just beginning: 10

Dabbler: 20

Moderately skilled: 30

Proficient: 40

Expert: 50

Virtuoso: 60

Exceptional: 70

World Class: 80

Greatest Alive: 90

Greatest of All Time: 100

The following are examples of actions of specific difficulties for archery, hiding, languages, rope walking, and wilderness survival. They are intended to serve as a guide to setting general difficulties for actions. Common sense should be used to apply to other skills; throwing, for example, will not have anywhere near the range and accuracy of archery.

Very easy: -40

Archery: shooting a barrel 20 feet away.

Hiding: hiding in a darkened storeroom full of miscellaneous garbage, while clad in black.

Languages: "Hello." Greetings, numbers, etc. Extremely thick accent.

Rope walking: walking across a plank a foot wide.

Wilderness survival: surviving in a Yedidia orchard.

Easy: -20

Archery: shooting a barrel 20 yards away.

Hiding: hiding in a darkened forest, while clad in black/brown/green.

Languages: "Where is the bathroom?" Basic phrases (phrase book style). Accent that can be moderately easily understood by someone used to dealing with foreigners.

Rope walking: walking across a plank half a foot wide.

Wilderness survival: surviving in a Yedidia forest, where fruitful trees and water are reasonably easy to come by, but there are no hostile inhabitants.

Moderate: 0

Archery: shooting an unsuspecting boar 20 yards away.

Hiding: hiding in a forest in normal daylight, while clad in black/brown/green.

Languages: "I don't want this one. I want that one." Short sentences using very simple vocabulary. Normal accent which does not hinder comprehension.

Rope walking: walking across a plank three inches wide.

Wilderness survival: surviving in a Jec forest, where there is nothing hostile, but food and water are not so easy to come by, and the forest may get cold at night.

Difficult: 40

Archery: shooting a running boar 20 feet away.

Hiding: hiding in a forest at dusk, while clad in clothing that does not blend in.

Languages: "I'm glad to hear that you're feeling better. Do you have any idea how the snake got into your house?" Slightly slowed normal sentences using words that would be in the vocabulary of a child. Accent which only shows itself occasionally, or is generally present but faint.

Rope Walking: walking across a tight rope.

Wilderness survival: surviving on the border of the Tuz forest, where the creatures are potentially hostile.

Very Difficult: 80

Archery: shooting a running boar 20 yards away.

Hiding: hiding in a forest in full daylight, while clad in clothing that does not blend in.

Languages: Free, accentless conversation as a native speaker would, using an adult's vocabulary.

Rope walking: walking across a slack rope.

Wilderness survival: surviving in the heart of the Tuz forest, where creatures tend to be hostile and tough.

Extremely Difficult: 120

Archery: shooting a flying bird 20 yards away.

Hiding: hiding in a low cut field or a bare room, fully lit, wearing clothing that does not blend in. Concealing yourself where there aren't any obvious hiding places.

Languages: Technical discussions using complex sentence structure, unusual grammatical features, and vocabulary that most adults wouldn't know. Conversing with some Urvanovestilli philosophers.

Rope walking: sprinting across a tight rope.

Wilderness survival: Surviving in the Ice Peaks in the middle of winter, where the temperature is frigid and wild animals and other food is almost impossible to find.

---

## Section II G: Experience Gains

---

The basic unit of adventure is the quest. Upon completion of a quest, each character will receive 2 experience points, adjusted as follows (minimum of 0) for role playing, skill use/adventuring competence/party helpfulness, and moral virtue:

Exceptionally poor: -2 Poor: -1 Normal: 0 Good: +1

Exceptionally good: +2

A bonus of 1 point is awarded for an action that solves a substantial part of the quest.

So a character who had role played well, used his skills clumsily, and had shown exceptional heroism and virtue would receive  $2 + 1 - 1 + 2 = 4$  ep for the quest.

(No animal may gain experience.)

Experience may be devoted to some small subfield of a specific skill: specialization. Learning a specialization costs half as much (has half the ldf (learning difficulty factor)) as/of learning the whole skill. Learning the rest of a skill, up to an area less than or equal to the level of specialization, costs half as much as learning from scratch. There are also generalizations of skill (for example, languages as a generalization of a specific language, or musical instruments as a generalization of a specific instrument), which have twice the ldf of the specific skill. A generalization of a skill already learned would cost half as much as learning the generalization from scratch, IE exactly as much as the skill cost. (This applies, of course, only to as many ep as were placed in the specific skill beforehand). A generalization must be a specific and closely related group of skills; a "combat skills" generalization which included anatomy, archery, dodge, horseback riding, and longsword would be inappropriate.

Experience points may be used to increase skills as follows: a current skill's base skill's exponent is looked up (see section II

I). To raise a skill to a new level: look up the exponent of the desired new base skill. The experience point cost is the difference. For example, let's say that a character has a current skill bs of 34 and 2 ep. The exponent of 34 is 11. He adds the 2 experience points, bringing the exponent to 13. The log of 13 is 37, so he has a new skill bs of 37. (It would have cost him 1 point to make the same increase for a specialization, or 4 points to do so for a generalization.)

---

## Section II H: Starting experience

---

Initial experience is devoted with the character's al adjusted for everything but age.

Age:	Child	Young Adult	Middle Aged	Old	Ex
Points:	20	30	40	50	60

Here are starting experience allocations for the 10 roles outlined in the general description. 10 ep will be distributed; multiply by 2 for a child, 3 for a young adult, 4 for a middle aged person, 5 for someone who is old, and 6 for someone who is extremely old. If there is/are one or two races given for a role, the experience allocation assumes the untrained bases for that race(s). (A character may have experience devoted any way that is desired; this is an example.) Most starting characters will be young adults.

Acrobatic Scout: Hear Noise 1.5, Hide 2, Move Silently 2, Open Locks 2, Rope Use .5, Search 2.

Archer: Archery 10.

Bard: Geography 1.5, Hero's Tales 1, Mediation .5, Musical Instrument 2, Persuasion 2, Singing 1, Storytelling 1, Trivia 1.

Hunter: Attack (one missile weapon) 2, Hunting 5, Tracking 2, Woodlore 1.

Interpreter: Acquisition 1, Etiquette 1, Haggling 1, Languages 6, Persuasion 1.

Jack-of-All-Trades: Attack .4, Blind Action .4, Climb .4, Dodge .4, Endurance .4, Fire-Building .4, Guess Actions .4, Haggling .4, Hide .4, Hunting .4, Jump .4, Jury-Rig or Repair .4, Languages 2.4, Move Silently .4, Open Locks .4, Rope Handling .4, Search .4, Smell Creature .4, Tracking .4, Wilderness Survival .4.

MacGyver Chemistry 1, Engineering 1, Hide 1, Jury-Rig 5, Move Silently 1, Search 1.

Non-combat Blind Action 1, Guess Actions 2, Hear Noise 1, Know

Perceiver Blind Action 1, Guess Actions 3, Hear Noises 1, Keen Eyesight 1, Read Emotion 1, Search 1, Smell Creature 1, Tracking 1, Weather Sense 1.

Scholar Geography 3, History 3, Languages 3, Literature 1.  
Wayfarer Acquisition .3, Attack (one weapon) .2, Blind Action .2, Climb .2, Dodge .2, Endurance .2, Etiquette .3, Fire-Building .2, Geography .5, Guess Actions .2, Haggling .4, Hero's Tales .3, Hide .2, Hunting .2, Jump .2, Jury-Rig or Repair .2, Languages 2.4, Mediation .1, Move Silently .2, Musical Instrument .3, Open Locks .2, Persuasion 1, Rope Handling .2, Search .2, Singing .3, Smell Creature .2, Storytelling .2, Tracking .2, Trivia .3, Wilderness Survival .2.

Woodsman Animal Handling 1, Animal Training 1, Hunting 1, Tracking 1, Wilderness Survival 1, Woodlore 5.

---

## Section II I: Dice and Basic Tables

## 32,768

Here is the basic check table. When a character attempts an action, the success index is calculated as the difficulty subtracted from his av, and the two dice (red and blue) are rolled. The check value is  $(6*r)+b$ : six times the number on the red die, plus the value on the blue die. The following table gives the minimum value this result must have for the character to succeed at the attempt.

For example, if a character with an av of 57 attempts a skill of difficulty 23, he has a success index of 34. The red die yields a 1 and the blue die yields a 6, so the check value is  $(6*1)+6 = 12$ , which by the table requires a minimum success index of 25. His success index is greater than or equal to what it needed to be, so he succeeds at the check.

	Check Value	Success Index
7	Roll again, with success index 61 higher.	
	8	45
	9	37
	10	32
	11	28
	12	25
	13	22
	14	19

35	-19
36	-22
37	-25
38	-28
39	-32
40	-37
41	-45

42

Roll again, with success index 61 lower

---

## Section II J: Combat

---

All characters\* have a maximum health value of  $co+st+ag+an$ , where  $an$  is one half the character's adjusted anatomy skill, rounded down. Skills and attributes of an injured creature function at a penalty equal to the difference between their maximum health value and their current health value. So, for example, an animal with a maximum health value of 55 and a current health value of 31 has skills functioning at a penalty of 24 points.

All creatures take damage as follows: the damage is looked up on the log/exponent table, and its exponent (the value that occurs to the right of the damage) is looked up. The same is done for the creature's current health value. The exponent of the damage is subtracted from the exponent of the current health value. If the value is zero or less, the creature loses consciousness or dies at the game master's discretion. If the value is more than zero, its log is taken and becomes the creature's new health value (rounded up).

So, for example, if the animal mentioned with a current health value of 24 points takes an 8 point damage wound, the exponent of 24 is 5.3, and the exponent of 8 is 1.7. They are subtracted to yield 3.6; the log of 3.6 is 18, so the creature's new health value is 18.

Damage\* for a successful attack is inflicted at a value of  $r+st+wa+de+an+po$ , where  $r$  is the value shown by rolling the red die,  $wa$  is the weapon addend of the weapon, and  $po$  is the poison value of the poison (if any) or other special attack. (Damage for a successful backstab, catching the target unaware, is  $r+st+wa+de+(2*an)+po$ .) If a creature is injured in the course of taking an action, it may complete the action at skill and attribute values for when the action was begun, and the injury will take

effect on skills and attributes when the action is completed.

An injured creature will regenerate at a rate of  $-50 + (2 * co) + st + ms$  per day, where  $ms$  is the medical skill of the creature or other caretaker. The regeneration works as the exact opposite of a wound.

An unarmed character has a  $wa$  of  $-10$ .

\* A creature which has no anatomy skill does not receive agility or anatomy adjustments to health value, or anatomy or dexterity adjustments to damage.

---

## Section II K: Animals and Random Encounters

Animal behavior at an encounter is as follows; a number generated in the range of 1-10 tells how it behaves ('special' indicating that the game master should either create a special behavior on the part of the animal, or else simply reroll):

#	Feisty	Herbivore	Pet	Predator	Sn
1:	attack	attack	attack	attack	at
2:	attack	attack	curious	attack	cu
3:	attack	curious	curious	attack	fl
4:	attack	flee	flee	curious	fl
5:	attack	flee	flee	flee	fl
6:	curious	friendly	friendly	friendly	fl
7:	flee	ignore	friendly	sneak attack	fr
8:	ignore	ignore	friendly	sneak attack	sn
9:	sneak attack	ignore	friendly	sneak attack	sn
10:	special	special	special	special	sp

Animal age and sex are rolled separately: 1-2 child, 3-6 young, 7-8 middle aged, 9 old, 10 very old; 1-5 male, 6-10 female.

#### Animal Descriptions

All animals have the following skills: attack 30 (1 s; de 1, sp 1, st 1), blind action 20, dodge 30, hear noises 20, hide 30, move silently 30, and smell creature 20. All predators and small predators can hunt 30, smell creature 30, track 30. Name, attributes, behavior type (feisty, herbivore, pet, predator, small predator), descriptions, comments, and special abilities follow.

Constitution, in some cases, may not indicate exceptional health on the part of the creature, but rather some sort of

natural armor.

The attributes are (no is number appearing, a \* next to po represents a nonpoisonous special attack):

1: Acid Slime Mold  
no po wa ag co de pe sp st  
1 20\* 0 20 10 10 10 20 10  
Predator, 4-8' long, not injured by cutting or bludgeoning. Special acid. (It looks like a pale green blob)

2: Acid Spitter no po wa ag co de pe sp st 1 20\* 0 20 20 20 10 10 30  
Predator. 5' high. This creature has a thick torso and head on four stumpy legs, and a tough black hide. Its special damage is acid.

3: Anteater no po wa ag co de pe sp st 1 0 0 10 10 10 10 10 0  
Herbivore. As in real life.

4: Bear no po wa ag co de pe sp st 1 0 0 20 30 10 -10 0 40  
Feisty. Grizzly in the Tuz land, polar in Nor'krin land, black elsewhere.

5: Behemoth no po wa ag co de pe sp st 1 0 0 10 30 20 -10 -10 70  
Herbivore. As in Job.

6: Boar no po wa ag co de pe sp st 1 0 0 20 10 10 10 10 25  
Feisty. As in real life.

7: Bulette no po wa ag co de pe sp st 1 0 0 0 30 10 10 10 30  
Predator. 8-10' long. Land shark. A tough, sharklike creature that burrows through earth and has short, strong legs. The hide may be sold for 500 au.

8: Caribou no po wa ag co de pe sp st 30 0 0 10 10 10 10 10 30  
Herbivore. As in real life.

9: Carnivorous Log no po wa ag co de pe sp st 1 0 0 10 20 10 0 10 30  
Predator. An animal that looks like a large fallen log. When stepped on, large tentacles will shoot out and drag towards teeth and jaws.

10: Carnivorous Tree no po wa ag co de pe sp st 1 0 0 10 20 10

10: Carnivorous Tree no po wa ag co de pe sp st 1 0 0 10 20 10  
10 10 40 Predator. Like a carnivorous log, but uses branches  
instead of tentacles.

11: Cobra no po wa ag co de pe sp st 1 30 -10 10 10 10 30  
-10 Predator. As in real life.

12: Colorspray no po wa ag co de pe sp st 1 0\* -20 10 10 10 10  
10 -10 Pet. A short, 2' football shaped, multicolored creature  
with several orifices on its back. A very affectionate pet which  
will spray brightly colored paints on someone it likes.

13: Crocodile no po wa ag co de pe sp st 1 0 0 10 30 10 10 10  
30 Predator. As in real life.

14: Cuddler no po wa ag co de pe sp st 1 0 -40 10 0 10 10 0 -20  
Pet. A soft, 1' black, furred, round creature that cuddles like a  
Shal and will occasionally squirt water.

15: Deer no po wa ag co de pe sp st 1 0 0 30 10 10 20 10 20  
Herbivore. As in real life.

16: Dog no po wa ag co de pe sp st 10 0 0 10 10 10 10 10 20  
Predator. As in real life.

17: Duck no po wa ag co de pe sp st 5 0 -20 10 10 10 10 10 -20  
Herbivore. As in real life.

18: Fog-Thing no po wa ag co de pe sp st 1 0 0 20 10 10 10 10  
40 Predator. a 10' tall beast which emits dense fog, obscuring  
vision in its vicinity.

19: Furred Serpent no po wa ag co de pe sp st 1 0 0 10 10 10  
10 10 0 Pet. 2-20' long, with soft, sometimes brown fur.

20: Garder Snake no po wa ag co de pe sp st 1 0 0 10 10 10 10  
10 -50 Pet. As in real life.

21: Giant Aphid no po wa ag co de pe sp st 1 0 0 10 30 10 10 10  
30 Predator. 8' tall if unearthed, in a depressed sand trap  
hidden by a thin camouflaged cover.

22: Giant Firefly no po wa ag co de pe sp st 20 0 -30 10 10 10  
10 10 0 Herbivore. 4' tall. Fly. F

10 10 0 Herbivore. 4' tall, fly 5.

23: Giant Land Lobster no po wa ag co de pe sp st 1 0 0 10 50  
10 0 -10 50 Feisty. 20-30' long.

24: Giant Scorpion no po wa ag co de pe sp st 1 30 10 10 30 10  
10 10 20 Feisty. 5' long.

25: Giant Viper no po wa ag co de pe sp st 1 30 0 10 10 10 20  
10 50 Predator. 50'-200' long.

26: Giant Walking Stick no po wa ag co de pe sp st 1 20\* 0 0  
10 10 0 10 -10 Small Predator. 3' long, 2' tall. Poison does not  
cause damage, but hinders for one day as if damage had  
occurred.

27: Giant Wasp no po wa ag co de pe sp st 1 30 0 0 10 10 10 10  
10 Feisty. 18" long.

28: Giant Webthrower no po wa ag co de pe sp st 1 20\* 0 10  
20 10 20 20 25 Predator. A 10' long spider; special attack is  
throwing webs which do not injure but impair physical action as if  
injury had occurred.

29: Glower no po wa ag co de pe sp st 1 0 0 10 10 10 20 10 20  
Pet. A phosphorescent half sized bear.

30: Gorilla no po wa ag co de pe sp st 10 0 0 25 10 10 10 10 30  
Herbivore. As in real life. Climb 10.

31: Griffon no po wa ag co de pe sp st 1 0 0 25 20 10 20 20 30  
Predator. 8' long. Half eagle (Fly 10), half lion, loves horsemeat.

32: Hawk no po wa ag co de pe sp st 1 0 -10 10 10 10 10 10 0  
Small Predator. As in real life.

33: Hedgehog no po wa ag co de pe sp st 1 0 0 10 10 10 10 10  
-10 Herbivore. As in real life.

34: Hnakra no po wa ag co de pe sp st 1 0 0 25 30 10 25 20 50  
Predator. An aquatic creature (Swim 10), a great armored  
shark/sea serpent 50-100' long. As in C.S. Lewis's  
\_Out\_of\_the\_Silent\_Planet\_

35: Horse no po wa ag co de pe sp st 30 0 0 20 10 10 10 10 30

35: Horse no po wa ag co de pe sp st 30 0 0 20 10 10 10 10 30  
Herbivore. As in real life.

36: Hoverfeather no po wa ag co de pe sp st 1 0 -10 20 10 10  
10 10 0 Herbivore. A 3' ball of eyes and feathered wings (golden,  
black, brown, or white).

37: Hummingbird no po wa ag co de pe sp st 1 0 -10 30 10 20  
25 40 -50 Herbivore. As in real life.

38: Iceflyer no po wa ag co de pe sp st 1 0 -10 10 10 10 10 10  
0 Predator. A 6' white arctic bird of prey (Fly 10).

39: Icestriker no po wa ag co de pe sp st 1 20\* 0 10 10 25 20  
10 10 Predator. A toothed, clawed 20' acid spitting bird of prey  
(Fly 10).

40: Ironram no po wa ag co de pe sp st 1 0 0 0 20 10 0 10 40  
Feisty. A 15' long, piglike furred beast that rams with its bony  
head.

41: Jewel Serpent no po wa ag co de pe sp st 1 40 0 25 20 10  
10 10 30 Predator. A red, 5-20' serpent with an immense red  
jewel between its eyes which has a phosphorescent glow that  
lasts until an hour after its death. The gem is worth 5,000 gold,  
or 10,000 if it is still glowing.

42: Jumpcling no po wa ag co de pe sp st 2 0 0 10 20 20 30 10  
-30 Pet. A 6" beast with many paws that will jump and cling to a  
person.

43: Jumper no po wa ag co de pe sp st 20 0 -10 50 10 10 10 10  
30 Herbivore. A 4' long beam with two opposite feet that it  
jumps and bounces off with. (Jump 10)

44: Kriit no po wa ag co de pe sp st 1 20\* 0 10 10 30 20 15 0  
Predator. A 5' tall, long-armed beast that spits acid from behind  
trees.

45: Land Octopus no po wa ag co de pe sp st 1 0\* 0 10 10 10 10  
10 20 Feisty. 8-20' spread. Like an octopus, but squirts ink — can  
temporarily blind

temporarily blind.

- 46: Lavishnatim no po wa ag co de pe sp st 1 0 -20 25 10 20 10  
10 -10 Pet. An incredibly curious, 2' rodentlike creature.
- 47: Leviathan no po wa ag co de pe sp st 1 40\* 0 20 40 10 -10  
10 80 Feisty. As in Job. Special attack is breathe fire.
- 48: Mile Long Snake no po wa ag co de pe sp st 1 0 0 10 10 10  
10 10 80 Herbivore(-like). A 20' high snake a mile long
- 49: Milshh no po wa ag co de pe sp st 1 0 -20 20 10 10 30 20  
-20 Pet. A short, 18", round, eyeless catlike creature with long,  
golden fur, and eight short legs ending in round paws.
- 50: Mimic no po wa ag co de pe sp st 1 0 -10 10 10 10 25 10  
-20 Pet. A monkeylike creature that will follow and imitate a  
person.
- 51: Mirior no po wa ag co de pe sp st 1 0 -10 10 0 10 10 10 0  
Herbivore. A humanoid form with mirrorlike skin.
- 52: Mishraim no po wa ag co de pe sp st 1 0 -10 10 10 10 0 10  
30 Pet. Like a giant 5' anteater, but with a shorter snout.
- 53: Monkey no po wa ag co de pe sp st 10 0 -30 20 10 20 10 10  
-10 Herbivore. As in real life.
- 54: Mouse no po wa ag co de pe sp st 1 0 -10 10 10 10 10 10  
-50 Herbivore. As in real life.
- 55: Muckdweller no po wa ag co de pe sp st 1 0 0 30 10 10 10  
10 30 Predator. A black, tentacled, four legged beast that waits  
in the muck and then draws things down in order to drown and/or  
eat.
- 56: Obstructor no po wa ag co de pe sp st 1 0 0 30 20 20 20 0  
50 Predator. A giant (20') eight armed apelike creature which  
will use branches, rocks, etc. to form a barrier around prey  
before throwing rocks at it.
- 57: Ostrich no po wa ag co de pe sp st 1 0 0 -10 0 0 0 30 25  
Herbivore. As in real life.
- 58: Owl no po wa ag co de pe sp st 1 0 -10 10 10 10 10 10 0

58: Owl no po wa ag co de pe sp st 1 0 -10 10 10 10 10 0

Small Predator. As in real life.

59: Panther no po wa ag co de pe sp st 1 0 0 30 10 20 30 10

30 Predator. Climb 5. As in real life.

60: Parrot no po wa ag co de pe sp st 1 0 -10 20 10 10 10 25

-30 Pet. Fly 5. As in real life.

61: Platypus no po wa ag co de pe sp st 1 0 0 10 10 10 10 10 -10

Herbivore. As in real life.

62: Poison Quilled Porcupine no po wa ag co de pe sp st 1 30 0

10 10 10 10 10 0 Herbivore. Like a real porcupine, but three feet

long, and, if struck hand-to-hand without appropriate armor, will

automatically hit attacker. (When it attacks, its attack does not

do poison damage.)

63: Porcupine no po wa ag co de pe sp st 1 0 0 10 10 10 10 10

-20 Herbivore. As in real life.

64: Prairie Dog no po wa ag co de pe sp st 10 0 0 10 10 10 10

10 -15 Herbivore. As in real life.

65: Rabbit no po wa ag co de pe sp st 1 0 -10 20 10 10 20 25

-30 Herbivore. As in real life.

66: Ram no po wa ag co de pe sp st 1 0 0 10 10 10 10 10 20

Herbivore. As in real life.

67: Ricochet no po wa ag co de pe sp st 1 0 0 30 10 10 20 40

20 Herbivore. A fast, 12 legged (equally spaced) 1' red-brown

creature that quickly bounces off trees and everything else if

threatened.

68: Roc no po wa ag co de pe sp st 1 0 -10 0 10 10 20 -20 70

Predator. 100' tall. A giant bird of prey (Fly 10) that eats

panthers.

69: Rock Crusher no po wa ag co de pe sp st 1 0 0 -10 30 0 0

-20 80 Herbivore(-like). A giant (40') creature with stony skin

that sits and eats rocks.

70: Rock Thrower no po wa ag co de pe sp st 1 0 0 10 10 20 20

70: Rock Thrower no po wa ag co de pe sp st 1 0 0 10 10 20 20  
10 20 Feisty. A beast with four legs alternated with four arms,  
throwing rocks.

71: Rodent of Unusual Size no po wa ag co de pe sp st 1 0 0  
300 10 10 20 25 10 Predator. As in The Princess Bride.

72: Sand Trapper no po wa ag co de pe sp st 1 0 0 10 10 20 10  
30 30 Predator. 10-15' high. Lives in sand and shoots up a green  
tentacle to drag in prey.

73: Sea Serpent no po wa ag co de pe sp st 1 0 0 20 20 10 10  
0 40 Herbivore(-like). 20-40' long, swim 10.

74: Shocker no po wa ag co de pe sp st 1 40\* 10 20 20 10 10  
10 30 Predator. An immense (10') deep green to blue lizard with  
slimy black tentacles that deliver a powerful electric shock,  
capable of throwing many creatures. Any creature hit by a  
shocker and taking over 10% damage will be disrupted in the  
action it was completing, drop what it was holding, and forget  
what it was doing/be momentarily disoriented. Thick clothing  
may function as armor against a shocker's attack, as the  
electrical damage only takes place if electrical contact occurs.

75: Skunk no po wa ag co de pe sp st 1 0\* -10 10 10 10 10 10  
-20 Herbivore. As in real life. (Special attack, as in real life.)

76: Sloth no po wa ag co de pe sp st 1 0 -20 10 10 10 10 -20  
-15 Pet. As in real life.

77: Soft Rolling Stone no po wa ag co de pe sp st 1 0 -30 0 20  
0 -30 -10 -30 Pet. A rolling creature that looks like a round,  
mossy stone. Warm and friendly.

78: Sparrow no po wa ag co de pe sp st 20 0 -20 20 10 10 10  
10 -50 Herbivore. As in real life (Fly 10).

79: Spinstar no po wa ag co de pe sp st 50 0 0 30 10 10 10 10  
-30 Pet. A blue (tinged with red) 9" land starfish which whitish  
feet at the end of each limb and a feeding orifice on one side.

Moves by rolling

moves by rolling.

- 80: Stegosaurus no po wa ag co de pe sp st 1 0 0 0 40 -20 -30  
-10 50 Herbivore. As in real life.
- 81: Stinging Insect no po wa ag co de pe sp st 1000 30 -50 25  
25 10 25 20 -30 Feisty. A swarm as in real life.
- 82: Stoneshell no po wa ag co de pe sp st 1 0 0 10 80 10 10 10  
10 Herbivore. A creature with a stonehard shell, 10' tall.
- 83: Strider no po wa ag co de pe sp st 1 0 0 25 25 10 10 30 20  
Predator. 7' tall. A predator which moves incredibly quickly (85  
mph). It is jet black, has long, strong, thin legs, and will try to  
run prey into trees.
- 84: Swamp Thing no po wa ag co de pe sp st 1 0 0 20 10 10 10  
10 50 Predator. A huge malodorous mass of beast. 20-50'
- 85: Tail Spikethrower no po wa ag co de pe sp st 1 20 0 10 20  
20 10 10 30 Predator. 9' long. Like a scorpion, but throws  
poisoned spikes.
- 86: Tar Baby no po wa ag co de pe sp st 1 0 -10 -30 30 10 10 0  
10 Feisty. A black, tar-covered beast. Any weapon or limb which  
strikes it will stick and require an hour to free.
- 87: Terrask no po wa ag co de pe sp st 1 0 0 10 80 10 10 10  
100 Feisty. An immense, dinosaurian creature (200' tall), pale  
grey to black at different spots.
- 88: Thousand Legged Roller no po wa ag co de pe sp st 1 0 0  
25 10 10 20 30 30 Herbivore. Great multi-colored 6' ball covered  
with legs, by which it rolls.
- 89: Ticklebug no po wa ag co de pe sp st 1 0 0 10 10 30 30 10  
-30 Pet. A little, 6" furry creature (white, gold, tan, orange,  
calico, grey, brown, red, or black) with long whiskers, fond of  
touching other creatures very lightly.
- 90: Torpor Beast no po wa ag co de pe sp st 1 40\* 0 10 10 10  
10 10 10 Predator. A beast with four limbs and a spiked trunk —  
snikes inject a potent sleeping poison

spines injure a person sleeping person.

91: Translucent Frog no po wa ag co de pe sp st 1 0 -10 25 10  
10 10 10 10 Herbivore. An animal such that you can see into its  
body to look at its inner workings.

92: Trin no po wa ag co de pe sp st 30 0 -20 30 10 10 10 10  
-10 Herbivore. This beast is short, round, and flat, with tan fur.

93: Turtle no po wa ag co de pe sp st 1 0 0 -10 60 0 0 -30 10  
Herbivore. As in real life.

94: Tyrannosaurus Rex no po wa ag co de pe sp st 1 0 0 -10 10  
10 0 -10 60 Predator. As in real life.

95: Warm Fuzzy no po wa ag co de pe sp st 1 0 -30 10 10 10  
30 0 -20 Pet. Same colors as a ticklebug, round, 8", with very  
long, very soft fur. Can climb (Climb 2) very comfortably and  
snuggle for hours. Used like teddybears.

96: Water Sprite no po wa ag co de pe sp st 25 0 -20 50 10 10  
10 10 -10 Herbivore. An extremely shy and beautiful form that  
comes out once a year to dance in the moonlight.

97: Wind Hummer no po wa ag co de pe sp st 1 30 0 50 10 10  
10 20 -40 Feisty. 1' tall. A quick, translucent (Dodge 50, Fly 40),  
stinging creature.

98: Wolf no po wa ag co de pe sp st 20 0 0 10 10 20 10 10 20  
Predator. As in real life.

99: Wyvern no po wa ag co de pe sp st 1 30 0 20 20 10 10 10  
25 Predator. A flying (10', Fly 10), red-brown stinging reptilian  
predator.

100: Game Master's Creation

Random Person Encounters:

In general, 1-10 people will be encountered. (Hermits will  
always be encountered alone.) Several factors/scales are given  
(race, profession, Myers-Briggs personality type, etc.); the GM  
need only generate as much information as he needs to get an  
idea of how to play it.

Random personal encounters

Random personal encounters are, in essence, an opportunity to role play social interaction, and should be played as such. While there are other possibilities, such as trading for equipment or information, the game master should focus on making the encounter an interaction with interesting people who will make play more interesting.

These tables are for encounters out in the wild — generally, parties of people who are mostly adventurers. Encounters in a city or village should be different.

Character race and roles	N	T	U	Y	J
1: Janra Acrobat	1	1	1	1	1
2: Janra Acrobatic Scout	2	2	2	2	2
3: Janra Actor	3	3	3	3	3
4: Janra Archer	4	4	4	4	4
5: Janra Bard	5	5	5	5	5

### Myers-Briggs Personality Type:

Shal: 1-3 Extrovert, 4-10 Introvert; Other: 1-7 Extrovert, 8-10

Introvert 1-6 Sensing, 7-10 INTuitive

Male: 1-6 Thinking, 7-10 Feeling; Female 1-4 Thinking, 5-10

Feeling. 1-5 Judging, 6-10 Perceiving

Handedness: Janra 01-75 left, 76-95 ambidexterous, 96-100

right; other 01-94 right, 95-99 left, 100 ambidexterous

Birth Order: 1-3 first, 4-6 middle, 7-9 last, 10 only

---

Section II L: Equipment, Devices, Chemicals, Herbs, and  
Money

---

In the monetary system, 1 gold sovereign (au) = 2 electrum sceptres (el) = 8 silver crowns (si) = 64 copper pennies (cu) = 256 iron tips (fe). Price is variable; a device could easily be sold for twice or half its listed cost here. All coins are of the same weight; 64 of them weigh a pound.

Adventuring equipment as a rule is scarce and difficult to acquire. The ad (acquirement difficulty) given for equipment is e (easy), m (moderate), d (difficult), vd (very difficult), and ed (extremely difficult). The races in whose homeland the items are easily found are designated by first initial ('J' denoting Jec rather than Janra, as the Janra have no homeland); items may be found in other lands, but at a difficulty one notch higher (so difficult becomes very difficult, etc.).

The following are illustrations of devices and equipment available. Other equipment in the same spirit (as described in the game master's introduction, section IV) is encouraged with game master discretion. Each device is slightly different; they may well have modifications (such as a tiny hidden compartment). There should ideally be thousands of unique devices, of which the listed examples are but a tiny hint. Chemical prices, unless otherwise specified, are per fluid ounce, and herbs per ounce. Chemicals which temporarily affect attributes do *\*not\** affect st and co contributions to health value.

Armor made not out of steel but out of special alloys may be found, at one notch higher ad and ten times the price, with all the protection but only half the penalties. When armor reduces damage by a fixed percentage, it should be read as the exponent of the damage which is reduced.

Animals (trained or otherwise friendly) may be acquired at a difficulty of the sum of the squares of their attributes, for half

the ad if their behavior type is pet, ad for behavior type herbivore, twice the ad for behavior type small predator, three times the ad for behavior type predator, and four times the ad for behavior type feisty.

What is listed is specifically equipment which will be useful to adventurers. There are an infinitude of other objects which exist — clockwork devices which are built up to perform various tasks (such as play music or be a moving model of the solar system) much as a computer programmer assembles instructions to make a program; herbs which act as spices, or which, when drunk as a tea, have a mild narcotic effect (which herbs are carefully and temperately used, just like alcohol), or chemicals which, when mixed, turn a complex rainbow of scintillating colors — and they would take forever to list. Here is a simple example of what may be useful to adventurers, to give the game master a feel for the spirit of creation.

### Devices and Equipment

	Cost	ad	Name
5 au	m		Axe/Hatchet (wa 0) (N, T, U, Y, J, S)
	3 au	d	Backpack (T, U, Y)
20 au	d		Belaying Device, automatic — a springloaded box with at one end, a crank on the side, and which shoots grappling hook. This device catches a climber who preventing injury, and allowing him to try again in grip (thereby effectively doubling climbing skill)
4 au	d		Camouflage cloak — usually forest green, dark grey occasionally brown, these can lower the difficulty one notch (T, U, Y, C)
8 au	d		Cat's Claw — an angled iron or steel clawed boot and glove which is highly effective at attaching to surfaces; someone wearing a Cat's Claw has a climb increased by 10. (T, U)
50 au	d		Chain Mail: -20 to sharp damage suffered, and -5 to damage; 5-st penalty to ag, de, sp; -20 to Move Silently (For instance, a character with st -5 would suffer 10 to ag, de, sp).
500 au	vd		Chain Mail, "feather": -15 to sharp damage and -3 to damage; -10 to Move Silently (U)

damage; -10 to move silently. (U)  
 5-20 au m Chest, Locked, Reinforced – size varies with price  
 5 au d Cloth tape – 50 yards (U)  
 400 au vd Collapsible rowboat – skeleton of iron bars and j  
 oil skin surface, when taken apart and packed away  
 large back pack. (U)  
 3 au d Compass (U)  
 10 au m Crossbow (wa 0 Urvanovestilli, 10 Tuz; strength di  
 load 0 Urvanovestilli, 10 Tuz) (T, U)  
 200 au vd Crossbow, Pump-Action – a pumping action loads the  
 so that the time to load and shoot is 5s instead c  
 0, loading requires action of strength difficulty  
 400 au vd Crossbow, Spray – a cup on the front of the bowstr  
 20 bolts which, when fired, fan out in a spray. w  
 effectively increases firer's skill/accuracy by 10  
 cannot be gainfully used with a telescopic sight)  
 3 cu m Crossbow Bolt (T, U)  
 1 au d Crossbow Bolt, Exploding (+20 to wa) (U)  
 1 au d Crossbow Bolt, Harpoon – a fine wire or silk cord  
 inside the shell, and an end can be attached to th  
 other anchor.  
 1 au d Crossbow Bolt, Poison Injecting (U)  
 5 au d Crowbar (T, U)  
 2 au m Dagger (wa 0 hand to hand, -10 thrown) (N, T, U, J  
 80 au vd Dagger, Obsidian, Razor-edged (wa 5 hand to hand,  
 (U)  
 40 au vd Dagger, Poison Injecting (wa 0) (U)  
 60 au vd Directional mechanical listening device – a pair c  
 for the ears. It has a sight and a hard parabolic  
 a tube which goes to the ears at the focus – incom  
 from the direction it faces is echoed into the tub  
 with exceptional sensitivity.  
 15 au d Earhorn – effectively doubles hear noises skill  
 2000 au ed Firestar – a longsword with a hollow, insulated ha  
 network of veins inside the blade leading to a por  
 which will be covered in burning oil (po 20, hotte  
 more damage possibly available upon searching).  
 25 au d Fishing Rod, collapsible (U)  
 6 au d Goggles, Waterproof (U)  
 2 au d Grappling Hook (T, U)  
 1 el d Gunpowder (U)  
 30 au d Halberd (wa 15) (T, U)  
 200 au d Hang Glider (U)  
 600 au vd Hang Glider, Collapsible – can collapse to backpac  
 pop out at the push of a button (U)  
 60 au d Herbal/Chemical Medicine kit – medicines allow an  
 character to heal faster. (Easy medical skill che  
 causing damage (prevents healing that dav). diffic

skill check to double rate of healing) (U, Y)

3000 au vd Hot Air Balloon (U)

150 au d Hummer – a small device which emits a high and low (inaudible to humans) which is 90% likely to repel animals. (U)

1000 au vd Jack/Rabbit Tool – This device has two hardened st each shaped like a flattened chisel, and a crank w turned, will slowly (over the course of a few minu the prongs to push apart with very powerful force the strength of the using character), sufficient t force most doors and chests open. (U)

10,000 au ed Juggernaut – a movable room and armored vehicle, c going over all sorts of terrain at the average jog the party inside, which seats 4-8. A very good pl in a Tuz forest. (U)

1 au e Knife (wa -3 hand to hand, -8 thrown) (N, T, U, Y,

120 au vd Ladder, Collapsible – expands at the push of a but can be collapsed to an object 18"x8"x4". (U)

40 au d Lance (wa 3) (T, U)

5 au e Lantern (T, U, J)

10 au d Lantern, parabolic mirror – beam of light comes ou one direction. (U)

10 au e Leather Vest: -7 to sharp damage, -3 to blunt dama penalties (N, T)

5 au d Lighter – like a cigarette lighter, but with a wic instead of butane. (U)

30 au d Lock Picks (U)

10 au m Longbow (N, T, U)

1 si m Longbow Arrow (N, T, U)

10 au d Longsword (wa 10) (T, U)

5 au d Mace (wa 5) (T)

1000 au ed Manual of Skill (specific skill) – A Manual of Ski instructions and insights into one particular skill after a month's usage a character will gain five e points in that skill. Unless the game master expl specifies otherwise, all manuals of skill when fou in extremely poor condition and will fall apart an completely unusable after one character has used i

80 au d Medical Kit – allows a character's medical skill t in caring for the healing of another. (U)

10 au d Periscope (U)

2 au m Pickaxe (T, U, J)

100 au d Plate Armor, heavy: -30 to sharp damage, -20 to bl penalties 20-st to ag, de, sp; -20 to Move Silentl

200 au vd Plate Armor, light: -15 to sharp damage, -10 to bl 5-st penalties to ag, de, sp; -20 to Move Silently

50 au vd Pneumatic-Powered Liquid Sprayer, glass coated ins

are powered by compressed gas cartridges; some are pumping to build up pressure. (U)

15 au m Rapier (wa 5) (U)

500 au vd Reference Manual (specific skill) – A reference manual consulted, allows a character to make a skill check had five ep more (adjusted for gear but not al) after hour's consultation in preparation for that specific and as if he had ten ep more after one day's consultation.

1 au d Robe, many-pocketed (U, Y, J)

1 au m Rope, 50' (N, T, U, Y, C) 50

50 au d Rope, 50', silk (much thinner, smaller, and stronger than normal rope). (U)

350 au vd Self Contained Underwater Breathing Apparatus (U)

100 au vd Sewing Machine, portable (U)

10 au d Shield – its usage skill (block, works exactly like a shield). (T, U)

3 au m Slide Rule (U)

3 au d Snorkel (U)

2 d Soft cloth/leather boots/shoes – effectively increase wearer's move silently skill by 10. (U, Y, S)

10,000 au ed Spider Silk Robe: -30 sharp damage, -5 blunt damage associated penalties. (U)

30 au d Springboard – with running start, doubles jump skill

300 au vd Staff, Rocket Launching – launches rockets that explode (1 yard r+50-damage fireball) (U)

50-200 au d Swiss Army Knife (U)

1 au vd Syringe (U)

10 au d Telescope, 10x magnification (U)

100 au 64 Telescope, 100x magnification (U)

500 au vd Telescope, zoom, 10-250x magnification (U)

50 au d Telescopic Crossbow sight – allows for a shot taken in time and prone to have accuracy increased by 50 if used with a difficult Urvanovestilli crossbow and adjusted with a difficult device craftsmanship/engineering check. (U)

200 au vd Tent, framed – collapses to fit inside a moderately sized backpack. (U)

1 au e Tinderbox (N, T, U, Y, J, S)

20 au e Tool Kit (U)

50 au d Two-handed sword (wa 20) (T, U)

10 au m Watch (U)

1 au m Waterskin (N, T, U, Y, C, S)

15 au m Winter Clothing – lowers cold tolerance difficultly by 1 notch. (N, U, C)

1 d Wire, steel, 5 yards

10 au d Wire Saw (U)

## Non-Herbal Chemicals

500 au ed Adrenaline serum. One ounce of this hormone per lb of body weight will affect attributes with the following adjustments: ag+5, al+15, ch-10, de-5, kn-8, me-8, st+15, wi-15. At the time of being injected, the character must make one constitution check, of difficulty equal to the number of ounces of adrenaline injected per hundred pounds of body weight. If this check is failed, then the character causes him to run in fear from any threat until it is cured. (Note that this reduces wisdom as quickly as it reduces strength; a character with wisdom reduced to .1 or lower is no longer under the control of the player.) Also, adrenaline causes an injured creature (as long as it's still alive) to function as if not injured.

100 au ed Anabolic steroids. One ounce of this, appropriate for the character and spread over a year with vigorous exercise, will increase strength by 2. (After the year, no further steroid use will bring increase. Increased steroid use will reduce the base strength, unadjusted by steroids). The number of ounces is subtracted from constitution.

1 au d Docility Drug (po 10) – this and other drugs take the drug "damage" combined with actual damage bring the character below zero health value (U)

5 au 64 Docility Drug (po 20) (U)

25 au vd Docility Drug (po 30) (U)

125 au 1024 Docility Drug (po 40) (U)

625 au ed Docility Drug (po 50) (U)

1 si d Glue (U)

1 au vd Glue, exceptional strength (if allowed to set, is stronger than the materials it has bonded together)

8 au vd Nitric Acid – comes in a glass container (one of few substances it will not eat through), with a tiny explosion (U)

2 au vd Compressed Gas Cartridge (U)

1 cu e Lantern Oil (T, U, J)

1 el d Lantern Oil, Extra Bright – when burnt in a lantern will illuminate a room as brightly as daylight. (U)

1 au d Poison (po 10) (U)

5 au 64 Poison (po 20) (U)

25 au vd Poison (po 30) (U)

125 au 1024 Poison (po 40) (U)

625 au ed Poison (po 50) (U)

2 au d Roman Candle (U)

1 au d Sleeping Drug (po 10) – this and other drugs take the drug "damage" combined with actual damage bring the character below zero health value (U)

5 au 64 Sleeping Drug (po 20) (U)

25 au vd Sleeping Drug (po 30) (U)

125 au 1024 Sleeping Drug (po 40) (U)

125 au 1024 Sleeping Drug (po 40) (U)  
 625 au ed Sleeping Drug (po 50) (U)  
 1 au d Smoke Bomb (U)  
 10 au vd Thermite — a mixture of powdered rust and aluminum  
 when ignited with a magnesium fuse (generally available  
 wherever thermite is available), burn through near  
 — steel, sand, asbestos...). (U)

Herbs and Herb Derivatives — some herb effects derived  
 from the net.book on herbs. Herbs, in raw form, may be acquired  
 using the herbalism or woodlore skills as well as acquisition, in  
 which case they are obviously free.

1 sp m Aloe Vera — when rubbed over sunburnt skin, alleviates  
 pain and causes healing to occur at four times the normal rate.  
 50 au ed Angel's Hair — this herb, when dried, powdered, and  
 mixed with water to make a viscous fluid, will, when drunk (one  
 dose per day) reduce aging by 1/4. 1 sp m Coffee — one silver  
 piece's worth per hundred pounds body weight will bring adjust  
 $pe*1.1$ ,  $sp*1.1$ , cube of silver piece's worth per hundred pounds  
 body weight will adjust  $de*.98$ ,  $in*.98$ . Lasts one hour. (U) 1 au d  
 Cofisa Tea — a tea with strong herbal extracts that focuses and  
 intensifies nervous system impulses to the muscles. Adjusts  
 $st*1.1$ , cube adjusts  $pe*.98$ . Lasts 15 minutes. 4 au vd Desp —  
 when an extract of this herb is injected, it causes the person to  
 continue strenuous exercise for ten times the normal duration,  
 after which he will fairly quickly fall asleep. 1 au d Docility Drug  
 (po 10) — this and other drugs take effect when the drug  
 "damage" combined with actual damage brings an animal below  
 zero health value (Y) 4 au 64 Docility Drug (po 20) (Y) 16 au vd  
 Docility Drug (po 30) (Y) 64 au 1024 Docility Drug (po 40) (Y)  
 256 au ed Docility Drug (po 50) (Y) 1 cu d Ficop — A liberal  
 distribution of a paste made of this herb, held on with dressings,  
 (one pound per square foot), will cause burns to heal at four  
 times the normal rate. 1 au m Gentian Violet — this herbal

extract, when applied to a bleeding wound, will cause it to rapidly slow, scabbing unless it is a major vessel. 1 au d Hallucinogenic Mushroom Extract — this and other drugs take effect when the drug "damage" combined with the actual damage brings an animal below zero health value. An animal in combat who hallucinates has a 50% chance of being scared off by hallucinations, and, if not scared, has a 50% chance of attacking hallucinations rather than threats (po 10) (Y) 4 au 64 Hallucinogenic Mushroom Extract (po 20) (Y) 16 au vd Hallucinogenic Mushroom Extract (po 30) (Y) 64 au 1024 Hallucinogenic Mushroom Extract (po 40) (Y) 256 au ed Hallucinogenic Mushroom Extract (po 50) (Y) 2 sp d Hedisc — when rubbed on scars daily (one ounce can cover one square inch of scar for one week), causes scars to heal fully within a month (Y) 50 au d Herbal Medicine Kit (Y) 5 au vd Hesniana — when made into a tea and drunk, this adjusts pe+5 noncumulatively for ten minutes. (Y) 1 el d Hofiu — anti-nauseant (Y) 20 au vd Kedlidi — diminishes by half the effect of alcohol (non-cumulatively). (Y) 1 sp d Locriat Tea — This includes a variety of teas which, a day after drinking, will begin to color the drinker's skin (and, in some cases, hair); the colors will wear off with discontinuation after about a month to half a year (depending on how much has been consumed); possible resultant colors may be described as any color which may be obtained by rubbing a non-opaque dye onto a person's skin. (Y) 2 au m Nesrit — When burned in a fire, the resulting smoke will leave an odd scent in the air which will repel insects and snakes for one hour (Y). 3 au d Plei Kr't Sha — this herb, when taken orally, will in ten minutes cause a person for an hour to be aware of painful stimuli but not feel them as pain, and not to be nauseated by grotesque sights or thoughts; used frequently in surgery (Y) 1 au d Poison (po 10) (Y) 4 au 64 Poison (po 20) (Y) 16 au vd Poison (po 30) (Y) 64 au 1024 Poison (po 40)

(Y) 256 au ed Poison (po 50) (Y) 1 au d Poison Antidote — Poison antidotes are specific to the plant, and/or creature from which the poison originated. There are three or four common poisons of each strength and several uncommon poisons of each strength (price and ad up by a factor of four) (po 10) (Y) 4 au 64 Poison Antidote (po 20) (Y) 16 au vd Poison Antidote (po 30) (Y) 64 au 1024 Poison Antidote (po 40) (Y) 256 au ed Poison Antidote (po 50) (Y) 1 au d Sleeping Drug (po 10) — this and other drugs take effect when the drug "damage" combined with actual damage brings an animal below zero health value (Y) 5 au 64 Sleeping Drug (po 20) (Y) 25 au vd Sleeping Drug (po 30) (Y) 125 au 1024 Sleeping Drug (po 40) (Y) 625 au ed Sleeping Drug (po 50) (Y) 2 au d Solvi — causes internal blood clots to dissolve (Y) 2 au m Stiv Tea — causes neurons in the eye to fire once per photon detected instead of once every seven, thereby causing a person to be dazzled in bright light, see in dim light as if it were bright, and see in very weak light (moonless starlight, indirect candlelight) as if it were dim. 5 au d Talinor Tea — adjusts in+2, pe-1, sp-1, wears off in one hour (U, Y)

---

## Section II M: Speed and Simultaneity

---

This section is optional:

The exponent of a creature's speed is looked up in the log/exponent table, and actions are shortened in duration by that divisor. For example, a creature of speed 10 has an exponent of 2, so he does things twice as fast (he takes half as long to do things).

Creatures may voluntarily speed up or slow down actions, affecting the difficulty as follows: let's say that a character wants to perform an action 4 times as fast. The log of 4 is looked up in the log/exponent table: 20. This number is added to the difficulty of the action: it is 20 points more difficult to perform the action at 4 times normal speed. Creatures can benefit from slowing down to perform actions, up to a difficulty 10 points lower by taking twice as long.

A character may perform  $n$  actions simultaneously with the difficulty for each increased by the log of  $n$ : 10 points for 2 actions, 20 points for 4, etc. Common sense should be applied to what can be done simultaneously; archery and horseback riding are sensible concurrent activities, while archery and juggling are not. Running while doing other activities does not require an ability check, but does count as a simultaneous activity (increasing the difficulty of the other activities performed).

---

## Section III: A Quick Key to Abbreviations

---

Here is what each abbreviation means. It may be convenient to print out this page to have on hand until the abbreviations become familiar.

	ad	acquirement difficulty
	ag	agility
	al	ability to learn
an		one half anatomy skill, rounded down
	au	gold
	av	adjusted value
b		number resulting from rolling the blue die
	bs	base skill
	ch	charisma
	co	constitution
	cu	copper
	d	difficult
	de	dexterity
	dl	difficulty of learning
	e	easy
	ed	extremely difficult
	el	electrum
	ep	experience point(s)
	fe	iron
	gaa	governing attributes addend
	in	intelligence
	kn	knowledge
	ld	learning difference
	m	moderate
	me	memory
	ms	medical skill
	pe	perception
	po	poison
r		number resulting from rolling the red die
	si	silver
	sp	speed
	st	strength
	ub	untrained base
	vd	very difficult
	wa	weapon adjustment
	wi	wisdom

---

## Section IV: A Sample Character sheet

---

Here are parts of a sample character sheet being set up, in order to make the model perhaps easier to understand. I am demonstrating using my stopwatch as a ten-sided die (starting and stopping it, and then looking at the place for hundredths of seconds), and a simple four function calculator. The number of decimal places kept track of is somewhat arbitrary, but I will use two.

First, I decide the character's race, age, and gender (young Yedidia female). We'll call her Ocula. (We should also have an idea of what kind of skills she will have — I'll say a perceiver, although her 30 ep may be devoted any way I want.) Second, I generate 36 numbers as r-b (I roll the red and blue dice, subtracting the value on the blue die from that on the red die — if the red says '3' and the blue says '5', then the number is 3-5, or -2):

n1: 4; n2: 3; n3: 2; n4: -1; n5: -3; n6: 0; n7: 3; n8: -2; n9: 1;  
 n10: 0; n11: 4; n12: -3; n13: -1; n14: 5; n15: 2; n16: 2; n17: 3; n18:  
 0; n19: -1; n20: 1; n21: -1; n22: -1; n23: 0; n24: -5; n25: 1; n26: 2;  
 n27: -1; n28: 4; n27: -2; n28: 1; n29: -3; n30: 4; n31: 1; n32: -1;  
 n33: 0; n34: -1; n35: 0; n36: 2

Now, using those 36 random numbers, I calculate her attributes as given in section II A, and adjust them as given in section II B:

Attribute	Racial	Gender	Age	Adjusted
ag: $4+3+2-1-3=5$	+0	+0	+5	10
al: $4+0+3-2+1=6$	+0	+0	+5	11
ch: $4+0+0+4-3=5$	+5	+0	+0	10
co: $-1+5+2+2+3=11$	+0	+0	+5	16
de: $4+3+2+0-1=8$	+0	+2	+5	15
in: $4+0+3+1-1=7$	+3	+0	+0	10
kn: $4+0+3-1+0=6$	+0	+0	-4	2
me: $4+0+3-5+1=3$	+0	+0	+0	3
ne: $4+3+2-1+4=12$	+10	+5	+5	32

sp:	$4+3-3+4+1=9$	+0	+0	+5	14
st:	$-1+5-1+0+1=4$	+0	-5	+5	4
wi:	$4+0+3+0+2=9$	+0	+0	+0	9

For all unadjusted attributes, 0 is average, and how far above or below 0 the character's attribute is is how far above or below average the character is in that attribute.

Ocula is above average in virtually everything; this is unusual even for a heroine. (If the player does not like the first attributes generated, he may generate new ones — while Ocula is unusually gifted, heroes should be above average.) Ocula is, as compared to other young Yedidia women, mentally sharp, moves quickly, healthy, and exceptionally perceptive.

Now it is time to allocate initial experience. Ocula has 30 points to distribute on skills (above and beyond her untrained bases as a Yedidia female). Using one of the given roles, she will be a perceiver (her experience devoted, as listed in section II H, are blind action  $3*1=3$  ep, guess actions  $3*3=9$ , etc.).

Now, for a daily encounter check. Will there be an encounter?

1. Encounter. What kind of encounter? 2. Animal. What animal? 19. Duck. How will it be/ behave? 3. It is curious.

Upon seeing the duck, she will guess actions to see what it will do. Now we will calculate her guess actions skill.

Her untrained base for Guess Actions is 20. She has 9 ep devoted, so we calculate her bv as follows, consulting the log/exponent table: the exponent of 20 is 4.  $4+9=13$ , so this is what her experience does. The log of 13 is 37, so she has a base skill of 37 for Guess Actions. Her al is added to this (11), and her gaa as well (32). Her av (adjusted value) for guess actions is 80.

Guessing actions for a person under normal circumstances would be of moderate difficulty; guessing the actions of a nonhuman animal is difficult (difficulty 40). Her success index is

$80-40=40$ . The dice are rolled; red yields 4 and blue yields 1.  $(6*4)+1=25$ , and looking at the table, she needs a success index of at least -1. Ocula succeeds in guessing what the duck is going to do, namely try to figure out if she is going to attack and, if not, if she is safe to approach.

Later, a young Urvanovestilli man, in his wanderlust, comes through to visit. He has a pianoforte music box which entrances her. He is a bit of a maverick, and tells her that he will bet the music box against a well aged bottle of strawberry wine that he can beat her in a gambling game. She agrees.

He is a good gambler (gambling 30), and has an unadjusted perception of 3, adjusted 8. His  $al$  is 5, so his gambling skill is 43.

Ocula is not particularly skilled at gambling, but she can guess actions well — a skill closely related to gambling — and guess actions and gambling have an  $ld$  of 10, so she can gamble 70. Skill against skill; she has a success index of 27. Red rolls 5, blue rolls 2, for a roll of 32. She needed a success index of -11 or higher to win, so she won.

Ocula completes a quest, gaining two experience points. She decides to devote both of them to guessing actions. Her  $bv$  is 37, which has an exponent of 13. Adding the two experience points make it 15, which has a log of 39. With this two point increase, her new  $av$  is 82. (If she had trained with a tutor of sufficiently high  $av$  (84 or more — which would have been found on an acquisition skill check of difficulty 84), she would have gotten double benefit out of her experience, adding 4 to the exponent instead of 2, yielding 17 with a log of 41, so her new  $av$  would have been 84.)

Ocula's initial character sheet (without experience from the quest) is as follow:

Ocula Yedidia Female Age: 33

Attribute	Racial	Gender	Age	Adjusted
ag: 4+3+2-1-3=5	+0	+0	+5	10
al: 4+0+3-2+1=6	+0	+0	+5	11
ch: 4+0+0+4-3=5	+5	+0	+0	10
co: -1+5+2+2+3=11	+0	+0	+5	16
de: 4+3+2+0-1=8	+0	+2	+5	15
in: 4+0+3+1-1=7	+3	+0	+0	10

## Section V: Notes and Properties

---

These are my comments about the model — about properties that I see as desirable and undesirable, plus miscellaneous comments.

It is a discrete, integer, dice-oriented translation of a continuous, real-valued model having the following properties:

Miscellaneous: The model (or, more properly, the racial and age attribute adjustments and racial base skills) is not balanced. I intentionally placed realism above balance in model design.

Undesirable properties:

Desirable properties:

The model is continuous and real-valued.

Related attributes are correlated in value.

What attributes are, and their impact, is appropriate.

Adjustments take the form of multiplicands, rather than addends.

Adjustments make a substantial impact on individual checks, rather than just being a subtle and minute increment.

Attributes adjust skills.

Experience devoted to skills produces an appropriate law of diminishing returns — it takes a little while to learn a little, and a long while to become a virtuoso.

Related skills apply to each other.

The model is simple and unified — one model fits all — and can be easily programmed into a scientific calculator.

Once a character's skills are calculated, there is no more calculation for a while.

I like the way it handles time and actions.

Having listed other little virtues that this model possesses, I wish to delineate one virtue which I consider cardinal.

This model is small and incomplete; it possesses a limited

domain.

It is the wide consensus of gamers that r-o-l-e-play is infinitely superior to r-o-l-l-play; this model is a miniscule thing which governs a tiny part of play, and calls for contrainte in use. It governs certain natural abilities and certain developed skills; I would like to point out two major areas of play that it doesn't touch.

The first is something which is traditionally a part of play and which mathematical models are kept out of: tole play: who a character is, what his personality is, what makes him tick, what his spiritual state is. It is something which is governed by an understanding of how things are done that cannot be reduced to rules and algorithms. On this point, I don't feel the need to explain further.

The second is something which is traditionally a part of play in some form or other and which is traditionally governed by mathematical models, much to the detriment of play. It consists of things like the motion and gifts of the Spirit, the prayer of faith, divine intervention, etc.

In D&D, a cleric's prayer power is reduced to another form of mechanized spell casting: a cleric gets such and such many prayers of the following power levels per day, as a function of his wisdom and the number of creatures he has killed. Star Wars is no better: using the Force is just one more skill which happens to be accompanied by some more rules about conduct. Neither is GURPS.

God is good and he is reliable, but he is not safe and not tame, and certainly not predictable enough to reduce to a model. While God is not predictable, incorporating a great deal of randomness in a model won't cut it. God, when listening to prayers, weighs the petitioner's faith and motives, the situation, and then makes

a decision that, while unpredictable, is governed by infinite love and wisdom. This is, if anything, less, not more, reducible to algorithms than personal interactions. This calls for the *GM* to pray, rely on the Spirit, and think. *God's* action must be handled as the most challenging and delicate role to portray, and it takes a game master created in the image of *God* to do.

# Further Notes

## The Minstrel's Song: Further Notes and Musings

A note on magic...

Most people reading this have probably noticed the absence of anything magic.

This absence is quite intentional, and of it I would like to say a couple of things.

First of all, magic is sin. It's that simple.

But, you may say, playing a character who uses magic does not mean that the player is tracing runes in the air, drawing chalk circles, and so on.

If you mean in the hands, granted. But there is something more to say.

One of the themes in the Sermon on the Mount is that purity belongs not only in the hands, but is to penetrate to the heart. Listen to how this precept is applied to sexual purity: "You have heard that it was said, 'You shall not commit adultery.' But I say to you that anyone who looks at a woman lustfully has already

committed adultery with her in his heart."

That is to say, sin does not begin with the full act of sexual intercourse (outside of marriage); it is sinful to use the imagination to commit adultery in the heart — and a man who so much as casts one glance in lust has already done so.

The application to magic means that sin does not begin with chanting the words in a spellbook; it is wrong to use the imagination to use magic in the heart... and, just as lust does not begin after spending several minutes imagining every last instant and detail of foreplay and intercourse, pretending to use magic does not begin after imagining every last detail of casting a spell.

Role playing games provide a way to pretend, to use the imagination to become the great explorer who voyages into the unknown, the romantic bard whose tales spin beauty and wonder.

Nobody wants to play a scullery maid or a cobbler who makes shoes day in and day out; a character who is played for enjoyment is someone whom it would be enjoyable to be. To play is to pretend; to have fun by playing a magical character is to have fun by committing the sin of sorcery in the heart. (The same also goes for violence, deceit, thievery, etc.)

The second thing to say is this: God creates. Satan only mocks. forming counterfeit substitutes.

Lust is not a wonderful creative flair which Satan came up with. Marriage, including sex, is God's good creation; it is sacred, so much so that the Song of Songs (a Hebrew superlative meaning the greatest and most beautiful of songs) is devoted to eroticism. Lust is a cheap substitute, a cold prickly where God intends warm fuzzies. It can only be appealing because of the goodness of sex.

If the analogy is extended to magic, several useful things can be drawn from the analysis.

The question, "Why do people derive pleasure from pretending to use magic?" has two answers which I can immediately see.

The first is "Power." Magical powers enable characters to do amazing things.

Power is certainly not innately evil — God is all-powerful, and the believer who walks in the Spirit grows in power — but Satan often twists it to do what it was never meant to; function as a substitute for love. Totalitarian dictators and despots are rarely described by psychologists as having spent childhood surrounded by warm and compassionate friends; they are rather described as having been picked on and bullied. Power has a place in life, but role play is not enhanced by making characters into demigods.

The terms 'munchkin' and 'Monty Haul' do not describe a solid campaign. Perhaps a character is less powerful in some ways if he does not have a cloak which turns him invisible, but that does not make him a boring and pointless character.

The second, and in my estimation far more informative, answer to the question is, "Wonder."

In common speech and in literature, words such as 'magical' and 'enchanted' are used to describe things that are spectacular, awe inspiring, breathtaking.

God created people to be filled with wonder. Wonder fills pious living, and one of the many evils of looking to magic is that it has a grievous potential to blind people to the wonder God wants to fill them with.

There is wonder in little things that often go unnoticed; in the dance of a candle's flame and the feel of a gentle breeze. The created order — from the deep majesty of the starry vault, to the height of the mountains, to the depth of the oceans — is, as the human body, fearfully and wonderfully made.

There is also wonder in music, in art, in dance, in the form of ideas. It lies in personality, in the beauty of the human spirit. Finally, above and beyond these and many other things, is a source of wonder greater still.

The final and greatest source of wonder is God himself.

It is the motion of the Spirit which animates worship; indeed, Spirit-filled worship is probably the most wondrous element of human experience. It is the motion of the Spirit which enables men to speak in the tongues of men and angels; it is the motion of the Spirit which transported Philip from the Ethiopian eunuch to Azoth.

One need only read the story of Elijah and the prophets of Ba'al to catch a little of this. Elijah summoned the four hundred and fifty prophets of Ba'al, and asked the people of Israel, "How long will you waver between two opinions? If Yahweh is God, worship him, but if Ba'al is God, worship him." He proposed a contest: each would have a bull to offer in sacrifice; the hundreds of prophets of Ba'al would ask Ba'al to send fire to their sacrifice, and Elijah would ask Yahweh to send fire to his sacrifice, and the one who answers with fire — he is God.

The prophets of Ba'al went about for hours dancing and gashing themselves, taunted by Elijah: "Surely Ba'al is god! Why don't you cry a little louder? He could be asleep, or traveling.

Who knows? Maybe he's sitting on his porcelain throne."

After a while, it was Elijah's turn. He told the people, "I don't want to bore Yahweh. This is too easy." So, after preparing the sacrifice, he made the people thoroughly drench it in water, and drench it again, and then drench it again. Then he prayed, and fire came down from Heaven, consuming the bull, the wood, and all of the water.

It is not in magic, but in the Spirit — always faithful and

never predictable — that the believer finds wonder.

---

One more note on magic:

There are certain elements of magic which seem to recurrently appear in Christian-designed fantasy role playing games.

I am referring in particular to magic in which the Bible or some book of liturgy becomes a spellbook, and verses/prayers/quotations become runes, incantations, etc.

If I may provide an analogy...

Creating a pornographic film is wrong.

Creating a pornographic film which has as its characters the characters of the Gospel (ergo, where it is Jesus, his disciples, Mary Magdala, the prostitutes and tax collectors whom Jesus said were entering the Kingdom of Heaven ahead of the Pharisees and so on who have an orgy, instead of random 20th century people having an orgy), is still wrong.

What is wrong with the latter mentioned pornographic film is not that it contains characters from the Gospel. What is wrong is that it is a pornographic film. Using Gospel characters within the context of a pornographic film does not make everything OK.

The context of a pornographic film is wrong, even if the characters who appear in it are perfectly fine.

Now, to extend the analogy to gaming...

It is wrong to play a character who spends time studying dusty spellbooks, from which he learns a magical incantation which, once per day, will cause a fireball to explode in the midst of the enemy, or enable him to fly, or create a magical shield about him.

That stated, let me quote the LightRaider Net fanzine, for the Christian DragonRaid game, (c) 1996 Jill Oviatt (oviattws@alaska.net) and Charlie Banders (charlie@mat.net).

An important WordRune that I think goes hand in hand with #55 Purge Evil WordRune (covered in issue #5) is #49, No Sweat WordRune.

NIV Romans 8:31b "If God is for us, who can be against us?"

This simple and easily memorized scripture (especially if you know the D+K song) is good by itself, but also a good balance to #55. Whereas #55 helps with the offensive strategy of the LightRaider, #49 helps with the defensive side of a battle. The No Sweat WordRune will allow you to raise your LightRaiders 'Shield of Faith rating by 3 for the duration of one encounter'. This Wordrune may only be used once per day so use it wisely.

Even in an allegorical situation... This is still magical. It does not involve prayer which rests on faith and which God grants, but memorization, recitation, words which bear power in and of themselves, and in terms of description and game mechanical effects is indistinguishable from a wizard's spell in Dungeons and Dragons.

Prayer is powerful, and memorization of Scripture is good. But the essence of prayer does not stem from the words in which it is spoken: when Jesus gave a model prayer in the Sermon on the Mount, he chastened people who babble because they believe they will be heard for the many words, and reminded his disciples that their Heavenly Father knew what they needed before they began to ask. When the Samaritan woman asked Jesus which place was the true place to worship, on this mountain or on that mountain, Jesus answered that the true place to worship was in Spirit and in truth. Does one do justice to these teachings of Jesus by saying that specific words spoken in

These teachings of Jesus by saying that specific words spoken in prayer have a power in and of themselves, residing the words, that would not be found in any other words? No. The New Testament teaching is that the power resides in the prayer and in the faith of the believer, to which God responds as a loving father, which is anything but governed by mechanistic rules as given in such games.

This kind of thing is, just like taking characters from the Gospel and incorporating them into a pornographic film, taking words from Scripture and incorporating them into a system of magic.

This is not how God works and answers prayer.

---

A note on stories (note: this falls into the category of half-baked musings and suggestions rather than moral compulsions, and I may well be speaking of the impossible)

There was one professor of music who said of worship song that, rather than thinking "Here is the song on paper; we start it at time X and finish it at time Y", it might be better to think of one neverending song that always has been and always will be rising in the presence of the Eternal; people who sing step, for a while, into this song.

My story is like a thread being woven into a great tapestry; beautiful in and of itself, it is being led into contact with other threads, and slowly woven into a magnificent whole. It is not the Story before which there was no world; it is a story which is rather included in a beauty it could never attain on its own. It is not really that God is a part of what I am doing, so much as that I am a part of what God is doing.

Something of this might be brought into play; rather than one party in the world which acts upon a static situation (and in which other events occasionally happen as needed as plot devices for the story of the one party), there might be a Copernican revolution to the point where the world is full of interconnected stories which are parts of the one great Story; the characters and the party are dancing the great Dance.

I'm not entirely sure how to implement this — I'm netter at designing worlds than telling stories; my mind is more shaped around what is, than what happens — but the following seem to be at least promising:

- Just try. In the absence of detailed instructions, simply attempting and keeping it in mind may do a lot.

- Russian author solution. *Chez les e'crivains russes*, characters, plots, and subplots abound. It may be a lot of work/a headache for the game master, and having several round, many flat, and numerous functionary non-player characters may be a feat not to be attempted by non-Russians, but at least a little hint of this might add a bit of color.
- Multiple parties/numerous characters. This is probably the most promising, and the most capable of generating a nightmare. There are a couple of things that I've observed as tendencies in existing game play:
  - The shortage is of game masters, not players. If there is a reasonable way for a game master to deal with more than one party (2-7 characters), it's probably worth exploring.
  - The basic unit of play is either the whole party, or one player (solo).

In real life, I enjoy time spent with a group of friends and time spent in solitude — and, very much, time spent in a smaller group, and, especially, time spent alone with one person.

If the characters have a strictly professional relationship — I'll keep track of where we are, deal with organization, and talk with the locals; you'll take care of food and other supplies; Jim will work on puzzles and jury-rigging something to do the trick when we're up against a brick wall, etc. — then that may be feasible. Indeed, working together to solve a puzzle is a quite enjoyable experience. I think, however, that rich role play should have friendship as well, which will work out to personal relationships more complex than

individual/group.

I think that email may be able to bear \*some\* of the load. Letters from one character to another/others (cc'd to the game master) are a substantial tool for character development and role play. They can carry some interpersonal conversations very well, and are wonderful, to speak in a timewise manner: each player sends his character's words when he is free, and the additional strain on the game master is negligible.

This should not supplant the traditional mode of play. Face to face interaction, the general social environment, munchies and something to drink — this is an enjoyable atmosphere, and a part of why the game is enjoyable.

---

A note on puzzles...

"It is the glory of God to conceal a matter, and the glory of kings to search it out."

Proverbs 25:2

After role play, an orientation towards puzzles should be an important constituent of enjoyable play. There is a certain pleasure that comes of a challenge mastered, and that pleasure is particularly sweet when it comes from the mastery of a puzzle. (The balance which should constitute play, as I envision it, would consist of role play, exploration, wonder (motion of the Spirit and detail in the world), and problem solving)

The following are suggested examples of puzzles:

Riddles: These could be posed by a gatekeeper as a requisite to crossing a bridge etc.; alternately, a door could have a riddle engraved on it, the answer to which would tell where the key may be found, or what button to press, or...

Logic puzzles: See Raymond Smullyan, *The Lady or the Tiger?*; a good library, in that section, should have other books with other appropriate puzzles.

Mazes: twisty passages, secret doors...

Cryptogram: On this point, I would issue a strong warning, from personal nbobi experience, that the objective is *\*not\** to protect information, but to es"Ni provide a puzzle which can be solved in a reasonable amount of time. er"nt Ergo, simple and relatively easy: substitution ciphers, something where eeytl the direction is reversed and the vowels are deleted, a creative ntofe rearrangement where "Ninety nine bottles of beer" becomes the contents of the square to the right, a text where the first letter of each word spells out the message, etc. It is

THE FIRST LETTER OF each word spells out the message, etc. IT IS very easy to make something which is too hard and frustrating to the players, but care and moderation should make something enjoyable.

Word game: Give a text with one rather bizarre feature — a void to perceive, or an odd pattern — which, when noticed, will be helpful to the party.

Strategy games: Something simple, but different. Examples of such games may be found among mathematical puzzle books in a library.

Spatial/three dimensional puzzles: Sokoban, various disassembly/reassembly puzzles which may be found in shops, Towers of Hanoi... if these can not be acquired, it's not the end of the world, but they should add something.

Guess the rules: A very simple strategy game, with a (non-optimal) algorithm to play against... but the rules are not initially given, beyond a yes/no answer to the question of, "Is this legal?"

Tesselation puzzles: Fit the pieces in place and/or assemble to make a certain form.

(Explicit) mathematical problems: If there's a good way to put them in play, math contest problems of the sort that can be found in books are a lot of fun to solve.

---

Charles Baudelaire, in "La Morale du Joujou", made some very interesting observations about children's play and toys... the most notable was that children, when they play with toys, are not really playing with toys.

There are some, to be sure, that, in all of their flash and snazzle, leave nothing to the imagination... but many, perhaps most children's toys as played with mean a manner of play that uses toys as a springboard to play with imagination.

He commented, with a degree of sadness, that many adults who attend theater do not realize that it is possible to faithfully play Shakespeare with a very simple stage and costume setup. I think that something similar is to be seen in our culture's intolerance of puppetry as a serious adult form of drama; only trivia that is small enough to relegate to children may be permitted to leave pieces to be filled in in the viewer's mind. Hollywood in its present form spends who knows how many million dollars (probably enough to feed and clothe a small third world country) per movie on special effects and computer graphics.

The result leaves nothing to the imagination but the plot.

Role playing games are, in a sense, a manner of play which does not directly fall prey to this tendency. Play sometimes involves the use of miniatures, many game books have vivid pictures, and game masters normally generate maps, but the general nature of play finds it entirely feasible to play in a space that exists within the imagination.

I would suggest, however, that this takes a second order form as comes to technical rules and game models. Bad players attempt to use game mechanics as a substitute for playing properly, and proper play — though characters may have attributes and skills to tell the game master what die roll is

necessary to successfully swat a mosquito — does not really consist of it. Just as children use their toys but do not really play with them, good players use game rules but do not really play with them. To role play a believable and rounded character is too complex to reduce to dice and charts.

The one point where it is disanalogous, is strategic complexity. Complex and well-designed rule systems facilitate a high level of mathematical problem solving; I would describe the problem solving side of fantasy and science fiction battles as the intersection between mathematics and military strategy.

I think, however, that that challenge can come into through play through proper choice of puzzles.

# **Game Master's Introduction**

## **Section I: Initial comments.**

The game master should know and understand the material in the general player's section, and in addition the material in the game master's section.

The game master is the referee and the "everyone else", the one who designs adventures and governs the pretend world play occurs in.

## Section II: Designing play

There are several components which should shape play. A proper mixture and balance of these different elements, like a balanced diet, provides the most enjoyable passage of time.

Role play, personal interaction, acting — this is (especially) when characters talk and do things in a way that shows their personality. This is perhaps the most central part of play; it is at least the one which this genre of game is named after. This lies more with the players than with the game master in that it is something the players do; the game master's role here is just to encourage and to provide opportunities conducive to good role play. (Ergo, a quest more robust than two riddles, a logic puzzle, three locked doors, and a maze leading to a chest of gold.)

Challenge, problem solving, puzzles — bring situations where players have to think. The key to keep in mind here is that it is not the game master versus the players, but rather the game master providing puzzles that are difficult but not insurmountable — puzzles which will yield to thought and effort.

More information is provided in section III, puzzles.

Skill use — situations which bring into play the characters' skills. Locks for a scout to pick. A wilderness trek for a woodsman's wilderness survival skills. A maze to map out. Hidden doors to discover. A quest which brings characters into other lands and requires them to use an interpreter. Et cetera.

Word pictures and stories — role playing is, in a sense, a narrative in the second person, and one attribute of good literature is skillful and beautiful use of words. A description of situations which is beautiful and moving is preferable to one which is dull and mechanical.

Divine action and intervention — points where characters come into contact with God. Gifts of the Spirit at work. A dream in which a character is warned that he will be badly needed by far away friends. A moving worship service. An angel's appearance to give a party a quest.

Exploration and wonder — a sense of penetration and discovery, venturing out into the unknown, and a sense of surprise, is another color on the game master's palette which is necessary to a good painting.

Rewards — rewards of various sort can be worked in for good and successful playing, and set after significant accomplishments. Good role playing, and puzzle solving, are in a sense their own rewards. Other rewards include experience (the characters becoming better at some skill or skills, or learning new ones), Urvanovestilli devices, friendships and alliances, information, the discovery of wonders...

Faith and morality — Espiriticthus is a world where faith is a part of life and life is a part of faith. Sometimes the motion of God is plainly visible; sometimes it takes more subtle forms, as in the book of Esther, where God is not explicitly mentioned even once. But God moves. Faith, and moral virtue, should be a part of the campaign — the setting in which the adventurers move.

## Section III: Puzzles

"It is the glory of God to conceal a matter, and the glory of kings to search it out."

Proverbs 25:2

The following are suggested examples of puzzles:

Riddles: These could be posed by a gatekeeper as a requisite to crossing a bridge etc.; alternately, a door could have a riddle engraved on it, the answer to which would tell where the key may be found, or what button to press, or...

Logic puzzles: See Raymond Smullyan, *The Lady or the Tiger?*; a good library, in that section, should have other books with other appropriate puzzles.

Mazes: twisty passages, secret doors...

Cryptogram: On this point, I would issue a strong warning, from personal nboi experience, that the objective is *\*not\** to protect information, but to es"Ni provide a puzzle which can be solved in a reasonable amount of time. er"nt Ergo, simple and relatively easy: substitution ciphers, something where eeytl the direction is reversed and the vowels are deleted, a creative ntofe rearrangement where "Ninety nine bottles of beer" becomes the contents of the square to the right, a text where the first letter of each word spells out the message, etc. It is very easy to make something which is too hard and frustrating to

the players, but care and moderation should make something enjoyable.

Word game: Give a text with one rather bizarre feature — a void to perceive, or an odd pattern — which, when noticed, will be helpful to the party.

Strategy games: Something simple, but different. Examples of such games may be found among mathematical puzzle books in a library.

Spatial/three dimensional puzzles: Sokoban, various disassembly/reassembly puzzles which may be found in shops, Towers of Hanoi... if these can not be acquired, it's not the end of the world, but they should add something.

Guess the rules: A very simple strategy game, with a (non-optimal) algorithm to play against... but the rules are not initially given, beyond a yes/no answer to the question of, "Is this legal?"

Tesselation puzzles: Fit the pieces in place and/or assemble to make a certain form.

(Explicit) mathematical problems: If there's a good way to put them in play, math contest problems of the sort that can be found in books are a lot of fun to solve.

## **Section IV: Urvanovestilli devices, etc.**

Urvanovestilli devices may be very useful to players. Devices may include anything which could plausibly be made given a mind like that of Leonardo da Vinci, finely machined gears, levers, springs, etc., and the dexterity of a microsurgeon. (Be creative.) The price of devices should take into account materials cost and amount of skill and labor; in general, they should be rather expensive.

Sample devices include a sewing machine, a Swiss Army Knife, a hang glider, a device which (when pulled along on a leash) leaves an ink trail on a floor to indicate where players have been, a Babbage-style analytical engine, a collapsible ladder, a spring loaded automatic belaying device which (once the springs are pumped up) will shoot up a grappling hook and then automatically pull in slack in a rope (until a certain button is pushed and held, at which it will feed out rope at a slow rate (given over 50 pounds pull — well below the weight of any adventurer) and reset the springs)...

(Unacceptable devices would include a mechanical thinking person, a machine to turn lead into gold, or something else which could not plausibly be made under the technology parameters given.)

The Urvanovestilli also have a knowledge of chemistry which

allows the creation of many chemicals — pyrotechnics, glues, acids, chemical (phosphorescent) lights, and drugs being among the more useful to adventurers. (Drugs, if combined with the fruits of Yedidia herbalism, would be roughly on par with what exists in the modern world — for example, medicinal drugs would include antibiotics, antishock drugs, etc., but would not include something to make a third degree burn instantly heal — only the gift of healing can do that). Chemicals in general are expensive. Hormones exist, but are prohibitively expensive, as they can only be gathered in minute amounts each day at butchers' shops, and require a degree of skill and labor to extract. Much of the more powerful drugs and hormones, as well as being extremely expensive, have side effects or potential to backfire — ergo, anabolic steroids having the same problems as in real life, adrenaline speeding up reflexes, increasing strength greatly, etc., but unpredictably causing either a fight or flight reaction — so a calm and controlled adventurer injected with adrenaline could start running as fast as possible away from all danger.

# General Comments and Theological Groundings

I'm going to attempt to explain a reworked concept of role playing games.

Let me preface this by saying that:

- I'm toying around with ideas; the best that I can offer now is unpolished and half-baked.
- Explaining this in terms of extant role playing systems will be something like explaining non-verbal communication in terms of the logical reasoning of geometry.
- If, by *God's* grace, I manage an explanation that is not too clumsy to understand, and lay out a system which is not too incomplete to use, it will still be very challenging and require much thought to play.

I have played AD&D extensively, and Star Wars a fair amount. In addition, I am marginally familiar with GURPS, Shadow Run , Amber, and a couple of home brewed systems. I am most familiar with AD&D as the grandfather (technically, basic

D&D, BUT IT DOESN'T MATTER FOR WHAT I WILL BE SPEAKING OF), AND  
will speak of it as the basis.

I have enjoyed many hours of rich role play; I believe it to be immensely valuable. Not only is it enjoyable, but it develops and strengthens imagination, emotion, and reason. That alone is a needed flash of light at a time when imagination and reason are dying, and emotion is reduced to a tool to influence your choice of shampoo.

When I find problems in existing role playing games, therefore, I am not saying, "Role play is evil. Destroy it." Instead, I am saying, "Fix it. Heal it. Complete what is lacking, restore what is askew, remove what is baneful." The basic principle — a game master creates a world, players create characters, and they play out — is very good.

That being stated, there are two basic things that need a major overhaul.

- Philosophical groundings.

Gnosticism, which is perhaps the heresy plaguing Christendom, holds many things, including the following: The final measure and achievement is power. You, a member of the elite, will achieve the final end by making yourself more and more powerful, penetrating successive ranks until you become like a god.

Good and evil are equal and opposite, balancing forces which together make a higher order unity.

If this is beginning to sound uncomfortably familiar, it should. The philosophical groundings of AD&D are Gnostic. Another point of Gnosticism is a morality that is, to put it politely, revised. In AD&D, what are the four classes? Fighter. One whose training is in combat, and kills all the time. Thief. One whose training is in thievery. Mage. One

... whose training is in sorcery. Aah, but we have a relief in the cleric, right? No. Clerics are religious knights who take a vow never to shed blood — and then learn to use blunt weapons with a proficiency far beyond that of most professional soldiers. It is entirely possible for a character to lie, worship false gods, use magical talismans and cast magic spells, wade through blood — and be a hero.

Now to contrast with Christian orthodoxy:

Identity consists not in power or the deified Self, but in Christ. In Christ, after you humble yourself, God will lift you up, by his grace. He will forgive your sins, give you a place in the community of his saints, and call you his son. The Christian's identity is first of all in Christ (hence the term 'Christian'), and second of all in the Church; in that context he is the wonderful new creation.

What then of power? It has no place in identity. Paul, at the end of his life, could have written, "I have written letters outlining the faith, planted churches, served as the Apostle to the Gentiles, cured the lame, raised the dead, and converted more people than Jesus Christ;" in short, "I achieved in power." Instead he wrote, "I have run the race; I have fought the good fight; I have kept the faith," in short, "I obeyed."

Not by might, nor by power, but by the Spirit. God has chosen the weak to shame the strong, the poor to shame the rich, the foolish to shame the wise. Look at the disciples Jesus chose — fishermen, a tax collector, one terrorist even! It was a very foolish choice, but it was divine foolishness. God's foolishness is wiser than man's wisdom, and that is why the Church that Christ started with these men is rockina the world.

There is a place for the use of talent, but the talent is empowered by being given over to God and consecrated by him; anything else is but dust and ashes. And it is clear that God has no need of human power to accomplish anything. Good and evil are not equal forces; evil is an absence or a twisting of good. Satan cannot create; he can only mock. God creates worship; Satan mocks with idolatry. God creates sex; Satan mocks with adultery. God creates truth; Satan mocks with lies. Evil has no substance or creation of its own; it exists in terms of good, twisted, distorted, absent. Good exists on its own terms; it existed long before evil, and it will exist long after evil has no existence save torment in the lake of fire. But then why do good and evil fight? Evil fights good because it stands in rebellion against good. Good has its own purposes, and, because evil stands in the way, fights evil as an obstruction. It is not defined by this fight, and will not lose anything of itself when the last battle is over; in the New Jerusalem, we will see good in its truest and purest form.

And what of the teaching that great men are not bound by the "mere" constraints of traditional morality? I can only say that fulfilling the "mere" requirements of morality was a major part of the accomplishment of Jesus Christ, the greatest man who ever lived.

A little leaven leavens the whole lump, which is why every thought must be taken captive to the Lordship of Christ. The system must be built from the beginning, not on heresy, but on the foundation of Jesus Christ.

- Mathematical modeling.  
Advanced Dungeons and Dragons, the grandfather of all role playing games, established a detailed mathematical model:

the process of generating a character is set according to a system of rules, in a manner that can be accomplished by an algorithm; indeed, it has been accomplished in algorithms, and I have seen several computer programs capable of generating and describing everything but the personality. I might add that the First Edition *Dungeon Master's Guide* had an appendix which contained an algorithm to randomly determine non-player character personalities as well.

Play follows in which players make choices according to an algorithmic set of rules, and dice rolls are used according to charts and rules to decide what happens of attempts to do this, that, and the other thing. This is the way that events' outcomes are usually determined, and, again, computer programs can do this quite effectively. This basic premise has been imitated in every RPG I know of; in this sense, AD&D still IS the de facto standard. Amber diceless role play made a big splash — by introducing an algorithmic set of rules which used player bids instead of dice to operate. The question asked of a new game system is not "How does it handle things? Does it use a mathematical model?", but "How exactly does its mathematical model operate?"

I would like to draw this mode of thought into the light for a minute. First of all, I would like to draw attention to DikuMUDs and the various computer games such as *The Eye of the Beholder*, *The Curse of the Azure Bonds*, etc. They have all of the stats and THACOs and ACs and damage ratings that anybody could possibly want. Yet they pale in comparison with true role play.

The reason is that the heart of role play consists in what can not remotely be reduced to rules. It has something to do with an imaginative world, characters who are realistic, and a

plot. To technically administer rules is easy; to have good role play requires experience and calls for thought. What author ever began to weave a tale by using charts, rules, and dice to determine that the main character would have a strength of 7 on a scale of 1 to 10, a 43% chance of successfully picking a lock, and could quickly tie any one of 21 different knots?

"Christianity is not a statistical view of life."

-G.K. Chesterton

If we look to Scripture, we see that there is more rejoicing in Heaven over one filthy sinner who repents than ninety-nine righteous men who do not need to repent. We see that a day and a thousand years are the same in the sight of the Lord. We see that many wealthy men made ostentatious and showy gifts out of their excess, and a poor widow dropped two pennies, all that she had to live on, and surpassed them all. I could go on for pages, but eloquence does not consist in a multitude of examples.

One is required to conclude from these things that either God is an incompetent mathematician, or that the measure by which he sees the world is something greater than mathematics.

Therefore, in establishing a system to play with, we should seek not so much to imitate mathematical models and computer programs, as something else: I would (loosely) propose children's games of make-believe and books.

Having stated what I believe is necessary, let me attempt to lay it out.

It begins with prayer. This is not a question of a waste of

power, or annoying God by interrupting him with something trivial. He wants to be involved with the most intimate details of our lives. If we, who are evil, know how to give good things to those whom we care about, how much more will God, who is good, know how to give good things to his own children, for whom he did not spare his only Son? So let us begin by asking his blessing.

Father, bless us in this endeavor, bless it, and bless its fruit.

The divine name is Yahweh; "HE IS." God is spirit, profound, deep, eternal; a substance more real than even the physical; the Rock upon which rock stands. Beyond actions, beyond time, beyond even attributes such as power and wisdom, HE IS.

It is possible, especially in our culture, to be distracted of this, to let doing displace being and accident displace substance.

The question of "Who are you?" has been usurped by "What do you do?" This is wrong. The proper place of doing is to point to being, and of accident to point to substance. When I fill out details, I will ask that you not only look at "What does this detail look like?", but "To what, beyond itself, does it point?"

We are created in the image of God; that is, in the image of the Creator. Thence comes our imagination and our power to create. And we hold the power to create in the image of his Creation.

History contains four events: the Creation, the Fall, the Incarnation, and the Second Coming.

In the Creation, God filled his universe with infinite order and beauty and color. In *That Hideous Strength*, C.S. Lewis said, "God does not create two blades of grass alike, let alone two angels, two saints, or two nations." Light is the presence of all color; black is the absence of color. If there is light, then there will be red and yellow and magenta and silver and polka-dot green. The body of Christ lives and breathes, not as four

thousand, nine hundred and twenty two left thumbnails, but as a unity of variety. If the world is to be ordered and beautiful to point to God, then color is not simply permissible but mandatory.

Unless the characters are to be wayfarers, wandering over the face of the earth (in which case there will be many places and cultures for the game master to exhibit), there should be a culture, a nation, a land set for the characters to live in.

What is the nature of the spiritual life there? Do the people live in community, loving each other? Do they look after each other's needs, present in time of weakness, and holding each other accountable? Do they spend time in silence, stillness, meditation, looking inside themselves? Do look — at souls, at birds, at shining stars — and both enjoy their beauty and stand in awe of the Creator whom they reflect? Do they worship in spirit and in truth? What points of sound doctrine do they emphasize? What virtues shine forth? How does the Spirit move among them?

What is the culture like? What is their music? Is it solemn and stately, telling of the great and majestic King? Is it vivid and lively, telling of the Lord of the Dance? Is it soft and still, telling of the Eternal? What is the life of the mind like? Is the thought logical or symbolic? What of imagination? What emotions flow forth? Do the people learn to be ancient, gentle, and wise, speaking the words of a sage? Do they learn to be like little children, dancing without end and staring in wonder of the beauty of Creation? What kind of art do they have? What senses do they focus on — sight, to see and behold; hearing, to listen to music, words, and silence, to hear birds chirping and the voice of a friend; smell, of flowers, food, and people; taste, to savor meat and bread and wine; touch, to feel water and stone and cloth and the soft warmth of human skin?

What is the land like? Is it lush forest, filled with warm rains? Is it arid desert? Is it cool and misty? Is it flat, or hilly, or mountainous? Are villages near or far apart? Is there a body of water nearby? What plants and animals are around? How much does the weather change? What special natural features are there?

In thinking about questions such as these, and perhaps others which have not come to mind, it should be possible to get a beginning picture of what the world will be like.

Creation was not the only event; there was the Fall, and its twistedness. The very way in which man was created as the holy image of God is the very means used by evil as instruments of wickedness. Created with the power to love, we hate. Created with the need for worship, we whore after idols. Created as sexual creatures, we commit adultery. Created with a tongue to bless the Lord and Father, we curse men, made in God's image. Created with a mind to know the truth, we embrace lies. Created with hands to build up, we kill.

The characters, therefore, are fallen and will walk the dust of a fallen world. The next questions will give shape to that as well:

What moral sins, vices, and heresies are there? Are the people split into ten thousand factions, each one bickering and claiming, "We know the truth?" Have the people turned their back on God as irrelevant to their lives? Do they chase after money? Are they shallow? Are their friendships trivial? Do they throw the mind and scorn wisdom? Do they worship the mind as supreme above God, pursuing religion within a context of reason? Are they self-righteous prudes, tithing mint, dill, and cummin, and neglecting justice, mercy, and faith? Do they pray for their neighbor one day in seven and prey upon him the other six? Do

they pursue a false wisdom which scorns the body and objects of sense, which "God created to be received with thanksgiving by those who believe and know the truth?" Do they know nothing beyond the physical? Are they proud, lecherous, manipulative, hateful, duplicitous? Do they cut others down with the tongue? Do they lie, cheat, steal? Do they dishonor their elders? Do they crush the weak? Do they commit adultery? Do they kill in their worship of power? What good things do they neglect?

When man had turned away from God and forfeited everything, God paid for redemption at the price of his Son. The Word became flesh, and walked among us. Now, we know Jesus Christ crucified for the forgiveness of sins.

Are the people willing to confess their sins — all of their sins — as sin, and repent of them, in order to receive forgiveness?

Are they willing to open themselves to the motion of the Holy Spirit, and be filled with his mighty power? Do they take up daily the Cross, to come and die? Do they know his passion, his agony, his suffering? Have they given him everything?

What color does the new light shine in them? What fruit and gifts? How do they live in the freedom that Christ has given them?

Now, I think, would also best be answered the questions of, What is their history? Have the people been peaceful or violent? Have they changed or stayed the same? Have the changes been for better or for worse, or both? What are their traditions? What do they commemorate? What are their customs? Have they interacted with other nations abroad, or stayed within their own borders? What other cultures have influenced them? What influences have they brought? Where does their language come from?

After all has passed will come the final end: the Second

Coming. The old order of things shall pass away. God himself will wipe every tear from their eyes, and there shall be no more evil, no more crying, no more pain. The saints will enter into joy and life eternal.

This has not yet come to pass, but it still has a mark on the present. One of the great themes of Christian thought is the Kingdom of Heaven — "Your kingdom come, your will be done, on earth, as it is in Heaven." Bringing Heaven down to earth is expressed by one relief worker who said, "I'm going back to Hell, to plant some flowers." Worship is a piece of Heaven, brought to earth. The prime citizenship of the believer is the Kingdom of Heaven rather than any worldly kingdom; "in the world, but not of it." Believers carry little pieces of Heaven with and about them.

Do the believers carry with them a sense of timelessness? Do they witness to the world with what the world has never seen? Do they escape entrapment by material possessions, enjoying them but sharing generously? Do they sow a spark of joy? Do they meditate on the blessed hope of the resurrection? If this is the light that they shine, with what color do they radiate?

After the game world is designed, the players should spend a time — perhaps an hour or two — with the game master. In this time, the players will learn of the world, and the game master will help with any incomplete areas of character development.

This should not become a haggling over power.

In a game which revolves around power and struggles for it, it is important that there be a balance of power. Here, that should not necessarily be the case. In *A Wrinkle in Time*, of many characters — a boy genius with second sight, scientists of worldwide renown, mighty and majestic angels — it is a stubborn and impatient ten year old girl who rescues Charles from the

power of IT; the weak and foolish chosen to do what the strong and wise could not. The game should not be about power, and if either game master or player focuses on it, something is wrong.

Here, then, are some questions to use in the formation of a character:

Who is he? Does Jesus sit enthroned in his heart? How does he try to imitate Christ? How does he see the world? Where do his loyalty and his love lie? How does he use his talents? What virtues does he embody? Is he temperate, controlled, balanced? What vices does he still hold on to? What sins does he struggle with? What does he search for in other people? How deep are his friendships? How deep is he? How strongly does he embody the qualities he holds? What community is he a part of? What is his family, his liege, his birthplace? What inhabits his thoughts? How does he embody what is truly masculine (she embody what is truly feminine)? What fruit does he let the Spirit work in his life? What is his name?

What is his story? What interests, goals, and desires does he have? What does he cherish? What special twist does he put on things? How does he pray? What is his role in the Church? What does he create? Of what would his friends look and say, "That is him?" What is his story? What (if any) visions has he had [this question is more the focus of the DM than the player]? If he were an animal, what animal would he be, and why? What are his hobbies? What is his favorite story? What does he like to present to other people? What is he afraid of other people knowing about him? What memories does he cherish? How old is he? How has he changed over the years? How has he remained the same? What are his loyalties? Who lies closest to his heart? Who does he exist in relationship to? What communities is he a member of? How does he spend his time? What are his hopes

and dreams?

Only then,

What is he naturally gifted at? What skills has he developed? What would traditional game systems attribute to him? What gifts has he received in the Spirit [again, this question is more for the DM]? Prophecy? Faith? Wisdom? Knowledge? Healing? Miraculous powers? Leadership? What are his weaknesses? Does he have any handicaps? What can and can't he do?

What does he look like? What is his manner?

After the world is created and the characters are established — not as isolated islands, but in relation to their culture and each other (Brother and sister? Friends from childhood? Father and son? Mentor and student? Reconciled enemies?) can play begin.

The game master, as an authority, is to exhibit Christ's model of authority: not an iron fist or a lording of power, but "he who would be great must be a servant, and he who would be first must be a slave," just as the rabbi who washed his disciples' feet. The game master holds the most power and has the final say; he is therefore the most bound to humility and service.

The play itself should consist of that which is wholesome: the playing out of personas, the exploration of a world, the spiritual warfare against the invisible forces of darkness, the participation in the great dance. The game master can do special things — shape the plot, send dreams and visions, people and events — but the world is created not only by the game master but also by the players, by the richness of their dialogue and the miniature world they create among themselves. In this manner good books may be taken as a model, and, after all things, prayer.

This, I believe, will make it work.

# The Treasury of Humility and the Royal Race

I told the guestmaster I'd like to become a monk.

"What kind of monk?" he asked. "A real monk?"

"Yes," I said.

He poured me a cup of wine. "Here, take this." No sooner had I drunk it than I became aware of a crystal globe forming around me. It began to expand until finally it surrounded him too. This monk, who a minute before had seemed so commonplace, now took on an astonishing beauty. I was struck dumb. After a bit the thought came to me, "Maybe I should tell him how beautiful he is—perhaps he doesn't even know."

But I really was dumb—that wine had burned out my tongue! But so great was my happiness at the sight of such beauty that I thought it was well worth the price of my tongue. When he made a sign to leave, I turned away, confident that the memory of such beauty would be a joy forever.

But what was my surprise when I found that with each person I met it was the same—as soon as he would pass

unwittingly in my crystal globe, I could see his beauty too.

And I knew it was real.

Is this what it means to be a REAL monk—to see the beauty in others and be silent?

[Tales of a Magic Monastery](#), Theopane the monk

To even get near [humility], even for a moment, is like a drink of cold water to a man in a desert.

Do not imagine that if you meet a really humble man he will be what most people call "humble= nowadays: he will not be a sort of greasy, smarmy person, who is always telling you that, of course, he is nobody.

Probably all you will think about him is that he seemed a cheerful, intelligent chap who took a real interest in what you said to him.

If you do dislike him it will be because you feel a little envious of anyone who seems to enjoy life so easily. He will not be thinking about humility: he will not be thinking about himself at all.

Humility is not thinking less of yourself. It is thinking of yourself less.

C.S. Lewis

These two striking Western quotes need some counterbalance. Orthodox confess before communion: "I believe that thou has come into the world to save sinners, of whom I am chief." And though this is above my pay grade, there are some very important words (in [The Ladder of Divine Ascent](#), for instance) about longing for the cup of dishonor as if it were honor, an experience that I believe is very different from the inside and from the outside. The experience of reaching a new

level of pride may be exultant for an instant, but the natural course of that sin, if we do not repent of it, is to hold on to the sin while its pleasure necessarily vanishes. My suspicion that those who long for the cup of dishonor as if it were honor, retain the virtue while its sting gives way to joy. [Repentance is Heaven's best-kept secret](#), and the monastic longing for dishonor may also bring joyful surprises.

With all of that stated, the story about the globe is the best picture I've seen of the heart of humility. And the humblest people I have known don't really try to impress upon me how horrible people they are. They bear a striking resemblance to the figure Lewis describes: hospitable, generous, open, welcoming, listening, wanting to understand what you have to say, and wanting to understand you. Their style, the practical living effect of their belief that God is everything and they are nothing, is marked by joy in whatever person's company God deigns to grace them with.

One verse that I've found profoundly difficult to appreciate is, "In humility consider others better than yourself." I suspect others don't find it pleasant either. But there is treasure inside.

I'd like for you to imagine yourself sitting next to your hero: your favorite person, past or present, near or far, someone you know or someone you might never meet. What is it like to be next to that person?

Now imagine someone who is a jerk and acts like an absolute scumbag. Do you enjoy the company?

Which one of these two is humbly considering others better than yourselves?

Pride is blinding; the term "hubris" refers to a blinding arrogance. The greatest degree of pride that has a label I'm aware of is called "prelest" or spiritual illusion, a term that

doesn't even mention self-opinion but describes being completely and destructively out of touch with reality and what will benefit oneself and/or others.

But with humility it is quite different. Some have said that the only true intelligence is humility. Humility opens people's eyes, and it opens them to everything that is beautiful, honorable, and noble in others.

Humility allows us to see and enjoy the royal race.

## The royal race

What do I mean by "the royal race?"

Let's visit Confucius.

One nice, opaque snippet states that Confucius learned of a fire in the horse stables. Confucius asked, "Were any people hurt?" And we are explicitly told that he did not ask about the horses.

Today this story lends itself to thinking, "I guess Confucius just wasn't the world's biggest animal lover," and trust me if I say, "Please ignore that; something completely different was going on culturally."

In the China of Confucius's day, a stable worker was a slave, here meaning a mere commodity worth only 20% of the value of a horse. **Please contrast this with U.S. Southern slave owners who rationalized slavery at infinite length because they knew it was wrong, and they rationalized because they knew that it was morally wrong to keep African-American slaves in conditions unworthy of human beings and unfit for human consumption.** In Confucius's day, they didn't even know it was wrong. The socially expected response from Confucius, upon hearing that there had been a major fire in the horse stables, would be to ask about what was the most valuable and important: the precious horses, not the expendable stable hands.

Confucius's question about people in the stable left the

obvious, socially expected response highly conspicuous by its absence. The point he sledgehammered was of the supreme value of every human life, whether at the top of the social scale, or the bottom, or anywhere in between. He didn't say that all human life is sacred, and possibly it would not have occurred to him to connect life with the sacred, but the essential point he drove home is the supreme value of human life.

And that is really a dignity of the royal race.

Having mentioned race, I would like to comment something on the biology of the royal race. If we lay out on a football field the whole millions of years since humans first appeared, the first ninety-nine yards, or perhaps even the first ninety-nine and a half yards, show to the best of my knowledge our ancestors as living in Africa in the Sahara Forest. Then, a geological eyeblink ago, there was an Ice Age, and some of our ancestors bundled up against the cold and migrated under sub-Arctic conditions to what was eventually Europe. And they suddenly changed from needing lots of dark pigment to block out the mighty African sun, to vastly decreased levels of our built-in sunscreen because they needed to get as much of the precious little sun as they could. The whole change was only reducing the amount of one particular chemical: that's it. And that is one major factor of the difference between dark and light skin.

What I would like to comment here is that this is an extremely shallow biological adaptation. Never mind that a dark-skinned and a much lighter-skinned person look quite different to the uninstructed. The biological difference is shallow. It is quite literally only skin-deep. None of us as the royal race grow feathers and have the ability to fly like birds, or can breathe underwater without technology, or can sleep while standing up unsupported. Nor, apart from birth defect, accident, etc. have

we lost toes, or lose the full support of a circulatory system, or anything like that. Unless age, disability or adverse circumstances stop us, we all walk and we all trade in the miracle of language. There is one set of human anatomical features to be had, with distinction between the sexes. We all need food, water, sleep, and so on. We tend to think we are very different because we look different, but the adaptations we have are biologically the shallow adaptations of a single, royal human race. There are admittedly other adaptations besides the pigments in our skin, but race as we know it hinges on people leaving Africa an extremely short time ago on geological terms and not enough time for much of any particularly interesting evolution to have occurred. We are all from the same species, *Homo sapiens*. For that matter, we are also all from the same, more specific subspecies: *Homo sapiens sapiens*!

Now I would balance my remark in biology and acknowledge any number of the most profound cultural differences across the world and possibly right in each other's back yards, but again this is the royal race. Humpback whales have a culture; wolves have a culture; but there is essentially one culture for an animal community in a wild ecosystem. So far as I know the vast number of cultures that exist today attest to an unparalleled flexibility built into the royal race.

And if we look at *Genesis 1*, perhaps the two biggest takeaways are that we are made in the image of *God*, constituted by the divine presence in us, and that the entire human race is one family. The person before you is great: and he is your brother.

## A note on beggars

And I would like to make one comment, very specific: "He is your brother" includes beggars.

I know some people, who do or do not give to beggars, who have made a careful and considerate decision and act in a situation where evaluating the best action is hard to do. I know of some people whose considered judgment is that giving money to beggars does more harm than good, and their refrain from giving is harder to them than giving would be. I might also suggest that one could give things other than money; one can carry a bag with [easily peeled Cuties citrus fruit](#), or a Halloween-style bag of tiny chocolate bars if the weather won't melt them.

**However, I have heard, and wince, when someone says "beggars" like they are some kind of disgusting vermin.** They are not. They are made in the image of God, as you, and the Orthodox Church's teaching is that you should give, and when you give, you are respecting others made in the image of God. It is possible that their begging is sinful; that is not your concern and you do not share in the guilt by a gift. I've heard multiple Orthodox priests address the topic, and they never seem to suggest giving particularly much; the specific suggestion is to give little at least most of the time, without any suggestion that you have to furnish all that a beggar with a story of need lists as the needed expense.

But there is a more basic concern than meeting beggars with an open hand, and that is meeting them with an open heart. Monastics are said to be "above alms": those who have placed themselves above possessions may not have a single bite of food to offer at the moment. But the literature quotes, "Is not a word better than a gift?", with the implication explicitly explored that if you have nothing you could give (or, perhaps, you have a \$20 bill but have run out of the quarters or singles you carry in a separate pocket to give), a warm welcome is itself giving a gift. Monastics are spoken of as "above alms", but they are not above loving beggars. Those monastics, perhaps more than people who are not above alms, are called to fit the picture of humility towards beggars: hospitable, generous, open, welcoming, listening, wanting to understand what they have to say, and wanting to understand them. This kind of warm welcome is a much bigger gift than a quarter.

But may I suggest a view of beggars that has more sharply defined contours?

**Look at beggars as altars.** The beggar, regardless of religion, is made in the image of God and can never be rightly understood without reference to God. He who despises the poor shows reproach for their Maker; God loves everybody at every level of the social scale, and to show kindness to a beggar is to show a kindness to God. It is possible to embrace without touching, or embrace in an offered fist bump. Insofar as you are able, give a quarter or dollar (if you are in the U.S.) / a Cutie / chocolate / ..., and what is more, try to give in the generosity of a monk above alms who meets the dues of hospitality.

Look on beggars as altars on whom you can show kindnesses to God.

## One more quote to squirm by

Here is one more quote that makes people squirm; it is a personal favorite (Mt 25:31-46, NIV):

When the Son of Man comes in his glory, and all the angels with him, he will sit on his glorious throne. All the nations will be gathered before him, and he will separate the people one from another as a shepherd separates the sheep from the goats. He will put the sheep on his right and the goats on his left.

Then the King will say to those on his right, 'Come, you who are blessed by my Father; take your inheritance, the kingdom prepared for you since the creation of the world. For I was hungry and you gave me something to eat, I was thirsty and you gave me something to drink, I was a stranger and you invited me in, I needed clothes and you clothed me, I was sick and you looked after me, I was in prison and you came to visit me.'

Then the righteous will answer him, 'Lord, when did we see you hungry and feed you, or thirsty and give you something to drink? When did we see you a stranger and invite you in, or needing clothes and clothe you? When did we see you sick or in prison and go to visit you?'

The King will reply, 'Truly I tell you, whatever you did for one of the least of these brothers of mine, you did for me.'

Then he will say to those on his left, 'Depart from me, you who are cursed, into the eternal fire prepared for the devil and his angels. For I was hungry and you gave me nothing to eat, I was thirsty and you gave me nothing to drink, I was a stranger and you did not invite me in, I needed clothes and you did not clothe me, I was sick and in prison and you did not look after me.'

They also will answer, 'Lord, when did we see you hungry or thirsty or a stranger or needing clothes or sick or in prison, and did not help you?'

He will reply, 'Truly I tell you, whatever you did not do for one of the least of these, you did not do for me.'

Then they will go away to eternal punishment, but the righteous to eternal life.=

Christ, in his own person, has no needs beyond the Trinity and could not possibly benefit from any generosity from any person.

But Christ in the person of a beggar is another story. There we can welcome him as Christ; there we can ease his hunger; there we can show a million kindnesses that will answer for us on that dread day when we are judged before his throne.

Someone who had a large collection of books asked, "Will I have any of these books with me in Heaven?" The answer came, "Probably." The book lover then asked, "Which ones?" The answer came, "The ones you gave away."

When our life is spent, none of the possessions we cling to will offer us any hope. However, even the tiniest of gifts given in the right spirit will answer for us. Even a smile, when you didn't have change available, counts!

In humility consider beggars better than yourself. They, too,  
belong to the royal race!

# **Player's Introduction**

## Section I: What is role play?

What is role play?

When you read a book, your imagination transports you to the long ago, the far away, the fantastic. You are there with the characters, listening and feeling with them, watching as the story unfolds.

Role play takes another step. You are still imagining goings on in a fantasy world, but not just as a passive observer: you are an active participant whose actions affect the twists and turns of the story. You aren't just pretending to be with the great explorer, the brave adventurer, the charming minstrel; you are pretending to be that character, and he does what you decide.

The essential premise is that you have a made up character, with his own personality, likes, dislikes, goals, dreams, skills, abilities, attributes, etc. You are playing that character: you are told what your character sees and hears, what happens around him, and you choose what he does.

Your character is in a party of other player characters; these are companions and fellow adventurers who are working together towards a common goal. There is also a game master, whose role is not so much like that of one character as of the author: to serve as a referee as to events in the external world, telling what happens, what non-player characters do, and so on. (When

the party walks into a town and starts looking for a tavern, an inn, a supply shop, etc., I'm the one who tells if/when they find it, who they meet on the street, what the bartender/innkeeper/shopkeeper does, and so on and so forth.)

The character should be a person, an entity, within the game world: a member of one of the seven races (Nor'krin, Tuz, Urvanovestilli, Yedidia, Jec, Shal, Janra). (A part of the character design is that it be from within one of the peoples there: a Nor'krin archer would be far more appropriate than a New York City cop who happens to have the body of a Tuz. (That's a part of the fun of role play.)) He should also, as well as a race, have a role within the game: an adventuring related profession. (For example, archer.)

What you will do in setting up a character for my game is decide what kind of person you want her to be. To this end, I am furnishing a list of personal questions about her, and a list of skills, attributes, and virtues. In the interest of not intimidating you, let me say that they are given, not to tie you down, but to help you. I don't expect a 500 word essay in response to every single question; my intention is rather that the questions help you think about your character — that they will spark an "Aha! I want to play a character who ...". Likewise with the skills and attributes — if you don't need it, you're more than welcome to play without it.

## Section II: What do I need to do to start?

To start playing Hero's Quest, you need to define a character. After the character is defined, role play can begin. Here is roughly what should be defined in setting up a character.

- Personality. Identity. A sense of who the character is. To help define characters, there is a list of questions to that end, and a list of virtues. A personal history is also an important and helpful part of the character's identity.
- Race. This is an important part of who the characters are; players should read at least the description of the race that your character is a member of, to understand part of the character's identity.
- Role and abilities. What skills the character has; what he can do. The list of roles and the list of skills is intended to help define this part of a character.
- Attributes: what the character is naturally gifted at, and naturally not so gifted at. An idea of how strong or weak the character is in the listed attributes.
- Other miscellanea:
  - Physical appearance.
  - Possessions.

○

Name.

## Section III: Sample roles

The following roles are samples of what a character might build himself into. They are meant not to be a definitive limit, but illustrative of possibilities. If a particular race is especially appropriate to a role, it will follow the race. (Of course, other races could learn as well; it's just that the particular races are especially well suited).

When a character's role/selection of skills is being determined, one dimension worthy of consideration is whether the character will be a generalist or a specialist. On his own, a generalist is likely to be the most effective character; with a party, it is probably more useful to have specialized characters who excel at diverse skills.

**The Acrobatic Scout (Janra)** If you're a Janra, you're an acrobat. The scout in particular can roll down the passages of a cavern and maze, keeping a good sense of how to get out; he can climb walls and trees, pick locks, disappear into the shadows.

**The Archer** The archer can handle a bow with a virtuoso level of skill. An Urvanovestilli crossbowman has no trouble with parlor tricks such as whipping out a one-handed crossbow and shooting a coin off a child's ear.

**The Bard (Yedidia)** The bard knows tunes to soothe the savage beast. He knows legends and lore, the tales of heroes; he has a decent chance of knowing at least a hint about where lost

treasures might be. From extensive travel, he knows the lay of the land and pieces of local color, which inns will give you a night's lodging if you sing for their visitors and which taverns have the best beer. The bard is an excellent storyteller and a master of words; to him, mediation is easy, and he has a most persuasive tongue.

**The Hunter (Nor'krin, Tuz)** The hunter is good at providing food for a whole party, and a decent woodsman to bat — can track, knows how to handle a bow (Nor'krin) or a dagger (Tuz), and knows the tricks of the wood.

**The Interpreter** In a world full of different languages and cultures, a party which does not all speak a common language or which is going to go to different lands will benefit immensely from having an interpreter. The interpreter will be a student of the different languages, know enough of etiquette and customs to avoid offense, and likely be a good general party mouthpiece: know how to secure provisions and a night's roof, how much to haggle for, how to persuade people to do favors...

**The Jack-of-All-Trades (Janra)** The jack-of-all-trades is a dabbler who knows a little of this, a little of that — what would come in handy for an adventurer. He can track, hunt, smell creatures, move silently, hide, dodge, and handle a bow; he can pick locks, search, climb, use ropes, jump, function tolerably well in the dark... He's in decent shape; he doesn't wear out that quickly. He can guess what others are going to do, haggle, and knows a smattering of all the languages. He can survive in the wilderness, build fires, knows first aid, and can repair broken equipment (or at least jury-rig it to work for the moment). None of this he can do spectacularly — he is a jack of all trades and master of none — but he's pretty good on his own and is likely to be able to do at least tolerably what nobody else in the party

knows how to do.

MacGyver 'nuff said.

The Scholar (Urvanovestilli) The scholar is a very literate person who knows a lot about history and geography. He can read and write, and given time can decipher at least some of each language (and is conversant with the different literatures). It is often sages that Nor'krin seek out for advice in fulfilling their quests; they have sharp minds and extensive knowledge, which can help guide any party.

The Wayfarer The wayfarer is somewhat the jack-of-all-trades adventurer, somewhat the interpreter, somewhat the bard... He has travelled to many places and knows the different lands extensively; he's made friends across races and has a lot of open doors.

The Woodsman (Yedidia) The woodsman knows the secrets of the wood. He knows which plants are edible, can find water without difficulty, knows which animals have passed by and which are nearby, knows a decent bit of mountaineering... He is able to track and hunt, of course, but is more than just that. He can calm animals, and enjoys having them eat out of his hand. He is at peace with the wood, and sees a great deal of beauty in it.

## **Section IV: The Spirit, and its Gifts**

All characters are believers. As such, they have the ear of an omnipotent Father; Christ Jesus dwells in their heart; they possess the Spirit as the structure of obedience and as a power in their lives. Prayer and the motion of the Spirit are to be manifest in play; this is not included in the mathematical model, not because it is not important enough to model, but because it is too big and too important to model. (See model, section III)

The one Spirit that is present gives different gifts to specific believers; Paul, after laying out the teaching of one body whose different parts serve to a higher and necessary unity, writes (I Cor. 12:27-28, NIV):

Now you are the body of Christ, and each one of you a part of it. And in the church God has appointed first of all apostles, second prophets, third teachers, then workers of miracles, also those having gifts of healing, those able to help others, those with gifts of administration, and those speaking in different kinds of tongues.

For game purposes, a character (if so desired) may pray, asking for a specific gift or gift(s), which may or may not be given. (If something else is given, the character/player has not been bad or anything like that: it's just that a different gift has

been given.) One, or occasionally two or three gifts should be given. The gift should be appropriate to the character — his whole personality and identity — if there is one which is fitting. Gifts should not necessarily center around what is \*useful\* to play; it is unbelievably vulgar to think of the Spirit as a power source which is useful to characters. It is fine for not all — for that matter, none — of the characters to have gifts that happen to be useful to play. Gifts may also have different strengths, and/or different frequencies of operation, in different characters.

The gifts mentioned in the Scriptures may be given; other appropriate ones may also be given (for example, the touch given Curdie in *The Princess and Curdie*). I'm not sure exactly how to define appropriate, but one obvious point is no imitation magic: no incantations and material components, no items with strange properties. In general, Spirit-given gifts which are consistent with how God has revealed himself in Scripture.

#### Specific gifts:

- Administration:  
A Spirit-given leadership ability.  
Note that it is possible to have natural leadership talents without this gift of the Spirit; like several other gifts, it may not be obvious whether a person is exercising a gift of the Spirit or natural talent. (Some gifts, such as faith and helping others, are Spirit-given strong measures of qualities that all believers should have.)
- Apostleship:  
Paul stated that he was the last of the apostles, so this gift is different from the others in only applying to a very small group of people at a very specific time. For the sake of

simplicity, I will assume that player characters are not apostles.

- Discernment of Spirits:  
As this gift applies to the discernment between angels and demons, it will not appear in its current form in the game. It will appear, however, as an ability to sense — perhaps even see, in a person in whom the gift is strong — angels.
- Evangelism:  
A Spirit-given gift to effectively evangelize. This would not appear in a sinless world.
- Faith:  
Someone with the gift of faith possesses a great measure of faith, and unusually powerful prayers.
- Healing:  
The Spirit-given power to heal people.
- Helping Others:  
A special Spirit-given ability and energy to help others, flowing out of an endowment of love.
- Interpretation of Tongues:  
The Spirit-given ability to interpret what is spoken in tongues.
- Knowledge:  
This gift appears in two forms.  
The first is a knowledge of sound doctrine — a gift that is at times not clearly distinguishable from prophecy, preaching, and teaching.  
The second, "logos gnosis" (word of knowledge), is a Spirit-given insight into facts about the external world, about other people's needs. (This is also not always clearly distinguished from prophecy)
- Miraculous Powers:

Look to the Old Testament narratives surrounding Elijah for a picture of a person in whom the gift is strong.

- Pastors:  
The gift of overseeing and caring for and nurturing the spiritual conditions of others.
- Preaching:  
The Spirit-given ability to preach the truth in a way that is powerful and shows its relevance to believers' lives.
- Prophecy:  
Prophecy, Biblically speaking, is somewhat broader than the contemporary understanding of "Spirit-inspired prediction of the future."  
The first and foremost meaning, of chief ecclesiastical importance, is a Spirit-inspired telling of the truth. In this aspect, I am not sure how to clearly distinguish prophecy from preaching and teaching.  
The second part of it is things such as dreams, visions, the voice of the Spirit speaking.  
The specific form the gift of prophecy takes when given to a character will take some form like this.
- Speaking in Tongues:  
Spirit-given (moment-by-moment) speech in the tongues of men and angels.
- Teaching:  
The Spirit-given ability to teach and impart the truth.

ONE FINAL NOTE ON THIS POINT: I am placing the Spirit in play, with greatest reverence, as someone too important to leave out. The Spirit is too big and too important to reduce to just another kind of power or just another element of play. Do not do it. Give the Spirit in play a treatment that is nothing

short of worship.

I cannot give a rule to make this happen. Walk in the Spirit,  
and it will give you the power to do so.

## Section V: A Sample of Play.

Here is a sample of play. The characters are Kendall Lightfoot, a Janra scout given prophecy, Qualinesti (regional name), an Urvanovestilli scholar given knowledge in the first sense, Pirt, a Jec wayfarer given faith, 'Limna, a Yedidia interpreter given healing, and Torv, a Tuz hunter given the gift of help. They are currently in a Tuz village on the Urvanovestilli border. As they have been together for a while, they have all studied a common language (specifically Jec), which they have by now learned to speak with a reasonable proficiency.

I would like to emphasize that this is only one of many, many possible kinds of situations.

[...]

**Pirt:** "What did the riddle say, again?"

**Qualinesti:** "As tall as a house, as round as a cup; people drink from me without lifting me up."

**Pirt:** "Hmm... [pauses in thought for a minute] I wonder if it was talking about a well. Why don't we split up, search the village for a well, and meet back here in half an hour, and go to the well if we find one?"

**Qualinesti, Kendall, 'Limna, Torv:** "Sounds good to me."

**Game Master:** In half an hour's searching, you find that the village has one well, next to the miller's house. From the looks of

it, it has been dry for quite some time. Pirt found, from a brewer, that the village now gets water from a valley about half a mile away.

**Kendall:** I'm going to climb down the well and search for any signs of anything interesting.

**Pirt:** "Would you like to borrow my lantern?"

**Kendall:** "Yes, thank you."

**Game Master:** The well is approximately 25 feet deep; after fifteen minutes of climbing and searching, you find that one of the stones has letters chiseled into it in some script, apparently Urvanovestilli, which doesn't spell out letters that you can read.

**Kendall:** "Pirt, may I also borrow your rope?"

**Pirt:** "Certainly."

**Kendall:** I'm going to climb up, take the rope, tie a Swami seat on Qualinesti, and body belay him down into the well.

**Qualinesti:** "Wait a minute. How am I supposed to get back up? I can't climb the way you can."

**Kendall:** "Relax. I can belay you, and if you really can't climb, I can pull you up. But climbing's so easy!"

**Qualinesti:** "I am not a Janra."

**Kendall:** I'm going to wink as I say, "We all have our problems."

**Torv:** I'm going to pick Kendall up and throw him over my head.

**Game Master:** Kendall, are you going to try to dodge?

**Kendall:** Given an opportunity to fly through the air? No way!

**Game Master (to himself):** Why did I even ask? (to Kendall) Sure enough, you find yourself flying through the air, and land in a couple of somersaults.

**Kendall:** I'm going to saunter back. (to Qualinesti): "So, how about heading down to read the inscription?"

**Qualinesti:** OK, I'll head down.

**Kendall:** Once he's down safely, I'll climb down as well.

**Game Master:** After a little while of identifying the script — it comes from some weird dialect — you are able to decipher the message. It reads, "Do the opposite of usual to what is opposite me."

**Kendall:** Hmm... no buttons to push this time. I'm going to inspect the stone again.

**Game Master:** You don't find anything new.

**Qualinesti:** Are the stones arranged in any kind of orderly pattern?

**Game Master:** Yes; as a matter of fact, they are. There are thirty-two in a circle.

**Qualinesti:** I'm going to see if I can do anything to the opposite stone — especially pull it out.

**Game Master:** You can't budge it.

**Kendall:** I'm going to give it a try.

**Game Master:** You are able to pull it out one inch, at which point you hear a sound of some kind of stonework moving. After a few seconds, the base of the well beneath you begins to tremble, and slide to the left.

**Kendall:** I'm going to jump up and shoot my feet out to the sides so that they catch on a foothold, and shoot an arm around Qualinesti's waist to hold him up.

**Torv:** I'm going to grab the rope and brace myself so that I can pull up Qualinesti and Kendall, if need be.

**Game Master:** Ok. (To Qualinesti and Kendall) The stone beneath you slide out to the side, revealing stone steps receding into the darkness.

**Kendall:** I'm going to shift Qualinesti to my back, and climb down to the stairs, and head down.

**Game Master:** At the end of the stairwell is a closed door, with twenty buttons and what appears Qualinesti to be a cryptogram. It says, [hands sheet to players]

Up pqfo uif eppxbz, qsftt jo cvuupot uxp, uisff, gjwf, ojof, boe pof npsf cvuupo. Uijt pof npsf cvuupo dpoujouft uif qbuufso.

**Qualinesti:** [looks at it] "Both 'uif' and 'pof' are repeated; I'd be willing to guess that one of them is 'the'. ('npsf' and 'cvuupo' are repeated, but I don't know any four or six letter words as probable as 'the'.) For 't' to go to 'p' is back four; 'h' going to 'o' is forward seven; 'e' to 'f' is forward one. That doesn't help us any. 't' to 'u' is forward one, 'i' to 'h' is... T-o o-p-e-n... Got it!

"To open the doorway, press in buttons two, three, five, nine, and one more button. This one more button continues the pattern.

"Hmm. Two plus three is five; five plus three is eight. No, that's not it. Two plus three is five; two plus three plus five is ten. Now if we could only find a happy medium."

**Pirt:** "Two times two minus one is three; two times three minus one is five; two times five minus one is nine. Hey! I think I've got it. Who's for pushing buttons two, three, five, nine, and seventeen?"

**Qualinesti:** "Hmm, that's a little complicated. If we add, two plus one is three, three plus two is five, five plus four is nine... it doubles, so nine plus eight is seventeen."

**Kendall:** "I think you agree. How about if we try it?"

**Others:** "Ok." **Game Master:** Gears begin to turn, and the door hinges squeak as the door turns back.

[The party enters the underground, and after a while of puzzles and exploits, locates the map which they had been in search of. Coming out after a couple of days, they go to an inn.]

**Game Master:** Jim, could you come with me for a second? [pulls Kendall's player, Jim, out of earshot of the rest of the players.] During the night, you have a dream in which an angel appears and tells you to go the cave of Munra, a great prophet and sage, which is indicated by the notched circle on the map. He tells you to examine carefully and heed the information on the map, and says that on the way you will meet three trials, which must be overcome.

**Kendall:** I'm going to ask the angel what the trials are.

**Game Master:** "That is for you to discover." [They return to the players.]

**Kendall:** "Last night, I had a dream. An angel told me that we must seek out the cavern where Munra lives, which is marked by a notched circle on the map. Munra is a great prophet and sage. We need to try to understand and pay attention to the map on the way there. We will meet three trials on the way, which we must overcome before arriving."

**Qualinesti:** Are there any caravans or other wayfarers travelling in that direction from the village?

**Game Master:** No.

**Torv:** "How 'bout if we all buy five days' provisions and set out?"

**Others:** "Ok."

**Qualinesti:** Is there a path to the cave indicated on the map?

**Game Master:** Yes, there is.

**Qualinesti:** "I suggest we follow the path."

**Others:** "Ok."

**Game Master:** You begin to follow the path. Along the way, Torv finds an adequate supply of rabbits, boars, and so on to keep you fed, as well as springs and streams sufficient to always have at least some water in your waterskins. After fifteen days'

travel, you come to the place indicated on the map as Riddler's Pass. There are two ridges coming together, forcing any travellers to pass between them, and between the mountains lies a yawning chasm.

The weather is an intense thunderstorm.

**Kendall:** Can we climb the ledges?

**Game Master:** There is only sheer rock, and the top seems to be angled so that there's nothing for a grappling hook to catch on to.

**Kendall:** Is there anything to secure a rope to?

**Game Master:** Yes; there are trees on both sides.

**Kendall:** I'm going to toss my grappling hook and attempt to secure a rope on the other side, then tie a noose on the other end around the rope, and attach another rope through the loop of the noose so that I can pull the rope back from the other side.

**Game Master:** Done.

**Kendall:** "How about if I shuttle across giving you each a piggyback ride, and then carry across our gear?"

**Others:** "Ok. We'll wait by the edge for you to get back"

**Game Master:** You get Torv, Pirt, and Qualinesti over; while you are carrying 'Limna over, a bolt of lightning strikes the tree on the far side. The electrical spasm causes Kendall with 'Limna to jump off the rope, and the thunder blast knocks Torv, Pirt, and Qualinesti over the edge. You fall seventy five feet onto rock.

Qualinesti has a fractured femur.

Torv has a tibia/fibula fracture, and some broken ribs.

Pirt has unknown injuries; he is knocked out by the impact.

'Limna has two broken arms.

Kendall is able to roll and reduce the damage, but he will have

some severe abrasions.

**Limna:** I'm going to pray over myself, and then lay hands on Qualinesti, Pirt, Torv, and Kendall.

**Game Master:** You feel a lessening of pain as the bones begin to slide into place.

**Kendall:** I'm going to search around the sides for a route up.

**Game Master:** The sides are sheer rock and slippery rock; you can see almost nothing now. It's unclear whether you'd be able to find a route up on a sunny day; you can't climb out now.

**Kendall, Torv, Pirt:** We're going to search for a way out.

**Game Master:** You don't find anything.

**Pirt:** I am going to pray that a way out may be found.

**Game Master:** The rain begins to grow less intense, and, after about an hour, the sun begins to shine. You notice that the walls have streaks of talc reaching up to the top.

**Kendall:** Are there any visible climbing routes?

**Game Master:** No.

**Kendall:** "Torv, may I borrow your dagger?"

**Torv:** "Here you go."

**Kendall:** I'm going to start seeing if I can carve holds in the the talc, hoping to find a way to the top.

**Game Master:** In about three hours, you get about two thirds of the way up, before coming to the end of a streak which is not within any reasonable distance of any other.

**Kendall:** I'm going to climb down and rest for a while.

**Torv:** What's the status of the rope?

**Game Master:** It's lying coiled at the edge.

**Torv:** Are there any small rocks around?

**Game Master:** Yes, there are.

**Torv:** I'm going to throw rocks at it to knock it down.

**Game Master:** You can't throw any rocks higher than about

thirty feet.

**Kendall:** I'm going to stuff rocks in my pockets, and climb up the talc trail to throw rocks at the rope.

**Game Master:** You get about halfway through before knocking it down. It falls about ten feet to your right, and goes down about twenty feet.

**Kendall:** "Geronimo!!!"

**Game Master:** You barely manage to stop yourself sliding before you reach the tip.

**Kendall:** I'm going to climb up, scare away any animals, and ferry the gear across, then from the other end, pull across and reanchor the rope, and help the people up. [pause] Wait. I'm going to rapell down the side and carve handholds.

**Game Master:** There are a couple of raccoons who have helped themselves to your food, but no other animals. You manage to do what you wanted to.

**Kendall:** "Thanks for letting me use your dagger, Torv. Here it is."

**Torv:** "You're welcome."

**Game Master:** You continue on, and early the next day come to a fork in the path.

**Pirt:** What does the map say?

**Game Master:** The map shows only one path.

**Pirt:** Is one side more sharply angled, or wider, or more worn?

**Game Master:** Both are equally angled, equally wide, and equally worn.

**Pirt:** I'm going to study the map to see if I can find any hints.

**Game Master:** [pauses] You don't find any.

**Qualinesti:** I'm going to do the same.

**Game Master:** You don't find any, either.

**Kendall:** I'm going to pray for a word on which path to choose.

**Game Master:** You remember the words of an author:

And I said to him, "Sir, give me a light, that I may tread safely into the unknown."

And he said to me, "Put thy hand into the hand of God. That will be better to thee than a light, and safer than a known way."

**Kendall:** Do I receive anything else?

**Game Master:** No.

**Pirt:** "God has sent us on this quest, and I am sure that he desires that we succeed. I think we should just pick a path, and trust God that it will be the right one. Which one do you suggest?"

**Kendall:** "Say, left."

**Torv:** "How do you know? Did you receive a word from God?"

**Kendall:** "I don't. I didn't. But I'm trusting in him."

**'Limna:** "Is that okay for everyone?"

**Others:** "Sounds fine."

**Pirt:** "Well, let's go, then."

**Game Master:** You go along, and as you go the hunting becomes more difficult. You come to the last village before the cave, where you purchase five days' worth of provisions, and go along... four days later, you're almost out of water, having just enough to get back, and haven't been able to find any along the way. It looks like another good week's journey until you get to the cave.

**Pirt:** Has there been any rain or any indication of rain?

**Game Master:** No. You've come across a couple of dry creeks.

**Pirt:** "I say that we go along and pray to find water."

**Qualinesti:** "We could go back to the village and ask about

water sources."

**'Limna:** "Yes, we could, but that would mean taking a few days' recovery from dehydration. It would mean a long delay."

**Kendall:** "Point."

**Pirt:** "I think that this is the third test."

[After a continuation of deliberation, they decide to continue.]

**Game Master:** Two days later, you come across an abandoned well which, while the wood holdings, the rope and the bucket are hopelessly rotted, Kendall is able to climb down into to replenish your waterskins. Four days later, you come across a cavern twisting into the earth.

**Pirt:** I'm going to light my lantern, hold my breath, and walk in.

**Game Master:** It takes your eyes a little while to adjust to the semidarkness, and then you see an old man with a flowing, white beard, wearing a coarse woolen cloak, sitting in a chair.

There is a fire in the corner of the cave.

He stands up, raises his hand in benediction, and then says something in his tongue. [pulls Jane, 'Limna's player, aside.] He said, "Greetings, travellers. I have been waiting for you."

**'Limna:** Unless I indicate that I'm having a private conversation with Munra, I'm going to interpret so that you can just speak for him. [to others] "He said, 'Greetings, travellers. I have been waiting for you.'"

[ 'Limna interprets for the interaction.]

...

## Section VI: Character definition.

Here is a battery of questions designed to help players think about who the character they are designing is:

Who is he? Does Jesus sit enthroned in his heart? How does he try to imitate Christ? How does he see the world? Where do his loyalty and his love lie? How does he use his talents? What virtues does he embody? Is he temperate, controlled, balanced?

What does he search for in other people? How deep are his friendships? How deep is he? How strongly does he embody the qualities he holds? What community is he a part of? What is his family, his liege, his birthplace? What inhabits his thoughts? How does he embody what is truly masculine (she embody what is truly feminine)? What fruit does he let the Spirit work in his life? What is his name?

What is his story? What interests, goals, and desires does he have? What does he cherish? What special twist does he put on things? How does he pray? What is his role in the Church? What does he create? Of what would his friends look and say, "That is him?" What is his story? What (if any) visions has he had [this question is more the focus of the DM than the player]? If he were an animal, what animal would he be, and why? What are his hobbies? What is his favorite story? What does he like to present to other people? What is he afraid of other people

knowing about him? What memories does he cherish? How old is he? How has he changed over the years? How has he remained the same? What are his loyalties? Who lies closest to his heart? Who does he exist in relationship to? What communities is he a member of? How does he spend his time? What are his hopes and dreams?

What is he naturally gifted at? What skills has he developed? What would traditional game systems attribute to him? What gifts has he received in the Spirit [again, this question is more for the DM]? Prophecy? Faith? Wisdom? Knowledge? Healing? Miraculous powers? Leadership? What are his weaknesses? Does he have any handicaps? What can and can't he do?

What does he look like? What is his manner?

What are his relationships to other characters?

Here is a listing of skills/areas of knowledge/abilities. It is meant to be illustrative rather than exclusive. (Partially borrowed from AD&D)

(A following parenthesized letter indicates that a skill is common to all members of a race: (N)or'krin, (T)uz, (Y)edidia, (U)rvanovestilli, Je(C), (S)hal, (J)anra. Other parenthesized information may follow.)

- Acrobatics/Tumbling (J)
- Acting
- Ambidexterity
- Animal Handling (Y)
- Animal Lore
- Animal Training
- Anatomy
- Anthropology

- Appraisal
- Archery
- Artistic Skill (Specific Medium)
- Balance (J)
- Biology
- Blacksmith
- Blind Action (S)
- Bowyer/Fletcher
- Brewing
- Building
- Carving
- Carpentry
- Catch
- Ceremonies (U)
- Charioteering
- Chemistry
- Climbing (J)
- Clockwork Device Craftsmanship (U)
- Cobbling
- Cooking
- Cold Tolerance (N)
- Cultures (specific culture)
- Dancing (Y)
- Dodge (J)
- Doublejointedness
- Endurance
- Engineering
- Etiquette
- Farmer (C)
- Fire-Building
- Fisher

- Gambling
- Gardening (Y)
- Gem Cutting
- Geography
- Guess Actions — guess from looking at a person what he will do next.
- Haggling
- Hear Noise — hear almost silent noises.
- Heat Tolerance (T,S)
- Heraldry (U)
- Herbalism (Y)
- Hide
- History (U)
- Hunting (N,T)
- Illusionism
- Improvisation (Musical)
- Incense Making
- Janra-Ball (J) — incomprehensible to members of other races.
- Jewelry Work
- Juggling
- Jumping (J)
- Jury-Rigging
- Keen Eyesight
- Languages (Specific Language(s))
- Leadership
- Leather Working
- Literature (U)
- Mapmaking
- Massage
- Mathematics (U)

- Mediation
- Medicine
- Mining
- Move Silently
- Mountaineering
- Musical Composition
- Musical Instrument (Specific Instrument)
- Navigation
- Open Locks
- Painting
- Persuasion
- Philosophy (U)
- Poetry Composition
- Pole Vault (J)
- Pottery Making
- Public Speaking
- Pyrotechnics
- Reading/Writing (U)
- Read Emotion (Y)
- Repair
- Riding
- Rope Use
- Sailing
- Search
- Shouting — shout loudly and prolongedly without tiring vocal chords.
- Singing (Y)
- Smell Creature (Y) — smell what creatures are around and have passed by.
- Sports
- Stonemasonry

- Storytelling
- Strategy Games
- Swimming (J)
- Symbolic Lore (N,C)
- Tailoring
- Technology Use (U)
- Theology (U)
- Tightrope Walking (J)
- Tracking
- Trivia
- Ventriloquism
- Weather Sense (Y)
- Weaving
- Wilderness Survival (N,T,Y)
- Withdrawing/Meditation (S)
- Woodlore (Y)
- Wrestling (J,T)

Here is a list of some attributes, to think about how strong or weak a character might be:

- Ability to Learn
- Agility
- Charisma
- Constitution
- Dexterity
- Intelligence
- Knowledge
- Memory
- Perception
- Speed

- Strength
- Wisdom

Possible virtues to think about how a character embodies goodness:

- Balance
- Chastity
- Compassion
- Contrainte
- Courage
- Faith
- Faithfulness
- Forgiveness
- Generosity
- Gentleness
- Honesty
- Honor
- Hope
- Humility
- Joy
- Justice
- Kindness
- Mercy
- Moderation
- Love
- Obedience
- Patience
- Peace
- Penitence
- Purity

- Self-Control
- Simplicity
- Submission
- Wisdom

# A Simple Mathematical Model

After having made an exquisitely complex mathematical model, I am trying to make something simple that will take a back seat to role play, and not confuse new players. It is modelled after White Wolf, and in another sense after the computer language Smalltalk; I am trying to make a rule sheet that is very short and sweet.

In this model, you have four attributes: Physical, Mental, Social, and Other. Each of those attributes is rated 1 to 5: 1 is below average, 2 is normal, 3 is typical for adventurers, and 5 is highest possible. The value of these attributes is determined by you and the game master, at whatever most appropriately represents your character. The Other attribute is one you specify: could be charisma, or understanding of other people, or dexterity, or knowledge. It should be chosen in an area that tells more about your character than just Physical, Mental, and Social would have. You also have skills/abilities, each rated at between 0 and 5; skills can be anything appropriate; a suggested list is as follows:

Acrobatics/Tumblina Actina Animal Handlina Animal

Training, Anatomy, Anthropology, Appraisal, Artistic Ability, Attack, Balance, Biology, Blacksmith, Blind Action, Bowyer/Fletcher, Brewing, Building, Carving, Carpentry, Catch, Ceremonies, Charioteering, Chemistry, Climbing, Clockwork Device Craftsmanship/Engineering, Cobbling, Cooking, Cold Tolerance, Cultures, Dancing, Dodge, Endurance, Engineering, Etiquette, Farmer, Fencing, Fire-Building, Fisher, Gambling, Gardening, Geography, Guess Actions, Hagging, Hear Noises, Heat Tolerance, Heraldry, Herbalism, Hide, History, Hunting, Illusionism, Improvisation, Incense, Janra-Ball, Jewelry, Juggling, Jumping, Jury-Rigging, Languages, Leadership, Leatherworking, Literature, Mapmaking, Massage, Mathematics, Mediation, Medicine, Mining, Move, Musical Composition, Musical Instruments, Navigation, Open Locks, Persuasion, Philosophy, Physics, Poetry, Pole Vaulting, Pottery, Public Speaking, Pyrotechnics, Reading/Writing, Read Emotion, Repair, Riding, Rope Handling, Sailing, Search, Shouting, Singing, Smell Creature, Sports, Stonemasonry, Storytelling, Strategy Games, Swimming, Symbolic Lore, Tactics, Tailoring, Technology, Technology, Theology, Throw, Tightrope Walking, Tracking, Trivia, Ventriloquism, Weather Sense, Weaving, Wilderness Survival, Withdrawing, Woodlore, Wrestling

You start with a total of 10 points to distribute between all your skills; you will earn from 1 to 3 experience points between sessions, depending on how well you role play. It takes 1 experience point to raise a skill from 0 to 1 points, 2 experience points to raise a skill from 1 to 2 points, and so on, 5 points being necessary to raise a skill from 4 to 5 points.

When you attempt to do something, the game master will assess a difficulty level from 1 (easiest) up to 10 (most difficult).

You will add up the relevant attribute plus skill level (-1 if you have no skill points for that skill), and then add a die roll (divided by 2 and rounded down) to your sum, making your total; the game master will add a die roll (divided by 2 and rounded down) to the difficulty, making the difficulty total. If your total is greater than or equal to the difficulty total, you succeed at the action.

Injury is intentionally left out of this model. It is intended to be role played — if you fall when climbing the wall, the consequence is not that you're three hit points lower; the consequence is that you've got a broken leg. The point of this model is not to govern role play; it is to support it, not representing in full so much as evoking just enough chance to lend uncertainty to events in role play.

# A Voyage in Espiritichthus

I was running a play by e-mail adventure in the world Espiritichthus. Basic documents for [The Minstrel's Song](#) (the game) are on its page. The campaign is closed.

## **Character descriptions:**

The characters are [Caroline](#), [Hood](#), [Jeff](#), [Xingu](#), and [Zakhs](#) online.

## **Turns:**

*A First Meeting*

*A Contest*

*Seeking Rozimald's Keys*

*A Hermit*

*An Encounter*

*A Bear*

*Continuing On*

---

**Name:** Caroline Leof'degn

**Race:** Nor'krin

**Age:** 24

**Gender:** Female

**Physical Appearance:**

Caroline is 5'10" and 160 pounds. A little tall even for one of the 'northern giants'. Her sun bleached blond hair is kept in a neat and tidy braid down her back, reaching down to the small of her back. Her clothing tends to be practical and designed to hold up in all kinds of weather. Her eyes are blue and in times of deep emotion yellow flecks seem to rise and burst upon the surface.

She travels very light with a backpack of various healing tools and herbs, a bow, and a long sword. Her iron cross given at becoming an adult at first appears very plain and only with close inspection do the tiny designs show.

**Personality:**

Started out her life, very concerned with the law and facts. Things of practical use. Used to consider things that were not of obvious practical use as wasteful. She was all the more shocked when at 16 her challenge for becoming an adult turned out to be learning to sing. She left to go live with the Yedidia people, since logically they would be the best ones to show someone how to sing. It was not that simple. Yedidia sing because they enjoy life, and to show Caroline how they sing, she needed to learn about enjoying life. Not enjoying a particular activity or helping someone, but life and living itself. By the time Caroline left, five years had passed and Caroline was starting down the path to understanding and enjoying life. She had finally learned how to sing.

### **Profession/talents/skills:**

Healing is her first vocation. The taking care of wounded and sick. She is fairly skilled and tended of the physical wounds, and is slowly learning to identify those hurt in other ways. Protecting and taking care of other physical needs is the use she puts her weapons skill too. Singing.... singing she does for joy of life, in answer to the beauty of a sunrise or rose.

### **Miscellaneous:**

Caroline has an true enjoyment of herbal teas. While she still enjoys crisp cold water that her race normally favours, during her five years with the Yedidia one of the pleasures of the senses she learned to enjoy was tea. She has tea either hot or chilled, enjoying not only the taste but the smell as well. She remembers her time spend learning with the Yedidia with every cup.

### **A quote:**

"Sometimes we become so consumed with what we believe we should be rushing to do, we forget to listen in silence to the voice of God."

---

**Name:** Hood Natheel

**Race:** Tuz

**Age:** 25

**Gender:** Male

**Occupation:**

Blacksmith

**Appearance:**

Hood is a shorth stocky fellow. He is bald but do have a large jetblack beard. He usally wears a pair of short grey trousers and buff coloured sleeveless leather vest with a sort of flap hanging down on the knees( it a kind of blacksmith protection wear that is quite common among the Tuz, also known a "Tuulth")

**Personality:**

Hood Natheel got a personality similar to the iron he usally work with. He is strong willed, cold in the face of danger and if someone heats up his heart it will melt and the somewhat cold front will disappear and show the true Hood. Usally his temper is very balanced, but on occasions he will emotional outburst( either of joy or if he is really displeased with something)

Hood is a curious fellow always eager to seek answer to the questions he is confronted with. An ability that might put him in jeopardy sometimes. Usally he sort these things out.

He is also looking for solutions to his community, so his curiosity is not at all self centered. If a problem occur among the his friends neighbors or someone else he usally seek out to find an answer to the question at hand.

He is perhaps not the most intelligent being in the creation, but since he is a patient man he usally ends up with the answers in the long run.

The solutions that Hood comes up with are usally based on

simplicity and he often hard to understand more complex reason. Therefor he might feel a bit uneasy with the company of scholar and highly educated men an women. As usual he tries to compensate this weakness with the usual patience. Cooperation comes before confrontaion so Hood would probably not start a confrontaion with people who does not share he way thinking.

Hood usally speaks in a laconic way. He seldom expresses more than absolutely needed. That makes him a rather bad preacher and he is not the type of person that tries to impose his ideas on others.

**A typical Hood quote:**

"Eeh..Wait...I think I got it!!..eeh.or perhaps not"

**Background:**

Hood is born in a small Tuz village called Haahem. He has very seldom left it when he entered the game. On occasions he has visited other villages. He is the eldest son of a Tuz blacksmith named Holth Natheel. Just like his father(and numerous generations before him) Hood is a blacksmith. The silent steady nature of the Natheel family has given them a good reputation in the home village and the surrounding area. For the moment the Natheel family consist of 15 persons, grandpa Oothol Natheel, Holth and his wife Holthina and their 12 children( among them you can find Hood).

**Inventory:**

- sledge( used as a protection weapon)
- knife
- tinderbox
- rope 50'
- lantern
- leather protection

---

**Name:** Chimera Antonio Pbrush Petra Mistrelli Charleston  
Jeffery Mirrorman

**Race:** Urvanovestilli

**Age:** 35

**Gender:** Male

**Physical appearance:**

Chimera is 5'3" and weighs 101 pounds. He has clear white skin and long jet-black hair pulled back in a ponytail. When he is out in the sun, he will have a wicker hat on with a long brim that hides his face, and wears a pair of dark sunglasses. He wears all white satin clothes and carries his tools in a backpack along with several blankets that he uses when there is no place to lodge. He walks with a long metal walking stick that is wrapped with a leather strap. His shoes are made of a cotton black clothe with very thick leather souls. He has emerald green eyes and claw scar across his left forearm.

**Personality:**

Chimera is very quiet, but a very hard worker. When he does talk, it is with a very soft and tender voice. His love for God can be seen deep within his eyes and in the fact that he spends much time in prayer and study each day. Once you get to know Jeff, he is very friendly and very willing to offer his hand to assist others.

**Profession/talents/skills:**

Like his father, Jeff will one day take over the maintenance and construction of the labyrinth of the city Mistrelli. He has been brought up on the studies of Ceremonies, Clockwork Device Craftsmanship, Heraldry, History, Literature, Mathematics, Philosophy, Reading/Writing, Technology Use, and Theology. Jeff is also Proficient at Illusionism, and Moderately Skilled at

Opening Locks and is more than just a Dabbler when it comes to Jury-Rigging.

**Background:**

My name is, Chimera Antonio Pbrush Petra Mistrelli Charleston Jeffery Mirrorman. My friends call me Jeff. I am an Urvanovestilli from the city of Mistrelli. Christ is the center of my life, for I try to live as He would have by giving all that I have and all that I am to helping others. The world is a great place, with many mysteries and wonders. I am but a young adult at the age of 35. I have been on many journeys to see the world and to meet the other cultures that God has created. In this part of my life, I am still filled with the wanderlust that is engraved upon my soul, but I find greater fulfillment when I can help others as I see the world. My family has been apart of the creation of Mistrelli, therefore, I have grown up creating many unusual devices for traps and secret passages. Some of the devices that I have personally developed were the search light for wandering around in the tunnels, and a mirroring device that allows one's image to be projected at a distance, but my most fun device was a box with a button on it, that when pressed, entangles the holder of the box with strong wires that could not be broken, not even by a Nor'krin. Since I have been on many journeys, I have also been able to help others with minor problems such as water irrigation and food storage. Some of the virtues that I embody would be Contrainte, Faith, Forgiveness, Generosity, Gentleness, Honesty, Honor, Humility, Joy, Love, Patience, Peace, Self-Control, and Wisdom.

I search for Honesty in other people. I have only a few relationships with others, but they are very deep. I think that quality counts much more than quantity. In my spare time, I love to think about the mysteries of God and the universe. How He

has created such a symphony of life with as much diversity.

I am my father's first born, and will return one day to become his assistant, and eventually, take over for him. Even though I might look helpless, I would have to disagree. In my travels, I have been able to study and master the Martial Art form Akido, which is a very soft a non aggressive form. Although non aggressive, it is very useful when being attacked. The attacker when only get hurt accordingly to how much force he put into the attack.

I enjoy life very much. One of my favorite games is Imperial Kingdoms, a more complex version of Chess. My other hobby is creating a machine that will allow me to fly. My favorite story is about Eistinia, one of the great inventors from my town. He created a balloon that could carry a basket into the sky with several people. After his first attempt, he landed in a far away place, because he forgot to setup a way to go down. Anyway, he came across a small village that knows nothing of God and was able to share the God news with them. How exciting. I too, want to be able to help others, both physically and spiritually. I like to present others with my gifts of service, to help them in their needs.

I cherish the memory of my great grand father, because it was he how taught me that God and Science are the same, for we would not have Knowledge if it were not God's will. I have grown much since that time, and I have helped many people because of that. But one thing has not changed, I have always wanted to know why I believe what I believe, and never just accept anything as that was how it has always been.

There is a girl back home that has also left following her wanderlust, her name is Tia Carolina Pamelita. It would be my desire to win her heart and to ask her to marry me. But before I

do, I must find out who I am.

I am a typical Urvanovestilli standing at 5'3" and weighing in at 101 pounds. I might seem very quiet, but I am really very bright and well cultured. I have studied Ceremonies, Clockwork Device Craftsmanship, Heraldry, History, Literature, Mathematics, Philosophy, Reading/Writing, Technology Use, and Theology. But I have also studied Anatomy, Biology, Chemistry, Cooking, Herbalism, Illusionism, Improvisation, Jury-Rigging, Languages, Massage, Mediation, Medicine, Musical Composition, Piano, Open Locks, Poetry Composition, Pyrotechnics, Strategy Games, and Trivia.

Ability to Learn - Good

Agility - Fair

Charisma - Fair

Constitution - Fair

Dexterity - Fair

Intelligence - Good

Knowledge - Good

Memory - Good

Perception - Good

Speed - Poor

Strength - Poor

Wisdom - Good

**A Quote:**

"To study what God has created and how it works is to understand who God is just a little bit more"

---

**Name:** Xingu  
**Race:** Shal  
**Gender:** Male  
**Age:** 232  
**Weight:** 135 lbs  
**Height:** 5'5"

Xingu is, for a Shal, of medium height and weight, with soft, penetrating blue eyes. If one wished to know his age, one would be confused by the contrast of his frame - that of middle age, with well-defined muscles in his upper forearms - and his skin whose aging has been accelerated by the salt breeze of the sea; yet Xingu possesses an air of timelessness that makes even thinking of age superficial. He wears a dark green cloak and carries a walking stick of gnarled wood.

Xingu doesn't have as much a personality as he has a presence. One can be with him, and not a word need be spoken before his presence - a feeling of warmth, compassion, love, serenity, peace, and timelessness - is felt.

Xingu lives in the Shal port village of Vis. There he was a sailor and fisherman. Like all Shal, he lives his life in serene mysticism, possessing a timeless wisdom - not exactly logic, not exactly intelligence, but a wisdom much like the Tao masters. As per his trade, he is skilled at fishing, sailing, rope handling, and navigation, the latter based more on intuition than calculation.

Like most sailors, Xingu is passable at some musical instruments, singing, and sea lore. Traditional Shal music is less outwardly joyous; it is more peaceful, serene, and inspiring of meditation.

The Shal sail largely by intuition, by becoming at peace with the ocean. While one certainly should not sail with a Shal if

speed is the end goal, there's no person better to be with should the seas get rough. Many a Shal has been known to survive storms which should have cracked a boat to bits, by holding the helm in one calloused hand, the main sheet cutting into the flesh of the other hand, muscles straining to keep the ship under control, and yet maintaining a look of utmost peace and tranquility, a lack of fear, and a faith strong enough to move mountains. The Shal sail, and weather storms, simply by staying in harmony with the sea and remaining at peace. Xingu is certainly no exception.

Xingu will always welcome a stranger into his house, or sail a foreigner to any destination. Long days and nights on a ship with guests, repeated for nearly two centuries, combined with seemingly infinite patience have made Xingu quite well-versed in the languages, customs and ways of the other cultures, and he has come to appreciate the different races greatly.

One day when withdrawing from his community and the rest of the world, Xingu felt a calling to leave his boat and travel away from Vis, which he had never before left by land. It was then that he happened upon the city of Mistrelli.

Xingu carries just enough possessions to survive - a hunting knife, a tinder box and flints, and a canteen of water. At his home in Vis is moored his simple 16 foot yawl-rigged boat with tan bark sails, his ropes and net.

**Quote:**

"I feel, I sense, and I live. I am, and He is, hence I know."

**Quote:**

"I feel, I sense, and I live. I am, and He is, hence I know."

---

**Name:** Zakhs

**Race:** Tuz

**Age:** 28

**Gender:** Male

**Physical appearance:**

Zachs is of medium height and stocky build. His broad grin (his usual expression) is nestled in his thick black beard, and his eyes have a humorous twinkle. When he laughs, it is long and loud. He carries a stout walking stick made of a dark-colored wood, and his clothes are well-worn and comfortable looking.

**Personality:**

He is not naive, for he has seen much of the world, but he is a basically trusting person. He gives people the benefit of the doubt until they prove him wrong. He greets everyone he meets as a friend until proven otherwise, and he is a hearty and enjoyable person. His special gift is the ability to help others, and he takes great joy in this. When he comes across someone working in his travels, he pitches in and helps them finish a job. In this way he can raise goodwill as well as food and a place to sleep for the night.

**Profession/talents/skills:**

He is a wanderer and a pilgrim, seeking through the world in order to broaden his experience. He has the standard skills of a Tuz; Heat Tolerance, Hunting, Wilderness Survival, and Wrestling. He is also skilled in Animal Lore, Brewing, and Endurance. He is good with his hands and likes to Build and Carve.

**A quote:**

"Greetings, Friend! Care for some help with that?"

---

Mistrelli lies in the heart of the Fog Valley; a shroud of mist cloaks the ground, out of which rise trees and tall buildings with spires and towers. Inside the buildings are all manner of tunnels of tunnels, secret passages, and trapdoors; there are clockwork devices in each one. Throughout the city are spread a handful of entrances to a vast underground labyrinth, of which the better part is unknown; there are all manner of doors and puzzles inside.

The city is full of rose bushes, climbing up the sides of the buildings, over and around gates; most are yellow, but there are some of every color.

The people take a long time to get to know, and their personalities always have hidden gems. Their study of theology emphasizes mystery and the incomprehensible nature of God; Connaissance, a theologian from Mistrelli, began and ended his magnum opus with the words, "I do not know."

Inside this city, which you have all come to for your various reasons, you are each hailed by a young Janra. He is wirily built, with deep, twinkling blue eyes and a shimmering midnight blue robe. He greets you according to your people's way and tells you in your native tongue, "Greetings. My name is Nimbus. I would like to request the honor of your presence tomorrow, in the third hour of the afternoon, at a meeting in the public square."

Nimbus is apparently an adventurer of some renown. He is said to have gone on many quests, although exactly what is not clearly known; no two stories are alike. He is also said to have a massive vehicle known as the Juggernaut, Nimbus's Roving Citadel, etc.

The following day, in the public square, Nimbus divides those assembled into teams, and announces, "I have hidden three eggs, one gold and two silver, in the labyrinth. A team which returns

with a silver egg I will give forty gold sovereigns and a tour of my fortress. The team which returns with the golden egg will receive a hundred gold sovereigns, and I will take them in the citadel anywhere within a month's journey they wish to go."

---

Hood belched a loud belch, and chuckled. He had had little difficulty finding something to do — it seemed that people everywhere had heavy things to carry around — but the dainty little portions he had been served were a surprise. Very cute, the strips of meat arranged across layers of cheese and a flaky bread, but not terribly filling. No wonder all the Urvanovestilli were thin as a beanpole, he mused. He tried to eat with the silver instruments he was given, but the strips of meat kept falling off of the pointy thing. At least the tiny knife was sharp — it cut with a refreshing lightness as compared to the much larger knives he was accustomed to, which assumed that you had a bit of strength.

The chef must have seen him staring in disbelief at the food; he turned the faintest shade red, quickly walked back in the kitchen, and came back holding a pot, by wooden pads, and followed by a little girl holding a miniature bowl and spoon. "I'm sorry; I am used to serving for Urvanovestilli, and forgot for a moment that you were a Tuz," he said through a thick accent. It took Hood a little while to grasp the long sentences, but when he understood them, he smiled. In Urvanovestilli, he tried to say, "Thank you," and took the pot, guzzling the soup from it. The warmth of the steel pot was comforting to his calloused hands, and the steaming soup filled his stomach with a pleasant heat. There was a somewhat awkward moment of silence — the cook staring in disbelief that anybody could touch the pot with bare hands, let alone drink from it, Hood realizing that they had actually intended him to eat the soup with the tiny bowl and spoon. Finally, Hood set the pot down, smiling and again saying, "Thank you," and the cook picked it up, and said, "I hope you liked it."

The soup had had a taste Hood had never tasted before — subtly spiced, with a gentleness to its meaty flavor and salt — and Hood leaned back and belched to express his gratitude. There was a moment of silence, as people turned to him, and the little girl giggled; Hood remembered that the Urvanovestilli had a rather odd attitude about belching. A young man said something rather loudly in Urvanovestilli, and then fluent Tuz: "Aah, yes, I have heard of how the Tuz express their appreciation for a good meal by a good, hearty belch. It sounds like our hard working friend here is quite pleased with the fare!" The cook looked as if he understood, and then tipped his head, walking away with the pot, bowl, and spoon.

Now that the situation had ended, it was far easier to see its humor. Having spent a few days in the forest, hunting his food, Hood had been out of Urvanovestilli culture, and lived much as if he were in a Tuz forest — though even then, he missed some of the tough and rowdy monsters to be found. Have a little patience, he thought, and you'll adjust to a culture, learn to do things their way, while still remaining you — little moments like the one about the meal brought a bit of spice and amusement.

Hood had left his home village Haheem for the first time in his life. The reason was simple. 12 kids could not inherit a single blacksmith workshop. The Tuz living around Haheem has not developed the idea that the eldest son is the obvious heir to his father's possessions. There were actually no clear rules at all regarding this matter. After a short discussion Hood suggested that they all should solve the matter in one big wrestling match - Hood did not win, so there was nothing more to do for Hood than to leave his village and to seek his fortune somewhere else.

Maybe he could start a new workshop in a nearby village one day. Now you're a somewhat young Tuz blacksmith and you need to

get a job, what do you do? Well maybe seek employment in some of the Urvanovestilli cities. The strange inhabitants in these cities sometimes have a need for Tuz artisans. Hood had heard stories about the marvelous city of Mistrelli. A city packed with weird mazes, buildings and other strange things.....maybe the Misterellians needed help with some new constructions.

A couple of weeks later Hood has just entered the city of Misterelli. He has been drifting around a while studying the sites and landmarks of the city when he sees a young Janra. Hood thought for himself.....

"Ahh..a Janra!.... well as we say in Haheem..where there is a Janra there is something going on...."

So now he was at the square, eagerly waiting for things to begin.

There were a few people who stopped to talk with him along the way; the most interesting was an old woman, wearing a black robe with a loose cowl and golden threads woven into its edges, who spoke entirely in questions. She didn't speak any Tuz, but she spoke slowly, loudly, and with simple words, and repeated her questions a few times. It was very difficult to see the person behind those questions, but Hood thought that there was something there, if only he could give it enough time. There was just enough there, for Hood to know for sure that something was eluding him... As Nimbus climbed a tree and cleared his throat to speak, she handed him a piece of paper, and said, "Here's my address; do come by."

The first thing that the young Janra said was, "Brothers and sisters, there are people of many languages here. Please have patience as I explain things in everyone's tongue, and please remain here until I have divided people into groups." He said this, of course, in several languages, but it was not too long before

those gathered heard in their own native tongue: that he had hidden three eggs, two silver and one gold, that a team returning with a silver egg would gain forty gold sovereigns and a tour of his Juggernaut, and the team returning with the golden egg would win not only one hundred gold sovereigns, but a trip inside the Juggernaut to anywhere within a month's journey.

It seemed but a moment before Hood was brought together with a team, and then people began to quickly scatter into nooks and crannies. The others assembled and brought into the team were:

Zakhs, another Tuz, a stocky fellow with a broad grin, twinkling eyes, and a thick black beard. His clothing was well-worn, and he carried a thick, dark walking stick.

Xingu, a young Shal with a very peaceful gaze.

Caroline, a young Nor'krin bearing a sharp sword, a bow, and a box, with braided hair running down her back. She bears with her a slight fragrance of roses; when asked, she explained that she was savoring the roses at the rose garden, and held out her hands; her fingertips were a shade of dark pink, the color of the roses having rubbed off on them.

Hood pulled out his lantern and tinderbox, and with nimble fingers, quickly struck the wick afire. "Shall we go a lookin'?"

The square was already still, the people having departed; only Nimbus remained, perched in the tree, and a few people passing here and there.

As the group began to walk about, Hood's sharp eyes looked in a public square and spotted a statue with a large pedestal, with a rectangular block on one side slightly recessed. He kneeled down, and felt around the edges. The block gave a little when he pressed on it, but beyond a short distance seemed to catch on something. It moved more at the bottom, where it

moved back, than the top, where it scarcely moved at all. "This seems to give, but I can't tell how to trigger it." The statue was a statue of a thin, despairing man, clothed in rags, with hands stretched up towards Heaven.

Zakhs looked around and said, "There's an inscription on the other side. Can anybody read it?"

Hood walked around. The script was long, flowing, and carved in the stone, overlaid with gold leaf. "Pretty letters." He paused for a moment, and then read, "I am [pause] tall. Who will [pause] me receive something for [pause] to drink?" He paused for a second and said, "Understanding these people talking is hard; reading them... I am tall. Who will receive me something to drink? I have at least one word wrong."

Zakhs said, "Pronounce the 'tall' word."

Hood pronounced it, and Zakhs said it a few times to himself, then changed one sound, and laughed. "I am thirsty. Who will give me something to drink?"

Zakhs looked around, and saw a fountain. He cupped his hands, taking water, and stepped up onto the pedestal (with a little help from Hood), opening his hands over the statue's mouth. There was a gurgling sound for a moment, then a click, and a sound of clockwork gears turning. The stone rectangle turned inward and upward, on hinges, revealing a shaft with an iron ladder descending into the darkness.

Xingu opened a hand, and then said, "Shall we?"

Hood hefted his massive sledge hammer, and then said, "I think I'd best go down first, in case there are any nasty critters in there." Xingu paused in thought a moment, considering questioning that — but, given the determination in Hood's words, decided not to. He loosened the girdle of his leather protector somewhat, slid in the sledge, took the lantern in hand, and began

descending the iron rungs.

At the bottom of the pit was a short passageway, ending in an abrupt stone wall. It was dusty, with recent tracks that led under the stone wall — and there disappeared. As the other people came down, they began to inspect the wall and the surrounding areas for some indication as to how one would open the doorway.

After a time, Xingu began to say, "'Tis said that people often pay too much attention to time and the order of things in time. I wonder..." He began to climb the ladder.

"Where are you going?", Caroline asked.

"Wait a moment. I'm checking to see something." He disappeared into the shaft, ascending noiselessly.

There was soon a sound of shifting stone, of gears turning and chains moving, and the stone door glided into the walls of the passageway.

Xingu calmly said, "Shall we go on?"

The passageway came to a T-shaped junction; the tracks went off one way. There was general concurrence to go the other way. As they walked through the long and twisty passageway, Hood's heavy step brought not only the ring of his iron boot, but a slightly different thud than usual. "That stone," said Zakhs, "is different from the others." He knelt down, felt around a little, and then struck one of the stones with his staff. There was a faint echo, a hollow sound. "What are y—", began Caroline, as Hood's heavy hammer came down and slammed into the floor. There was a loud ringing sound, and the stone had several cracks.

Hood began to pull out pieces of stone, then reached into what was a hole, and pulled out a small, shiny steel box. "This shouldn't be too hard to open," he said, setting it on its side.

Caroline quickly snatched the box, looked him in the eyes, and

said, "No." in clearly enunciated Tuz.  
"But it'll be faster than —," Hood began.

"No."

"But why not?"

"Maybe fragile. Break. Shatter."

"I don't think —"

"No."

Hood looked her in the eyes, to stare her down, and saw a will equal to his own. Zakhs put his hand on Hood's shoulder and said, "Brother, it's probably safe to open, but there's just a slight chance that it has something fragile, that is not broken. Why don't we be safe and wait a little while before opening it, just in case?" With that, Hood relaxed.

They went on; the passageway came to a seven way intersection.

The first path led to a circular room with a small, shallow pool in it. The water in the pool was murky, and had a stagnant smell to it.

The second path was long and twisty, but only came to a dead end.

The third path led to a dead end, but coming back, they found a secret door to a long, rectangular room with bas-relief sculpture on the walls.

The fourth lead to a winding circular staircase, heading upwards. As they ascended, they began to hear music. It came to a narrow doorway; opening it, they saw the relatively bright light of dusk, a crimson sunset slowly ebbing away. As they adjusted to the light, the music stopped; Nimbus, holding a lute, came walking up. They were at a hidden door, opening outwards, in the corner of a building in the public square.

"Greetings. How was your time in the dungeon?" He listened

with interest, and then said, "I'm sorry to say that all three eggs have been located. But let me look at that box. I think I can open it, if nothing else."

Nimbus pulled out some metal tools, and in a short time the lid came open.

Inside were several things. There was a tiny porcelain figurine of a deer, a silver bracelet, a rock with some paint on it, a small crystal phial on a necklace, and lastly, a small, curved fragment of parchment with what appeared to be part of a bard's song:

To Rozimald's chambers the keys are three,  
They all upon the triangle mountains be.  
A blue sapphire key beneath a great blue sapphire set,  
A black onyx key, by black onyx is met.  
An emerald key among hanging emeralds does rest.

Nimbus muttered, "Rozimald, Rozimald, Rozimald... Where have I heard that name before... Aah, Rozimald. He was a wealthy Urvanovestilli eccentric long ago, with — never mind that, the tale has probably grown a lot in the telling. Some people know where his abode was, but I haven't heard of anybody being able to get in.

"One thing I will say, though. He is thought to have had a store of a very potent fuel, made of powdered rust mixed with powdered aluminum. I don't remember exactly how much there is, but I can find that out. At any rate, if you bring that to me, I will be glad to train you; I am currently taking a break from adventuring, to train other adventurers.

"Oh, and I almost forgot. I would like to give you something." He reached into the folds of his robes, and produced a white candle with carvings on the sides. "Keep this with you, and may its light remind you of the hour of our meeting "

the night reminds you of the heat of our meeting.  
Nimbus bowed deeply and disappeared into the shadows.

---

Hood said, "My UCLA Zogah always told me and my brothers never to interfere with rich mens secrets....but I am very curious about these Rozimalds chambers.....and Uncle Zogah cannot always be right.....any ideas where to start looking...eh?"

Caroline stopped her exploration of the sight and textures of the various objects including the box itself, and said to Hood "We are not interfering with Rozimald's secrets but answering his invitation. For that is what this riddle-song is, an invitation for those who can solve it. As for were to start, the song says triangle mountains. I guess there are where his home was, so if we ask about the location of Rozimald's home perhaps what the triangle mountains are will be obvious. Nor'krin teaches using stories and remembering the stories help me remember the lessons the stories contained. The Yedidia teach with song. The Urvanovestilli build physical puzzles and riddles as part of their teaching. Rozimald's invitation is to learn from him, and the works he created during his life. He has even left the riddle-song with other gifts so that we know we are welcome."

Caroline also discovered that tapping the metal box with a flicked finger can cause an interesting bell like sound.

Hood continued, "...guess your right.....sounds simple enough.....although I must say that the Urvanovestilli are a bit weird...not doing this the Tuz way...much better....can't he just tell his secret with a few simple words....does anyone have any knowledge where to find these triangle mountains?"

Caroline smiled and says "Different things work for different people. Some people lack the wisdom or faith to accept a few simple words and need to learn through trial and experience. These lessons can take a long time to learn, yet in the end the wisdom can be said in a few simple words."

Zachs also smiled at Hood's comments. Then he added, "I have travelled far and wide, and visited many places. I have never heard of these triangle mountains. Perhaps someone here in the city knows of it?"

Hood was a bit unsure about the next step in the research. As usual he started to set his somewhat slowstarted mind of his into motion..... It's easy to see when Hood thinks since the skin on his forehead gets all wrinkled. He also started to pull his hand through his long beard. He was about to say something when he suddenly stopped himself from doing so. It seemed that he was awaiting the the reaction from the other team members to the newly found puzzle.

Caroline suggested "Since it is information that we need, we should ask." She goes and tries to catch a passer by's eye, smiles and inquired, "I am trying to locate Rozimald's home, do you know where it is or who I should ask?"

The passerby, an old man with a white beard, said, "Rozimald. Let me think; I haven't heard that name for several hundred years." He closed his eyes, and a couple of minutes passed. "I'm sorry, I don't know where his mansion is or was. At least not any more; I've long since forgotten it. But if you go to the library's archives — probably here, if not here, at Capitello — and talk with the history librarian, who should be in tomorrow evening, he can look up what is available, and will know whom to talk with.

"The library is under the cathedral, in the center of the city.

"Is there anything else I can tell you about?"

Hood said, "Excuse me Sir! Sorry for my simple Tuz ways and for bothering you with my questions, but may I ask a few questions about the city surroundings?"

The man gently smiled and said, "You need not apologize for your simple Tuz ways, dear friend. The beauty of Urvanovestilli

ways lies in their refinement and complexity; those of the Tuz, in their power and strength. Enjoy the blessing that God has created you as a Tuz. Now what is your question?"

"Do you know where the Triangle Mountains are, or where or how we could find out about them?"

"The Triangle Mountains are about six weeks' walk east of north. I don't remember the exact location, but the mapmaker can tell you." He gave the group directions to the mapmaker. "If that is all you have to ask, I'll be going on."

The last rays of the dying sun painted the cathedral as the group reached it. It was intricate, dark, majestic — carved out of black marble.

Inside the cathedral, everything was cool, still, and pitch black. There were a few sounds of walking; there was a faint smell of dust.

Then, suddenly, the building was shaken by a thunderous blast of music from the organ. The sound was deep, rich, majestic; a turgid fugue of four voices played. The party could feel the vibrations in their bones.

Walking along in the darkness, they found a dry wooden door, and, opening it, descended down a circular staircase until they came to a large, open, dusty room.

Most cathedrals had crypts beneath, a reminder of the community and presence of those departed. This one had row upon row of shelves of books. It was filled by an ageless silence, and lit by the glow of candles.

Almost fearing to break the silence, they moved along until they found a librarian, sitting next to a candle, reading from the pages of an ancient volume. He slowly turned, and raised his hand in greeting, asking what he could do for them.

Rozimald, he said, was a man who had lived in the East Ridge

Mountains, near the Silouni River. He produced a map which showed the region, and indicated where his mansion had been said to be located. "I think I can spare you a trip to the mapmaker, if you can memorize a map", and showed a map of a road, with a trail branching off to a small village, beyond which lay the three mountains where the keys had been said to be located.

They went to an inn to sleep, and the next day set out early. It was good hunting, with deer or boar usually only a couple of hours' hunting, and a pleasant trip to reach the village. Once arrived, they spent a couple of days resting, selling pelts and buying supplies, before going on.

The second day out, the day's hunting was met by a long rainstorm which seemed to grow more and less intense. Hood, moving first, was about to strike a hedgehog, when he stepped and the ground beneath him gave.

Hood, very heavily weighed down, is sinking in quicksand.

---

Hood takes some dried fruit and eats.....while he is eating he starts to asking questions to the hermit, without thinking about what his mother said to him about what non-Tuz people thinks about eating and speaking at the same time:

"I very grateful for the food.....You sure seem..mauwauawmm(Hood is chewing) to be a wise fellow....you see we are in need of some information....humrph(he swallows the food)...you see we are looking for a chap...a certain Rozimald.....ancient fellow....Urvanovestilli I believe....and the triangle mountains....he is supposed to have some kind of chambers there..."

Xingu, seeing Hood talking and chewing at the same time, cracks a slight grin. He hugs Hood. Slowly, Xingu says, "One cannot appreciate what one has, till one sees that it may be gone in a moment. We are dust, and to dust we shall return. Hood, you are a light among us, and we must thank Him that you are still with us." Xingu bows his head in silence.

Time passes. Or rather, time stands still.

Xingu looks up, and his eyes meet the hermit's. He takes some food, bows his head deeply in what is taken as a sign of sincere gratitude, and eats.

Xingu then addresses the hermit: "All of us are made in His image, and like a diamond with many sparkling facets, each culture reflects a different aspect of Him. We are on a quest in search of the answer to an Urvanovestilli riddle. My mind does not think as an Urvanovestilli, and I confess that many of their logic puzzles escape me. Perhaps you can help us solve the riddle." Xingu turns to speak to the group, "May I see the box?"

Caroline who seems to have found the box in her presence, if only because she was carrying the lightest load and liked the

noise it made responds "Of course." Her eyes seems to twinkle with an inner happiness and she enjoys the company and the food. Offering as well to the table, herbal teas if anyone wishes to try a blend, as well as any food she carries that they wish to share.

Xingu slowly opens the box, and places on the table the porcelain figurine of a deer, a silver bracelet, a rock with some paint on it, a small crystal phial on a necklace, and reads from the parchment:

To Rozimald's chambers the keys are three, They all upon the triangle mountains be.

A blue sapphire key beneath a great blue sapphire set, A black onyx key, by black onyx is met. An emerald key among hanging emeralds does rest.

"These are the clues to our quest. What can we make of them?"

He pauses....

"What strikes me first is a feeling that this is the trinket box of a little girl. Bracelet, necklace, little odds and ends, and a poem; all things that one would expect to find. Yet the poem is a puzzle. It could possibly be a puzzle a small child kept in a trinket box.

"Where was it found? In a labyrinth, a large puzzle. Finding the paper in the labyrinth, one would think it a puzzle. Finding the metal box in a labyrinth, one would think the box a puzzle. Finding the same metal box in the room of a young girl, one would find the box as normal, but the paper a puzzle.

"What are the keys? Something we must find on the three mountains? Are they already found, stashed in this metal box by a past adventurer and hidden in the labyrinth? Are they symbols, or metaphors, found by an interpretation of the poem, or the

items within the box? Are the items in the box there by chance? Are they needed to find the keys? Are they a part of the puzzle, if not the keys themselves?

"Puzzle within puzzle within puzzle...."

He pauses.

"I also see a similarity in both the poem and the items; I sense a strong feeling of nature. Deer, stone, crystal, mountains, gems...."

Xingu picks up each item, including the box itself, and slowly examines them, looking not only for clues to the mystery, but also admiring the beauty of each object. He passes them around the room to the others.

The hermit looks at the poem, thinks for a time, and then says, "Oh, so you've finally found a good-looking clue to Rozimald's chambers. Let me think."

He leans back, and then closes his eyes for a moment. "Aah, yes. One moment; I'll be back."

He goes into a corner, and returns with a black, frosted glass bottle with a seal on the front. "I had almost forgotten," he says. "A Porto would be quite appropriate to this discussion."

After serving everyone a glass, he leans back, and says, "There are many poets that I have heard of, and some of them spend a great deal of attention on drawing out the wonder in the world around. They are working to open people's eyes, to fight off the ever threatening grey murk which threatens to cloud vision and make even the sun look dull and drab.

"Some of that group evokes the things that we most regard as precious — gold and silver, diamonds and rubies, wines and delicacies. Those things, perhaps in part because they are rare, are not so often looked at as dull and drab.

"There was one poet — I have forgotten his name — who

spoke of gems, describing the world as if it were composed entirely of gems. And the fragment of song which you describe appears to be some of his work."

He opens his mouth to say something, but you cannot hear his words due to a loud growl and sounds of a scuffle coming from outside.

Outside, as soon as your eyes can adjust to the brightness, you see a young Urvanovestilli being attacked by a bear. He is masterfully dodging, but the bear seems to be very determined in its attack.

They are both about a hundred feet away.

---

Hood takes some dried fruit and eats.....while he he eating he starts to asking questions to the hermit, without thinking about what his mother said to him about what non-Tuz people thinks about eating and speaking at the same time:

"I very grateful for the food.....You sure seem..mauwauawmm(Hood is chewing) to be a wise fellow....you see we are in need of some information....humrph(he swallows the food)...you see we are looking for a chap...a certain Rozimald.....ancient fellow....Urvanovestilli I believe....and the triangle mountains....he is supposed to have some kind of chambers there..."

Xingu, seeing Hood talking and chewing at the same time, cracks a slight grin. He hugs Hood. Slowly, Xingu says, "One cannot appreciate what one has, till one sees that it may be gone in a moment. We are dust, and to dust we shall return. Hood, you are a light among us, and we must thank Him that you are still with us." Xingu bows his head in silence.

Time passes. Or rather, time stands still.

Xingu looks up, and his eyes meet the hermit's. He takes some food, bows his head deeply in what is taken as a sign of sincere gratitude, and eats.

Xingu then addresses the hermit: "All of us are made in His image, and like a diamond with many sparkling facets, each culture reflects a different aspect of Him. We are on a quest in search of the answer to an Urvanovestilli riddle. My mind does not think as an Urvanovestilli, and I confess that many of their logic puzzles escape me. Perhaps you can help us solve the riddle." Xingu turns to speak to the group, "May I see the box?"

Caroline who seems to have found the box in her presence, if only because she was carrying the lightest load and liked the

noise it made responds "Of course." Her eyes seem to twinkle with an inner happiness and she enjoys the company and the food. Offering as well to the table, herbal teas if anyone wishes to try a blend, as well as any food she carries that they wish to share.

Xingu slowly opens the box, and places on the table the porcelain figurine of a deer, a silver bracelet, a rock with some paint on it, a small crystal phial on a necklace, and reads from the parchment:

To Rozimald's chambers the keys are three, They all upon the triangle mountains be.

A blue sapphire key beneath a great blue sapphire set, A black onyx key, by black onyx is met. An emerald key among hanging emeralds does rest.

"These are the clues to our quest. What can we make of them?"

He pauses....

"What strikes me first is a feeling that this is the trinket box of a little girl. Bracelet, necklace, little odds and ends, and a poem; all things that one would expect to find. Yet the poem is a puzzle. It could possibly be a puzzle a small child kept in a trinket box.

"Where was it found? In a labyrinth, a large puzzle. Finding the paper in the labyrinth, one would think it a puzzle. Finding the metal box in a labyrinth, one would think the box a puzzle. Finding the same metal box in the room of a young girl, one would find the box as normal, but the paper a puzzle.

"What are the keys? Something we must find on the three mountains? Are they already found, stashed in this metal box by a past adventurer and hidden in the labyrinth? Are they symbols, or metaphors, found by an interpretation of the poem, or the

items within the box? Are the items in the box there by chance? Are they needed to find the keys? Are they a part of the puzzle, if not the keys themselves?

"Puzzle within puzzle within puzzle...."

He pauses.

"I also see a similarity in both the poem and the items; I sense a strong feeling of nature. Deer, stone, crystal, mountains, gems...."

Xingu picks up each item, including the box itself, and slowly examines them, looking not only for clues to the mystery, but also admiring the beauty of each object. He passes them around the room to the others.

The hermit looks at the poem, thinks for a time, and then says, "Oh, so you've finally found a good-looking clue to Rozimald's chambers. Let me think."

He leans back, and then closes his eyes for a moment. "Aah, yes. One moment; I'll be back."

He goes into a corner, and returns with a black, frosted glass bottle with a seal on the front. "I had almost forgotten," he says. "A Porto would be quite appropriate to this discussion."

After serving everyone a glass, he leans back, and says, "There are many poets that I have heard of, and some of them spend a great deal of attention on drawing out the wonder in the world around. They are working to open people's eyes, to fight off the ever threatening grey murk which threatens to cloud vision and make even the sun look dull and drab.

"Some of that group evokes the things that we most regard as precious — gold and silver, diamonds and rubies, wines and delicacies. Those things, perhaps in part because they are rare, are not so often looked at as dull and drab.

"There was one poet — I have forgotten his name — who

spoke of gems, describing the world as if it were composed entirely of gems. And the fragment of song which you describe appears to be some of his work."

He opens his mouth to say something, but you cannot hear his words due to a loud growl and sounds of a scuffle coming from outside.

Outside, as soon as your eyes can adjust to the brightness, you see a young Urvanovestilli being attacked by a bear. He is masterfully dodging, but the bear seems to be very determined in its attack.

They are both about a hundred feet away.

---

Xingu starts singing, and the bear seems to be beginning to slow down — but it is not clear how quickly it will slow down. As people pour out of the cave and begin to fan out, the bear's paw comes down on the young Urvanovestilli's arm. He winces, and jumps back.

As he jumps back, Caroline manages a fair shot into the bear's heavy bulk. It rears, and begins to sniff around.

Hood's heavy armored steps ring as he runs forward. He swings a heavy blow at the bear's chest; it connects solidly. The bear crouches down to dodge; Hood's sledgehammer slides down a side.

Zakhs has by now run up, and swings his staff, hitting the bear on the head. The staff vibrates in his hands.

The bear swings at Hood, and hits solidly, his claws scraping across his armored chest. Hood is knocked on his back.

Caroline hits the bear again, and hits solidly.

The bear lunges at Hood, who has by now prepared with a blow of the sledgehammer, and has his ironshod feet up in the air. The sledgehammer hits the side of the bear's head, and glances away. His knees buckle into his chest, winding him.

Zakhs swings his staff again, and hits the bear, distracting him from Hood.

Hood is gasping and struggling to breathe, but even so begins to roll towards his feet, sledgehammer in hand. He hits the bear in the back, winding it in turn.

Caroline shoots at the bear again, but misses.

Zakhs swings at the bear, and also misses.

Hood, weakening in his struggle to breathe, swings at the bear, but only grazes it.

The bear swings at Zakhs, but does not move quite quickly

enough to hit it.

Hood, beginning to turn blue, swings again, and hits. Zakhs lifts his staff from below, hitting the bear in the mouth.

Caroline shoots another arrow solidly, hitting the bear in the back of the neck. It immediately falls over.

Hood, turned a deeper shade of blue, finally manages to inhale. He drinks the air in deep gulps; slowly his breathing and his skin color return to normal.

After a little while, your attention returns to the young Urvanovestilli, who was mauled by the bear. He introduces himself.

---

Zakhs steps over to the young Urvanovestilli, after pounding Hood solidly on the back (to help him regain his breath). He will examine the young man's arm and see if there is anything he can do for the boy.

"What could have riled that creature up so much?" he will wonder aloud as he examines the Urvanovestilli's arm.

Hood cleans his sledge by rubbing it to the ground....then he comments the whole thing.....

" Tough bear...."

He turns towards the the young Urvanovestilli.

".....you are still alive...glad to see it.....it was a close thing....."

Caroline introduces her self to the young Urvanovestilli. She the proceeds to tell him a story about a brave young person from her tribe, while she tends his wounds. She seems to have more than herbs for tea in her pack. The story and the treatment end at the same time.

Hood brushes off some dirt from his clothes...and continues to adress the young Urvanovestilli.....

"I haven't introduced myself.....I am Hood"

Hood reaches out a hand.....

"I know not what riled it up, but the poor fellow will make quite a delicious meal. Of course, we may not have enough to go around, with only one bear and two Tuz."

Xingu, with a wide grin, gives Zakhs a friendly punch in the gut.

Xingu then walks toward the Urvanovestilli, and greets him with a raised hand and three kisses, as is the way of Urvanovestilli culture, and speaks to him in his native tongue.

"Hello, my name is Xingu. I thank the Lord that you survived this encounter without greater injury. We are a band of

adventurers, following clues to discover Rosimald's chambers. Please stay, eat, and join us; we welcome your insight in solving this puzzle."

The little man looks as if he was coming out of his daze for the previous brush with death, then he stands up to introduce himself, but then sits back down, and says, "Greetings and salutations, you may call by the name that my friends call me, which is Jeff. I am still a little bit shaken by the whole ordeal, so I feel that I would be unable to fully express who I am in an intelligent manner, therefore, could you tell me a little bit about who you are? Just in case if you were wondering, I was sent to help you on your quest."

The hermit walks around and begins collecting branches to make a fire; in a couple of hours, there is roast bear for all to eat their fill of (even the Tuz). Caroline has bound the wounds; the young man's arm is set and healing, and Hood doesn't seem to have taken any grave injury (although his chest will have some nasty bruises).

As you eat, the young man begins to introduce himself.

"Hello, my name is Chimera Antonio Pbrush Petra Mistrelli Charleston Jeffery Mirrorman, but you can call me Jeff. I am from the city of Mistrelli, sent to help you on your quest. I believe that my understanding of Illusions can help you on your journey.

"I am my father's first born, and will return one day to become his assistant, and eventually, take over for him. But for now, I want to continue to see the world, and meet the different races and creatures that inhabit it.

"I also love to play, Imperial Kingdoms, which is a complex version of Chess. I am also working on a flying machine, although it is far from being able to work, it is a hobby that I enjoy."

The hermit asks for the rest of the bear's carcass (after you have taken a good chunk as food for the journey), to make jerky and a rug out of. "I'd heard from other people that there was a rather cantankerous bear around here, and I'd seen a few tracks, but I'd never met it..."

"Come with me. Let's stand in a circle around Chimera, and lay hands on him."

As you do so, the pain in Chimera's face begins to ease, and he sits back.

The hermit sits back, after the meal, and begins to talk about the local geography; he describes a few paths, and landmarks for you to find your way on. "Do stop back here after you have looked around, and I wouldn't mind hearing how you mean to set about finding the keys in the forests. See you later." After a night's rest for all, he sees you off again.

# Why Play?

Why play The Minstrel's Song? The following is an edited excerpt from a letter written introducing some people to the topic; it gives seven reasons why a person would want to play.

1. It is an opportunity to get connected with people and get to know them a little better. In the very beginning of high school, I met a group of people who had become good friends by the end of the school year through role play... Role play is a social activity, and when you play, you get to know the people you're playing with. (Enough so that I would much rather play with people who are friends or people with whom I wish to cultivate friendships than with a group of strangers that I had nothing in common with.)  
As well as a sociable atmosphere, role playing games provide a unique opportunity to see how people think. While most people's characters are not exactly themselves, most people are still reflected in their characters.
2. It is an exploration into the nature of goodness and virtue. The nature of uniqueness in goodness is dealt with explicitly a little at the end of the document describing cultures... Trying to explore a character who is a hero, who walks in the Spirit, who embodies moral virtue, who does good deeds is an interesting and edifying exercise. Phil. 4:8 says,

Finally, brethren, whatever is true, whatever is honorable, whatever is lovely, whatever is gracious, if there is any excellence, if there is anything worthy of praise, think about these things.

I have found my role play to be a way to do that.

3. It is a challenge. A part of what I try to do as a game master is make an interesting, feasible but still conquerable challenge to the player's intelligence. You'll find puzzles to think about in the game. It stretches the mind.
4. It is an opportunity, by imagination, to visit another time, another place, another world. A vivid book lets you almost feel like you're there in the action... role play is like that, except that you're not just observing; you take a part in the story; you help create. It is like travelling inside the mind's eye to a fantasy world. It stretches the imagination.
5. It is an opportunity, by imagination, to be someone else — to be a great explorer, to be a romantic bard. It allows the player to imagine not only observing but playing a part in an unfolding tale.
6. Unlike nearly all other games, it is cooperative, rather than competitive. Rather than (for example) Monopoly, where you are trying to gather as much money as possible and force the other players to go bankrupt, you are playing a character who is working together with other characters who are friends and allies to achieve a common goal. Role playing games do not foster a mindset of "them versus us" or "I am competing with the rest of the world"; it fosters a mindset of cooperation and teamwork.
7. It's enjoyable. I do know a couple of people who don't like role play, and I wouldn't by any means say that if you don't

like role play something's wrong with you, but... I have found that a majority of people whom I've convinced to role play, ergo people who wouldn't have done so were I not to extend an invitation, have enjoyed it. I as the game master have the most difficult task, and I found the game to be quite refreshing, one of the highlights of the week. It's a nice change from hitting the books, and an enjoyable way to spend part of the day of rest. So, while I wouldn't bet my life on your liking it, I think it's worth a try.

# The Modern Baccalaureate

Baccalaureate:

I am the very model of a modern baccalaureate;  
I know of data structures, algorithms, a-and languages;  
I know of the-ory's giants, and I quote programming idioms,  
From foo or die to for loop, arrang-ed by a radix sort;  
I'm very well acquainted, too, with matters theoretical,  
I know many algorithms, both the simple and quadratical,  
About exponential time I'm teeming with lots o' news,  
With many cheerful facts about the problems intractaloose.

Chorus:

With many cheerful facts about the problems intractaloose.  
With many cheerful facts about the problems intractaloose.  
With many cheerful facts about the problems  
intractatractaloose.

Baccalaureate:

I'm very good at top-down and bottom-up appro-o-oaches;  
I know the technific terms for things very numerous:  
In short, in data structures, algorithms, and languages,  
I am the very model of a modern baccalaureate.

Chorus:

In short, in data structures, algorithms, and languages,

He is the very model of a modern baccalaureate.

Baccalaureate:

I know the classic games, from ro-o-ogue to moria;  
I answer challenge problems; I've a pretty taste for recursia;  
I quote, in great detail, all the flaws of frightful Windows;  
In tuning I can bring speedups incredibles;  
I can tell classic code from tha-at of a fre-eshman  
I know the tables ASCII and EBCDIC in base 10!  
Then I can tell a joke of which I've heard the theme afore,  
And recite all the words from the UL spam recipe!

Chorus:

And recite all the words from the UL spam recipe!  
And recite all the words from the UL spam recipe!  
And recite all the words from the UL spam recirecipe!

Baccalaureate:

Then I can write a rot-13 in x86 assembler,  
And tell you how to list a set's every member,  
In short, in data structures, algorithms, and languages,  
I am the very model of a modern baccalaureate.

Chorus:

In short, in data structures, algorithms, and languages,  
I am the very model of a modern baccalaureate.

Baccalaureate:

(Slowly)

In fact, when I know what is meant by "person" and "humanities",  
When I can tell at sight if someone's a smi-ilin' or a weepin',  
When such affairs as songs and friendship I kno-ow of,  
And when I know precisely what is meant by "sociology",  
When I guess what depth hides in real community,  
When I know more of French than a young boy watching tele-vee

In short, when I've a smattering of thoughts from the  
humanities—

(Vivace)

You'll say a better baccalaureate has never sat a gees—

Chorus:

You'll say a better baccalaureate has never sat a gees,

You'll say a better baccalaureate has never sat a gees,

You'll say a better baccalaureate has never sat a sat a gees,

Baccalaureate:

For my liberal arts knowledge, tho' I'm clever and intelligent,

Fails to include many things the most magnificent;

But still, in data structures, algorithms, and languages,

I am the very model of a modern baccalaureate.

Chorus:

But still, in data structures, algorithms, and languages,

He is the very model of a modern baccalaureate.

# Monarchy

I wanted to give a meditation on the mystical theology of kings and monarchs.

As a starting point, I would point out that bishops rightly wear the regalia of the Byzantine Emperor, and the government of the Orthodox Church is monarchical: her bishops are monarchs. And I would like to make a few observations about my own bishop, for whom I am grateful: His Grace Bishop Peter of Cleveland and Ohio (ROCOR). He offers a point of departure for understanding monarchy.

His Grace Bishop Peter's public bearing is quite regal, and he receives honor publicly. But privately he acts differently, and in quite the opposite way as a Hollywood celebrity who is sympathetic and modest in front of the camera and haughty in private. Quite the opposite, His Grace Bishop Peter is a monk, and like a good monk he tried to run away when he found out he was going to be made bishop. He sleeps in a chair, in a modest apartment. One gets the impression, not so much that he is a bishop, but that he is a monk fulfilling the obedience of serving as a bishop when he would rather live as a more ordinary monk—the kind of monk who may be the best kind of bishop!

All this is in accord with the *Philokalia*, which prescribes that monks who are in authority publicly act as their office requires,

but privately not see themselves as any greater than anyone else. Perhaps some may covet the office of bishop because they see in it a chance to see themselves as greater. But that is something that cannot exist. In a certain sense Bishop Peter's fine robes are meant for others to see and not him: I may admire how great he is, and be edified, but he may not do so, and it is spiritual poison if he does. There really is something great about being clergy, or bishop, or king, but that greatness should be invisible to the person in the office. It is a trustworthy saying, and worthy of all acceptance: "[Christ Jesus came into the world to save sinners, of whom I am chief.](#)" Being a bishop or king is no exemption to this rule; if anything, it is a greater demand. Being in office does not make it legitimate to see yourself as better; it just makes this spiritual poison harder to avoid and a greater threat. I may admire how fine His Grace Peter looks in his vestments, and be spiritually nourished by it, but to him it would be poison: there exists no legitimate spiritual license for self-admiration, not even if you are a bishop or a king!

I have coveted the status of being a knight; when Google AdWords advertised "English titles of nobility", I wish my eyes had not lingered. But this is folly. Wishing a title without responsibilities is like hoping to be married without a spouse. And I think that confusion is a sign of our times: perhaps people have always coveted honor, but if men covet honor when they are taught to be humble, what will they do when schools teach "self-esteem" and pastors encourage "Godly self-respect"? Now to enter a role of service, as servant leader, is another matter: ordination is not at its core about acquiring the honor of a title as entering a role of service (the whole "servant leadership"), and the title that is conferred is for the benefit of others; the honors conferred are a gift to those the candidate is to serve.

To be clergy or monarch is privilege, but the privilege is for others, not for oneself. The question, "Is the king for the kingdom, or the kingdom for the king?" is rhetorical: the king is for the kingdom. The reason the Orthodox practice is to have bishops selected from among monks is not an indictment of marriage; St. Peter the Apostle, the Rock upon whom Christ built his Church, had a mother-in-law, and every bishop today is less than him. That monks are to be chaste is one part of a deeper reality: a monk is to be a whole burnt offering without remainder, and the reality in the Orthodox Church is that married men may be among the clergy, but its highest rank in particular is chosen from the monks who are peculiarly called to die to the world and be a whole burnt offering without remainder.

[The Akathist to the Theotokos](#) tells of the Magi, "The sons of the Chaldees saw in the hands of the Virgin Him Who with His Hand made man. And knowing him to be the Master, even though He had taken the form of a servant, they hastened to serve Him with gifts, and to cry to Her Who is blessed... Rejoice, Thou Who didst enlighten the initiates of the Trinity!" There is a link here. The sons of the Chaldees came bearing gifts: gold, frankincense, and myrrh. Each of these gifts is an emblem: gold of royalty, frankincense of divinity, and myrrh of suffering or sacrifice. And in this trinity of gifts, you cannot rightly pick up one without picking up the others. Every Christian must bear his cross, and if you read the lives of the saints, those who are fragrant with Heaven's incense are fragrant after a life with deep suffering: they are fragrant with myrrh as sacrifices. And if the question is, "What is a king?" one answer would be, "One whose spirit is gold, but gold that is of one substance with frankincense and myrrh." It is confusion to want to be a king, but

have gold without myrrh. Better to recognize that kingship, divinity, and suffering are of the same substance as they appear in the great hymn to humility:

Let this mind be in you,  
Which was also in Christ Jesus:  
Who, being in the form of God,  
Thought it not robbery to be equal with God:  
But made himself of no reputation,  
And took upon him the form of a servant,  
And was made in the likeness of men:  
And being found in fashion as a man,  
He humbled himself,  
And became obedient unto death,  
Even the death of the cross.

Wherefore God also hath highly exalted him,  
And given him a name which is above every name:  
That at the name of Jesus every knee should bow,  
Of things in heaven,  
And things in earth,  
And things under the earth;  
And that every tongue should confess that Jesus Christ is  
Lord,  
To the glory of God the Father.

Here is humility. Here are gold, frankincense, and myrrh.

## Mystical theology to live out

There is something we are missing if we understand monarchy only as a system of government. The Orthodox Church has words about how oil is used to anoint kings and priests, but these words are from when all the faithful are summoned to be anointed in Holy Week. The image we are made in is not only divine: it is royal. Myrrh is the emblem of sacrifice, of human approach to the divine; oil is the emblem of the divine approach to humans, and it is no mistake that anointing chrism is for all Christians: from ancient times Christ, which is to say the Anointed One, was understood to be anointed with the sacred oil that made prophet, priest, and king. And from ancient times the Church sees that anointing as given to Christians too. It is fashionable to claim a Facebook profile religious affiliation that over-modestly says, "Follower of Jesus"; I have wished it would be appropriate to answer with a stated affiliation of, "Alter christus: 'follower of Jesus' means 'another Christ'!" But that could be over-forceful.

If we are kings, what are we kings of? One chief answer is that we are kings over our work. Whether we be working professionally, or homemaking, or learning how to grow up, or job hunting, or retired and volunteering, all of us are called to work and to work is to reign in the activity of the royal image.

Secondly, we are called to rule over ourselves in asceticism. The "Sol Invictus" claim of "I am the master of my fate, I am the master of my soul" is an obscene parody; in quite a different way, in the asceticism of our lives, God summons us to serve as bishop and monarch over ourselves and our passions, conquering them and ultimately being God's co-worker as they are transfigured. He who says "stewardship" says "royal reign": if we are to be careful stewards of our time, treasure, and talent, we are to reign faithfully in these, and in other areas of life, in our relationships and in our solitude, we are to reign. And this is real reign.

When I was a graduate student in theology, I winced when people tried to pay me a compliment by saying that by my obscure sources and scholarly rigor I had a real, serious understanding of the Bible, and they merely had a lightweight, devotional understanding of the Bible. I respected the humble appreciation, but this was an entirely backwards understanding. The Bible in its real and dynamic form is used liturgically and devotionally; my difficult scholarly commentaries had a place but were something dead compared to the living devotional use of the Bible. "In humility consider others better than yourself" is spiritually sound, but I winced that people could say that my academic exercises were serious Bible study and their devotional reading was second-rate and fluffy. And in like fashion, monarchy is misunderstood if it means only that one person out of many exercises a political reign. It is a basic spiritual reality, and God summons all of us to be prophet, priest, and monarch.

## A potent warning

I have written [elsewhere](#):

Seekest thou a mighty deed,  
Our broken world to straighten out?  
Seek it not! Knowest thou not,  
That the accursed axe ever wielded in the West,  
To transform society, with a program to improve,  
Is a wicked axe, ever damned,  
And hath a subtle backswing, and most grievous?  
Wittest thou not that to heal in such manner,  
Is like to bearing the sword,  
To smite a dead man to life therewith?  
Know rather the time-honeyed words,  
True and healthgiving when first spoken,  
Beyond lifesaving in our own time:  
Save thyself,  
And ten thousand around thee shall be saved.

In our time and place, this warning is one well worth heeding.  
One poster I saw showed a picture of Hitler and said,  
"Politicians. The best argument for monarchy yet." I find it  
awfully hard to say that we live under an optimal government. But  
it's an impulse shared with a Western half-converter to organize  
a manifesto to restore monarchy. A manifesto is an axe to

depose kings; it is a fundamental error to try to approach monarchy through political activism as promulgated by the West for when you really care and want to make a difference. The fundamental error is almost:

**Category Mistake**, n. An assumption embodied in an inappropriate question, inquiring about an undefined attribute, such as, "Is yellow square or round?", "Is the doctrine of the Trinity calm or excited?", or "What was the point of that speech?"

To those who are convinced that kingship is ordained by God, I would recall Christ's sharp question: "Which is greater, the gold of the temple, or the temple which makes that gold sacred?" The gold of earthly kingdoms may be sacred as liberal inventions are not. But the temple of the Kingdom of Heaven is greater, and that is a Kingdom that is established in us. Perhaps it is best to have both the gold and the temple that makes the gold sacred, but that does not mean we should leave the temple so we can bring some gold to be made sacred in it. The [Sermon on the Mount](#) bids us, impels us, commands us, "But seek ye first the kingdom of God, and his righteousness; and all these things shall be added unto you." If there is to be a God-ordained restoration of monarchy, it will be one of "all these things" that "shall be added unto you." It is a matter of "Save thyself, and ten thousand around thee will be saved." If you leave this to be practical, you are picking up an axe that cannot but lay waste when its backswing hits.

There may be said to be two archetypes, the saint and the activist. The saint lives to contemplate God; even if this means a life of asceticism (as one monk described monastic life, "We fall and

get up, fall and get up, fall and get up,"), and never reach contemplation in its pure sense, laity in the world live for contemplation. By contrast, the activist lives to change the world, and the activist impulse is like a hydra: cut it off once, and it resurfaces in two other places. But it is not lawful to Orthodox. Many Orthodox saints have changed the world, but this was only because their goal was the goal of contemplation. Orthodoxy has no saying, with the activist, of "Try to make a plan a reality, and you may save ten thousand people." She only says, and can say, "Save yourself, and ten thousand around you will be saved:" Orthodoxy is not served by the activist, only by the saint.

And be advised that *the wicked axe, ever damned, works just as well when people try to recover past glory as when people try to create something new.* The Renaissance, the Reformation, the Enlightenment, neo-Paganism, are but reincarnations of one single phenomenon: people trying to recover long past glory, break off continuities with the immediate past, and separate themselves in a schism further from the recent and ancient past alike. If you reconstruct monarchy, be ready for a backswing that will leave a society further, not closer, to the glory of human monarchy.

But there is another option. Save thyself, and *God will change the game.*

# The Monastery

It was late in the day, and my feet were hurting.

I had spent the past three hours on the winding path up the foothills, and you will excuse me if I was not paying attention to the beauty around me.

I saw it, and then wondered how I had not seen it—an alabaster palace rising out of the dark rock around it, hidden in a niche as foothill became mountain. After I saw it, I realized—I could not tell if the plants around me were wild or garden, but there was a grassy spot around it. Some of my fatigue eased as I looked into a pond and saw koi and goldfish swimming.

I looked around and saw the Gothic buildings, the trees, the stone path and walkways. I was beginning to relax, when I heard a voice say, "Good evening," and looked, and realized there was a man on the bench in front of me.

He was wearing a grey-green monk's robe, and cleaning a gun. He looked at me for a moment, tucked the gun into a shack, and welcomed me in.

Outside, the sun was setting. At the time, I thought of the last rays of the dying sun—but it was not that, so much as day giving birth to night. We passed inside to a hallway, with wooden chairs and a round wooden table. It seemed brightly enough lit, if by torchlight.

My guide disappeared into a hallway and returned with two

my guide disappeared into a hallway, and returned with two silver chalices, and set one before me. He raised his chalice, and took a sip.

The wine was a dry white wine—refreshing and cold as ice. It must have gone to my head faster than I expected; I gave a long list of complaints, about how inaccessible this place was, and how hard the road. He listened silently, and I burst out, "Can you get the master of this place to come to me? I need to see him personally."

The servant softly replied, "He knows you are coming, and he will see you before you leave. In the mean time, may I show you around his corner of the world?"

I felt anger flaring within me; I am a busy man, and do not like to waste my time with subordinates. If it was only one of his underlings who would be available, I would have sent a subordinate myself. As I thought this, I was surprised to hear myself say, "Please."

We set down the chalices, and started walking through a maze of passageways. He took a small oil lamp, one that seemed to burn brightly, and we passed through a few doors before stepping into a massive room.

The room blazed with intense brilliance; I covered my eyes, and wondered how they made a flame to burn so bright. Then I realized that the chandeliers were lit with incandescent light.

The shelves had illuminated manuscripts next to books with plastic covers—computer science next to bestiaries. My guide went over by one place, tapped with his finger—and I realized that he was at a computer.

Perhaps reading the look on my face, my guide told me, "The master uses computers as much as you do. Do you need to check your e-mail?"

I asked. "Why are there torches in the room you left me in.

and electric light here?"

He said, "Is a person not permitted to use both? The master, as you call him, believes that technology is like alcohol—good within proper limits—and not something you have to use as much as you can. There are electric lights here because their brilliance makes reading easier on the eyes. Other rooms have torches, or nothing at all, because a flame has a different meaning, one that we prefer. Never mind; I can get you a flashlight if you like. Oh, and you can take off your watch now. It won't work here."

"It won't work? Look, it keeps track of time to the second, and it is working as we speak!"

The man studied my watch, though I think he was humoring me, and said, "It will give a number as well here as anywhere else. But that number means very little here, and you would do just as well to put it in your pocket."

I looked at my watch, and kept it on. He asked, "What time is it?"

I looked, and said, "19:58."

"Is that all?"

I told him the seconds, and then the date and year, and added, "But it doesn't feel like the 21st century here." I was beginning to feel a little nervous.

He said, "What century do you think it is here?"

I said, "Like a medieval time that someone's taken a scissors to. You have a garden with perfect gothic architecture, and you in a monk's robe, holding an expensive-looking rifle. And a computer in a library that doesn't even try to organize books by subject or time."

I looked around on the wall, and noticed a hunting trophy. Or at least that's what I took it for at first. There was a large shield-shaped piece of wood, such as would come with a beautiful

stag—but no animal's head. Instead, there were hundreds upon hundreds of bullet holes in the wood—enough that the wood should have shattered. I walked over, and read the glass plate: "This magnificent deer shot 1-4-98 in Wisconsin with an AK-47. God bless the NRA."

I laughed a minute, and said, "What is this doing in here?"

The servant said, "What is anything doing here? Does it surprise you?"

I said, "From what I have heard, the master of this place is very serious about life."

My guide said, "Of course he is. And he cherishes laughter."

I looked around a bit, but could not understand why the other things were there—only be puzzled at how anyone could arrange a computer and other oddments to make a room that felt unmistakably medieval. Or was it? "What time is it here? To you?"

My guide said, "Every time and no time. We do not measure time by numbers here; to the extent that time is 'measured', we 'measure' by what fills it—something qualitative and not quantitative. Your culture measures a place's niche in history by how many physical years have passed before it; we understand that well enough, but we reckon time, not by its place in the march of seconds, but by the content of its character. You may think of this place as medieval if you want; others view it as ancient, and not a small part is postmodern—more than the computer is contemporary."

I looked at my watch. Only five minutes had passed. I felt frustration and puzzlement, and wondered how long this could go on.

"When can we move on from here?"

"When you are ready. You aren't ready yet."

I looked at my watch. Not even ten seconds had passed. The

second hand seemed to be moving very slowly.

I felt something moving in the back of my mind, but I tried to push it back. The second hand continued on its lazy journey, and then—I took off my watch and put it in my pocket.

My guide stood up and said, "Walk this way, please."

He led me to a doorway, opening a door, and warning me not to step over the threshold. I looked, and saw why—there was a drop of about a foot, into a pool of water. The walls were blue, and there was sand at the far end. Two children—a little boy and a little girl—were making sand castles.

He led me through the mazelike passages to rooms I cannot describe. One room had mechanical devices in all stages of assembly and disassembly. Another was bare and clean. The kitchen had pepperoni and peppers hanging, and was filled with an orange glow that was more than torchlight. There was a deserted classroom filled with flickering blue light, and then we walked into a theatre.

The chamber was small, and this theatre had more than the usual slanted floor. The best way I could describe it is to say that it was a wall, at times vertical, with handholds and outcroppings. There were three women and two men on the stage, but not standing—or sitting, for that matter. They were climbing, shifting about as they talked.

I could not understand their language, but there was something about it that fascinated me. I was surprised to find myself listening to it. I was even more surprised to realize that, if I could not understand the words, I could no less grasp the story. It was a story of friendship, and there is something important in that words melted into song, and climbing into dance.

I watched to the end. The actors and actresses did not

disappear backstage, but simply climbed down into the audience, and began talking with people. I could not tell if the conversation was part of the act, or if they were just seeing friends. I wondered if it really made any difference—and then realized, with a flash, that I had caught a glimpse into how this place worked.

When I wanted to go, the servant led me to a room filled with pipes. He cranked a wheel, and I heard gears turning, and began to see the jet black keys of an organ. He played a musical fragment; it sounded incomplete.

He said, "Play."

I closed my eyes and said, "I don't know how to play any instrument."

He repeated the fragment and said, "That doesn't matter. Play."

There followed a game of question and answer—he would improvise a snatch of music, and I would follow. I would say that it was beautiful, but I couldn't really put it that way. It would be better to say that his music was mediocre, and mine didn't quite reach that standard.

We walked out into a cloister. I gasped. There was a sheltered pathway around a grassy court and a pool stirred by fish. It was illumined by moon and star, and the brilliance was dazzling.

We walked around, and I looked. In my mind's eye I could see white marble statues of saints praying—I wasn't sure, but I made up my mind to suggest that to the master. After a time we stopped walking on the grass, and entered another door. Not too far into the hallway, he turned, set the oil lamp into a small alcove, and began to rise up the wall. Shortly before disappearing into the blackness above, he said, "Climb."

I learn a little, I think. I did not protest; I put my hands and feet on the wall, and felt nothing. I leaned against it, and felt something give way—something yielding to give a handhold. Then I started climbing. I fell a couple of times, but reached the shadows where he disappeared. He took me by the hand and began to lead me along a path.

I could feel a wall on either side, and then nothing, save his hand and my feet. Where was I? I said, "I can't see!"

A woman's voice said, "No one can see here. Eyes aren't needed." I felt an arm around my waist, and a gentle squeeze.

I felt that warmth, and said, "I came to this place because I wanted to see the master of this house, and I wanted to see him personally. Now—I am ready to leave without seeing him. I have seen enough, and I no longer want to trouble him."

I felt my guide's hand on my shoulder, and heard his voice as he said, "You have seen me personally, and you are not troubling me. You are here at my invitation. You will always be welcome here."

When I first entered the house, I would have been stunned. Now, it seemed the last puzzle piece in something I had been gathering since I started hiking.

The conversation was deep, and I cannot tell you what was said. I don't mean that I forgot it—I remember it clearly enough. I don't really mean that it would be a breach of confidence—it might be that as well. What I mean is that there was something special in that room, and it would not make much sense to you even if I could explain it. If I were to say that we talked in a room without light, where you had to feel around to move about—it would be literally true, but beside the point. When I remember the room, I do not think about what wasn't

there, but what was there. I was glad I took off my watch—but I cannot say why. The best thing I can say is that if you can figure out how a person could be aware of a succession of moments, and at the same time have time sense that is not entirely linear—or at very least not just linear—you have a glimpse of what I found in that room.

We talked long, and it was late into the next day when I got up from a perfectly ordinary guestroom, packed, and left. I put on my watch, returned to my business, and started working on the backlog of invoices and meetings that accumulated in my absence. I'm still pretty busy, but I have never left that room.

# Money

Today the biggest symbol of evil is Hitler or Naziism; there is almost no bigger insult than calling someone a Nazi or a comparison to Hitler. The Old Testament's symbol of evil that did the same job was a city in which the Lord God of Hosts could not find fifty righteous, nor forty-five, nor forty, nor thirty, nor twenty, nor even ten righteous men. It was the city on which fire and brimstone rained down from Heaven in divine wrath until smoke arose as from a gigantic furnace. It was, in short, the city of Sodom.

Ezekiel has some remarks about Sodom's sin that might surprise you. Ezekiel 16:49 says, This was the sin of your sister Sodom: she and her daughters had pride, more than enough food, and prosperous ease, but did not aid the poor and needy.

These are far from the only stinging words the Bible says to rich people who could care for the poor and do not do so. Jesus said something that could better be translated, "It is easier for a rope to pass through the eye of a needle than for a rich person to enter the Kingdom of God." (Mark 10:25). It would take hours or perhaps days to recite everything blunt the Bible says about wealth, if even I could remember so much.

But who are the rich? The standard American answer is, "People who have more money than I do," and the standard

American answer is wrong. It takes too much for granted. Do you want to know how special it is, worldwide, to be able to afford meat for every meal you want it and your Church permits it? Imagine saying "We're not rich; we just have Champagne and lobster every day." That's what it means for even poorer Americans to say "We're not rich, just a bit comfortable." The amount of money that America spends on weight loss products each year costs more than it would cost to feed the hungry worldwide. When Ezekiel says that "your sister Sodom" had more than enough food but did not care for the poor, he is saying something that has every relevance to us if we also fail to care for the poor.

I would be remiss not to mention the Sermon on the Mount here, because the Sermon on the Mount explains something we can miss (Matt 6:19-21,24-33):

Do not lay up for yourselves treasures on earth, where moth and rust consume and where thieves break in and steal, but lay up for yourselves treasures in heaven, where neither moth nor rust consumes and where thieves do not break in and steal. For where your treasure is, there will your heart be also... No man can serve two masters; for either he will hate the one and love the other, or he will be devoted to the one and despise the other. You cannot serve God and Money.

Therefore I tell you, do not worry about your life, what you shall eat or what you shall drink, nor about your body, what you shall put on. Is not life more than food, and the body more than clothing? Look at the birds of the air: they neither sow nor reap nor gather into barns, and yet your heavenly Father feeds them. Are you not of more value than they? Do you think that by worrying you can add a single

hour to your life? You might as well try to make yourself a foot taller! And why do you worry about clothing? Consider the lilies of the field, how they grow; they neither toil nor spin; yet I tell you, even Solomon in all his glory was not arrayed one of these. But if God so clothes the grass of the field, which today is alive and tomorrow is thrown into the oven, will he not much more clothe you, O men of little faith? Therefore do not worry, saying, 'What shall we eat?' or 'What shall we drink?' or 'What shall we wear?' For the Gentiles seek all these things; and your heavenly Father knows that you need them all. But seek first the Kingdom of God and his perfect righteousness, and all these things shall be added unto you.

This includes a hard saying about wealth, but it is not only a hard saying about wealth, but an invitation to joy. "Do not store up treasures on earth but store up treasures in Heaven" is a command to exchange lead for gold and have true wealth. It is an invitation to joy, and it is no accident that these sharp words about Money lead directly into the Bible's central text on why we never need to worry.

Elsewhere we read, "A man's life does not consist in the abundance of his possessions," (Luke 12:15), which is not a statement that spiritual people can rise so high that their lives aren't measured by possessions. It is about everybody, great and small. If money doesn't make you happy this is not something specially true about spiritual people; it's something that's true of everybody. But Jesus's entire point is to direct us to what our life does consist in. The words about storing up treasures in Heaven prepare us for the "Therefore I tell you," and an invitation to live a life that is fuller, richer, more vibrant,

deeper, more alive, more radiant with the light of Heaven than we can possibly arrange through wealth.

What will we leave behind if we spend less on ourselves? Will we leave behind the Lord's providence, or hugs, or friendship, or banter, or worship, or the Church, or feasting? Will we leave behind the love of the Father, or Christ as our High Priest, or the Spirit? Will we be losing a Heaven whose beginning is here and now, or will we be pulling out our right hands and our right eyes? If it seems that way, we may adapt C.S. Lewis to say that living the life of Heaven through our finances today may seem like it will cost our right hand and our right eye, or in today's words an arm and a leg, but once we have taken that plunge, we will discover that what we have left behind is precisely nothing.

Or perhaps we could say that we are leaving behind a false Savior who never delivers, but only distracts us from the true Savior in Christ, and the treasure that is ours when we lay our treasures at his feet.

Is there a luxury you could give up in this invitation to joy?

# The Most Politically Incorrect Sermon in History

*A Commentary on the  
Sermon on the Mount*

**Blessed are the poor in spirit: for theirs is the kingdom of heaven.**

"Blessed are the poor in spirit:" here begin the Beatitudes, a ladder reaching to the expanse of Heaven.

Poor in spirit was the Theotokos whose scandalous pregnancy helped prepare the way for the scandal of the cross. Poor and humble in spirit was the one who humbly prayed [the doxology](#), [the Magnificat](#):

My soul doth magnify the Lord,  
And my spirit hath rejoiced in God my Saviour.  
For he hath regarded the low estate of his handmaiden:  
For, behold, from henceforth all generations shall call me  
blessed.  
For he that is mighty hath done to me great things; and holy  
is his name.  
And his mercy is on them that fear him from generation to  
generation

generation.

He hath shewed strength with his arm;  
he hath scattered the proud in the imagination of their  
hearts.

He hath put down the mighty from their seats,  
and exalted them of low degree.

He hath filled the hungry with good things;  
and the rich he hath sent empty away.

To be poor and humble in spirit is the first rung on a ladder  
that climbs to Heaven.

**Blessed are they that mourn: for they shall be comforted.**

This life was given to us for repentance. Repentance is  
terrifying as a prospect; it seems like mournfully letting go of  
something we must have. Then when we let go, we find ourselves  
in a space more spacious than the Heavens, and realize, "I was  
holding on to a piece of Hell!"

To those who mourn their sins, who cry out for mercy, Christ  
answers by pouring out mercy and comforting them. But it is  
nonsense to expect such comfort without mourning; comfort is  
the fruit that men eat when they have planted it as a seed of  
mourning. And the fruit would have no taste to one who had not  
done the work of planting the seeds. Heaven offers nothing the  
mercenary soul can desire, and the Fire of Hell is itself the Light  
of Heaven as it is experienced through the rejection of the only  
Joy that we can have: Christ himself.

**Blessed are the meek: for they shall inherit the earth.**

One person I heard years ago said that the term "meek" in  
Greek was a term one would use of a horse that for all its  
strength was under disciplined control, and so to be "meek" was  
power under control. And that reading, however good or bad it

may be from a scholarly perspective, is spiritual poison: it castrates the words that are meant to be an insult to our pride.

Part of what is not communicated clearly is that a "meek" horse was under disciplined control from another; from its rider: a meek horse was not exceptionally good at marching to the beat of a different drummer! **A meek horse, like you or me, is under authority, under headship, and to be meek is defined by that headship.** And this unfolds in showing meekness before others: the Lord was meek before his accusers because he was meek to his Father and Head. The meekness we are meant to have has an aspect of discipline, even power, but it is neither ungrounded nor headless; it reflects the headship of Christ and others over us.

The Sermon on the Mount is intended to build power in the reader; but part of this power is the power of humility, and to be able to interpret "Blessed are the meek" without seeing a challenge to one's pride is poison. One time I confessed pride in my intelligence, and the priest told me quite emphatically, "The only true intelligence is humility!" Humility is the mortar that holds together all spiritual bricks and stones, the virtues in the spiritual life and the Sermon on the Mount. And we need the humbling spiritual training ground of meekness if we are going to get anywhere. Crediting ourselves with "strength under control" is worthless, penny wise and pound foolish, or worse.

**Blessed are they which do hunger and thirst after righteousness: for they shall be filled.**

Blessed are those who hunger and thirst for what is truly good for them: for they shall be satisfied.

The Greek term translated 'blessed' at one stroke means both happy and blessed. So this beatitude could be rephrased, "Blessed are those who seek for the only happiness there is; for they will be satisfied. (Others who seek happiness in the wrong

places can never be satisfied, even if they find it: "Two great tragedies in life: not to find one's heart's desire, and to find it," applies to that case.)

**Blessed are the merciful: for they shall obtain mercy.**

Here and now I would underscore something that may not have needed such emphasis in other times: the word translated "mercy" refers both to God's love, in "Lord Jesus Christ, Son of God, have mercy on me, a sinner," or giving money. St. John the Merciful and [St. Philaret the Merciful](#) are both called merciful because they are generous to those who beg them.

Now here I am entering a controversial point because many people say that it does no true help to give money to a beggar; and this is not simply an excuse of stinginess. You will hear this argument being made by people who work in soup kitchens and really care about the poor. And I would more pointedly bring something from a conversation with a friend, after we had given some money to a beggar and he quoted an anecdote where two friends were walking, one of them gave a little money to a beggar, and the other said afterwards, "You realize that he'd have probably drunk it?" and the first answered, "Yes, but if I'd have kept I'd have probably drunk it," and I stridently objected to this anecdote. I told him that I would have no qualms about buying my next drink, or my friend's next drink, but I would have every objection to buying the next drink for a pastor we both loved, who was an alcoholic: perhaps he had been stone cold sober for decades, but he was an alcoholic and I saw nothing good in giving him his next drink.

With that stated, all Orthodox priests I've heard on the topic say that you give something to beggars. Money. Not very much, necessarily, an amount that is entirely within your power. But it is worth considering carrying a pouch for change to give.

Maybe it would also make sense to give fresh oranges or clementines (don't give apples; people who have lost teeth have trouble with them), or chocolates. But when you give a beggar money, you are treating that person as a moral agent made in the image of God, and if he uses it wrongly, you have no more sinned than God has sinned by giving you blessings that you use wrongly.

But in any show mercy and give something, with a kind look, as well as being merciful in other areas of your life, and you will be shown mercy in the more serious areas of your own life.

Be faithful to your neighbor in little, and God will be faithful to you in much. Be merciful to your neighbor in little, and God will be merciful to you in much. (Blessed are the merciful, for they shall be shown mercy.)

**Blessed are the pure in heart: for they shall see God.**

Blessed are those who seek what they ought to seek, for they will receive it.

The saints shall see God: saint and sinner alike shall see the Uncreated Light which shone on Mount Tabor. God is Light; he cannot but shine, and can only shine in fulness, for every creature, for the saved and for the damned. Then why say, "Blessed are the pure in heart" as if they alone will see God?

The answer is that the pure in heart will see God in their ultimate triumph, while the impure will see God in their ultimate defeat. God cannot do anything but shine in his Light; creatures cannot be happy, blessedly happy, except that they see this light. Now it may only be a mediated, dimmed, filtered, metaphorical sight of God who is Uncreated Light, but still: blessedness is the only entryway to happiness. (If in fact they really are two different things.)

**Blessed are the peacemakers: for they shall be called the children of God.**

In English, "peace" often means the absence of violence, though something that is soothing may be called "peaceful." In Hebrew and in Greek, the defining characteristic is not the absence of violence, but a state of well-being where love is manifest. The predominant, though not exclusive, sense is of divine blessing. One may be a peacemaker by quelling violence, but the broader sense is a way of life where divine love is manifest.

**Blessed are they which are persecuted for righteousness' sake: for theirs is the kingdom of heaven.**

We are entering a time of trial, when darkness rises. When I was a boy it seemed obvious to me that I had good chances of living to a ripe old age. Now it seems much more possible that I may endure persecution at least. Or at least face persecution; I would compare myself to a poorly trained soldier on the eve of a battle. But the stronger persecutions get, the more powerfully some of these passages speak. The Sermon on the Mount was not given to people whose lives would be comfort and ease. The Sermon on the Mount was given to people where persecution was a fact of life, and this beatitude has good news: persecution for righteousness' sake is the privilege of the Kingdom of Heaven.

We know enough of earthly privileges: a car, a big house, the respect of others. But persecution for righteousness' sake is not meaningless; it is the token by which saints are given the Kingdom of Heaven.

**Blessed are ye, when men shall revile you, and persecute you, and shall say all manner of evil against you falsely, for my sake. Rejoice, and be exceeding glad: for great is your reward in heaven: for so persecuted they the prophets which were before you.**

In Hebrew, to repeat an adjective three times is to give

superlative force: in [Isaiah 6](#), the seraphs call to each other, "Holy, holy, holy, is the LORD of Hosts." Here we have the same beatitude repeated three times in three wordings. The point is emphasized. The first time, Christ says, "Blessed are they..." as it speaking of others. Now he says, "Blessed are ye..." and addresses us directly. He strengthens those who will be persecuted for the sake of righteousness, and underscores the heavenly privilege of being "counted worthy to suffer shame for his name" ([Acts 5:41](#)).

Persecution and defamation are how the world heralds true sons of God. Satan is the ultimate sore loser, and these blows struck from below acknowledge that one is ascending into Heaven.

**Ye are the salt of the earth: but if the salt have lost his savour, wherewith shall it be salted? it is thenceforth good for nothing, but to be cast out, and to be trodden under foot of men. Ye are the light of the world. A city that is set on an hill cannot be hid. Neither do men light a candle, and put it under a bushel, but on a candlestick; and it giveth light unto all that are in the house. Let your light so shine before men, that they may see your good works, and glorify your Father which is in heaven.**

During one scandal about baseball players abusing steroids, the question was raised of what a terrible example these athletes were to younger kids looking up to them as role models. Some had the audacity to protest, "But I never tried or sought out to be a role model," and other people said, "Sorry, buddy, you are. The question is not whether an athlete like you is a role model. The question is whether an athlete like you is a good role model, or a bad role model. You are a role model."

The Sermon on the Mount does not say that if we are very

holy we may become the salt of the earth and the light of the world; it says that we are, fullstop. We can lose our saltiness and become worthless as salt; but the question is not whether we are holy enough to be salt of the earth and light of the world. We aren't, but that's beside the point. The only question is whether we exercise this role well or poorly.

**Think not that I am come to destroy the law, or the prophets: I am not come to destroy, but to fulfil. For verily I say unto you, Till heaven and earth pass, one jot or one tittle shall in no wise pass from the law, till all be fulfilled.**

**Whosoever therefore shall break one of these least commandments, and shall teach men so, he shall be called the least in the kingdom of heaven: but whosoever shall do and teach them, the same shall be called great in the kingdom of heaven. For I say unto you, That except your righteousness shall exceed the righteousness of the scribes and Pharisees, ye shall in no case enter into the kingdom of heaven.**

Christ changes things, but if you think he is a way to dodge the hard parts of the Law, you have another think coming.

The story of the woman at the well is a story where shame loomed large. The woman came to draw water alone because she had a terrible reputation, and when Christ announced living water, she sought his help running for her shame. [Read her story](#); Christ offers no help in escaping her shame, but instead pulls her through her shame to the other side, when she ran through the village, freed from her shame, announcing, "Come and see a man who told me everything I ever did!"

If we seek Christ to provide an easy way out of the hard parts of the Law, we seek the impossible.

But Christ can pull us through to the other side.

**Ye have heard that it was said by them of old time, Thou**

shalt not kill; and whosoever shall kill shall be in danger of the judgment: But I say unto you, That whosoever is angry with his brother without a cause shall be in danger of the judgment: and whosoever shall say to his brother, Raca, shall be in danger of the council: but whosoever shall say, Thou fool, shall be in danger of hell fire. Therefore if thou bring thy gift to the altar, and there rememberest that thy brother hath ought against thee; Leave there thy gift before the altar, and go thy way; first be reconciled to thy brother, and then come and offer thy gift. Agree with thine adversary quickly, whiles thou art in the way with him; lest at any time the adversary deliver thee to the judge, and the judge deliver thee to the officer, and thou be cast into prison. Verily I say unto thee, Thou shalt by no means come out thence, till thou hast paid the uttermost farthing.

These are strong words, and if you ask if this is an example of "hyperbole", then if you mean by "hyperbole" a way to dodge their force, then no, they are not hyperbole.

Some of the Fathers look for a more than literal sense:

"Agree with thine adversary quickly" does not refer to a man, but our ever-accusing conscience. And though few have had spine enough to leave a gift before an altar, we offer wrongly if we go to the altar without first coming terms with the other person.

More broadly, these words are not an exaggeration of "First things first." These words are forceful at a point where the truth is forceful, and we gain something when we look for, not less than these words would appear to offer, but more. For one example, when we have offended another person, the wrong thing to do is hope it will go away, hope that if you forget about the whole deal the other person will to. You are in their eyes as one justly in prison, and will remain so until you have made amends,

and that to the uttermost farthing: "almost satisfied" is a very bad resting place.

Even when there was no question of conflict, the principle applies. One of my responsibilities as a web designer at my university was to take portraits of faculty members, and you could tell the difference between when a professor was happy with a picture, and when she was almost happy with the picture.

There were times when a professor was almost happy and thoughtfully talked about wrapping up the photo shoot and moving on, and that was an ending I avoided like the bubonic plague. I would rather spend a full hour shooting photos to get one the professor was happy with, and have both of us walk away happy, than have the professor decide, "I've taken enough of your time," and walk away almost happy. In practice it never took anywhere near an hour, but better devote an hour to getting the other person happy, to the uttermost farthing, and both walk away happy, than say, "Well, I suppose this is good enough."

Better to pay the uttermost farthing.

**Ye have heard that it was said by them of old time, Thou shalt not commit adultery: But I say unto you, That whosoever looketh on a woman to lust after her hath committed adultery with her already in his heart.**

This being commentary on the world's most politically incorrect sermon, perhaps it might be appropriate to give a few words here on unnatural vice.

In one sense sin and vice are never natural. But there are vices that are unnatural, such as (among sexual vices) contraception. To people who find that identification of unnatural vice, I extend an invitation to read [Orthodoxy, Contraception, and Spin Doctoring: A Look at an Influential but Disturbing Article](#), in which I tear to shreds the article that

defined the (hotly contested) "new consensus" that contraception is permissible to Orthodox provided you follow a few guidelines.

There is a shift between patristic times and our day; it may well be that an Orthodox monk in America interacts more with women than a married Orthodox Christian in patristic times. The old rule was, "Don't go to your wife unless you're going to her to try to make a baby." And over time this harsh position has been progressively softened, and an **I would be overstepping to suggest a reconstitution of the ancient rule.** But there has been a progression over history; once people changed their minds and said that it is permissible to have sex during the infertile period despite the infertility to such acts, to some saying that it is permissible to limit sex to the infertile period in order to enjoy sex without the encumbrance of fertility. **We have no entitlements,** but we believe we are entitled to the pleasure of sex without the encumbrance of fertility. And in recent years we have pursued this sexual perversion further, and a man who has trouble getting it up once is entitled to ED drugs. Far from a St. Maximus Confessor who regarded the pleasure of sex as not spiritually helpful and regarded sex as wrong when a man approached a woman other than his wife or approached his wife for a purpose other than conceiving a child, we understand sex as good in terms of being a potent "pleasure delivery system." **And, pop culture notwithstanding, we don't need a pleasure delivery system.** It is almost an act of counterculture for Orthodox Christians to refuse to practice more unnatural vice than the Greeks of Foucault's History of Sexuality, where one philosopher was asked, "How often should I have sex?" and gave the answer, "As often as you wish to deplete your energy." It's not just that ancient Orthodoxy exercised a tad bit more self-

control in sex than we do; queer Greek philosophers were also just a little more self-restrained than us.

And a note to those anticipating at least a mention of queer sexuality, I will say this. Hillsboro Baptist Church may be Christianity's greatest gift to queer advocacy yet. It spares gays the trouble of wondering whether a God who loves gays infinitely, and a God who wants far better than gay acts for them, might be one and the same God. Before trying to straighten out queers, we might work on straightening those who appear straight.

**And if thy right eye offend thee, pluck it out, and cast it from thee: for it is profitable for thee that one of thy members should perish, and not that thy whole body should be cast into hell. And if thy right hand offend thee, cut it off, and cast it from thee: for it is profitable for thee that one of thy members should perish, and not that thy whole body should be cast into hell.**

In ancient times the concensus was that this cannot be taken literally. If you sin with your right eye and pluck it out, you will go on sinning with your left eye. Furthermore, when a man decided to cut off the problem at its root, the Council condemned self-castration.

However, the fact that these words cannot be literal does not mean that they cannot be true. In ascetical

**Once a great teacher and a truth-seeker were standing in a river. The teacher asked the student, "What do you want?" The truth-seeker said, "Truth."**

Then the teacher plunged the student under the water, and let him up and asked him, "What do you want?" The student said, "Truth!" Then the teacher held the student's head under the water, and the student struggled and struggled, and

struggle, there will be some sin, some thing to which one is attached in passion, that it seems we cannot live without. To give it up would be to tear out our right eye or right hand. But the Lord tells us: "Tear out your right eye and your right hand and be free," and we must cut off our own damnation. Never mind that afterwards we realize that we were afraid of letting go of Hell; never mind that once we have torn out our right eye cut off our right hand we find that we have our right eye and our right hand now more than ever: if cutting off our right hand is the price of freedom, cut it off.

And to pick a salient example: if you are one of many men who does not benefit from having a porn delivery service attached to your computer, cut off the sewer of pornography at whatever level necessary to be free. Censorware exists; not wanting to have to bring a sin to confession exists. Canceling internet service and checking email at libraries is better than having full internet access and taking that path all the way to Hell.

**It hath been said, Whosoever shall put away his wife, let him give her a writing of divorcement: But I say unto you, That whosoever shall put away his wife, saving for the cause of fornication, causeth her to commit adultery: and whosoever shall marry her that is divorced committeth adultery.**

Marriage is permanent. Civil divorce exists, and the great mercies of Orthodox oikonomia extend to allowing a second or third marriage after divorce, even if they make clear that this is

finally the teacher let him up and asked him, "What do you want?" The student gasped, "Air!!!" Then the teacher said, "When you want truth the way you want air, you will find it."

The same thing goes for freedom from porn!

oikonomia. But even with divorce in the picture, marriage is indelible: to put it bluntly, when two divorced people sleep together, there are four people in the bed.

But there is another point to be made: the place of marriage, that is real, full, true marriage in the world today is almost like the place of monasticism in the desert in days past. One monk in the Philokalia wrote that the things that are successes for a man in the world are failures to the monk, and the things that are successes to a monk are failures to a man in the world. A man in the world wants a fine reputation and places of honor, a beautiful wife and fine children, a magnificent and luxurious house, to be able to have his way in what happens, etc. And all of these are ruin to the monk. For the monk, success consists in living in obedience and receiving painful commands, having a spartan cell, enduring shame and dishonor, being cut off from his kin, and so on. And if this happens to the man in the world, some have committed suicide. And there is something strikingly similar, spookily similar, with the faithful married life in the world and classical monasticism.

If we ask what is success in the world as a whole, it is sampling various world spiritualities, having a nice car and house, being able to buy the things you see advertised, and so on and so forth. And not all of these are ruin for faithful married life in the world, but at least the price tags are switched. To faithful married life in the world, doing some nice family activity every week, or even just doing chores together, is much better than two high paying jobs and a nanny. A family presumably means some income, but the faithful living married life in the world are probably not going to be good enough at running the rat race to have much more money than they need (and if they are faithful, they will be more likely to open their hands). None of this is

technically a monk's "vow of poverty," but between inflation, low income, and debt, the family may have a "virtual vow of poverty." People in times before have said that marriage and monasticism are two different and possibly opposite ways to reach the same goal, ultimately a goal of living out of love for God. But that's a decoy to my point here. My point here is that compared to the success and standards of the world around us, faithful married life in the world starts to look a whole lot like monasticism and not much at all like people who look to Starbuck's and yoga, perhaps also serial monogamy, to fill their deepest needs.

Marriage is given attention in the quite short Sermon on the Mount, and its sanctity is underscored by underscoring its permanence. Especially today, we should give marriage something of the recognition we give monasticism.

**Again, ye have heard that it hath been said by them of old time, Thou shalt not forswear thyself, but shalt perform unto the Lord thine oaths: But I say unto you, Swear not at all; neither by heaven; for it is God's throne: Nor by the earth; for it is his footstool: neither by Jerusalem; for it is the city of the great King. Neither shalt thou swear by thy head, because thou canst not make one hair white or black.**

**But let your communication be, Yea, yea; Nay, nay: for whatsoever is more than these cometh of evil.**

To abolish oaths is to make every statement an oath. An oath is specially sanctioned; by saying "You know I am telling truth because I am swearing," you implicitly say, "This needed because I were not to swear it might be OK for me to lie."

God swears in the Bible, and St. Paul's letters contain much swearing, or language that is close to swearing, but none the less it is not only the radical Reformers' fixation on the Sermon on the Mount that rejected swearing: an Athonite monk refused to

swear in court and went, uncomplainingly, through a four month jail term and said, "It may seem a small matter to you, but we recognize something real and important in it." And, I would expect, truthfulness was enough of this monk's character that to him every statement was made as if it were an oath.

There is also a second layer, which might be put as follows: "Swear even by your head? Guarantee that something will happen? Do you have any idea that you might not wake up tomorrow, that any number of things might change about your circumstances? Don't you understand that you cannot make one single hair white or black?"

**Ye have heard that it hath been said, An eye for an eye, and a tooth for a tooth: But I say unto you, That ye resist not evil: but whosoever shall smite thee on thy right cheek, turn to him the other also. And if any man will sue thee at the law, and take away thy coat, let him have thy cloak also.**

**And whosoever shall compel thee to go a mile, go with him twain. Give to him that asketh thee, and from him that would borrow of thee turn not thou away. Ye have heard that it hath been said, Thou shalt love thy neighbour, and hate thine enemy. But I say unto you, Love your enemies, bless them that curse you, do good to them that hate you, and pray for them which despitefully use you, and persecute you; That ye may be the children of your Father which is in heaven: for he maketh his sun to rise on the evil and on the good, and sendeth rain on the just and on the unjust. For if ye love them which love you, what reward have ye? do not even the publicans the same? And if ye salute your brethren only, what do ye more than others? do not even the publicans so?**

**Be ye therefore perfect, even as your Father which is in heaven is perfect.**

Is there a just war? No and never; Orthodox soldiers who kill in war must do penance. The treasury of Orthodox saints includes mighty warriors like St. George, and passion-bearers like the princes Boris and Gleb who allowed themselves to be murdered by wicked rulers usurping their throne. But even St. George did not defend himself from being martyred.

But the point here is not overstated; if anything, it is understated. It may or may not be right to defend oneself, one's loved ones, one's country, by force of arms. There may be oikonomia, leniency, to defend oneself by force even though it injures others' bodies. But the Christ before Pilate not only did not defend himself by violence; he did not resist evil even by words. And Orthodox tradition has picked up on this and said that monks are to remain silent before their accusers and not even defend themselves by words. And it is a strange thing to say that we may never injure another's body to defend ourselves; it is beyond strange to say we may not defend ourselves even by healing another's understanding. But let us recall Christ on trial. Christ did not do what was expected, make any defense against the many allegations brought before him; his entire passion is a living exposition of the claim, "My kingdom is not of this world." And this is not just that Christ's disciples did not defend him beyond cutting off Malchus' ear (whom Christ healed), but there is something positive we will forever miss if we say that in the ideal we may not defend ourselves even by trying to heal the poison others hold in their mind when they accuse us.

When Christ had refused to play along with the Sanhedrin, the astonished Pilate asked him, "Don't you know I have the power to crucify you or to free you?" Or, to paraphrase, "Don't you see that I have all the cards in my hand, and you have none?"

And Pilate was terrified as their exchange unfolded; Christ made no effort to free himself and Pilate did not know what power he was dealing with but knew that he was dealing with a power next to which his power, his pomp, his authority was but dust and ashes. Pontius Pilate sensed that he was a chintzy wooden puppet king passing judgment on the first real man he'd met. After then, Christ was crucified, but the grave was not big enough to hold him, and is the grave, not Christ, that lost in the exchange. In the Resurrection of Christ, when the Devil appeared to have managed a decisive and final victory, "God the Game Changer" trumpeted, "Checkmate!"

---

And here we come to something politically incorrect enough that most readers will read the text and be blithely unaware of it. It doesn't even show up as a blip on the radar.

Perhaps the best way to portray it, or at least the best I can find, is to portray two archetypes, the archetypes of the Saint and the Activist, which define a polarity. The Saint, as I use the term here, consists mostly of people who will never see canonization as formal saints, and the Activist includes mostly people who don't think of themselves as activists, not any more than people who use cars, trains, busses, and airplanes think of themselves as "motor vehicle enthusiasts." The Activist prays, if anything, "Lord, help me change the world," and is concerned with the sewer of problems in the world around. The saint prays, "Lord Jesus Christ, Son of God, have mercy on me, a sinner," and is concerned with the sewer of problems within. (G.K. Chesterton won an essay contest, and also wrote the shortest letter to the editor on record, answered the question, "What is wrong with the world?" with a Saint's, "Sir, I am.") The Saint may end up changing the world; in the end the Saint will end up changing the world, but that must never be his goal. "Save yourself, and ten thousand around you will be saved," is not about the need to straighten out ten thousand people, but the need to straighten out one, and the one person you may least wish to correct. The Activist says, "Let there be peace on earth, and let it begin with me." The Saint says, "[Be it unto me according to thy word;](#)" Could any difference be greater?

Since the Catholic Church, one could say, self-amputated from Orthodoxy in 1054, East and West have been separated by a growing chasm, and in an inconsistency I will use 'East' to refer to the Eastern Orthodox Church (though, in this regard, it

shares much with Hinduism, (more subtly) Islam, Jainism, etc.), while by 'West' I refer to the broader Western society and specifically include elements that the Roman Catholic Church played no part in. There is a reason for this inconsistency in that the fall of the Roman Church deprived the West of a vital nutrient, however I am simply choosing terms inconsistently to best illuminate something.

In the West, the figure of the Renaissance magus looms large and still has a shadow today: job ads I see calling for an Ajax ninja or a Rails rockstar echo the Renaissance magus. The Eastern figure was the humble member of a community, one strand of an intricately woven web, relating to society, culture, and the Church as one relates to a mother. But the Renaissance magus, besides freely engaging the occult, stood over and against society, and regarded one's culture as a sort of a despicable raw material that would gain value only insofar as one would transform it to something better. And this attitude represented a novelty, or at least an aberration, to Orthodoxy. It would come across a bit like telling the mother who gave you birth, "You know, I don't like the way your body is arranged. You have one arm more than you need; we can consolidate the musculature to give you a much stronger arm, and move your fingers to your feet so that you can easily use your feet to pick things up. And your present skin color is not nearly so beautiful as the royal purple with which I would see you adorned; you should go through the pain of a whole-body tattoo so that your skin may be regal in its color. And I would like to rearrange a few things inside." And did I mention that the Renaissance magi claimed equality to Christian saints, saying that the Renaissance magus and the Christian saint were two sides of the same coin?

The Renaissance magus left several strands that are part of the West, and I am not here talking about increasing interest in the occult. I would recall one class where the admittedly flaming liberal professor introduced the topic of "autism and advocacy," finding it patently obvious that if you care about people on the spectrum, "care" translates immediately to political activism.

One of the articles she had chosen was surprisingly a Saint talking about the asceticism of love, the spiritual discipline, of living as a father to an autistic child and facing parenting issues that simply don't come up with autism-normal children. But to an Activist, the obvious response to the autism spectrum, if you have a heart, is political advocacy. But that isn't really from the heart, because Activism is from a head severed from the heart. The response that had a heart was the one she was blind to even as she assigned it: the struggle of a father, in the concrete, to love and care for a highly autistic child. This heart had no grand schemes to transform society, even on a smaller level; it was just exercising a Saint's love and care in whatever concrete situation one is in. Including having a child and discovering that he had some unusual needs and would take a lot of love to care for.

The Activist looms large; it looms large enough that not only do liberals pursue advocacy of liberal agendas, but many conservatives shuffle a few things around and pursue advocacy of a few conservative agendas. This may seem strange enough to say, but I wince at some of the conservative, Christian pro-life advocacy I have seen, because it takes the framework of a liberal activist and fills in the blanks with something conservative instead of something liberal. Being pro-life is an area where political Activism can only take you so far: you cannot reach its heart, until you enter the process of becoming a Saint.

The Saint turns the other cheek. The Activist can only win by

earthly victory. The Saint often wins though earthly defeat.

**Take heed that ye do not your alms before men, to be seen of them: otherwise ye have no reward of your Father which is in heaven. Therefore when thou doest thine alms, do not sound a trumpet before thee, as the hypocrites do in the synagogues and in the streets, that they may have glory of men. Verily I say unto you, They have their reward. But when thou doest alms, let not thy left hand know what thy right hand doeth: That thine alms may be in secret: and thy Father which seeth in secret himself shall reward thee openly.**

Feeding the hungry is greater work than raising the dead. the saints tell us. Fasting benefits you alone; almsgiving also benefits your neighbor. And these things cannot be kept secret. The harder you try to keep your almsgiving a secret, the more God will show you off as his faithful Saint.

The spiritual danger of making good deeds a means to praise is like buying food so that you can play with its packaging. It's entirely backwards, and Christ lays the axe at the root of the tree: he does not chop it off above ground so it will grow back, but cuts as deep in the roots as he needs to do uproot a deadly weed. What God does or does not do in terms of publicizing results is his concern and not ours. Our concern is that it shows severely warped priorities to seek commensurate recognition for your goodness.

I remember wishing, years back, to see some Christian institution name a building after a widow who gave \$10 a month that she couldn't afford, out of her husband's pension.

I have not lost that wish, but I am profoundly grateful that the Orthodox Church names parishes not after money bags, but after a saint or feast who has entered the heavenly mansions

and is no longer in danger of sinking into pride from being so honored.

**And when thou prayest, thou shalt not be as the hypocrites are: for they love to pray standing in the synagogues and in the corners of the streets, that they may be seen of men. Verily I say unto you, They have their reward. But thou, when thou prayest, enter into thy closet, and when thou hast shut thy door, pray to thy Father which is in secret; and thy Father which seeth in secret shall reward thee openly. But when ye pray, use not vain repetitions, as the heathen do: for they think that they shall be heard for their much speaking. Be not ye therefore like unto them: for your Father knoweth what things ye have need of, before ye ask him.**

Almsgiving is not to be trumpeted, but few of us are so stealthy as to give alms without the recipient knowing. But prayer can be done in secret, so only God knows we pray. The text does not have mainly unspoken prayers in mind such as those coming from Protestantism may expect; purely mental prayer is one of a number of kinds of prayer there is, and the text does not discuss prayer without opening one's lips, but prayer in one's closet with the door shut, prayer which is presumably spoken aloud. But as with almsgiving, we are to seek secrecy and hidden works, and when we strive to tear away the last shred of wanting to show off our good deeds, God himself will show off our good deeds.

Orthodox writing about "much speaking" take a line of argument one might not get from the "bare text" of "use not vain repetitions." Essentially, the suggestion is that the bedrock of prayer is not from masterpieces of rhetorical excellence, but rather simple, childlike prayers which are repeated over and

over. The Jesus Prayer is the crowning jewel of such prayers. But even then, it is a mistake to think one will be heard for much speaking. The Jesus Prayer is intended to sink down into you from the outside in until it becomes like the blood pulsing through your body, and even in the highest use of the Jesus Prayer there is no expectation that one will be heard from one's many words. The path that is most abundant in repeated words is the one further from thinking one is heard from much repetition.

And furthermore Christ de-mythologizes God. If the Father is seen as an old man with a beard, it may be entirely relevant to inform him what things one has need of. But Christ will not accept this: God knows, before we begin to ask him, what we need, and he knows better than we do. We are urged on every account to pray, but the burden does not lie on our shoulders to instruct God about what we need.

I may comment briefly that before Bultmann went through his campaign to de-mythologize the Bible, over a thousand years before Pseudo-Dionysius had a campaign to de-mythologize the Bible, and did a better job of it. Here Christ instructs us in appropriate prayer to a de-mythologized God.

**After this manner therefore pray ye: Our Father which art in heaven, Hallowed be thy name.**

"Our Father:" in these two words alone is something astonishing, something stunning. This prayer is prayed in the Divine Liturgy in the brief period when the holy gifts have become the body and blood of Christ and before they are consumed. It is a singular prayer. And it may be noted that calling God one's Father is a strong claim in Scripture: to be a son of God is to be divine and from ancient times this prayer was seen in relation to theosis.

The first of seven petitions, "May your name be held holy,"

contains the other six. It is as if the prayer is given here, and then a commentary.

**Thy kingdom come. Thy will be done in earth, as it is in heaven.**

This is an adult prayer. It is not a prayer that everything go according to your wishes, or mine, but God's. It is a prayer that God's reign extend, and the earth that is an icon of Heaven may ever be fuller or more complete.

**Give us this day our daily bread.**

This is the one prayer for material concerns, and it is exceedingly modest. It is kept by us who may have a month's food on hand as a formality; but to many of those who prayed, it was anything but formality. The faithful needed the days' bread.

And here again it is modest, for it does not say "Give us this week a week's bread," but "Give us this day our daily bread." The prayer is almost a goad to say, "Stop scrambling to enlist God as your helper in your efforts to build a kingdom on earth. Don't cling to wants. You have legitimate needs, and you are invited, summoned, to ask for your legitimate need of enough bread for today."

**And forgive us our debts, as we forgive our debtors.**

We ask God for contradictory things, and we do that all the time. We ask for the peace that belongs to people who are not controlling, and we also ask to be in complete control of others around us. We ask God to help a child make independent adult-like decisions, and we demand that their choice agree with ours.

Or we ask God to free us from the misery of alcoholism and addiction, but we ask him to let us keep whatever we are addicted to. With the Blessed Augustine, we pray, "Lord, give me chastity, but not yet."

It is incoherent, contradictory, to ask for forgiveness when

we will not forgive. *We owe God billions and billions of dollars, and when he has forgiven us, we demand repayment from our brother who owes a few thousand dollars.* Not that a thousand dollars is any trifling sum; it is worth months of income, but if we will not forgive, God's grace bounces off of us. The door to the heart can only be opened from the inside, but we are confused if we try to open it when we have bolted and barred it with a grudge.

There are seven petitions in this singularly important prayer, and any of them could be commented on at length. In the Sermon on the Mount only this one receives further comment, and it is a comment stark and clear.

**And lead us not into temptation, but deliver us from evil: For thine is the kingdom, and the power, and the glory, for ever.  
Amen.**

The closing note is not addressed to the Father alone, but asserts all kingdom, power, and authority to the whole Trinity.

But the main point I would note is something else.

The prayer is given slightly differently in the Orthodox practice: "And lead us not into temptation, but deliver us from the Evil One," and then a priest if present adds, "For thine is the kingdom, and the power, and the glory, of the Father, and of the Son, and of the Holy Spirit, now and ever and unto ages of ages. Amen." "Evil One" replaces "evil" because we are not praying for a delivery from some abstract, depersonalized quality like confusion or misunderstanding, but from the Devil, the Dragon who swept a third of the stars from Heaven.

**For if ye forgive men their trespasses, your heavenly Father will also forgive you: But if ye forgive not men their trespasses, neither will your Father forgive your trespasses.**

This is the comment mentioned above. All seven petitions are

inexhaustible, but this one is clear: it is a stupid thing to hold on to a grudge and expect forgiveness. (Tradition preserves the reason why: it's like holding shut the door to your heart and inviting God to come in.)

**Moreover when ye fast, be not, as the hypocrites, of a sad countenance: for they disfigure their faces, that they may appear unto men to fast. Verily I say unto you, They have their reward. But thou, when thou fastest, anoint thine head, and wash thy face; That thou appear not unto men to fast, but unto thy Father which is in secret: and thy Father, which seeth in secret, shall reward thee openly.**

What has been said first of almsgiving, and then of prayer, is said of fasting, is this: if you try to show off, and your purpose is to impress others, then it is hollow and worthless. That is all the reward you will ever have, in this world or the next. But if you conceal it and perform to an audience of One, God himself, it will be full, invaluable, and God himself will show it off. By all means, choose the right path, and it will never be taken from you.

**Lay not up for yourselves treasures upon earth, where moth and rust doth corrupt, and where thieves break through and steal: But lay up for yourselves treasures in heaven, where neither moth nor rust doth corrupt, and where thieves do not break through nor steal: For where your treasure is, there will your heart be also.**

This says more than the [Tao Te Ching](#) which I remember to say, "Halls of gold and jade cannot easily be guarded." (The implication? If you don't have halls of gold and jade, neither can you lose halls of gold and jade.) A net of financial security paradoxically becomes one more thing to worry about.

Christ offers very simple investment advice. This investment advice may be beyond the pall even of political incorrectness, but

here is his investment plan:

1. Do not store up financial resources, but give to the poor.
2. Give freely as an offering to Christ.
3. Christ will receive your gift as a loan.
4. Christ will repay you exorbitantly, but on his time and on his terms.

This cuts against the grain of every worldly advice; financial assets that you hold on to are not an asset but a liability. Now some people have said, "We may have things as long as we are not attached to them," and that is genuinely and fully true, but inner detachment is harder than just getting rid of one's possessions, and easier to fool yourself.

Having an earthly safety net to do the job of God's providence is to have an idol. Earthly worldly advice is about how to have enough treasures on earth to support oneself. But they are flimsy, worthless, and the best way to take yourself is not to store up treasures on earth, not to seek one's providence from earthly treasure, but instead store up treasures of Heaven. And having really and truly thrown yourself on the mercy of God, you will find that God is merciful beyond your wildest dreams.

**The light of the body is the eye: if therefore thine eye be single, thy whole body shall be full of light. But if thine eye be evil, thy whole body shall be full of darkness. If therefore the light that is in thee be darkness, how great is that darkness!**

"If thine eye be single" has an immediate sense and a more profound sense. Marriage is honorable, but St. Paul warns that if a man is married his eye will not be single because it will be divided between the Lord and his wife. He gives advice but not a command. If it is a hindrance to divide one's eye between the

...  
Lord and one's spouse, what hindrance must it be to divide one's eye between the Lord and despicable money!

On a deeper level, I would recall an academic theology who presented as a lesson from computer science that we should switch between several activities rapidly. (In academic theology, the standard way to do name-dropping is to introduce a term from science, usually in a way that scientists could not make head or tail of.) My response was, "This may be true; what it is not is a lesson from science," but I don't believe it is true. Far from it, divided attention is a hindrance to earthly success, let alone Heavenly growth; we fragment ourselves in a way that would be unimaginable millenia ago when philosophers said then that we were fragmented.

Progress in monasticism moves through layers of contemplation that let go of worldly things and even what one has grasped in previous layers of contemplation until one is all eye and all beholding the Uncreated Light. The focus becomes progressively like a laser: the monk, who is all eye, has more and more a single eye.

Perhaps there are other ways; reading the [Tao Te Ching](#)—or, better, the "Nine Enneads" from [Christ the Eternal Tao](#), may not be on par with the Fathers, but if you let them sink in for decades you may gain something. Or simply be under the fatherly guidance of a good priest who appropriately emphasizes the Jesus Prayer. But in any case Lao Tzu complained in his day that people had fallen from an eye that is single—let alone Christ—and if we make the same claim, we have gone from out of the frying pan, not into just fire, but into termite (which has been used to burn through the armor on tanks).

One does not jump in a single moment from dismal conditions to perfection: the standard pastoral advice is to give a little

... perfectly, the servant of passion desires to give a little more or cut back a little further, and we will not leap all in one jump from a divided eye to one that is single. But growing towards an eye that is single is growing towards contemplation in the glory we were made for.

**No man can serve two masters: for either he will hate the one, and love the other; or else he will hold to the one, and despise the other. Ye cannot serve God and mammon.**

Note that Christ does not call Money a servant, but a master. He says not, "No man can have two servants," but "No man can serve two masters." If your life is ordered so that you have money and the things money can buy all lined up to serve you, it is in fact you who are serving money. And this is not just some sophisticated insight, but something very basic. St. Paul tells us that the love of money is the root of all evil, and the Philokalia describe the demon of loving money as what would today be described as a "gateway drug": once one's spirit is defeated by the love of money, one is passed along to other, worse demons. As regards money, the Sermon on the Mount is uncomfortably clear.

**Therefore I say unto you, Take no thought for your life, what ye shall eat, or what ye shall drink; nor yet for your body, what ye shall put on. Is not the life more than meat, and the body than raiment? Behold the fowls of the air: for they sow not, neither do they reap, nor gather into barns; yet your heavenly Father feedeth them. Are ye not much better than they? Which of you by taking thought can add one cubit unto his stature? And why take ye thought for raiment? Consider the lilies of the field, how they grow; they toil not, neither do they spin: And yet I say unto you, That even Solomon in all his glory was not arrayed like one of**

these. Wherefore, if God so clothe the grass of the field, which to day is, and to morrow is cast into the oven, shall he not much more clothe you, O ye of little faith? Therefore take no thought, saying, What shall we eat? or, What shall we drink? or, Wherewithal shall we be clothed? (For after all these things do the Gentiles seek:) for your heavenly Father knoweth that ye have need of all these things. But seek ye first the kingdom of God, and his righteousness; and all these things shall be added unto you. Take therefore no thought for the morrow: for the morrow shall take thought for the things of itself. Sufficient unto the day is the evil thereof.

Let me make a couple of brief remarks before diving to the core of the passage. First of all, you are making a fundamental error if you assume that "Each day has enough trouble of its own" is only intended for the inhabitants of a mythical and perfect world. It is in fact practical advice for our world, and it is more practical advice for us today than ever. Second, there is a translation issue in that one verse could be rendered, "Which of you by worrying could add a single cubit [a foot and a half] to his height?" or "Which of you by worrying can add a single hour of your span of life," but in fact the word play admits an apt paraphrase: "Do you think you can add a single hour to your lifespan by worrying? You might as well try to worry your way into being over a foot taller!"

Now to the main point: "Do not store up treasures on earth" and "You cannot serve both God and Money" are not a barbed wire fence that serves only to injure. They protect a paradise which we can live in here and now: if wealthy Solomon in all his splendor could not match the lilies of the field, to what height will we ascend if we let go of taking up God's responsibility of

providing for our needs; we will be as the birds of the air or the lilies of the field, as Adam and Eve naked and innocent in Paradise. We cast ourselves out of Paradise when we open our eyes and say, "What shall we eat?" or "What shall we wear?" But the entire point of the stark, pointed fence is a buildup to a right and proper invitation to live in Paradise here and now. Not later, when the economy might be better. Here and now we are called to enter paradise and live the divine life.

**Judge not, that ye be not judged. For with what judgment ye judge, ye shall be judged: and with what measure ye mete, it shall be measured to you again. And why beholdest thou the mote that is in thy brother's eye, but considerest not the beam that is in thine own eye? Or how wilt thou say to thy brother, Let me pull out the mote out of thine eye; and, behold, a beam is in thine own eye? Thou hypocrite, first cast out the beam out of thine own eye; and then shalt thou see clearly to cast out the mote out of thy brother's eye. Give not that which is holy unto the dogs, neither cast ye your pearls before swine, lest they trample them under their feet, and turn again and rend you.**

I read a woman who was a pillar of the church I grew up in, recounting a civil union and saying, "There was not a dry eye in the place." Even after I thought, I held my tongue from adding, "Only the sound of angels weeping."

One of the principles of mystagogy in Orthodoxy is that if you know the truth, and you know someone will reject it, you don't say it. Come Judgment Day, it is better for the other person to not have rejected the truth. And it is better for you not to have put the other person in that position. But even then we are not to judge; we have acted so that another person will not be Judged on Judgment Day, and who are we to judge? Has

God asked our help judging our neighbor?

Someone sins, and that is a stench in God's nostrils. Then we see it and we judge. Now there are two stenches in God's nostrils. Is it better for you to leave God with one stench or two?

**Ask, and it shall be given you; seek, and ye shall find; knock, and it shall be opened unto you: For every one that asketh receiveth; and he that seeketh findeth; and to him that knocketh it shall be opened.**

Keep on asking, and it will be given to you at a time you do not expect it. Keep on seeking, and you shall find at a place you would never imagine. Keep on knocking, and after you are certain your knocking is not working, the door shall be opened to you.

Sometimes it is less painful than this; but we must ask until our voices fail, because sometimes it is not until our voices fail and our petitions seem to have fallen on deaf ears are we ready to have what we ask for. Keep on asking. Keep on seeking. Keep on knocking. And if it is easier than this, count yourself blessed. If it is harder than this, still count yourself blessed. In all cases it is God's sovereign hand strengthening and growing you in all the ways you would know to ask and all of the ways you would never imagine to ask.

Never stop asking, or seeking, or knocking. And never assume that because you did not instantly receive what you asked, you will never receive what you asked. Never assume that because your request was not granted in the way you envisioned, you will not be given something better that you would never think to ask.

**Or what man is there of you, whom if his son ask bread, will he give him a stone? Or if he ask a fish, will he give him a serpent? If ye then, being evil, know how to give good gifts unto your children, how much more shall your Father which is**

**in heaven give good things to them that ask him?**

We today, in our political correctness, manage others' moods by feeding their vices. We give a stream of compliments so others will feel better. Christ does not give a honey-sweet drone of manufactured compliments; he instead calls us "evil" and elsewhere, though he surely is good, reproveth even the truthseeker who called him "good."

Christ says that if evil as we are, we give good gifts to children, how much will the Heavenly Father who is good give anything but excellent gifts? Quite often he gives us better than we asked and we say that our prayers were denied. We have been corrupt enough to ask for a stone to eat, or a serpent, and his work is to wean us from corrupt foods onto foods fitting in every sense to men. The original audience asked God for loaves and fishes, but we would rather have stones and serpents.

**Therefore all things whatsoever ye would that men should do to you, do ye even so to them: for this is the law and the prophets.**

To pick a nit: the text does not say "Therefore all things whatsoever they would that men should do to you," but "Therefore all things whatsoever ye would that men should do to you." The single-word difference is subtle but profound.

wE are to ask for bread and fish. But when others ask for a stone, prayerfully consider giving bread, and when others ask for a serpent, prayerfully consider giving a fish. The time may not be right, or the occasion, but if nothing else we can pray good gifts for them. And do whatever you would want others to do for you if you ARE seeking the Kingdom of Heaven.

**Enter ye in at the strait gate: for wide is the gate, and broad is the way, that leadeth to destruction, and many there be which go in thereat: Because strait is the gate, and**

**narrow is the way, which leadeth unto life, and few there be that find it.**

At non-Orthodox funerals, I have always heard that the deceased is in Heaven. You die and next you go to Heaven. But there is another quite chilling possibility. Most people go to Hell and perhaps many Orthodox go to Hell. The one time I was closest to dying, I experienced and gave in to extraordinary temptations in my spirit. God graciously provided a way out, but it is common for the dying to be allowed great temptations, and I'm really not sure that if I had died then, in that state, I would be in Abraham's bosom. As Orthodox we do not say that we have been saved; we might say that we are being saved, but even great saints do not enjoy safety. The story is told of a dying monk who stepped with one foot into Paradise, and the demons said, "Glory to you, you have defeated us," and the monk said, "Not yet I haven't," and pulled the other foot completely into Paradise. The story is also told of a monk who experienced high mystical visions and was brought bodily into Heaven, and then fell and was damned.

Heaven is not the final resting place for everybody in our circle. Many we are connected to can easily be damned, and we ourselves can easily be damned. I am very wary of assuming that I am standing firm, because that is how you fall. And it is clear to me now that I could be damned no matter how good my asceticism looks to me.

**Beware of false prophets, which come to you in sheep's clothing, but inwardly they are ravening wolves. Ye shall know them by their fruits. Do men gather grapes of thorns, or figs of thistles? Even so every good tree bringeth forth good fruit; but a corrupt tree bringeth forth evil fruit. A good tree cannot bring forth evil fruit, neither can a corrupt tree**

**bring forth good fruit. Every tree that bringeth not forth good fruit is hewn down, and cast into the fire. Wherefore by their fruits ye shall know them.**

You shall know them by their fruits: not anything else, even ecclesiastical rank.

We live in an age of false prophets, and not just those promoted on Oprah. These words of Christ have never been wisely ignored, but we need them in particular here and now: **the fruits of rhetoric**, the fruit of people's personal lives so far as we know them, and **the fruit of what happens in their following**. The fruit of honest or dishonest, manipulative, shady rhetoric is perhaps the least important of these three, but it is there. The fruit of personal lives is important, though it may be harder to find since anyone can choose whatever image they want on the network: here "the prophet sees through a glass, darkly, while the archivist sees through a microscope, sharply," (Peter Kreeft), and we do not have an archivist's knowledge. But perhaps the most important fruit of all is another fruit that cannot be hidden, which is what happens in a person's wake. Does the prophet leave behind a following with the fragrance of godliness, or a stench of rotting?

**Not every one that saith unto me, Lord, Lord, shall enter into the kingdom of heaven; but he that doeth the will of my Father which is in heaven. Many will say to me in that day, Lord, Lord, have we not prophesied in thy name? and in thy name have cast out devils? and in thy name done many wonderful works? And then will I profess unto them, I never knew you: depart from me, ye that work iniquity.**

Christ makes his point strongly. He does not say that many whose faith was lukewarm, many whose eyes were not single and whose hearts were divided, will be damned. That is of course

true, although many "unlikely candidates" will feast in the Heavenly kingdom. But he puts the point most sharply: among those who seem to have a faith to remove mountains, who in his name have prophesied and cast out demons, who have performed miracles, will be damned.

There is an old Russian folktale that His Eminence KALLISTOS has what he calls an all-purpose story, where there was a woman who was exceedingly sharp and strict in fasting and every legalistic astonishment, and to her astonishment died and found herself in Hell. She called her guardian angel, and asked about what must be a mix-up. The angel asked if there was anything she had done out of charitable love for another, and she mentioned that she had given a long, thin onion to a beggar once.

The angel reached out into his pouch, took out the onion, and said, "Here it is. I'll hold onto one part of it and you hold onto the other, and I will try to pull you out." The woman took the onion, and the others in Hell saw that she was starting to be pulled up, and began to grab on to her, so that there was a collected web beginning to rise out of the fire of Hell. The woman said, "Stop it! Let go! It's mine!", and when she said, "It's mine!", the onion snapped, and the woman and all those attached to her fell back into Hell.

Fasting and other disciplines are important, but a legalistic fast that does not arise from Christ knowing you is worthless.

Even casting out demons and working miracles is of precious little value if it is not (the power of) [Christ in you, the hope of glory](#). Neither unimpeachable fasting, nor working miracles, nor writing or reading theology, nor even almsgiving, will itself save you from being rightly damned to Hell.

**Therefore whosoever heareth these sayings of mine, and doeth them, I will liken him unto a wise man, which built his**

house upon a rock: And the rain descended, and the floods came, and the winds blew, and beat upon that house; and it fell not: for it was founded upon a rock. And every one that heareth these sayings of mine, and doeth them not, shall be likened unto a foolish man, which built his house upon the sand: And the rain descended, and the floods came, and the winds blew, and beat upon that house; and it fell: and great was the fall of it.

When Y2k was approaching, I believed the grid would go black January 1, 2000. I believed in the worst case scenario, and while I did not have anything near adequate material preparation for this, I was completely wrong.

Completely wrong.

Then why do I feel like I'm crossing my fingers? Every prediction I believed about disaster on January 1, 2000 turned out to be 100% wrong.

The burr under my saddle in saying I was wrong was that I believe I was fully wrong about the details of Year 2000 collapse, but there are still some beliefs I retain. Not, perhaps, that the Y2k prediction was a nice, poetic story, or that I wish to say, Star Wars style, "What I told you was true, from a certain point of view," but let me outline the beliefs I held surrounding Y2k:

1. A great disaster will occur immediately on January 1, 2000, and will shut down Western civilization.
2. If there is a great disaster, we will have physical needs.
3. If there is a great disaster, we will have spiritual needs.

Now as far as the first point goes, I think it was wrong but not entirely off the mark; I don't believe so much that

deterioration will happen as that deterioration is already happening, and this is a point I don't really think I need to argue.

Now as regards the second point, I could find survivalist resources galore; if I had more oomph to my opinion, I would have dug much deeper into the copious literature on how to care for one's material needs if civilization abruptly fell apart on a particular day.

But the third point, the interesting one, is the one I had the most trouble about. It seemed obvious to me that if the grid were to go black, if all normal societal and social patterns were completely disrupted, then we would have other problems besides how much food we had in store and how ready we were to defend our resources. One friend of mine has worked on spiritual retreats for people at the bottom of the totem pole economically socially, recognizing correctly that not only do the people at the bottom of the totem pole benefit from having something in their belly and shelter from the elements, but they could benefit from a spiritual retreat for the same basic reasons middle class people would benefit from a spiritual retreat. And I deeply respect the humanness of that observation. And I asked and poked about psychological and spiritual resources for people surviving disasters, and this point was not one that survivalists seemed to have thought through. The most of a response I could get was, "Buy plenty of condoms and stock up on board games."

I broadened my search, seeing if I could find clues anywhere else, and in fact there were clues. People who had been taken hostage by terrorists for years had established a rhythm of spiritual discipline, and this "treasure from Heaven" fed their spirits in terrible situations. People who survived Nazi and [Marxist concentration camps](#) had a spiritual fire already burning. And the core of this fire is found in the Sermon on the Mount.

Therefore whosoever heareth these sayings of mine, and doeth them, I will liken him unto a wise man, which built his house upon a rock: And the rain descended, and the floods came, and the winds blew, and beat upon that house; and it fell not: for it was founded upon a rock. And every one that heareth these sayings of mine, and doeth them not, shall be likened unto a foolish man, which built his house upon the sand: And the rain descended, and the floods came, and the winds blew, and beat upon that house; and it fell: and great was the fall of it.

What is the "flood"? Cancer, adultery, divorce, depression, being a hostage of terrorists or a prisoner of Nazis or [Marxists in concentration camps](#): all of these things are storm and flood. That some flood will come is completely non-negotiable. Whether we build on rock or sand is up to us, and as a martial arts instructor said, "The way you practice is the way you will fight:" if you are slow or half-hearted in spiritual disciplines now, you will arrive with disaster on half-baked preparation, whereas if you take to heart the words, "The more you bleed in the dojo, the less you'll bleed on the street," you will come to the disaster as one who has already bled, as someone who is ready for the fight.

There are resources on spiritual struggle that go into more detail than this: The Philokalia immediately springs to mind. But there is no text so central as the Sermon on the Mount.

# Musings

Sunday, 8/13/00

It has been a while since I journalled. I kept some journals after my [Journal of an Awakening](#), but they disappeared when my previous laptop died. I am not sure this is a bad thing; I don't think that what I said in them was on par with my [Journal of an Awakening](#), and certainly not stellar. It is not my talent to be able to continue to produce good writing in a genre of my choosing; writing in a new genre has often been easier than writing in one I have practice in. Or, to put it differently, my writings come to me with the genres they will be in, and if I try to force success in a style that has succeeded for me in the past, I may cause the style, but I will not always cause a successful writing.

Now writing is coming to me — or has been coming to me, I haven't gotten it written down yet, and I fear I may have lost some of it — so it is time for me to get back to journalling, not necessarily on a day by day basis, but when the muse strikes. Tonight will be my first night in my new 1 bedroom apartment, and I will have more time — though I do not know what, or how much, will come to me.

The thing that has brought me back to journalling is as follows:

Last schoolyear, I spoke with a mystic who is a student at Pooh's Corner (the group of people at Wheaton who meets to read children's books aloud), and I talked about how I identify with Charles Wallace in Madeleine l'Engle's *A Wind in the Door*, and Michael Valentine Smith in Robert A. Heinlein's *Stranger in a Strange Land*. I asked him if he knew of any other characters like that. He suggested that I read Steven Lawhead's *Merlin*, where Merlin is portrayed as the last of the Druids, a Christian who has grown up with Druid lore, a mystic, and a politically active prophet. I was disappointed — I had been disappointed at his placement of Merlin with Moses and Elijah as political/leader/prophet/mystic types, because the character of Merlin reeks of magic, a reek that has as little to do with Christian mysticism as astrology does with astronomy. I did not mention this to him, because I did not want to enter a fruitless argument (I have had enough of those to last a lifetime), but I was disappointed.

Recently, wanting to read something that would give me insights into medieval culture (and having learned from another friend that Lawhead did historical research before writing), I checked *Merlin* out at the library, read partway through, and returned it after reading the scene in which Merlin makes the stones fly around in a circle. This was a display of pagan magic, not a Christian miracle, and I read it with a feeling of defilement.

I later waited and picked up the book again, reading it to the end. There were passages that I did not read in good conscience. There were other passages that grabbed me. As I began writing this journal entry, I realized — or, more properly, remembered — something. When I first read *Stranger*, I hated it — I saw its lewdness, its anti-Christian invective, its introduction of psychic

powers in a context that (at least to begin) seemed as out of place, *deus ex machina*, as anything I could think of — and none of its strengths. I was going to say that I didn't know if I was going to read Merlin again, but then I reflected on my actions in the past and how my emotions flow, and I realized that I will probably read Merlin again, but not now. God willing, the time of rereading will be when I know in my heart that God has given me the strength to be ready to read it without being troubled by the parts that defiled my conscience — and God has given me the strength to read Stranger — I was not polluted by it, merely angered.

What about Merlin pulls me, that I am writing about it now? I had that more clearly in my mind a few days ago, when I was thinking, walking about at a classic car show with my parents and one of my brothers, but there are three things:

- Ynes Avalach. Ynes Avalach is the island (Ynes) castle of the Fisher King (Avalach), the wounded king who sat on a boat on his island and speared fish. It was the place of Merlin's childhood, the place where he grew up, and in a world of shifting sands it was steady — even unchanged, a piece of another world.

Ynes Avalach resonates with me; it is a symbol of Heaven, and a place that I believe can be found on earth — but that we can never control. C.S. Lewis wrote about this sort of thing in his introduction to *The Great Divorce*, saying that Heaven is everywhere, but not everywhere is Heaven. I have a great longing for home, a place like Ynes Avalach; the two areas where I most consistently experience it are worship, and in writing and the expectant time when I feel out what I want to write.

- The bard's awen. The awen is an aroused, mystical state that descends on a bard; Merlin felt it when he was close to the supernatural. Two of the times listed, he was fighting in battle and, suddenly, the world around him seemed to slow down, so that he moved rapidly and lightly amongst the sluggish invaders. Other times, it came around a miracle. The awen is also something that resonates with me. A similar state has descended on me, too, at times. It is not something that I can turn on at will, but walking has often been a precursor to its minor modes in writing.
- When Merlin was with the fhain (the people whom other races called the baen sidhe (fairies)), he spoke of learning "that which men call magic". I realized (partly after reading the "How to Become a Hacker" document) that I have picked up along the way a number of skills that are in our world something like magic — I thought most specifically of being able to make web pages.

I also realized that many of the things that are supporting me now are things that I picked up along the way in activities I was discouraged from as distractions from my work. I learned how to program when I wrote [The Minstrel's Song](#) — and it has profited me far more than additional effort on coursework would have.

My writings on my web page are also things I have been discouraged from doing, and in them I believe I am accomplishing far more of lasting value there than in my job. Life is what happens when you are making other plans.

Monday, 8/14/00

There was something else nagging at the back of my mind yesterday, that I wanted to remember, but couldn't. It was the other point that motivated me to want to write in this journal.

On Saturday, my family went out to eat at a nice Italian restaurant. We were all under-dressed and over-smelly from a day's hard work, and I was unshaven. I needed to go to the restroom in the beginning, and (after I washed my hands) I turned to find a towel dispenser to dry my hands. There was a smiling black man in a tuxedo (sans jacket), holding a roll of paper towel, and standing next to a rack of amenities (I remember seeing small cigars, and other things that looked expensive); he was complimenting me on my "PRAY HARD" T-shirt.

I was only marginally able to keep my composure then; I wouldn't have been bothered that much by just having someone to hand me paper towel, but having a black man do it... I was not comfortable. It was patently offensive to me. It felt like having a slave. Semiotically, everything about him said, "I am here to smile and adore you, but I am only here to be treated like part of the wallpaper, to be treated like dirt if you are in a bad mood."

He looked like support staff under the mentality that makes jokes like, "Confucius say, 'Secretary not part of furniture until screwed on desk.'" During dinner, I thought of reading about Gandhi as he was in danger and a rickshaw (a man-pulled cart which aged and wore terribly at its carriers) was offered to him... my feelings were lesser, but they were of the same kind.

After dinner I needed to go to the bathroom and it wasn't

After dinner, I needed to go to the bathroom, and it wasn't until I was almost there that I remembered he was there... I had enough time using the facilities to decide that, if I could not avoid him, I could at least treat him as a peer, not as part of the furniture. So I talked with him, treating him as cordially as he treated me, and he told me that he was a Jew who grew up Baptist, but had never been to a synagogue. He asked me if I was a minister.

I think I missed a witnessing opportunity. The one person I spoke with about it thought I was being too hard on myself — I was tired and in a hurry — but there was an opportunity I missed to speak with someone who had some questions, and who was probably ready to move one step closer to the Kingdom of Light.

I have grown up in an academic context which tells us that witnessing is offensive and evil (at least when done by Christians — when done by environmentalists, it is treated differently). Sometimes it is even necessary to be offensive. But there are also many times when witness is not necessarily offensive, when it is welcome.

I think our equation of witnessing with offensiveness and disrespect for persons should be jettisoned.

8/28/00

I have been thinking recently about the origins of the word 'obscene'. Ob-scene material is material that takes place off-scene.

As the word has developed, it has come to mean "material which should not be portrayed because it is highly inappropriate to portray." (The meaning has narrowed further to mean "inappropriate sexual content". I have not heard any contemporary usage having 'obscene' refer to violent content — probably stemming from the same reason as why there are innumerable films rated X due to sexual content, but almost none rated X due to violent content — the mentality that, in the words of one Christianity Today article, "finds massaging a breast to be more offensive than cutting it off." Dorothy Sayers' essay "The Other Six Deadly Sins" speaks powerfully to this problem.)

The word 'obscene' means "inappropriate content" to us, but placing material off-scene can serve other literary purposes.

Done the right way, off-scene presentation can be more powerful than on-scene presentation. In [Calvin and Hobbes](#), there are references to "the noodle incident", which is never described. Watterson said that he believed it would be better if left to the reader's imagination. For related but subtly different reasons, I am intentionally not specifying small but

significant facets of my second novel — Aed's academic discipline is never explicitly stated.

Giving just enough hints to fuel the imagination can be a powerful alternative to explicit portrayal.

**9/23/00**

There is a musing which I had some time ago, and never recorded.

When I was a TA in UIUC's math department, during orientation, Prof. Weichsel told us, if we had to do something unpopular, to say, "It's department policy," and that he would be the complaints department for us, as well as a resource for questions and problems that came up.

I never said that an unpopular decision was department policy, but there was something that struck me about this, a sense of "You are supported in your good faith efforts." He might suggest a different way of handling a situation if it came up in the future, but he would support us in our efforts.

I believe some of the same beauty is true of God. In terms of dealing with moral dilemmas, I have come to believe that a Christian who listens to the Spirit and makes a good faith effort to do right in a moral dilemma doesn't have to succeed in guessing the right course of action — even if he makes a mistake in judgment, his action is holy, supported by God. There is a story — first mentioned to me, by the way, in a discussion with a Christian who believes in a just war — about one of Corrie ten Boom's family, sheltering Jews when a Nazi soldier came and asked, "Are you hiding any Jews?" She told the truth: "Yes. They're hiding under the table." The Nazis didn't believe her.

They went on their way.

From the other side, there was a Christian couple, the wife pregnant and grievously ill. The doctors told her, "You cannot live and carry this child. You're going to have to have an abortion."

After great prayer and deliberation, they decided to have the child removed from their womb and an attempt made to save his life. The child lived, and is a blessing to those who come into contact with him.

If I were asked, I would have advised both to choose differently. (At least a possibility in the first case, with my mind changing over time, and a certainty in the second case. I have heard of hard cases where not having an abortion would have been very difficult. I have not heard of a case where I would have approved of an abortion, and one person I have known was born out of one of those very hard cases.) Perhaps I am right, perhaps I am wrong; I am not raising these cases to stand in judgment over my fellow believers. The reason I am raising these cases is to say that God supported the believers in their choice.

This is not an occasion for license to do anything and say "God will support me" — in both cases, people were seeking to do God's will; it is necessary to seek out a knowledge of the right action through prayer and the Spirit — but it does mean that we are not going to land in trouble because there was a legitimate debate among believers, and we came down on one side of it, and God came down on another. (And — who knows? Maybe the lines of morality fall differently than any human system; maybe God led and specifically wanted Miss ten Boom to tell the truth about whether she was sheltering Jews, and specifically wanted Dietrich Bonhoeffer to try to assassinate Hitler. I don't know if that is true, but it seems on a surface view to be consistent with how God works.)

Existentialism portrays a picture where we are orphans, who must make any, arbitrary choice because we are abandoned and without guidance. The place I was at for a while, where I believed you had to choose the right thing, believed there was a right choice, but saw us as in a sense abandoned in trying to pick out that choice. It had a ring of existentialism. This is, I believe, removes another layer of existentialism: there is a right choice, but God supports us in our efforts to pursue that choice; we are not abandoned in picking out the right. We are God's children.  
We are supported.

**9/29/00**

After having a rough end of week, I was warmed by one part in particular of a conversation with my friend Heather. She and her boyfriend Josh had independently worked out an idea, which I will briefly summarize here as contrasting a Hellenistic mindset (thinking logically and constructing systems which men can piece together logically — and having difficulty with sets of statements that the thinker cannot reconcile) with a Hebraic mindset (believing that God is sovereign and accepting his sovereignty in a way that is open to paradox — and therefore not needing to fall into e.g. Calvinist/Arminian camps). (Josh wants to do a Ph.D. thesis about this, and Heather wants to write a book together, and Josh wants to have the book wait until the thesis is done — therefore I do not wish to explore details about their idea, which I think is an excellent discovery worthy of development and sharing, at this point.)

When Heather and I were walking, she commented to me that she had realized that talking with me about that idea and about the Hebraic mindset was like talking with a fish about water. I felt very warmed by that comment; it seemed to me a marker of a kind of spiritual success. It seemed to me a sign that I had become steeped in the Scriptures and Christian ways of thought.

There was a classic poster I saw at Wheaton's Computing Services on how to become a Unix wizard. It had, catechism

style, questions of "How many kernels do I have to build?" and "Which books do I have to read?" The last question was, "How can I know when I have become a wizard?" The answer to it was, "Never mind that. Keep on toiling, and some day you will look back and realize the mantle of wizardhood has been on your shoulders since you knew not when." I had not exactly the same experience; the image describes if anything more than I really experienced, but one of similar poetic resonance; I was down, and a comment like that was a pleasant surprise. Thinking Christianly means a great deal to me, and I believe that comment was a part of God's ministrations of grace to me that day.

**9/26/00**

I have been thinking about a distinction for the past couple of days, between what might be termed explicit and implicit, or perhaps strong and weak, awareness. When someone says something that you knew beforehand but didn't have the words to say, that is a transition from implicit or weak awareness to explicit or strong awareness. When you sense something but can't quite put your finger on what, that is implicit awareness.

There are at least two levels of explicit awareness, and two levels of implicit awareness (although they are not in parallel — the difference between levels of implicit awareness is not the same kind of thing as the difference between levels of explicit awareness). The second level of explicit awareness is the one hinted at so far — when an implicit awareness is made explicit. There is also a first level of explicit awareness, where there is explicit expression without implicit awareness. This is what you have when you read a book but don't yet know what it means, when the material has not been digested. The first level of implicit awareness, on the other hand, is what I have hinted at; the second level of implicit awareness lies beyond implicit awareness.

As to what that means — in a certain sense, I don't see through the Hebraic mindset as Josh articulated it, and I don't believe in the seven virtues or the seven deadly sins. I believe

that all of the seven deadly sins are sins, and that the seven virtues are virtues, and I accept a great deal of what is said about them, but I don't think in terms of the lists. You might say that I believe the list of the seven deadly sins, and the list of the seven virtues, are structured mnemonics that let people see a deeper structure, and I believe in the deeper structure, but not the superficial list. Or, another way of putting it would be, the lists of seven deadly sins and seven virtues are organizing lines drawn over a map, and I know the terrain and believe that it has structure, but I believe that the lines drawn (for the most part — not, for instance, the lines between land and water) are at least partially mnemonics, and not purely statements about the terrain. Lao Tze began the Tao Te Ching by saying, "The name that can be named is not the ultimate name," (other translations being possible), and I believe that the deepest levels of awareness are beyond what one can say in words and mental structure. This is not true of God — he can express himself in a Word quite well — but, in the things they know most, such as their cultures, humans are terrible at explanation precisely because they know them too intimately to express them well. TAs are often better teachers than their professors, because they learned the material recently, and are more easily able to recall an explicit form like the way they learned.

Someone can see an explicit awareness instead of seeing through it to a second level implicit awareness. When Heather and Josh presented their thoughts on the Hebraic mindset, I saw the explicit portion — the lines drawn on the map... I think it was an explicit explanation of something I knew implicitly on the second level.

At least that's a rough sketch; someone who saw my point might not subscribe to a number of particulars. There is a link

between the first and second levels of implicit awareness, a continuum perhaps; tighter, at any rate, than between the levels of explicit awareness. Self-consciousness I associate with the second level of explicit awareness; the transition from the first level of implicit awareness to the second level of explicit awareness to the second level of implicit awareness is like the transition from simplicity to complexity to simplicity on the other side of complexity, or (in [Unashamed](#)) Abby's transition from a free lack of self-consciousness to self-consciousness to an ease on the other side of self-consciousness.

At any rate, this insight could be applied to itself, or more properly to my expression of it; I spend a lot of time taking implicit awareness and making it explicit.

It seems a danger of writing that, when you draw lines to illustrate features of the terrain, readers will take the lines and forget the shape of the terrain.

**9/27/00**

The above distinction might be helpful in refuting the teaching that the real test of whether you understand a matter is whether you can explain it well to a layperson — the implication being that, unless you can do so, you don't really understand what you're talking about. One would never tell a sniper that, unless he can convey his skill in five minutes, it doesn't count that he can hit shell casings from across a football field.

---

Socrates said that the unexamined life is not worth living. Life is worth living, intrinsically because of how God created it, but it bespeaks examination highly that Socrates would say that without it, life is not worth living.

What are the other things that a person could love so much as to say, at least poetically, that without it life is not worth living? I put that imperfectly; I could only honestly say "An unexamined life is not worth living," if I were speaking poetically, but I believe that Socrates was speaking quite literally when he made that comment; the difference stems partly from different views of what the basic value of human life is.

I should also like to nuance this by mentioning an old distinction between "Good for all people" and "Good for me." People make an error by going from a realization (true) that something has been highly beneficial to them, to a conclusion (false) that that something would be highly beneficial for everybody. Communion with God is good for anybody, but many spiritual practices are tremendous channels of grace through which God has blessed some people, without being beneficial for everyone. In the list, I will list things which have enough goodness that a poet could say that without it, life is not worth living. Some of these things I will list will be good for all people, and others of them will be good for some people, but not others; I will not distinguish between them.

What are some blessings of which a person who grew in them might say, "Without this, life is not worth living?" I can think of the following:

- Worship/communion with God/glorifying him/enjoying him forever

- Marriage
- Family
- Friendship
- Honor
- Kything
- The aesthetic: art, music, dance, literature, mathematics...
- Touch
- Suffering
- Thought
- Rest

The list is neither definitive nor complete; it has fuzzy borders, and some parts of it might be contested. Being a good means in some sense being a deep good, and some of these goods have more in them than we commonly think. (The flipside, which I don't know how to reconcile, is that some goods will deliver more if we do not have massive expectations of them; romance is this way, and C.S. Lewis in *The Four Loves* talks about how appreciation of nature can work this way: a Romantic-style worshipper of nature will be surprised by the beauty of nature less than will a Christian who goes into his garden merely to pray. I think romance is too inflated in our culture; we are to draw our sustenance from a diversity of goods, and (if not romance) I have tried to draw too much sustenance from lesser goods, like putting too much weight on a weak limb.)

**9/28/00**

There was something I thought of in a conversation with Heather that I want to record here. It concerns the sovereignty of God and free will.

The Calvinist-Armenian debate attests to the difficulty we have seeing both at the same time. My present insight is not exactly concerned with that question, or at least not primarily and directly concerned with it, but with the question of guidance, free will, and God's direction for our lives. It concerns how we make decisions. The two major camps on this question are as follows:

- God has a plan for everyone and for every believer's life. When faced with a decision, believers should make the decision by seeking out the Lord's will.
- God has given us free will, and wants us to exercise that free will in the decisions we make. When we are faced with a decision between two good courses of action, God wants us to exercise that freedom in our choices.

It is the time-worn philosopher's trick to say "the two opposing schools are both wrong because of where they both agree: ...", and I was trying to think of a less shopworn way to present where I'm going with this. I won't exactly say "Both schools are wrong because of where they both agree," but I am

going to say "Both schools appear incomplete because of something they both miss." I will leave it to the reader's judgment as to whether I am saying anything different.

What do I think the two camps are missing? When two friends meet, the question of how the meeting will end is not determined a priori. It could be that one of them or the other will have some prior need that says "I have to be somewhere at 3:30," so that that result is fixed at the beginning, but it will often be the case that the friends decide together how long to meet, and that the end time of their gathering is set by the interaction of the two people, so that the question of "Who will end the time together?" may have no fixed answer ahead of time.

The point where I would challenge both camps is that they both seem to believe that the real outcome of a decision boils down to the decision of one fixed party. Either God's sovereignty means that we need to agree with God's one decision in our lives, or our free will means that the decision is ours to make. As an alternative to this, I propose a metaphor of friends meeting: sometimes, God will have a very detailed, specific plan and say "I want you to do this" (Heather pointed out that God is often much more explicit and more likely to use skywriting with young believers), and sometimes, a decision will be left to us, but much of the time, we are invited to partnership, making decisions together with God, in which sovereignty and free will come together, in which seeking out God's will is mingled with responsible exercise of our own free wills.

One might suggest as a description that, instead of saying that the decision is 100% God's and 0% yours, or 0% God's and 100% yours, or even stopping with a compromise that says the decision is 50% God's and 50% yours, a decision instead that is

100% God's and 100% yours, or perhaps 80% God's and 80% yours. God chooses to exercise his sovereignty in a way that respects free will, so that it is possible to submit totally to God (or perhaps I should say, supposing for the sake of argument that we on earth could submit totally to God), and free will still exists and has room to breathe, and that free will, responsibly exercised to its fullest, respects God's sovereignty. The reason I said 80-80 is that there are times when humility before God demands the sacrifice of things that free will has legitimate claim to, and because some people might argue that God lets go of things he has claim to because of people's prayer (but I don't want to discuss here the debate as to whether God ever changes his mind). Beyond that, I believe that the metaphor of friends meeting helps us to see a way in which sovereignty and free will can occupy the same space.

---

Another concept I've been drawing on recently involves some mathematical concepts, concerning what is called a function or a mapping.

A mapping is like a black box, where you put something in and you get something out. An example of a mapping might be the height of a person: for each person, there is a height. On the box analogy, you could put me in the box, and out comes a height of six feet. A telephone directory is an example of another mapping: you put into the box a person's or company's name, and out of it you get a phone number.

There are some cases where a mapping is invertible: it runs backwards. A telephone directory represents an invertible function: it is possible to make a reverse telephone directory, where you start with a phone number, and look up a person's name.

Each function has a domain, of what you can put into the box, and a range of what you can get out of it. The domain of a telephone directory function consists of people and organizations, and the range is telephone numbers. The domain of the height function is the set of people, and the range is the set of heights.

Not all functions are invertible. If a function is not one to one — if more than one input has the same output — then it is ambiguous to say "Give me the thing the function maps to this result," because more than one thing might map to the result. If someone says, "Give me the height of Jonathan Hayward," it is a straightforward thing to measure my height. If, however, someone remembers my height but forgets my name, and says, "Give me the person who is six feet tall," then there is a problem. There are many people who are six feet tall; if you

wanted me and reached out and grabbed the first person you saw who was six feet tall, you would probably not get me. The height function is not invertible.

I was thinking, not exactly of functions, but of a related concept in the connection between thoughts and words. We know that if a thought can be expressed in words, it can probably be expressed in different ways, and that that a given set of words is usually at least slightly ambiguous as to what thoughts will correspond to. However, I am setting these observations aside for the moment, as not relevant to the basic insight, and I would ask the reader to accept (at least for the sake of argument) the assumption that a given wording will produce a single interpretation in the reader's mind.

What I saw is this: Say that there are two functions: the function mapping ideas to wordings, and the function mapping wordings to ideas. The first function happens when a person has an idea, thinks about how to explain it, and writes it down; the second function happens when a person reads and gets ideas from it. Then these functions are not each other's inverses, and furthermore there might be no way to express a given idea in such a way that the reader's interpretation is what the writer intended, or (to put it differently) the most faithful expression of an idea may necessarily give rise in the reader's mind to something else. The process might go on like this: One person (writer) thinks of a person and writes down his height. Another person (reader) takes the text and picks out the first person he sees who has the height, and thinks, "This is the person who has been written about." There are many times and places where it works — perhaps a better analogy would be to say that the writer thinks of a person and writes down his first name, and the

reader finds calls out the name and talks with the first person to answer. It works quite well, as long as you don't have two people going by the same name. Get two Robins in the room, however, and things might be more difficult. If my friend David wants to talk about his roommate, he will say 'Robin', at which point I will probably think of my best friend (and his friend, too) Robin.

The first time I observed a phenomenon, or a realization, like this, was a couple of years ago. At the time, I believed in a sort of theistic evolution, and I started to write a story about a world, beginning with its creation. I envisioned that world as having been created by a theistic evolutionary process; when I thought about how to effectively describe it, I could only do it in poetry, and for that matter poetry further on a literal reading from a scientific view of the processes than the *Genesis* accounts are from a picture of evolution. In thinking about an idea — of *God* creating life through aeons and "chance" and natural forces — the best way I could think of to explain it was one that would have (on a literal level) give rise to something other than what I thought. This gave rise to the following insight:

Imagine two scenarios. In the first scenario, *God* creates the world in six days, about six thousand years in the past, as literally described in *Genesis I*. What is the best way to describe it? The text we have now.

In the second scenario, *God* shapes the world over billions of years through natural forces and a subtle but powerful influence over quantum phenomena — "chance". What is the best way to describe it, with all of its majesty, glory, and wonder? Well, when I tried to do that in good faith, I came up with a far less literal account than the *Genesis* account. So probably, something like the text that we have now.

What this means is that the six day creation account is not as informative as it would appear at first glance in our understanding. From one perspective, a direct, naive reading of the text (and, connotations notwithstanding, naivete is often a good thing in reading a text), leads most naturally to a six day creation account, but, with this insight in consideration, the question of "How would you change the text if you were to make it reflect a theistic evolutionary perspective?" meets with an answer of "Not much."

There is something that wants to keep me from settling there; I think it has something to do with crediting a naive understanding and believing that this philosophy does not give us a privileged understanding of the text. In the same way that I believe it misportrays the text to believe it is fundamentally about the scientific details of origins, I believe it grossly misportrays reading of the text to wield such an insight as a weapon against naive readings — God has hidden things from philosophers and shown them to children who have read a text naively. The person who reads a text naively profits from it far more than a genius with a thousand insights better than mine, who is too sophisticated to open himself to the straightforward meaning a child of ten would learn.

This is somewhat of a tangent; I meant it mainly as an example. The direction I was driving towards was to say that we have something to learn from computer tape drives, which often (after writing some information out) immediately read it back to see if what's coming back from the tape is the same thing as what is supposed to have been written on it. I came with this basic insight when I was trying to think of how to express an insight I've now forgotten, and came to the realization that there was no way (so far as I could tell) for me to explain it so

that a natural reading would give another person the thought I had meant to express: every way I could think of to express it, meant something else on a natural reading.

There are two directions in which this can be taken. One is, in communication, to ask "Is this idea expressible in the sense that it is what a person will think of on naively reading my text?" — and, if you go off the beaten path like I do, the answer may well occasionally be 'no,' or (what may be hoped) provide an adjustment for your words to let the reader know that you don't mean the obvious interpretation. The other is, in talking with others, to ask, "What intended meanings, other than the obvious one, could have been meant when so-and-so said X?" Both might cut down on miscommunication.

**9/30/00**

Yesterday night I went to a square dance, and then hung out with some friends and some new acquaintances. I had some thoughts, the last of which I wish to elaborate here.

I was thinking about a similarity between dance and martial arts, both as kinds of kything, and then... connected. Not intensely, but in a relaxed manner. I was in a newer sense able to be at peace with not being in the bard's awen — enjoying the ordinary as just the ordinary. I was thinking in part about how, in Kuk Sool, I was comfortable bowing to the instructor and other students, but not to the picture of the Kuk Sa Bo Nim (grandmaster), because bowing is to me an act so close to worship that it is fitting to bestow on a man but not anything lesser. And then —

The major debates are over an issue of substance. The Calvinist-Arminian debate exists not only because the Scriptures reflect a mystery not easily captured in models, but also because the question of how the sovereignty of God relates to free will is a big enough question to hold a debate over. Both sides know it's important; that's why there are two sides engaged in the discussion. The question of the relationship of faith and works is another area which is debated because both sides recognize it to be a matter of importance. (On that point, I regard it as beautiful and fitting that *The Cost of Discipleship*, one of the

20th century's greatest books about works, was written by the Lutheran Dietrich Bonhoeffer, and that *The Ragamuffin Gospel*, perhaps a lesser work, but none the less a powerful inspirational classic about grace, was written by the Catholic Brennan Manning.)

Along these lines, I think that the question of whether or not men may be called gods concerns a big enough matter that it is surprising it is not a matter of debate. There is a terrible truth, a deep magic (to borrow a Narnian image) that we are not gods, that it is blasphemy to arrogate to ourselves the title of divinity.

There is a more terrible truth, a deeper magic, that we are not only gods but more than gods, and that we shall become greater still than we are now. If you take and compare a weak believer — an alcoholic living on the street, someone who doesn't go to church because he feels ashamed to be there, but who loves Jesus, whose eyes will tear up if you begin talking with him about Jesus — and compare him with the beings the Norsemen or the Greeks worshipped as God, the failing, weak, marginal believer is to me more majestic and more worthy of worship. In him is the Holy Spirit; in him is submission to the will of God; in him is in a sense something deeper than virtue, important as virtue may be.

It is not just the Marines of the Army of God — those glowing saints whom we read about, and think we can never measure up to — who are godlike. It is, in a catholic sense, every man and woman of God, those whose faith is far weaker than ours as well as those whose faith is far stronger, who is a god and (invisibly to eyes this side of Heaven, usually) is wrapped in a glory that paganism never thought to give to its gods and goddesses.

I cannot in good conscience give the Sanskrit greeting *Namaste*, "I bow to the divine spirit in you." We are not God, and we fall into trouble to think that we are — and yet the

Scriptures contain so many things that I would think blasphemous if they were found in any other source. We are made in the image, likeness, and glory of God. We are invited to be his sons and daughters. We will judge angels. We are invited (Ephesians 6:11-17) to enter spiritual warfare wearing, among other things, the breastplate of righteousness and the helmet of salvation — that is, the armor worn by God (Isaiah 59:17). We have been chosen to share in the divine nature.

I believe C.S. Lewis addresses this basic insight in *The Weight of Glory*, although I haven't read it recently. Each person is on the way to becoming either a being a godlike creature whom, if you saw now, you would be sorely tempted to worship, or else a horror such as you never encountered in your worst nightmares. Lewis wasn't sure whether a person should think as much as possible about his own glory, but it can scarcely hurt to think as much as possible about his neighbor's glory.

Worship is the supreme love reserved to God alone, but man as the image of God may be given a second love that is the image of worship.

This area is addressed more fully in [A Dream of Light](#).

**10/5/00**

It often happens that people's beliefs concerning a question can be placed along a continuum. One example of this may be the question of who may legitimately be addressed as "Father," in light of Jesus' words about "Call no one on earth your father" etc. People wishing to persuade you to shift in their direction may point out an extreme position in the opposite direction as a means of softening you up to slide away from that extreme — such as when a Catholic, after talking about hyperbole, asks what you are going to call your literal father. After reacting to the extreme pointed out — and realizing that you do legitimately call your earthly father 'Father' — the natural tendency is to slide a couple of notches closer to the position being advocated, namely "It is OK to address ecclesiastical authorities as 'Father'." That is a temptation to be resisted. It is in some sense true that "no one on earth" does not refer to one's earthly father, but even hyperbole is a means of emphasizing something important — and it is difficult to me at least to believe that the obvious exceptions to "no one on earth" include all pastors. The context speaks directly about what ecclesiastical authorities may be called — if ecclesiastical authorities are included among obvious exceptions, it is hard to tell exactly what the point of saying that was. Perhaps Jesus was exaggerating, but what important point was he exaggerating, if the exceptions include the most

direct and obvious point of application?

Reacting an extreme position is often a stepping stone to an unnecessary shift. Reacting the position of "Do not even call your earthly father 'Father'" softens people up to say "I guess Jesus didn't really mean absolutely no one when he said 'Call no one on earth your father'," and mean by it, "When Jesus said 'Call no one on earth your father,' he wasn't referring to ecclesiastical authorities."

---

The story of the boy who cried wolf has something to do with warnings and legal contracts.

Implicit in a warning message is a claim of "This message says something important and non-obvious about a real danger to sensible use." After reading a certain number of warnings and finding them superfluous, people's trust has been violated. They don't believe warnings are worth reading. And they aren't — usually.

An analogous, but related principle seems to apply in legal contracts. When you have to agree to a license agreement to download free software, and there are several pages of legalese — like the warning, the contract has lost fair claim to be read by the person signing it.

---

"A cheap car is rare. That which is rare is expensive. A cheap car is expensive." There are limitations on what can be done by taking reasonable-sounding propositions and working from them logically. The proposition can be basically true — and lead, through a logical argument, to a false conclusion. (I know of at least one person who does not engage in philosophical speculation because of this.) This is not always true — there are cases where logical development from given statements can bring forth highly accurate contents — but care must be taken in logical development from approximate wordings. Sometimes it is hard to tell when words mean something approximately, and when they mean something exactly. In exegesis, I wonder if at least some of our debates stem from reading as exact words which were meant to be read approximately — perhaps partially because it is easy to equate taking a text seriously with reading it exactly — and so we go to as approximate of a reading as we need to to satisfy some texts, but have debates because we can only give certain other texts a literal reading.

On the note of exegesis, I wish to also record that it is bad practice to take some convenient set of Bible verses, those whose literal construal leads most easily to your position, and magnify them along the lines that lead to your position, and then explain away those verses which are problematic to your interpretation. God inspired and meant one as much as another; it is better to say, "I don't understand how it all fits together," or "Such-and-such is as much sense as I can make out of it," than to magnify some verses and raze others. There is a certain bad odor — of contrived explanations, of explaining things away — that is free of logical contradiction, but which signals the

presence of bad exegesis. It's kind of like an announcement of a stunning new discovery that shatters old theological dogmas (as in the beginning of Jesus de Montreal) — even before logical eyes can see exactly what is wrong here, an experienced nose can smell that something is awry.

**10/9/00**

The past few days have been a fertile time for musings. I can't remember everything that I thought, but there is one that I have been thinking about that I do wish to write down.

The best way I see to introduce it is by asking if TCKs (third culture kids — to oversimplify, people who have grown up with substantial exposure to multiple cultures, where their parents' culture was different from the culture of the surrounding people) have a culture, and giving a provocative answer of "No, at least not in the sense that most of the world's people have a culture." The world's majority, people who have one culture, have a space for culture, and TCKs also have that space, and also have something in that space, but that something is not a culture.

I'm hesitant to give a definition of culture, because definitions are finite and tend to take a life of their own, but one facet of culture is that it is something shared by a community, and shaped by that community, rising out of it. There is something that TCKs share, even a TCK community of sorts, but TCKs did not come to what they had by being immersed in it as a culture when they grew up. What they have in place of a culture may draw on two or more cultures, but it is not itself a culture.

I was trying to think of what to call this genus of which culture is a species, these things that can occupy the space

which is in most people occupied by a culture, and I came across a couple of terms which are conceptually related but not identical to it: worldview and personality, as well as metaculture (a concept which I do not wish to describe in detail here, beyond saying that where a person in culture fits into and naturally breathes a culture, a person in metaculture is able to shift and move between cultures, and does not occupy a culture in the same way — is never in a culture so completely as to not see how else it could be), are related, but not the same. Without having a name, I would like to summarize the concept by saying that culture is a species of the genus of things which occupy the space normally occupied by culture.

Being a TCK can provide a person with something else in the place of a culture; so can exceptional intelligence, and possibly some of mental illness/neurological disorders. I think there are other kinds of differences capable of causing this as well; mental illness is relatively well-documented as a kind of difference that has a significant darkside; differences that do not have significant darksides would not seem to draw the same exploration as differences that cause significant problems for the people that bear them. What I realized is that I have something else in the place of a culture. I thought about writing a document about what that something else is, but am waiting on that for now, until some intuitions are more clear.

One question which may be useful as a rule of thumb for whether a person has a culture or something else in that place is, "When he changes something in the culture, does he change from within or change from without?" in a sense related to the distinction introduced by C.S. Lewis in *The Abolition of Man*.

There is a difference between the person who uses materials inside the box to fumblingly try to think outside the box, and the

person who uses materials outside the box to fumblingly try to  
think inside the box.

---

One logician I've read was arguing for game theoretical semantics, where a statement under examination is considered to represent a game, and one player is the Verifier, and the other is the Falsifier. The statement is considered to be true if the Verifier has a winning strategy, and False if the Falsifier has a winning strategy. It is possible for a game not to have a winning strategy on either side, and the logician argued from this that there may therefore be statements which are neither true nor false. (This struck me as an example of bad logic — you have a terrain and a standard map, and you suggest using another map, and point out that the second map has a property which the first map did not, concluding that the terrain might have the property indicated on the second map.) If one pursued those lines, though, the definition of a game can be loosened so that a game can at least potentially be won by both parties. This would correspond to games which (in some instances) could have a winning strategy for both Verifier and Falsifier, and statements which were neither true nor false. "This statement is false" could be the canonical simple example of a game which had neither a winning strategy for Verifier nor a winning strategy for Falsifier (a statement which is neither true nor false), and "This statement is true" the example of a statement which has winning strategies for both Verifier and Falsifier (a statement which is both true and false).

---

Christianity is a broad thing; individual believers may own the whole, but they live in a niche. Celibacy and married life both belong to all believers, but a believer will inhabit only one of those possibilities. This phenomenon (another instance is different spiritual gifts — no gift is common to all believers) is a part of what is meant by catholicity — the whole faith is to be believed by all believers, even though not every detail will come to play in every believer's life. It is like a culture — it takes a village to transmit a culture, because a culture belongs to all its members, but it is larger than any single member's role in it.

**10/10/00**

Different kinds of writing have, in a sense, different ways of being true. A metaphor embodies or fails to embody truth along somewhat different lines from a literal statement.

Fiction, I believe, can be true or false, even though we do not speak of it much in that way. For a work of fiction to be true does not mean that the events literally happened, but... Fiction presents a world-view, and says that things happen a certain way.

The truth or falsity of fiction is not measured by the literal truth or falsity of what is seen, but the effects it has on the way people see. Action-adventure movies present life as cheap and of little consequence; killing someone is not only permissible, but not that big of a deal and without serious consequences. In so far as that is true, that fiction is false, and it is as false as a report that cigarettes are not addictive and do not pose any serious health threats.

Robert A. Heinlein's *Stranger in a Strange Land* is a curious and powerful mix of truth and falsehood; it is a classic because it is powerfully true in certain ways — the psyche of Michael, especially at the beginning, and the interaction of cultures; perhaps also certain areas of law — but it also lies: the limitless perfectibility of man, a benign nature to promiscuity, a certain arbitrary reshapability to human culture are among its falsehoods.

It is also possible, in this sense, to have false statements

that are literally true. The stories told by the Unman(?) in C.S. Lewis's *Perelandra* to the unfallen, Perelandrian Eve are false even if they are literally true. More to the point, Clinton's electoral stories, television newscasting, or kneejerk conservative tales of welfare abuse are all falsehoods expressed in a way that is literally true. These tales are not only tales of "these details happened", but "this is the way the world works." On the welfare score, the tales of abuse are never tales of just "This abuse happened at this time." The meaning of the tales extends much farther, to "This is how things work. The welfare system is a corrupt system the nature of which is to be taken advantage of by parasites who constitute a massive financial drain on hardworking, honest, overtaxed America, and it is in need of a massive overhaul and massive cutbacks." That is not true.

---

There are a number of arguments in principle that are to be made for pacifism, which I will not mention here. I would like to mention one lesser, prudential, argument before I forget.

If you ask two Christian thinkers — one who believes in a just war, the other of whom is a pacifist — what they believe concerning violence and problem solving, the difference between the answers given is never going to be that the pacifist believes in constructive problem solving and the just war believer believes in killing people to solve problems. The difference will rather be something far closer and more subtle: both believe that man is the image of God, that human life is of infinite value, and that people should learn to solve conflict in ways to avoid violence.

The difference is that the pacifist believes violence is never acceptable, where the just war believer, who would much rather die than be killed, accepts violence as a last resort when all else has failed, and the probable destruction caused by acting in violence is less than the probable destruction caused by any other route. So the difference is not a difference of whether violence or constructive problem solving is better, only a very small difference (among people who agree on the desirability of peaceable living) of what will be done in the last resort after every effort at a peaceable solution has failed.

What I would like to submit is that this picture is distorted. It fairly accurately captures the difference in what people say, but not the difference in what people do. Both the pacifist and the just war believer say that they believe in attempting a peaceful solution in a potentially violent situation, and that peaceful conflict resolution is vastly preferable to violence, but only the pacifist normally makes any serious effort to

understand nonviolent solutions that can prevent violence. In my own experience, only pacifist churches and meetings have given any instruction in how to handle a problem solution so as to prevent violence; when I gave a speech at Wheaton on peace making, not one of the members of the audience believed in a just war. Or, to put it differently, in the whole student body at Wheaton, not one of the just war majority thought it worth an evening's effort to attend a speech on peace making. Or, again, those who cared about peaceful resolution to conflicts consisted exclusively of pacifists, even in a student body where the vast majority believed in a just war.

In the stated just war position, the major thesis of the position is that human life is of infinite value, and that Christians should make dedicated efforts towards the peaceful resolution of problems. It is a minor clause that says that violence may be used as a last resort. I would like to submit that the pacifist keeps more of this position, more faithfully, than does the person who holds a just war position. That is to say, the pacifist not only lives up to the pacifist standards better than the one who believes in a just war; he also lives up to the just war standards better.

Sun Tzu, in *The Art of War*, told the general to cut off all hope of retreat from the troops, so that they are cornered and will either win a battle or die. At first this struck me as very strange: doing so limits options and prevents the troops from fighting another day if they lose. Now, though, I understand that it was a profound psychological insight that put those words in such a timeless classic on military strategy: the troops will fight to the death if cornered; they can't fight that hard if there is a way of retreat.

On a naive model, the question of pacifism vs. just war is a

question that has the same answer for most situations, differing only in that (in a small fraction of situations) the pacifist will either not act or else interpose himself in harm's way, and the just war believer will use force. But the difference is not confined to those situations. There is also the difference that the pacifist is cornered and fights to the death in situations where the just war believer, fighting as hard as he can while still preserving a way out, doesn't — can't — try as hard as the cornered pacifist. And so the body count, if you will, from the two situations, cannot stop after taking into consideration the situation where the pacifist refuses to kill a murderer, resulting in his own death and that of the person the murderer set out to kill; it must also take into consideration the situation where the pacifist averted bloodshed by applying training that the just war believer did not take the effort to find out. If this is so, then even if there are some cases where use of violence will save more lives than it kills, it is still quite possible that overall allowing the option of violence kills more lives than it saves.

This ties in to a question in computer science concerning the use of goto statements, an area where I am trying to think of a nontechnical example, and finding nothing as good.

A goto statement is a part of a computer program that tells the computer to go from one part to another (go to, goto). When I was in gradeschool, I thought goto statements were the best thing since sliced bread. But it's not. One classic computer science paper argued that the free-ranging functionality of the goto statement should be replaced with conditional statements (if A is true, then do B, else do C) and loops (while D is true, do E). This kind of discipline does wonders to control certain kinds of hidden nightmares, and all serious contemporary programming I'm aware of uses conditional statements and loops instead of

gotos for the bedrock of computer programming.

The question arises, "Should programming languages allow goto statements, or not?" The reason the question is not closed is that, every once in a blue moon, a goto is out-and-out the best way to solve a problem. A good programmer never uses gotos as a first approach, and bad programmers will only use gotos in ways that are inappropriate, but once in a blue moon, a situation comes up where a goto will solve the problem better than conditionals and loops. So there is a case for allowing gotos. But many languages have chosen to leave goto statements out of the language's functionality — not because a goto statement is never justified, but because if a goto statement is in a language, programmers will use gotos in cases which hurt program quality. So, in isolated cases, it is uncontested that goto statements are sometimes justified, but overall, it is deemed better to rule out all goto statements, including the ones that are justified, than deal with the effects on the programmer and through programming of leaving the statements in the language.

This question has implications for moral reasoning.

I would not place this argument as my primary argument for pacifism, but I would place it as something to think about — and, perhaps, as an occasion for people who believe in a just war to decide what they believe (not "Is violence ever justified?" but "Is violence undesirable enough that it is worth making a serious investigation into how one can prevent it?"), and live up to what I hope a just war position should be.

---

The concepts of classical and romantic, discussed in *Zen and the Art of Motorcycle Maintenance* (a second rate treatment of first rate issues), was something I originally thought of as "classical is concerned with what is below the surface, while romantic is concerned with the surface," but I wish to revise that. Classical and romantic are both concerned with something behind and beneath the surface, but in different ways.

---

There is a distinction I have thought of between a logical and a practical conclusion. A logical conclusion answers the question, "What comes forth from this idea if a logician takes it and analyzes its implications?" A practical conclusion answers the question, "What comes forth from this idea if a group of people believe this idea and live with it for some time?" The two are related, but different. Sometimes there are things in a practical conclusion that wouldn't be immediately evident to a logician.

My above musing about a prudential case for pacifism could be portrayed as teasing out of differences between the practical conclusions of just war and pacifist teachings.

---

There are at least two ways that a human environment can be hostile — actively and passively.

An actively hostile environment is one in which people are consciously and intentionally hostile to a person or another group of persons. I would take South African apartheid as a paradigm example of this. A passively hostile environment does not necessarily have active hostility, but there are elements in the environment which none the less make it a hostile place. I would take handicap-inaccessible architecture as the paradigm example here.

Active hostility is what is usually thought of in reference to a hostile environment, discrimination, etc. The two other examples I can think of of passive hostility are right-handed technology, and many of the things that make giftedness a burden — an educational system that breaks at both ends of the spectrum.

**10/11/00**

When I wrote the [above](#) material about truth, falsity, and fiction, there was something I realized was not quite on the head. Today I put my finger on it.

Madeleine l'Engle is reported to have said that if an author does not respect his characters' free will, then the story becomes a false story. This, as well as embodiment of a false world view (perhaps moreso), is how a story can be false. Deus ex machina, at least in its bad sense, is a kind of falsity in storytelling.

A large part of the indictment of utilitarian Christian art in Franky Schaeffer's *Addicted to Mediocrity: 20th Century Christians and the Arts* is that it is false art and literature. It brings to mind one interchange I read in a Christian magazine, about the relative merits of Christian and popular music. The argument one person put forth for listening to secular music was that it was better music than the Christian music, and the rebuttal was based on the fact that the Christian music had Christian lyrics. That is to say, the rebuttal to an indictment of musical inferiority was to not argue for the music's quality, or even see it as an issue — the music was only a sugar coating for a doctrinal content of the lyrics. That is a defense and rationale for false music.

Much of the best art and literature stems from efforts at

persuasion; the *Aeneid* and the *Divine Comedy* were both written by poets who wished to prove their languages weren't inferior. The best art is rarely purely for art's sake — but neither is it purely instrumental. Perhaps it comes from the interaction of trying to make good art and trying to serve another purpose. And perhaps the NEA-sponsored exhibits, which are often accused of making a virtue of incomprehensibility, does terrible "art for art's sake", falling into errors that are not possible for someone trying to persuade. But the major error in most of what I have seen is false art that violates the integrity of the artwork in order to do something useful. It kills the goose of art to get all the golden eggs of persuasion — and then bewails the fact that the goose no longer produces golden eggs. It can't. It was killed by its creator.

Bill Watterson's story of refusing to commercialize his comic strip, in a way that he regards as selling out his own creation (recounted, I think, in *The Calvin and Hobbes 10th Anniversary Special*), shows an artist's difficult endeavor to retain the truth of his creation.

---

There was a connection which I made recently...

I have problems owning American culture. My heart is in a sense in Europe; partly in a romantic impression, but also and more substantially in a classical look at (especially) philosophy and other aspects of culture (friendship would probably be another).

What I realized, or remembered, was that I once had difficulty owning Western culture at all. I held some interest in Eastern thought, and resonances between Eastern and Christian thought. Part of this was rebellion, pride, wanting to be different and better than other people. But only part. Another part was recognition of the wreckage of the past 500 years of Western philosophical history — I still think the past 500 years of "progress" are mostly something that would best be erased, done over, and that even though Eastern philosophy (pagan virgin) does not measure up to Christian (married) philosophy, it provides a vastly better starting point, and even working medium, than most of contemporary Western philosophy (apostate divorcée). Another part of my difficulties in identifying with the West was that I had some awareness, albeit an unwitting, unconscious awareness that hit the very large nail not quite on the head, of how different I was from other people. I didn't connect it with intelligence, and I did not have the clarity to put my thinking as "I am a Westerner who is more different from most Westerners than most Easterners are;" I thought of myself as non-Western in a way that roughly meant Eastern (and came to a deep understanding of one Eastern philosophy). The second part of the realization is that I have, by whatever means, come to be at home with being a part of the West. Not like everybody else — not by a long shot — but distinctively

Western. I have not, within the West, settled down to accepting being an American yet, in the sense that it naturally flows from me, but I am able to accept, with pleasure, being Western. And I had a breaking point at a square dance when I was able to look and realize that I was enjoying a distinctively American cultural beauty.

Exactly where in the geographical-historical map of the actual West my heart is, is still a little hard to say. In the West, but not at any literal place of it. Somewhere in Europe, probably France, spread out across a few centuries, with a touch of fantasy. I am using the term 'fantasy' in a poor metaphor because I do not see any better way to explain it, but it calls for some explanation. I do not mean the medieval-impression-plus-magic that is commonly meant by fantasy, nor the psychological sense of an escape into unreality. Rather I mean an "impression" (I mean something like what this word means, only deep rather than shallow), both classical and romantic in character (but more fundamentally classical), of a culture and a world that could be real but does not happen to be. The culture that most readily comes to mind is that of Blajeny in Madeleine l'Engle's *A Wind in the Door*.

A certain element of this does not need to change. There are elements of American culture that I do not think I ever need to embody, and others that I may learn to play as a social game (I identify with the youngest star in Madeleine l'Engle's *A Wrinkle in Time*. She tried to appear human — an eccentric old woman, outside on a terribly stormy night — and quite nearly botched it; the shawl and eating and making sheets look like ghosts was not who she was, was a game she played that did not begin to give even a glimpse of who she really was. This is a picture of an

angel-like being in one sense, but in another sense is a revelation of a real, flesh-and-blood human being out of a human's experience; it is a description not only of angels but of men). There are also a number of elements of American culture that I need to love and own.

There are a couple of things that have happened lately that I am taking as exciting indications that I am beginning to own American culture, and have the discipline to love it even when I do not like it.

---

Halloween is, or at least can be, a revelatory holiday.

By this I mean that it is a holiday that provides a social context for people to reveal themselves to other people in ways that would not normally occur in the usual course of interactions. For many people it's not — the costume doesn't say anything — but for me at least it is. My costumes say something about me.

Christmas is also, in a different way, a revelatory holiday. It is not just a revelatory holiday (such a thought makes me shudder), but it is such. Giving a gift is an act of communication; the gift says something about the person who it is given to, but also about the giver.

What other revelatory holidays could be imagined?

I could see a favorite books day, where people read a passage from their favorite books.

Something to draw on the theme of icebreakers at parties. Icebreakers are embarrassing and humiliating; every one I have examined since I made this basic observation crosses some social boundary and make people uncomfortable. I believe this is for a specific reason; pushing people across an internal boundary disinhibits them and opens the door to getting to know the other people. It takes a jolt to break the ice.

Persona day. People do not dress up in costumes, but (in normal wear) role play other people.

Prohibition day. Some common and basic activity or faculty is verboten for the course of the day. The Church does this with fasts and Lord's day rest. I believe there are prohibitions which would force people to operate differently, but I can't think of any (new ones) off the top of my head.

---

Baudelaire, in *La Morale du Joujou*, talks about how, in children's play and religious artwork, the toy/art represents a reality, which it suggests but does not fully portray. When a little boy takes a small object (perhaps a spool of thread) and moves it about, making sounds, and pretends it is a spaceship, there is no need for a perfectly shaped model of what appears to be a spaceship — and, Baudelaire argues, it is better that way. It is better to have an incomplete portrayal, in which the imperfect vehicle is taken over by imagination to become what it represents, than a perfect and complete portrayal which leaves nothing left for the imagination to do.

In America, unlike many other countries, puppetry is allowed as a children's art form but not taken seriously as a medium for adults — our loss. Some puppetry (euphemistically called 'animatronics' by people who do not want their use of puppetry to be known) is used in movies, albeit puppetry that has so much technical sophistication that it succeeds in appearing to be something else; we do not have puppets that appear as puppets. This is in contrast to the shadow puppet theatre of Malaysia, to take an instance off the top of my head, where there are beautiful but stylized puppets: they are meant to evoke, but not be mistaken for the real thing. Perhaps related to this, all the non-cartoon movies and television I've seen present as close an approximation to (a romantic impression of) a photorealistic image of what happens. There is no case where, as in child's play, people look at an inverted garbage can and agree to make believe it's a robot. When I watched *The Matrix*, after not having seen any movies in a while, I was distracted by the romantic impression; at times I had difficulty seeing through it to the

characters and concepts. (This isn't because the movie was ineffective within its genre; it's because I had begun to lose touch with the medium, but I think there is something in my having lost touch.)

I think it would be an interesting matter to see a good movie in which there was enough to evoke images in the viewer's minds, but not the complete substitute for imagination in detail — a shooting of a plainclothes rehearsal on an empty set. What would the experience be like?

I think that there is probably a link (both from the same source, possibly) between the fact that puppets that look like puppets are accepted by children but not adults (a sign, not of maturity, but of loss of imagination), and the fact that movies do not call on the viewer's imagination. I know that television is criticized for rotting the imagination, but what if there was television that just showed actors on empty sets, with very crude props that suggested the objects they were to refer to?

It wouldn't be watched (see Mander's argument for why television needs technical events and artificial unusuality in order to hold people in *Four Arguments for the Elimination of Television*), but it's an interesting concept. Perhaps it would be interesting to go to pre-dress rehearsals of plays.

On a related but distinct note — all movies I can recall seeing operate on a romantic rather than a classical plane, and attempting to interact with a movie on classical grounds (thinking about the science and technology is one of a number of examples) yields frustration. The science in science fiction movies is meant to be awe inspiring and impressive — not (in my experience) for people to try to understand. It would be interesting to see a classical movie — perhaps a classical movie that just had suggestive sets, costume, and props.

**10/12/00**

The image I used in [A Dream of Light](#) for the curse of Babel was a rainbow being shattered and its pieces being scattered across the sky to become stars. There was a fragmentation and a diminution of language.

I do not think that the New Jerusalem will see an exact reversal of what happened at Babel. I don't think the diversity in languages will be reversed, even to restore the language of the Dawn of Creation. I believe that we will have something deeper — even more than in Eden an instrument of communion and not just communication — something that does not have to pass through the pipe of the senses. And I believe that the diversity of human languages, past, present, and future, will be preserved in that fusion. The observation is made of idiolects, that different people will use language in different ways; different idiolects can still be part of the same language in which people understand each other when speaking. In Heaven, I believe I will speak in a way influenced, foreshadowed by, the languages I have worked with here (with various degrees of proficiency — I speak two languages well, and have dabbled in others), and a way that others will understand.

---

I wrote about fantasy [above](#). I wish to — not quite explain that theme more (I am having difficulty thinking about it clearly enough to say anything significant) — but talk about related material.

Fantasy is in our minds associated with another era; this is not because people invented a forgotten world, a faroff age and invested it with magic, but because people living in a then-contemporary world saw magic operating on their world. The fantastic element was not conceived to be fixed to their time, and the profession of woodcutter in fairy tales was originally as contemporary and as ordinary as a mechanic in our world. This is why, when C.S. Lewis wrote fairy tales for grown-ups (*That Hideous Strength*), he did not give people occupations from yesteryear; he set them in the contemporary world. The same is true of Madeleine l'Engle's *Time quartet*. The fact that 'fantasy' means 'pseudo-medieval' is in some sense a matter of historical accident.

When writing [A Cord of Seven Strands](#), or more properly when thinking before writing it, I was thinking over the question of whether not to write fantasy. I was sure of a contemporary setting, and I did not want magic in the story. What I was debating was a cultural and geographical bifurcation, something that would feel like our world but be different.

It was a related but different sense of 'fantasy' that I meant [above](#). When I am trying to express something, I sometimes see a visual symbol before I can think of words; the visual symbol I saw was two long rays at a very acute angle. Both rays come from the same source. One ray represents the way things actually happened, the real world. The other represents

the fantasy: it is nearly the same in orientation, but it is displaced, and the further you go, the further apart they are. Something similar may be said for Australian, English Canadian, British, and U.S. culture. They are all bifurcated (albeit interacting) lines from the same source, in a sense almost parallel. Complementary to the usual intuition of Britain being on its historical path and the colonies branching off or doing the same thing, it may also be said that these four countries represent alternate historical and cultural developments of the British culture that existed several centuries ago. To someone with a historical sense who had grown up in one of these four contemporary cultures and been transported to another, each provides an answer of "This is how it might have been but is not." The direction of the angle I see is different — not a "This is how it might have been but is not" of historical and cultural development, but of the different feel brought with intelligence, the part of intelligence that is not connoted or implied by the popular understanding of the word 'smart'. That isn't quite it, or perhaps you could say that that is one facet but not all; at any rate, it is the only one I know how to concretely describe.

I was thinking about the direction of Madeleine l'Engle's fantasy — breaking off from our world (though she would not view it that way) in the direction of (some) non-human characters, of kything and under-hearing. I regard it a valuable question to ask how my fantasy would break off. A part of it is in the direction of pseudo-fantasy, material that reads like fantasy while consisting exclusively of events I could believe happened.

Other parts I can't describe.

**10/14/00**

Recently I found out that a person whom I have been talking with (I won't mention his name) was looking at an area of thought in a way that was fundamentally distorted (I won't give the details on that, either). What I regard as significant is that my reply to him was emotional, only partially logically coherent, and probably not nearly as persuasive as most of what I write.

I was thinking about this, in large part because I was disturbed that I hadn't given him a better answer, a better explanation — I was aware that I was explaining things badly as I wrote, but I couldn't do better. It wasn't because this was an obscure question that I knew little about; anything but. The reflection I had coming out of this was analogous to aesthetic distance: if an issue is too far out, then you do not know it well enough to talk about it effectively, then as it moves closer you can start to talk about it, but if it comes too close, then the lack of distance prevents effective discussion. These are some of the things you know best, but you can't start talking about them.

If this is true, this may mean that on the handful of issues that a thinker becomes emotional and incoherent in argument, the incoherence is not because he doesn't know what he is talking about, but because he knows it so intimately that he cannot discuss it effectively — it is when he is least persuasive that he may be voicing something far more important to him than

what lets him be carried away on the wings of eloquence.

## 10/14/00 and subsequent days

There is a classic Reader's Digest in which a married couple, building their dream house, tells their decorator that they want an authentic early American bathroom. The decorator hesitates, and says, "Ok. Exactly how far away from the house do you want it to be?"

It has occurred to me in thinking about that joke that I have been ungrateful to my own era. Perhaps I am in an era that doesn't really have a place for me, but the Middle Ages wouldn't necessarily have had a place for me either, even if my metacultural perspective is spiritually closer to medieval than modern or postmodern. So I would like to list twenty things about my historical-cultural perspective that I appreciate — partly out of discipline and contrition, but also to draw others (especially those who feel the legitimate pull of metaculture and the recognition that other historical-cultural milieux have legitimate and probably richer spiritual climates, who see in modern progress an illusion and are appalled by the literal and figurative 20th century body count) to an appreciation of the good things our climate uniquely holds. This is a bit like [the 100 ways of kything](#) in that I don't know at the outset what all the entries are:

## **Things I like about my historical-cultural placement:**

1. Medical technology. I do not approve of worshipping technology, but it is not worship to note that medical technology has saved my life more than once, and that if I had lived in another era, then (barring supernatural healing) the bone infection I had in my ankle in eighth grade would have killed me, and I wouldn't have produced any of my writings. In a significant sense, my writings are a ministry: the question is not whether I would have produced my writings, diminished, in the theological crampedness of my age, or produced them on the strength of a stronger age; the choice is between my struggling, fighting uphill, swimming upstream to think clearly and produce my writings (perhaps even doing a better job because I could not simply go with the flow), and being dead before I could mature enough to produce any of them.
2. The internet. In previous technological environments (hand copying and then print), the expense and scarcity of writing materials meant that you had, to share writings, to convince someone with scarce resources that your writing was worth the allocation of scarce resources — and, even now, getting a book printed is more a matter of salesmanship than of

writing. (And I am not an expert salesman.) The internet is the first means in history where a person like me can concentrate almost wholly on the quality of his writings and then, almost effortlessly, without any jumping through hoops, make them available worldwide. There is a kind of sharing and connection, community, made possible by the internet that wasn't possible before. Many great writers of the past were discovered posthumously, by accident. The internet provides a place where writing is far less restricted.

3. **IMSA.** The Illinois Mathematics and Science Academy, the magnet school where I went to high school, is a world unto itself. Culturally, and in the way people think, it is one of a few homes to me; the last time I visited campus, there was a shared bond and a rate of connection that affected me as one of those moments that leave you wondering how you could have gotten used to its absence. IMSA has its many flaws, but even with them — it is on the strength of notesfile discussions at IMSA that I learned to write, and if I was able to later read the Bible repeatedly and perform a mental housecleaning to expunge myself of worldview/teachings from IMSA (i.e. the premise that math and science will solve our world's problems), even that mental housecleaning used discipline acquired at IMSA. But IMSA is not to me just the place where I learned to think; it is a place where I met kindred spirits, and (even in its flaws) an Ynes Avalach to me, more of an alma mater than any of the four colleges and universities I attended. I am grateful to my era, and to the state of Illinois and its taxpayers, for letting me have that opportunity.
4. **Computers.** Computers do not need to be an object of

worship or another enhancement to corporate abilities to generate wealth. They can also be seen as a triumph of human culture, and an opportunity for interaction unlike anything any previous aeon has seen. Where else can you interact with a being that can do arithmetic and logic flawlessly but has no intelligence, not even common sense? There is something in interacting with something logical to show you that you are not logical; programming computers provides a new facet to a thinking man's self-understanding.

5. Religious volunteerism. The idea that one belongs to a given religious affiliation because he chooses to belong is, historically speaking, far from universal. There are imperfections — religion as a private choice, religion as something tamed — but they are imperfections in carrying out a great thing.
6. The concept of tolerance. Most readers will know of hypocrisies and imperfections in how this is carried out, the equation of "racist = white", and the problems that have been caused in the name of diversity. I would recall the words, "Hypocrisy is the tribute that vice pays to virtue," and say that the respect for personhood embodied in diversity concerns is a great thing.
7. Breadth/specialization/academia/diversity. In terms of level of specialization, the present world has quite a few niches that wouldn't exist in most other societies. (This is a mixed blessing, but a blessing.) My choice of professions is better now than in most historical-cultural contexts; in a small village, the selection of available professions (even without any cultural restrictions) would probably not have allowed me anything as thought-oriented as I have now.
8. The value given to an individual life. One person's life is held

to be of tremendous value — not just VIPs, but everyone.

This is far from a cultural universal.

9. Creature comforts and good thinking environments. Creature comforts and a special place have a great influence on how well a person is able to perform abstract thought; creature comforts are nice in themselves, but they also allow people to ignore the absence of discomfort and sink into thought.
10. A native language that is lingua franca throughout the world. This is something very few people in world history have enjoyed. There are any number of arguments that have been made about the dark side of American English steamrolling through half the world's linguistic bases, and I don't mean to make light of that — but to speak the language as your native tongue, and never need to learn another, is a rare privilege.
11. Cheap books. Before the printing press, books were hard to come by; a library of sixty books was quite respectable in the Middle Ages. Books have since then become cheaper and easier to make, which means not only that books are easier to acquire, but that a broader selection of material is liable to be printed. True, much of this material is trash, but there is also material that is not trash.
12. Roads and Other Transportation. Roads take a heavy and non-obvious toll; the Amish do not drive cars because it is their considered judgment that the use of cars tends to degrade the community. That stated, roads provide access to people, more diverse acquaintances than one would have in a small village. I consider my job options to be much better than if I had to choose from positions I could walk to — in which case I'd probably go bonkers.
13. Psychology. Psychology, as all academic disciplines, has its

own special way of being ridiculous. It also has generated an understanding of human nature with some strengths that many cultures do not have. I would hesitate to say that academic psychology has surpassed the insights of other cultures on their own terms, but on its terms psychology has provided us with some good understandings of human nature.

14. Hallowe'en. Every age has beautiful holidays; I like Halloween: not the ghouls and witches and warlocks, but the opportunity to be someone else, to reveal yourself in a different way.
15. Role play. This element of cultural wealth is something that has always been around — in the form of children's make-believe. I am not aware of another cultural context that carries this into adulthood.
16. Recognition of childhood. The non-universal concept of childhood, whose present disappearance Neil Postman explores and laments in *The Disappearance of Childhood*, is of benefit to both children and adults.
17. *Lex, Rex*. The rule of law — the idea that everyone, even the highest governing officials, is subject to the law — is far from common in time and history. Many people from other nations had trouble understanding when Nixon was impeached: how could the highest official of the land be on trial for breaking the law? It struck them as it might strike us to see a family where the parents were grounded — grounding is something parents hand out to children, not something parents are themselves subject to. The rule of law is imperfectly followed — as I write, the chaos surrounding the 2000 American presidential election is just beginning to subside — and the concept has flaws. Yet, even with an imperfect implementation of imperfect ideas,

attempts to follow the rule of law reduce arbitrariness.

18. Bureaucracies. Now I know that some readers are probably wondering why I would put bureaucracies on the list — 'bureaucracy', like 'mother-in-law', carries strongly negative connotations. Do I like pushing through red tape? No. But, to an outsider, working with an American bureaucracy is a positive luxury. One Brazilian student was stunned when he applied for a scholarship without knowing anyone who could pull strings, and then received it; a friend at home couldn't believe him when he explained what had happened. The reason is simple: in Brazil, like most countries across most of time, you need an inside connection to get anything out of a bureaucracy. In the US, it doesn't hurt, but you have reasonable chances of getting a lot of things out of a bureaucracy — enough so that this can be taken for granted, and we can ungratefully grumble about how inefficient bureaucracies are.
19. The concept of genius. The concept of genius is far from universal; while there are problematic developments (the "exceptional man" exposed in *Crime and Punishment*), the boundary between genius and normal (or even just gifted and average), like that between children adults, is one that benefits people on both sides.
20. Mechanical devices to tinker with. When I made [a fantasy world](#), one of the races had tinkering as a national hobby. It's delightful and fascinating to tinker, to fix things MacGyver style, and to have intriguing gadgets. It's not one of the greatest things in life — not up there with faith and friendship — but Legos and knickknacks (Legos being one of my favorite thinking toys as a child) are an enjoyable part of local color.

**10/18/00**

There is a sense in which I think we've swapped the meanings of asceticism and hedonism. On the surface, at least, and as far as we usually look, asceticism is drab and unpleasant, and hedonism is really enjoying things. But this is the inverse of the reality. Hedonism is one of the pessimistic philosophies of life, trying to enjoy sensory pleasures as someone would enjoy his last meal before an execution. Some forms of asceticism are indeed joyless, but others make small sacrifices in the pursuit of something big. In so far as devout Christians live abstemiously, it should not be a rejection of joy, but embracing a bigger joy than comes through hedonism.

---

When I came back to my *A Luddite Guide to Technology*, I was amazed at the level of goofiness I had been blind to. I had spoken about the importance of love and forgiveness to all, and in almost the same breath poured out anti-Microsoft invective. Why is it easier to see another's goofiness than one's own?

---

Democracy is not coterminous with good government. It is associated with good government in at least one cultural context, and quite possibly others, but the assumption in e.g. TV newscasts that democracy is the one form of government that is best to all countries, and that the political health of a country can be measured by how democratic it is becoming, is worthy of question.

---

Earlier I spoke of us as gods. I might want to suggest another helpful picture, that of us as apprentice gods, where this life is an apprenticeship to full godhood in Heaven.

---

Zen emphasizes living in the now. I was thinking about that for a time, and came to realize that in some sense I live best when I am spread out over a time, when I am present to a moment that includes but is not limited to the present. A painter may momentarily only be brushing a small area of the painting, but he is throughout time present to the whole painting, in a way that is structured according to the painting rather than according to the path the brush tip may take (he may even forget what the brush tip took). In the same way, through time I have found a magical way of fitting in to time something that doesn't fit into linear time, kind of like a mathematician's Peano curve, where continuous twisting of a curve fills space.

Some theologians have spoken of eternity being without the flow of time as we understand it, where we will no longer have our existence rationed out to us. The Zen approach, where one is totally present to the moment, approximates this in one sense, but in another sense, the perspective I have become aware of (in failing to be exclusively present to the present, and understanding why I failed at it) is something that seems to reflect another aspect of eternity. What I have is something-embedded-in-time, a something that is more than time, and whatever unimaginable thing eternity will be, it will be more, not less, than what we have now. I believe it will be a more natural medium for what is snuck in to time — somehow, probably in a way that we cannot reason out, we will have all of our existence at once, and yet not be limited to a single instant, "ever changing from glory to glory." (God has all of his existence at once, but he at very least interacts with time; his eternality is not a less-than-temporality.)

---

In *A Wind in the Door*, the Murrays' having given up money and prestige to work in an obscure stone lab is something I identify with in my present stage of life. What I have is not so much a noble giving up as a loss, it has been a less voluntary moving from heavy-thinking, recognizable academic work to software engineering (which I am not doing as proficiently as well as I expected), and a quiet apartment to write in. But I am at peace. I have thought about (after a couple of years' work) going back to school in cognitive science, and I have gone from enduring it's-only-a-couple-of-years to being able to enjoy and cherish this time writing — something like the Zen koan that set my thinking, where a monk runs from a tiger, jumps over a cliff, and grabs a thin branch holding him above spiked rocks below. What does he do? He cannot climb up the cliff (the tiger — the past — makes this impossible), and he cannot let go and fall down (the spikes — the future — make this impossible). So he grabs and enjoys some strawberries next to him. I do not think it possible to be happy if both past and future are lethal, but I am enjoying the present without being able to go back to the past, or know or control the future. I am looking forward to the hope of cognitive science work, but I am also genuinely enjoying the present.

**10/23/00**

Zen and the Art of Motorcycle Maintenance says that there are two types of welders. One is not necessarily better than the other, but it is important to know which one you need, and have the right kind. (I'll transpose the ordering from Pirsig's.)

The first kind prefers to do familiar welds, and dislikes having to figure out a new one. The second kind regards figuring out the weld as part of the fun, and resents having to do a job over again.

What I pieced together is that I'm at least a notch or two past the second kind of welder — in my writing, where a new piece usually comes in a new genre, in riflery and martial arts (as Robin pointed out), in other things.

---

I also realized a strange similarity (or perhaps 'similarity' is too strong a word — 'comparable character', perhaps) between the attitudes of an agnostic Jew towards religious ceremony and my own.

Agnostic Jews participate in certain ceremonies that they don't believe in in a religious sense, as a matter of preserving and keeping alive Jewish identity. The ceremonies do not mean, in a sense, the glory and worship of God. At least not primarily and not directly. That is, the agnostic Jew does a ceremony but doesn't believe its direct meaning.

I realized a parallel between that attitude and my own attitude towards religious ceremony. I participate in religious ceremonies, but I do not believe that a given structure is the necessary form that worship takes, any more than the specific words of a given conversation are necessary to conversation between two people. They are to me the outer shell that worship took in that one case; they are not part of the substance of worship.

---

The most common use I hear of the term 'semantic' is as in "They were just arguing semantics," meaning that people were having a pointless argument that existed, not because they disagreed over something substantial, but because they were using words differently.

That is in a sense a true use of the term 'semantic', but it is disappointing (especially as the primary way in which the term is used). An unnecessary argument because people didn't know they were using words differently is the pocket lint of things semantic; there are so many greater things that can be referred to by 'semantic', of what people mean and what texts mean.

Syntactic knowledge is shallow, surface knowledge (the connection of the letters l-o-v-e with the concept of love); semantic knowledge is real, deep knowledge (the conceptual wealth that is evoked by l-o-v-e). In computer programming, people who are trying to fill jobs are usually measuring by what syntactic knowledge is possessed (or, more properly, what buzzwords the person can claim); it is semantic knowledge (theory, the knowledge that is not searched for but is the most important knowledge a programmer possesses) that makes for real success.

I like semantic discussions that are something deeper than an unnecessary conflict because people did not understand how each other were using language.

11/2/00

I have spoken with [Josh](#) about disclosing his thoughts about Hebraic and Hellenistic mindsets. (It is Josh's and Heather's idea, but Josh had said something that made me want to ask him before distributing it.) Josh has given me permission to disclose it; my thoughts are a little fuzzy, because it's been a little while since he and Heather explained the concepts, and I only have the one sheet they wrote things down on, but I'll try to reproduce:

Josh began by saying that, with a couple of arguable exceptions, all the books of the Bible were written by Hebrews, operating from a Hebraic mindset, but subsequent Christian thought has largely followed a Greek mold, and that, if we are to understand the Scriptures, we should understand them as seen by the mindset in which they appeared. He then delved into one area where there is a discrepancy between a Hebraic and a Hellenistic mindset.

In the beginning of the explanation, Heather drew a line down the center of a sheet of paper, and began to write words in pairs, one on either side of the line:

works faith

predestination choice

sovereignty free will

truth love

law grace

law grace  
thought emotion  
rhythm rhyme  
line color  
power meekness  
words music  
logic intuition  
left brain right brain  
man woman

Heather then asked me to imagine that I did not know about law and grace, and how they fit together, but only that God was righteous and cannot abide sin, that each transgression demands judgment, and at the same time that God is merciful, and desires to save men. Responses to such a situation show a divergence between the Hebraic and Hellenistic mind, especially in cases where a neat resolution is not known.

The Hebraic mind does not understand everything and does not expect to understand everything, but has a trust and room for paradox that enable them to believe both in God's justice and mercy without having a knowledge of how they fit together. The Hellenistic mindset does not understand everything either, but it expects that it should. As such, and holding both the usual strengths (keenness of analysis) and the unnecessary but usual weaknesses (limiting oneself to it) of logic, it tries to create rational systems accounting for as much of the data as can be cut to fit into a consistent logical system. It is probably due to this phenomenon that people who forget the explanation/principle where perfect law meets perfect grace feel the need to cut one down to make room for the other: legalists cut down mercy to preserve their unyielding law, libertines cut down justice in order to prevent anything from

libertines cut down justice in order to prevent anything from bumping into their cruel mercy, and both sides become more aggravated and more extreme by trying to run away from the excesses of the other side.

This much happens with a paradox to which a logical reconciliation has been revealed in Scripture. It is not much better with Calvinism and Arminianism — both of which live in a mental system that takes certain passages, magnifying them and declaring them to be fundamental, and then play awfully fast and loose with inconvenient others. The same God who inspired one set of verses inspired the others; where the Hellenist needs to have an interpretation cut down enough to fit inside his head, the Hebraist can believe the whole without being able to know how it all works out. Although Josh didn't mention it, there is something here reminiscent of a G.K. Chesterton quote, about how a poet merely wants to get his head into the Heavens, but a logician wants to get the Heavens into his head, and it is his head that splits.

I remember one time when I was talking with another friend (a graduate student in philosophy) and I made a fairly simple argument from Scripture, and he gave an *it's not that simple*, saying that what I was saying was true under the thought-forms that clothed the message of the Bible in its original cultural context, but was not necessarily true if one took the intellectually responsible step of translating the Bible, not only from original to contemporary languages, but from original to contemporary languages. (This argument contains a real and significant kernel of (distorted) truth, but it springs from the same poisoned well as the perspective that dismisses Biblical arguments for traditional gender roles by saying that the Bible was written in a patriarchal culture. Beyond saying that, I do not

wish to analyze either argument here.) The reason I mention this is to say that the language of the Bible is in a sense an outer husk that need not be a focus of attention, but the mindset, the mentality, is considerably less husk-like. The mentality is at times part of the core of what is communicated.

My initial reactions (and here is where I will begin to depart from Josh and Heather), apart from a mild-mannered acceptance (I reacted less than most people because it is an embodiment of something that I breathe — what I have to offer here are refinements, not correctives to something massively flawed), were to think of two things. One was to say that the list was a cultural artifact, meaning that it is a way of codifying truth that can be helpful to most people, but also that it is not an attribute of reality and not something that I happen to describe to — much like the list of seven deadly sins I spoke of [above](#). That observation is trivial. The other one, though, is not, and it is one I would like to develop.

I began to articulate an alternative, in its beginning form, by talking about a chapter in Jeremiah or Ezekiel (Josh's favorites, it turns out) in which the Lord tells Israel, "I did not pick you because you were worthy, because you were mighty or attractive. When I found you, you were a babe rolling in salt and blood..." and then narrates how he raised her to a woman of beauty and grace before she became unfaithful to him. Robert Heinlein, in cult classic *Stranger in a Strange Land*, tells the story of "a Martian named Smith": a man raised by Martians, inculturated into Martian culture and then transported to earth. It is culture shock writ large, the story of an alien culture coming into contact with, coming into, human culture. That provides a helpful perspective for looking at the Bible and especially the Gospel accounts — in both, there is material that is stunningly

countercultural to a reader who understands certain details of cultural context (e.g. how Jesus broke social norms in every recorded encounter with women). If Hebraic culture is a holy culture, it is so not because it (or any human culture) is worthy to be so, but because of uniquely prolonged and deep context with the divine forces. It is like a pet in a human house, tame out of a world of feral kin — its suitability to be with children stems from human contact, not because a feline is intrinsically more man-like than an opossum.

I coined the term 'metaculture' (partially explored in [The Metacultural Gospel](#)) out of seeing a similarity of phenomenon between third culture kids and people who are astronomically intelligent. Both of them are to some extent capable of entering into a culture, including whichever one they've grown up in, but cannot breathe it in the un-self-conscious way of the monocultural majority. One biological principle is that a creature which is particularly adapted to one specific environment will be poorly suited to others; a metacultural is not especially suited to any one environment, but has a certain flexibility. (There are other qualitative differences which escape me at the moment.) I have thought here about whether to use that term or make another (one denoting a kind of metaculture, the kind hinted at in Plato's "Allegory of the Cave"), and I will stick with metaculture.

A metacultural isn't exactly in any one culture; he's in something else, and incidentally in a culture. That, I believe, provides a substantial alternative/refinement to the Hebraic mindset: the step after being in the Hebraic mindset is being in God, and being shaped by the same forces that shaped Hebraic culture. The solution to being in a darkened cavern is not to move into a cavern that someone has brought a light of, but to climb

out of the cavern into the sunlight.

I spent some time thinking, because the metacultural mindset as I originally formulated it seemed accessible only to a minority, not a catholic possibility and therefore not a full solution. I think that the italicized wording, indicates a sense in which the metacultural mindset may be catholic.

That, and in particular the italicized phrase, is a mishnah that requires a Talmud, probably a Talmud with parts that vary from host culture to host culture. I believe it is, in core form, an insight that refines Josh's, perhaps worth further exploration (although I have no further thoughts on it now).

---

An "It's not that simple." is when person A says something basic, and person B says, "It's not that simple." What that means, invariably in my experience, is "It really is that simple, in a direct and obvious sense, but person B has found an elaborate way to convince himself otherwise, probably (cognitive dissonance) because there is some advantage or cherished position that is threatened by an acknowledgment of straightforward observation."

---

There is an insight I had when reading Em Griffin's *A First Look at Communication Theory* and what it says about persuasion.

The text describes the mechanics of persuasion, with an intended development of more effective influence in persuading others. Those basic mechanical principles can also be used to affect how one is influenced by others — to be more easily persuaded when one should be persuaded and less easily persuaded when one shouldn't be persuaded.

Knowing the communication principles behind, i.e. people losing their faith at school, could be a step towards preparation. Knowledge of psychological principles does not nullify them, but it does give people a greater degree of control in how they act.

C.S. Lewis in *The Abolition of Man* talks about an outward direction/inward direction distinction. It's easy (and sometimes appropriate) to desire outward influence in persuasion. It also strikes me as desirable to have inward influence with regards to persuasion.

---

In Matthew 10:30, Jesus says, "As for you, every hair on your head has been counted." This is something that someone in love does.

**11/13/00**

Last night, a friend and I spent a long time trying to use the *GIMP* (GNU Image Manipulation Program) to perform a simple task (swapping colors in a two-color submit button). I came away from the frustrating experience with a new appreciation for what Unix's arcane interface is like to a newcomer.

---

Technical support people (and sometimes other hackers) have an acronym **PEBKAC**, short for Problem Exists Between Keyboard and Chair. From [the jargon file](#):

**PEBKAC** /peb'kak/

[Abbrev., "Problem Exists Between Keyboard And Chair"]  
Used by support people, particularly at call centers and help desks. Not used with the public. Denotes pilot error as the cause of the crash, especially stupid errors that even a luser could figure out. Very derogatory. Usage: "Did you ever figure out why that guy couldn't print?" "Yeah, he kept cancelling the operation before it could finish. PEBKAC."

With a great many apparently technical problems, the problem exists between the keyboard and chair. The question I was thinking about is, which keyboard and chair?

On Mac and Windows computers, and to some extent on the web, an alert box will pop up with some snippet of text and a button. The messages that pop up are often not very important — something like the warning labels attached to many products — and, as such, alert boxes carry a nonverbal message of "I am interrupting your work because I have something to tell you, probably not very important, and you can't use your computer until you click my button. Once you have clicked on this button, you can go about your business." When there are a great many alert boxes like this, it is not a stupid thing at all to habitually click the button when the alert box appears... except that, on a small minority of such boxes, the habitual response cancels your print job. The problem with this system exists between keyboard and chair, but not the user's keyboard. The problem with this system exists between the designer's keyboard and chair. A

system exists between the designer's keyboard and chair. A great deal of stupid user errors are not stupid user errors at all, but the results of bad interface design by software developers who did not design with human-computer interaction factors in mind.

That's the thing about people who think they hate computers. What they really hate is lousy programmers.

Larry Niven and Jerry Pournelle in Oath of Fealty

PEBKAC.

---

I've thought of a hacker's game. Here's the core idea: Alice writes a program. Bob modifies the program in such a way that he can tell the difference between them. Alice wins if she can discern which is which. Bob wins if Alice can't tell, but he can tell. The round is a draw if they both can't tell.

This basic idea is in need of refinement and rules for both parties, roughly speaking in order that there are no obvious and cheap ways for either side to win. (Neither of them should be able to perform direct tests on the compiled programs, for instance, and things like "Click on the upper lefthand pixel of the applet window, and then hold shift and click on the bottom righthand pixel, and a smilie face will appear" aren't the kind of cleverness that is desired.) If such rules are formed, it will take a community's work over time. But I think this could be a good programmer's game.

---

I was saddened to learn of the demise of Canada's Rhinoceros Party, a satirical political party with platforms like "Coast from coast to coast!" (after your car has been raised to the top of a giant, Canada-wide ramp), "My platform is the one I'm standing on," and "Legalize pot. And pans. And spatulas. And other kitchen utensils." It's defunct as of the last two elections, and learning of its demise (when doing a web search, because I wanted to show Rhinoceros Party information to some of my coworkers) was saddening, like a child's finding that all the fairies were dead — a learning that a shining part of the world has gone out.

The U.S. still has Dave Barry and his year 2000 presidential campaign (I'm taking an educated guess, as I'm waiting to hear the results of the Florida recount in the U.S. 2000 Presidential Elections, that the final difference between Bush and Gore will be less than the number of votes Dave Barry received), but that was saddening news.

---

There is an image I've had (partly from my own experience, partly from other sources) of someone very bright who is off in his own little world, and when he talks with other people, he tries to answer as faithfully to his own world as he can, and people just don't get it. What I realized in my Gospel reading a few days ago is that this happened with Jesus. He spoke from his world, and people tried to interpret his words as what they would have meant from their world, and there was a glaring absence of connection. Examples of this are threaded throughout John's mystical gospel account in particular; one conspicuous example is where Jesus is on trial before Pilate and they are talking about whether Jesus is a king. Jesus is trying to bring Pilate up to his plane, and Pilate is equally trying to understand Jesus's words without leaving his own plane, and there is conflict.

Seeing this in the Gospel accounts, and having things click, gave me a feeling of being in good company.

**11/14/00**

Make-believe is a kind of illusion that implicitly depends on being recognized as illusion. I was thinking about this basic phenomenon in some matters related to [my Halloween costume this year](#). My fun was spoiled when I realized that at least one of the children had literally believed I was Blajeny, that the illusion of my costume had not been recognized as illusion.

**11/16/00**

A while ago, I was having a conversation with Robin (techie) and another friend (Bob, non-techie). We were talking about making custom modifications to software, and I mentioned that a few decades ago, it was common to have computers with their own instruction sets. Robin immediately saw the point I was trying to make; to translate for Bob, I said that for each computer to have its own instruction set would be like each book having its own alphabet.

In places where we've gotten used to standards, breathing them is second nature. There are rare exceptions where it is desirable to break good standards — off the top of my head, I can think of the beautiful Elvish script in J.R.R. Tolkein's Lord of the Rings trilogy — but, in certain areas, standards can be quite helpful. The computer industry is moving towards increasing standardization at higher levels of abstraction — and this is a good thing. Dealing with a locally suboptimal standard solution twenty times involves, among other things, significantly less cognitive strain than dealing with twenty locally optimal nonstandard solutions.

Where I see this argument as applying (technical areas, and human cognitive strain), this is not a death penalty on nonstandard approaches — many of the best technical ideas have been highly nonstandard approaches. I do believe, however, that

things should be done in a standard manner unless there is good reason to do otherwise. For something meant for humans, doing something nonstandard means potential confusion and a probable learning curve.

Web pages that are not designed with a first-time visitor in mind are a prime example of material that breaks this principle.

12/2/00

I have been occupied recently, and have several ideas jotted down, but not taken the time to write them down. I wrote a letter and received an invitation to join a very high-intelligence mailing list; I spent a good deal of the past week worrying about whether I've bitten off more than I can chew. Today, I felt that still, small voice saying, "Get back to writing your musings."

The musing I've been carrying around for a while, has to do with the monoglot and the polyglot (the person who speaks only one language versus the one who speaks several). I debated whether it was worth writing down, and decided for a while that it wasn't worth writing until I came across something in George Steiner's *Errata*. He mentioned the distinction, talked about his own polyglot background, and then poetically and emphatically argued that polyglot is the condition to be in — at one point, he said that the monoglot does not know even his own language.

That bothered me; to explain what bothered me, I would like to bring two brief images to mind: an American who is devoted to his country and holds the kind of patriotism Lewis extolls towards the beginning of *The Four Loves*, and the American who is devoted to his country and considers the natives of other countries to be unfortunate second-class world citizens. The first is laudable (and compatible with respect for the patriotism of other nations); the second is not. It is the second condition

which parallels Stiener's exaltation of the polyglot condition and (unnecessary) denigration of the monoglot condition.

To explain where I stand on this question, I would like to begin with a lunchtime conversation with my best friend (Robin), and an old friend of his (Morris). I surprised Robin by saying that I preferred to read texts in English translation when I had the option — preferably a free translation — rather than reading them in a non-English original.

It's not that I'm afraid of learning another language. There have been times when I found thinking in French to be easier than thinking in English, and there has been a span of several years where my French sounded closer in relation to a typical native French speaker than my English sounded in relation to a typical native English speaker. If one counts mathematical and computer languages, I've worked with more languages than the number of years I've been alive, and this will probably remain true for the rest of my life. I've had the experience of not recognizing which language a text was written in, but still being able to read it. I've lost count of how many languages I've dreamed in, and I occasionally have dreams where my mind makes up a new language on the fly.

Why, then, would I prefer to read texts in English? In a single word, comprehension. I came to realize at one point that my knowledge of French at its best has been a rough equivalent to a native proficiency, but that I will never speak another language as well as I speak English, not if I am immersed in it for the rest of my life. The proficiency I have in English is something beyond what is normally meant by 'native'. There is an additional cognitive strain — so I am spending energy trying to interpret the text (in the direct and mundane sense) rather than on interacting with its meaning (in a deeper sense). I'll

understand a good free translation a lot better.

More broadly, proficiency in multiple languages takes mental energy that could be used to other purposes. There are people that can afford that expenditure of mental energy, and there are definite benefits to knowing two or more languages — the ability to compare ("The better you know another world, the better you know your own." — George Macdonald, *Lilith*), the ability to communicate with more people, the improved ability to pick up other languages. For all that, there is a consolidated energy that comes of having spent your efforts on learning one language and learning it well — and there are a great many people in the world who do not have the excess mental energy to have spare room to learn extra languages.

---

Bloom, in the introduction to his translation of Plato's Republic, argued for making strictly literal translations. The essential argument is that the translator, however great a scholar he may be, must have the humility to realize that the student who reads his text may be a greater mind, capable of deeper understanding. As such, the translator should provide the student with what the words say, rather than confining the student to his interpretation. He proceeded to give several quotations from free translations of the Republic which, in trying to make the text accessible to a contemporary reader, succeeded in producing something accessible, albeit inappropriate as renderings of the text. I forget exactly what they were, but they would be comparable to portraying Martin Luther's crisis of faith as a postmodern midlife identity crisis.

I do not believe that choosing between literal and free translations is a choice between a flawed and a near perfect rendering model; a student who wants to really understand a text (which is written in a language he cannot read well) should probably peruse several translations, varying in how literally/freely they render the text. And, if I want to know a short text or excerpt well, my rendering of choice will be a heavily footnoted literal translation.

For large-scale reading — for the kind of reading comprehension that can be sustained for numerous pages — there is a different phenomenon. The danger in free translation is that it can confine the reader to the translator's interpretation. The danger in literal translation is that it can confine the reader to not understanding the text at all. A woodenly literal text, one that's read for dozens or hundreds of pages, brings a cognitive strain and consumes energy that could

be used in thinking about the text. And, for that reason, if I can only choose a single translation, I'll take my chances with a free translation.

---

I read a book recently called *Please Understand Me*. It was a valuable resource to read, but it's something I'd prefer to give to others with a complimentary grain of salt.

It's about different personality and temperament types, and one of the central theses is that people have fundamentally different natures, but engage on a Pygmalion project to reshape others into copies of themselves. It is written in such a way that

a reader who is persuaded of the legitimate point (that temperaments are not right or wrong, just different, and it is inappropriate to try to change a person to a temperament that he's not) will (in a similar fashion to the *Green Book* in C.S.

Lewis's *The Abolition of Man*) come to the unjustified and illegitimate conclusion that there is not right or wrong in much of anything, and that it is wrong to try to change a person on any score. It never draws this conclusion in so many words, but a transposition of key takes what Lewis said about the *Green Book* and fits it (quite well) to *Please Understand Me*.

The book is worth reading, if you can resist the conclusion that the flow of the text pulls you towards.

**12/16/00**

There is a distinction I have periodically been thinking about: it is a conceptual distinction between a gentleman's duel and an assassin's duel.

Both represent a kind of contest between two people, but contests of two different sorts. Don Quixote refers to knightly duels in which both parties were meticulously careful to make all things equal: both swords the same length, both parties standing at equal angles to the sun so that neither one would have the sun in his eyes more than the other. This is an extreme form of the basic idea of the gentleman's duel. At the other end, there are no rules and no concept of fairness; an assassin might accept another's challenge, and then arrange to have him shot by archers. Wesley's battle of wits with Vizzini in *The Princess Bride* represents the quintessential assassin's duel.

The two frameworks for a contest, or a test, offer distinct conceptions of how a person's ability may be measured. I have seen a number of gentleman's duel IQ tests, for instance; I am not aware of any established tests that operate like assassins' duels, and the ability to function effectively outside of external structure (the cliché is 'think outside the box') is one of the distinctive features of intelligence.

---

Catholics speak a great deal about the primacy of Peter among Christ's disciples, but there is also a primacy to John. Peter had a unique place in the nurture of the church ("Feed my sheep,"), but it was John who was closest to Jesus, John the mystic, who had a stunningly brilliant mind and probably understood him best. In a technology corporation, Peter might be compared to the CEO, and John to the prize research scientist.

---

My apartment is a sparse place, slightly messy and having no television. It is not really decorated; an outer austerity conceals an active life of the mind.

People's homes can give insight into those who dwell there.

My apartment does not exude the same romantic warmth as many other places, but that is because my attention is elsewhere.

---

I have a different perspective on aging than what I have seen about me. It always makes me slightly sad when I hear my father saying, "We're getting old," not because it is false, but because he says it as a confession of weakness. I view aging as getting closer to Heaven, (as described in Hebrews) as approaching the finish line of a great race. My way of holding this belief has a dark side — I sometimes look on life as enduring time so as to be past it and into eternity — but I still think I am better off not to be approaching my thirtieth birthday as when I will become a has-been.

---

I wrote about two types of welder [above](#). I realized a certain affinity between the apostle Paul and myself, especially as regarded the welder distinction. Paul, as an apostle, skipped from place to place and culture to culture, with a veritable rainbow of activities: planting churches and writing were just the beginning.

He certainly travelled more than I have.

Seeing a sort of kindred spirit (even if separated by millenia), and in someone whom I greatly respect, was warming to me.

---

I have thought that the entrenched numerical scale of IQs are unfortunate. The numbers corresponding to a person's weight are proportional; one person who weighs 200 pounds has as much body-stuff as two people who weigh 100 pounds each, or four children who weigh 50 pounds each. It is simply not true, in a corresponding sense, that one person with an IQ of 200 has exactly twice as much thinking-stuff as two people with IQs of 100 each. A programmer with an IQ of 150 is quite possibly capable of doing feats that could not be accomplished by any number of programmers with IQ 100. There are not just quantitative differences (for which an exponential scale might be preferable), but qualitative differences as well.

The other critique I have of the concept of IQ is that it equates (for children and adults) higher intelligence with functioning at a more advanced mental age. This is true, in a sense, and brilliant adults grow out of precocious children, but there is an important mental dimension that is well-developed in most children and atrophied in most adults: mental flexibility/openness/creativity/curiosity. Experiments have found gradeschool children to be more creative than professional engineers; it is a rare mind that can enter adulthood without losing childhood creativity. A child with a high IQ, one would hope, is not simply at a cognitive level normally associated with people a few years older; he may be capable of tasks most people cannot complete until a few years older, but he retains the mental flexibility associated with his chronological age — perhaps a younger age. "A more intelligent child mentally functions like an older person" is a good rough take on the matter, but the basic concept of "older [up to mental maturity] = better" has room for further nuance.

introverted nor extraverted — but not what is meant by 'X', namely half-and-half — that is 'C'), or 'B' (both introverted and extraverted, but again not half-and-half).

When I first took the Myers-Briggs, I had difficulty answering the thinking-feeling questions — because I embodied both of the qualities which the test portrays as opposites. I had equal difficulty answering the judging-perceiving questions — but for a different reason: I was not familiar with, and did not identify with, either modus operandi. On a two-dimensional scale such as I drew above, I would be around point B for thinking-feeling, and point D for judging-perceiving.

---

My office had a Secret Santa gift exchange, and I got one of my co-workers a boxed set of Lewis's *The Chronicles of Narnia*. I was warmed to find out that she'd been wanting to get that series for a couple of years.

# **Note to Orthodox Evolutionists**

**Stop Trying to  
Retroactively  
Shanghai Recruit the  
Fathers to Your Camp!**

**At least some bishops** explicitly allow their faithful flock to believe theistic evolution, young earth creation, or any of several other options.

This article is not meant to say you can't be Orthodox and believe in evolution. It is, however, meant to say that you can't be

Orthodox and  
misrepresent Church  
Fathers as saying  
things more  
convenient to  
evolution than what  
they really said.

## Two examples of a telling symptom: Fishy, suspicious arguments

Alexander Kalomiros is perhaps a forerunner to Orthodox finding a profound harmony between the Church Fathers and evolution. To pick one of many examples, Kalomiros's [On the Six Days of Creation](#) cites St. Basil the Great as saying, "Therefore, if you say a day or an age, you express the same meaning" (homily 2 of St. Basil's *On the Six Days of Creation*). So Dr. Kalamiros cites St. Basil as clearly saying that "day" is a term with a rather elastic meaning, implying an indefinite length.

Something really piqued my curiosity, because a young earth Creationist cited the same saint, the same book, and even the same homily as Kalamiros, but as supporting the opposite conclusion: "one day" means "one day," period.

I honestly wondered, "Why on earth?" Why would the same text be cited as a proof-text for "days" of quite open-ended length, but also a proof text for precise twenty-four hour days?

So I read [the homily of St. Basil that was in question](#). The result?

The young earther's claim is easier to explain: St. Basil does, in fact, quite plainly claim a young earth, and treats this belief as non-negotiable. And what Kalomiros cites? The text is talking about something else when St. Basil moves from discussing the

Creation to matters of eternity and the Last Judgment. One of the names for eternity is "the eighth day," and in explaining the timelessness of eternity, St. Basil writes, "Thus whether you call it day, or whether you call it eternity, you express the same idea." Which is not exactly how Kalomiros quotes him, not exactly.

Kalomiros offers a quote out of context, and translates in a subtle but misleading wording, leading the reader to believe St. Basil clarified that a "day" [of Creation] can just as well be an "age" [of time]. This is sophistry. This is disingenuous. What is more, I cannot ever remember following one of Kalomiros's footnotes supporting evolution and find an appropriate and responsible use of the original text. When I check things out, little if any of it checks out. And that's a concern. When someone argues like that, the reader is being treated dishonestly, and deceptive argument is rarely the herald of truth.

Let me quote another of many examples celebrating a harmony between patristic Orthodoxy and evolution, Vladimir de Beer's [Genesis, Creation and Evolution](#). He writes:

The account of creation in the first chapter of *Genesis* is known as the Hexaemeron (Greek for 'six days'), on which a number of Greek and Latin Church fathers wrote commentaries. Some of them interpreted the six days of creation quite literally, like St Basil the Great who was much influenced by Aristotle's natural philosophy. Yet the same Cappadocian father insisted that the scriptural account of creation is not about science, and that there is no need to discuss the essence (ousias) of creation in its scientific sense.[1] Others followed a more allegorical approach, such

as St Gregory of Nyssa who saw the Hexaemeron as a philosophy of the soul, with the perfected creature as the final goal of evolution.

It has been my experience that for a certain kind of author one of the cheapest ways to dismiss a Father is to say that they were heavily influenced by some kind of non-Orthodox philosophy. Usually they don't even give a footnote. St. Basil the Great is a Church Father and one of the Three Hierarchy, and if you are going to downplay whether his position is one we should believe, you should be doing a lot more than due diligence than making a dismissive bare assertion that he was heavily influenced by non-Orthodox forces.

But at least de Beer is kind enough to allow St. Basil to believe in six literal days. I am rather mystified by his treatment of St. Gregory of Nyssa, [whose commentary On the Six Days of Creation is here](#). Are we referring to the same work?

St. Gregory's commentary is not a allegorical interpretation, such as St. Maximus the Confessor's way of finding allegory about asceticism and ascetical struggles in the details of the Gospel. It is if anything 90% a science lesson, or an Aristotelian science lesson at any rate, and at face value St. Gregory owes much more of a debt to Aristotle than St. Basil does. (At least St. Gregory spends vastly more time talking about earth, air, fire, and water.) St. Gregory's [On the Six Days of Creation](#) assumes and asserts that the days of Creation were, in fact, literal days. And that's not the end. St. Gregory of Nyssa explicitly ascribes the highest authority and weight to St. Basil's work and would almost certainly be astonished to find his work treated as a corrective to St. Basil's problematically literal *On the Six Days of Creation*;

St. Gregory's attitude appears to be, "St. Basil made an excellent foundation and I want to build on it!" On all counts I can tell, St. Gregory does **not** provide a precedent for treating young earth creation as negotiable. De Beers may well have a friend among the Fathers, but St. Gregory is not that friend. And if this is his choice of friends, maybe he isn't aware of many real, honest friends among the Fathers. St. Augustine may be his friend here, but if the Blessed Augustine is your only friend among the Fathers, you're on pretty shaky ground.

Examples could easily be multiplied, but after a point it becomes somewhat tedious checking out more harmonizers' footnotes and finding that, no indeed, they don't check out.

## Why it matters

Have you read much [creation science seeking to use science to prove a young earth?](#) The reason I'm asking is that that's what scholars do when they use patristic resources to prove that Orthodoxy and evolution are in harmony. The kind of distortion of facts that they wouldn't be caught dead in origins science is the kind of distortion of facts that is routine in those harmonizing Orthodoxy with evolution.

I wrote [a thesis calling to task a Biblical Egalitarian treatment of the Haustafel in Ephesians](#), and it is part of my research and experience to believe that sophistry matters, because sophistry is how people seek to persuade when truth is against them. And when I see misrepresentation of sources, that betrays a problem.

I myself do not believe in a young earth; I am an old earth creationist and have seriously entertained returning to belief in theistic evolution. I stand pretty much as far outside the patristic consensus as Orthodox evolutionists. **But I don't distort the Fathers to shanghai recruit them to my position.**

It may well be that with knowledge that wasn't available to St. Gregory and his fellow Fathers, the intellectual dishonesty and distortion needed to believe in a young earth may be greater than saying, "I know the Fathers' consensus and I remain outside of it." That's not ideal, but it is infinitely better than distorting

the Fathers' consensus to agree with you.

It is better by far to acknowledge that you are outside the Fathers' consensus than make them agree with you. **If you are an Orthodox evolutionist, please stop shanghaiing recruiting ancient Fathers to your camp.**

## **A helpful analogy: What are the elements?**

Some Protestants made young-earth creationism almost "the article by which the Church stands or falls," and much of young-earth and old-earth creationism in Orthodoxy, and evolution, is shaped by that Protestant "article by which the Church stands or falls."

**Today's young-earth creationism and theistic evolution are merely positions on a ballot in single-issue voting, and single-issue voting that was unknown to the Fathers. **There are other issues.****

(What other issues are there, you ask?)

Let me give my standard question in dealing with young-earth Orthodox who are being pests and perhaps insinuating that my Orthodoxy is impaired if I don't believe their position: "Are we obligated to believe that the elements are earth, air, fire, water, and maybe aether?"

If that question seems to come from out of the blue, let me explain:

St. Basil's *On the Six Days of Creation* takes a position we can relate to readily enough even if we disagree:

"And the evening and the morning were the first day."  
Evening is then the boundary common to day and night; and in the same way morning constitutes the boundary of night

IN THE SAME WAY MORNING CONSTITUTES THE APPROACH OF NIGHT TO DAY... WHY DOES SCRIPTURE SAY "ONE DAY THE FIRST DAY"?

Before speaking to us of the second, the third, and the fourth days, would it not have been more natural to call that one the first which began the series? If it therefore says "one day," it is from a wish to determine the measure of day and night, and to combine the time that they contain. Now twenty-four hours fill up the space of one day—we mean of a day and of a night; and if, at the time of the solstices, they have not both an equal length, the time marked by Scripture does not the less circumscribe their duration. It is as though it said: twenty-four hours measure the space of a day, or that, in reality a day is the time that the heavens starting from one point take to return there.

That's on our radar. What's not on our radar is how bluntly St. Basil treats his day's closest equivalent to modern chemistry, and please note that alchemy has nothing to do with this; he does not condemn [alchemy](#) as being occult, but chemistry as atheistic:

Others imagined that atoms, and indivisible bodies, molecules and [bonds], form, by their union, the nature of the visible world. Atoms reuniting or separating, produce births and deaths and the most durable bodies only owe their consistency to the strength of their mutual adhesion: a true spider's web woven by these writers who give to heaven, to earth, and to sea so weak an origin and so little consistency! It is because they knew not how to say "In the beginning God created the heaven and the earth." Deceived by their inherent atheism it appeared to them that nothing governed or ruled the universe, and that was all was given up to chance.

The emphatic alternative he offers is a belief in the four or five elements, earth, air, fire, water, and possibly the aether.

This is something he finds in Genesis:

"And the Spirit of God was borne upon the face of the waters." Does this spirit mean the diffusion of air? The sacred writer wishes to enumerate to you the elements of the world, to tell you that God created the heavens, the earth, water, and air and that the last was now diffused and in motion; or rather, that which is truer and confirmed by the authority of the ancients, by the Spirit of God, he means the Holy Spirit.

St. Basil takes the text to mean more than just that water exists; he takes it to mean that water is an element. Nor is St. Basil the only one to make such claims; as mentioned earlier, [St. Gregory's On the Six Days of Creation](#) is not in the business of condemning opposing views, but it not only assumes literal days for Creation, but the "science" of earth, air, fire, and water is writ large, and someone wishing to understand how ancients could see science and cosmology on those terms has an invaluable resource in [St. Basil's On the Six Days of Creation](#).

Furthermore, the view of the four elements is ensconced in Orthodox liturgy: the Vespers for Theophany, which is arguably the central text for Orthodox understanding of Creation, enumerates earth, air, fire, and water as the four elements. To my knowledge, no Orthodox liturgy ensconces the implicit atheism of modern chemistry.

What are we to make of this? Does this mean that modern chemistry is off-limits to Orthodox, and that Orthodox doctors should only prescribe such drugs as the ancient theory would

justify? God forbid! I bring this point up to say that the obvious answer is, "Ok, there is a patristic consensus and I stand outside of it," and that this answer can be given without shanghaiing recruiting the Fathers to endorse modern chemistry. When science and astronomy were formed, someone was reported to say, "The Bible is a book about how to go to Heaven, not a book about how the Heavens go," and while it may be appropriate to say "On pain of worse intellectual dishonesty, I must accept an old earth and chemistry as worth my provisional assent," it is not appropriate to distort the Church Fathers into giving a rubber stamp to beliefs they would reject.

Drawing a line in the sand at a young earth is a Protestant invention that has nothing to do with Orthodoxy, but casting the opposite vote of theistic evolution in a single-issue vote is also short of the Orthodox tradition. In reading the Fathers, one encounters claims of a young earth. However, often (if not always) the claim is one among many disputes with Greek philosophers or what have you. To my knowledge there is no patristic text in which a young earth is **the** central claim, let alone even approach being "the article by which the Church stands or falls." Single-issue voting here, even for evolution, is not an Orthodox phenomenon except as it has washed in from Protestant battle lines. If an Orthodox who questions the Orthodoxy of old-earthers is being (crypto-)Protestant, the Orthodox who cites the Fathers in favor of evolution is only slightly less so—and both distort the truth.

The young-earth Creation Science makes scientific evidence bow before its will. The Orthodox evolutionist makes the Church Fathers bow before his will. Which is the more serious offense?

"Religion and Science" Is Not Just Intelligent Design vs. Evolution.

**"When I became a man, I  
put childish ways behind  
me."**

One Protestant friend said that I had a real knack for insulting analogies. The comment came after I said of mainstream Evangelical "Christian art" that it worked on the same communication principle as hard porn: "Make every point with a sledgehammer and leave nothing to the imagination but the plot." And I have used that ability here: I have said that Orthodox evolutionists writing of harmony between evolution and the Church Fathers are treating patristic texts the same way creation scientists treat scientific evidence. **Ouch.** The Orthodox-evolutionary harmonizers are playing the same single-issue politics game as their young-earth counterparts, and are only different by casting the opposite vote. **Ouch.**

Is there a method to this madness?

I cannot forbid origins questions altogether, for reasons not least of which I am not tonsured even as a reader, let alone being your heirarch or priest. At least some heirarchs have refused to decide for their flock what they may believe: perhaps people are expected to find God's hand at work in creation, but the exact mechanism of involvement, and time frame, are not decided. But I could wish something like the theology surrounding the holy mysteries, where in contrast to the

detailed, point by point Roman account, the Orthodox Church simply says that at one point in the Divine Liturgy the gifts are only (blessed) bread and wine, and at a certain later point they have become the body and blood of Christ, and beyond that point speculation is not allowed.

There are some questions where having the right answer is less valuable than not asking the question at all. Origins questions in the scientific sense do not loom large in the Fathers, and what little there is appears not to match scientific data. But this is not a defect in the Fathers. It is, if anything, a cue that our society's preoccupation with science is not particularly Orthodox in spirit, and perhaps something that doesn't belong in Orthodoxy. Again, [Religion and Science Is Not Just Intelligent Design vs. Evolution.](#)

But for the interim, for people who need an answer and are good enough scientists to see through Creation Science, please do not ~~shanghai~~ recruit the Church Fathers to rubber stamp the present state of scientific speculation. For starters, science is less important than you may think. But that's just for starters.

# Not Stressed?

You want to know how to deal with stress—if I have anything to tell you. Yes, indeed. Let me pass on some advice I found in a book:

So don't worry about your life, what you will eat or drink, or about your body, what you will wear. Isn't life more than food, and the body more than clothing? Look at the birds of the air: they neither sow nor reap nor gather into barns, but your Heavenly Father feeds them. Aren't you worth much more than them? And which of you can add another hour to his life by worrying? You might as well try to add another foot to your height! And why do you worry about clothing? Consider the lilies of the field, and how they grow. They neither toil nor spin, but I tell you that not even Solomon in all his glory was dressed like one of these. But if God so clothes the grass of the field, which today is alive and tomorrow is thrown into the oven, won't he much more clothe you, you who have so little faith? Don't worry, saying, "What will we eat?" or "What will we drink?" or "What will we wear?" For the pagans run after all these things, and your Heavenly Father knows well enough that you need them. But seek first his kingdom and his righteousness, and all these things will also be given to you. (Matt. 6:25-33, RSV,

altered.)

Oh, I've annoyed you. I'm sorry. You didn't want me to just quote Bible verses; you wanted something more, well, impressive. How about if I tell you about something I've taken from my travels in Asia?

I spent a summer in Malaysia, and one of the things I learned there is that people interact differently with time. I don't know how to explain that experience: it was as if for your entire life the only music you heard was the music of a banjo, so that to you the sound of a banjo was the sound of music. Then, after its quick strumming, for the first time you heard a violin, later to be joined by trumpets and flutes: a whole orchestra of music you had not heard. My experience of Malaysian time was like hearing the first notes from a violin.

What's special about Malaysian time? Before answering that, I'd like to answer what is special about American time, and describe it as something foreign. If you took geometry and used protractors to measure angles, you may remember how small a degree is. Three hundred and sixty degrees make a circle; if you imagine a cross section of a knife, which would look like a wedge, it's something like a five degree angle. Putting tick marks on the protractor for degrees is awfully precise—more precise than you really need.

None the less, there are smaller angles, a way to measure even more precisely if you've got the tools to do it. You can divide a degree into sixty minutely small parts, called minutes—it would take 300 of them to make a wedge as thick as a knife—and then if that isn't tiny enough for you, you can divide a minute into sixty even smaller pieces, so small that it would take 18,000 of them to make a wedge as thick as a knife. These sort of

"second minutes" are called seconds, and if an angle one minute wide is ridiculously tiny, a second is even more ridiculous.

Yet our watches measure minutes and seconds—a digital stopwatch measures hundredths of seconds. In the Bible, an hour is the smallest unit of time. We have taken an hour and divided it into minute parts, called minutes, and then secondly minute parts called seconds. If I were describing my culture's time sense to an aborigine who understood English, I would say that we have machines that count, and that time is the exact number on a counting machine, and that we are so incredibly attuned to this mechanical counting of tiny time increments that we can ask a machine to cook food for five minutes and count down the last minute in tense agony. And I wouldn't be surprised if he struggled to grasp an understanding of time that is so exotic.

In Malaysia, as in many non-Western countries, things tend to be slower than in America. However, this is something from a detour from a qualitative difference in the experience of time. We are sharply attuned to time as numbers, minutely measured. To the Malaysian, time fades to the background as you try to be with people relationally: you visit someone and it takes however long it takes. You don't say "I'll talk with you for fifteen minutes;" you talk with the person and let the visit itself work out how many numbers a machine would count before you leave. That's a simplified explanation, and I won't try to explain the difference between the Malaysian experience of time and what effect a Western visitor experiences. Instead of explaining that, I'd like to talk about what effect it had on me.

That was my first experience living abroad, and it opened a door. It was the first time my culture shifted. It let me realize that I could shift my culture. What? I'm not sure how to explain.

I consciously shifted my sense of time in Malaysia, and the conscious shifting didn't stop when I left. I've been interested in different experiences of time since then, and I've worked hard to keep a slower, more relational sense of time, where time recedes to the background and presence becomes more important—which has rescued me from the tyranny of the clock. I've picked up things from other cultures—a medieval sense of space, for instance. How's that?

When I took a class in modern physics, the professor was interested in my assessment that Newtonian physics is basically a mathematical restatement of our common sense understanding of how the world works: everything has its place at a given time; time is straightforward; space is a three-dimensional version of what we study in high school geometry, and so on and so forth. Modern physics is a complete reversal: space itself is convoluted in ways that are hard to understand unless you know advanced math, there is no absolute time and space, there are funny things that happen when you try to measure both where something is and how fast it's moving, everything (including you and me) is both a particle and a wave, you can have a cat that's both dead and alive until you look at it... A few years later, I read about medieval culture and made a very slight change to my evaluation that Newtonian physics is a mathematical development of our common sense while modern physics is closer to the result of a contest to see who could find the strangest way of describing our world.

In medieval thought, you don't have anything like Newton's one absolute time and space that encompasses everything. There's an icon of two saints from different centuries talking together, and this troubles the medieval mind not at all. Each place is not one more cell of an immense Newtonian grid, but its

own little world with its own internal logic. (Could the medievals do logic? They invented the university, and Aristotle, who defined logic, was to many medievals the philosopher.) This, more than any logical weakness, appears to be why the medievals could look at four places all claiming to have the head of John the Baptist, and be grateful that God had been so generous. This understanding of space may be part of why C.S. Lewis, a medievalist, would write a children's story that begins to get interesting when a girl walks into a wardrobe and finds that inside is a passage to another world. When I understood this view of space, I revised my estimation that Newton's physics is a mathematical version of our common sense and modern physics is strange. Newton is not a mathematical version of common sense because my culture's common sense is a non-mathematical simplification of Newtonian physics. We have the cart before the horse: Newtonian physics shaped what I felt was common sense, and this common sense is something not shared by a great many intelligent people.

I remember one point that I was walking with some friends through a park and felt momentarily disoriented when I saw an American flag. The reason I felt disoriented was that I was looking at a very picturesque pastoral view and talking with my friends, and had become steeped enough in the medieval view of space that I thought of it as its own country. I value that error—even if it was an error—because it showed that the medieval view of space had seeped deep enough into my bones that I could not only talk about it, but see through medieval eyes. Do I think that my culture's view of time and space is false? I believe they're a rather small kind of truth—true so far as they go, but not nearly as significant as they seem. The medieval view of space means that when I enter the house of God, I am entering a

special place, a sacred space, a place to cast aside all earthly cares. (This way of thinking, by the way, makes a difference in being able to enter another person's world.)

Some people could probably say nasty things about this, and I have gotten myself in the trouble. But I have made it a discipline to become acquainted with other cultures, past and present, and draw on them. In this discipline, I've learned that there are things I can say 'no' to, things that don't have to be. Living under the tyranny of the clock, and a lot of the stress we experience, doesn't have to be. My time in Malaysia was the key that opened that door.

It would take a very long time to explain, or even remember, the treasures I've encountered. Let me mention one. Another practical life skill has to do with technology. Computer hobbyist as I am, I once began a book entitled, *The Luddite Guide to Technology*. The title was meant less to convey irony than to suggest something: technology costs other things besides its price tag. A cell phone, for instance, means that you are available to people who want to reach you no matter where you are. It also means that you lose your privacy. This is, in fact, the same thing, and it is part of why I don't own one. Technology has ramifications well beyond what you pray in a store, and I believe there's a lot to be said for seeing a technology and asking, "What effects will this have?" before asking, "Can I afford it?" The Amish position is a lot more sophisticated than it seems. It's not, "Technology, bad!" The Amish believe that technologies will impact their community, and they evaluate a technology based on whether it will help or hinder their community. The reason they have buggies but not cars is not that buggies are older than cars, but that buggies give mobility within a community and cars make it all too easy to detach oneself from a

community. This is a major difference. I disagree with some specifics of how they take that project, but I respect them profoundly for making that inquiry.

What does this have to do with de-stressing? I read a webpage a while back where the author talked about getting a perspective about 1950's wages versus 1990's wages. In both decades, an hour's work at minimum wage will buy you a burger and fries at a restaurant. Then how has a double income become insufficient for a family? He started listing i.e. what was in a kitchen in the 1950's versus the many things found in a 1990's kitchen, and his conclusion was, "We're not keeping up with the Joneses any more. We're keeping up with the Trumps." The spiritual discipline of simplicity provides an alternative to burning the candle at both ends.

When Y2k was approaching, I was profoundly pessimistic. It was my considered judgment that January 1, 2000 would be doomsday. So I was trying hard to prepare. And one of the things that I realized was that if society shut down, there wouldn't just be the physical challenge of food, drink, and so on. Any physical challenges would be dwarfed by the psychological challenge. So I began doing research.

I asked around on newsgroups; I checked out books on people in wartime and disaster conditions. In the end I received very little in the way of interesting responses; about the most I got by way of response was one person on a survivalist newsgroup saying, "You're right; be sure to get some board games." (If I were to be stuck in my house long term, board games would have been profoundly inadequate.) The best I was able to find was material about Christians who had been held hostage. Those who weathered the storm best were those who had a strong devotional life. Spiritual discipline made the difference.

What I have found in my travels, in my reading, in my exploring, amounts at its most basic to spiritual discipline. Sometimes this is quite mundane spiritual discipline. There was a man who told a doctor, "I don't want you to tell me to stop burning the candle at both ends. I want you to give me more candle." Part of spiritual discipline is learning what is possible rather than chasing an impossible fantasy—to stop searching for something to give you more candle, and instead learn to put out one of the flames and let the other flame burn for its full length of time.

One of the things I have learned is to guard the inner person. Guard thoughts, beliefs, emotions, desires. C.S. Lewis said that today we only ask one ethical question, or maybe two, out of three major questions the ancients asked. If we use the image of ships at sea, the main question we ask is, "How can the ships avoid bumping into each other?" The other two questions, which were recognised in the ancient world, are "How can the ships be shipshape inside?", and "Why are they out at sea in the first place?" It's awfully hard to keep from bumping into other ships if you don't do whatever it takes to be shipshape inside—even if you can't do it perfectly (I certainly can't), it's better to aim for the sky and miss than aim for manure and hit. Being unstressed has something to do with how I am inside, what care I take of myself, and how I live in the Spirit whose communion makes a world of difference. And this care of this inner person, means sitting and thinking and praying, but it also saying 'no' to things that push me too far from calm and quiet: I can't do this completely, but if I have a choice between working overtime and not having the latest appliances and working overtime, I'll have a bit of an emptier house. This is also true on a smaller scale: sometimes when I am most desperately locked into "I need to

get this done!", is precisely the point when I most need to take a break. Besides the larger-scale lifestyle choice, there is a vast number of little choices that add up to a lot. Choices like "How long will I work on this task today?", or "Will I start something productive or procrastinate just a little?" add up to a lot.

There's a saying that procrastination is the thief of time. Putting off work drains your time and mine, doing something that is neither productive work nor refreshing leisure—and steals time from both your work and leisure. Sometimes I'm feeling burned out when I stop work at 5:00, and it's awfully hard to do anything besides sit in the chair and stare into nothingness. That can be when I most need to play with a pet project, or take a walk, or talk with another person—and I have a choice there whether to act proactively or simply sit, drained. What I need is, on the small scale, a proactive sense of balance that means both choosing to avoid now what is too much for now, and to overcome myself and pour myself into something when my natural bent is to just procrastinate, just a little. He who is faithful in little is also faithful in much. He who is unfaithful in little is also unfaithful in much. This means that if I am going to do a good job on a project, I am not given a choice about whether I will do well on it. I really only have a million little choices about whether I'll get to work or fiddle with something non-productive, just for a little while.

Another aspect of spiritual discipline that has made a difference is to learn, even if I learn slowly and badly, to stop thinking in practical terms like an atheist. What do I mean by that? (I've been a Christian all my life.) Let me explain. One of my friends, who is an administrator, has a paper above his desk that says, "Good morning. This is God. I will handle all of your problems today. Please relax, and enjoy the day." There's a big

difference between believing that and believing on paper that there is a God, but you have to solve all of your problems on your own, by yourself. One is a situation where you are working with a loving God, and he's ultimately in charge. The other is one where you're an orphan, nobody's in control, and if you don't get things just right, you're at the mercy of chance—and if you do happen to get things right, you're still at the mercy of merciless chance. There's a world of difference between these two. Believing that you are working with God, he is in charge, and will deal with things in his sovereign manner, means so much less stress.

Now I am learning about another kind of time, liturgical time.

This aspect of spiritual discipline surprised me, because I became Orthodox without this being a reason why: I was more humoring the Church than believing its practice was anything good. And I was surprised when it was. In liturgy, time flows, like a stream in a peaceful forest: here it moves quickly, there it flows slowly, there it turns in eddies. That's how liturgical time flows in Orthodox worship. But liturgical time isn't confined to Church; there are the cycles of the day, week, and year, and all of these interlock, making exquisite patterns. There is a whole spectrum of interlocking colours. Alexander Schmemmann wrote that secular culture has "literally no time": the tyranny of the clock is a vast emptiness compared to what time should—and can—be. Orthodoxy has this discipline—an hour to begin, a lifetime to master—and it manages to preserve wisdom that has endured for ages and at the same time be about living a life of faith, now.

There is the paradox—or at least what seems to be a paradox from outside—of a living anachronism, of something that is in a very real sense ancient, a Patristic culture that is alive today, and at the same time something that is not trying to restore a golden age, because it's trying to live now.

And to describe Orthodoxy as a culture, in purely secular terms, is to miss something fundamental. The culture is there precisely because it is part of something larger. If you say Orthodoxy is a culture, you have another detail of earth. If you recognize that Orthodoxy brings Heaven down to earth, and draws people to share in the divine life, then you are no longer looking at earth alone. This has profound ramifications for spiritual discipline—for what it means and what it does. It means that spiritual disciplines are not an earthly tool to give you an edge in living an earthly life. They take the life we live and begin to draw it into a Heavenly life that begins here on earth.

Someone has said, "Even if you win the rat race, you're still a rat." Spiritual discipline isn't the whole picture, but it does much more than mitigate the worst effects of the rat race. As you begin to walk the path, the Orthodox way, you begin to live the joy you were made for. God touches you so you become more like Christ, and live more deeply, richly, and fully the divine life.

Have I left anything out? Yes, volumes. I haven't talked about prayers, but praying has done a world of good to me. (And God has also given me many of the things I've asked for. But that's another story.) In prayer, God takes the many requests we make of him and weaves them into something immeasurably greater: communion with him, the Lord and Creator of all that exists. I haven't talked about the simplicity and "Non-Conform Freely" of [Living More with Less](#), a book that says quite a lot that's relevant here. I haven't even mentioned sacraments. Of the things I've met, read, thought about, imagined, and created, the treasures all seem to boil down to spiritual discipline, which is quite a lot. Is there anything that spiritual discipline boils down to? Funny you should ask. I've found some very practical advice in a book:

So don't worry about your life, what you will eat or drink, or about your body, what you will wear. Isn't life more than food, and the body more than clothing? Look at the birds of the air: they neither sow nor reap nor gather into barns, but your Heavenly Father feeds them. Aren't you worth much more than them? And which of you can add another hour to his life by worrying? You might as well try to add another foot to your height! And why do you worry about clothing? Consider the lilies of the field, and how they grow. They neither toil nor spin, but I tell you that not even Solomon in all his glory was dressed like one of these. But if God so clothes the grass of the field, which today is alive and tomorrow is thrown into the oven, won't he much more clothe you, you who have so little faith? Don't worry, saying, "What will we eat?" or "What will we drink?" or "What will we wear?" For the pagans run after all these things, and your Heavenly Father knows well enough that you need them. But seek first his kingdom and his righteousness, and all these things will also be given to you. (Matt. 6:25-33, RSV, altered.)

## For Further Reading...

### [The Powered Access Bible](#)

I made the Powered Access Bible to make it easy to find things in the Bible and read them in context. The [Sermon on the Mount](#) is an excellent place to start learning about the foundations of spiritual discipline.

The Philokalia ([Volume 1](#), [Volume 2](#), [Volume 3](#), and [Volume 4](#)).

The Philokalia is a massive compilation by spiritual masters from the fourth to fifteenth centuries. It is all about the life of discipline, and is second only to the Bible in spiritual writings that have influenced the Orthodox Church.

[In Celebration of Discipline](#), by Richard Foster

I was given this book on my baptism at Petaling Jaya Gospel Hall. It's a good introduction to spiritual discipline, especially if you find it foreign.

### [A Manual of Eastern Orthodox Prayers](#)

This is the prayer book that I use in my prayers. It is part of the liturgical rhythm I am using, and it has prayers of great beauty.

[Living More with Less](#), by Doris Longacre

This is a very simple book that outlines five principles. Where it talks about abstaining from things, this is always in the context of a fuller life. It does a good job of underscoring the joy of spiritual discipline.

[Maximus Confessor: Selected Writing](#), by Saint Maximus Confessor

Saint Maximus Confessor wrote at the end of the Patristic age and was a key figure in helping crystallise the Christian understanding of who Christ was. His writings are slow reading, enigmatic, and full of insight. I'd recommend starting with his "chapters on love".

[The Orthodox Way](#), by Bishop Kallistos Ware

[The Orthodox Church](#), also by Bishop Kallistos Ware, has become the standard introduction to the Orthodox Church.

[The Orthodox Way](#) is much shorter and says less, but resonates more. Or at least that's what I've found. More than anything else I've read, this book answers the question, "What does a life of discipline look like from the inside?"

# Now

Now.

Eternity is now.

Eternity is now,

And Paradise is wherever the saints are.

Forever we are dispersed,

Our minds' concentration diffused,

Wishing it were a later time,

When something we are waiting for arrives,

A false hope.

Hope abides, with faith and love,

A hope things eternal to wit,

Earthly hopes do not deliver:

"Earthly things cannot give Heavenly comfort,

And in the end earthly things cannot give earthly comfort,

Either:

Heavenly comfort is the only comfort to be had."

Hoping for change on earth will disappoint:

This is the key to the riddle:

"Two great tragedies in life:

Not to get your heart's desire,

And to get it."

The desire for comfort in earthly hopes,

Is a vortex.

Sucking the energy out of life.  
But there is another way.  
To a thief crucified in torture,  
To any man in circumstances dire,  
Hear the word of the Lord:  
"This hour you will be with me in Paradise."  
And listen to its heart:  
Paradise is not when we get some earthly wish;  
Paradise is now,  
A scattered mind,  
Brought home as a dove in peace,  
To an earth lifted up to Heaven.  
He who wants peace and paradise,  
And worries about how to arrange the things of earth,  
Is rightly compared,  
To a man who wants to swim and clap his hands.  
Multitasking is a way to grasp at more,  
And let more slip through your fingers,  
So you end up grasping less,  
And dissipation with it.  
"What is the sound of one hand clapping?"  
What is the peace achieved by worry?  
What is the contentment achieved by acquiring something?  
If your desire is frustrated,  
Perhaps God wishes to free you to greater goods:  
Treasures on earth give only illusory security,  
But treasures in Heaven feed us today.  
And if you cannot see how God could provide,  
Perhaps God is waiting,  
To give you something bigger,  
To see with the eyes of faith.

Be in your mind,  
"A garden locked,"  
"A fountain sealed,"  
Not dispersed in every direction,  
For when we abandon this NOW that God gives us,  
And wish a handhold on controlling the future,  
Our hearts spill out in every which way,  
Losing living water by grasping for an earthly water supply,  
"Take no thought for tomorrow,"  
And let Living Water enclose Himself,  
In the cistern of your heart.  
The time for eternal life is now:  
The time for obedience is now,  
If you procrastinate,  
Choosing not to obey now,  
Saying, "I can do it later,"  
When that "later" becomes "now",  
It will be harder to do now,  
Because you have already rejected doing it now.  
"Take no thought for tomorrow,"  
You will more have eternity now,  
If your heart is not dispersed,  
Dispersed into "What if this?"  
Dispersed into "I want that,"  
Than if you attend today to what God has given today,  
("Each day has enough troubles of its own.")  
You will be better rested from one night's sleep,  
Than trying your hardest to sleep for a week at once,  
You will be better nourished by eating one nourishing meal now,  
Than trying to get a head start by eating ten nourishing meals at  
one sitting.

And leave this now for other imagined moments.

Tomorrow does not come,  
As a worry, or a plan, or other distraction:  
God has not given it yet,  
But when he does give,  
He will give it as now.

A now where we will remain in the summons,  
To gather ourselves into our heart,  
To dismiss thoughts that disperse us,  
Present to God,  
Present to neighbor,  
Present to surroundings,  
And Paradise present to us.  
When the time comes,  
When we will sink or swim,  
We will swim,

Because swimming is easier than you think,  
When you are only trying to swim,  
And not also clap your hands:  
"My yoke is easy and my burden is light:  
Come to me, all who are weary,  
And I will give you rest."

There is no other time we can obey,  
But:  
Now.  
Now.

# Oops... Could the Western Rite Please Try Again?

Fr. Cherubim has left a considerable wake; the tip of the iceberg is in his contribution to a wave of committed Evangelicals deciding that being Orthodox is an indispensable aid to pursuing their cottage industry of reconstructing the ancient Church. The sycophant excitedly commented, "Yes; there was an article on this phenomenon in The Onion Dome. It was a bit like that article in The Onion, um, what was it... there was a woman, a strong woman, who overcame years of childhood abuse to become a successful porn star..."

[Followers of Fr. Cherubim \(Thorn\) Demand His Immediate Canonization and Full Recognition as Equal to the Heirophants](#)

## The Western Rite: "Chaotic Neutral" Orthodoxy

When I played Dungeons & Dragons in high school, one of the cardinal rules surrounded alignments: "Lawful Good", "Neutral Good", "Chaotic Good", "Lawful Neutral", "True Neutral", "Chaotic Neutral", "Lawful Evil", "Neutral Evil", and "Chaotic Evil". Each of these alignments was quite different from each other, but there was a common undergirding: no matter what alignment you play, you pick a course of action and you stick with it. You may be a hero or a villain; you may believe in organized

cooperation or the power of the individual, but whatever your choice may be, you are shirking due diligence as a role playing gamer unless you pick a course of action and stick with it.

Except for one exception. "Chaotic Neutral" isn't exactly a matter of picking a course of action and sticking it with it.

"Chaotic Neutral" role play can be described as "You can do anything you want, as long as you don't do it twice," and it is the closest alignment to acting like a hero one day and a villain the

Since my involvement with Dungeons & Dragons, I wrote a Christian role playing game, [The Minstrel's Song](#), before writing [Exotic Golden Ages and Harmony with Nature: Anatomy of a Passion](#) and moving away from role playing games.

next. It has a bad reputation among gamers, perhaps because it disproportionately draws gamers who want to dodge proper handling of one cardinal aspect of game play, and quite possibly may dodge due diligence in other areas as well. And the Western Rite seems in large measure to be the "Chaotic Neutral" of Orthodoxy.

**Q: Why do some Protestants keep trying to reconstruct the ancient Church?**

**A: The "Great Apostasy"**

If you are trying to understand Protestant Christianity, one of the key features you should understand is the "Great Apostasy", even if the term is unfamiliar to many Protestants today. Today the Internet is in working order, and regardless of what may happen in the future, it would be a strange thing to seek out venture capitalists now to help fund the great endeavor of reconstructing the Internet. It doesn't make sense to "reconstruct the Internet" unless the Internet is dead, which it isn't. And it also doesn't make sense to try to "reconstruct the authentic ancient Church" unless the ancient Church died and left no surviving continuation into our day.

The Reformers asserted that there were serious problems in the Catholic Church they knew, and on that score many loyal Romans agreed with them. (For that matter, there are problems in Orthodoxy today—real problems.) What the Reformers asserted was something stronger: some time between the days of the Apostles and their days, the genuine Church had vanished altogether, on some accounts very soon after the Apostles

passed away, and this belief impelled them to a great project of scholarly research and antiquarian reconstruction to reconstruct the (genuine) ancient Church. And so we have the Evangelical cottage industry of trying to reconstruct the ancient Church, which only makes sense if the Church had vanished and, in Orthodox terms, there was no living Tradition whose milk we should turn to nurse from. It is not an accident that the Reformers abandoned Church vestments in favor of scholar's robes; understanding the Bible was no longer through reading the words of holy saints, but through secular antiquarian research. (This attitude still holds in the secular discipline of Bible scholarship today.)

**Q: And why does the Western Rite keep trying to reconstruct Western Orthodoxy?**

**A: Their own version of the "Great Apostasy."**

The Western Rite's project does make some sense here: the Western Church did in fact go through a *Great Apostasy*, and while I have never heard someone from the Western Rite find a *Great Apostasy* and say that the Orthodox Church has died out in Antiochian, Greek, Russian, Serbian, Georgian, etc. living Tradition, none the less it is not a provocative thing to say that the West was once canonically Orthodox and has ceased to be that.

But in my conversations with Western Orthodox and what I have read, the plumbline of Orthodoxy is always a Protestant-style reconstruction of Western Orthodoxy from the time the West was Orthodox. Hence one asserts, for instance, that the vestments used follow the pattern of the time when East and West wore the same liturgical vestments, before the East changed. And this is not an isolated example; things keep coming up where the offered reason for a decision is that this is closest to what historical lessons tell us things were like in the ancient

Church. It is a Protestant tune that is foreign to non-Western Rite Orthodox, and it keeps coming up.

## Converts from the same tradition

One thing that concerns me is that Western Rite Orthodox are by and large not former Roman Catholics, but former Anglicans: one who understood Roman Catholicism and Anglicanism would be much more wary of former Anglicans practicing the Western Rite than former Romans. But let us waive that aside.

One point of spiritual danger for converts to the Orthodox Church is to overly associate with other converts from the same place, an arrangement that seems to invite subtle regressions to how the former confession places things. I have heard friends commenting how an Orthodox group of former Catholics was getting a bit unhealthy, and I have seen it in a mailing list of former Evangelicals. The Western Rite is largely a group of former Anglicans, and subtle (and

The Western Rite discussion I have seen on Facebook often has an edge of British nationalism.

There were "historical" articles posted, and I remember some surprise at someone asserting King Arthur as literal, historical fact. I've (as a historian type) read quite a lot of scholarly commentary on King Arthur, as well as thousands of pages of medieval Arthurian legends, and though there is

maybe not-so-subtle) bits and pieces of Anglicanism seem to keep cropping up.

The Western Rite was unknown until St. John of Shanghai and San Francisco started to create it on his own authority; it is not a continuous, living tradition preserving Orthodoxy, and here nature abhors a vacuum. Converts practicing Western Orthodoxy, not in a position to nurse from the bosom of a living rite of Eastern Orthodoxy, willingly or unwillingly regress to the milk of [an Anglicanism whose Archbishop of Canterbury is a Druid](#). (Some have said that the Anglican way is not via media as proclaimed, but "cut, copy, and paste." But let us leave that aside.)

some evidence that there might have been a warrior named Arthur, [the basic idea of King Arthur comes from a pseudo-historical work, the Brut, which was great reading and captivated European readers, but is not a work of history in any way, shape, or form](#). (I don't remember reference to King Oswald, a saint and martyr which English kings associated with until slightly after William the Bastard's invasion in 1066.)

## ***Must I adopt a foreign culture?***

Christ did not invent baptism, nor did John the Baptist. Baptism was practiced in Judaism for the reception of non-Jewish pagans into Judaism: it was bringing in someone who was unambiguously portrayed as an outsider. What Christ did that was distinctive was to say that baptism is for everyone, Jew as much as Greek pagan. We all start outside.

The introduction to Bishop NIKOLAI's [Prayers by the Lake](#) speaks of "the Christ-fighting Slavic soul": Russians and Serbs need to swim upstream. And I remember a discussion with one Serb on Facebook who was a devout Orthodox and corrected my assumption that he had grown up in Orthodoxy: he grew up an atheist and learned that the giants of Serbian history were all Orthodox, and then discovered something much bigger than nationalism when he discovered Holy Orthodoxy.

One of the differences between Catholicism and Orthodoxy is that in Catholicism, philosophy and culture can be swapped in and out; Thomism is a usual standby but Patriarch JOHN PAUL was a phenomenologist. In Orthodoxy, however, philosophy and culture are not something you change like a garment, and the Orthodox Church in its way keeps alive philosophies and cultures long after the West apostasized. Today's Western culture boasts a millenium of apostasy and is scarcely closer to tenth

century England than it is to present-day India. If you're going to aim for what Western culture was when it was still Orthodox, you have at least as far to go as if you join an Orthodox Church and start to absorb its culture along the way.

And not to put too fine a point on it, but former Catholics and Protestants can only enter the Church as reconciled heretics; we may wish it were some other way, but former Anglicans (among others) are reconciled heretics who particularly need to submit to the Church as one shaped outside of her ways.

## Is there any alternative?

Let's leave aside generalities for just one moment and talk in the specific. My priest is a protopresbyter or archpriest within ROCOR, and a former Anglican deacon. He is glad that he was not immediately ordained when he entered the Orthodox Church, but spent some time as a layman growing Orthodox roots. And not to put too fine a point on it, but I have never heard him argue, in Western Rite style, "This book says that this is how something was done in the ancient Church, so we should implement a program of change to restore this part of ancient Christianity."

Not that he has any particular desire to throw out the old; he's rather conservative. But one particular decision he has made is interesting. As well as being a priest he is a physician, a doctor who treats patients at the extremes of pain and suffering, and he has brought together an icon shrine devoted to one of the "holy unmercenary physicians", saints who healed without charge. And he has placed, very near together, an icon of the ancient Roman St. Panteleimon next to a hand-painted icon of the twentieth century Blessed St. Luke. Another icon shows all of the holy unmercenaries across all the centuries, and as it so happens, the specific saint the corner is named after is St. Panteleimon. From the same fount as this icon corner comes a priest who will accept wisdom from a saint of any century, and again, I have never heard him argue, "This is what my book

research says about how things were way back several centuries ago, or nineteenth century Russia or whatever, so we should change what we are doing to reconstruct the past."

Looking at all the reconstruction of Western Orthodoxy that looms so large in the Western Rite, and seeing such an incredibly Anglican demeanor among Anglican converts who do not seem to really see themselves as reconciled heretics, wild olive branches grafted onto the Vine, leads me to want to say, "**Oops... Could the Western Rite please try again?**"

# Open

How shall I be open to thee,  
O Lord who is forever open to me?  
Incessantly I seek to clench with tight fist,  
Such joy as thou gavest mine open hand.  
Why do I consider thy providence,  
A light thing, and of light repute,  
Next to the grandeur I imagine?  
Why spurn I such grandeur as prayed,  
Not my will but thine be done,  
Such as taught us to pray,  
Hallowed be thy name,  
Thy kingdom come:  
Thy will be done?  
Why be I so tight and constricted,  
Why must clay shy back,  
From the potter's hand,  
Who glorifieth clay better,  
Than clay knoweth glory to seek?  
Why am I such a small man?  
Why do I refuse the joy you give?  
Or, indeed, must I?  
And yet I know,  
Thou the Theotokos the saints

...ness, the presence, the same,  
Forever welcome me with open hearts,  
And the oil of their gladness,  
Loosens my fist,  
Little by little.  
God, why is my fist tightened on openness,  
When thou openest in me?

# **An Open Letter to Catholics on Orthodoxy and Ecumenism**

## **What might be called "the Orthodox question"**

I expect ecumenical outreach to Orthodox has been quite a trying experience for Catholics. It must seem to Catholics like they have made Orthodoxy their top ecumenical priority, and after they have done their best and bent over backwards, many Orthodox have shrugged and said, "That makes one of us!" or else made a nastier response. And I wonder if Catholics have felt a twinge of the Lord's frustration in saying, "All day long I have held out my hands to a rebellious and stubborn people." (Rom 10:21)

In my experience, most Catholic priests have been hospitable: warm to the point of being warmer to me than my own priests. It almost seems as if the recipe for handling Orthodox is to

express a great deal of warmth and warmly express hope for Catholics and Orthodox to be united. And that, in a nutshell, is how Catholics seem to conceive what might be called "the Orthodox question."

And I'm afraid I have something painful to say. Catholics think Orthodox are basically the same, and that they understand us. And I'm asking you to take a tough pill to swallow: Catholics do not understand Orthodox. You think you do, but you don't. I'd like to talk about an elephant in the room. This elephant, however painfully obvious to Orthodox, seems something Catholics are strikingly oblivious to.

## **A conciliatory gesture (or so I was told)**

All the Orthodox I know were puzzled for instance, that the Pope thought it conciliatory to retain titles such as "Vicar of Jesus Christ," "Successor of the Prince of the Apostles," and "Supreme Pontiff of the Universal Church," but drop "Patriarch of the West." Orthodox complain that the Roman bishop "was given primacy but demanded supremacy," and the title "Supreme Pontiff of the Universal Church" is offensive. Every bishop is the successor of the prince of the apostles, so reserving that title to the Pope is out of line. But Orthodoxy in both ancient and modern times regards the Pope as the Patriarch of Rome, and the Orthodox Church, having His Holiness IGNATIUS the Patriarch of Antioch and all the East, has good reason to call the Patriarch of Rome, "the Patriarch of the West." The response I heard to His Holiness Benedict dropping that one title while retaining the others, ranged from "Huh?" to, "Hello? Do you understand us at all?"

## **What Catholics never acknowledge**

That is not a point I wish to belabor; it is a relatively minor example next to how, when in my experience Catholics have warmly asked Orthodox to reunify, never once have I seen any recognition or manifest awareness of the foremost concern Orthodox have about Rome and Constantinople being united. Never once have I seen mere acknowledgment of the Orthodox concern about what Rome most needs to repent of.

Let me clarify that slightly. I've heard Catholics acknowledge that Catholics have committed atrocities against Orthodox in the past, and Catholics may express regrets over wrongs from ages past and chide Orthodox for a lack of love in not being reunified. But when I say, "what Rome most needs to repent of," I am not taking the historian's view. I'm not talking about sack of the Constantinople, although people more Orthodox than me may insist on things like that. I am not talking about what Rome has done in the past to repent of, but what is continuing now. I am talking about the present tense, and in the present tense.

When Catholics come to me and honor Orthodoxy with deep warmth and respect and express a desire for reunion, what I have never once heard mention of is the recantation of Western heresy.

This may be another tough pill to swallow. Catholics may know

that Orthodox consider Catholics to be heretics, but this never enters the discussion when Catholics are being warm and trying to welcome Orthodox into their embrace. It's never acknowledged or addressed. The warm embrace instead affirms that we have a common faith, a common theology, a common tradition: we are the same, or so Orthodox are told, in all essentials. If Orthodox have not restored communion, we are told that we do not recognize that we have all the doctrinal agreement properly needed for reunification.

## **But don't we agree on major things? Rome's bishops say we do!**

I would like to outline three areas of difference and give some flesh to the Orthodox claim that there are unresolved differences. I would like to outline one issue about what is theology, and then move on to social ethics, and close on ecumenism itself. I will somewhat artificially limit myself to three; some people more Orthodox than me may wonder why, for instance, I don't discuss the filioque clause (answer: I am not yet Orthodox enough to appreciate the importance given by my spiritual betters, even if I do trust that they are my spiritual betters). But there's a lot in these three.

To Catholics who insist that we share a common faith, I wish to ask a question that may sound flippant or even abrasive. A common faith? Really? Are you ready to de-canonize Thomas Aquinas and repudiate his scholasticism? Because Orthodox faith is something incompatible with the "theology" of Thomas Aquinas, and if you don't understand this, you're missing something fundamental to Orthodox understandings of theology. And if you're wondering why I used quotes around "theology," let me explain. Or, perhaps better, let me give an example.

See the two texts below. One is chapter 5 in St. Dionysius (or, if you prefer, pseudo-Dionysius), *The Mystical Theology*.

That gem is on the left. To the right is a partial rewriting of the ideas in the style of Thomas Aquinas's *Summa Theologiae*.

**St. Dionysius the  
Areopagite, "The Mystical  
Theology"**

Again, as we climb higher we say this. It is not soul or mind, nor does it possess imagination, conviction, speech, or understanding. Nor is it speech per se, understanding per se. It cannot be spoken of and it cannot be grasped by understanding. It is not number or order, greatness or smallness, equality or inequality, similarity or dissimilarity. It is not immovable, moving, or at rest. It has no power, it is not power, nor is it life. It is not a substance, nor is it eternity or time. It cannot be grasped by the understanding since it is neither knowledge nor truth. It is not kingship. It is not wisdom. It is neither one nor oneness, divinity nor goodness. Nor is it a spirit.

**Rewritten in the scholastic style  
of Thomas Aquinas**

Question Five: Whether God may accurately be described with words and concepts.

Objection One: It appears that God may be accurately described, for otherwise he could not be described as existing. For we read, I AM WHO AM, and if God cannot be described as existing, then assuredly nothing else can. But we know that things exist, therefore God may be accurately described as existing.

Objection Two: It would seem that God may be described with predicates, for Scripture calls him Father, Son, King, Wisdom, etc.

in the sense that we understand the term. It is not sonship or fatherhood and it is nothing known to us or to any other being. It falls neither within the predicate of nonbeing nor of being. Existing beings do not know it as it actually is and it does not know them as they are. There is no speaking of it, nor name nor knowledge of it. Darkness and light, error and truth—it is none of these. It is beyond every assertion and denial. We make assertions and denials of what is next to it, but never of it, for it is both beyond every assertion, being the perfect and unique cause of all things, and, by virtue of its preeminently simple and absolute nature, it is also beyond every denial.

father, son, king, wisdom, etc.

Objection Three: It appears that either affirmations or

negations must accurately describe God, for between an affirmation and its negation, exactly one of them must be true.

On the Contrary, I reply that every affirmation and negation is finite, and in the end inadequate beyond measure, incapable of containing or of circumscribing God.

We should remember that the ancients described God in imperfect terms rather than say nothing about him at all...

## Lost in translation?

There is something lost in "translation" here. What exactly is lost? Remember Robert Frost's words, "Nothing of poetry is lost in translation except for the poetry." There is a famous, ancient maxim in the Orthodox Church's treasured [Philokalia](#) saying, "A theologian is one who prays truly, and one who prays truly is a theologian:" theology is an invitation to prayer. And the original *Mystical Theology* as rendered on the left is exactly that: an invitation to prayer, while the rewrite in the style of the *Summa Theologiæ* has been castrated: it is only an invitation to analysis and an impressively deft solution to a logic puzzle. The ideas are all preserved: nothing of the theology is lost in translation except for the theology. And this is part of why Archimandrite Vasileos, steeped in the nourishing, prayerful theology of the Orthodox Church, bluntly writes in [Hymn of Entry](#) that scholastic theology is "an indigestible stone."

Thomas Aquinas drew on Greek Fathers and in particular St. John the Damascene. He gathered some of the richest theology of the East and turned it into something that is not theology to Orthodox: nothing of the Greek theology was lost in the scholastic translation but the theology! And there is more amiss in that Thomas Aquinas also drew on "the Philosopher," Aristotle, and all the materialistic seeds in Aristotelianism. (The Greeks never lost Aristotle, but they also never made such a big deal

about him, and to be called an Aristotelian could be a strike against you.) There is a spooky hint of the "methodological agnosticism" of today's academic theology—the insistence that maybe you have religious beliefs, but you need to push them aside, at least for the moment, to write serious theology. The seed of secular academic "theology" is already present in how Thomas Aquinas transformed the Fathers.

This is a basic issue with far-reaching implications.

Am I seriously suggesting that Rome de-canonize Thomas Aquinas? Not exactly. I am trying to point out what level of repentance and recantation would be called for in order that full communion would be appropriate. I am not seriously asking that Rome de-canonize Thomas Aquinas. I am suggesting, though, that Rome begin to recognize that nastier and deeper cuts than this would be needed for full communion between Rome and Orthodoxy. And I know that it is not pleasant to think of rejoining the Orthodox Church as (shudder) a reconciled heretic. I know it's not pleasant. I am, by the grace of God, a reconciled heretic myself, and I recanted Western heresy myself. It's a humbling position, and if it's too big a step for you to take, it is something to at least recognize that it's a big step to take, and one that Rome has not yet taken.

## The Saint and the Activist

Let me describe two very different images of what life is for. The one I will call "the saint" is that, quite simply, life is for the contemplation of God, and the means to contemplation is largely asceticism: the concrete practices of a life of faith. The other one, which I will call, "the activist," is living to change the world as a secular ideology would understand changing the world. In practice the "saint" and the "activist" may be the ends of a spectrum rather than a rigid dichotomy, but I wish at least to distinguish the two, and make some remarks about modern Catholic social teaching.

Modern Catholic social teaching could be enlightened. It could be well meant. It could be humane. It could be carefully thought out. It could be a recipe for a better society. It could be providential. It could be something we should learn from, or something we need. It could be any number of things, but what it absolutely is not is theology. It is absolutely not spiritually nourishing theology. If, to Orthodox, scholastic theology like that of Thomas Aquinas is as indigestible as a stone, modern Catholic social teaching takes indigestibility to a whole new level —like indigestible shards of broken glass.

The 2005 [Deus Caritas Est](#) names the Song of Songs three times, and that is without precedent in the Catholic social encyclicals from the 1891 [Rerum Novarum](#) on. Look for

references to the Song of Songs in their footnotes—I don't think you'll find any, or at least I didn't. This is a symptom of a real problem, a lack of the kind of theology that would think of things like the Song of Songs—which is highly significant. The Song of Songs is a favorite in mystical theology, the prayerful theology that flows from faith, and mystical theology is not easily found in the social encyclicals. I am aware of the friction when secular academics assume that Catholic social teaching is one more political ideology to be changed at will. I give some benefit of the doubt to Catholics who insist that there are important differences, even if I'm skeptical over whether the differences are quite so big as they are made out to be. But without insisting that Catholic social teaching is just another activist ideology, I will say that it is anything but a pure "saint" model, and it mixes in the secular "activist" model to a degree that is utterly unlawful to Orthodox.

Arius is more scathingly condemned in Orthodox liturgy than even Judas. And, contrary to current fashion, I really do believe Arius and Arianism are as bad as the Fathers say. But Arius never dreamed either of reasoning out systematic theology or of establishing social justice. His Thalia are a (perhaps very bad) invitation to worship, not a systematic theology or a plan for social justice. In those regards, Catholic theology not only does not reach the standard of the old Orthodox giants: it does not even reach the standard of the old arch-heretics!

Catholics today celebrate Orthodoxy and almost everything they know about us save that we are not in full communion. Catholic priests encourage icons, or reading the Greek fathers, or the Jesus prayer: "Lord Jesus Christ, Son of God, have mercy on me, a sinner." But what Catholics may not always be mindful of is that they celebrate Orthodoxy and put it alongside things

that are utterly anathema to Orthodox: like heartily endorsing the Orthodox Divine Liturgy and placing it alongside the Roman mass, Protestant services, Unitarian meetings, Hindu worship, and the spiritualist séance as all amply embraced by Rome's enfolding bosom.

What we today call "ecumenism" is at its root a Protestant phenomenon. It stems from how Protestants sought to honor Christ's prayer that we may all be one, when they took it as non-negotiable that they were part of various Protestant denominations which remained out of communion with Rome. The Catholic insistence that each Protestant who returns to Rome heals part of the Western schism is a nonstarter for this "ecumenism:" this "ecumenism" knows we need unity but takes schism as non-negotiable: which is to say that this "ecumenism" rejects the understanding of Orthodox, some Catholics, and even the first Protestants that full communion is full communion and what Christ prayed for was a full communion that assumed doctrinal unity.

One more thing that is very important to many Orthodox, and that I have never once heard acknowledged or even mentioned by the Catholics reaching so hard for ecumenical embrace is that many Orthodox are uneasy at best with ecumenism. It has been my own experience that the more devout and more mature Orthodox are, the more certainly they regard ecumenism as a spiritual poison. Some of the more conservative speak of "ecumenism awareness" as Americans involved in the war on drugs speak of "drug awareness."

Catholics can be a lot like Orthodox in their responses to Protestants and Protestant ideas of ecumenism; one might see a Catholic responding to an invitation to join an ecumenical communion service at First Baptist by saying something like,

I'm flattered by your ecumenical outreach... And really am, um, uh, honored that you see me as basically the same as an Evangelical... And I really appreciate that I am as welcome to join you in receiving communion as your very own flock...

Really, I'm flattered...

...But full communion is full communion, and it reflects fundamental confusion to put the cart before the horse. For us to act otherwise would be a travesty. I know that you may be generously overlooking our differences, but even if it means being less generous, we need to give proper attention to our unresolved differences before anything approaching full communion would be appropriate.

But Catholics seem to be a bit like Protestants in their ecumenical advances to Orthodox. If I understand correctly, whereas Rome used to tell Orthodox, "You would be welcome to take communion with us, but we would rather you obey your bishops," now I am told by Rome that I may remain Orthodox while receiving Roman communion, and my reply is,

I'm flattered by your ecumenical outreach... And really am, um, uh, honored that you see me as basically the same as any Catholic... And I really appreciate that I am as welcome to join you in receiving communion as your very own flock...

Really, I'm flattered...

...But full communion is full communion, and it reflects fundamental confusion to put the cart before the horse. For us to act otherwise would be a travesty. I know that you may be generously overlooking our differences, but even if it means being less generous, we need to give proper attention to our unresolved differences before anything approaching

full communion would be appropriate.

If the Roman Church is almost Orthodox in its dealings with Protestants, it in turn seems almost Protestant in its dealings with Orthodox. It may be that Rome looks at Orthodoxy and sees things that are almost entirely permitted in the Roman Church: almost every point of theology or spirituality that is the only way to do things in Orthodoxy is at least a permitted option to Roman Catholics. (So Rome looks at Orthodoxy, or at least some Romans do, and see Orthodox as something that can be allowed to be a full-fledged part of the Roman communion: almost as Protestants interested in ecumenism look at the Roman Church as being every bit as much a full-fledged Christian denomination as the best of Protestant groups.) But the reverse of this phenomenon is not true: that is, Orthodox do not look at Rome and say, "Everything that you require or allow in spiritual theology is also allowed in healthy Eastern Orthodoxy." Furthermore, I have never seen awareness or sensitivity to those of Orthodox who do not consider ecumenism, at least between traditional communions, to be a self-evidently good thing to work for: Catholics can't conceive of a good reason for why Orthodox would not share their puppyish enthusiasm for ecumenism. And I have never heard a Catholic who expressed a desire for the restoration for full communion show any perception or willingness to work for the Orthodox concerns about what needs to feed into any appropriate restoration of communion, namely the recantation of Western heresy represented by figures like Thomas Aquinas and not only by [Mater et Magistra](#) or liberal Catholic dissent.

## **Conclusion: are we at the eve of an explosion?**

I may have mentioned several elephants in the room. Let me close by mentioning one more that many Orthodox are painfully aware of, even if Catholics are oblivious.

Orthodoxy may remind Western Christians of Rome's ancient origins. But there is an important way in which I would compare Orthodoxy today to Western Christianity on the eve of the Reformation. Things hadn't exploded. Yet. But there were serious problems and trouble brewing, and I'm not sure it's that clear to people how much trouble is brewing.

Your ecumenical advances and efforts to draw us closer to Rome's enfolding bosom come at a rough and delicate time: What if, while there was serious trouble but not yet schisms spreading like wildfire, the East had reached out to their estranged Western brethren and said:

Good news! You really don't need scholasticism... And you don't exactly need transsubstantiation either... And you don't need anywhere such a top-down Church hierarchy...

And you really don't need to be in communion with the Patriarch of Rome... And...

There is a profound schism brewing in the Orthodox Church. It may not be within your power to stop it. but it may be within

...may, not be within your power to stop it, but it may be within  
your power to avoid giving it an early start, and it may be within  
your power to avoid making the wreckage even worse.

The best thing I can think of to say is simply, "God have  
mercy on us all."

Cordially yours,

[Christos Jonathan Seth Hayward](#)

# An Open Letter From a Customer

**I don't WANT to abuse  
your employees and be  
rewarded for gaming the  
system.**

[cjshayward.com/customer](http://cjshayward.com/customer)

Dear Customer Service;

**I don't WANT to abuse your employees and be rewarded  
for gaming the system.**

As a customer and as a member of the public, I like being treated with courtesy and respect, and it is nice if customer service employees can be gracious to me whether I am right or wrong. And if "**The customer is always right!**" is about being gracious and representing the company well whether the customer is right or wrong, then I'm all for **that version** of, "The customer is always right!"

However, if you say "The customer is always right!" as a **policy that invites customers to be deliberately abusive**, and treat your employees as punching bags because they know you

will treat them better than customers who act like mature adults, I will take my business to places like Starbuck's (for one example) where employees give the excellent customer service that only employees supported by their management can give.

I do, sometimes, come in with a complaint that I want help with. But even then, I'm not looking for "free hits" on a punching bag. I'm not even looking for a shoulder to cry on, although it might be nice if customer service can offer a sympathetic ear when a customer has had a rough day. What I really am looking for is help fixing a problem, and **the bigger the problem is, the more an empowered employee is my best ally**. An unsupported employee who has been put out as a punching bag, and is trying to hide resentment from being put out as a punching bag by management, is not nearly so big a help to me as an empowered employee. I've heard that bad internal customer service never gives good external customer service, and **when I need help, I want an empowered employee acting with management support, not someone management pushes forward as a doormat**.

Like a lot of other people, and like a lot of other customers, **I don't like to watch someone be abused**, and then treated better than those of us who try to respect your employees as humans. The message is very clear, whether or not it is one you would want associated with your organization. The message? You are willing to let us see others who are obviously acting abusive to your employees to get ahead of us when they are "just" being abusive to game the system, while people who treat your burning-out employees with respect are effectively second-class customers. Why? Because we are not gaming the system by abusing your employees.

I've heard of stores where the management treats employees

with enough respect to call the police if a customer will not stop treating employees abusively. This happens perhaps once or twice a year; most of the time the employees are trying to make any reasonable effort to please customers. But when it does happen, **the spontaneous response from the other customers is to clap and cheer.** Most customers do not enjoy seeing someone be abused, even if the abuser isn't getting rewarded for gaming the system.

I spent a bit of time in England, and one thing that really struck me there was that customer service settings seemed to quite often have a poster that said something like, **"I am here to help customers. Please let me do my job. If you treat me in an abusive manner, my supervisors will put their foot down and call the police if they need to."** I was, for a very, very short while put off the first time I saw one of those posters, and then very, very impressed. And I realized that **those posters went hand-in-hand with excellent customer service:** not just the routine details, but deftly smoothing some very ruffled feathers when a customer was wrong and upset at not getting what he wanted.

And perhaps it stands to reason. I know the English place an emphasis on politeness, but customer service people who are treated as punching bags will probably be working hard to hide resentment. I may be missing something, but these customer service people didn't seem to have much resentment to hide. (If any.)

I miss that customer service, and for that matter I miss the posters. Now I often get the inferior customer service that comes from employees who know that management doesn't support them (and knowingly expects them to take abuse), not the top-notch customer support of employees who are supported

by management, are not expected to take frequent abuse, and act empowered and free to help me as the customer. It's quite a difference.

It's a shame when "The Customer Is Always Right" gets in the way of treating employees well enough that they can deliver good customer service.

**As a customer and as a member of the general public, and as a man and a human being, I would appreciate if you treat your employees as human beings who you will no more allow to be abused on your premises than a customer.**

Sincerely,

Christos Jonathan Hayward

# An Open Letter to OTHER Link Prospectors

Dear **Other** Link Prospectors;

I run a major website at [cjshayward.com](http://cjshayward.com). It is a collection of my creative works and has increasingly been focused on Orthodox theology. Suggested starting points include [Doxology](#) and [The Angelic Letters](#). Most of what I've written for reading (as opposed to e.g. open source software or artwork) [is available collected in this seven volume set](#).

I've gotten the occasional fan (e)mail, but I have never had a fan or visitor be generically impressed with everything on my website. I've only had one visitor claim to have read everything for that matter. People who just like my work tend to give some specific compliment or thanks for some of the specific content on my site. Usually people who write fan mail are more than happy to explain what, specifically, makes them happy my site is available to them.

For that matter, I've gotten flames, and the flames in general are quite obviously written in response for some specific posting or element on my site. No one really seems to call me nasty things without some specific statement about how work on my

site. Call it justified the claim

SITE TULLY JUSTIFIES THE CLAIM.

If you try to obtain a one-way backlink from my site without bothering to find out what my site is about and what some of my works are, you are failing to show me a courtesy readily shown by most haters. Please do not be offended if I regard your contact as spam and it is reported as spam.

## A “Hall of Shame” example

I've gotten various link prospecting emails that in generic terms could be sent to the owners of almost any website. The most recent example of a particularly objectionable link prospecting emails is,

**Subject:** Thank you  
Dear C.J.S. Hayward,

Although, it is generally not in my nature to “cold-contact” people I don't know, nonetheless, I wanted to offer you my gratitude for the writings you have shared on your website. They have gotten me through some very hard days. As way of saying “thank-you”, and not being at this time to make any purchases of your products, following are three website links related to one of your current posts, that I thought you may find useful. They are:

<http://arachnoid.com/>

(Psychology - Located on the sidebar of homepage)

<http://www.hoagiesgifted.org/>

(Geared towards parents of gifted children, but may be useful as a general resource)

[URL deleted]

(Fr. [name deleted], of the Anglican Catholic Church - His

perspective on similar psychological and theological topics)

I apologize in advance if these links are not useful to you.  
As I said, they are a humble offering in appreciation for  
what you have freely shared.

Thank you again,  
Bryan W.

I believed what it said for a short while. I started to write a  
thank-you note, and then when I thought things through, I was  
horrified.

The first point, if a subtle one, is that like many sites on the  
website, my [contact page](#) contains a direct and explicit request  
of people contacting me: that they put "To the author" in their  
email subject so it gets fished out of my spam folder if need be.  
This is not meant as a hoop to jump through, but I ask it and the  
feedback form and email link on my site have a "To the author"  
baked right in. This provided a crystal-clear red flag that  
however much he may have wished for resharing, it didn't  
translate into respecting simple instructions. (That much, by the  
way, offers a useful filter, and if you are working on triaging  
your own incoming link prospect requests, you might include some  
simple and very clearly stated request on your contact page.)

The second point is that the first paragraph does not  
reference anything specific. Now my website does have several  
works intended to offer strength and comfort to people in hard  
times; [The Best Things in Life are Free](#) comes readily to mind.  
However, while some of my work has been received respectfully,  
this is the first report I've heard that they've helped someone  
quite that much. They don't deserve sole credit. I think they're  
good and worth reading, but I think that anyone who really  
benefitted from them would be benefitting from several other

supports too. But I may be being too picky here; it is common practice to exaggerate some compliments so I don't want to be too legalistic.

The first psychology link left me mystified; I do not consider psychology to be a particularly active interest, and I follow my advisor in regarding psychology to be a sort of leftover that stayed around during and after a process of secularization in the West. Or maybe that's a strong way of putting it, but one post about [Theory of Alien Minds: A UX Copernican Shift](#) does not make me a credentialed psychologist nor does it make psychology a primary interest.

The second link left me mystified as regards approaching giftedness; you don't really tell gifted parents to go to Hoagie's Gifted almost like how you don't really tell web users to go to Google to find things out. Apart from my retaining the spammer's mention of Hoagie's Gifted in this posting, the only real reason I would see myself telling someone about that site would be if I got an "out of the blue" email from a parent whose child was identified as gifted and the parents want a roadmap.

**The third link is the cultural equivalent of saying, "You're from Japan? Say something in Chinese!"** It made me profoundly uncomfortable, and there is a profound difference between Eastern Orthodoxy and Anglican "Catholics", and I was much more uncomfortable with that contact than I usually am either with mainstream Romans or mainstream Anglicans. I wanted to send the spammer a link to my reply to those Greek Catholic T-shirts that say, "Orthodox Christian in Communion with Rome," [a T-shirt that says, "Roman Catholic in Communion with the Archdruid of Canterbury"](#). (I restrained myself.)

And by the way, that wasn't really three links the sender equally wanted me to see. It was two links of window dressing

and one link of payload. This was part of multiple aspects of guile in this post. It was made to give the impression of having received a great benefit, without mentioning anything in particular, and it presented the three links as a thank-you when they were, in fact, there to do the job of link acquisition. Upon reflection, I believe the email was sent in the optimistic hopes that I was born yesterday.

And the last thing I'll mention is that it is admittedly current practice to avoid the word "link" in link prospecting emails and more generically speak of sharing and passing on even though what you want most is a link. That at least might be appropriate, but the goal of this email is to obtain a white-hat one-way backlink, and there was a lot of guile and feigned respect. **Sorry, no.**

I am, as a site owner, willing to give links, including white-hat one-way backlinks. However, if you want something that big from me, your due diligence is to communicate honestly, research my site enough that you have some idea of its marketing proposition and some examples of its content, and if your site is a religious site, read the sharply written [An Open Letter to Catholics on Orthodoxy and Ecumenism](#), and needless to repeat, respect the clear instructions on [my contact page](#). Guile is one of several ways you can get reported for spam.

Owners of other high-quality sites might appreciate similar considerations.

Thanks,  
[C.J.S. Hayward](#)

# An Open Letter to Spam Patrons

**Dear Valued Patron;**

**How would you like to associate your organization with false advertising, illegal marketing scams, snake oil diets, and offensive unsolicited porn? You can—it's easier than you think.**

**You can reach thousands of people for every penny you invest.**

**The only real cost is to your reputation.**

**What? That doesn't sound attractive to you? Too bad. You're doing all that—and more—every single time you send unsolicited bulk e-mail. It's also known as spam, and for good reason. Why?**

**In a classic Monty Python sketch, a customer in a restaurant asks what's on the menu. The waitress tells him, "Well, there's egg and bacon; egg, sausage, and bacon; egg and spam; egg, bacon, and spam; egg, bacon, sausage, spam; spam, bacon, sausage, and spam; spam, egg, spam, spam, bacon, and spam; spam, sausage, spam, spam, spam, bacon, spam, tomato, and spam; spam, spam, spam, egg, and spam" (and so on). Then a chorus of Vikings begins chanting, "Spam, spam, spam, spam; lovely spam, wonderful spam."**

**The waitress just doesn't get it, even when the customer repeats that he doesn't like spam.**

**You may be the victim of false advertising. Many spammers advertise "opt-in e-mail lists" with millions of targeted recipients**

—but please think for a moment. Would you choose to be on a mailing list that let advertisers fill your mailbox dirt-cheap? Are there millions of people who would choose to have a mailbox with advertisement, advertisement, personal letter, advertisement, family newsletter, and your advertisement? If someone has asked you to read this page, there's a good chance you've patronized spam—and been advertised along with snake oil diets and illegal marketing scams. Don't you think you're in bad company?

You don't have to be. If you want more information, you can read [Stopping Spam: Stamping Out Unwanted E-mail and News Postings](#). It's one of O'Reilly & Associates' best-selling titles. But, most importantly, you can stop paying people to make you look bad. Think about it.

Sincerely,

Jonathan Hayward

[Jonathan's Corner: A Free Library of Online Books](#)

# Ordinary

O Lord my God,  
Who hath placed me here and now,  
Not in the ages of Christological councils,  
Nor in Russia in the 19th century,  
But here and now,  
Sovereign Master and Lord,  
Help me be at peace,  
With where thou in thy sovranty hast placed me,  
Help me to desire for my ascesis,  
What thou in thy sovereign love hast ordained for me.  
If I seek harmony with nature,  
Let it not be with Protestant heart,  
Seeking to reconstruct some romantic golden age,  
But let it be the harmony with nature,  
Whose radix is virtue,  
And a virtue that is found,  
In the things that thou hast given,  
For there is more harmony with nature,  
In contented use of everyday technology,  
Loving people and using things,  
Self-forgetting in humility,  
Than a heart filled with wonder,  
In forest alen enthralled.

Self-impressed at return to harmony with nature.  
O Lord our God,  
Who hast ordained that I might be saved in hesychastic stillness  
and silence,  
Let me beware of technologies whose raison d'être is to deliver  
noise,  
And provide an alternative to asceticism:  
Let me not look my thirst to slake,  
In broken cisterns that cannot hold water,  
In this new technological world forever extended,  
For if technology may be used in asceticism,  
We may not ask it to slake our thirst,  
For asking technology to deliver from boredom,  
Is like asking wine to deliver us from the thirst drunkenness  
creates,  
Or narcotics to deliver us from the addict's low.  
Boredom is a passion,  
And escape from the ordinary feeds it;  
Its cure is repentance,  
And serving God here and now,  
Our thirst slowly reoriented,  
From the mirages of broken cisterns,  
To living water,  
Which we seek in vain when we seek to escape,  
And find given in what we sought to escape from.  
We seek to escape a despised here and now,  
And so long as we escape,  
We close our eyes to the beauty of Heaven,  
Unfolding in the here and now:  
Paradise is wherever God's saints are;

The bad news is that we cannot escape,  
And the good news is that there is no need:  
The bad news is that mirages can never slake our thirst,  
The good news is that what we have disdained in chasing after  
mirages,  
Holds a fountain of living water.

O Lord our God,  
Help us to respect the ordinary which thou hast ordained,  
Help us to be grateful for the here and now,  
Whether that is a here and now of first world luxuries,  
Or a here and now of suffering increased,  
A here and now for spiritual athletes' to strive,

Let us answer,  
Glory to God in all things,  
In easy times and in hard,  
Whether luxuries are placed within our grasp,  
Or we grow ever closer,  
To being offered the crowns of confessors and martyrs,

Glory to God in all things,  
Let us confess,  
Let us pray,  
Let us glorify,  
Thou who art Lord and God and King,  
Thou who reignest,  
In all places and all times,

The God sovereign over the Christological councils,  
The God sovereign over nineteenth century Russia,  
The God sovereign over every age past,  
The God sovereign over every age present,  
The God sovereign over every age future,  
Who hast placed us where we are,

In thy sovereign wisdom,  
For our ascesis,  
For our growth,  
For our struggle,  
For our contemplation,  
For our glory.

And if we consider ourselves wiser than thee,  
As we do if we think we are in the wrong age,  
And we would better have been placed in another era,  
Let us repent,  
And be grateful,  
For where thou hast placed us,  
And the terms of the ascesis,  
Which thou hast ordained for our theosis,  
The ordinary terms,  
Of ordinary things,  
And ordinary work,  
And ordinary activity,  
And ordinary needs,  
And ordinary responsibilities,  
For monastic and faithful living in the world,  
Alike find their salvation,  
In what are their ordinary circumstances,  
Anchored in the ordinary,  
For when their energy is not spilled out in self-seeking,  
Then they are freed to soar to Heaven,  
Working in and through a course ordained,  
For their salvation.  
To thee belongeth glory,  
To thee belongeth praise,  
To thee is due right ascetical use,

Of every circumstance,  
To the Father and the Son and the Holy Ghost,  
Who hast ordained what is ordinary,  
In every place and every time,  
And to whom is due,  
Right use of the present thou hast given us in the present,  
Gratitude expressed in ascesis,  
For the terms on which thou hast offered us theosis,  
To the Father and to the Son and the Holy Ghost:  
Glory to God for all things!  
Amen!

# An Orthodox Bookshelf

## The Greatest Treasures

These are some of the greatest treasures around to read, and there's a lifetime worth of reading in them. I may be critical in some of my reviews, but I only list books I think are worth reading, and the pieces I criticize are probably worthy of a more charitable spirit.

### [The Orthodox\\* Study Bible](#) (Kindle)

In this Orthodox bookshelf, a decisive pride of place goes to [The Orthodox\\* Study Bible](#). I have felt more comfort in reading it than any other Bible, and it gives a real sense of reading the Bible, not privately, but in community with the saints across the ages. The footnotes are decisively better than the Bible de Jérusalem / [New Jerusalem Bible](#), and those responsible for [The Orthodox\\* Study Bible](#) decisively understand that the proper use of footnotes in a text is not to speculate about how a text came together across the

ages, but to illumine the Bible as the ultimate work of practical, spiritual, and mystical theology, with footnotes oriented towards practical, spiritual, and mystical theology.

Then why have I put an asterisk in [The Orthodox\\* Study Bible](#)?

[The Orthodox\\* Study Bible](#) shows signs of a group of converts who have described as trying to do too much, too fast. Their selection of saints for commentary is limited to the first millenium (have no nineteenth century saints already stood the test of time?), and the introduction harps on the ancient Church.

If harping on the antiquity of the Church doesn't seem strange, think about how we are all the continuation of the royal, ancient bloodline of His Majesty King ADAM and Her Majesty Queen EVE. Poetry and meaning are alike profound when, to quote a Protestant author, C.S. Lewis has Aslan proclaim "Sons of Adam and Daughters of Eve." Such a thing may be poetic to note, and quaint, but it would be a strange thing to harp on and say that you respect other people primarily as carriers of an ancient bloodline. Most of the respect we have, or should have, for other people is not for the antiquity of our bloodline, but because they are fully human, however we may understand being human, because they are made in the image of God and can be transformed into the likeness of Christ. It may be a useful thing to remember that a beggar or a person we can't stand is ultimately family to us, but very little of the language of respect for the human person, whether Orthodox, other religious, or secular, states that we are the fullness of the ancient bloodline of our first parents. And, notwithstanding that eagerness to re-create the ancient Church was

foundational to the Reformation and can still be found in Protestant influences, the basis of respect for Orthodoxy is not that it is Ancient Orthodoxy, but that it is Holy Orthodoxy.

Though [The Orthodox\\* Study Bible](#) introduces its material by talking about the authentic continuity of the Orthodox Church (without so much as a brief passing mention of our antiquity as the authentic continuity of the bloodline of Lord Adam and Lady Eve), I have never heard such harping on the ancient Church among cradle Orthodox. Admittedly the Orthodox Church is the same living organism as the ancient Church, but in the altar at my parish, most of the books are ancient in character (service books, Gospel books, a Greek New Testament), not one of them is labelled as ancient: no service book touts "the ancient Divine Liturgy of Saint John Chrysostom." 'Ancient' is not the point.

And there are other things like that are written to "smooth things over" at the expense of truth in [The Orthodox\\* Study Bible](#). **For one instance**, the note on Creation on page 2 says like a politico, "Regarding scientific questions about the scientific accuracy of the Genesis account of creation, and about various viewpoints concerning evolution, the Orthodox

For more information, see [Note to Orthodox Evolutionists: Stop Trying to Shanghai Recruit the Fathers to Your Camp and Creation and Holy Orthodoxy: Fundamentalism Is Not Enough](#).

Church has not dogmatized any particular view." This is misleading disinformation; origins questions may well be among the many areas "not dogmatized", but there is a near-universal consensus among the Church Fathers, including the

Church Fathers of the first millenium that [The Orthodox\\* Study Bible](#) returns to, that the earth was created in six days about six thousand years ago. This may be inconvenient to point out, and it might be easier to help people get along if we say that several views are legitimate, but this is twisting facts for the sake of convenience. (And for the recdord, I believe in a billions of years old earth and legitimate disagreement over how God created the world), although [the world was created 3:00 PM, March 25, 28 AD.](#))

With all that stated, [The Orthodox\\* Study Bible](#) has a number of helpful and edifying notes in an overall tenor that provides guidance in reading the Bible, and nothing better has come to fill its place.

Perhaps another work will come along that is not trying to do "too much, too fast," but [The Orthodox\\* Study Bible](#) has left behind a pretty big pair of boots to fill, and there is much profit in it whether you know the Bible well or are just beginning to dive into it.

[Sir Lancelot Brenton's translation of the Septuagint Old Testament \(Read online\)](#) and [The King James Version of the New Testament](#)

One tacit assumption about the Bible is that we have to have it in one volume. In fact, we do not, and when I read the Bible in Greek, one volume is [a copy of the Septuagint](#) (with [Sir Lancelot Brenton's translation](#) on the side), and the other is [a Greek New Testament](#) (admittedly, a Western critical edition rather than the Byzantine text). This works quite well.

The language of both is a little unfamiliar today, but there is something unsurpassed in [the King James Version](#). Modern translations of the Bible are the work of specialized

language scholars, and their technical skill in the original language is not matched by being able to write well in English: in fact the only time I've heard of someone selected to help in translation based on being able to write well in English is the very tangential involvement of J.R.R. Tolkien in The New English Bible(?). [The King James Version](#) is the work of generalists, Renaissance men whose technical knowledge of original languages was matched by aptitude as English wordsmiths. And that is something that modern bureaucratic translations don't even try.

The best alternative I am aware of to [The Orthodox\\* Study Bible](#) is a combination of [Sir Lancelot Brenton's translation of the Septuagint](#), which was clearly written to match the excellence of [The King James Version](#), and [the King James Version of the New Testament](#).

And if the language seems a little unfamiliar at first, I would recall one encounter in [The Way of the Pilgrim](#), where a man had been cured of alcoholism by a priest who gave him a Gospel book and told him to read one Gospel each day (which he made a part of his practice). The Gospel was in Slavonic, which is further from that day's Russian than the Elizabethan English of [The King James Version](#) is from our English. The priest, giving him the Gospel book, said, "Do not worry if you do not understand [all of] what you are reading. The demons will understand."

**The Philokalia** ([Volume 1](#), [Volume 2](#), [Volume 3](#), [Volume 4](#)),  
([Kindle](#))

[The Philokalia](#) is a library of practical theology, and there is nothing else like it. It is a collection about the science of spiritual struggle, and though entries can vary substantially from each other, they are very edifying and can orient us to

what is truly important in life.

[The Philokalia](#) is best viewed, not as a book, but as a library of classics, and the intent is that people would read specific works as selected by a clergy member. I can attest that simply reading it cover to cover is a second-best solution.

Many Orthodox give [The Philokalia](#) first place outside of the Bible.

### [The Ladder of Divine Ascent](#)

[The Ladder of Divine Ascent](#) is a work addressed to monastics, and is read each Lent in monasteries. However this is far from being a treasure only useful to monastics. It is a jewel of the Orthodox Church as a whole, and all kinds of people have read [The Ladder of Divine Ascent](#) to great spiritual profit.

**The Prologue of Ochrid** ([Volume 1](#), [Volume 2](#) ([Daily selections online](#); [Old Calendar](#)))

The Orthodox Church has a great tradition of biography as theology: one grasps holiness by reading the lives of the saints. A rich sampling of these lives is found in the daily readings of the [Prologue](#), which tells of all the saints commemorated on a particular day.

### [The Jordanville Prayer Book](#)

Praying the prayers of the Church is a great help along the way, and [The Jordanville Prayer Book](#) (or any other good prayer book) is like the script to a play: it is not primarily meant to be read silently while sitting in a chair, but spoken aloud, brought to life, preferably from a standing position.

Prayers, with fasting, are an area to work out with one's priest or spiritual father. They come alive when they are practiced as part of the life of the Church.

[Akathists](#) (links to many good Akathists; note that the website, Orthodox Wiki, should be taken with a little grain of salt).

St. Romanos the Melodist is said to have miraculously received the prayer of the [Akathist to the Mother of God](#).

Since then there is a tradition of Akathist prayers; the term "akathist" means "not seated," i.e. standing to deliver the prayer. The first Akathist, and many of the ones that follow, are beautiful and powerful prayers.

[The Ante-Nicene Fathers and Nicene and Post-Nicene Fathers](#) collections ([Read online](#))

[The Ante-Nicene and Nicene and Post-Nicene Fathers](#) provide the standard reference translations to a great many Church Fathers. This collection receives its own asterisk because while the texts are Orthodox they were translated by Anglicans grinding a massive axe against Rome. Hence a

condemnation of contraception, abortion, and infanticide by

St. John Chrysostom is turned into a condemnation of abortion and infanticide alone; Augustine may be allowed to condemn Natural Family Planning, but there is an axe that is ground in the texts and is even more explicit in the accompanying notes and introductions.

Still, this does not stop a great deal of glory from the Fathers; read, for instance, [St. John Chrysostom's Treatise to Prove that No One Can Injure the Man Who Does Not Harm Himself](#). The collection, for all its deficiencies, is still a great treasure.

[St. John of Damascus, An Exact Exposition of the Orthodox](#)

For more information on contraception in particular, see [Orthodoxy, contraception, and spin doctoring: A Look at an Influential but Disturbing Article](#).

[Faith \(Kindle\)](#), [Pseudo-Dionysius: The Complete Works](#), etc.

I have picked these two examples of works that it is work to read. I read them, not because I have grown enough that they seem easy and natural to read, but because they stretch me and challenge me to enter into a larger space. Fr. John Behr said, "The only thing worse than not reading the Fathers and reading them systematically;" in a similar fashion, the Fathers are of the most value to us, not when we find an endorsement of what we have always believed, but when we are challenged and invited to grow. I am challenged by these works, and I pick out these two as representative examples of innumerable works that challenge me to grow bigger and unpleasantly challenge me to enter a larger world.

## Lesser Classics

This is a collection of lesser greats, limited in number by the limitations of what I am familiar with. Note that this does not include a lot of popular authors, such as [Fr. Seraphim \(Rose\)](#), or Met. John (Zizioulas); in the latter case, I answered the question, "Is John Zizioulas an existentialist in disguise?" by asking, "Where's the disguise?" However, there is some good work produced recently, and I've even read a little of it.

### [The Orthodox Way](#)

The standard print introduction to Orthodoxy is His Eminence Metropolitan Kallistos's [The Orthodox Church](#), but what captivated my attention was not that more systematic work but the less systematic and more mystical [The Orthodox Way](#). It is an excellent introduction to Holy Orthodoxy.

### [The Way of the Pilgrim \(Kindle\)](#)

[The Way of the Pilgrim](#) is a glimpse of one pilgrim for whom the [Philokalia](#) unlocked the treasures of the Gospel. The author, whose name is lost, would today be considered a vagrant; that was the form taken by his pilgrimage. Along the way [the Jesus Prayer](#) unfolds in his heart. The book is a lesser classic, but it is a classic.

## External Influences

One queer postmodern theologian speaking in class spoke of how the Fathers used "the best philosophical resources of their day," the implication being that we should use the postmodern resources fashionable today. To that I might reply: the best philosophical resources available to the Fathers were neo-Platonism, and the best philosophical resources available today are neo-Platonism. That may sound harsh, but the Church that said "What has Athens to do with Jerusalem?" used philosophical resources without limiting themselves to them as captives. Neo-Platonism was at once the air the Fathers breathed and the opponent they struggled against; in today's terms, slightly clumsy to apply to them, they strove for a critical reception of neo-Platonism, or developed (or rather preserved) a counterculture.

These books are not exhaustive; but they serve to point to an area that is worth reading. But perhaps this section of this Orthodox bookshelf is less important than one might think.

Note here that there is one category I have deliberately excluded: Gnostic and other heretical writings. Gnostic writing is spiritual pornography and I regret I have ever set eyes on it. I thought it would provide perspective to help me understand Orthodoxy. It did not, and I would rather have read any Orthodox resource than that form of spiritual poison.

### **Plotinus: The Enneads (Kindle)**

A central work of neo-Platonism, and possibly the best single resource in philosophy from outside the Church into what the Fathers drew from when they drew from pagan philosophy, in the image of one Church Father, "like a bee that goes straight to the sweetest nectar and ignores all else."

### **Plato: The Republic (Kindle)**

A seminal work that was the first domino that would build to neo-Platonism. There are parts of the work that seem strange today; Derrida called it "the world's oldest, longest, and least funny political joke". I would amend that to "the world's oldest, longest, least funny, and least intentional political joke." The treatment of sexuality reads like something plagiarized from Monty Python today, but viewed in relation to historical context (in books I shouldn't have read), it does not seem nearly so provocative a stance against currents of its own day as in currents of our own day. It sets forth one of the oldest radical political ideologies, but for all that it is a seed of many important things, many good things, and I lightly adapted its most famous passage in [Plato: The Allegory of the...Flickering Screen?](#)

**Almost last, and certainly  
least,**

I would at least like to mention my own offerings, not because there is any conclusion that they are classics, but because I cherish them and they are what I have to offer. They are in:

[The theology section at Jonathan's Corner.](#)

**I invite you to visit my collection of theology Kindle eBooks!**

## The “Big Room”

Programmer slang uses “the Big Room” for outside, the “room” one is in when one is not hunched over a computer indoors. And there is something profound to looking beyond books and learning from life.

Monasticism has a maxim, “Your cell will teach you everything you need to know.” And the precept holds whether or not one is a monk; staying in one’s place and learning things is powerful. Most monks have been illiterate and not owned books; the maxim is not simply “Your bookshelf will teach you everything you need to know,” but “Your cell will teach you everything you need to know.” The here and now that God has put you in, that you are tempted to escape by real or virtual means, will teach you everything you need to know.

# **An Orthodox Looks at a Calvinist Looking at Orthodoxy**

Jack Kinneer, an Orthodox Presbyterian minister and a D.Min. graduate of an Eastern Orthodox seminary, wrote a series of dense responses to his time at that seminary. The responses are generally concise, clear, and make the kind of observations that I like to make. My suspicion is that if Dr. Kinneer is looking at things this way, there are a lot of other people who are looking at things the same way—but may not be able to put their finger on it. And he may have given voice to some things that Orthodox may wish to respond to.

Orthodoxy is difficult to understand, and I wrote a list of responses to some (not all) of the points he raises. I asked New Horizons, which printed his article, and they offered gracious permission to post with attribution, which is much appreciated. I believe that Dr. Kinneer's words open a good conversation, and I am trying to worthily follow up on his lead.

**A Calvinist Looks at  
Orthodoxy**

**Jack D. Kinneer**

---

During my studies at St. Vladimir's Orthodox Theological Seminary, I was often asked by students, "Are you Orthodox?" It always felt awkward to be asked such a question. I thought of myself as doctrinally orthodox. I was a minister in the Orthodox Presbyterian Church. So I thought I could claim the word orthodox.

But I did not belong to the communion of churches often called Eastern Orthodox, but more properly called simply Orthodox. I was not Greek Orthodox, Russian Orthodox, or Antiochian Orthodox. As far as the Orthodox at St. Vladimir's were concerned, I was not Orthodox, regardless of my agreement with them on various doctrines.

My studies at St. Vladimir's allowed me to become acquainted with Orthodoxy and to become friends with a number of Orthodox professors, priests, and seminarians. My diploma was even signed by Metropolitan Theodosius, the head of the Orthodox Church in America. From the Metropolitan to the seminarians, I was received kindly and treated with respect and friendliness.

I am not the only Calvinist to have become acquainted with Orthodoxy in recent years. Sadly, a number have not only made the acquaintance, but also left the Reformed faith for Orthodoxy. What is Orthodoxy and what is its appeal to some in the Reformed churches?

### **The Appeal of Orthodoxy**

Since the days of the apostles, there have been Christian communities in such ancient cities as Alexandria in Egypt, Antioch in Syria, and Corinth in Greece. In such places, the

Christian church grew, endured the tribulation of Roman persecution, and ultimately prevailed when the Roman Empire was officially converted to Christianity. But, unlike Christians in the western half of the Roman Empire, the eastern Christians did not submit to the claims of the bishop of Rome to be the earthly head of the entire church. And why should they have done so? The centers of Orthodox Christianity were as old as, or even older than, the church in Rome. All the great ecumenical councils took place in the East and were attended overwhelmingly by Christian leaders from the East, with only a smattering of representatives from the West. Indeed, most of the great theologians and writers of the ancient church (commonly called the Church Fathers) were Greek-speaking Christians in the East.

The Orthodox churches have descended in an unbroken succession of generations from these ancient roots. As the Orthodox see it, the Western church followed the bishop of Rome into schism (in part by adding a phrase to the Nicene Creed). So, from their perspective, we Protestants are the product of a schism off a schism. The Orthodox believe that they have continued unbroken the churches founded by the apostles. They allow that we Reformed may be Christians, but our churches are not part of the true church, our ordinations are not valid, and our sacraments are no sacraments at all.

The apparently apostolic roots of Orthodoxy provide much of its appeal for some evangelical Protestants. Furthermore, it is not burdened with such later Roman Catholic developments as the Papacy, purgatory, indulgences, the immaculate conception of Mary, and her assumption into heaven. Orthodoxy is ancient; it is unified in a way that

PROTESTANTISM IS NOT; IT LACKS MOST OF THE medieval doctrines and practices that gave rise to the Reformation. This gives it for many a fascinating appeal.

Part of that appeal is the rich liturgical heritage of Orthodoxy, with its elaborate liturgies, its glorious garbing of the clergy, and its gestures, symbols, and icons. If it is true that the distinctive mark of Reformed worship is simplicity, then even more so is glory the distinctive mark of Orthodox worship. Another appealing aspect of Orthodox worship is its otherness. It is mysterious, sensual, and, as the Orthodox see it, heavenly. Orthodox worship at its best makes you feel like you have been transported into one of the worship scenes in the book of Revelation. Of course, if the priest chants off-key or the choir sings poorly, it is not quite so wonderful.

There are many other things that could be mentioned, but I've mentioned the things that have particularly struck me. These are also the things that converts from Protestantism say attracted them.

### **The Shortcomings of Orthodoxy**

So then, is this Orthodox Presbyterian about to drop the "Presbyterian" and become simply Orthodox? No! In my estimation, the shortcomings of Orthodoxy outweigh its many fascinations. A comparison of the Reformed faith with the Orthodox faith would be a massive undertaking, made all the more difficult because Orthodoxy has no doctrinal statement comparable to the Westminster Confession of Faith. Orthodoxy is the consensus of faith arising from the ancient Fathers and the ecumenical councils. This includes

the forty-nine volumes of the Ante- and Post-Nicene Fathers, plus the writings of the hermits and monastics known collectively as the Desert Fathers! It would take an entire issue of *New Horizons* just to outline the topics to be covered in a comparison of Orthodoxy and Reformed Christianity. So the following comments are selective rather than systematic.

First, in my experience, the Orthodox do not understand justification by faith. Some reject it. Others tolerate it, but no one I met or read seemed to really understand it. Just as Protestants can make justification the whole (rather than the beginning) of the gospel, so the Orthodox tend to make sanctification (which they call "theosis" or deification) the whole gospel. In my estimation, this is a serious defect. It weakens the Orthodox understanding of the nature of saving faith.

Orthodoxy also has a real problem with nominal members.

Many Orthodox Christians have a very inadequate understanding of the gospel as Orthodoxy understands it. Their religion is often so intertwined with their ethnicity that being Russian or Greek becomes almost synonymous with being Orthodox. This is, by the way, a critique I heard from the lips of Orthodox leaders themselves. This is not nearly as serious a problem in Reformed churches because our preaching continually stresses the necessity for a personal, intimate trusting, receiving, and resting upon Jesus Christ alone for salvation. Such an emphasis is blurred among the Orthodox.

Second, the Orthodox have a very inadequate understanding of sovereign grace. It is not fair to say that they are Pelagians. (Pelagius was a Western Christian who

denied original sin and taught that man's will is free to choose good.) But they are definitely not Augustinians (Calvinists) on sin and grace. In a conversation with professors and doctoral students about the nature of salvation, I quoted Ezekiel 36:26-27 as showing that there is a grace of God that precedes faith and enables that human response. One professor said in response, "I never thought of that verse in that way before." The Orthodox have not thought a lot about sin, regeneration, election, and so forth. Their view of original sin (a term which they avoid) falls far short of the teaching of Paul. Correspondingly, their understanding of Christ's atonement and God's calling is weak as well. Their views could best be described as undeveloped. If you want to see this for yourself, read Chrysostom on John 6:44-45, and then read Calvin on the same passage.

Third, the Orthodox are passionately committed to the use of icons (flat images of Christ, Mary, or a saint) in worship. Indeed, the annual Feast of Orthodoxy celebrates the restoration of icons to the churches at the end of the Iconoclast controversy (in a.d. 843). For the Orthodox, the making and venerating of icons is the mark of Orthodoxy—showing that one really believes that God the Son, who is consubstantial with the Father, became also truly human.

Since I did not venerate icons, I was repeatedly asked whether or not I really believed in the Incarnation. The Orthodox are deeply offended at the suggestion that their veneration of icons is a violation of the second commandment. But after listening patiently to their justifications, I am convinced that whatever their intentions may be, their practice is not biblical. However, our dialogue

on the subject sent me back to the Bible to study the issue in a way that I had not done before. The critique I would offer now is considerably different than the traditional Reformed critique of the practice.

Finally, many of the Orthodox tend to have a lower view of the Bible than the ancient Fathers had. At least at St. Vladimir's, Orthodox scholars have been significantly influenced by higher-critical views of Scripture, especially as such views have developed in contemporary Roman Catholic scholarship. This is, however, a point of controversy among the Orthodox, just as it is among Catholics and Protestants. Orthodoxy also has its divisions between liberals and conservatives. But even those who are untainted by higher-critical views rarely accord to Scripture the authority that it claims for itself or which was accorded to it by the Fathers. The voice of Scripture is largely limited to the interpretations of Scripture found in the Fathers.

There is much else to be said. Orthodoxy is passionately committed to monasticism. Its liturgy includes prayers to Mary. And the Divine Liturgy, for all its antiquity, is the product of a long historical process. If you want to follow the "liturgy" that is unquestionably apostolic, then partake of the Lord's Supper, pray the Lord's Prayer, sing "psalms, hymns, and spiritual songs," and say "amen," "hallelujah," and "maranatha." Almost everything else in any liturgy is a later adaptation and development.

### **A Concluding Assessment**

But these criticisms do not mean that we have nothing to learn from Orthodoxy. Just as the Orthodox have not thought a lot about matters that have consumed us (such as

thought a lot about matters that have consumed us (such as justification, the nature of Scripture, sovereign grace, and Christ's work on the cross), so we have not thought a lot about what have been their consuming passions: the Incarnation, the meaning of worship, the soul's perfection in the communicable attributes of God (which they call the energies of God), and the disciplines by which we grow in grace. Let us have the maturity to keep the faith as we know it, and to learn from others where we need to learn.

Orthodoxy in many ways fascinates me, but it does not claim my heart nor stir my soul as does the Reformed faith.

My firsthand exposure to Orthodoxy has left me all the more convinced that on the essential matters of human sin, divine forgiveness, and Christ's atoning sacrifice, the Reformed faith is the biblical faith. I would love to see my Orthodox friends embrace a more biblical understanding of these matters. And I am grieved when Reformed friends sacrifice this greater good for the considerable but lesser goods of Orthodox liturgy and piety.

Dr. Kinneer is the director of Echo Hill Christian Study  
Center in Indian Head, Pa.

Reprinted from New Horizons of the [Orthodox Presbyterian  
Church](#), as posted at  
[http://www.opc.org/new\\_horizons/calvinist\\_on\\_orthodoxy.html](http://www.opc.org/new_horizons/calvinist_on_orthodoxy.html).  
Used with permission.

---

**I wrote the following reply:**

Dear Dr. Kinneer;

**First**, on an Orthodox mailing list, I saw a copy of your "A Calvinist Looks at Orthodoxy." I would like to write a somewhat measured response that you might find of interest; please quote me if you like, preferably with attribution and a link to my website ([cjshayward.com](http://cjshayward.com)). I am a convert Orthodox and a graduate of [Calvin College](#), for which I have fond memories, although I was never a Calvinist, merely a non-Calvinist Evangelical welcomed in the warm embrace of the community. I am presently a Ph.D. student in theology and went to church for some time at [St. Vladimir's Seminary](#) and have friends there. I hope that you may find something of interest in my comments here.

**Second**, you talk about discussion of being Eastern Orthodox versus being orthodox. I would take this as a linguistically confusing matter of the English language, where even in spoken English the context clarifies whether (o)rthodox or (O)rthodox is the meaning intended by the speaker.

**Third**, I will be focusing mostly on matters I where I would at least suggest some further nuance, but your summary headed "The Appeal of Orthodoxy," among other things in the article, is a good sort of thing and the sort of thing I might find convenient to quote.

**Fourth**, the Orthodox consensus of faith is not a much longer and less manageable collection of texts than the [Ante-Nicene Fathers and Nicene and Post-Nicene Fathers](#), combined with the even more massive *Patrologia Graecae*, and other patristic sources. [I have said elsewhere](#) that Western and particularly

Protestant and Evangelical culture are at their core written cultures, and Orthodoxy is at its core an oral culture that makes use of writing—I could suggest that it was precisely the Reformation that is at the root of what we now know as literate culture. This means that Orthodoxy does not have, as its closest equivalent to the Westminster Confession, a backbreaking load of books that even patristics scholars can't read cover to cover; it means that the closest Orthodox equivalent to Westminster Confession is not anything printed but something alive in the life and culture of the community. (At very least this is true if you exclude the Nicene Creed, which is often considered "what Orthodox are supposed to believe.")

**Fifth**, regarding the words, "First, in my experience, the Orthodox do not understand justification by faith:" are you contending that former Evangelicals, who had an Evangelical understanding of justification by faith, were probably fairly devout Evangelicals, and are well-represented at [St. Vladimir's Seminary](#), do not understand justification by faith?

There seems to be something going on here that is a mirror image of what you say below about icons: there, you complain about people assuming that if you don't hold the Orthodox position on icons, you don't understand the Christian doctrine of the incarnation; here, you seem in a mirror image to assume that if people don't have a Reformation-compatible understanding of justification by faith, you don't understand the Biblical teaching.

I wrote, for a novella I'm working on, [The Sign of the Grail](#), a passage where the main character, an Evangelical, goes to an Orthodox liturgy, hears amidst the mysterious-sounding phrases a reading including "The just shall walk by faith," before the homily:

In the Name of the Father, and of the Son, and of the Holy Ghost. Amen.

One of the surprises in the Divine Comedy—to a few people at least—is that the Pope is in Hell. Or at least it's a surprise to people who know Dante was a devoted Catholic but don't recognize how good Patriarch John Paul and Patriarch Benedict have been; there have been some moments Catholics aren't proud of, and while Luther doesn't speak for Catholics today, he did put his finger on a lot of things that bothered people then. Now I remember an exasperated Catholic friend asking, "Don't some Protestants know anything else about the Catholic Church besides the problems we had in the sixteenth century?" And when Luther made a centerpiece out of what the Bible said about "The righteous shall walk by faith," which was in the Bible's readings today, he changed it, chiefly by using it as a battle axe to attack his opponents and even things he didn't like in Scripture.

It's a little hard to see how Luther changed Paul, since in Paul the words are also a battle axe against legalistic opponents. Or at least it's hard to see directly. Paul, too, is quoting, and I'd like to say exactly what Paul is quoting.

In one of the minor prophets, Habakkuk, the prophet calls out to the Lord and decries the wickedness of those who should be worshiping the Lord. The Lord's response is to say that he's sending in the Babylonians to conquer, and if you want to see some really gruesome archaeological findings, look up what it meant for the Babylonians or Chaldeans to conquer a people. I'm not saying what they did to the people they conquered because I don't want to leave people here trying to get disturbing images out of people's

minds, but this was a terrible doomsday prophecy.

The prophet answered the Lord in anguish and asked how a God whose eyes were too pure to look on evil could possibly punish his wicked people by the much more wicked Babylonians. And the Lord's response is very mysterious:

"The righteous shall walk by faith."

Let me ask you a question: How is this an answer to what the prophet asked the Lord? Answer: It isn't. It's a refusal to answer. The same thing could have been said by saying, "I AM the Lord, and my thoughts are not your thoughts, nor are my ways your ways. I AM WHO I AM and I will do what I will do, and I am sovereign in this. I choose not to tell you how, in my righteousness, I choose to let my wicked children be punished by the gruesomely wicked Babylonians. Only know this: even in these conditions, the righteous shall walk by faith."

The words "The righteous shall walk by faith" are an enigma, a shroud, and a protecting veil. To use them as Paul did is a legitimate use of authority, an authority that can only be understood from the inside, but these words remain a protecting veil even as they take on a more active role in the New Testament. The New Testament assumes the Old Testament even as the New Testament unlocks the Old Testament.

Paul does not say, "The righteous will walk by sight," even as he invokes the words, "The righteous shall walk by faith." Here's something to ponder: The righteous shall walk by faith even in their understanding of the words, "The righteous shall walk by faith."

In the Name of the Father, and of the Son, and of the Holy Ghost. Amen.

When I showed this to one Reformation scholar to check my treatment of the Reformation, he said that I didn't explain what "The righteous shall walk by faith," but my entire point was to show what the Old Testament quotation could mean besides a shibboleth that one is sanctified in entirety in response to faith without one iota being earned by good works. The Reformation teaching, as I understand it, reflects a subtle adaptation of the Pauline usage—and here I might underscore that Paul and Luther had different opponents—and a profound adaptation of the Old Testament usage. And it may be possible to properly understand the Biblical text without interpreting it along Reformation lines.

**Sixth**, you write that Orthodox tend to have a poor understanding of sovereign grace. I remember how offended my spiritual Father was when I shared that a self-proclaimed non-ordained Reformed minister—the one person who harassed me when I became Orthodox—said that Orthodox didn't believe in grace. He wasn't offended at me, but I cannot ever recall seeing him be more offended. (Note: that harassment was a bitter experience, but I'd really like to think I'm not bitter towards Calvinists; I have a lot of fond memories from my time at Calvin and some excellent memories of friends who tended to be born and bred Calvinists.)

I would suggest that if you can say that Orthodox do not understand sovereign grace shortly after talking about a heavy emphasis on theosis, you are thinking about Orthodox doctrine through a Western grid and are missing partly some details and partly the big picture of how things fit together.

**Seventh**, I am slightly surprised that you describe original sin as simply being in the Bible and something Orthodox do not teach. Rom 5:12 as translated in the Vulgate ("...in quo omnes peccaverunt") has a Greek ambiguity translated out, so that a

Greek text that could quite justifiably be rendered that death came into the world "because all sinned" (NIV) is unambiguously rendered as saying about Adam, "in whom all have sinned," which in turn fed into Augustine's shaping of the Western doctrine of original sin. It's a little surprising to me that you present this reading of an ambiguity as simply being what the Bible says, so that the Orthodox are deficiently presenting the Bible by not sharing the reading.

**Eighth**, I too was puzzled by the belief that the Incarnation immediately justifies icons, and I find it less puzzling to hold a more nuanced understanding of the Orthodox teaching that if you understand the Incarnation on patristic terms—instead of by a Reformation definition—its inner logic flows out to the point of an embrace of creation that has room for icons. I won't develop proof-texts here; what I will say is that the kind of logical inference that is made is similar to a kind of logical inference I see in your report, i.e. that "The righteous shall walk by faith" means the Reformation doctrine that we are justified by faith alone and not by works.

I believe that this kind of reasoning is neither automatically right nor automatically wrong, but something that needs to be judged in each case.

**Ninth**, you write, "Finally, many of the Orthodox tend to have a lower view of the Bible than the ancient Fathers had." When I was about to be received into the Orthodox Church, I told my father that I had been devoted in my reading of the Bible and I would switch to being devoted in my reading of the Fathers. My spiritual father, who is a graduate of [St. Vladimir's Seminary](#), emphatically asked me to back up a bit, saying that the Bible was the core text and the Fathers were a commentary. He's said that he would consider himself very fortunate if his parishioners

would spend half an hour a day reading the Bible. On an Orthodox mailing list, one cradle Orthodox believer among mostly converts quoted as emphatic an Orthodox clergyman saying, "If you don't read your Bible each day, you're not a Christian." Which I would take as exaggeration, perhaps, but exaggeration as a means of emphasizing something important.

**Tenth**, regarding higher-critical views at [St. Vladimir's Seminary](#): I agree that it is a problem, but I would remind you of how [St. Vladimir's Seminary](#) and [St. Tikhon's Seminary](#) compare.

[St. Vladimir's Seminary](#) is more liberal, and it is an excellent academic environment that gives degrees including an Orthodox M.Min. [St. Tikhon's Seminary](#) is academically much looser but it is considered an excellent preparation for ministry. If you saw some degree of liberal academic theology at [St. Vladimir's](#), you are seeing the fruits of your (legitimate) selection. Not that [St. Vladimir's Seminary](#) is the only Orthodox seminary which is not completely perfect, but if you want to see preparation for pastoral ministry placed ahead of academic study at an Orthodox institution, [St. Tikhon's](#) might interest you.

**Eleventh**, after I was at [Calvin](#), I remembered one friend, tongue-in-cheek, talking about "the person who led me to Calvin."

I also remember that when I was at [Calvin](#), I heard more talk about being "disciples of John Calvin" than being "disciples of Jesus Christ," and talk more about bearing the name of "Calvinist" than "Christian," although this time it wasn't tongue-in-cheek. I notice that you speak of how, "sadly," people "left the Reformed faith for Orthodoxy." One response might be one that Reformers like Calvin might share: "Was John Calvin crucified for you? Or were you baptized in the name of John Calvin?" (Cf I Cor. 1:13)

I left this out at first because it's not as "nice" as some of

the others, but I would like to invite you to perhaps leave the "faith" (as you call it) that aims for John Calvin, and embrace the faith that Calvin was trying to re-create in response to abuses in the Western Church. It's still alive, and we still have an open door for you.

# A Postmodern- Influenced Conclusion

When I studied early modern era Orthodox Patriarch Cyril Lucaris, I compared the Eucharistic teaching in his profession of faith to the Eucharistic teaching in Calvin's [Institutes](#)...  
...and concluded that Calvin was more Orthodox. Calvin, among other things, concerned himself with the question of what John Chrysostom taught.

I really don't think I was trying to be a pest. But what I did not develop is that Calvin tried to understand what the Greek Fathers taught, always as an answer to Protestant questions about what, in metaphysical terms, happens to the Holy Gifts. The Orthodox question is less about the transformation of the Holy Gifts than the transformation of those who receive it, and Calvin essentially let the Fathers say whatever they wanted... as long as they answered a question on terms set by the Reformation.

When I read Francis Schaeffer's [How Should We Then Live?](#), my immediate reaction was that I wished the book had been "expanded to six times its present length." I have some reservations about the fruitfulness of presuppositional

apologetics now. What I do not have reservations about is saying that there is a valid insight in Schaeffer's approach, and more specifically there is distortion introduced by letting Orthodoxy say whatever it wants... as an answer to Calvinist questions.

To assert, without perceived need for justification, that the Orthodox have very little understanding of sovereign grace and follow this claim by saying that there is a preoccupation with divinization comes across to Orthodox much like saying, "\_\_\_\_\_ have very little concept of 'medicine' or 'health' and are always frequenting doctor's offices, pharmacies, and exercise clubs." It's a sign that Orthodox are allowed to fill in the details of sin, incarnation, justification, or (in this case) grace, but on condition that they are filling out the Reformation's unquestioned framework.

But the way to understand this is less analysis than worship.

**A look at India in relation**

## to my own roots and formation

My live story up until now would be immeasurably impoverished if the various ways in which India had entered my life would simply be subtracted. I appreciate Indian food, even if I eat it in a non-Indian (Paleo) fashion. And that is not trivial, but there are deeper ways I've been enriched by that great nation. One of these relates to pacifism, where one of India's giants, one certain Gandhi, is perhaps the best-known person in history as I know it for the strength of pacifism. Gandhi might have said with perfect sincerity, "Truth and nonviolence are as old as the hills," but there is a certain motherlode as old as the hills that Gandhi may have mined that motherlode better than anyone else in history.

My own earliest roots, the brand of Christianity I received as mother's milk, were in the Anabaptist tradition, and more specifically the Mennonite Church. I have never been a member of the Amish tradition, but I would contrast Amish as they are known today from Anabaptists in the time of the Reformation. Today Amish are seen as quiet, peaceful, and [daft in being picky about which technologies they accept in their community](#).

(Amish are conservative, perhaps seen as a bit daft, and as Weird AI offensively jabs them, says, "[Tonight we're going to party like it's 1699](#), not seeing what on earth could be good about [partying like it's 1699](#).)

But Amish and other Anabaptists were originally the anarchist wing of the Reformation, the Radical Reformers who were radical even in the eyes of fellow Protestants, the

were radical even in the eyes of fellow Protestants, the Reformation's Left Coast. That they would have been parodied in the future as "quaint"ly conservative and "please don't point and stare" would have perhaps astonished Zwingli and his radical wing of the Reformation, and all their opponents, alike.

Before and during college, I went on a bit of a journey and a quest to bolster and advocate for pacifism. I studied the [Sermon in the Mount](#); I read Gandhi write things that I thought only a Christian would write. Gandhi did not only say that his three heroes were Jesus, Daniel, and Socrates; he said that Christ offered himself as a sacrifice for the sin of the world, a perfect act. And it was only years later that I learned why Gandhi did not become a Christian, something not given a single stinging word in a single quote I ever saw attributed to Mr. Gandhi.

I was filled with shame when I learned that Gandhi wanted to become a Christian, attended a Christian evangelist's meeting, and was turned away from being accepted into the Christian faith, because of the color of his skin. And he gave advice to Christians on how to present Christianity to Hindus, including displaying the hard parts very clearly, but he was not willing, after that, to consider becoming a Christian.

I would not have felt shame if I heard that Gandhi simply didn't ever consider becoming a Christian, or that he found the Hindu mystical tradition deep enough that he would content himself with Hindu roots, or that he would not have considered adopting the religion of the colonial occupiers of India, or other reasons like Hinduism as perhaps the most cosmopolitan of all world religions, or if we may permit an anachronism, Hinduism as the deep tradition that would years later establish India as a software superpower. These are all bearable. But not becoming Christian because a Christian evangelist turned him away—that is

not bearable, but shameful.

In my own journey and life practices, the very oldest of the major works on my website, [Blessed Are the Peacemakers: Real Peace Through Real Strength](#), was from my own search for pacifism. I don't deny that the nonviolent power that Gandhi described in terms of "satyagraha" or hold onto Truth (from the Sanskrit), nor that satyagraha became incarnate with Indian flesh. "I am a man, so nothing that is human is alien to me," as an ancient Roman said. The Church Fathers who quickly saw a path that meets its fruition in Christianity in philosophy or Plato is able to read of the practice of satyagraha and nonviolence, and the Indian cardinal virtue of ahimsa that recognizes you are tied to the other person and cannot harm the other without harming yourself, can be coherently interpreted without recognizing what Gandhi took, without compromise, from Christianity and the [Sermon on the Mount](#). If Plato or Platonism can be purified, and someone [Taoism can be purified](#), then perhaps something can be purified from Gandhi and the one nation on earth that established itself as sovereign and independent without shedding a drop of enemy blood.

I would like to briefly stop at [C.S. Lewis](#) and what is apparently an attack on satyagraha. The architect of "mere Christianity" as it is established in the West makes the only external addition to what is called "mere Christianity" that is in fact not part of Christianity as it was known then. He describes and condemns a guilt manipulation that one holds oneself hostage to make pity a weapon. And he is the only Protestant writer I have read who, in papers like "Why I am not a Pacifist," says not only that Christians may wage war but in fact that conscientious exemption is not acceptable in any sense, and pacifists as much as anyone else should be compelled to try their best to kill men

in military service. And on that point I really give Lewis an F. Ruling out even alternative service for people who believe it is always wrong to kill is FAIL, at least for someone pushing a comprehensive plan of "mere Christianity."

## A second look at my roots

I mentioned Anabaptism or Mennonites earlier as my earliest roots, and I have revisited them, not as a matter of regression but pushing a divide further. And there are some points of contact. The Anabaptist movement has three self-identified points of distinction:

1. A "believer's baptism", meaning baptism only on adult profession of faith,
2. A refusal to take oaths under any circumstance.
3. Pacifism.

On the first point there is a disagreement between Orthodoxy and the Anabaptist tradition; what Anabaptists sought to dismantle in saying "Infant baptism is of the Devil," is one of many continuities with Orthodoxy that some in the West has

The self-identification may or may not be what is most important to others. Probably the strongest critique that Orthodox might make of the Radical Reformation, shocking to both sides of the comparison, might be that an early Anabaptist might say, "We are starting with a clean slate. God is NOT incarnate in bread and wine, is NOT incarnate in any fixed form of worship, is NOT incarnate in any icon

opted out of.

On the second point, there is strong agreement. Now in pastoral terms there is an issue of people's comfort with a teaching, and it is not pastorally helpful to take a teaching someone is not ready

to recognize, and ram it down that person's throat rather than allowing that person to grow to accept the teaching. But as far as oaths go, there was one Athonite monk who refused to take a required oath before testifying in a court of law, and endured without complaint the four months of prison that he was punished with before refusing to take an oath. [St. John Chrysostom](#), called "the moral theologian among the Fathers par excellence," throughout every work that I have read, keeps on returning to certain moral topics regardless of perception. He keeps on hitting on the necessity of sharing with the poor, and of the theatre "in which the common nature of women is affronted" (think Internet porn, as it existed in the fourth century; to be an actress included being a member of a much older profession), and he more than once drops the hammer on the practice of taking oaths at all.

But as regards the question of pacifism, I regard my own [Blessed Are the Peacemakers: Real Peace Through Real Strength](#) as an interesting early

or art, NOT incarnate in any priesthood where priests are anything more or less than laity, NOT incarnate in the saints, NOT—" and [a Muslim might answer](#), "You're off to a good start, but you left off the most important one: [God is NOT incarnate in Christ!](#)"

However, for now I would like to focus on the three self-chosen identifiers that I was taught growing up were the Anabaptist distinctives.

I should wish to clarify that I am, as an Orthodox Christian, in

step, particularly as there weren't too many other pieces playing in the same space that I was able to find. I asked a number of other people for feedback, and I regret my own sophomoric side of dealings with mature Christians who believe in a just war and who in every sense embodied what I advocate for here. (Wheaton College president Dr. J. Richard Chase asked for a copy for his personal files; part of this was undoubtedly kindness, but the kind gesture was against a backdrop where he probably had not seen too many works like it at all, even if he searched for them.) I've come back to review it, and there are things I wouldn't say now in this the very oldest and earliest of my works. But my coming back to it after all these years is not so much a matter of recognizing I was young and idealistic and thinking I am practical and realistic now, but looking again and saying that **I did not go nearly far enough.**

(Coming back years later deepened in the Orthodox spiritual tradition, or at least slightly less immature, my further knowledge has unlocked things in my earlier position that I could not understand in my early career as a

communion with saints including alike the [Martyrs and Passion-bearers Boris and Gleb](#), who were rulers in authority who chose to be murdered rather than take the sword, and warrior-saints like the [Greatmartyr, Victory-bearer and Wonderworker George](#). Both are treasures of the Orthodox Church, and while a soldier who has gone on active duty cannot become clergy, he can become a saint.

I might also comment that in years back, when I was exploring and searching, Christians who believed in a just war, without exception, met my forceful arguing only

convinced pacifist.)

But let us not demand perfection from everyone, and give one concession, at least, for lawful gun ownership.

with gentleness and kindness. If you are one of those people, this piece is dedicated to you.

## **A cue from the military that might *matter* to gun owners**

One Orthodox faithful explained gun ownership and challenged people who regarded gun ownership as simply nothing but a passion of anger. And he explained how, as a loving and careful father, he hopes to never fire his gun "live", but as a loving and responsible husband and father, he knows what he would do if someone broke into his house with intent to do harm. He would bring such killing to confession, but he had his priorities straight.

(Note that this is reasoning about what would happen in an imagined scenario, not what was happening, a distinction which is important in Orthodox mystical theology.)

I have heard gun control advocates talk about how tragic it was when someone heavily armed opened fire on children; I haven't yet heard a rebuttal after a card-carrying NRA member answered, "Yes, it was tragic not only that that started, but that there was no one lawfully possessing firearms available to stop the crime. Did you hear about one of those many incidents that never appears on television, where for instance a man armed to kill a bear entered a church sanctuary with intent to do ill, and an off-duty security guard who was carrying a firearm legally and with explicit permission of her church shot and stopped a

crime?"

And this may be just my observation, but the primary approach to persuasion taken by gun control advocates is to show hard-hitting images of traumatized people after an active shooter met no armed speed bump at all, to persuasion taken by the gun lobby is to mount a logical argument appealing to research and statistics. Now as a mathematician I understand Mark Twain's point that there are three types of lies ("Lies, \_\_\_\_\_ lies, and statistics!"), and I don't put my weight onto statistics I haven't seen investigated, but the question between gun control and gun lobby isn't a matter of deciding which side has cooked their books. Perhaps the gun lobby has cooked their books: but it is a little sad when only one side of a discussion argues from research, evidence, and statistics.

I may be hypocritical or a freeloading parasite when I say this, but I do not personally own a gun; I never have and probably never will. [I have some skill with firearms](#), but that is beside the point. But I feel safer now that my state has legalized carrying concealed firearms, with a few asterisks about how to opt out on your property. I would rather be in a situation where there are two guns in a room, owned by a criminal and meant for a crime, and one by a law-abiding citizen intending to stop crime in the most drastic circumstances, than only the gun carried by a criminal. I feel safer knowing that gun-using criminals do not know where there is a lawfully carried firearm, and criminals simply do not know if I am carrying a .45 with hollow-nosed rounds.

But if you're keepinkeeping a firearm by your bed for self-defense, may I ask if you are also, for instance, investing in good [night vision](#)? Have you taken the time to install a respectable home security system? This may be slightly less "sexy" than

having a powerful gun at hand, but have you established the powerful and immediate deterrent of flooding your home with light (a thief's worst enemy) if someone approaches?

And have you considered that it may be easier, after training, to hit someone while shooting out a solid stream of pepper spray—especially in poor lighting, where at least without night vision you can't really aim—than the few rounds in a gun's magazine? And that the effects on your house are much easier to clean up from a vile liquid than a few bullet holes after a powerful gun has shot through an intruder's body and hit the wall behind. Killing someone, however justified it may be, is a traumatic experience; even for trained law enforcement professionals, for instance, killing in the line of duty is trauma and good police chiefs can mandate that an officer who has killed in the line of duty get a year's counseling. Training as a law enforcement professional or soldier does not change the fact that it is traumatic to kill another person. If I had a choice between stopping a dozen innocent men with pepper spray and stopping one guilty man with a shot through the heart, I know which one I would rather remember when I look in the mirror each day.

For a first cue from the military, snipers, who know well enough how to fire a rifle at a paper target, are given one round and only one round to keep with them, carry, hold, and move around, and then after a couple of days are given one shot to take a "hostage situation" (balloon full of oatmeal or whatever) shot. Most fail the first time. With a bit more training and preparation, it gets to one shot, one kill. But it takes some training to get there. I wouldn't myself trust that with one shot, cold and in a panic, to hit home.

But with all that preface stated, may I ask people who look for safety via firearms to at least take a cue from the military?

Sun Tzu's classic *The Art of War* c. 500 BC, adapted for the business world in sometimes flaky ways, is arguably the greatest classic in military strategy and usually considered to be less dated than the best of the best from 100 years ago.

If one were to condense the multi-faceted classic into a single sentence, it should probably be one gem taken from the text, "**All warfare amounts to deception.**" To put it starkly, war is not achieved by killing people, with psychological considerations in any sense being a side issue. War is about deceiving people; killing people has more of a supporting role than anything else. The terms "strategy" and "strategem" are forms of the same basic word; they amount to how to trick the opponent. You don't win well by killing each other's soldiers and seeing who has some left over at the end; military forces at any rate fall apart at a third (maybe less) casualties, and rank and file U.S. troops have guns and ammunition intended to seriously wound in the average case, but not kill. (Part of this is love for enemies; part of it is a tactical consideration that if you instantly kill an enemy soldier, you take one man out of action; if you seriously wound a soldier with a wound that may be treatable, you take three men out of action.)

One ancient account talks about how a military leader stripped a force of thousand down to a few hundred, and gave them torches and the shofars that one would use at the head of a host. Then they crept around the host, surrounded it, and blasted the horn. The entire enemy warhost, "like the sand at a seashore for multitude", fell into deep panic and was routed, falling to each other's swords ([original text](#)).

World War II might have been won under even more dire circumstances, but at least it was not the armies of second-born sons whose blood was poured out like water who won D-Day

without strategem. Also contributing to that scenario was an enormous effort to build up rubber balloon versions of tanks at the like, massing to look from the air like the Allies were intending to invade from the point where the English Channel was narrowest, but sent a double agent to keep Hitler believing the D-Day invasion was just a diversion and keeping his main forces to where the channel was nearest and therefore out of the way when the breach was made on Normandy beach.

What does this have to do with home security? **Everything.** You're not firing on all pistons if you stop with a gun, and I do not mean that you need more firepower, or really even more gadgets.

Jack MacLean's [Secrets of a Superthief](#) says, on the cover:

"They said I was the best, the one the police called the 'Superthief.' Before I went straight I picked every lock, turned off every alarm, found every hiding place. I know how burglars get inside—and gets them out. If you're smart, you'll pay attention to what I have to say..."

Possibly the most valuable observation in the text is that home security should be 60% psychological and 40% physical, and it is seriously confused to think that you can win a physical arms race with a thief who wants to get in and isn't afraid of you. If you change your doors for heavier doors and less glass then a determined intruder will just change an already big crowbar for an even bigger crowbar. Then what other options are there? [the book](#) has some options; drawn from it:

**Situation:** There is an intruder accidentally making sounds in your house, or at least you think it is an intruder.

You say, crossly, with irritation and as much frosty, icy

condescension as you can muster, "Yes, Sweetie, I know what the machine gun will do to the walls. I don't care. I'm going to give 60 more seconds for the SWAT team to get here, and then I'm taking care of it **MY** way."

**Situation:** A thief is casing your back door for possible entrance.

Have a clearly scribbled note on your back door, fresh-looking note that says, "Honey, will you please talk to Billy? He's let that stupid pet rattlesnake escape his cage again, and right now, I can't even find that idiotic scorpion! Can you explain to him that this is UNACCEPTABLE?"

(Women have sometimes taken to putting a pair of [size 17 men's boots](#) outside the door each evening.)

Does it work? Perhaps you may not sound entirely believable, but nerves roughened by intruding in unknown situations where you don't know how people are armed and you could legally be killed tell a different story. (The "Superthief" tells of not being able to count how many terrifying times he heard a barking dog answered by "Shaddap, Max!")

The most implausible note he described, more humorous than believable, was a notice when he wanted people to leave him alone, was a note saying that he had a severe case of crabs, and the crabs were strong enough to break people's fingers with their claws.

**However, it was enough to motivate other convicted felons in prison to simply leave him alone.**

There's a lot that can be accomplished by violence in certain very unhappy circumstances, and Gandhi respected those who use force nobly. Seriously, he did:

*The people of a village near Rettilah told me that they had*

The people of a village near Dehri told me that they had run away whilst the police were looting their houses and molesting their womenfolk. When they said that they had run away because I had told them to be nonviolent, I hung my head in shame. I assured them that such was not the meaning of my nonviolence. I expected them to intercept the mightiest power that might be in the act of harming those who were under their protection, and draw without retaliation all harm upon their own heads even to the point of death, but never to run away from the storm centre. It was manly enough to defend one's property, honour or religion at the point of the sword. It was manlier and nobler to defend them without seeking to injure the wrongdoer. But it was unmanly, unnatural and dishonourable to forsake the post of duty and, in order to save one's skin, to leave property, honour or religion to the mercy of the wrongdoer. I could see my way of delivering the message of ahimsa to those who knew how to die, not to those who were afraid of death.

- Gandhiji in Indian Villages by Mahadev Desai

But there is more...

...and yet shew I unto you a more excellent way.

## **"Our social program is the Trinity"**

Of all the brief sayings that most mystifies people, "Our social program is the Trinity" may be the most confusing. A social program includes a blueprint for some more or less vaguely Utopian social order, and how by ~~civil war~~ politics it is possible to influence, manipulate, coerce, intimidate, bamboozle a plan to concretely build things on earth. And given such a bulleted list of key features to a social program, it seems an extremely strained reading of the doctrine of the Trinity.

But may I ask: What about devout Christian family communities saying, "Our juvenile correctional system is parents who love each other, stay married to each other, and love and discipline their children?" That's wordier, but the key point lies in a similar vein. If you go to a staunch Evangelical community, you may not see terribly many prisons, courthouses, correctional officers, and so on and so forth, but the purpose of a staunch Evangelical community is not that it has abundant "department of corrections" responses to a 10-year-old arrested for pushing hard drugs or a 12-year-old arrested for rape; however much there may be support for repentance, an ounce of prevention is worth a much more than a ton of cure, and an ounce of bored children in a less-than-ideal Bible study is worth years of expensive state programs to care for children who have been

incarcerated.

And in that sense, prayerful life, or the entire struggle in spiritual discipline, is the Orthodox martial art. Certain threads more than others, but the disciplined Orthodox life offers more than a martial art as wholesome homes offers something better than a state Department of Corrections or a doctrine of the Trinity that effectively answers social planners: "There are more things in Heaven and earth, visible and spiritual, than are even dreamed of in your ideologies."

Orthodox have various statements of how monasticism and the laity are compared, if they should be; I am of the opinion that it is beneficial to monastics to regard laity as fully equal, and laity to regard monastics as immeasurably above them. But some things in monasticism are falsely criticized as "just because it's monasticism:" taking passages of the Bible at face value is not, or at least should not, be a particularly distinctive feature of monasticism. And some people have said that Lent is just how Orthodoxy should be year round, and it makes sense to say that the bulk of monasticism is just how all Orthodox Christians should be.

Monasticism is privilege.

Monasticism is privilege, easily on par with a full ride scholarship at a top-notch university. But doesn't it entail poverty, obedience, and chastity? Well, of course. Aren't they difficult? Yes. But the vow of poverty, of never providing for your future self, is a vow of accepting the Providence who knows and loves you (past, present, and future) more than you could possibly ask. It is one of three medications that carves out a niche for abundant health. Perhaps most laity should observe chastity through faithfulness, but it is the same virtue that powers one practice and the other.

We are to be as the birds of the air, highlighted in the  
[Sermon on the Mount](#):

Lay not up for yourselves treasures upon earth, where moth and rust doth corrupt, and where thieves break through and steal: But lay up for yourselves treasures in heaven, where neither moth nor rust doth corrupt, and where thieves do not break through nor steal: For where your treasure is, there will your heart be also.

The light of the body is the eye: if therefore thine eye be single, thy whole body shall be full of light. But if thine eye be evil, thy whole body shall be full of darkness. If therefore the light that is in thee be darkness, how great is that darkness! No man can serve two masters: for either he will hate the one, and love the other; or else he will hold to the one, and despise the other. Ye cannot serve God and mammon. Therefore I say unto you, Take no thought for your life, what ye shall eat, or what ye shall drink; nor yet for your body, what ye shall put on. Is not the life more than meat, and the body than raiment?

Behold the fowls of the air: for they sow not, neither do they reap, nor gather into barns; yet your heavenly Father feedeth them. Are ye not much better than they? Do you think you can add one single hour to your life by taking thought? You might as well try by taking thought to work your way into being a foot taller! And why take ye thought for raiment? Consider the lilies of the field, how they grow; they toil not, neither do they spin: And yet I say unto you, Even Solomon in all his glory was not arrayed like one of these.

Wherefore, if God so clothe the grass of the field, which

to day is, and to morrow is cast into the oven, shall he not much more clothe you, O ye of little faith? Therefore take no thought, saying, 'What shall we eat?' or, 'What shall we drink?' or, 'Wherewithal shall we be clothed'? (For after all these things do the Gentiles seek:) for your heavenly Father knoweth that ye have need of all these things. But seek ye first the kingdom of God, and his righteousness; and all these things shall be added unto you. Take therefore no thought for the morrow: for the morrow shall take thought for the things of itself. Sufficient unto the day is the evil thereof.

There is something very powerful here, a something that is missed in business as usual in the U.S. Business as usual means heaping up treasures on earth, saying "God helps those who help themselves" (a quotation from Benjamin Franklin not found anywhere in the Bible), to be your own Providence. The idea that we are to do God's job as our Providence is at times treated harshly by Christ ([Luke 12:15](#):

And [Jesus] said unto them, "Take heed, and beware of covetousness: for a man's life consisteth not in the abundance of the things which he possesseth."

And he spake a parable unto them, saying, "The ground of a certain rich man brought forth plentifully: And he thought within himself, saying, 'What shall I do, because I have no room where to bestow my fruits?' And he said, This will I do: I will pull down my barns, and build greater; and there will I bestow all my fruits and my goods. And I will say to my soul, 'Soul, thou hast much goods laid up for many years; take thine ease, eat, drink, and be merry.' But God said unto him, 'Thou fool, this night thy soul shall be required of thee:

then whose shall those things be, which thou hast provided?'  
So is he that layeth up treasure for himself, and is not rich  
toward God."

I wrote about the husband who owned a gun as a means of being responsible towards his family: but my inward wincing was less that firing a gun is not turning the other cheek, than that he responded out of a spiritual illusion. This side of the Fall, we cannot ever arrange things right, and we do not do well to oust God so that we can get back to steering the helm of our lives ourselves.

It may or may not be appropriate for Orthodox laity to arm themselves, but whatever other reasons there may be for arming yourself, shutting off risk is not one of them. It is non-negotiable that no matter what hedge we surround ourselves with, the sand we grasp will slip through our fingers, and this is actually good news: we have another option, living the [Sermon on the Mount](#), not harmed because we do not have control, and free because we know we do not need to have control, [open to a larger world than the constricted world we keep on making for ourselves.](#)

There was a Linux fortune that said, on eloquent terms that I cannot fully reproduce, that there were a bunch of starfish clinging to rocks on the bottom of a rapidly flowing river, holding the rocks tightly and terrified they would lose their grip. Then one of them suddenly let go, was battered against a few rocks, and then finding a place in the flow. And, perhaps in a dig at Christianity, the other starfish who didn't get it called the one starfish a Messiah and worshiped him while continuing to cling, and remaining terrified of losing their grip on the rock.  
(But we are called to do both worship the Man, and imitate

him.)

The [Sermon on the Mount](#) would almost speak more strongly about violence being unworthy of Christians if it didn't address violence. The direct mention shadows the overarching theme, where silence speaks more powerfully than words.

But there are in fact words:

Ye have heard that it hath been said, 'An eye for an eye, and a tooth for a tooth:' But I say unto you, 'Ye resist not evil: but whosoever shall smite thee on thy right cheek, turn to him the other also.' And if any man will sue thee at the law, and take away thy coat, let him have thy cloak also. And whosoever shall compel thee to go a mile, go with him twain.

Give to him that asketh thee, and from him that would borrow of thee turn not thou away.

Ye have heard that it hath been said, 'Thou shalt love thy neighbour, and hate thine enemy.' But I say unto you, 'Love your enemies, bless them that curse you, do good to them that hate you, and pray for them which despitefully use you, and persecute you;' Ye may be the children of your Father which is in heaven: for he maketh his sun to rise on the evil and on the good, and sendeth rain on the just and on the unjust. For if ye love them which love you, what reward have ye? do not even the publicans the same? And if ye salute your brethren only, what do ye more than others? do not even the publicans so? Be ye therefore perfect, even as your Father which is in heaven is perfect.

St. Paul's empathic plea to Christians to not demean themselves and the Church by secular lawsuits against fellow Christians ([Why not rather be wronged? Why not rather be](#)

cheated?) is cut from the same cloth.  
But there is more.

## How does the Orthodox Christian martial art really work?

Returning the theme of monasticism as privilege, one aspect of the depth of monasticism is that monks are not to defend themselves by force. When they are accused, they are not to defend themselves in words, as Christ Himself remained silent before Pilate (Note: ...and terrorized Pilate more than any threat could have done). And this is not exactly a mainstream approach in the West. It's a bit of an oblong concept: something that is a common assumption between the various permutations of pacifism and just war is that, once you've decided what are the appropriate means for self-defense, you can and should use the most effective appropriate means to end the danger with minimal harm to yourself and others. It just goes without saying that whatever limits may be, obviously defending yourself with speech is appropriate. But the monastic interpretation of "[Ye resist not evil: but whosoever shall smite thee on thy right cheek, turn to him the other also.](#)" is quite simply that we are not to defend ourselves. We are not to defend ourself by means of lethal force; we are not to defend ourselves by means of less lethal force; we are not to defend ourselves even by words; we are not to defend ourselves even in thoughts. Not a single angry thought is permitted to us, and there are two kinds of power that we

wield after renouncing power.

The first kind of power, the (relatively) obvious one, is highlighted in a story from [A 3rd Serving of Chicken Soup for the Soul](#):

In the days when an ice cream sundae cost much less, a 10-year old boy entered a hotel coffee shop and sat at a table. A waitress put a glass of water in front of him. "How much is an ice cream sundae?" "Fifty cents," replied the waitress. The little boy pulled his hand out of his pocket and studied a number of coins in it. "How much is a dish of plain ice cream?" he inquired. Some people were now waiting for a table and the waitress was a bit impatient. "Thirty-five cents," she said brusquely. The little boy again counted the coins. "I'll have the plain ice cream," he said.

The waitress brought the ice cream, put the bill on the table, and walked away. The boy finished the ice cream, paid the cashier and departed. When the waitress came back, she began wiping down the table and then swallowed hard at what she saw. There, placed neatly beside the empty dish, were two nickels and five pennies - her tip.

C.S. Lewis's article [Why I Am Not a Pacifist](#) which would be more accurately be titled, for what it says, "Why No Christian Should Be a Pacifist Nor Have Either Their Church Teachings or Their Conscience Respected As a Conscientious Objector," dismissed what appeared to be Gandhi's toolchest as a dog lying in a manger (as in "Aesop's Fables:" which not only does not eat but also prevents other animals from eating). And it is not clear to me that all of the tools Gandhi used are appropriate: I'm not sure there is ever reason to seek out suffering, and after the

Church's decision to both canonize St. Ignatius (who brought martyrdom down on himself), and forbid future Orthodox Christians from trying to provoke martyrdom, apart from strained readings of the [Sermon on the Mount](#), I can't remember seeing any subsequent interpretations of hunger strike as appropriate. In other words, the [Sermon on the Mount](#) may give us tools, including a [Do not resist evil](#) that is never separate from the more foundational Truth in [Do not worry](#), does not justify other tactics such as civil disobedience without **direct** provocation, or hunger strikes.

There's plenty of reason for fasting, of course, but fasting is not a tool for straightening out God and his Providence: fasting is a tool to let God straighten **you** out. And in fact the [Sermon on the Mount](#) tells us that fasting, like prayer, should be as secret as manageable. Then it can reach its full power. However, Lewis himself may have furnished the most touching portrayal of Gandhi's toolbox in Christian literature of all that I have read, in [The Voyage of the Dawn Treader](#):

"Hail, Aslan!" came his shrill voice. I have the honor—" But then he suddenly stopped.

The fact was that he still had no tail—whether that Lucy had forgotten it or that her cordial, though it could heal wounds, could not make things grow again. Reepicheep became aware of his loss as he made his bow; perhaps it altered something in his balance. He looked over his right shoulder. Failing to see his tail, he strained his neck further till he had to turn his shoulders and his whole body followeed. But by that time his hind-quarters had turned too and were out of sight. Then he strained his neck looking his shoulder again, with the same result. Only after he had

turned completely round three times did he realize the dreadful truth.

"I am confounded," said Reepicheep to Aslan. "I am completely out of countenance. I must crave your indulgence for appearing in this unseemly fashion."

"It becomes you very well, Small One," said Aslan.

"All the same," replied Reepicheep, "if anything could be done . . . Perhaps her Majesty?" and here he bowed to Lucy.

"But what do you want with a tail?" asked Aslan.

"Sir," said the Mouse, "I can eat and sleep and die for my King without one. But a tail is the honor and glory of a Mouse."

I have sometimes wondered, friend," said Aslan, "whether you do not think too much about your honor."

"Highest of all High Kings," said Reepicheep, "permit me to remind you that a very small size has been bestowed on us Mice, and if we did not guard our dignity, some (who weigh worth by inches) would allow themselves very unsuitable pleasantries at our expense. That is why I have been at some pains to make it known that no one who does not wish to feel this sword as near his heart as I can reach shall talk in my presence about Traps or Toasted Cheese or Candles: no, Sir —not the tallest fool in Narnia!" Here he glared very fiercely up at Wimbleweather, but the Giant, who was always at a stage behind everyone else, had not yet discovered what was being talked about down at his feet, and so missed the point.

"Why have your followers all drawn their swords, may I ask?" said Aslan.

"May it please your High Majesty," said the second Mouse, whose name was Peepiceek, "we are all waiting to cut

off our own tails if our Chief must go without his. We will not bear the shame of wearing an honor which is denied to the High Mouse."

"Ah!" roared Aslan. "You have conquered me. You have great hearts. Not for the sake of your dignity, Reepicheep, but for the sake of the love that is between you and your people, and still more for the kindness your people showed me long ago when you ate away the cords that bound me on the Stone Table (and it was then, though you have long forgotten it, that you began to be Talking Mice), you shall have your tail again."

On an immediate level, this is what nonviolent resistance may seem to have. But the "big picture" realization was one that I realized in discussion with one friend about "What will you do in situation X [which had not, and has not, happened]?" and I told a joke:

A young man who was a prospective captain of a ship was being quizzed about how he would handle difficulties.

The person quizzing him said, "What would you do if a storm came?"

"I'd drop an anchor."

"OK; suppose that the anchor gets stuck and won't come up, and later on another storm came up again. What would you do?"

"I'd drop another anchor."

"Ok, and if that gets stuck and won't come up, and later on you see another storm, what would you do?"

"Where on earth are you getting all these anchors from?"

"From the same place you're getting all these storms from!"

Fr. Thomas Hopko's [55 Maxims](#) says, "Flee imagination, fantasy, analysis, figuring things out," and connects with "What would you do in situation X?" and the point I tried to make in [Treasures in Heaven: The Inner Meaning of "Do Not Store Up Treasures on Earth"](#). We are not to store up treasures on earth only in things external to our bodies; we are not to store up internal treasures on earth, things that exist in our minds.

One of these kinds of false treasure exists in terms of our perceived need to map everything we do out in advance. One teacher talked about how some scholar claimed to map out what St. Irenaeos would have said in various circumstances that hadn't happened: "What would St. Irenaeos have said if Adam and Eve, with their immediate children, had not sinned, but their grandchild did?" And regardless of the content of such scholarship, it is imposing on St. Irenaeos something utterly foreign to his mindset. As I have seen the academic community today, it is natural both to ask, "What is ...?" and "What would ...?" when trying to understand something. In patristic writers, only one of the two basic kinds of questions is valid for understanding something: "What is ...?" And no real saint that I am aware of announces that we must have a plan that anticipates every possibility before we act. Part of the point in the [Sermon on the Mount](#) is that there is no need for planning. It is as if this dialogue plays out:

**God:** Will you trust me on this?

**Us:** I don't know. I'm trying to trust you, but I really don't understand what you are trying to do with me here.

**God:** I know you don't know. That's my point. [As your Spiritual Father](#), I am not asking you to do my

thinking for for me. I am asking you to trust me. Do  
you trust me?

**Us:** I'm trying to fit things together, really I am, and  
maybe can work together if I am able to work out a  
plan. Could you work with me on this?

**God:** I am very interested in working with you. Do you  
trust me?

It is not my point—and probably not my position—to try to  
tell fellow Orthodox what saints' footsteps they may follow.

There are warrior-saints, and then there is [St. Acacius](#),  
mentioned in St. John Climacus's [Ladder of Divine Ascent](#), who  
obediently served an abusive elder for nine years until he died,  
and when asked at his grave, "Brother Acacius, are you dead?"  
called out from beyond the grave, "No, Father, how is it possible  
for an obedient man to die?" And there are many others of  
various stripes, [a kaleidoscope to the glory of God](#).

It is not my point—and probably not my position—to tell other  
Orthodox Christians whether they should join the military, or  
under what (if any) conditions firearm ownership is appropriate,  
or other questions regarding violence. I have a hunch that a good  
set of bright lights that turn on instantly whenever someone  
approaches your house may, at least by itself, provide a more  
effective deterrent than a gun for when an intruder is already in  
your house. And it may be a mistake to assume that the real "I'm  
taking it seriously" way to address threats is something that  
starts with weapons. However, at least for the sake of argument,  
I do not wish to give a prescription for how others may relate to  
violence. **But it is my direct wish to challenge the main  
assumption that keeps popping up when Christians regard  
violence as the real practical power.**

One point regarding the [Sermon on the Mount](#) is that this side of Heaven, control that you plan out is simply impossible.

The task is not to God's thinking for him; it is to accept his Providence as intended to bless you entirely, and trust him with the complete trust that the [Sermon on the Mount](#) cries out. This may mean being [with the birds of the field and the lilies of the field](#), and being so with (in some cases) or without openness to using violence. And, though this is a lesser point, I'm a little wary of a second assumption that lurks under the covers: "Pacifism is idealistic and appropriate for an ideal world, while sometimes using force is what works in the non-ideal world that we have." But there is confusion for people stressed and worried to give that line to "[Each day has enough trouble of its own](#)." I've had times with more stress in my life, and times with less, and it may more be true that in an ideal world, we wouldn't need "[Each day has enough trouble of its own](#)", but in the rough circumstances in which we live, we need to take things one day at a time, and we need it much more than we would if we were in Paradise.

One ex-military person I spoke with talked about how top brass would keep on waking everyone up at very late night / early morning, sound the alarm, say the USSR was invading NOW, and everybody had to get up and go out to the tanks. And so soldiers would grudgingly walk out, dragging their rifles by the muzzle, and get into the tanks, and the live question in everyone's eyes was whether the officers would call off the exercise before they got the tanks out and into mud. The live concern here is whether the soldiers would have to clean the mud off the tanks for moving into the field the next morning. And he talked about idealistically believing that if only he and his colleagues trained hard enough, no one would attack anyone else.

I remember hearing a missionary's kid who grew up

somewhere on the African continent saying, "You can't defeat people who have nothing to lose!" and thinking that that sounded awfully idealistic, something I really wanted to believe but couldn't, but that was over a decade ago, and since then the U.S. has been involved in multiple wars against third world nations and perhaps won none of them. World War I proudly paraded a mechanized army down to California for a sort of extended field training exercise where the entire mechanized army failed to apprehend the one single Mexican bandit that they were searching for. In Vietnam, the U.S. strategy was, "Our cool gadgets will win this war for us," the Viet Cong's strategy was to maximize the war's unpopularity back home ("ballbuster": a non-lethal anti-personnel mine used by the Viet Cong, just powerful enough to destroy testicles), and the present strategy in the present conflict of shooting at ISIL from the air and arming jihadists to fight ISIL jihadists is really less of a military strategy, properly speaking, than an all-American marketing strategy.

Having control this side of Heaven is not possible, and believing that firearms can be a way to opt-out of the conditions [Sermon on the Mount](#) addresses in its prescriptions. In that sense gun ownership is dangerous, because even if you accept 100% of what NRA advocates say, you have effectively closed your eyes to some of the bedrock of what the [Sermon on the Mount](#) says. In another matter, that of finances, the Fathers are quite clear: "That robe, hanging in your closet, belongs to the poor;" "Feeding the hungry is greater work than raising the dead." If your firearm costs you the ability to live the [Sermon on the Mount](#), drop it off at the police department; it is better for you to enter eternal life as killed where a firearm would have let you stop a crime, than to have your whole body (and your gun

with it) cast into Hell.

I might briefly comment that I have brief experience with martial arts, and I have consistently noticed that they had become the driest portions of my spiritual life. Firearms and martial arts, if they are to be useful, depend on constant practice and preparation. As the banner for every school but one of Kuk Sool Won, "We need more practice!" At the grandmaster's school, the banner says, "You need more practice!" The common consensus is that with martial arts, you fight noticeably better within months, but real mastery takes years, and years, and years. And even then you don't have a money-back guarantee; any martial arts instructor worth anything will make it clear before you reach black belt level (arguably before you reach anything above white belt) that martial arts instructors will make it abundantly clear that martial arts are no silver bullet; you may be safer in a conflict but not safe against every threat; someone testing for black belt can, if arrogant enough, wind up with a hole in the head. There have been attempts to make something simply easier to learn and remember—Goshin Jitsu is meant to be simple and effective—but keeping up on a martial art just because it might be useful in a fight is a bit like spending a few hours a week practicing a spare profession so that if you happen to lose your job you have a spare profession ready and waiting for you. It's a lot of work, and it's no more of a guarantee at that.

And there is a spiritual toll for practicing violence over and over and over. You sink in a lot of time that might be better spent sharpening your skills in your own profession. Aiki Ninjutsu talks about becoming a compassionate protector of others, and talks about building great compassion to offset the incredible destructiveness of the techniques. With all due respect, I need

to give all the compassion to others that I can give, without preventably siphoning it off to offset other considerations. Perhaps you can numb or ignore what it feels like to practice violence on others and have others practice violence on itself; and martial arts have an occult ambiance; the concept of ki / qi / chi is a Buddhist practice, not really Christian, and there is a good case to be made that it's magical, even without taking a common sense look at the philosophies Eastern martial arts draw on, which are almost invariably laden with an occult dimension.

**...and yet shew I unto you a more excellent way.**

## Thoughts Which Determine Our Lives

Much of what I wrote in [Our Thoughts Determine Our Lives: Beyond The Secret and the Law of Attraction](#) relates here. After Providence, here is perhaps the core payload for what is the Orthodox martial art.

The English word "practice" has two senses. One is, as a musician says, "I'm practicing," meaning, "I am taking time to make dry runs at this skill and sharpen it as much as possible." Or one speaks of a doctor "practicing medicine," meaning "I am exercising and doing the proper live activity in my profession." I will use the terms musician-style-practice and doctor-style-practice to distinguish the two meanings

With both firearms and martial arts, you need to practice to keep an edge, practice in the sense of the musician-style-practice. Competence requires an ongoing time sink. But live doctor-style-practice, comes very, very rarely.

One communication textbook talked about what your odds were for being assaulted on your way home: 1 in 10, 1 in 100, 1 in 1000, or 1 in 10,000. The point was that the more TV you watch, the more you overestimate the chances of suffering a violent response. The heaviest TV viewers expected a 1 in 10 chance of assault. The actual figure was the 1 in 10,000 per night figure. Notwithstanding shows glamorizing a highly romanticized view of

law enforcement—when did a police show ever depict an officer filling out an hour of paperwork, or spending a day doing a daily grind of dull responsibilities—police officers draw their weapons (excluding training) perhaps once every few years.

In the musician-style-practice, you only practice very, very rarely, even including officers. No matter how much preparation it takes to keep a sharp edge, live doctor-style-practice is, and should be, very rare.

The discipline of nepsis or spiritual watchfulness over thoughts, has more than one relevance, but a nepsis that watches for and cuts off warring thoughts at the first is invaluable. Though this is a different meaning than when I last saw it, "They say that if you must resort to violence, you have already lost." Read my article [Our Thoughts Determine Our Lives](#): then read Elder Thaddeus's original [Our Thoughts Determine Our Lives](#) and learn to appreciate your warring thoughts in deeper ways.

It may seem almost "sexist" that the blame, or at least attention and corrections, should be placed entirely on one side, yours; but this dark cloud hides an astonishing silver lining. If the correction is only put on one side, so is the power to change and make the situation better. Perhaps most (not all) conflicts include a feedback loop of escalating anger (and one that most or all truly good martial artists know how to shut down, by for instance meekly saying, "You're the tough guy"—and this was a third-degree black belt who meekly and submissively opted out of having to be the tough guy). There is a classic enlightenment exercise where a group of sailors stand in a ring, with instructions to touch the shoulder of the soldier exactly as yours was pressed. And someone touches one of the sailors lightly, with one light finger press. The

"equal to what happened to me" results in a heavy finger press, and before too long at all the light touch has become a meaty, and nasty, punch. It is very hard at times, but **love your enemies, bless those who curse you, pray for those who despitefully use you**: but you have the power, many times, to shut down the escalating unmerry merry-go-round that others will not step off of. Not that this is only for pacifists; I have seen soldiers beautifully live out of this power, and people who weren't specifically soldiers but believed in a just war (a western concept that never really took in Orthodoxy even though Orthodoxy never really places an expectation of becoming a pacifist). If Elder Thaddeus's sage advice could be summed up in a single maxim, it might be **Proverbs 15:1: "Anger slays even wise men; yet a submissive answer turns away wrath: but a grievous word stirs up anger."**

Gandhi said, "**An eye for an eye** only ends by making the whole world blind." each day and practicing our nonviolent thoughts (doctor-style-practice) a watchfulness in thoughts that is alert to snuff out smoulders when it is small rather than heroically deluging a burning house, is harder up front, but far easier down the road.

**It sounds small, but the results down the road are anything but small.**

## Holy and blinding arrogance

Elsewhere in *The Art of War*, Sun Tzu writes:

It is said that if you know your enemies and know yourself, you will not be imperiled in a hundred battles; if you do not know your enemies but do know yourself, you will win one and lose one; if you do not know your enemies nor yourself, you will be imperiled in every single battle.

And this is far from what the Orthodox Church has to offer. Do we need to know the demons? **No**. The [Philokalia](#) may say as much about demons as any Orthodox writing may have, but we are allowed arrogance such as Sun Tzu would have considered a fatal weakness. As regards the demons, we are to be really, properly, truly, and blindingly arrogant, like the Orthodox elder who was speaking with a novice about strange noises in a courtyard and told the novice, "It is only the demons. Pay it no mind." This is cut from the same cloth as the liturgical references to "the feeble audacity of the demons." **The mind takes the shape of whatever it contemplates**, hence St. Paul's words, [Finally, brethren, whatsoever things are true, whatsoever things are honest, whatsoever things are just, whatsoever things are pure, whatsoever things are lovely, whatsoever things are of](#)

good report; if there be any virtue, and if there be any praise, think on these things. We should look at Light, not darkness; live the *Sermon on the Mount*, and then, and not before, will we understand that the Light knows Himself and the darkness; the darkness knows neither itself nor the Light. If the spiritual eye receives things that make an impression on it, it matters what items it receives impressions from. *The light of the body is the eye: if therefore thine eye be single, thy whole body shall be full of light:* "single" in this context is cut from the same cloth as the *Beatitudes* that Orthodox chant in Liturgy, confessing in abbreviated form the entire *Sermon on the Mount*.

It has been said, "You can choose your options, but you cannot choose the consequences of your actions." You can choose whether to look at Light or darkness: in so doing you may choose, by gazing on the Light, to be filled with peace, or to gaze deeply into darkness (and have darkness gaze into you) by training your eyes on the whirlpool of circumstances all of us face. The option is not presented to try to do God's thinking for him, and analyze and work out how we will handle the future, and instead of darkness have all of the joys of peace that beholds the Light of God.

O that we could reach far enough into overreaching arrogance that we could, like saints old and new, look upon good and bad people and only see the beauty of the image of God in each!

## Conclusion

A lot has been covered here; the past few paragraphs narrate what, in a very specific sense, can be done as the Orthodox martial art. Broadly and in a deeper sense, holiness matters.

We live in turbulent times, as did Elder Thaddeus, who wrote, [Our Thoughts Determine Our Lives](#), a gift given to me by a friend who gave a very modest recommendation: "It's not terribly deep, but I find it helpful.". After reading it and writing, [Our Thoughts Determine Our Lives: Beyond The Secret and the Law of Attraction](#), I came up to him and told him he'd undersold it. It wasn't long before he agreed.

We live in turbulent times, and probably more turbulent and rougher as time goes on. But there is an alternative to being whipped out in the vortex of our times and surroundings. (Elder

Thaddeus had many sufferings and was repeatedly taken prisoner by Nazis.) We have a choice about whether we will be sucked into it. It might not seem like it, but we do. Psychologists advising addicts say that you have more power than you think. If we are attentive and refuse to consent to thoughts, perhaps praying to God to save us from this temptation, and if we are in anger, praying for God's every blessing. This is not a quick overall process: it may be something that is a minute to start, and a lifetime to master. But though it may take years and years and years to master, but improvement may start much faster

than months.

In [Treasures in Heaven: The Inner Meaning of "Do Not Store Up Treasures on Earth"](#), I try to unpack a small mystical slice of [Blessed are the poor in spirit](#). There is bodily poverty, and monastics are blessed when they let go of physical possessions. But we have many false treasures in terms of ideas in our heads, and the letting-go of these false interior treasures is in step with why my previous parish priest said, "When we are praying, we should not have very good thoughts; we should have no thoughts." And this has a poverty that is hard to come by. But once you have tasted it, earthly treasures taste suddenly flat. You've drunk something purer.

### **Beyond the Deep Magic of violence**

When aggression and violence are met only with meekness and love, what results can be truly powerful. Evil is not always stopped from harming and killing no matter where you fall: witness Satan's defeat in the martyrs, who are not in any sense killed because they are not good enough as Christians. Martyrdom is implemented by the Devil's work, but the victor in martyrdom is always and ever in the Lord and in the triumphant martyr entering Heaven in glory as a son of God. What happens in martyrdom, but quite a few other places as well, happens when the Deep Magic of violence runs its course, but when it has run its course, the Devil's work is transfigured into something immeasurably far beyond anything that the practical nature of violence can hope for. And its primary application is not reserved to the most extraordinary moments in a well-lived life, but the warp and woof of the daily living of those who practice it, be it on ever so small a scale!

Seeing as are surrounded by such a great cloud of  
witnesses,  
And such and heavenly treasures are set within our reach,  
Let us ever reach,  
Further Up and Further In!

# **Orthodoxy, Contraception, and Spin Doctoring: A Look at an Influential but Disturbing Article**

**The reason for writing:  
"Buried treasure?"**

Computer programmers often need to understand why programs behave as they do, and there are times when one is trying to explain a puzzle by understanding the source, and meets an arresting surprise. Programmer slang for this is "buried treasure," politely defined as,

A surprising piece of code found in some program. While usually not wrong, it tends to vary from [cruffy](#) to [bletcherous](#), and has lain undiscovered only because it was

functionally correct, however horrible it is. Used sarcastically, because what is found is anything \*but\* treasure. Buried treasure almost always needs to be dug up and removed. 'I just found that the scheduler sorts its queue using [the mind-bogglingly slow] [bubble sort](#)! Buried treasure!'"<sup>1</sup> ([source](#))

What I have found has me wondering if I've discovered theological "buried treasure," that may actually be wrong. Although my analysis is not exhaustive, I have tried to provide two documents that relate to the (possible) "buried treasure:" one treating the specific issue, contraception, in patristic and modern times, and one commentary on the document I have found that may qualify as "buried treasure."

## How to use this document

This document is broken into two parts besides this summary page.

The first part is taken from a paper written by an Orthodox grad student, with reference to Orthodoxy in patristic times and today. It sets a broad theological background, and provides the overall argument. One major conclusion is that one paper (Chrysostom Zaphiris, "Morality of Contraception: An Eastern Orthodox Opinion," *Journal of Ecumenical Studies*, volume 11, number 4, fall 1974, 677-90) is important in a troubling shift in Orthodox theology.

The second part, motivated by the understanding that Zaphiris's paper is worth studying in toto, is a relatively brief commentary on Zaphiris's paper. If the initial paper provides good reason to believe that Zaphiris's paper may be worth studying, then it may be valuable to see the actual text of his paper. The commentary can be skipped, but it is intended to allow the reader to know just why the author believes Zaphiris is so much worth studying.

It is anticipated that some readers will want to read the first section without poring over the second, even though the argument in the first section may motivate one to read the second.

## Why the fuss?

The Orthodox Church appears to have begun allowing contraception, after previously condemning it, around the time of an article (Chrysostom Zaphiris, "Morality of Contraception: An Eastern Orthodox Opinion," *Journal of Ecumenical Studies*, volume 11, number 4, fall 1974, 677-90) which may have given rise to the "new consensus." This article raises extremely serious concerns of questionable doctrine, questionable argument, and/or sophistry, and may be worth further studying.

A broader picture is portrayed in the earlier article about contraception as it appears in both patristic and modern views, which are profoundly different from each other.

# **Patristic and Current Orthodoxy: on Contraception**

## **Introduction**

Patristic and contemporary Orthodoxy do not say exactly the same things about contraception. Any differences in what acts are permitted are less interesting than the contexts which are much more different than the differences that would show on a chart made to classify what acts are and are not formally permissible.

Much of what I attempt below looks at what is unquestionable today and asks, "How else could it be?" After two sections comparing the Patristic and modern circumstances, one will be able to appreciate that one would need to cross several lines to want contraception in Patristic Christianity while today some find it hard to understand why the Orthodox Church is being so picky about contraception, I look at how these considerations may influence positions regarding contraception.

## How are the Fathers valuable to us?

I assume that even when one criticizes Patristic sources, one is criticizing people who understand Christianity much better than we do, and I may provocatively say that the Fathers are most interesting, not when they eloquently give voice to our views, but precisely when they shock us. My interest in what seems shocking today is an interest in a cue to something big that we may be missing. This is for much the same reason scientists may say that the most exciting sound in science is not "Eureka," "I've found it," but "That's funny..." The reason for this enigmatic quote is that "Eureka" only announces the discovery of something one already knew to look for. "That's funny" is the hint that we may have tripped over something big that we didn't even know to look for, and may be so far outside of what we know we need that we try to explain it away. Such an intrusion—and it ordinarily feels like an intrusion—is difficult to welcome: hence the quotation attributed to Winston Churchill, "Man will occasionally stumble over the truth, but most of the time he will pick himself up and continue on."

Understanding Church Fathers on contraception can provide a moment of, "That's funny..."

## The Patristic era

My aim in this section is not so much to suggest what views should be held, than help the reader see how certain things do not follow from other things self-evidently. I would point out that in the Patristic world, not only were there condemnations of contraception as such, but more deeply, I would suggest that there was a mindset where the idea of freeing the goodness of sexual pleasure from any onerous fecundity would seem to represent a fundamental confusion of ideas.

We may be selling both the Fathers and ourselves short if we say that neo-Platonic distrust of the body made them misconstrue sex as evil except as a necessary evil excused as a means to something else, the generation of children. The sword of this kind of dismissal can cut two ways: one could make a reductive argument saying that the ambient neo-Gnosticism of our own day follows classical forms of Gnosticism in hostility to bodily goods that values sex precisely as an experience and despite unwanted capacity to generate children, and so due to our Gnostic influence we cannot value sex except as a way of getting pleasure that is unfortunately encumbered by the possibility of generating children whether they are wanted or not. This kind of dismissal is easy to make, difficult to refute, and not the most helpful way of advancing discussion.

In the Patristic era, some things that many today experience

as the only way to understand the goodness of creation do not follow quite so straightforwardly, in particular that goodness to sex has its center of gravity in the experience rather than the fecundity. To Patristic Christians, it was far from self-evident that sex as it exists after the Fall is good without ambivalence, and it is even further from self-evident that the goodness of sex (if its fallen form is considered unambiguously good) centers around the experience of pleasure in coitus. Some contemporaries did hold that sexual experience was good. The goodness of sex consisted in the experience itself. Any generative consequences of the experience were evil, to be distanced from the experience. Gnostics in Irenaeus's day (John Noonan, *Contraception: A History of Its Treatments by Catholic Theologians and Canonists*, Cambridge: Harvard University Press, 1986, 57, 64. Unfortunately, not only is there no recent work of Orthodox scholarship that is comparable to Noonan, but there is little to no good Orthodox scholarship on the topic at all!), Manichees in the days of Augustine (Noonan 1986, 124.), and for that matter medieval Cathars (Noonan 1986, 181-3.) would hold to the goodness of sex precisely as an experience, combined with holding to the evil of procreation. (I will not analyze the similarities and differences to wanting pleasure unencumbered by children today.) Notwithstanding those heretics' positions, Christianity held a stance, fierce by today's standards, in which children were desirable for those who were married but "marriage" would almost strike many people today as celibacy with shockingly little interaction between the sexes (including husband and wife), interrupted by just enough sex to generate children (For a treatment of this phenomenon as it continued in the Middle Ages, see Philip Grace, *Aspects of Fatherhood in Thirteenth-Century Encyclopedias*, Western Michigan University

master's thesis, 2005, chapter 3, "Genealogy of Ideas," 35-6.).

Men and women, including husbands and wives, lived in largely separate worlds, and the framing of love antedated both the exaltations of courtly and companionate love without which many Westerners today have any frame by which to understand goodness in marriage (See Stephen Clark, *Man and Woman in Christ: An Examination of the Roles of Men and Women in Light of Scripture and the Social Sciences*, Ann Arbor: Servant 1980, Chapter 18, for a contrast between traditional and technological society.).

I would like to look at two quotations, the first from Augustine writing against the Manichees, and the second as an author today writes in reference to the first:

Is it not you who used to counsel us to observe as much as possible the time when a woman, after her purification, is most likely to conceive, and to abstain from cohabitation at that time, lest the soul should be entangled in flesh? This proves that you approve of having a wife, not for the procreation of children, but for the gratification of passion.

In marriage, as the marriage law declares, the man and woman come together for the procreation of children.

Therefore whoever makes the procreation of children a greater sin than copulation, forbids marriage, and makes the woman not a wife, but a mistress, who for some gifts presented to her is joined to the man to gratify his passion. Where there is a wife there must be marriage. But there is no marriage where motherhood is not in view; therefore neither is there a wife. In this way you forbid marriage. Nor can you defend yourselves successfully from this charge, long ago brought against you prophetically by the Holy Spirit

([source](#); the Blessed Augustine is referring to [I Tim 4:1-3](#)).

There is irony here. "Natural family planning" is today sometimes presented as a fundamental opposite to artificial contraception. (The term refers to a calculated abstinence precisely at the point where a wife is naturally capable of the greatest desire, pleasure, and response.) Augustine here described natural family planning, as such, and condemns it in harsh terms. (I will discuss "natural family planning" in the next section. I would prefer to call it contraceptive timing for a couple of reasons.)

Besides the immediate irony of Augustine criticizing the form of contraception to be heralded as "'Natural' Family Planning," (remember that "natural" family planning is a calculated abstinence when a wife is capable, naturally, of the greatest desire, pleasure, and response), Augustine's words are particularly significant because the method of contraception being discussed raised no question of contraception through recourse to the occult ("medicine man" pharmakeia potions) even in the Patristic world. There are various

issues surrounding contraception: in the Patristic world, contraceptive and abortifascient potions were difficult to distinguish and were made by pharmakoi in whom magic and drugs were not sharply distinguished (Noonan 1986, 25.). But it would be an irresponsible reading to conclude from this that Patristic

**Note:**

There is some irony in calling "'Natural' Family Planning" making a set of mathematical calculations and deliberately avoiding intercourse at the times when a woman is naturally endowed with the greatest capacity for desire, pleasure, and response.

condemnations of contraceptive potions were only condemning them for magic, for much the same reason as it would be irresponsible to conclude that recent papal documents condemning the contraceptive mindset are only condemning selfishness and not making any statement about contraception as such. Patristic condemnations of contraception could be quite forceful (Noonan 1986, 91.), although what I want to explore is not so much the condemnations as the environment which partly gave rise to them:

[L]et us sketch a marriage in every way most happy; illustrious birth, competent means, suitable ages, the very flower of the prime of life, deep affection, the very best that each can think of the other, that sweet rivalry of each wishing to surpass the other in loving; in addition, popularity, power, wide reputation, and everything else. But observe that even beneath this array of blessings the fire of an inevitable pain is smouldering... They are human all the time, things weak and perishing; they have to look upon the tombs of their progenitors; and so pain is inseparably bound up with their existence, if they have the least power of reflection. This continued expectancy of death, realized by no sure tokens, but hanging over them the terrible uncertainty of the future, disturbs their present joy, clouding it over with the fear of what is coming... Whenever the husband looks at the beloved face, that moment the fear of separation accompanies the look. If he listens to the sweet voice, the thought comes into his mind that some day he will not hear it. Whenever he is glad with gazing on her beauty, then he shudders most with the presentiment of mourning her loss. When he marks all those charms which to youth are so

precious and which the thoughtless seek for, the bright eyes beneath the lids, the arching eyebrows, the cheek with its sweet and dimpling smile, the natural red that blooms upon the lips, the gold-bound hair shining in many-twisted masses on the head, and all that transient grace, then, though he may be little given to reflection, he must have this thought also in his inmost soul that some day all this beauty will melt away and become as nothing, turned after all this show into noisome and unsightly bones, which wear no trace, no memorial, no remnant of that living bloom. Can he live delighted when he thinks of that? ([source](#))

Let no one think however that herein we depreciate marriage as an institution. We are well aware that it is not a stranger to God's blessing. But since the common instincts of mankind can plead sufficiently on its behalf, instincts which prompt by a spontaneous bias to take the high road of marriage for the procreation of children, whereas Virginité in a way thwarts this natural impulse, it is a superfluous task to compose formally an Exhortation to marriage. We put forward the pleasure of it instead, as a most doughty champion on its behalf... But our view of marriage is this; that, while the pursuit of heavenly things should be a man's first care, yet if he can use the advantages of marriage with sobriety and moderation, he need not despise this way of serving the state. An example might be found in the patriarch Isaac. He married Rebecca when he was past the flower of his age and his prime was well-nigh spent, so that his marriage was not the deed of passion, but because of God's blessing that should be upon his seed. He cohabited with her till the birth of her only children, and then, closing the channels of the senses, lived wholly for the Unseen...

(source)

This picture of a "moderate" view of marriage that does not "depreciate marriage as an institution" comes from St. Gregory of Nyssa's treatise *On Virginity*, and allowances must be made for the fact that St. Gregory of Nyssa is contrasting virginity, not with an easy opposite today, namely promiscuity or lust, but marriage, which he bitterly attacks in the context of this passage. The piece is not an attractive one today. However, that does not mean that what he says is not part of the picture. This bitter attack is part of a picture in which contraception could look very different from today, but that way of looking at contraception is not purely the cause of a rhetoric attacking marriage to praise virginity. I present this not to analyze St. Gregory's exact view on marriage, but to give a taste of an answer to "How else could it be?" in comparison to what is unquestionable today.

Some attitudes today (arguably the basic assumption that motivates offense at the idea that one is condemning the goodness of the created order in treating sex as rightly ordered towards procreation) could be paraphrased, "We affirm the body as good, and we affirm sex in all its goodness. It is a source of pleasure; it is a way to bond; it is powerful as few other things are. But it has a downside, and that is a certain biological survival: unless countermeasures are taken, along with its good features unwanted pregnancy can come. And properly affirming the goodness of sex means freeing it from the biological holdover that gives the good of sexual pleasure the side effect of potentially resulting in pregnancy even if it is pursued for another reason." To the Patristic Christian, this may well come across as saying something like, "Major surgery can be a

wonderful thing. It is occasion for the skillful art of doctors, in many instances it is surrounded by an outflow of love by the patient's community, and the difficulties associated with the process can build a thicker spine and provide a powerful process of spiritual discipline. But it would be really nice if we could undergo surgery without attendant risks of unwanted improvements to our health."

It seems so natural today to affirm the goodness of the body or sex, and see as the only possible translation of that affirmation "the goodness of the pleasure in sexual experience," that different views are not even thinkable; I would like to mention briefly some other answers to the question, "How else could it be?" The ancient world, in many places, looked beyond the few minutes of treasure and found the basis for the maxim, "Post coitum omne animal triste" (after sex, every animal [including humans] is sad), and feared that sex could, among other things, fundamentally deplete virile energy (Michel Foucault, *The History of Sexuality: The Use of Pleasure*, New York: Random House 1985, 137): its goodness might be seen as a costly goodness involving the whole person, rather than simply being the goodness of "one more pleasure, only a very intense one, that is especially good because it is especially intense" or self-evidently being at the core of even a good marriage (Noonan 1986, 47-8).

This is not to suggest that Christians merely copied the surrounding views. Contraception, abortion, and infanticide were quite prevalent in the Roman world (Noonan 1986, 10-29). Whatever else Patristic Christianity can be criticized for in its strong stance on contraception, abortion, and infanticide, it is not an uncritical acceptance of whatever their neighbors would happen to be doing. And if St. Gregory of Nyssa holds up an

example which he alleges is procreation that minimizes pleasure, it might be better not to simply say that neo-Platonism tainted many of the Fathers with a dualistic view in which the body was evil, or some other form of, "His environment made him do it."

## **Modernity and "natural" family planning**

In the discussion which follows, I will use the term "contraceptive timing" in lieu of the somewhat euphemistic "natural family planning" or "the rhythm method." In my own experience, I have noticed Catholics consistently needing to explain why "natural family planning" is an opposite to contraception; invariably newcomers have difficulties seeing why decreasing the odds of conception through mathematical timing is a fundamentally different matter from decreasing the odds of conception through biological and chemical expedients. I would draw an analogy to firing a rifle down a rifle range, or walking down a rifle range to retrieve a target: either action, appropriately timed, is licit; changing the timing of an otherwise licit action by firing a rifle while others are retrieving their targets and walk in front of that gun is a use of timing that greatly affects the moral significance of an otherwise licit act. I will hereafter use the phrase "contraceptive timing."

## Orthodox implications

As Orthodox, I have somewhat grave concerns about my own Church, which condemned contraception before 1970 but in recent decades appears to have developed a "new consensus" more liberal than the Catholic position: abortifascient methods are excluded, there must be some openness to children, and it must be agreed with by a couple's spiritual father. This "new consensus," or at least what is called a new consensus in an article that acknowledges it as surrounded by controversy that has "various groups accusing each other of Western influence," which is, in Orthodox circles, a good cue that there is something interesting going on.

The one article I found on the topic was "lobbyist" scholarship that seemed to avoid giving a fuller picture (Zaphiris 1974.). This one article I found in the ATLA religion database matching the keywords "Orthodox" and "contraception" was an article that took a "new consensus" view and, most immediately, did not provide what I was hoping a "new consensus" article would provide: an explanation that can say, "We understand that the Fathers had grave reservations about contraception, but here is why it can be permissible." The article in fact made no reference to relevant information that can (at least today) be easily obtained from conservative Catholic analyses. There was no discussion of relevant but ambiguous matter such as Onan's

sin (Noonan 1986, 34-6.) and New Testament condemnations of "medicine man" pharmakeia which would have included some contraception (Noonan 1986, 44-5.). There was not even the faintest passing mention of forceful denunciations of contraception by both Greek and Latin Fathers. John Chrysostom was mentioned, but only as support for distinguishing the good of sex from procreation: "The moral theologian par excellence of the Fathers, St. John Chrysostom, also does not stress the procreation of children as the goal of marriage." (Zaphiris 1974, 680) Possibly; St. Chrysostom Chrysostom may not have written anything like the incendiary material from St. Gregory above. But "the moral theologian par excellence of the Fathers" did write:

[St. John Chrysostom:] Why do you sow where the field is eager to destroy the fruit? Where are the medicines of sterility? Where is there murder before birth? You do not even let a harlot remain only a harlot, but you make her a murderess as well. Do you see that from drunkenness comes fornication, from fornication adultery, from adultery murder? Indeed, it is something worse than murder and I do not know what to call it; for she does not kill what is formed but prevents its formation. What then? Do you condemn the gift of God, and fight with his laws? What is a curse, do you

The [Nicene and Post-Nicene Fathers](#) has at times a legendary bias against against Rome (let alone against the Eastern Church), and renders Chrysostom as talking about abortion and infanticide but not obviously contraception. This is deliberate mistranslation. To pick out one example, In *Patrologia Graecae* 60.626 (the

seek as though it were a blessing?... Do you teach the woman who is given to you for the procreation of offspring to perpetrate killing?... In this indifference of the married men there is greater evil filth; for then poisons are prepared, not against the womb of a prostitute, but against your injured wife. (Homilies on Romans XXIV, Rom 13:14, as translated in Noonan 1986, 98.)

St. Chrysostom is not so quick as we are today to distinguish contraception from murder. Possibly, as Zaphiris writes, "there is not a defined statement on the morality of contraception within Orthodoxy." But this is a treacherous use of words.

Let me give an analogy to explain why. People consume both food and drink, by eating and drinking. But it is somewhat strange to point out that a person has never drunk a roast beef sandwich, particularly in an attempt to lead a third party to believe, incorrectly, that a person has never consumed that food item. The Church has "defined" statements relating to Trinitarian and Christological, and other doctrines ([source](#)), and formulated morally significant canon law. But she has never "defined" a statement in morals; that would be like drinking a roast beef sandwich. And so for Zaphiris to point out that the Orthodox Church has never "defined" a statement about contraception—a point that would be obvious to someone knowing what sorts of

quotation spans PG 60.626-7), "enqa polla ta atokia," rendered "ubi multae sunt herbae in sterilitatem?" in the PG's Latin and "Where are the medicines of sterility?" by Noonan, appears in the NPNF as "where are there many efforts at abortion?" This is a deliberate under-translation.

things the Church does not "define;" "defining" a position against murder would, for some definitions of "define," be like drinking a sandwich—and lead the reader to believe that the Church has never issued a highly authoritative statement about contraception. The Orthodox Church has issued such statements more than once.

Saying that the Orthodox Church has never "defined" a position on a moral question is as silly and as pointless as saying that a man has never drunk a roast beef sandwich: it is technically true, but sheds no light on whether a person has consumed such a sandwich—or taken a stand on the moral question at hand. Zaphiris's "observation" is beginning to smell a lot like spin doctoring.

I have grave reservations about an article that gives the impression of covering relevant Patristic material to the question of contraception without hinting at the fact that it was condemned. Needless to say, the article did not go beyond the immediate condemnation to try to have a sympathetic understanding of why someone would find it sensible to make such condemnations. If I were trying to marshal Orthodox theological resources in the support of some use of contraception, I doubt if I could do better than Zaphiris. However, if the question is what Orthodox should believe in reading the Bible through the Fathers, submitting to the tradition in seeking what is licit, then this version of a "new consensus" theological treatment gives me even graver doubts about the faithfulness of the "new consensus" to Orthodox tradition. The Zaphiris article, if anything, seems to be an Orthodox document with influence, and red flags, that are comparable to *Humanae Vitae*.

There have been times before where the Orthodox Church

has accepted something alien and come to purify herself in succeeding centuries. In that sense there would be a precedent for a change that would be later undone, and that provides one ready Orthodox classification. The Orthodox Wiki provides no history of the change in Orthodoxy, and a formal statement by the Orthodox Church in America (source), without specifically praising any form of contraception, attests to the newer position and allows some use of reproductive technologies, but does not explain the change. I would be interested in seeing why the Orthodox Church in particular has brought itself into sudden agreement with cultural forces beyond what the Catholic Church has.

The Orthodox Church both affirms that Christ taught marriage to be indissoluble—excluding both divorce and remarriage after divorce—and allows by way of *oikonomia* (a concession or leniency in observing a rule) a second and third remarriage after divorce, not counting marriages before full reception into the Orthodox Church. However, there is a difference between observing a rule with *oikonomia* and saying that the rule does not apply. If a rule is observed with *oikonomia*, the rule is recognized even as it is not followed literally, much like choosing "the next best thing to being there," in lieu of personal presence, when one is invited to an occasion but cannot easily attend. By contrast, saying that the rule does not apply is a deeper rejection, like refusing a friend's invitation in a way that denies any duty or moral claim for that friend. There is a fundamental difference between sending a gift to a friend's wedding with regrets that one cannot attend, and treating the invitation itself with contempt. The rites for a second and third marriage are genuine observations of the fact that one is observing a rule with leniency: the rite for a second

marriage is penitential, the rite for a third marriage even more so, and a firm line is drawn that rules out a fourth marriage: oikonomia has limits ([source](#)). If a second and third marriage is allowed, the concession recognizes the rule and, one might argue, the reality the rule recognizes. If one looks at jokes as an anthropologist would, as revealing profound assumptions about a culture, snipes about "A wife is only temporary; an ex-wife is forever" and "When two divorced people sleep together, four people are in the bed" are often told by people who would scoff at the idea of marriage as a sacred, permanent union... but the jokes themselves testify that there is something about a marriage that divorce cannot simply erase: a spouse can become an ex-spouse, but the marriage is too permanent to simply be dropped as something revocable that has no intrinsically permanent effects. And in that sense, an ex-spouse is closer to a spouse than to a friend that has never had romance. Which is to say that marriage bears witness both to an absolute and oikonomia in how that absolute is observed.

Even with noted exceptions, the Gospels give the indissolubility of marriage a forceful dominical saying backed by quotation from the heart of the Old Testament Scriptures. If something that forcefully put may legitimately be observed with oikonomia, then it would seem strange to me to say that what I have observed as Patristic attitudes, where thinking of contraception as desirable would appear seriously disturbed, dictate not only a suspicion towards contraception but a criterion that admits no oikonomia in its observation. Presumably some degree oikonomia is allowable, and perhaps one could not rule out the oikonomia could take the form of a new consensus's criterion allowing non-abortifascient contraception, in consultation with one's spiritual father, on condition of allowing children at some

point during a marriage. However, even if that is the legitimate oikonomia, it is legitimate as the lenient observation of grave moral principles. And, in that sense, unless one is prepared to say that the Patristic consensus is wrong in viewing contraception with great suspicion, the oikonomia, like the rites for a second and third marriage, should be appropriate for an oikonomia in observing a moral concern that remains a necessary moral concern even as it is observed with leniency.

## Conclusion

I am left with a puzzle: why is it that Orthodox have adopted the current "new consensus"? My guess is that Zaphiris's quite provocative article was taken as simply giving a straight account of Orthodoxy and Patristic teaching as it relates to contraception. The OCA document more or less applies both his analysis and prescriptions. But, while I hesitate to say that no one could explain both why the Fathers would regard contraception as abhorrent and we should permit it in some cases, I will say that I have not yet encountered such an explanation. And I would present, if not anything like a last word, at least important information which should probably be considered in judging the rule and what is appropriate *oikonomia*. If Orthodoxy regards Patristic culture and philosophy as how Christ has become incarnate in the Orthodox Church, then neither condemnations of contraception, nor the reasons why those condemnations would be made in the first place, concern only antiquarians.

Would it be possible for there to be another "new consensus?"

## **"Morality of Contraception: An Orthodox Opinion:" A commentary**

The article published by Chrysostom Zaphiris, "Morality of Contraception: An Eastern Orthodox Opinion," *Journal of Ecumenical Studies*, volume 11, number 4, fall 1974, 677-90, seems extremely significant. **It seems a lobbyist article, and in both content and timing the 1970's "new consensus" as articulated by the Orthodox Church in America is consistent with taking Zaphiris in good faith as simply stating the Orthodox position on contraception.** (This was the one article I found in an ATLA search for keywords "Orthodox" and "contraception" anywhere, on 13 May, 2007. A search for "Orthodoxy" and "contraception" on 14 May, 2007 turned up one additional result which seemed to be connected to queer theory.)

I perceive in this faulty—or, more properly, deceptively incomplete data, questionable argument, and seductive sophistry which I wish to comment on.

I believe that Zaphiris's text is worth at least an informal commentary to draw arguments and certain features to the reader's attention. In this commentary, all footnotes will be Zaphiris's own; where I draw on other sources I will allude to the discussion above or add parenthetical references. I follow

his footnote numbering, note page breaks by inserting the new page number, and reproduce some typographical features.

THE MORALITY OF  
CONTRACEPTION: AN EASTERN  
ORTHODOX OPINION\*

by  
CHRYSOSTOM ZAPHIRIS  
PRECIS

This discussion of the morality of contraception includes four basic points: the purpose of marriage as viewed scripturally and patristically, the official teachings of Orthodoxy concerning contraception, the moral issue from an Orthodox perspective, and "the Orthodox notion of synergism and its implications for the moral question of contraception."

It is possible through inference to determine that the Scriptures and the early Christian writers considered that, within marriage, sexual activity and procreation were not the same entity and that sexuality was to be practiced within marriage. These assertions are illustrated.

The official teaching of the Orthodox Church on contraception

**Footnote from  
Zaphiris's text**

Chrysostom Zaphiris (Orthodox) is a graduate of the Patriarchal Theological School of Halki, Turkey, and holds a doctorate with highest honors from the University of Strasbourg, where he studied with the Roman Catholic faculty. His 1970 thesis dealt with the "Text of the Gospel according to St. Matthew in Accordance with the Citations in Clement of Alexandria compared with Citations in the Greek Fathers and Theologians of the Second to Fifth Centuries." Dr.

includes five points: a denunciation of intentional refusal to procreate within marriage, a condemnation of both abortion and infanticide, an absence of any commitment against contraception, and a reliance upon the medical profession to supply further information on the issue. The author offers a theological opinion on the question of contraception allowing for contraception under certain circumstances.

Synergism is the final issue discussed. Synergism is defined as cooperation, co-creation, and co-legislation between humans and God. When people use their talents and faculties morally and creatively, they are acting in combination with God and expressing God's will. The Orthodox view of contraception is perceived within the dimensions of synergistic activity and serves as a contrast to the Roman Catholic view.

The essay concludes with some comments about contraception as a moral issue as perceived within the Eastern Orthodox Church. Allowing

Zaphiris taught canon law and New Testament courses at Holy Cross School of Theology (at Hellenic College), Brookline, MA, 1970-72. From 1972 to 1974, he was Vice Rector at the Ecumenical Institute for Advanced Studies, Tantur, Jerusalem.

\* This paper was originally presented during the discussion held for doctors of Jerusalem, Bethlehem, and the surrounding area hosted by theologians of the Ecumenical Institute at Tantur on the question of the morality of contraception. At this point, I would like also to thank Br. James Hanson,

for individual freedom and responsibility, and in light of synergism, Orthodoxy avoids

C.S.C., for his help editing my English text.

definitive pronouncements on such moral issues as contraception.

## I. INTRODUCTION.

Contraception is one of the most important aspects of human behavior and family life, and thus it is a part of life which cannot be ignored by theology itself. There can be no question of treating this moral question, but only of outlining the aspects which must be considered according to the Orthodox tradition.

I don't know an exact rule for "what must be considered for the Orthodox tradition," but besides of Biblical witness, the Patriarch of New Rome and one of three "heirarchs and ecumenical teachers" of the Orthodox Church, St. John Chrysostom, homilectically treating something as an abomination and calling it "worse than murder" would tend to be something I would include under "aspects which must be considered according to the Orthodox tradition."

One reaction which I would like to address in many readers, even though it is not properly commentary is, "Contraception is comparable to homicide? It's called "worse than murder"? Is this translated correctly? Is this gross exaggeration? Is it cultural weirdness, or some odd influence of Platonic thought that the Church has recovered from? Why on earth would anybody say that?" This is a natural reaction, partly because the Fathers are articulating a position that is inconceivable today. So the temptation is to assume that this has some cause, perhaps historical, despite moral claims that cannot be taken seriously

today.

I would like to provide a loose analogy, intended less to convince than convey how someone really could find a continuity between contraception and murder. Suppose that destroying a painting is always objectionable. Now consider the process of painting: a painting germinates in an artist's mind, is physically created and explored, and finally becomes something one hangs on a wall.

Now let me ask a question: if one tries to interrupt the process of artistic creation, perhaps by disrupting the creator's state of mind and scattering the paints, does that qualify as "destroying a painting"?

The answer to that question depends on what qualifies as "destroying a painting." If one disrupts the artist who is thinking about painting a painting, or scatters the paints and half-painted canvas, then in neither case has one destroyed a finished painting. You cannot point to a completed painting that was there before the interruption began, and say, "See? That is the painting that was destroyed." However, someone who is not being legalistic has good reason to pause before saying "This simply does not qualify as destroying a painting" A completed painting was not destroyed, but the process of artistic creation that produces a completed painting was destroyed. And in that sense, someone who interrupted Van Gogh and stopped him from painting "Starry Night" is doing the same sort of thing as someone today who would burn up the completed painting. The two acts are cut from the same cloth.

Now my intent is not to provide a precise and detailed allegory about what detail of the creation process represents conception, birth, etc. That is not the intent of the general illustration. My point is that talk about "destroying paintings"

need not be construed only as destroying a completed painting in its final form. There is also the possibility of destroying a painting in the sense of willfully disrupting the process of an artist in the process of making a painting. And, perhaps, there is room for St. John Chrysostom's horrified, "Indeed, it is something worse than murder and I do not know what to call it; for she does not kill what is formed but prevents its formation."

Now is this rhetorical exaggeration? Quite possibly; Noonan studies various penitentials, all from before the Great Schism, and although there is not always a penance assigned for contraception by potion, two assign a lighter penance than for homicide, one assigns the same penance, and one actually assigns a penance of four years for homicide and seven for contraception. Contraception could bear a heavier penance than murder.

It is somewhat beside the point to work out if we really have to take St. John Chrysostom literally in saying that contraception is worse than homicide. I don't think that is necessary. But it is not beside the point that the Fathers seem to treat a great deal of continuity between contraception, abortion, and infanticide, and seem not to draw terribly sharp oppositions between them. Whether or not one assigns heavy-handed penalties from contraception, I can't think of a way to read the Fathers responsibly and categorically deny that contraception is cut from the same cloth as abortion and infanticide. The point is not exactly an exact calculus to measure the relative gravity of the sins. The point is that they are all connected in patristic writing.

First, we need to study the purpose of marriage as we find it in the Scriptures and in the writings of the Greek Fathers. Second, we will reflect on the official teaching authority of the

Orthodox Church on this question of contraception. Third, we will offer a moral opinion as to the legitimacy of the practice of contraception from an Orthodox viewpoint. And finally, we will discuss the Orthodox notion of synergism and its implications for the moral question of contraception.

## II. THE PURPOSE OF MARRIAGE.

Although the purpose of marriage is never treated systematically in the Scriptures or in the Fathers according to our contemporary viewpoint and questions, it is possible to infer the thoughts of these classical authors on the purpose of marriage. In general, what we find is that there is the presupposition that human sexual activity within marriage and the procreation of children are not seen as completely the same reality. And furthermore, both Scripture and the Fathers consistently counsel the faithful to live in such a way that human sexuality can be expressed within marriage.

The claim in the last sentence is true; more has been argued from St. John Chrysostom. But Orthodoxy does view celibacy and marriage as more compatible than some assume today. At least by the letter of the law, Orthodox are expected to be continent on fasting days and on days where the Eucharist is received, meaning a minimum of almost half days of the year, including one period approaching two months. I don't know what degree of *oikonomia* is common in pastoral application, but an Orthodox might want to drop another shoe besides saying "both Scripture and the Fathers consistently counsel the faithful to live in such a way that sexuality can be expressed in marriage."

The Scriptures present us with a Christian doctrine of marriage most clearly in *Genesis* and in the writings of St.

Paul. In *Genesis 2:18*, God said that it was not good for man to be alone, but that he should have a helpmate which he then gave to Adam in the person of his wife, Eve. Is this help meant by God to be only social and religious?

Apparently the possibility that marriage could, as in the patristic world, be not only an affective matter of what people but a union of pragmatic help encompassing even the economic is not considered.

For a detailed answer to "How else could that be?" in terms of a relationship including quite significant pragmatic help, see Stephen Clark, *Man and Woman in Christ: An Examination of the Roles of Men and Women in Light of Scripture and the Social Sciences*, Ann Arbor: Servant 1980. To someone who has read and digested that book, there seem to be an awful lot of assumptions going into what marriage is allowed to be for the husband and wife.

Or is it also intended by God to be a physical help provided to a man in terms of sexual complementarity?

Does "physical help" simply boil down to the C-word, as Zaphiris seems to imply? Are there no other possibilities? And why is "physical help" just something a wife gives a husband and not something a husband gives a wife? The euphemism sounds like the wife should be kind enough to join a pity party: "It causes him so much pleasure, and it causes me so little pain." I would like to propose a much more excellent alternative: **making love**.

Perhaps it is also possible that "physical help" should also include assistance with errands, or provision, or getting work done as part of a working household? Besides Stephen Clark, Man

and *Woman in Christ: An Examination of the Roles of Men and Women in Light of Scripture and the Social Sciences* (Ann Arbor: Servant 1980), Proverbs 31:10-31 describes the ideal helpmate who perhaps has children but is not praised as for beauty or as a basic sex toy: she is praised, among other things, as a powerful and effective helpmeet. In the praises, physical beauty is mentioned only in order to deprecate its significance.

In reading Clark, it seems a natural thing to offer a wife the praises of the end of Proverbs. Zaphiris's presuppositions make that kind of thing look strange. But the defect is with Zaphiris.

However we answer these questions, one thing is certain: the question of procreation as such is not raised by the author. Yet, procreation itself is encouraged by the author of *Genesis 1:28*, when God orders human beings to be fruitful and multiply and fill the earth. Just as the author of the Pentateuch never makes an explicit connection between the creation of Eve and the practice of human procreation, so likewise St. Paul in the New Testament never makes this connection.

In the case of St. Paul, it is a question of sexual relations of continence within marriage or of marriage as opposed to virginity, but never exactly the question of procreation in any of these cases. Paul considers marriage and virginity as charisms within the life of the Church. He exhorts believers to the practice of virginity if they have this charism; if not, he encourages them to marry. This raises a subsequent question: "Does St. Paul encourage marriage first of all to promote the procreation of children or rather make up for human weakness which is experienced in sexual passion?" While I acknowledge that procreation of children is one of

the reasons for marriage which Christian theology has consistently taught, it has never been the only reason for Christian marriage.

If we follow St. Paul closely, it is apparent that he encourages a man to marry, not simply to procreate children, but for other reasons, the most prominent of which would be to avoid fornication (cf. I Cor. 7:2). It is because human persons have the right

I would like to make a comment that sounds, at first, like nitpicking about word choice:

Rights-based moral calculus is prevalent in the modern world, sometimes so that people don't see how to do moral reasoning without seeing things in terms of rights. But the modern concept of a "right" is alien to Orthodoxy.

See Kenneth Himes (ed.) et al., *Modern Catholic Social Teaching: Commentaries and Interpretations* (Washington: Georgetown University Press 2005), chapter 2 (41-71) for an historical discussion including how the concept of rights became incorporated into Catholic moral reasoning from the outside. The change was vigorously resisted as recently as Pope Pius IX's *Syllabus of Errors* (1864), today the subject of embarrassed explanations, but what Catholics apologetically explain is often closer to Orthodoxy than the modern Catholic explanation of what Catholicism really teaches. Even in modern Catholicism, officially approved "rights" language is a relatively recent development, and there are attempts to use the concept differently from the secular West.

Armenian Orthodox author Vigen Guorian's *Incarnate Love: Essays in Orthodox Ethics* (Notre Dame: University of Notre Dame Press 1987, page number not available) briefly complains

about the modern idea of placing human dignity on no deeper basis than rights; I would refer the reader to my homily "Do we have rights?" ( [http://jonathanscorner.com/no\\_rights/](http://jonathanscorner.com/no_rights/) ) for moral-ascetical reasoning that rejects the innovation.

The reason why I am "nitpicking" here is that there is a subtle difference, but a profound one, between saying that sex is good within marriage (or at least permissible), and saying that husband and wife have a right to sexual pleasure, and this entitlement is deep enough that if the sexual generation of children would be undesirable, the entitlement remains, along with a necessity of modifying sex so that the entitled sexual pleasure is delivered even if the sexual generation of children is stopped cold.

Zaphiris never develops the consequences of rights-based moral reasoning at length or makes it the explicit basis for arguing for an entitlement to sexual pleasure even if that means frustrating sexual generation. However, after asserting a married right to sex, he not only fails to discourage this reasoning, but reaches a conclusion identical with the one this reasoning would reach.

to be married and to perform sexual activity within that specific context that Jesus Christ and St. Paul have condemned explicitly the practice of fornication (cf. Mt 5:32, 19:9; Acts 15:20; I Cor. 5:1, 6, 13, 18). Thus, in our study of the Christian tradition on marriage and the possibility of contraceptive practices within marriage, we must keep clearly in view this particular function of marriage as an antidote to fornication.

We find a similar sensitivity in the writings of Paul to the human need for sexual gratification in marriage when he

counsels Christian couples on the practice of continence within marriage. "The wife cannot claim her body as her own; it is her husband's. Equally, the husband cannot claim his body as his own; it is his wife's. Do not deny yourselves to one another, except when you agree upon a temporary abstinence in order to devote yourselves to prayer; afterwards, you may come together again; otherwise, for lack of self-control, you may be tempted by Satan" (I Cor. 7:4-5). In this passage, there is no question of procreation, but only of the social union between husband and wife within Christian marriage. While, on the positive side, Paul affirms that Christian marriage is a sign of the union between Jesus Christ and the Church and that the married couple participates in the unity and holiness of this union, more negatively he also sees in marriage an antidote or outlet for the normal human sexual passions. In this context, St. Paul always counsels marriage as preferable to any possibility of falling into fornication.

In saying this, St. Paul is obviously not opposed to procreation as the end of marriage. The bearing of children was naturally expected to result from the practice of sexual intercourse within marriage as he counseled it. Abstinence from regular sexual intercourse was encouraged only to deepen the life of prayer for a given period of time. This limiting of abstinence to a specific period of time shows well Paul's sensitivity to the demands of human sexual passions and his elasticity of judgment in giving moral counsel. Thus, from the exegesis of Genesis of St. Paul, the whole contemporary question of the explicit connection between sexual intercourse within marriage and the procreation of children was simply not raised in the same form in which it is

today.

I would like to take a moment to look at the story of Onan before posing a suggestion about exegesis.

I suggest that in the Bible, especially in portraying something meant to horrify the reader, there are often multiple elements to the horror. The story of Sodom portrays same-sex intercourse, gang rape, and extreme inhospitality. There is a profoundly naive assumption behind the question, "Of same-sex intercourse, gang rape, and extreme inhospitality, which one are we really supposed to think is the problem?" In this case, it seems all three contributed to something presented as superlatively horrifying, and it is the combined effect that precedes Sodom's judgment in fire and sulfur and subsequently becoming the Old Testament prophet's "poster city" for every single vice from idolatry and adultery to pride and cruelty to the poor. The story of Sodom is written to have multiple elements of horror.

There is one story where contraception is mentioned in the Bible, and it is one of few where Onan joins the company of Uzzah, Ananias, Sapphira, Herod (the one in Acts), and perhaps others in being the only people named in the Bible as being struck dead by God for their sins. This is not an august company. Certainly Onan's story is not the story of a couple saying, "Let's just focus on the children we have," but a story that forceful in condemning Onan's sin, whatever the sin properly consisted in, has prima facie good claim to be included a Biblical text that factors into a Biblical view of contraception. The story is relevant, even if it is ambiguous for the concerns of this question.

Likewise, in something that is not translated clearly in most

English translations, the New Testament (Gal 5:20, Rev 9:21) pharmakoi refers to "medicine men" who made, among other things, contraceptive and abortifascient potions, in a world that seemed not to really separate drugs from magic. English translations ordinarily follow the KJV in translating this only with reference to the occult sin, so that it does not come across clearly that the Bible is condemning the people you would go to for contraceptives. This is ambiguous evidence for this discussion: it is not clear whether it is only condemning the occult practices, condemning what the occult practices were used for, or condemning both at the same time, but the question is significant.

Granted, not every Biblical text touching marriage is evidence against contraception. There are other relevant passages like Gal 5:21-33 which discuss the love in marriage with no reference to fecundity, but if one wants to understand the Bible as it relates to contraception, it is surprising not to mention passages that directly impinge on it, ambiguously but raising the question of whether contraception is a grave sin.

Turning from the writings of Paul to those of the Greek Fathers, we will see that there is a continuity of Orthodox tradition in

this understanding of the purpose of marriage. First, let us consider the statement of Clement of Alexandria who raises this problem as a theologian and as a pastor of the faithful.

When he comments on I Cor. 7:2, he uses neither the allegorical nor the spiritual method of exegesis, but rather the literal interpretation of this Pauline text. Through this methodology, Clement, in spite of his usual idealism,

#### **Zaphiris's**

#### **footnote:**

1. Cf. Stromata, III, 82, 4.

recommends marriage over fornication and counsels sexual intercourse within marriage over the possibility of serving the temptor through fornication.[1]

679 We find a similar line of thought in his successor, Origen.

Although Origen accepts procreation as the end of marriage, he also sees in marriage the legitimate concession to human weakness in its sexual passions.[2]

Likewise Methodius of Olympus continues this interpretation of St. Paul in a very clear statement on the subject: "... The apostle did not grant these things unconditionally to all, but first laid down the reason on account of which he has led to this. For, having set forth that 'it is good for a man not to touch a woman' (I Cor. VII, 1) he added immediately 'nevertheless, to avoid fornication, let every man have his own wife' (I Cor. VII, 2)—that is 'on account of the fornication which would arise from your being unable to restrain your passions.' ..." Afterwards the author notes that Paul speaks "by permission" and "not of command," so that Methodius comments: "For he receives command respecting chastity and not touching of a woman, but permission respecting those who are unable to chasten their appetites."

Methodius applies similar logic to the possibility of the second marriage, in that he permits the second marriage, not specifically for the procreation of children, but

"on account of the strength of animal passion, he [Paul]

**Zaphiris's  
footnote**

2. See H. Crouzel, *Virginité et mariage selon Origène* (Paris-Bruges, 1963), pp. 80-133.

**Zaphiris's  
footnote**

3. Cf. *The Banquet of the Virgins*, III, 12.

allows one who is in such condition may, 'by permission' contract a second marriage; not as though he expressed the opinion that a second marriage was in itself good, but judging it better than burning . . ." According to Methodius, the apostle speaks here, first saying that he wished all were healthy and continent, as he also was, but afterwards allowing a second marriage to those who are burdened with the weaknesses of the passions, goaded on by the uncontrolled desires of the organs of generations for promiscuous intercourse, considering such a second marriage far preferable to burning and indecency.[3]

The moral theologian par excellence of the Fathers, St. John Chrysostom, also does not stress the procreation of children as the goal of marriage. On the contrary, he adheres to the Pauline texts and to the apologists for virginity and concludes that marriage does not have any other goal than that of hindering fornication.

4. See A. Moulard, Saint Jean Chrysostome, le défenseur du mariage et l'apôtre de la virginité (Paris, 1923), pp. 72ff.

"The moral theologian par excellence of the Fathers" wrote the passage cited in the paper above:

"Why do you sow where the field is eager to destroy the fruit? Where are the medicines of sterility? Where is there murder before birth? You do not even let a harlot remain only a harlot, but you make her a murderess as well. Do you see that from drunkenness comes fornication, from fornication adultery, from adultery murder? Indeed, it is something worse than murder and I do not know what to call

it; for she does not kill what is formed but prevents its formation. What then? Do you condemn the gift of God, and fight with his laws? What is a curse, do you seek as though it were a blessing?... Do you teach the woman who is given to you for the procreation of offspring to perpetrate killing?... In this indifference of the married men there is greater evil filth; for then poisons are prepared, not against the womb of a prostitute, but against your injured wife."

There is arguably a degree of ambiguity in the Church Fathers. However, the ambiguity is of a far lesser degree. The Fathers argued most vehemently against opponents who believed the procreation of any children was morally wrong; contraception was seen as a duty in all intercourse, and not a personal choice for one's convenience. See Augustine as cited on page 6 above. Acknowledging that the Fathers addressed a different situation, this does not mean that, since the Fathers did not address the situation of a couple not wishing to be burdened by more children for now, the patristic arguments are inapplicable. An injunction against suicide may say something about self-mutilation even if, in the initial discussion, there was no question of mutilations that were nonlethal in character.

There is some element of something in the Fathers that can be used to support almost anything: hence Sarah Coakley's *Powers and Submissions: Spirituality, Philosophy, and Gender* (Oxford: Blackwell 2002) teams up St. Gregory of Nyssa with Judith Butler, who is a lesbian deconstructionist and "bad writing" award winner, in pursuing the "gender fluidity" that is greatly sought after by queer theory and feminism (157-61). For that matter, I think there is a stronger case for Arianism, from the Bible, than Zapyiris makes from the Church Fathers on

contraception, and it involves less "crossing fingers." For the record, I believe the conclusions of both arguments I have brought up are heresy, but there is a reason I brought them up. We are in trouble if we only expect the truth to be able to pull arguments from the Scripture and the Fathers, or believe that an argument that draws on the Scripture and the Fathers is therefore trustworthy. My point is not so much whether Zaphiris is right or wrong as the fact that there's something that can be pulled from the Fathers in support of everything, either right or wrong. His argument needs to be weighed on its merits. (Or demerits.)

There is some more complexity to the discussion; I have left many things out of the shorter article, but the much even of what I have left out would make the point more strongly. Hence Noonan discusses a view that sex during pregnancy is not licit because it will not be fruitful, discusses the Stoic protest of "even animals don't do this," mentions a third-century dissenter from this view (Lactantius) who allowed sex during pregnancy only as an ambivalent concession, and then the well-read researcher writes, "This... is the only opinion I have encountered in any Christian theologian before 1500 explicitly upholding the lawfulness of intercourse in pregnancy" (Noonan 1986, 78.). Properly taken in context, this would support a much stronger position than I have argued, and one less attractive today.

Is the issue complex? There's a lot here to understand. Granted. But in this case, "complex" does not mean "nothing but shades of grey," and I am at a loss for a good, honest reason to claim to provide an overview Patristic theology as relevant to contraception, while at the same time failing to mention how it condemned contraception.

### III. THE OFFICIAL TEACHING OF THE ORTHODOX CHURCH ON CONTRACEPTION

While there is not a defined statement on the morality of contraception within Orthodoxy,

To modify what I wrote above: I am not sure exactly what Zaphiris means by "defined." The Church is not considered to have "defined" any position on morals in the sense of infallibly pronounced doctrines. In Orthodoxy, the Seven Ecumenical Councils may create canons that are morally binding, but irreversible doctrinal declarations are mostly connected to Christology. Under that definition of "defined", the Orthodox Church would not have "defined" a ruling against contraception, regardless of its moral status. Neither would she have "defined" a ruling against rape, murder, or any other heinous offenses, even as she unambiguously condemns them.

This is one of several passages that raises questions of slippery rhetoric, perhaps of sophistry. Assuming that the above understanding of "defined" applies (a question which I am unsure of even if it seems that an affirmative answer would be consistent with the rest of the document), his claim is technically true. But it is presented so as to be interpreted as stating that the Orthodox Church has no real position on the matter, unlike other moral questions where the Orthodox Church would presumably have defined a position. This understandable inference is false. The Patristic witness, and arguably the Biblical witness, in fact do treat contraception as suspicious at best. If so, this is a case of Zaphiris saying something technically true in order to create an impression that is the opposite of the truth. That is very well-done sophistry.

Zaphiris continues with a small, but telling, remark:

there is a body of moral tradition which has a bearing on this question.

This short claim is also true. More specifically, there is a body of moral tradition which has a bearing on this question and tends to view contraception negatively.

First, the Church vigorously denounces any obvious case of pure egotism as the motivating force in Christian sexuality within marriage. Any married couple within the Orthodox Church who want absolutely no children sins grievously against both the Christian dispensation and against the primordial purpose of human life which includes the procreation or, as the Greek Fathers prefer, the "immortality" of the human species.

It seems that Zaphiris may be, for reasons of rhetoric and persuasion, providing a limit to how much he claims, so as to be more readily accepted. Zaphiris provides no footnotes or reference to sources more specific than the "Greek Fathers" to buttress this claim, and does not provide an explanation for certain questions. One such question is why, if marriage is not morally required and celibates are never obligated to provide that specific support for the "immortality" of the human species, such obligation is binding on all married couples. Are all celibates exempt from "the primordial purpose of human life," and if so, why is it permissible to fail to meet such a foundational purpose of human life? I do not see why Zaphiris's logic justifies his making the more palatable claim that some openness towards children is mandatory.

This raises the question of whether he has a consistent position arising from his reading, or whether he is simply

inventing a position and claiming he got it from the Greek Fathers.

According to the Greek Fathers, to refuse to transmit life to others is a grievous sin of pride in which the couple prefers to keep human life for themselves instead of sharing it with possible offspring.

Secondly, the Orthodox Church, following the teachings of the Fathers,[5] is totally opposed to any form of the abortion of unborn children. Human life belongs exclusively to God and neither the mother nor the father of the fetus has the right to destroy that life.

[6] When the Fathers of the Church debated against the non-Christian philosophers[7] of the first centuries, they considered abortion as murder because the life of the fetus is animate being.[8]

(Note, for the closing claim, that the reason Zaphiris provides is articulated in a fashion which does not apply to contraception, at least not directly: destroying a painting is wrong precisely because an existing and completed painting is a work of art. What the rhetoric says, avoids saying, and leaves the reader to

**Zaphiris's  
footnotes:**

Ad Diogn., 5,6; Tertullian, Apolog, IX, 6-8; Ad Nationes, I, 15; Minucius Felix, Octavius, XXX, 2; Lactance, Divinarum Institutionum, VI, 20.

6. In this regard, we should stress the fact that the Greek Fathers forbid every induced abortion of a

infer, seems to be exquisitely crafted sophistry.)

Thirdly, the Orthodox Church has universally condemned infanticide as immoral, following the same line of theological reasoning.

**Zaphiris's  
footnote:**

6. In this regard, we should stress the fact that the Greek Fathers forbid every induced abortion of a human fetus because abortion involves tampering with a human soul. In fact, the soul is not the product of the sexual act of the parents, but is rather the manifestation of the love of God or the result of a special direct or indirect action of God (cf. Clement of Alexandria,

human fetus because abortion involves tampering with a human soul. In fact, the soul is not the product of the sexual act of the parents, but is rather the manifestation of the love of God or the result of a special direct or indirect action of God (cf. Clement of Alexandria, Stromata, VI. 135, et Eclogae propheticae, 50, 1-3). A study of the means of the transmission of the soul is beyond the scope of the present paper so that we do not try to explain it here. What is important is to emphasize that the parents cannot destroy any human life—even embryonic

Stromata, VI. 135,  
et Eclogae  
propheticae, 50, 1-3).  
A study of the means  
of the transmission  
of the soul is beyond  
the scope of the  
present paper so  
that we do not try to  
explain it here. What  
is important is to  
emphasize that the  
parents cannot  
destroy any human  
life—even embryonic  
—because the  
embryo carries the  
soul which is  
transmitted by God.

Fourthly, it is important to stress that the Orthodox Church has not promulgated any solemn statements through its highest synods on the whole contemporary question of contraception. In general, I think it is accurate to say that, as long as a married couple is living in fidelity to one another and not allowing an immoral

egotism to dominate their sexual relations, the particularities of their sexual life are left to the freedom of

—because the  
embryo carries the  
soul which is  
transmitted by God.  
7. We must stress  
the fact that a few  
non-Christian  
philosophers took  
issue with the pro-  
abortion majority  
and condemned  
abortion. Cf. Seneca,  
De Consolatione ad  
Helviani, XVI, 3; R.  
Musunius, p. 77;  
Desimus Junius  
Juvenalis, Satire, VI,  
595f.; Philon of  
Alexandria,  
Hypothetia, VII, 7  
(apud Eusebius,

Evangelica, VIII, 7,  
7).

8. Among other  
Greek Fathers, see  
Clement of  
Alexandria, Eclogae  
propheticae, 50, 1-3.

the spouses to decide.

Finally, it is important to note that the Orthodox Church looks to the medical profession itself to come to some unanimity in its biological research on the effects of contraception for human health. At the moment, the world of science does not furnish the world of theology such a unanimous body of opinion as would allow the Church prudently to formulate unchangeable moral teaching on this point. 682

There is probably a higher class academic way of making this point, but there is a classic anecdote, rightly or wrongly attributed:

Winston Churchill to unknown woman: "Would you sleep with me for a million pounds?"

Unknown woman: "Would I!"

Winston Churchill: "Would you sleep with me for five pounds?"

Unknown woman: "Exactly what kind of woman do you think I am?"

Winston Churchill: "We've already established that. We're just negotiating over the price."

This claim is not a claim that the theological status of contraception is to be determined by the medical profession. The paragraph quoted above means that the theological status of contraception has already been established, with the "price" left to the medical profession to work out.

#### IV. A THEOLOGICAL OPINION ON THE QUESTION OF CONTRACEPTION

From the material we have surveyed above, it should be obvious that there can be no question of entering into marriage without the intention of procreating children as part of the marriage and still remain faithful to the Orthodox moral tradition.

[10]

Pay very, very close attention to footnote 10, immediately above. When a Church Father says that marriage is for the procreation of legitimate children, Zaphiris mentions this only in a footnote and immediately apologizes for it, explaining it away it as "probably due to the influence of Greek philosophy." Are we really talking about the same "Greek philosophy" as Zaphiris describes above as only rarely having people speak out against abortion?

However, it seems to me that a different question is raised when we consider the case of a couple who already have three or four children and cannot realistically face the possibility of begetting more children and providing

**Zaphiris's  
footnote:**

10. Clement of Alexandria, e.g., probably due to the influence of Greek philosophy, defines marriage as "gamos oun esti synodos andros kai gynaikos e prote kata nomon epignesion teknon sporai," i.e. marriage is primarily the union of a man and a woman according to the law in order to procreate legitimate children (cf. Stromata, II, 137, 1).

**Zaphiris's  
footnote:**

11. When the patristic theologians comment on the Pauline doctrine of I Cor. 7:4-5, they

adequately for their upbringing and education. Either they can act fairly irresponsibly and beget more children or they can abstain from sexual intercourse with the constant threat that Satan may tempt the couple to some form of adultery.

I see plenty of precedent for this kind of heart-rending plea in Margaret Sanger's wake. Ordinarily when I see such a line of argument, it is to some degree connected with one of the causes Margaret Sanger worked to advance. I am more nebulous on whether the Fathers would have seen such "compassion" as

how compassion is most truly understood; they were compassionate, but the framework that gave their compassion concrete shape is different from this model.

I might comment that it is almost invariably first-world people enjoying a first-world income who find that they cannot afford any more children. Are they really that much less able than people in the third-world to feed children, or is it simply that they cannot afford more children and keep up their present standard of living? If this choice is interpreted to mean that more children are out of the question, then what that means is, with apologies to St. John Chrysostom, a decision that luxuries and inherited wealth make a better legacy for one's children than brothers and sisters.

consistently stress the temporary character of the sexual abstinence which was permitted by St. Paul to the marriage partners. This temporary period would be all that a husband and wife should agree to in order to avoid the temptation to evil (cf. Clement of Alexandria, Stromata, III, 79, 1).

If the first practice of continued sexual intercourse is pursued, there is the likelihood of an unwanted pregnancy in which case the child ceases to be a sign of their shared love, but risks being a burden which causes only anxiety and even hostility. It is not common that people in this situation of despondency opt for the clearly immoral act of abortion. If this radical action is avoided, and the parents go through with the birth of an unwanted child, there is still the danger that they will subsequently seek a divorce.

Apart from economic or possible emotional problems which accompany economic pressures in family life, there is the equally concrete problem that the health of one of the parents or the health of the possible child might be jeopardized should conception occur.

To limit as far as possible the moral, religious, social, economic, cultural, and psychological problems which arise with the arrival of an unwanted child—both for the parents and for the larger community—I believe that the use of contraceptives would be, if not the best solution, at least the only solution we have at our disposal today. I cannot distinguish between natural and artificial means because the morality of both is the same. If someone uses either a natural or an artificial means of birth control, the intention is the same, i.e., to prevent an unwanted pregnancy. The use of contraceptives can facilitate a sexual life which enjoys a minimum of anxiety.

With these reflections on the current situation of family life and based on the above understanding of St. Paul and the Fathers, I ask myself what is better: to practice abstinence from the act of sexual intercourse, an act made holy by the blessing of God, or to practice a controlled

sexual life within marriage and avoid the temptation of Satan? As we know, sexual intimacy within marriage is a very important aspect of the relationship between husband and wife. With the use of contraceptives this sexual intimacy can be practiced without fear of unwanted pregnancy or without the danger of adultery which may result from the practice of abstinence.

Here contraceptives appear to "save the day" in terms of marital intimacy, and the question of whether they have drawbacks is not brought to the reader's attention. Zaphiris is interested, apparently, in answering the question, "What can be made attractive about contraception?" There are other ways of looking at it.

There was one time I met Fr. Richard John Neuhaus; it was a pleasure, and very different from the stereotypes I keep hearing about neoconservatives here at my more liberal Catholic school, Fordham.

At that evening, over beer and (for the others) cigars I asked about the idea that I had been mulling over. The insight is that concepts ideas and positions having practical conclusions that may not be stated in any form. I asked Fr. Neuhaus for his response to the suggestion that the practice of ordaining women is a fundamental step that may ripple out and have other consequences. I said, "It would be an interesting matter to make a chart, for mainline Protestant denominations, of the date they accepted the ordination of women and the date when they accepted same-sex unions. My suspicion is that it would not be too many years."

He responded by suggesting that I push the observation further back: it would be interesting to make a chart for

American denominations of the date when they allowed contraception, and the more nebulous date when they started to allow divorce.

Fr. Neuhaus's response raises an interesting question for this discussion. There might be greater value than Zaphiris provides in answering the question, "What are the practical effects, both positive and negative, for sexual intimacy that happen when a couple uses contraception?" There is room to argue that intimacy premised on shutting down that aspect of sharing may have some rather unpleasant effects surfacing in odd places. Fr. Neuhaus seemed to think before suggesting a connection between contraception and divorce. But this is not the question Zaphiris is answering; the question he seems to be answering is, "How can we present contraception as potentially a savior to some couples' marital intimacy?" This is fundamentally the wrong question to ask.

The use of contraceptives can contribute to the possibility of a couple's having a permanent physical and spiritual union. The practice of contraception can contribute to the harmony between the man and wife which is the sine qua non of their union.

Furthermore, the practice of contraception can facilitate a balance between demographic expansion on our planet and cultivation of its natural resources. This is absolutely essential if we

### **Zaphiris's**

#### **foonote:**

12. This spiritual union and the physical union are not opposed to one another, but are complementary. As an Orthodox theologian, I cannot treat physical union and spiritual union as dialectically opposed realities, which would result from an

are to prevent future misery and human degradation for future generations. Furthermore, the church itself, which always desires to promote the economic, social, educational, psychological, and religious well-being of its members and of all persons, should permit the practice of contraception among its faithful if it is to be true to its own task.

There was one webpage I saw long ago, comparing the 1950's and 1990's and asking whether it was still possible to make ends meet. The author, after comparing one or two of other rules of thumb, compared what was in a 1950's kitchen with what was in a 1990's kitchen, and concluded, "We're not keeping up with the Joneses any more.... We're keeping up with the Trumps."

St. John Chrysostom was cited in an academic presentation I heard, as presenting an interesting argument for almsgiving: in response to the objection of "I have many children and cannot afford too much almsgiving," said that having more children was a reason to give more alms, because almsgiving has salvific power, and more children have more need for the spiritual benefit of parental almsgiving.

Besides finding the argument interesting, there is something that I would like to underscore, and it is not simply because this would be a family size with contraception forbidden. This is in

opposition between matter and spirit. Rather than getting trapped in this typically Western problem, I follow the theological stress of Orthodoxy; this opposition between matter and spirit is resolved through the Logos, and matter and spirit are affirmed to be in extraordinary accord and synergy.

the context of what would today be considered a third world economy—what we know as first world economy did not exist until the West discovered unprecedentedly productive ways of framing an economy. An hour's work would not buy a burger and fries; a day's work might buy a reasonable amount of bread, and meat was a rarity. Those whom St. Chrysostom was advising to give more alms since they had more children, were living in what would be considered squalor today. Or in the West the year of Zaphiris' publication, or perhaps before that.

Why is it that today, in such a historically productive economy, we have suddenly been faced with the difficulty of providing for a large family? Why does the first world present us with the (new?) issue of providing for as many children as a couple generates? My suspicion is that it is because we have an expected baseline that would appear to others as "keeping up with the Trumps." The question in Zaphiris is apparently not so much whether children can be fed, whether with a first world diet or with straight bread, as whether they can be given a college education, because, in a variation of Socrates' maxim, a life without letters after one's name is not worth living.

I would raise rather sharply the conception of what is good for human beings: as Luke 12:15 says, a man's life does not consist in the abundance of his possessions. The Orthodox ascetical tradition has any number of resources for a well-lived life. There are more resources than most of us will ever succeed in using. The Orthodox ascetical tradition is not only for people who consider themselves rich. Is contraception really justified just because the average middle-class family cannot afford to bring up more than a few children in the lifestyle of keeping up with the Trumps?

This personal theological-moral opinion which I have outlined and which suggests that we take active human measures regarding family life and the future of society does not at all imply that I reject the full importance of the action of divine providence as important—it is probably the most important factor in the human future. On the contrary, I want to suggest the cooperation of human reason with divine providence; for the Greek Fathers, human reason itself is a participation in the divine revelation. The discoveries and inventions of humankind are themselves permitted by God who governs the human spirit through the Logos without suppressing human freedom.

Furthermore, we must not forget that the physiology of the woman is itself a kind of preventative to the occurrence of pregnancy. During her menstrual cycle, as is well known, she is fertile only part of the time. On the side of the male physiology, it is only by chance, and certainly not the result of every ejaculation of semen, that one of the millions of sperm swims to the ovum with final success so that conception occurs. I believe that the physical make-up of the reproductive system of both female and male shows that God did not intend that every act of human sexual intercourse should result in a pregnancy. Consequently, I believe that the contraceptive pill does not produce an abnormal state in woman, but rather prolongs the non-fecund period which comes from God.

Having arrived at this moral opinion which would allow the use of contraceptives by Orthodox couples, it is important to conclude by underscoring several basic points. First, as an Orthodox theologian, I feel that I must respect the freedom of a married couple to ultimately make the decision

themselves after I have done my best to school them in the sacredness of marriage, the importance of their union within the saving Mystery of Jesus Christ, and their role in peopling the communion of saints.

684 Secondly, it is important, from an Orthodox point of view, to recognize in the practice of sexual continence a primarily spiritual reality. That is, sexual continence should be practiced only when a couple feels that this is being asked of them by God as a moment within their mutual growth in holiness and spirituality. Any imposition of continence as a physical discipline entered into for baser motives such as fear is not the kind of continence which is counseled to us by the Gospel.

This makes an amusing, if perhaps ironic, contrast to *Humanae Vitae*. Here Zaphiris more or less says that "continence" for the sake of having sexual pleasure unencumbered by children is not really continence. Which I would agree with. Zaphiris says that the pill (abortifascient, incidentally, on some accounts today) is merely regulating a natural cycle, while crying "foul!" at the Catholic claim that contraceptive timing is a spiritually commendable "continence." The Catholic position is the mirror image of this, rejecting the idea that the pill (even if it were not abortifascient) is merely regulating a natural cycle, and classifying the pill among what Catholic canon law calls "poisons of sterility." Both *Humanae Vitae* and Zaphiris make a shoddy argument for one of these two methods of contraception and cry "Foul!" about shoddy argument on the other side.

Despite the fact that Zaphiris presents himself as hostile to *Humanae Vitae* and rising above its faults, the two documents seem to be almost mirror images, more similar than different.

Thirdly, I want to make it quite clear that I am not proposing a complete and unqualified endorsement of the practice of contraception. Rather I am trying to find that same kind of middle ground which the ancient church followed in condemning both the extremes of sexual puritanism among the Encratites,[13] who found in sex something contrary to the holiness of God, and the opposite extreme of pagan debauchery which sought to find all human meaning in the practices of sexual excess. Within this Christian context, I exhort doctors to be faithful to the individual holiness of every Christian man and woman and to shun any irresponsible practice of automatically counseling the use of contraceptives in every situation for the sake of mere convenience and dehumanizing utilitarianism. Also, I want to make it quite clear that I in no way support the "new morality" with its ethic of sexual activity outside the bounds of matrimony, which is sometimes facilitated by doctors who furnish contraceptives quite

### Zaphiris's

#### footnotes:

13. As we know, the Encratites (e.g. Tatian, Cassien, and Carpocrates) condemned marriage because they considered every act of sexual intercourse as sinful. It was sinful because it did not come from God (cf. Epiphanius of Salamine, *Adv. Haer.*, I, III, 46). For them, sexuality was also condemned because of its supposed relationship to original sin. The fleshly union allowed by marriage only further propagated this original sin in the offspring. Thus, because sexuality was not divine, Jesus Christ came to suppress it (cf.

freely to the young and  
uninstructed.

#### V. THE QUESTION OF CONTRACEPTION IN RELATION TO HUMANS' ROLE AS CO- LEGISLATORS WITH GOD IN THE WORLD

The roots of the Orthodox teaching on marriage are to be found in St. Paul's statement about the love between Christ and the church, and St. John Chrysostom's view that marriage should be likened to a small church which, like the great church of God, is "one, holy, universal and apostolic." The relationship between husband and wife parallels the earthly church and the eternal church, or the relationship between the visible and the invisible church. These are not two different churches; on the contrary, there is one church with two dimensions: earthly or terrestrial, and eternal or celestial. The two are inextricably linked. Similarly, marriage constitutes for the Orthodox faith both a terrestrial and a celestial reality, for marriage is both a work of human love and a sacramental

Clement of Alexandria, Stromata, III, 91, 1; 92, 1). In their doctrine, through the suppression of the fleshly union, Jesus Christ opposed the Gospel of the New Testament to the Law of the Old Testament which had allowed sexual intercourse in marriage. The followers of the encratic movement said that they did not accept sexuality, marriage, or procreation because they did not feel that they should introduce other human beings into the world and in their stead as their immediate successors in the human race since they would only

means of salvation. Moreover, insofar as every divinely created being, including man and woman, is created according to the Logos, marriage reflects the Divine Logos.

For Paul, marriage is a striking manifestation (exteriorization) of the union between Jesus Christ and his church (Eph. 5:21-33). The Old Testament prophets saw marriage as a dimension of God's covenant with the people. A husband's

relationship with his wife is the same as the creature's relationship with the Creator; faithfulness in one is faithfulness in the other and, as with the faithfulness (cf. Hos. 1:1-3, 5; Jer. 3:1ff.; Ezek. 16:1ff., 23:1ff.; Isa. 50:1ff., 54:1ff.), so too Paul, in the New Testament, pronounced marriage a holy means (mysterion or sacrament) of Christ's grace. The marriage of man and woman participates in the marriage of Christ and the church.

Eastern Orthodox theologians view the relationship between God and human beings as a creative collaboration. It is our freedom that makes us co-creators with God in the world, and co-legislators with God in the moral order. As creatures, we are obliged to obey the law set down by the Creator, but insofar as our obedience is an expression of our freedom, we are not passive objects of God's law, but rather creative agents of it. Our reason is joined to God through the Logos (the Divine Reason). When we choose to exercise our reason in the moral life, we cooperate with God's creative work on earth. This cooperation or collaboration the

endure suffering and provide food for death (cf. Clement of Alexandria, *Stromata*, III, 45, 1).

14. Cf. Joseph Fletcher, *Moral Responsibility, Situation Ethics at Wori*, (London, 1967), especially pp. 34ff.

Greek Fathers spoke of as synergism (*synergeia*). The person and work of Jesus Christ is the fullest embodiment of this synergistic union of God and humanity.

It is in the light of the synergistic union between God and humanity that the Eastern church understands and resolves the problems of contraceptives, especially the use of the pill.

I could interrupt more to ask many more questions like, "Is this what the Eastern Church should teach to be faithful to her tradition, or what Zaphiris wants the framing metaphor for the Eastern teaching to be as a change to its prior tradition?"

The question we should ask now is: Does our freedom to devise and employ contraceptives, including the pill, violate "natural law" as Roman Catholic teaching states? We are compelled to answer that the encyclical of Pope Paul VI (*Humanae vitae*) is lacking because it does not acknowledge the role of man and woman as God's co-creators and co-legislators on earth. The Eastern Orthodox view of contraception, unlike that of the Latin church, is that our capacity to control procreation is an expression of our powers of freedom and reason to collaborate with God in the moral order. A human being is viewed not only as a subject which receives passively the "natural law," but also as a person who plays an active role in its formulation. Thus the natural law, according to Eastern Orthodox thinkers, is not a code imposed by God on human beings, but rather a rule of life set forth by divine inspiration and by our responses to it in freedom and reason. This view does not permit the Eastern Orthodox Church to conclude that the pill, and

artificial contraceptives generally, are in violation of natural law.

There are a couple of things that are significant here.

First the argument being made about being co-legislators is a point of cardinal importance and one that should ideally be supported by at least one footnote. There is an absolute lack of footnotes or even mention of names of authors or titles of text in this section's quite significant assertions about the Eastern Church. (This raises to me some questions about the refereeing here. My teachers usually complain and lower my grade when I make sweeping claims without adding footnotes.)

Second, to employ a Western image, Christian freedom is comparable to a sonnet: total freedom within boundaries. Hence, in a slightly paraphrased version of one of the sayings of the Desert Fathers, "A brother asked an old monk, 'What is a good thing to do, that I may do it and live?' The old monk said, 'God alone knows what is good. Yet I have heard that someone questioned a great monk, and asked, "What good work shall I do?" And he answered, "There is no single good work. The Bible says that Abraham was hospitable, and God was with him. And Elijah loved quiet, and God was with him. And David was humble, and God was with him. Therefore, find the desire God has placed in your heart, and do that, and guard your heart.'" ( [http://jonathanscorner.com/christmas\\_tales/christmas\\_tales10.htm](http://jonathanscorner.com/christmas_tales/christmas_tales10.htm) , as seen on 14 May, 2007) There is great freedom in Orthodoxy, but freedom within bounds. Things such as "Do not murder," "Do not commit adultery," and "Do not steal," are boundaries absolutely consistent with the Desert Fathers saying above. There is great freedom within boundaries, and in fact the boundaries increase our freedom.

What Zaphiris presents is a great, stirring, poetic hymn to our cooperation with the Creator as co-creators, presented as a reason not to require a certain bound. (It is my experience that sophistry is often presented more poetically than honest arguments.) Perhaps this would be a valid move if there were no serious issues surrounding contraception, but as it is, it follows the logical fallacy of "begging the question": in technical usage, "begging the question" is not about raising a question, but improperly taking something for granted: more specifically, presenting an argument that assumes the very point that it is supposed to prove. It is begging the question to answer the question, "Why is contraception permissible?" by eloquently proclaiming, "Contraception is a magnificent exercise of Orthodox freedom, because Orthodox freedom is magnificent and contraception is permissible within the bounds of that freedom." The whole point at issue is whether contraception is permissible; to argue this way as a way of answering that question is sophistry.

**(I might suggest that it is an "interesting" exercise of our status as co-creators with God to try hard to shut down the creative powers God built into sex. Perhaps the suggestion is not indefensible, but it is in need of being defended, and Zaphiris never acknowledges that this interpretation of our status as co-creators needs to be defended, or buttress his specific interpretation.)**

686 The conception of natural law in *Humanae vitae* contains a deterministic understanding of human marital and sexual life. According to this understanding, any and every human (or artificial) intervention into the biological processes of human being constitutes a violation of God's

law for humanity. Hence, contraception as an artificial interruption or prevention of the natural event of procreation is inherently a violation of God's law. *Humanae vitae*, moreover, goes on to state that each act of coitus is, according to the law of nature, an "actus per se aptus ad generation."

While the Eastern Orthodox Church fully acknowledges the role of procreation in the marital sexual act, it does not share the deterministic understanding of this act as expressed by *Humanae vitae*, which ignores love as a dimension of great value in sexual intercourse between husband and wife. Indeed, this love is viewed by the Eastern church as the marriage partners' own response to the love of God for human beings, a human love as the marriage partners' own response to the love of God for human beings, a human love which is also a paradigm of Christ's love for the church. Finally, one must say that the deterministic Roman Catholic conception of marital sexuality, rooted as it is in scholastic medieval teaching, cannot very well deal with crucial contemporary problems such as over-population, food shortage, poverty, and insufficient medical resources.

The Roman Catholic position on human sexuality and procreation is based on the teachings of St. Thomas Aquinas, and these in turn are decisively influenced by Aristotle's philosophy. Aristotle's view was that every object in the physical universe possesses an intelligible structure, a form which is composed of an intrinsic end and the means or "drive" to realize that end. When a thing is behaving, or being used, according to its end—as a frying pan used to fry fish—then that thing is acting properly or "naturally"; however, when a thing is not acting, or being

used, according to its intrinsic end—as when a frying pan is used to prop open a faulty window—then that object is acting, or being used, improperly or "unnaturally."

There is a much bigger problem than a singularly unflattering illustration of the distinction between natural and unnatural use.

Unless one counts Zaphiris's example above of a theologian saying that marriage is intended for procreation, with footnoted clarification that this is "probably due to the influence of Greek philosophy," the surrounding passage (about Thomas Aquinas's discussion of whether contraception is unnatural) is the first time that Zaphiris mentions a theologian presenting an argument against contraception. And it is a Latin after the Great Schism interpreted in terms of Scholastic influence.

The following inference is not stated in so many words, but the trusting reader who is trying to be sympathetic will naturally draw an understandably wrong conclusion: "Arguments that contraception enter the picture when Aquinas as a Latin Scholastic imported Aristotelian philosophy." Again, this is not stated explicitly, but much of sophistry, including this, is the impression that is created without technically saying anything false. (This is how sophistry works.)

This will lead the trusting reader to expect another further conclusion: since (so it appears) arguments against contraception, and especially the idea of contraception being unnatural, enter the picture with Latin Scholasticism, any Orthodox who brings such argument against contraception is under Western influence. People who have fallen under Western influence should perhaps be answered gently and charitably, but the Western influence is not something one should listen to and accept. Again, this is not stated in so many words, but it is

precise the rhetoric appears to be aimed at.

Incidentally, whatever Aquinas may have gotten from Aristotle, the Greek Fathers had ideas of unnatural vice without the help of Latin Scholasticism. There is a firmly embedded concept of unnatural vices, including witchcraft as well as "unnatural vice." Jude 7 charges the men of Sodom with unnatural lust (sarkos heteras). The salient question is not whether the Greek Fathers have an understanding of some sins as unnatural, but whether contraception is a sin and, if so, whether it is among the sins classified as unnatural. But it is not automatically due to Western influence for an Orthodox to make claims about unnatural sin.

St. Thomas attempted to synthesize Aristotle's logic of means-ends with the biblical story of the divine creator of the universe. For Aquinas, God is the author of the intelligible structure present in each finite or earthly object. When a finite being behaves according to its intrinsic end, it acts "naturally" as Aristotle thought, but according to Aquinas it also acts in accord with the divine will for that creaturely being. So it is with human sexuality and procreation. Aquinas believed that the intrinsic end of all sexuality (human and non-human) is procreation.

Procreation may not necessarily result from each act of coitus, but this does not mean that the sexual (human) partners have disobeyed God for, if their aim in sexual union was procreation, they have behaved in accord with the divine will governing this creaturely reality. But if that intrinsic aim of sexuality-procreation is subverted, either by substituting pleasure for procreation as the aim, or by introducing artificial devices or means to inhibit or prevent procreation,

then sexuality is practiced "unnaturally" or sinfully, and God is disobeyed.

The wedding of Aristotle's means-ends logic to the biblical Creator meant for Aquinas that sexuality, as every other earthly vitality, is governed by laws setting forth God's intention for each creaturely being, which are knowable to every creature for 686 the proper conduct of its life on earth. When the law governing sexuality and procreation is disobeyed, then, according to Aquinas' theology, the Creation itself is undermined and God's own creative will is defied.

\* \* \*

If a fuller anthropological understanding of human beings is advanced, such that people are viewed as free, rationally and spiritually, as well as biologically, a different judgment on contraception must then be made, one certainly different from that of the Roman Catholic Church.

Zaphiris is driving his persuasive effect further. He is driving home further the impression that if a misguided fellow Orthodox tells you that contraception is sin, he is presumably one of those poor saps, an Orthodox who has fallen under Western influence, and if this misguided fellow Orthodox perhaps specifies that this is because contraception frustrates the purpose of sex, this is someone under the spell of the Roman Church, who is to be dealt with as one ordinarily deals with the pseudomorphosis of Western influence yet again corrupting Orthodoxy.

It is the belief of Eastern Orthodox theology that only such an anthropology is consistent with the dignity the Bible bestows on humans as imago Dei.

Note that earlier some of what Zaphiris said earlier was presented as a "theological opinion," not necessarily binding on the consciences of other Orthodox Christians even if he was trying to make a case for it. But here we seem to have shifted to something that is binding on all Orthodox Christians: "It is the belief of Eastern Orthodox theology that only such an anthropology," apparently meaning the anthropology implied in the last section which makes at least one sweeping claim without footnotes or even the name of an author or text, that is binding on the consciences of Orthodox Christians. Earlier, perhaps the view of St. John Chrysostom might have been acceptable, at least as a theological opinion. Here it begins to look like a blunt declaration implying that Chrysostom's position is heretical. Is the implication, "If anybody disagrees with this, let him be anathema?"

This dignity is revealed afresh by Jesus Christ who, as both divine and human in freedom, reason, spirit, and flesh, incarnates the complex anthropology of all human beings.

Speaking from this anthropological conception of humanity, we should distinguish three principle aspects in the use of contraceptives—the psychological, the medical, and the moral. From the psychological point of view, contraceptives are permissible only when their use is the result of a common decision reached by both partners. The imposition of contraceptives by one partner in the sexual act must be regarded as immoral inasmuch as it abridges the freedom and possibly violates the conscience of the other partner. Any use of contraceptives which does not respect the psychological condition of both partners and of the sexual act itself must be judged immoral. What should guide

sexual act itself must be judged immoral. What should guide sexual partners in the use or non-use of contraceptives is their freedom and reason, their spiritual dignity as creatures of God.

From the medical point of view, we have mentioned above the conditions under which contraceptives are permissible. It is important to emphasize here that moral questions are not part of the technical judgments made by medical doctors about the use or non-use of contraceptives.[15] As we have said, the use of the pill is not a permanent sterilization but a temporary state of sterility induced for reasons that may be social or economic or psychological or demographic or physiological.

**Zaphiris's footnote:**  
15. [Footnote not recorded in my copy.]

Contrary to Roman Catholic teaching, the pill does not violate natural law. Its function is not to bring about a permanent state of sterilization but rather a temporary suspension of fertility. And this decision to suspend fertility, when made by both marital partners with reason and freedom and spirit, is a decision made perfectly consistent with God's will for human beings on earth.

\* \* \*

688 There is an authentic moral question in the use and non-use of contraceptives. It is no less true that marriage as a sacramental mystery contains a powerful moral dimension.

When marital partners engage in contraception, the Orthodox Church believes that they must do so with the full understanding that the goal God assigns to marriage is both the creation of new life and the expression of deeply felt love.

Note: Love is something you deeply feel. I do not find this notion in the Bible nearly so much as in the literature of courtly love. This conception of love is (one infers from Zaphiris) not only permissible but mandatory.

Moreover, the Orthodox Church believes that the relationship of man and woman in marriage is essentially a relationship of persons. This means that sexual life must be guided by the meaning of relationship and personhood.

Though it is obvious that procreation is a physical phenomenon, the Eastern church understands the decision of the married couple to have a child to be a moral, even more, a spiritual decision. The Pope's encyclical, *Humanae vitae*, in our judgment, committed a significant error. The authors of the encyclical sought to distinguish our procreative power from all other powers that make us human but, in fact, they isolate our procreateness and set it apart from the human personality. Such an isolation does little justice to the complexity. If conjugality has as its goal per se aptitude for procreation, then this is a virtual denial that sexual is permissible during a woman's infertile periods. We have said, and now repeat, that conjugality can and should continue, whether or not procreation is a practical possibility. In contrast to *Humanae vitae*, Orthodox thinkers do not believe that human beings are subjects bound by "natural law" in the deterministic Roman Catholic sense, but rather persons living and acting freely in the natural world.

It now appears, at least to the uninitiate or those liable to misconstrue things, that existentialist personalism is the teaching of the Orthodox Church. And apparently not just a theological opinion: one is bound to subscribe to it

theological opinion: one is bound to subscribe to it.

\* \* \*

Eastern Orthodoxy recognizes that men and women can only truly be God's co-creators on earth through the responsible use of freedom and reason. The question of responsibility becomes crucial in such cases as permanent sterilization, artificial insemination, [16] and euthanasia. The Eastern Orthodox Church cannot and will not legislate vis-à-vis the enormously important and complicated questions raised by these cases.

I'm at this point imagining the Battle Hymn of the Republic playing in the background: "Glory, glory, Hallelujah! His truth goes marching on!" This is very stirring rhetoric, but sits ill with some of my sources and seems to be something he doesn't document well.

These questions are regarded by the Orthodox Church as theologoumena, that is, theologically discussable issues. The Eastern church seeks always to respect one's freedom of decision, but it also seeks through its own ethical inquiry to guide people in making responsible decisions.

There is a lot of great rhetoric for this perspective in

**Zaphiris's  
footnote:**

16. For one Orthodox discussion of the question of insemination, see the excellent book of Prof. Chrysostomos Constantinidis, *Technete Gonipoesis kai Theologia in Orthodoxia*, XXXIII (1958), 66-79, 174-90, 329-335, 451-468; XXXIV (1959), 36-52, 212-230.

Vatican II, *Gaudium et Spes*. I am suspicious of this rhetorical version of growing to autonomous adult responsibility in its Catholic forms, and I don't see why it needs to be incorporated into Orthodoxy.

The Eastern church's refusal to provide specific answers to some concrete moral questions is based on a fundamental theological principle—the belief that no one can specify where human freedom ends and divine will begins.

Notwithstanding that Zaphiris has done precisely that, not by forbidding contraception altogether, but by specifying multiple lines which contraception may not pass. And, apparently, specified a line where Orthodox condemnation of contraception may not pass. But this is impressive rhetoric none the less.

Synergism means the collaboration of human beings with God in the continuing creation of the world. We must struggle to understand the right and wrong uses of our freedom, guided by the divine spirit. Our freedom is a mystery of God's own will and freedom. Therefore, no theologian—Eastern Orthodox 689 or otherwise—can specify what finally constitutes the divine-human collaboration. Practically speaking, we can know when any given act, having taken place we can never be certain of the responsible and creative use of our freedom. We cannot determine a priori the movement of the human spirit any more than we can determine a priori the movement of the divine spirit. It is certain that, unless we recognize continually the Lordship of God in the world—the Creator judging all the actions of the creatures, we cannot speak

truly of a divine-human synergism.

The church is an instrument of the work of the Holy Spirit on earth, and must seek to relate the scriptural revelation of God to the moral situation in life which we constantly confront. When the church accepts this responsibility, it enables the participation of human beings in the on-going history of salvation. In this fashion, the church witnesses simultaneously to the sacred will of God and to the urgency of human moral life. Thereby the church avoids both antinomianism on the one side and the moral reductionism of "situation ethics" on the other side.

Many ethical approaches are presented as meant to steer a middle course between problematic extremes, including ones we might like and ones we might not like. See an attempted middle road between forcing queer positions onto the Biblical text and forcing conservative positions onto the Biblical text in Patricia Beattie Jung, "The Promise of Postmodern Hermeneutics for the Biblical Renewal of Moral Theology," in Patricia Beattie Jung (ed.), *Sexual Diversity and Catholicism: Toward the Development of Moral Theology*, Collegeville: Liturgical Press 2001. I haven't seen this phenomenon before in Orthodoxy, but it is common in the liberal Catholic dissent I've read. The dissenter adopts a rhetorical pose of being eager to seek a measured middle course that doesn't do something extreme, and does not give unfair advantage to any position. But this is done in the course of agitating for change on a point where the Catholic teaching is unambiguous. Jung, for instance hopes for a versions Catholic ethics more congenial to lesbian wishes, but she always takes the rhetoric of moderate and reasonable efforts that will respect Scripture and Catholic Tradition. (Again, I am comparing Zaphiris

to Catholic dissent because I have not seen what he is doing here in Orthodoxy before, but have seen it repeatedly in liberal Catholic dissent.)

We must conclude here by saying that God's fantastic love for human beings—*maniakos eros*[17]—has divinised all creation. With this divinisation, God achieves the purpose of bringing all beings to God's own self. We play a role in this great work of salvation through the creativeness and freedom which God has bestowed on us. These dynamic capacities of our being cannot finally be identified and understood outside the scope of the Christian doctrines of humanity (anthropology), of Christ (Christology), and of salvation (soteriology). The ultimate purpose of our synergistic relation to God is our own regeneration, as the New Testament states (cf. Rom. 8:28; Phil. 2:13; I Cor. 3:9).

Moreover, synergism has an ecclesiological dimension, and secondarily a moral dimension. Our role as co-legislators on earth with God can only fully be exercised in relationship to the church, which is the instrument of the communication of the Holy Spirit to humans in their creativeness. This means for Eastern Orthodoxy that the legislative and creative actions

**Zaphiris's  
footnote:**

17. This is an expression used by Nicholas Cabasilas, an Eastern Orthodox theologian of the Byzantine era. The notion of God's *maniakos eros* is discussed by Paul Evdokimov, *L'amour fou de Dieu* (Paris, 1973).

**Zaphiris's  
footnotes:**

18 I Cor 2:7.

19 Rom 12:2.

of men and women are a liturgy of the church itself. When we live in relation to the church's body, we live within "God's wisdom: a mysterious and hidden wisdom framed from the very beginning to bring us to our full glory." [18] The ecclesio-anthropo-soteriological value of this human liturgy is contained in the relation which exists between God's revelation and our activity. The harmonious cooperation between God and humans makes it possible for our legislative and creative acts to be "what is good, acceptable, and perfect." [19]

We have offered these remarks in the hope that they can contribute to a common basis for an ecumenical discussion on the contemporary human problem of contraception.

Orthodox who are concerned with ecumenism may wish to take note of this statement of authorial intent.

690

### **Study and discussion questions**

1. What view concerning marriage and sexuality do we find in the Scriptures? In the early Christian writers?
2. Discuss the author's interpretation of the biblical and patristic views of marriage, sexuality, and procreation.
3. What implication concerning contraception can be derived from biblical and patristic concepts of marriage, sexuality, and procreation?
4. What are the official teachings of the Orthodox Church on contraception?
5. How do these teachings compare with Protestant and

### Roman Catholic teachings?

6. Under what circumstances does the author believe contraception to be theologically permissible? Discuss.
7. What is synergism?
8. How is contraception linked with synergism?
9. How is the resulting view of contraception within Orthodoxy a contrast to the Roman Catholic view?
10. Why does the Eastern Orthodox Church avoid concrete and decisive answers to problems such as contraception?

I have never seen Bible study/book discussions questions posed like this in a refereed journal before. I suspect that these will lead people to say things that will help cement the belief that the truth is more or less what has been presented in this account. This seems in keeping with other red flags that this is doing more than just providing a scholarly account of what Orthodox believe. Perhaps this is part of why this paper's label as a "theological opinion"—about as close as Orthodoxy gets to the idea of "agreeing to disagree" on spiritual matters—has been accepted as a statement of what the Orthodox Church believes, period.

I believe this document has problems, and if as I expect it is a major influence in the "new consensus" allowing some contraception in the Orthodox Church, this constitutes major reason to re-evaluate the "new consensus."

There could conceivably be good reasons to change the ancient tradition of the Orthodox Church from time immemorial to almost the present day. Maybe. But this is not it. (And if these are the best reasons Zaphiris found to change the immemorial tradition of the Church, perhaps it would be better not to do so.)

# Our Crown of Thorns

I remember meeting a couple; the memory is not entirely pleasant. Almost the first thing they told me after being introduced was that their son was "an accident," and this was followed by telling me how hard it was to live their lives as they wanted when he was in the picture.

I do not doubt that they had no intent of conceiving a child, nor do I doubt that having their little boy hindered living their lives as they saw fit. But when I heard this, I wanted to almost scream to them that they should look at things differently. It was almost as if I was speaking with someone bright who had gotten a full ride scholarship to an excellent university, and was vociferously complaining about how much work the scholarship would require, and how cleanly it would cut them off from what they took for granted in their home town.

I did not think, at the time, about the boy as an icon of the Holy Trinity, not made by hands, or what it means to think of such an icon as "an accident." I was thinking mainly about a missed opportunity for growth. What I wanted to say was, "This boy was given to you for your deification! Why must you look on the means of your deification as a curse?"

Marriage and monasticism are opposites in many ways. But

there are profound ways in which they provide the same thing, and not only by including a community. Marriage and monasticism both provide—in quite different ways—an opportunity to take up your cross and follow Christ, to grow into the I Corinthians 13 love that says, "When I became a man, I put childish ways behind me"—words that are belong in this hymn to love because love does not place its own desires at the center, but lives for something more. Those who are mature in love put the childish ways of living for themselves behind them, and love Christ through those others who are put in their lives. In marriage this is not just Hollywood-style exhilaration; on this point I recall words I heard from an older woman, that you don't know understand being in love when you're "a kid;" being in love is what you have when you've been married for decades. Hollywood promises a love that is about having your desires fulfilled; I did not ask that woman about what more there is to being in love, but it struck me as both beautiful and powerful that the one thing said by to me by an older woman, grieving the loss of her husband, was that there is much more to being in love than what you understand when you are young enough that marriage seems like a way to satisfy your desires.

Marriage is not just an environment for children to grow up; it is also an environment for parents to grow up, and it does this as a crown of thorns.

The monastic crown of thorns includes an obedience to one's elder that is meant to be difficult. There would be some fundamental confusion in making that obedience optional, to give monastics more control and make things less difficult. The problem is not that it would fail to make a more pleasant, and less demanding, option than absolute obedience to a monastic elder. The problem is that when it was making things more

pleasant and less demanding, it would break the spine of a lifegiving struggle—which is almost exactly what contraception promises.

Rearing children is not required of monastics, and monastic obedience is not required married faithful. But the spiritual struggle, the crown of thorns by which we take up our cross and follow Christ, by which we die to ourselves that we live in Christ, is not something we can improve our lives by escaping. The very thing we can escape by contraception, is what all of us—married, monastic, or anything else—need. The person who needs monastic obedience to be a crown of thorns is not the elder, but the monastic under obedience. Obedience is no more a mere aid to one's monastic elder than our medicines are something to help our doctors. There is some error in thinking that some people will be freed to live better lives, if they can have marriage, but have it on their own terms, "a la carte."

What contraception helps people flee is a spiritual condition, a sharpening, a struggle, a proving grounds and a training arena, that all of us need. There is life in death. We find a rose atop the thorns, and the space which looks like a constricting prison from the outside, has the heavens' vast expanse once we view it from the inside. It is rather like the stable on Christmas' day: it looks on the outside like a terrible little place, but on the inside it holds a Treasure that is greater than all the world. But we need first to give up the illusion of living our own lives, and "practice dying" each day, dying to our ideas, our self-image, our self-will, having our way and our sense that the world will be better if we have our way—or even that we will be better if we have our way. Only when we have given up the illusion of living our own lives... will we be touched by the mystery and find ourselves living God's own life.

**Our Thoughts  
Determine Our  
Lives: Beyond *The  
Secret* and the  
Law of Attraction**

(To the family who gave me my copy of **Our Thoughts  
Determine Our Lives**—You know who you are: you are appreciated  
and you are loved!)

## Perfecting the core of *The Secret*

The Elder Thaddeus of Vitovnica's [Our Thoughts Determine Our Lives](#) begins,

1.1 Our life depends on the kind of thoughts we nurture. If our thoughts are peaceful, calm, meek, and kind, then that is what our life is like. If our attention is turned to the circumstances in which we live, we are drawn into a whirlpool of thoughts and can have neither peace nor tranquility.

In Christ the Eternal Tao, there is a work similar to the Tao Te Ching, but it is introduced not as a translation of the ancient Chinese classic, but as a New Testament building on and perfecting the original Tao Te Ching. The Christian understanding of the New Testament is that it fulfills and completes the Old Testament. Where the Old Testament mostly forbids toxic actions and says "Do not murder" and "Do not commit adultery," the New Testament forbids toxic thoughts and says "Do not hate" and "Do not lust," offering a greater healing and freedom from evil and pain, even better than freedom from evil actions. And I would like to suggest that *The Secret*, a book loved by many, can be seen as an Old Testament that reaches its fulfillment and completion in Elder Thaddeus's

## [Our Thoughts Determine Our Lives.](#)

The Secret offers a very attractive promise. On the book's account, the Secret is a Secret that can unlock youthful health at any age, spectacular and more spectacular wealth, professional success, romance, and more. But there is more one could want, much more. The Secret may offer a program to satisfy one's conscious desires, but not so much is there a program to transcend one's desires. Our unrefined desires, our common covetousness, may be for things which will not really satisfy us, especially not as much as some things we may not think to even covet in our present state. And having read and not accepted The Secret and its Law of Attraction which says (along with other New Age sources) that if you think of something your thoughts will become reality, I was blindsided by Elder Thaddeus in [Our Thoughts Determine Our Lives](#), which had, if not a Law of Attraction in full, nonetheless something a lot like the Law of Attraction which said that our thoughts have a great deal more influence than we suspect. It said that if we have nastiness or conflict, it is rarely, or perhaps never, something that happens without our warring with others in our thoughts. Perhaps, as Elder Thaddeus does not specifically suggest, other people have contributed something, and perhaps some people start out with a chip on their shoulders. But they rarely, if ever, start warring against us, and continue their warfare, if we simply do not war against them in our thoughts. Others rarely remain hostile to us if we are gentle, respectful, and never strike back, not even in the most private recesses of our thoughts. And that is a Law of Attraction The Secret barely, if ever, even begins to hint at. It may be implicit, but The Secret never says that **if you sow hostile thoughts, you will reap conflict.**

[Our Thoughts Determine Our Lives](#) says more than this. It

also talks about thoughts that are in fact neither healthy nor truly our own. The demonic is real and operative, and part of spiritual health is declining an ongoing flood of thoughts that are not to our best interest. And some of the things touted as benefits in [The Secret](#) may be less helpful than they seem, even if they are true. It talks about how "...The end of the story about my own weight is that I now maintain my perfect weight of 116 pounds and I can eat whatever I want." The [Philokalia](#), by contrast, see the sin of gluttony as affecting much more than how one looks in a swimsuit: what overeating does to one's waistline is incidental to what it does to one's spirit, acting as a gateway drug to more serious sins.

## Maxims for life

The famous [55 maxims by Fr. Thomas Hopko](#) include ([Ancient Faith podcast](#)):

39. Don't complain, grumble, murmur or whine.
40. Don't seek or expect pity or praise.
41. Don't compare yourself with anyone.
42. Don't judge anyone for anything.
43. Don't try to convince anyone of anything.
44. Don't defend or justify yourself.
45. Be defined and bound by God, not people.
46. Accept criticism gracefully and test it carefully.

I would draw something out of "Be defined and bound by God, not people," in particular. When someone opposes us and we accept the warring thoughts that come so easily to all of our hands, we are being defined and bound by the people we are resisting, and not, or at least not only, by God. The satyagraha or nonviolent resistance highlighted by Gandhi draws on the [Sermon on the Mount](#) and has its power close to the heart of the [Sermon on the Mount](#) that simply says, "[Do not resist an evil person.](#)" If someone evil to you is hostile and you do not dish out hostility even in the secrets of your heart, that is powerful. If you are only "defined and bound by God, not people," and [turn the other](#)

[cheek](#), the roots of hostility begin to melt away. I personally do not know how my life would have been different if I had always shown the perfection of this teaching, but there have been some very rough situations that could have been very different if I had answered each and every hostility with unruffled meekness.

We tend to think that changes in our exterior life will make us happy, and this is part of why *The Secret* is such a runaway bestseller. It promises means to abundant success in various worldly concerns, and never asks the (at times terrifying) question of "What if I get the BMW SUV my heart is dying for now, and it does not deliver lasting satisfaction?" Someone who is a little bit sensitive to memories and experiences may note that sometimes getting some hot luxury item does not give us satisfaction, at least not for terribly long. But [Our Thoughts Determine Our Lives](#) offers a Law of Attraction that recognizes that the transformation that we need, and the transformation that will yield lasting satisfaction, is much more a transformation of our interior lives than anything external. And in regard to the interior life, God wants to give us much better than a cost-of-living raise. He wants to give abundant interior riches, and part of why external circumstances sometimes do not change is that he knows we need something more. Something beyond what *The Secret* even pretends to offer.

## One man's crown of thorns

It would be true, but deceptive by itself, to say that Elder Thaddeus was a clairvoyant elder who lived to see quite a following. The reason that is deceptive by itself is that that fruit gives an impression that his wishes were fulfilled, when in fact Elder Thaddeus had a much more painful life, with many more wishes not fulfilled, than most of us. The life of a saint is a difficult one with many more obstacles, not less, than your average Joe, and while I don't want to try to make Elder Thaddeus a saint speaking out of my own authority, his life was at least like that of a great many saints in seeing wish after wish simply denied. His own burden included serious health issues. It also included that his wishes in monasticism to simply be a lay monk, just praying in silence, never really happened. Instead he had, as a monk fulfilling the obedience of serving as an abbot, to take on himself the cross of addressing the great many cares and concerns of supporting the monks entrusted to him. Maybe some of us, in our worse moments, can covet offices and titles. The reality is different, and contains a great many things people coveting honor never imagine in connection with their coveting prestige and some office. If you ask how he was a clairvoyant elder, seeing into people's hearts and thoughts, the answer is surprisingly simple. Elder Thaddeus had a heart that was pierced

again and again until things that the rest of us were oblivious to were enough to pierce his heart. Now it is not particularly hard to make some imaginings and covet a clairvoyant elder's abilities, but Elder Thaddeus was no fortune teller in the usual sense: when an author came to him and asked a prediction for how well his novels would sell, Elder Thaddeus said, "I am not a psychic!" (Now Elder Thaddeus may have had surprising insights when people came to him in faith seeking a balm for spiritual difficulties, but I insist that the pierced heart he knew was not in any sense what one imagines and fuels if one is coveting clairvoyance.) Holiness is taking up your cross and following in the footsteps of our crucified Lord, and the further you walk on that path, the less your life looks like fulfilling your wishes and desires.

## Needless difficulties

I am choosing an example here to try to make my point strongly, as strongly as I see how. If this seems strange, hokey, or putting an unreasonable share of blame on myself, I apologize; you are welcome to [skip to the next section](#).

This portion of this article is posted by the kind and gracious permission of the other party, to whom I am grateful.

I remember, to pick one of many examples, when a friend who helped me on my journey to Orthodoxy, decided on his own authority that there was something wrong with me and he was going to "fix" me (his term, with his quotes). I caught him in the act and firmly said, "No." He said I was sending mixed messages. I said, more forcefully, "No." He reiterated his claim and said that I was sending such mixed messages. I repeatedly said a forceful, "No," and he kept on telling me I was sending a mixed message, and then, "You can say what you want to say, but I will do what I want to do," meaning that he would continue trying to "fix" me after I said, "No." Then I sent a "cease and desist" letter (and he was not so bold as to continue his campaign once the Gmail Abuse Team was in on the conversation). Since then, I've briefly reached out, but we have only spoken briefly since.

Now I would like to ask what was going on here. A psychologist would speak of boundaries, say that he was possibly

doing something wrong at the beginning, and he was definitely wrong to persist after I had expressed a boundary. And I was absolutely right to send a cease-and-desist letter after he repeatedly tried to push past the boundary I was expressing. But I would point out something else. Did he start it? That's not my concern. Was he in the wrong? Still not my concern, except perhaps as my replies exacerbated the temptations he faced.

What really is my concern is that I met him with warring thoughts. And what is more, I spoke to him and answered him out of warring thoughts. Whether or not he had warring thoughts, or his warring thoughts came first, is not my concern. I wanted to have the upper hand as badly as he did, and I got what I really wanted, which was to have a scathing last word. And my warring thoughts (and words) did nothing to defuse the conflict, but only confirmed and agreed to being in conflict, and in fact an intense power struggle. (I had earlier given a cool reception to other attempts to help me out, perhaps part of why he decided that this time around, I wasn't allowed to say, "No." I may have been right to say "No," but I could possibly have done so with more respect.) Some people might say that I was right to send a cease and desist letter, but even if I was right, that only came after I had failed at making the encounter into one appropriate to friends, really failed to even try. And, though I am glad he stopped trying to "fix" me, it is hardly a victory for me that our conversation as friends has not really resumed.

I got my way, which is unusual for a situation like this, but I did not truly win. I couldn't, not with that attitude. Winning might have gently stopped the treatment plan, but it would have saved the friendship, and would have left me at peace instead of with an unhealed painful memory. I believe better was possible, or would have been possible if I had been more grown up.

(This kind of scenario is a good example of why Gandhi said, "An eye for an eye only ends by making the whole world blind.")

**I hesitated on whether to include this or cut it out: more than anything else I have had, this has the most potential to repulse a good reader as not being devout Orthodoxy, but simply dysfunctional. But harassment has figured prominently in my life, and there have been perhaps half a dozen times I've had harassment persist until I copied authorities on a forceful "No." Usually the harassment has been from someone I regarded as a friend, and sometimes trusted a great deal. (If it is a friend who doesn't get that "No means no," starting the first time.)**

This doesn't make the harassment my fault, but when I have faced harassment, usually I have done something preventable that already antagonized the other party. (I am trying to learn what I can from the experiences.)

## Surprising beauty

The converse is also true.

To quote [Our Thoughts Determine Our Lives](#) again:

4.5. If in each family there were just one person who served God zealously, what harmony there would be in the world! I often remember the story of Sister J. She used to come and talk to me often while I was still at the Tumane Monastery. Once she came, together with an organized group of pilgrims, and complained, saying, "I can't bear this any longer! People are so unkind to each other!" She went on to say that she was going to look for another job. I advised her against it, as there were few jobs and a high level of unemployment. I told her to stop the war she was fighting with her colleagues. "But I'm not fighting with anyone!" she said. I explained that, although she was not fighting physically, she was waging war with her colleagues in her thoughts by being dissatisfied with her position. She argued that it was beyond anyone's endurance. "Of course it is," I told her, "but you can't do it yourself. You need God's help. No one knows whether you are praying or not while you are at work. So, when they start offending you, do not return their offenses either with words or with negative thoughts. Try not to offend them even in your thoughts; pray to God that He may send them an angel of peace. Also ask that He

that He may send them an angel of peace. Also ask that He not forget you. You will not be able to do this immediately, but if you always pray like that, you will see how things will change over time and how the people will change as well. In fact, you are going to change, too." At that time I did not know whether she was going to heed my advice.

This happened in the Tumane Monastery in 1980. In 1981 I was sent to the Vitovnica Monastery. I was standing underneath the quince tree when I noticed a group of pilgrims that had arrived. She was in the group and she came up to me to receive a blessing. And this is what she said to me, "Oh, Father, I had no idea that people were so good!" I asked her whether she was referring to her colleagues at work and she said she was. "They have changed so much, Father, it's unbelievable! No one offends me anymore, and I can see the change in myself, as well." I asked her whether she was at peace with everyone, and she answered that there was one person with whom she could not make peace for a long time. Then, as she read the Gospels, she came to the part where the Lord  $\hat{A}$ ' commands us to love our enemies. Then she said to herself, "You are going to love this person whether you want to or not, because this is what the Lord commands us to do." And now, you see, they are best friends!

And I have experienced profound respect from people I have shown profound respect. At times I've been caught off guard until I remembered the hand I stretched out.

The Orthodox Tradition has a great deal to say about our thoughts, and contrary to modern psychology, demonic influence actually contributes a great deal of thoughts we think of as "ours." The Secret says that admitting a little thought attracts

others: if we think in kindness, it opens the door to more kind thoughts, and if we think in negativity, it opens the door to more negative thoughts. And it is right in this regard. Counselors have said in reference to addiction, "You have more power than you think," and while we can hardly win involved engagements with destructive thoughts, as fighting them may only give them more power, we can refuse entry when they first come to us as very small temptations. (If a candle is extinguished just after it starts to fall, there will be no house fire to fight.) This watchfulness is not easy; monks take years to learn it. But it is possible. Fr. Thomas's 55 maxims include, "13. Do not engage intrusive thoughts and feelings. Cut them off at the start." And this is advice well worth following. Put out the smouldering spark when it is a spark: don't wait to address the problem until your house is on fire.

## Avatars and being divine

The Secret surges as it builds to its claim that You are God. It speaks of avatars, here meaning living and successful leaders whose words are highlighted in the book. (Note that this is a slight modification of how Hinduism understands avatars, who are essentially great lights from the past, and include the world's great teachers as understood in the West.) The core idea of an avatar is God come down in human form, the idea being that God, who is at the core of each of us, is not simply represented by avatars, but becomes them.

So how does this relate to Christianity? Orthodoxy may be distinctive here, but Hinduism looks surprisingly familiar here to Orthodox. There was one point in a theology course where the professor, a Roman, talked about a Hindu friend saying that he appreciated the Christian teaching of the incarnation, but asked, why only once? Why not an overflowing stream of incarnations or avatars? And I challenged him (perhaps not very Orthodox or very wise in this matter) and said that there was, on a Christian understanding, not only one. The incarnation is perfected in the Church, and every saint, every faithful Orthodox Christian, is a place where the incarnation unfurls. Now I do not understand saints on the Hindu terms for an avatar; I do not believe that they are, like avatars or the Christ I worship, divine by nature, but something happens to created men that makes that matter

less than one might think. St. Maximus the Confessor described five great transcendings of differences, the last being a transcending of the distinction between created and uncreated matter. In other words, when the sanctifying God works such a great miracle that the fact that saints and faithful were created and were not divine from the outset is simply not the issue. God has transcended the chasm between created and uncreated: that all the saints were created is entirely beside the point.

Christians who find Hinduism's idea that God is at the core of each of us strange might wake up a bit. In the first chapter of the Bible, we read, "God created man in his image. In the image of God he created them. Male and female he created them." A person is by nature connected to God, something by which God's power operates, someone who breathes the breath of God. The image of God in us represents and embodies the Lord. This might be on slightly different terms from what Hinduism suggests, but the Hindu understanding is not strange and may be less different from Orthodoxy than it looks.

One chilling passage in Scripture reads ([Matthew 25:31-46](#)):

When the Son of man comes in his glory, and all the angels with him, then he will sit on his glorious throne. Before him will be gathered all the nations, and he will separate them one from another as a shepherd separates the sheep from the goats, and he will place the sheep at his right hand, but the goats at the left. Then the King will say to those at his right hand, 'Come, O blessed of my Father, inherit the kingdom prepared for you from the foundation of the world; for I was hungry and you gave me food, I was thirsty and you gave me drink, I was a stranger and you welcomed me, I was naked and you clothed me, I was sick

welcomed me, I was naked and you clothed me, I was sick and you visited me, I was in prison and you came to me.'

Then the righteous will answer him, 'Lord, when did we see thee hungry and feed thee, or thirsty and give thee drink? And when did we see thee a stranger and welcome thee, or naked and clothe thee? And when did we see thee sick or in prison and visit thee?' And the King will answer them, 'Truly, I say to you, as you did it to one of the least of these my brethren, you did it to me.'

Then he will say to those at his left hand, 'Depart from me, you cursed, into the eternal fire prepared for the devil and his angels; for I was hungry and you gave me no food, I was thirsty and you gave me no drink, I was a stranger and you did not welcome me, naked and you did not clothe me, sick and in prison and you did not visit me.'

Then they also will answer, 'Lord, when did we see thee hungry or thirsty or a stranger or naked or sick or in prison, and did not minister to thee?' Then he will answer them, 'Truly, I say to you, as you did it not to one of the least of these, you did it not to me.' And they will go away into eternal punishment, but the righteous into eternal life.

Human nature is so much powered by the divine nature that we cannot rush past a beggar without rushing past God himself. Every kindness shown to even the least of those around us will be remembered at the crack of doom. And of course we all fall short, but giving half a loaf is better than giving no loaf.

And that brings me to one particular and not necessarily pleasant point. One question I've thought about is, "If you had the chance to do it over, would you fall in love with yourself all over again?" I've been pretty narcissistic, and I don't think I

can even imagine what my life would be like if I were more humble. I do know that the rest of the world has seemed a lot more interesting after I started to let go of trying to constantly stand awestruck at my "inner world." (As G.K. Chesterton said, "It takes humility to enjoy even pride.") If there is something about human nature that is deeply connected to the divine even among the worst of us, we would perhaps do better to think of our neighbor's genuine glory than our own. As C.S. Lewis said at the peak of, [The Weight of Glory](#) [PDF]:

It may be possible for each to think too much of his own potential glory hereafter; it is hardly possible for him to think too often or too deeply about that of his neighbor. The load, or weight, or burden of my neighbor's glory should be laid daily on my back, a load so heavy that only humility can carry it, and the backs of the proud will be broken. It is a serious thing to live in a society of possible gods and goddesses, to remember that the most dull and uninteresting person you talk to may one day be a creature which, if you saw it now, you would be strongly tempted to worship, or else a horror and a corruption such as you now meet only, if at all, in a nightmare... There are no ordinary people. You have never talked to a mere mortal... Next to the Blessed Sacrament, your neighbor is the holiest object presented to your senses.

## There's no time like the present

We live in rough times, but Elder Thaddeus, who wrote [Our Thoughts Determine Our Lives](#), was someone who had been repeatedly imprisoned by Nazis. He lived in rough circumstances, too, and there is some confusion implied in believing that his words flow naturally out of an unspoiled paradise and do not apply to our world with its rough realities. They do, and they are for here, and now.

I have had a lot of difficulty appreciating the here and now. This has not usually been because there is nothing to appreciate, but because I had, and still have, thoughts like the "before" of the young woman's "before and after" scenario quoted above. I am tempted to want a different setting, and perhaps for unrelated reasons such would be beneficial. But refusing to war against others in thoughts is for here and now, for the people I am actually connected with. [Our Thoughts Determine Our Lives](#) talks about a parish priest who kept persisting in asking his bishop to send him to another parish, and the bishop, to restate more boldly, said, "You're not unhappy because you have the wrong external settings. You're unhappy because you have the wrong thoughts and internal state." And the fact that the publication date of *The Secret*, ©2006, was when middle-class American families with Fords wanted BMW's, not when large

numbers middle-class American families are struggling to keep their houses, does not change the core issues. Elder Thaddeus's life was still under more difficult circumstances, and we may perhaps connect Elder Thaddeus's words (not quoted here) about spoiled children not knowing what they want and turning to dark alleys, with our going from unusually good times, historically speaking, to bearing a heavier cross. God is still with us whatever circumstances he puts us in, and his words are for us here and now, not hypothetical inhabitants of a perfect world.

In my own story, I have great hope arising from this text. I've had some real difficulties and I've warred against other people in my thoughts. Part of me wishes I had seen this text when I was twenty, but another part of me is wondering at new vistas that may be open to me if I repent of warring against my neighbor in my thoughts. I'm excited at possibilities in interviewing, job hunting, and employment beyond my current contract. I'm experiencing more zest for life than I have had in a long time.

## *Alice in Wonderland*

Programming expert Alan Perlis said, "The best book on programming for the layman is *Alice in Wonderland*, but that's because it's the best book on anything for the layman." And a word of caution is due here.

His Eminence KALLISTOS in [The Orthodox Church](#) wrote of Orthodoxy, "It is not something Oriental or exotic," and I chafed at those words, but they were very wisely chosen. My parish priest commented that people drawn in by the beauty of the liturgy sometimes didn't stick; it takes more than aesthetic pulls to stick with the liturgy, and as the priest who received me into confession said, "Orthodoxy is slog." I chafed at that too, but he was right. Nothing is permanently exotic, not Orthodoxy, nor anything else. And in that sense, I believe my treatment thus far is misleading; whatever of the Law of Attraction (or something better) may be present, it is much less exotic than my account of it; it is here and now, perhaps slogwork, and is no more exotic than the concept of a self-fulfilling prophecy is in the West. And there is nothing tantalizing or exotic about an adult in the West seeing a self-fulfilling prophecy in a youngster's words about homework of, "I don't understand this, and I'm never going to get it!"

I may have read or at least skimmed through [Our Thoughts Determine Our Lives](#) before, but this time I stumbled on it,

courtesy of some friends' generosity and modest praise of the book, as treasure in a field that was completely unexpected to me. However, however much I value it, Elder Thaddeus's basic claim is only one of many things God may say in drawing people closer to himself. This is only one of the thirty rungs of [The Ladder of Divine Ascent](#) (if even that). A great many wonderful classics do not make clear that our hostile thoughts can poison our interactions with others, and praying for others and stopping our warring thoughts can make a world of difference. This is only one flower from a field filled with many flowers.

This basic principle as I describe it sounds exotic, and that is a liability I don't see how to iron out. Its working out is mundane, or perhaps works in the mundane until we can accept the here and now. For me, it is loving the daily grind, in which regard I am fortunate. (I have a remarkably pleasant daily grind as far as external circumstances go.) It is loving God and my neighbor and working through my work and my dealings with others, as all of Orthodoxy is.

And that has made all the difference.

# The Patriarchy We Object To

Tell me what kind of patriarchy you object to. As Orthodox, we probably object to that kind of patriarchy as well.

There was one chaplain at a university who, whenever a student would come in and say, "I don't believe in God," would answer, "Tell me what kind of God you don't believe in. I probably don't believe in that kind of God either." And he really had something in common with them. He didn't believe in a God who was a vindictive judge, or a God who was responsible for all the evil in this world, or a God who was arbitrary and damned people for never hearing of him. And the chaplain wasn't just making a rhetorical exercise; he didn't believe in many kinds of "God" any more than the students who were kind enough to come and tell him they didn't believe in God. He really had something in common with them.

There was one book I was reading which was trying to recover women's wisdom from patriarchy. I was amazed when I was reading it, as it talked about the holistic, united character of women's knowing, and how women's knowledge is relational, how women know by participating. What amazed me was how much it had in common with Orthodox description of knowledge, because the Orthodox understanding of knowledge is based off an

essential unity and knows by relating, participating, drinking, rather than by analyzing and taking apart and knowing things by keeping track of a systematic map.

What Orthodoxy in the West would seek to recover from the West looks a lot like what feminism would like to recover from patriarchy. Part of what may confuse the issue is that feminism lumps together two very different forces as "patriarchy." One of these forces is classical tradition, and the other is something funny that's been going on for several hundred years in which certain men have defaced society by despising it and trying to make it manly.

The reason that women's holistic, connected knowledge is countercultural is something we'll miss if we only use the category of "patriarchy". The educational system, for instance, makes very little use of this knowledge, not because patriarchy has always devalued women's ways of knowing, but something very different. The reason that there's something countercultural to women's holistic, connected knowledge is that that is a basic human way of knowing, and men can be separated from it more easily than women, but it's a distortion of manhood to marginalize that way of knowing. And there has been a massive effort, macho in the worst way, that despised how society used to work, assumed that something is traditional it must be the women's despicable way of doing things, and taken one feature of masculine knowledge and used it to uproot the the places for other ways of knowing that are important to both men and women. There are two quite different forces lumped together in the category of "patriarchy." One is the tradition proper, and the other is "masculism" (or at least I call it that), and what feminism sees as patriarchy is what's left over of the tradition after masculism has defaced it by trying to make it

"masculine," on the assumption that if something was in the tradition, that was all you needed to know, in order to attack it as being unfit for men. "Masculism" is what happens when you cross immature masculinity with the effort to destroy whatever you need to make room for your version of Utopia. What is left of the tradition today, and what feminism knows as "patriarchy," is a bit like what's left of a house after it's been burned down.

With apologies to G.K. Chesterton, the Orthodox and feminists only ask to get their heads into the Heavens. It is the masculists who try to fit the Heavens into their heads, and it is their heads that split. This basic difference between knowing as exaltation and expansion, participating in something and allowing one's head to be raised in the Heavens, and domination and mastery that compresses the Heavens so they will fit in one's head, is the difference between what "knowing" means to both feminists and Orthodox, and what it means to masculists.

The difference between Orthodoxy and feminism is this. Orthodoxy has to a very large measure preserved the tradition. When it objects to masculism, it is objecting to an intrusion that affects something it is keeping. It is a guard trying to protect a treasure. Where Orthodoxy is a guard trying to protect a treasure, feminism is a treasure hunter trying to find something that world has lost. It is a scout rather than a guard. (And yes, I'm pulling images from my masculine mind.) Feminism is shaped by masculism, and I'd like to clarify what I mean by this. I don't mean in any sense that feminism wants to serve as a rubber stamp committee for masculism. The feminist struggle is largely a struggle to address the problems created by masculism. that's pretty foundational. But people that rebel against something tend to keep a lot of that something's assumptions, and feminism is a lot like masculism because in a culture as deeply affected by

masculism as much of the West, masculism is the air people breathe. (People can't stop breathing their air, whatever culture they're in.) For one example of this, masculism assumed that anything in the tradition was womanish and therefore unfit for men, and feminism inherited a basic approach from masculism when it assumed that anything in tradition was patriarchal and therefore unfit for women. It's a masculist rather than traditional way of approaching society. Orthodoxy has been affected by masculism to some degree, but it's trying to preserve the Orthodox faith, where feminism has been shaped by masculism to a much greater degree and is trying to rebel against the air its members breathe. Feminism is a progressive series of attempts to reform masculism for women; if you look at its first form, it said, "Women should be treated better. They should be treated like men." Later forms of feminism have seen that there are problems with that approach, but they have been reacting to a composite of masculism and earlier versions of feminism. Feminism has been a scout, rather than a guard. I say that feminism has been a scout rather than a guard, not to criticize, but to suggest that Orthodoxy has been given something that feminism reaches for, but does not have in full. It is a bit like the difference between maintaining a car and trying to go through a junkyard with the wrecks of many magnificent things and reconstruct a working vehicle. In a junkyard, one sees the imprint of many things; one sees the twisted remains of quite a few items that would be good to have. And one can probably assemble things, get some measure of functionality, perhaps hobble together a working bicycle. And if one does not have a working car, there is something very impressive about doing one's best to assemble something workable from the wreckage. It is perhaps not the best manners

to criticize someone who has combined parts to make a genuinely working bicycle and say, "But you were not given a working car!"

But in Orthodoxy, there is a very different use of time. Orthodox do not simply spend time filling the gas tank (there are many necessities in faith like filling a gas tank) and maintaining the car (which we periodically break), necessary as those may be. Having a car is primarily about living life as it is lived when you can drive. It is about being able to travel and visit people. It is about having more jobs open to you. If a car isn't working, dealing with the car means trying to do whatever you can to get it working. It means thinking about how to fix it. And feminism is trying to correct masculism. If a car is working, dealing with the car is about what it can let you do. It's like how when you're sick, your mind is on getting well and on your health. If you're healthy, you don't think about your health unless you choose to. You're free to enjoy your health by focusing on non-health-related pursuits.

What does Orthodoxy have to contribute to feminism? To begin with, it's not simply a project by men. Feminist tends to assume that whatever is in patriarchy is there because all-powerful men have imposed it on women, or to put things in unflattering terms women have contributed little of substance to patriarchal society. That may have truth as regards masculism, but Orthodoxy is the property of both men and women (and boys and girls), and it is a gross mischaracterization to only look at the people who hold positions of power.

Feminists have made bitter criticism of Prozac being used to mask the depression caused by many housewives' loneliness and isolation. Housewives who do not work outside the home have much more than housework to deal with; they have loneliness and isolation from adult company. And perhaps, feminists may icily

say, if a woman under those conditions is depressed, this does not necessarily mean Prozac is appropriate. Maybe, just maybe, the icy voice tells us, the solution is to change those conditions instead of misusing antidepressants to mask the quite natural depression those conditions create. Feminists are offended that women are confined to a place outside of society's real life and doing housework in solitary confinement. One of the most offensive things you can say, if there is no irony or humor in your voice, is, "A woman's place is in the house!" (and not add, "and in the Senate!")

But Orthodoxy looks at it differently, or at least Orthodox culture tends to work out differently. And, like many alien cultures, things have a very different meaning. The home has a different meaning. When people say "family" today, we think of a nuclear family. Then it was extended family, and thinking of an extended family without a nuclear family would have been as odd to people then as it would be odd today to take your favorite food and then be completely unable to eat anything else. Traditional society, real traditional society, did not ask women to work in isolation. Both men and women worked in adult company. And the home itself... In traditional society, the home was the primary place where economic activity occurred. In traditional society, the home was the primary place where charitable work occurred. In traditional society, the home took care of what we would now call insurance. In traditional society, the home was the primary place where education occurred. Masculism has stripped away layer after layer of what the home was. In Orthodox culture, in truly Orthodox culture that has treasures that have been dismantled in the West, a woman's place really is in the home, but it means something totally different from what a feminist cringes at in the words, "A woman's place is in the

house!"

America has largely failed to distinguish between what feminism says and women's interests, so people think that if you are for women, you must agree with feminism. Saying "I oppose feminism because I am for women's interests" seems not only false but a contradiction in terms, like saying "I'm expanding the text of this webpage so it will be more concise." It's not like more thoughtful Catholics today, who say, "I have thought, and I understand why many people distinguish or even oppose the teachings of the Catholic Church with God's truth. But my considered judgment is that God reveals his truth through the living magisterium of the Catholic Church." It's more like what the Reformers faced, where people could not see what on earth you meant if you said that God's truth and the Catholic Church's teaching were not automatically the same thing.

In this culture, someone who is trying to be pro-woman will ordinarily reach for feminism as the proper vehicle, just as someone who wants to understand the natural world will reach for science as the proper vehicle for that desire; "understanding the human body" is invariably read as "learning scientific theories about the body's work," and not "take a massage/dance/martial arts class", or "learn what religions and cultures have seen in the meaning of the human body." A great many societies pursued a deep understanding of the human body without expressing that desire the way Western science pursues it. They taught people to come to a better knowledge **of** their bodies—and I mean "of," not just "about"—the kind of relational, drinking knowledge that feminists and Orthodox value, and not just a list of abstract propositions from dissecting a cadaver (a practice which some cultures regard as "impious and disgusting"—C.S. Lewis). They taught people to develop, nurture,

and discipline their bodies so that there was a right relationship between body and spirit. They taught people to see the body as belonging a world of meaning, symbol, and spiritual depth—cultures where "How does it work?" takes a back seat to a deeper question: "Why? What does it mean?" Orthodoxy at its best still does teach these things. But Western culture has absorbed the scientific spirit that most people genuinely cannot see what "understanding the body" could mean besides "learning scientific theories about the body." And, in this context, it seems like a deceitful sleight of hand when someone says, "I want to help you understand the body" and then offers help in ways of moving one's body.

But I want to talk about some things that are missed within this set of assumptions. Feminism can speak for women's interests. It normally claims to. And women are ill-served by an arrangement when people assume that criticism of feminism is at the expense of women's interests. We need to open a door that American culture does not open. We need to open the possibility of being willing to challenge feminism in order to further women's interests. Not on all points, but if we never open that door, disturbing things can happen.

If you ask someone outside of feminism who "the enemy" is to feminists, the common misunderstanding is, "Nonfeminist men."

And that's certainly part of the problem and not part of the solution, but the real vitriol feeds into jokes like "How many men does it take to open a beer?—She should have it open when she brings it to him." The real vitriol is reserved for the contented housewife who wants to be married, have children, and make a home, and not have a professional career because of what she values in homemaking itself.

Feminism is against "patriarchy." That means that much that

is positive in the tradition is attacked along with masculism. That means that whatever the tradition provided for women is interpreted as harmful to women, even if it benefits women.

Wendy Shalit makes an interesting argument in [A Return to Modesty](#) that sexual modesty is not something men have imposed on women against their nature for men's benefit; it is first and foremost a womanly virtue that protects women. We now have a defaced version of traditional society, but to start by assuming that almost everything in the culture is a patriarchal imposition that benefits only men, sets the stage for throwing out a great many things that are important for women. It sets the stage, in fact, for completing the attack that masculism began. (The effect of throwing out things that strike you as patriarchal on a culture has much the same effect as killing off species in an ecosystem because you find them unpleasant. It is an interconnected, interdependent, and organic whole that all its members need. That's not quite the right way of saying it, but this image has a grain of truth.) Masculism scorned the traditional place for men, and was masculine only in that it rebelled against perceivedly feminine virtue. Feminism does not include a large number of women's voices in America and an even larger number worldwide—because feminism lumps them all together in "The Enemy." At times feminism can look anti-woman.

So everything will be OK if we resist feminism? No. First, if the tradition is right—let us say, in the controversial point that associates women with the home—that doesn't make much sense of today's options that don't really let women be women and don't let men be men. What is the closest equivalent to women reigning in one of society's most important institutions? Is it to be a housewife with a lunchtime discussion group, which seems to work wonders for depression caused by loneliness? Is it for

women to keep house and work part time? Is it to work full time, and find an appropriate division of labor with their husbands? I have trouble telling which of these is best, and it doesn't help matters to choose an option just because it bothers feminists. I think that women (and, for that matter, men) have an impoverished set of options today. Unfortunately, some of the most practical questions are also the ones that are hardest to answer.

Second and more importantly, reacting against feminism, or much of anything else, is intrinsically dangerous. If feminism has problems, we would be well advised to remember that heresies often start when people react against other heresies and say that the truth is so important they should resist that heresy as much as they can. Reactions against heresy are often heresy.

Let me explain how not to respond to feminism's picture of what men should be. You could say that feminism wants women to be more like men and men to be more like women, and that has a significant amount of truth. But if you dig in and say that men should be rugged and independent and say, "I am the master of my fate. I am the captain of my soul!", and women should be weak, passive creatures that are always in a swoon, there are several major problems.

The phrase "I am the master of my fate. I am the captain of my soul!" is something that nobody but God should say. Someone greater than us is the master of our fate, and someone greater than us is the master of our soul, and that is our glory. To be a man is to be under authority. Perhaps it irks feminists that the Bible tells wives to submit to their husbands as well as telling husbands to love their wives with the greatest and most costly love. (I've heard some first class citizens pointing out that the Bible requires something much heftier of husbands than mere

submission—loving and loving their wives on the model of Christ going so far as to give up his life for the Church.) But the tradition absolutely does not say "Women are to be second-class citizens because they are under men's authority and men are to be first-class citizens because they have the really good position of being free from authority." To be a man is to be under authority, to be a woman is to be under authority, and to be human is to be under authority. To masculism this looks demeaning because immature masculinity resists being under authority or being in community or any other thing that men embrace when they grow up. But Orthodoxy is a call to grow up, and it is a call to men to be contributing members of a community and to be under authority. To tell men, "Be independent!" is to tell them, "Refuse to grow up!"

What about women? Shouldn't they be passive and dependent? Let's look at one of the Bible's most complete treatments of what a woman should be like. I'll give my own slightly free translation from the Greek version of Proverbs (31:10-31):

Who can find a valorous wife?

She is more precious than precious stones.

Her husband wholeheartedly trusts her, and will have no lack of treasures.

Her whole life works good for her husband.

She gathers wool and linen and weaves with her hands.

She has become like a trading ship from afar, and she gathers her living.

She rises at night, and gives food to her house, and assigns work to her maids.

She examines and buys a farm, and plants a vineyard with

the fruit of her hands.

She girds her loins with strength and strengthens her arms  
for work.

She tastes how good it is to work, and her candle stays lit  
the whole night long.

She reaches her hands to collective work, and applies her  
hands to the spindle.

She opens her hands to the needy, and extends fruit to the  
poor.

Her husband does not worry about the men at home when he  
spends time abroad;

All her household has clothing.

She makes double weight clothing for her husband,  
And linen and scarlet for herself.

Her husband is respected when he engages in important  
business at the City Hall.

When he is seated in council with the elders of the land.

She makes fine linens and sells belts to the Canaanites.  
She opens her mouth with heedfulness and order, and is in  
control of her tongue.

She clothes herself in strength and honor, and rejoices in  
the future.

The ways of her household are secure, and she does not eat  
the bread of idleness.

She opens her mouth with wisdom, according to the deep  
law.

Her mercy for her children prepares them, and they grow  
rich, and her husband praises her.

Many daughters have obtained wealth, and many have worked  
vigorously, but you have surpassed them all.

Charm is false, and a woman's [physical] beauty is shallow:

For a wise woman is blessed, and let her praise the tear of  
the Lord.

Give her the fruit of her labors, and let her husband be  
praised at the City Hall.

I have several things to say about this text. To open with, I'll understand if you say this is an intimidating standard to be held up against, but if you say this affirms the ideal of women as passive and delicate, I'm going to have to ask what on earth you mean. Second, if you read the text closely, you can see hints of how important homes were to business and charity. Most business and charity were based in the home. Third, most translations use not quite the right word when they say, "Who can find a good wife?" The word used is not just "good". It's a word one could use of a powerful soldier. Fourth, at the risk of sounding snide, the words about not measuring womanhood by physical beauty beat body image feminism to the punch by about three thousand years. Fifth and finally, the text talks about this woman as a lot of things—as strong, as doing business, as farming, as manufacturing. But there's one thing it does not say. It does not interpret "woman" in terms of "victim."

There is something somewhat strange going on. If we ask what is the wealthiest nation on earth, it's the U.S.A. If we ask what nation wields the most political clout on earth, it's the U.S.A. And if we ask some slightly different questions, and ask what nation feminism has had the most success reforming the culture, the U.S. might not be at the very top, but it's at least near the top. The same is true if we ask what nation women hold the most political clout in: the U.S. is either at the top or near the top. If we ask what nations women hold the most civil rights, and have most successfully entered traditionally male

occupations, the U.S. is probably near the top. Now let us turn to still another kind of question: what are the women in the most powerful, and one of the most feminist-reformed, nations in the world, doing? If we're talking about uneducated and lower-class women, the answer is simply living life as women. But if we look at educated, middle-class women, the answer tends to be simple but quite different: they are Fighting in the fray for the lowest rung on the ladder of victimization.

To be fair to feminists, I must hastily add that it's a fray because it has a lot of participants besides feminists. The handicapped, gay, and racial minorities are also fighting, and it seems that everybody wants in. For that matter, a good many able-bodied, straight, white men also want in on the action; many middle-aged white applicants complain that affirmative action has biased the hiring process against them. To many of those who do not belong to an easily recognized victim's group, the cry is, "When can I be a victim so I can get some rights?" It seems that fighting for the lowest rung on the ladder of victimization has become the American national sport.

It seems like I'm mentioning a lot of paradoxes about feminism. Let me mention something else that concerns me. The term "consciousness raising" sounds like something everybody should support—after all, what could be wrong with enhancing someone's consciousness? But what does this term mean? To be somewhat blunt, "consciousness raising" means taking women who are often happy and well-adjusted members of society and making them hurt and miserable, not to mention alienated. Among feminists today, the more a woman identifies with the feminist movement, the more hurt and angry she is, the more she seems to be able to see past appearances and uncover a world that is unspeakable hostile to women. For that matter, historically the

more feminism has developed and the more success feminism has had reforming society, the more women, or at least feminists, are sure the world is grinding an invisible, or if you prefer, highly visible, axe against women. Are there alternatives to this? What about feminists who say that going back isn't an option? I'm not going to try to unravel whether there is an escape; I'm focusing on a different question, whether "consciousness raising" contributes to living in joy. If an animal's leg is caught in a steel trap, the only game in town may be to gnaw off its own leg. The question of, "Is it necessary?" is one question, but I'm focusing on the question of, "Is it basically good?" For the animal, chewing off its own leg is not good, even if it's the only game in town, and taking women who are happy and making them miserable is not good. You can argue that it is the only game in town, but if it's a necessary evil, it is still an evil, and naming this process "consciousness raising" is a bit like taking a piece of unconstitutional legislation that rescinds our civil liberties and naming it the "USA Patriot Act." It's a really cool name hiding something that's not so cool. The issue of whether there is anything better is one issue (I believe Orthodoxy is a better alternative), but there are two different issues going on here, and it is not clear that "consciousness raising" benefits women.

I've raised some unsettling points about feminism. And at this point I would like to suggest that Orthodoxy is what feminism is reaching for. What do I mean? There are a lot of points of contact between feminism's indictment of what is wrong with patriarchy and Orthodoxy's indictment of what is wrong in the West. (Both are also kook magnets, but we won't go into that.) I mentioned one thing that feminism and Orthodoxy have in common; there are a great many more, and some of them are deep. But there are also differences. Orthodoxy doesn't deliver

women who are hurt and angry; Orthodoxy has a place for women to be women, and for women to enjoy life. Feminism tries to be pro-woman, but ends up giving its most vitriolic treatment to women who disagree with it: we do not have the sisterhood of all women, as feminism should be, but a limited sisterhood that only includes feminists. Orthodoxy has its own vitriol, but there is also a great tradition of not judging; even in our worship people are doing different things and nobody cares about what the next person is doing. We don't believe salvation ends at our church doors, and in general we don't tell God who can and cannot be saved. Feminism is a deep question, and Orthodoxy is a deep answer.

That is at least a simplistic picture; it's complex, but I cannot help feeling I've done violence to my subject matter. It seems my treatment has combined the power and strength of a nimble housecat with the agility and grace of a mighty elephant. I would like to close with something related to what I said in the beginning, about knowing.

Christiane Northrup's *Women's Bodies, Women's Wisdom* talks about how women do not always feel the need to rush and get to the point, not because they are doing a bad job of getting that task out of the way (as necessary but unpleasant), but because to women things are interconnected, and the things a woman says before "the point" are things she sees as connected that add something to the point. This article has some of the qualities *Women's Bodies, Women's Wisdom* finds in women, and I see things as interconnected. Beyond analysis, there is synthesis. If this article discusses many things that are connected to the point, that is not because I am trying to write like a woman would. It's not something extra that I've decided to add; in fact it would be difficult for me to uproot this from

how I communicate. And it's not because I am trying to balance out my masculinity by being more feminine, or be androgynous, or because I'm trying to be woman-like out of a guilt factor. There are other reasons why, but I would suggest that it's an example of Orthodox manhood at work. Not the only example, and certainly not the best, but my point is that there is an important sense in which Orthodoxy is what feminism is reaching for. But to immediately get to the point would give an impression that is strange and deceptive, and almost completely fail to convey what is meant by the claim. That is why I've been spending my time exploring a web of interconnections that help show what that claim means.

Orthodoxy is about helping us to be fully human, and that includes divinely inspired support for both men and women. It is other things as well, but part of why I became Orthodox was that I realized there were problems with being a man in Western Christianity. Orthodoxy is the most gender balanced Christian confession in terms of numbers, and I came to ask the rather abrasive question, "Does Orthodoxy draw more men than Evangelicalism because Orthodoxy understands sanctification as deification and Evangelicalism understands sanctification as a close personal relationship with another man?" I never got much of an answer to that question (besides "Yes"). And even though I'm looking for more in Orthodoxy than help being a man, one of the reasons I became Orthodox was that it is the best environment for being a man that I found. And I'm coming to realize that men are only half the picture in Orthodoxy. Because everything is connected, if you hurt men, women get hurt, and if you hurt women, men get hurt... and if you think about what this means, it means that you cannot make an environment that is healthy for men but is destructive to women.

Nor can you make an environment that is healthy for women but destructive to men. Orthodoxy's being good for men is not something that is stolen from women. It is good for men because God instituted it as a gift to the whole human race, not only for men.

There are things that are deeply wrong with Western culture. Would you rather be working on an analysis of the problem, or learn to grow into its solution?

# A Personal Flag

When I was poking around the web, I found Steve Scheussler's home page. Among other things, it mentions that Steve has a personal constitution.

There was something that bothered me about the idea of a personal Constitution. I respect Steve and enjoy his acquaintanceship — I didn't feel a nagging doubt about him, only a disagreement with the idea of a personal constitution. The basic idea of *lex, rex* — "the law comes before the king" — is foundational to American government, runs so deep that justices who violate it invariably acknowledge its place by paying lip service to it, checks many of the abuses when a ruler is permitted to do anything he wants, and strikes me as fundamentally flawed. What you know is always more than you can write down, and living by a personal constitution makes a creation greater than its creator. The principle that can be written is not the ultimate principle.

I felt an objection, but I also felt something worth imitating. I followed my intuitions for a while, and came to a flag. I hold objection to the way flags are treated in American culture — the only physical object I have ever been asked to pledge allegiance to. I was required by law to pass a school test on the Constitution and on the flag, and the flag is the only item I have been told to never let touch the ground. Nobody objects when I

.....  
(quite frequently) put a Bible on the floor, nor does anybody object when I am roughhousing with friends (human — created in the image of God!) and push them into the ground — but the American flag is to be held in such high respect that it may not touch the ground, not even when it is being respectfully folded. The proper term, I believe, for an object of this veneration is: 'Idol'.

That is what American culture makes of a flag, but that is not what it must be. I choose to make it something else — a way to share who I am to other people. Like many symbols, it holds meaning, but does not explain itself. So here is an explanation of its symbolic side:

# Legend

## Basic design

Most flags are very simple, with perhaps one true picture at the center; my flag is intended to be at once both simple and complex. I will treat the simple aspects before going on to the little details.

The two obvious allusions are to the French and British flags. Why does the French flag appear reversed? I am left-handed. There's been a lot of silly stuff written about left-handedness, but there are some serious aspects as well. My brain has an unusual wiring pattern that appears in some left-handers — the pattern is only found in 2% of the world's population. If you meet me in person, you will find that I speak slowly, after a pause — but when I do speak, my words are as carefully chosen as those I write. I think differently, by nature.

I chose the French flag as the main model, because I have spent time in France, and because there are ways in which it is more home than America — French people often think and discuss ideas where Americans often watch television. I enjoy speaking French a great deal. But why is America not represented at all?

It is, only in a way that is not obvious.

The common mental model of American history is that there was England, and then English colonists came and settled in

was England, and then English colonists came and settled in America, and then they broke off and formed their own nation, and now the U.S. is the U.S. and England is England. How else could anyone think of it?

One of my professors argued that Martin Luther King was essentially a conservative: his "I have a dream" speech did not try to attack, change, or replace the fundamental principles of American government, but instead asked for a more consistent application of American principles. When he said that the bank of justice did not have insufficient funds, he was not asking white America to write a new check; he was trying to cash a check that had already been written. In a similar manner, the United States was in large part founded by English colonists who had been promised certain "rights of Englishmen", rights that were not forfeited by colonizing faraway soil, and rebelled when these English rights were violated. "No taxation without representation!" was an English cry. Another analogous situation would be the Reformation. The Reformation did not start when people decided that they wanted to break off from the Church and do something else; it started with criticisms from people who believed, rightly or wrongly, that the Roman Catholic Church was failing to live up to Catholic standards. Reams of anti-Catholic invective came later, but the initial idea was to help the Church be more properly Catholic. Something of the same is at work with America's independence. In contradistinction to the idea that the colonies split off from England and became different, I would suggest that a bifurcation occurred — and that the two sides are not very far apart. A friend who grew up in France commented on the similarity of spiritual atmosphere between France and the United States; both France and the United States are part of the West, and England and the United

States are closer still. Now the U.S. has economic and military distinction, and (for good or for bad) is drawing much of the world's technical talent — but there are strong similarities, and some of the intellectual movements that have been pointed to as America distinguishing itself from Europe are things I'd rather forget: pragmatism, behaviorism, etc. The English flag, in a non-obvious way, represents America, along with the basic colors of red, white, and blue.

## Red

This third of the flag might be titled, 'Eclectica' — not named for this website, but including various eclectic aspects of my interest or my person. Red was my favorite color when I was a boy. Specific things listed, loosely from top to bottom, are:

- The world. In this case, the world is not a symbol of the environment per se, so much as of cultures the world around. I am interested in cultures, and find them to be objects of fascination and beauty.
- A climber. I love to climb, and I am very happy that Wheaton College recently opened a climbing wall. I'm hoping to learn how to climb up a thick tree trunk without using branches.
- A hand, showing the bones inside. A skeleton is not necessarily a gruesome part of a corpse; it is also part of a living, breathing human body. In *Fearfully and Wonderfully Made*, Paul Brand talks about how a lobster has a hard skeleton on the outside — and how a man has a skeleton that's strong as steel, but covered with soft flesh. I don't know how well I live up to this standard (I know one person

who's said that I don't), but I want to live to the standard of rock hard, unyielding principles inside, but a soft touch that meets things on the outside.

- A paper target, viewed through a competition rifle's sight. I don't get to do riflery very often, but I enjoy it a great deal. Marksmanship is not about the machismo that Hollywood shows; it's about concentration and growing still.
- A Swiss Army Knife. I carry a thick Swiss Army Knife, and use it for all sorts of things. After watching MacGyver as a child, I came to value resourcefulness, tinkering, and jury-rigging; I still find the knife to be quite useful.
- A place called "the Web" at Honey Rock Camp. Honey Rock is a place that has been special to me from childhood; it is easier to know other people there, and there are beautifully eclectic physical facilities. One of these has a World War II cargo net strung up to make a place for children to romp around in: the Web. It is now, so far as I know, closed — the fabric is deteriorating, and it is a legal liability. The camp retains its beauty, and provided the home setting for [A Cord of Seven Strands](#).
- A clock with no hands. After spending a summer in Malaysia, I changed my time sense to move more slowly, to not need to have things happen quickly and try to let go of the number of minutes elapsed when I am with a friend. Something of this basic insight is captured in Madeleine l'Engle's description of kairos in *Walking on Water*, Neil Postman's description of moments (before the clock ruled) in *Amusing Ourselves to Death*, and by an anthropologist in *The Dance of Life*. Why? It's not that I wanted to lose awareness of time, so much as to gain a more effective focus on things that are lost. There are other facets, but I do not wish to

expand here — the interested reader is encouraged to look at the mentioned titles.

- A roll of duct tape. Same basic meaning as the Swiss Army Knife; I used to also carry that, too.
- Swimming underwater. I haven't done much swimming in the past few years, but I was quite often in the water as a boy — and, more often than not, swimming under the surface. I cherish those memories.
- A television with clothing on top and books in front. It's hard to portray the absence of a television per se, but I can portray one that hasn't been used in a long time. I generally try to avoid watching television, and I do not have one in my apartment. Not only is an hour of television an hour not spent doing other things, but watching television subtly alters — impairs — our experience of the external world. How does it do that? Read Jerry Mander's *Four Arguments for the Elimination of Television*.
- A cave. A cave is a quiet place to rest and think; it is a symbol of withdrawing to meditating. My apartment is such a place.
- A graveyard. A graveyard is not necessarily a symbol of the macabre; it is a place symbolic of continuity between the living and the dead. This is why many old churches and cathedrals bury people under the sanctuary; it is a symbol of connection with those who walked before. I do not believe in the modern concept of progress, nor the postmodern rejection of progress and everything near it; I believe in a human and a Christian continuity with those who walked before.

**White**

The center of the flag, and the connection between the other two portions, is faith. The Cross is central and defines what else is there.

There are innumerable symbols that could be used, but I chose to restrict myself to four. Those four are:

- Grapes. Grapes are a symbol of wine, one of God's blessings to man. It is a blessing so special that Christ chose it to become his blood, and when we drink Christ's blood, we are drinking the divine life — something hidden and mystical, and close to my heart.
- A candle. There is something a candle symbolizes that is not in a light bulb. It is a softer light. There is a reason couples want a candle for a special dinner, and it is a reason not confined to romantic love. I cannot explain what it is, but it is something like faith.
- Me, sitting in my blue armchair, praying. There is an interplay of light between God and me.
- Friends hugging. **Touch** is also important to me, and with it, more broadly, **kything** — I identify strongly with Charles Wallace in Madeleine l'Engle's *A Wind in the Door*, a work whose resonance has pierced my heart like few other.

## Blue

The last third of the flag, blue, is devoted to reason. A particular emphasis on the mind is not catholic and universal like the claims of the Christian faith, but it is one part of the broad corpus of human and Christian work, and it is important to me.

I should note that the word 'reason' has shifted meaning in the last few centuries, and it is an older meaning that I wish to

invoke. Now the term 'imagination' is used very broadly for human brilliance; a person might say that a plan shows "real imagination" as a way of saying that it reflected insight and understanding. In the Middle Ages, however, the term did not have its present meaning. It meant the faculty that formed visual images, and little else — the term 'imagination' has expanded in meaning. The term 'reason', however, has shrunk in meaning. At present, it does not mean much else besides logical thinking — but in the Middle Ages, 'reason' referred much more broadly to human faculties, including many things we would now call 'imagination'. 'Reason' is an alternate translation to the Greek *logos* that John used to describe God the Son. 'Reason' does not mean 'rationalism' ("Among intellectuals, there are two types of people: those that worship the mind, and those that use it." — G.K. Chesterton), but a special effort to love God with all of my mind.

From bottom to top, here are the symbols represented:

- A book, open, with light flaring out, and things coming from that light. The book is a symbol of learning in general, and the Book.
- A hypercube (tesseract) — mathematics, which provided discipline for my mind, among other things.
- A storm of blue and orange flame, by a burning tree: [Firestorm 2034](#) as the image of literature, both read and written.
- A networked computer, coming in part through the hypercube. Math and computer science are tightly linked, and computer work is putting bread on the table.
- A magnifying glass, and a caduceus: "You must study the ways of all professions." (Miyamoto Musashi, *A Book of Five*

Rings. As well as the basic academic disciplines, I have tried to understand other areas that would stimulate and broaden my thinking: emergency medicine, forensics...

- Deep waters. The thought that can be stated is not the ultimate thought; the worded thoughts give way to things that cannot be explained, and the symbol into which others recede is formless, deep waters. Most of my thoughts are now in words, but my deepest thoughts are never in words to begin with.

# A Pet Owner's Rules

God is a pet owner who has two rules, and only two rules. They are:

1. I am your owner. Enjoy freely the food and water which I have provided for your good!
2. **Don't drink out of the toilet.**

That's really it. Those are the only two rules we are expected to follow. And we still break them.

Drunkenness is drinking out of the toilet. If you ask most recovering alcoholics if the time they were drunk all the time were their most joyful, merry, halcyon days, I don't know exactly how they'd answer, if they could even keep a straight face. Far from being joyful, being drunk all the time is misery that most recovering alcoholics wouldn't wish on their worst enemies. If you are drunk all the time, you lose the ability to enjoy much of anything. Strange as it may sound, it takes sobriety to enjoy even drunkenness. Drunkenness is drinking out of the toilet.

Lust is also drinking out of the toilet. Lust is the disenchantment of the entire universe. It is a magic spell where suddenly nothing else is interesting and after lust destroys the

...suddenly, nothing else is interesting, and after that, lust destroys the ability to enjoy anything else, lust destroys the ability to enjoy even lust. Proverbs says, "The adulterous woman"—today one might add, "and internet porn" to that—"in the beginning is as sweet as honey and in the end as bitter as gall and as sharp as a double-edged sword." Now this is talking about a lot more than pleasure, but it is talking about pleasure. Lust, a sin of pleasure, ends by destroying pleasure. It takes chastity to enjoy even lust.

Having said that lust is drinking out of the toilet, I'd like to clarify something. There are eight particularly dangerous sins the Church warns us about. That's one, and it isn't the most serious. Sins of lust are among the most easily forgiven; the Church's most scathing condemnations go to sins like pride and running the poverty industry. The harshest condemnations go to sins that are deliberate, cold-blooded sins, not so much disreputable, hot-blooded sins like lust. Lust is drinking out of the toilet, but there are much worse problems.

I'd like you to think about the last time you traveled from one place to another and you enjoyed the scenery. That's good, and it's something that greed destroys. Greed destroys the ability to enjoy things without needing to own them, and there are a lot of things in life (like scenery) that we can enjoy if we are able to enjoy things without always having to make them mine, mine, mine. Greed isn't about enjoying things; it's about grasping and letting the ability to enjoy things slip through your fingers. When people aren't greedy, they know contentment; they can enjoy their own things without wishing they were snazzier or newer or more antique or what have you. (And if you do get that hot possession you've been coveting, greed destroys the ability to simply enjoy it: it becomes as dull and despicable as all your possessions look when you look at them through greed's

darkened eyes. It takes contentment to enjoy even greed: greed is also drinking out of the toilet.

Jesus had some rather harsh words after being unforgiving after God has forgiven us so much. Even though forgiveness is work, refusing to forgive one other person is drinking out of the toilet. Someone said it's like drinking poison and hoping it will hurt the other person.

The last sin I'll mention is pride, even though all sin is drinking out of the toilet. Pride is not about joy; pride destroys joy. Humility is less about pushing yourself down than an attitude that lets you respect and enjoy others. Pride makes people sneer at others who they can only see as despicable, and when you can't enjoy anyone else, you are too poisoned to enjoy yourself. If you catch yourself enjoying pride, repent of it, but if you can enjoy pride at all, you haven't hit rock bottom. As G.K. Chesterton said, it takes humility to enjoy even pride. Pride is drinking out of the toilet. All sin is drinking out of the toilet.

I've talked about drinking out of the toilet, but Rule Number Two is not the focus. Rule Number One is, "I am your owner. Enjoy freely of the food and water I have given you." Rule Number Two, "Don't drink out of the toilet," is only important when we break it, which is unfortunately quite a lot. The second rule is really a footnote meant to help us focus on Rule Number One, the real rule.

What is Rule Number One about? One window that lets us glimpse the beauty of Rule Number One is, "If you have faith the size of a mustard seed, you can say to a mountain, 'Be uprooted and thrown into the sea,' and it will be done for you." Is this exaggeration? Yes. More specifically, it's the kind of exaggeration the Bible uses to emphasize important points. Being human sometimes means that there are mountains that are

causing us real trouble. If someone remains in drunkenness and becomes an alcoholic, that alcoholism becomes a mountain that no human strength is strong enough to move. I've known several Christians who were recovering alcoholics. And had been sober for years. That is a mountain moved by faith. Without exception, they have become some of the most Christlike, loving people I have known. That is what can happen when we receive freely of the food and drink our Lord provides us. And it's not the only example. There has been an Orthodox resurrection in Albania. Not long ago, it was a church in ruins as part of a country that was ruins. Now the Albanian Orthodox Church is alive and strong, and a powerhouse of transformation for the whole nation. God is on the move in Albania. He's moved mountains.

To eat of the food and drink the Lord has provided—and, leaving the image of dog food behind, this means not only the Eucharist but the whole life God provides—makes us share in the divine nature and live the divine life. We can bring Heaven down to earth, not only beginning ourselves to live the heavenly life, but beginning to establish Heaven around us through our good works. It means that we share in good things we don't always know to ask.

Let's choose the food and drink we were given.

# "Physics"

I included [Aristotle's Physics](#) when I originally posted [An Orthodox Bookshelf](#), then read most of the text and decided that even if the Fathers' science was largely Aristotelian physics, reading the original source is here less helpful than it might appear. The Fathers believed in elements of earth, air, fire, and water, and these elements are mentioned in the Theophany Vespers, which are one of the primary Orthodox texts on how the cosmos is understood. However, even if these are found in Aristotelian physics, the signal to noise ratio for patristic understanding of science is dismal: [Aristotle's Physics](#) could be replaced with a text one tenth its length and still furnish everything the Fathers take from it.

I would like to take a moment to pause in looking at the word "physics." It is true enough that historically Aristotelian physics was replaced by Newton, who in turn gave way to Einstein, and then quantum physics entered the scene, and now we have superstring theory. And in that caricatured summary, "physics" seems to mean what it means for superstring theory. But I want to pause on the word "physics." Orthodox know that non-Orthodox who ask, "What are your passions?" may get a bit more of an earful than they bargained for. "Passions" is not a word Orthodox use among themselves for nice hobbies and interests

they get excited about; it means a sinful habit that has carved out a niche for itself to become a spiritual disease. And "physics", as I use it, is not a competitor to superstring theory; etymologically it means, "of the nature of things," I would quote C.S. Lewis, [The Voyage of the Dawn Treader](#):

"I am a star at rest, my daughter," answered Ramandu.  
"When I set for the last time, decrepit and old beyond all that you can reckon, I was carried to this island. I am not so old now as I was then. Every morning a bird brings me a fire-berry from the valleys in the Sun, and each fire-berry takes away a little of my age. And when I have become as young as the child that was born yesterday, then I shall take my rising again (for we are at earth's eastern rim) and once more tread the great dance."

"In our world," said Eustace, "a star is a huge ball of flaming gas."

"Even in your world, my son, that is not what a star is but only what it is made of."

What is a star? I would answer by quoting an icon, of the creation of the stars. The text on the icon does not refer to Genesis at all, but [Job 38:7](#), "...when the morning stars sang together, and all the sons of God shouted for joy?":

The stars in the icon are connected with the six-winged seraphim, the highest rank of angels. The Heavens are an icon of Heaven, and the icon says something very different than, "What are stars if we view them as reductionists do?"

And this article is not intended to compete with physics as it is now understood, or to defend patristic Aristotelian physics against its challengers, or to demonstrate the compatibility of theology with the present state of scientific speculation: words

theology with the present state of scientific speculation, nor as that I choose carefully, because theology is about divine revealed doctrine while science is the present state of speculation in a very careful system of educated guesses, and scientific theories will not stop being discarded for newer alternatives until science is dead. It is therefore somewhat of a strange matter to demonstrate the compatibility of theology with science, as conforming timeless revealed doctrines to the present best educated guess that is meant to be discarded.

## Of the nature of things

The central mystery in the nature of things is the divine nature. [No man can see God and live](#), and the divine essence is not knowable to any creature. The divine energies are available, and indeed can deify creation, but the central mystery around which all else revolves is God's unknowable essence and nature.

This is the central mystery around which everything else revolves, but the divine essence is not part of a larger system, even as its largest part. God lies beyond the created order, and perhaps the greatest failure of Aristotelian physics to understand the nature of things lies in its tendency towards materialism, its sense that you understand things by looking down. Some have said, in introducing [Michael Polanyi's theories of personal knowledge](#), that behavioralism in psychology does not teach, "There is no soul;" rather, it induces students into investigation in such a way that the possibility of a soul is never even considered. And Aristotelian physics started a trajectory that has lingered even when the specifics of Aristotelian physics were considered to be overturned: you understand the nature of things by looking at them materially. Aristotelian physics, in asking, "What is the nature of this?" leads the listener so as to never even consider an answer of, "Because that is how it functions as a satellite of God." And the entire physis or nature of every created being is as a satellite of God: the atheist who

says "The very notion of a God is incoherent," does so with the  
breath of God.

## Headship and harmony with nature

Many Westerners may identify the goal of harmony with nature with the East, but the concept as we have it is essentially Western in nature. Orthodox monasticism may look a lot like harmony with nature to the West: it often takes place in rustic surroundings, and animals are not afraid of monastics: deer will eat from a monk's hand. But there is a fundamental difference between this and the Western concept of harmony with nature: the harmony does not come from our taking out cue from plants and animals. Monks and nuns are to take their cue from God, and harmony with animals comes from how they take their cue from God.

All creation bears some resemblance to God, and God himself is called the Rock. For every creature there is a logos or idea in God's heart, that is what that creature should strive to be. But there is a distinction among creation. Some are given the image of God: men and angels, and we exist in a fuller and deeper sense than creatures that do not bear such an image. God exists in a unique and deepest sense, and if we say that God exists, we cannot say that we exist in the same sense, and if we say that we exist, we cannot say that God exists in the same sense. Those who are given the image, who have a human or angelic mind, are more fully nature than those creatures who have do not exist in

the same way on the same level. And we who bear the royal image, even if liturgical asceticism removes barriers between us and the rest of Creation, are to take our cue from God our head.

## Getting past "the politics of envy"

The concept of headship is a difficult and perhaps touchy one, not least because the only place where people think it applies is the husband being the head of the wife. But it is written into the cosmos in larger letters. St. Maximus the Confessor spoke of five divisions that are to be transcended:

### Head Body

Man            Woman

Paradise    The inhabited world

Heaven            Earth

Spiritual creation    Tangible creation

God            Creation

All these differences are ultimately to be transcended, and many more not listed. But the project of transcending them assumes there are differences to start off with, which we do not transcend by closing our eyes and pretending they are not there. And this feature of creation runs aground what might be called "the politics of envy", whose central feature is an equality that boils down to saying, "I don't want anybody to be better than me."

And this brings me to the point of inequality. Not only are the politics of envy toxic, but unequal treatment bears something

that the politics of envy would never imagine. The kindest and most courteous acts are most often not those that treat the other as an equal, but those that treat the other as not equal. The man who buys six dozen roses for his wife does not treat her as an equal: the thought would not occur to him to buy six dozen roses for one of his fellow workmen. The mother who holds and comforts a child after a scrape extends a courtesy that would not be extended quite so far for an adult capable of managing moods and life's scrapes. The greatest courtesies are extended precisely at the point when someone in a position of headship treats someone else, not as an equal, but as the head's body as in the chart above. The same is implied for authority, or some of the more painful social lessons having to do with profound giftedness. Perhaps people may say "Treat me as an equal" instead of "treat me well," but it has been my own experience that treating people as equals in an area where they request equality has given social explosions that I could have avoided if I were wise enough to realize that the point where I was asked, "Treat me as an equal," were precisely the situations which demanded the wisdom not to treat people as intellectual equals that could handle the full force of what I was thinking, but extend some of the most delicate courtesy and social graces. Exactly what is needed is hard to say, but precisely what is **not** needed is to say, "Great, I've found someone gifted in exactly the same way I am," and launch into the full force of your deepest thought. God does not create two blades of grass alike. He has never created two humans who are equal, but after each, he broke the mould.

## **Microcosm and mediator**

Mankind was created to be a microcosm, summarizing both the spiritual and tangible creation, and a mediator. All the Orthodox faithful participate in a spiritual priesthood, and its sigil is the sacramental priesthood that a few identify. We are called to mediate and help transcend the differences above. Our worship of the God who is Light, and ourselves being the light of the world, is as the vanguard of Creation returning to the Creator, the firstfruits of a world created by and for God.

## Symbols

I would like to close on an understanding of symbol. Men are symbols of God; that is what it means to be made in the image of God. The material world is best understood, not as things operating under mathematical laws, but as having a symbolic dimension that ultimately points back to God. The theory of evolution is not a true answer to the question, "Why is there life as we know it?" because it does not address the question, "Why is there life as we know it?" If it is true, it is a true answer to the question, "How is there life as we know it?" The sciences answer questions of "How," not questions of "Why," and the world is best understood as having a symbolic dimension where the question of "Why?" refers to God and overshadows the question of "How?"

Even if physics answers its questions with accuracy, it does not answer the deepest questions, and a deeper level has three kinds of causation, all of them personal. Things are caused by God, or by humans, or by devils. When we pray, it is not usually for an exception to the laws of physics, but that nature, governed by personal causes on a deeper level, may work out in a particular way under God's governance. And the regular operations of physics do not stop this.

## Miracles

Miracles are very rare, if we use the term strictly and not for the genuine miracle of God providing for us every day. But the readings for the Theophany Vespers repeat miracles with nature, and they present, if you will, nature at its most essential. Most of the matter in the universe is not part of icons of Christ, his Mother, and his Saints, and yet even outside of men icons are a vanguard, a firstfruit of a creation that will be glorified.

Mankind is at its most essential in Christ himself, and the natural world is at its most essential as an arena for God's power to be displayed. And God's display of power is not strictly a rarity; it plays out when bread comes out of the earth, when *The Heavens declare the glory of God / And the firmament sheweth his handywork. / Day unto day uttereth speech / And night unto night sheweth knowledge.*

## Sweet Lord, You Play Me False

All of this may be true, but there is an odor of falsity built in its very foundations, to provide an Orthodox "physics" (or study of "the nature of things") analogous to Aristotle's original "physics." Anselm famously wrote the "Monologion" (in which Anselm explores various arguments for God's existence) and the "Proslogion" (in which Anselm seeks a single and decisive proof of God's existence). Once I told an Anselm scholar that there had been a newly discovered "Monophagion," in which Anselm tries to discern whether reasoning can ever bring someone to recognize the imperative of eating, and "Prosphagion," in which Anselm gets hungry and has a bite to eat. For those of you not familiar with Greek, "prosphagion" means "a little smackerel of something."

This work is, in a sense, an exploration about whether philosophy can bring a person to recognize the necessity of eating. But that's not where the proof of the pudding lies. The proof of the pudding lies in the eating, in the live liturgical life that culminates in the Eucharist, the fulcrum for the transformation and ultimate deification of the cosmos. The proof of the pudding lies not in the philosophizing, but in the eating.

# A Picture of Evil

Once upon a time, there was a king. This king wished that his people know what evil was, so that his people could learn to recognize and flee from it. He issued a summons, that, in a year, all of his artists should come to him with one picture, to show what was evil. The best picture would be displayed to the people.

In a year, they all appeared at the king's palace. There were very few artists in the kingdom, but those who were there were very skillful, and worked as they had never worked before. Each brought a picture beneath a shroud.

The king turned to the first artist who had come. "Jesse, unveil your picture, and tell us its interpretation."

Jesse lifted the cloth. Against a background of blackened skulls was a dark green serpent, the color of venom and poison, with eyes that glowed red. "Your Majesty, it was the Serpent whose treacherous venom deceived man to eat of the forbidden fruit. The eye is the lamp of the body, and the Serpent's eye burns with the fires of Hell. You see that beyond the Serpent are skulls. Evil ensnares unto death and outer darkness."

The court murmured its approval. The picture was striking, and spoke its lesson well. The king, also, approved. "Well done, Jesse. If another picture is chosen, it will not be because you have done poorly. Now, Gallio, please show us your work."

Gallio unveiled his painting. In it was a man. his face red and

...and showed the painting. There was a man, his face red and veins bulging from hate. In his hand, he held a curved dagger. He was slowly advancing towards a woman, cowering in fear. "Your Majesty, man is created in the image of God, and human life is sacred. Thus the way we are to love God is often by loving our neighbor. There are few blasphemies more unholy than murder. You have asked me for a picture to show what evil is, that your subjects may flee from it. This is evil to flee from."

The court again murmured its approval, and the king began to shift slightly. It was not, as some supposed, because of the repellent nature of the pictures, but because he had secretly hoped that there would be only one good picture. Now, it was evident that the decision would not be so simple. "Gallio, you have also done well. And Simon, your picture?"

Simon unveiled his picture, and people later swore that they could smell a stench. There, in the picture, was the most hideous and misshapen beast they had ever seen. Its proportions were distorted, and its colors were ghastly. The left eye was green, and taller than it was wide. The right eye was even larger than the left, red, bloodshot, and flowing with blood; where there should have been a pupil, a claw grotesquely protruded. It was covered with claws, teeth, fur, scales, blood, slime, tentacles, and bits of rotted flesh; several members of the court excused themselves. "However it may be disguised, evil is that which is sick, distorted, and ugly."

There was a long silence. Finally, the king spoke again. "I see that there are three powerful pictures of evil, any one of which is easily a masterpiece and well fit to show to the people. Barak, I know that you have been given artistic genius, and that perhaps your picture will help me with this difficult decision. Unveil your picture."

Barak unveiled his picture. and an awestruck hush fell over

the court. There, unveiled, was the most beautiful picture they had ever seen.

The picture was in the great vault of a room in a celestial palace. It was carved of diamond, emerald, ruby, jasper, amethyst, sardonyx, and chrysolite. Through the walls of gem, the stars shone brightly. But all of this was nothing, compared to the creature in the room.

He carried with him power and majesty. He looked something like a man, but bore glory beyond intense. His face shone like the sun blazing in full force, his eyes flashed like lightning, and his hair like radiant flame. He wore a robe that looked as if it had been woven from solid light. In his left hand was a luminous book, written in letters of gold, and in his right hand was a sharp, double edged sword, sheathed in fire and lightning.

The king was stunned. It took him a long time to find words, and then he shouted with all of his might.

"You fool! I ask you for a picture of evil, and you bring me this! It is true that fools rush in where angels fear to tread, and that, like unthinking beasts, they do not hesitate to slander the glorious ones. What do you have to say for yourself and for this picture? I shall have an explanation now, or I shall have your head!"

Barak looked up, a tear trickling down his cheek. "Your Majesty, do you not understand? It is a picture of Satan."

# Pilgrim

O Holy Father, who hast made me a pilgrim,  
What pilgrimage is this that thou hast given me?  
Would that there were a volume inscribed,  
Refutatio Omnium Haerasium,  
Which is, being interpreted,  
The Refutation of All Heresies  
Whose pages were but inscribed,  
With but a single word:  
Michael.  
The war in Heaven is short,  
Already won,  
When the Dragon swept a third of the starry host,  
Thine own champion,  
Michael,  
But spoke his name,  
Which is, being interpreted,  
"Who is like God?"  
The damned doomed Dragon like lightning fell,  
From Heaven expelled,  
With all the rebellious host:  
Sore losers one and all,  
To use the common term,

Confounded by a single word:  
Michael.

But such a Refutatio Omnium Haeresium

Lieth not open to my pen:

A lesser work by far,

Righteous Father,

Hast thou given me to write.

To refute all heresies,

I would start on a point obscure,

And say that science and technology,

Have an occult resonance deep and loud,

For not with occult sin is one enchained,

A text to send,

But yet they beseem,

Of a single cloth to be cut,

And herein is a problem:

For of matters occult to treat,

The temptation is to believe,

"If only we are dainty enough,

We can pick up a turd by the clean end,

And avoid getting our hands dirty."

The point is sincere.

And yet we bear wounds,

Of the Damned Backswing,

And if all else were ignored,

I would speak carefully of the recurrent Damned Backswing.

The Sorceror's Bargain is one head of this Hydra:

The enchanter is told,

"Give me thy soul and I will give thee power,"

But if thou hast given thy soul,

Who hath the power?

This is one surfacing of the Damned Backswing,  
A Damned Backswing shared by street narcotic:  
    At first, a doorway to deepest joy,  
        Or so it first appears,  
    Until the first appearance disappears,  
        And the addictus,  
        The one consigned,  
Has escalating doses whose heights are lower,  
    Than the lows before taking a street drug.  
    Thus cutteth the Damned Backswing.  
    In ages past, Reason was enthroned,  
    Or such spake the spirit of the age,  
    Descartes and rationalism now made pariah,  
    In the postmodern flight from Reason,  
    But the Damned Backswing did not start,  
When Descartes became vilified without question:  
    "Reason" enthroned was "Reason" pared down,  
Like a toolchest replete with hammer, axe, awl, & c.  
    Pared down to a hammer alone,  
    And that hammer enthroned:  
    The Damned Backswing thus stole reason,  
Not from when continental philosophers ridiculed Descartes,  
    But in Descartes and the Enlightenment itself,  
    Darkness reigned:  
The Damned Backswing eviscerated Reason already.  
    In the '50s, in the '80s,  
    The economy was booming in many places,  
Middle class citizens enjoyed creature comforts,  
    Beyond imagining to medieval King and Queen.  
    But something queer has happened:  
    The Damned Backswing cuts,

And we are not ever changing from prosperity to prosperity;  
The Damned Backswing hews away at wealth.  
To the United States of America,  
The erstwhile champion of rights,  
The Bill of Rights is called,  
"Void where prohibited by law,"  
And surveillance grows and grows,  
Thus unfurls one cut of the Damned Backswing.  
What shall I say of porneia,  
Which is beyond a squid:  
Thrown out the front door,  
Its tentacles remain in your cabinets,  
And if you clean these out,  
They reach out from under your bed at night.  
Literally spoken, porneia is sexual vice,  
Yet its entwined, unbanishable tentacles,  
Are the condition of much more than lust; An open-ended thing is  
porneia.

In this porneia we have intertwined,  
Plastic foods and plastic culture,  
[Contraception and Splenda](#),  
Pleasure to grasp and fruitfulness to escape,  
Feminism renamed gender studies, queer concerns,  
Sexual freedom and a pornified world,  
Pride, narcissism, subjectivism, and the occult,  
Things that are not separate, but bleed one into the other,  
Our ersatz answer to the question,  
"What is the chief end of mankind?"  
For to glorify God and enjoy him forever,  
Is no longer apparent.  
The Christian way seems dull and discredited,

Or at any rate dull,  
So people turn to "alternative spirituality,"  
Or the iron yoke of Islamic surrender,  
When they recognize religious impulse as such.  
And just as people reaching for spirituality,  
Find "alternative spirituality" what comes to hand,  
People seeking the good of women,  
Find feminism of some stripe to come to hand,  
Not, perhaps, its extreme radical form,  
But something modest,  
Some via media to pick it up,  
By the clean end.  
What is not realized is that feminism is anti-woman.  
In rhetoric and presentation,  
It seems the promotion of women,  
Yet the enemy, the enemy true,  
Is not traditional men:  
They are only a decoy.  
The Enemy, capital "T", capital "E",  
Are nonfeminist women,  
Who enjoy happiness on a course—  
Not engineered by feminism,  
Who retain an organic spiritual diet,  
And not the plastic social engineering,  
Of feminists sitting down and designing,  
Their creation to make women happy—  
As they despise conditions that have made women happy.  
We are urged to listen to women's voices,  
And yet,  
And yet,  
And yet...

In practice only the suitably, conveniently liberal,  
Seem to qualify as having women's voices.

And to examine another tendril,  
Like in spirit and like in heart,  
Fantasy is no longer a bookstore's fringe,  
Christians read it,  
Laced with escape,  
From the terms of the here and now,  
Which God has given us.

It springs from the same root,  
As those for whom magic is not enjoyed,  
By a reader's willing suspension of disbelief,  
But literal and actually trying to make real.

There is a difference,  
A difference profound,  
But both are fruit of the same tree,  
And both instill the same passion,  
A spiritual condition that is wounded,  
In its ability to enjoy where God has placed us.

These two are connected:  
The clean end of moderate feminism,  
And the clean end of fantasy that is just a book,  
It seems we can pick it up without getting our hands dirty,  
But there isn't a clean end,  
Not really,  
There isn't.

I see two responses,  
One false, and one true:  
The true response is to cite,  
"The righteous shall live by his faith,"  
And the false is to tell how much,

In Wittgenstein-style "forms of life,"

We have lost:

For the 1950's were far from traditional;

For in traditional societies,

Men and women alike worked in adult company,

Not the 1950's housewife confined alone,

But this answer is a decoy.

C.S. Lewis was right:

"Life has never been normal."

**And the righteous will live by faith:**

Each day has enough trouble of its own,

And the path of life is to live,

Working on the day's work and food,

Given to us this day by God.

For the refutation of all heresies is:

Michael - Who is like God?

Amen.

# A Pilgrimage from Narnia

Wardrobe of fur coats and fir trees:  
Sword and armor, castle and throne,  
Talking beast and Cair Paravel:  
From there began a journey,  
From thence began a trek,  
Further up and further in!  
The mystic kiss of the Holy Mysteries,  
A many-hued spectrum of saints,  
Where the holiness of the One God unfurls,  
Holy icons and holy relics:  
Tales of magic reach for such things and miss,  
Sincerely erecting an altar, "To an unknown god,"  
Enchantment but the shadow whilst these are realities:  
Whilst to us is bidden enjoy Reality Himself.  
Further up and further in!  
A journey of the heart, barely begun,  
Anointed with chrism, like as prophet, priest, king,  
A slow road of pain and loss,  
Giving up straw to receive gold:  
Further up and further in!  
Lord Jesus Christ, have mercy on me, a sinner,

Silence without, building silence within:  
The prayer of the mind in the heart,  
Prayer without mind's images and eye before holy icons,  
A simple Way, a life's work of simplicity,  
Further up and further in!

A camel may pass through the eye of a needle,  
Only by shedding every possession and kneeling humbly,  
Book-learning and technological power as well as possessions,  
Prestige and things that are yours— Even all that goes without  
saying:

To grow in this world one becomes more and more;  
To grow in the Way one becomes less and less:  
Further up and further in!

God and the Son of God became Man and the Son of Man,  
That men and the sons of men might become gods and the sons  
of God:

The chief end of mankind,  
Is to glorify God and become him forever.  
The mysticism in the ordinary,  
Not some faroff exotic place,  
But here and now,  
Living where God has placed us,  
Lifting where we are up into Heaven:  
Paradise is wherever holy men are found.

Escape is not possible:  
Yet escape is not needed,  
But our active engagement with the here and now,  
And in this here and now we move,  
Further up and further in!

We are summoned to war against dragons,  
Sins, passions, demons:

Unseen warfare beyond that of fantasy:  
For the combat of knights and armor is but a shadow:  
Even this world is a shadow,  
Compared to the eternal spoils of the victor in warfare unseen,  
Compared to the eternal spoils of the man whose heart is  
purified,  
Compared to the eternal spoils of the one who rejects activism:  
Fighting real dragons in right order,  
Slaying the dragons in his own heart,  
And not chasing (real or imagined) snakelets in the world around:  
Starting to remove the log from his own eye,  
And not starting by removing the speck from his brother's eye:  
Further up and further in!

Spake a man who suffered sorely:  
For I reckon that the sufferings of this present time,  
Are not worthy to be compared with the glory which shall be  
revealed in us, and:  
Know ye not that we shall judge angels?  
For the way of humility and tribulation we are beckoned to walk,  
Is the path of greatest glory.

We do not live in the best of all possible worlds,  
But we have the best of all possible Gods,  
And live in a world ruled by the him,  
And the most painful of his commands,  
Are the very means to greatest glory,  
Exercise to the utmost is a preparation,  
To strengthen us for an Olympic gold medal,  
An instant of earthly apprenticeship,  
To a life of Heaven that already begins on earth:  
He saved others, himself he cannot save,  
Remains no longer a taunt filled with blasphemy:

But a definition of the Kingdom of God,  
Turned to gold,

And God sees his sons as more precious than gold:

Beauty is forged in the eye of the Beholder:

Further up and further in!

When I became a man, I put away childish things:

Married or monastic, I must grow out of self-serving life:

For if I have self-serving life in me,

What room is there for the divine life?

If I hold straw with a death grip,

How will God give me living gold?

Further up and further in!

Verily, verily, I say to thee,

When thou wast young, thou girdedst thyself,

And walkedst whither thou wouldst:

But when thou shalt be old,

Thou shalt stretch forth thy hands, and another shall gird thee,

And carry thee whither thou wouldst not.

This is victory:

Further up and further in!

# Plato: The Allegory of the... Flickering Screen?

**Socrates:** And now, let me give an illustration to show how far our nature is enlightened or unenlightened:—Behold! a human being in a darkened den, who has a slack jaw towards only source of light in the den; this is where he has gravitated since his childhood, and though his legs and neck are not chained or restrained any way, yet he scarcely turns round his head. In front of him are images from faroff, projected onto a flickering screen. And others whom he cannot see, from behind their walls, control the images like marionette players manipulating puppets. And there are many people in such dens, some isolated one way, some another.

**Glaucon:** I see.

**Socrates:** And do you see, I said, the flickering screen showing men, and all sorts of vessels, and statues and collectible animals made of wood and stone and various materials, and all sorts of commercial products which appear on the screen? Some of them are talking, and there is rarely silence.

**Glaucon:** You have shown me a strange image, and they are strange prisoners.

**Socrates:** Much like us. And they see only their own images, or the images of one another, as they appear on the screen opposite them?

**Glaucon:** True, he said; how could they see anything but the images if they never chose to look anywhere else?

**Socrates:** And they would know nothing about a product they buy, except for what brand it is?

**Glaucon:** Yes.

**Socrates:** And if they were able to converse with one another, wouldn't they think that they were discussing what mattered?

**Glaucon:** Very true.

**Socrates:** And suppose further that the screen had sounds which came from its side, wouldn't they imagine that they were simply hearing what people said?

**Glaucon:** No question.

**Socrates:** To them, the truth would be literally nothing but those shadowy things we call the images.

**Glaucon:** That is certain.

**Socrates:** And now look again, and see what naturally happens next: the prisoners are released and are shown the truth. At first, when any of them is liberated and required to suddenly stand up and turn his neck around, and walk and look towards the light, he will suffer sharp pains; the glare will distress him, and he will be unable to see the realities of which in his former state he had seen the images; and then imagine someone saying to him, that what he saw before was an illusion, but that now, when he is approaching nearer to being and his eye

is turned towards more real existence, he has a clearer vision, -what will be his reply? And you may further imagine that his instructor is asking him to things, not as they are captured on the screen, but in living color - will he not be perplexed? Won't he imagine that the version which he used to see on the screen are better and more real than the objects which are shown to him in real life?

**Glaucon:** Far better.

**Socrates:** And if he is compelled to look straight at the light, will he not have a pain in his eyes which will make him turn away to take and take in the objects of vision which he can see, and which he will conceive to be in reality clearer than the things which are now being shown to him?

**Glaucon:** True, he now will.

**Socrates:** And suppose once more, that he is reluctantly dragged up a steep and rugged ascent, and hindered in his self-seeking until he's forced to think about someone besides himself, is he not likely to be pained and irritated? He will find that he cannot simply live life as he sees fit, and he will not have even the illusion of finding comfort by living for himself.

**Glaucon:** Not all in a moment, he said.

**Socrates:** He will require time and practice to grow accustomed to the sight of the upper world. And first he will see the billboards best, next the product lines he has seen advertised, and then things which are not commodities; then he will talk with adults and children, and will he know greater joy in having services done to him, or will he prefer to do something for someone else?

**Glaucon:** Certainly.

**Socrates:** Last of he will be able to search for the One who is greatest, reflected in each person on earth, but he will seek him for himself, and not in another; and he will live to contemplate him.

**Glaucon:** Certainly.

**Socrates:** He will then proceed to argue that this is he who gives the season and the years, and is the guardian of all that is in the visible world, and is absolutely the cause of all things which he and his fellows have been accustomed to behold?

**Glaucon:** Clearly, he said, his mind would be on God and his reasoning towards those things that come from him.

**Socrates:** And when he remembered his old habitation, and the wisdom of the den and his fellow-prisoners, do you not suppose that he would felicitate himself on the change, and pity them?

**Glaucon:** Certainly, he would.

**Socrates:** And if they were in the habit of conferring honours among themselves on those who were quickest to observe what was happening in the world of brands and what new features were marketed, and which followed after, and which were together; and who were therefore best able to draw conclusions as to the future, do you think that he would care for such honours and glories, or envy the possessors of them? Would he not say with Homer, "Better to be the poor servant of a poor master" than to reign as king of this Hell, and to endure anything, rather than think as they do and live after their manner?

**Glaucon:** Yes, he said, I think that he would rather suffer

anything than entertain these false notions and live in this miserable manner.

**Socrates:** Imagine once more, I said, such an one coming suddenly out of the sun to be replaced in his old situation; would he not be certain to have his eyes full of darkness, and seem simply not to get it?

**Glaucon:** To be sure.

**Socrates:** And in conversations, and he had to compete in one-upsmanship of knowing the coolest brands with the prisoners who had never moved out of the den, while his sight was still weak, and before his eyes had become steady (and the time which would be needed to acquire this new habit of sight might be very considerable) would he not be ridiculous? Men would say of him that up he went with his eyes and down he came without them; and that it was better not even to think of ascending; and if any one tried to loose another and lead him up to the light, let them only catch the offender, and they would give him an extremely heavy cross to bear.

**Glaucon:** No question. Then is the saying, "In the land of the blind, the one eyed man is king," in fact false?

**Socrates:** In the land of the blind, the one-eyed man is crucified. Dear Glaucon, you may now add this entire allegory to the discussion around a matter; the den arranged around a flickering screen is deeply connected to the world of living to serve your pleasures, and you will not misapprehend me if you interpret the journey upwards to be the spiritual transformation which alike may happen in the monk keeping vigil or the mother caring for children, the ascent of the soul into the

world of spiritual realities according to my poor belief, which, at your desire, I have expressed whether rightly or wrongly God knows. But, whether true or false, my opinion is that in the world of knowledge the Source of goodness appears last of all, and is seen only with an effort; and, when seen, is also inferred to be the universal author of all things beautiful and right, parent of light and of the lord of light in this visible world, and the immediate source of reason and truth in the intellectual; and that this is the power upon which he who would act rationally, either in public or private life must have his eye fixed.

**Glaucon:** I agree, he said, as far as I am able to understand you.

# The Pleasure-Pain Syndrome

## Lorem Ipsum

In web design, as in graphic-related design since the 1500's, it is traditional to use a standard block of text called "lorem ipsum" when you're trying to see how the page will look graphically and you don't want to be distracted into reading the text itself. The standard block of "pseudo-text" reads:

Lorem ipsum dolor sit amet, consectetur adipiscing elit, sed do eiusmod tempor incididunt ut labore et dolore magna aliqua. Ut enim ad minim veniam, quis nostrud exercitation ullamco laboris nisi ut aliquip ex ea commodo consequat. Duis aute irure dolor in reprehenderit in voluptate velit esse cillum dolore eu fugiat nulla pariatur. Excepteur sint occaecat cupidatat non proident, sunt in culpa qui officia deserunt mollit anim id est laborum.

The text above, somewhat shortened and corrupted, comes from a quotation of "de Finibus Bonorum et Malorum", section

1.10.32, by Cicero, written in 45 BC. The original text interests me not because it is at the root of the standard piece of dummy text, but for what it says (H. Rackham, 1914):

But I must explain to you how all this mistaken idea of denouncing pleasure and praising pain was born and I will give you a complete account of the system, and expound the actual teachings of the great explorer of the truth, the master-builder of human happiness. No one rejects, dislikes, or avoids pleasure itself, because it is pleasure, but because those who do not know how to pursue pleasure rationally encounter consequences that are extremely painful. Nor again is there anyone who loves or pursues or desires to obtain pain of itself, because it is pain, but because occasionally circumstances occur in which toil and pain can procure him some great pleasure. To take a trivial example, which of us ever undertakes laborious physical exercise, except to obtain some advantage from it? But who has any right to find fault with a man who chooses to enjoy a pleasure that has no annoying consequences, or one who avoids a pain that produces no resultant pleasure?

The copyright date is 45 BC, were such ancient works to be under copyright, but I'll take this to be a straightforward statement of the obvious in our day. Let me repeat the last sentence: **"But who has any right to find fault with a man who chooses to enjoy a pleasure that has no annoying consequences, or one who avoids a pain that produces no resultant pleasure?"** There is a real flaw in this way of looking at things.

## The pleasure-pain syndrome

Certain selections of the [Philokalia](#) suggest an understanding that imply this statement to be based on a philosophical error.

Physical pleasure and pain are tied together, and trying to experience pleasure with "no annoying consequences" is like trying to withdraw money from your bank account without making your bank balance any lower. It's a get-rich-quick scheme that boils down to poor math skills. It is a sign of confusion to try to separate the sugar rush from the sugar crash.

There are certain points where we are warned of the pleasure-pain syndrome: the warnings children are given about street narcotics is not that they fail to deliver pleasure, but after delivering pleasure they deliver all the pain that comes with it. It's kind of like Disney's Aladdin, where Aladdin goads Jafar into wishing, "I wish to be an all powerful genie!", and then tells him, "You wanted to be a genie, you got it! And everything that goes with it!" Shackles appear on Jafar's wrists, and he is sucked into a lamp's "itty bitty living space"—if anything, a sunny and optimistic image to compare with "everything that goes with" addiction to street drugs.

The passages in the [Philokalia](#) adapting and elaborating St. Maximos Confessor's teaching make highly emphatic claims about the pleasure-pain syndrome. They very emphatically state that

Christ, who was born of a virgin, was conceived without any trace of physical pleasure (sexual or otherwise), and born without pain: a sufficient Redeemer, in other words, needed to be conceived and born outside of the pleasure-pain syndrome. He took the redemptive effects of sufferings he would not earn; other writers have stated that sinless Christ couldn't have died of ripe old age, but in order to die would have to have a "borrowed" death imposed from outside as occurred in the Crucifixion. Mankind entered the pleasure-pain syndrome in a fall to pleasure and sensuality, and to be rescued from drowning, we need a Savior with one foot solidly planted on the dry land of the shore. This is the extent to which that work frames both our destruction and our salvation in terms of the pleasure-pain syndrome.

There are many ways one could frame things, and the pleasure-pain syndrome does not appear to be a central theme in the [Philokalia](#) overall, let alone an encompassing theme in Orthodox spirituality. But the insight is valid, and for that matter may not be distinctively Orthodox. One Orthodox friend explained to me why he had stopped watching movies: he noticed that an hour or two after a movie ended, he found himself in a depression. Jerry Mander may provide a theory as to why in his [Four Arguments for the Elimination of Television](#), a 1978 title that is still salient, and the book has no pretensions of speaking from a religious

Speaking in terms of the pleasure-pain syndrome is not a central feature of Orthodox theology, but dispassion is beyond being a central point; it is crucial and receives center stage not just in the [Philokalia](#) but in other classics like [The Ladder of Divine Ascent](#), which is read during Lent as a consistent feature of monastic

tradition. But he argues at length that when you gaze long into television, television gazes long into you: he makes some rather chilling suggestions about what effect television has on where people look for and experience pleasure (in a word, the argument is, "When you have a hammer, everything looks like a nail."). He suggests that when television provides a major source of pleasure, there are things that follow in its wake.

It would not seem too difficult to transpose his basic insights in terms of

having a cell phone that occupies your attention all the time. Treacherously addictive Internet porn may be a much worse kind of pleasure than most others one might discuss, but it is not the only one where a pleasure-pain syndrome is at play.

Even if the economy is dire, I am concerned we are in an age of pleasures of all kinds, and these are the pleasures of the pleasure-pain syndrome. The [Philokalia](#) discusses people who try to pursue pleasure and avoid pain, and perhaps times have not changed much... or perhaps we have put the problem on steroids. Think about the short, short list of pleasures that were around when the [Philokalia](#) was being written, warning of the pleasure-pain syndrome. Then compare that list to today. If it is a basic philosophical error to pursue pleasures and try to avoid invisibly attached pains, and if the observation is true when pleasure means simple foods, then we've really put things on steroids if pleasure is TV, movies, smartphones, internet, and so on. It's not just "friendship with benefits" (or other kinds of more casual sex) that brings pleasure entangled with pain, and there are

discipline.

There is a direct and vital relationship between dispassion and the pleasure-pain syndrome: dispassion is a state of spiritual freedom where one is no longer shackled and governed by the pleasure-pain syndrome or any passion allied to it.

things about those passages in the [Philokalia](#) that seem like they had been written yesterday; the portrayal of human nature remains insightful today (1st century of various texts, 53):

[M]an finds by experience that every pleasure is inevitably succeeded by pain, and so directs his whole effort towards pleasure and does all he can to avoid pain. He struggles with all his might to attain pleasure and he fights against pain with immense zeal. By doing this he hopes to keep the two apart from each other—which is impossible... [H]e is, it appears, ignorant that pleasure can never exist without pain. For pain is intertwined with pleasure, even though it seems to escape the notice of those who suffer it.

## The microcosm of praise

Becoming attached to praises is another example of the pleasure-pain syndrome at work. Mark Twain reportedly said, "I can live for two months on a good compliment," and he was emphasizing the point partly by exaggerating how long one can live on a compliment. If one does live off of compliments, there's a problem: one gets hungry again. Praise is very powerful at the beginning, but after time men require stronger and stronger doses. And this may be why the Orthodox leaders I have known give very, very few compliments. They decisively treat other people with love and respect, but they rarely make a minor social compliment to help others feel better. Some of them are not very comfortable when others give them compliments to help them feel better. Some run from it like fire and poison.

One of the basic rules of the Orthodox life is that while monastics are called to abandon all property, the rest of us may own property but are required to own it with detachment. Monasticism aims at being impervious to pleasure and pain alike, but the Bible also provides a foundation for owning things, being married and pursuing ventures, while attempting the difficult work of detachment ([I Corinthians 7:29-31, RSV](#)):

I mean, brethren, the appointed time has grown very short; from now on, let those who have wives live as though they had none, and those who mourn as though they were not

they had none, and those who mourn as though they were not mourning, and those who rejoice as though they were not rejoicing, and those who buy as though they had no goods, and those who deal with the world as though they had no dealings with it. For the form of this world is passing away.

As regards human compliments, the lesson would seem to be this: Listen, but do not inhale. Do not let compliments become the nourishment you feed off of. Better by far not to receive compliments at all than to become dependent on them as your spiritual food. And you might be particularly cautious about those compliments that are peppered throughout conversation to make you feel better; they are even more treacherous.

## Deep Magic

In [The Lion, the Witch, and the Wardrobe](#), the Emperor's headsman, the White Witch, incredulously asks the Lion if he does not know the Deep Magic from the Dawn of Time: that a traitor must die and if the traitor does not die, Narnia will perish in fire and water. The Royal Lion in fact does know the Deep Magic. And he moves on.

But Aslan also knew something the White Witch didn't. He knew from within the Deeper Magic from before the Dawn of Time, that if an innocent victim were willingly slain in a traitor's stead, even death would begin working backwards: and so the White Witch slew Aslan to her defeat.

There is Deep Magic with pleasure and pain: what you sow, so shall you reap. If you sow pleasure to the flesh, you will reap pain to the flesh. The pleasure-pain syndrome is not the sort of thing you can escape by pleasure.

But there is Deeper Magic, and its supreme example is found in [Philippians 2:5-11, RSV](#):

Have this mind among yourselves, which is yours in Christ Jesus, who, though he was in the form of God, did not count equality with God a thing to be grasped, but emptied himself, taking the form of a servant, being born in the likeness of men. And being found in human form he humbled himself and became obedient unto death, even death on a cross.

became obedient unto death, even death on a cross.

Therefore God has highly exalted him and bestowed on him the name which is above every name, that at the name of Jesus every knee should bow, in heaven and on earth and under the earth, and every tongue confess that Jesus Christ is Lord, to the glory of God the Father.

St. John's Paschal homily pours out the Deeper Magic even more plainly:

By descending into Hell, He made Hell captive.  
He embittered it when it tasted of His flesh.

And Isaiah, foretelling this, did cry:

Hell, said he, was embittered

When it encountered Thee in the lower regions.

It was embittered, for it was abolished.

It was embittered, for it was mocked.

It was embittered, for it was slain.

It was embittered, for it was overthrown.

It was embittered, for it was fettered in chains.

It took a body, and met God face to face.

It took earth, and encountered Heaven.

It took that which was seen, and fell upon the unseen.

O Death, where is thy sting?

O Hell, where is thy victory?

Christ is risen, and thou art overthrown!

Christ is risen, and the demons are fallen!

Christ is risen, and the angels rejoice!

Christ is risen, and life reigns!

Christ is risen, and not one dead remains in the grave.

For Christ, being risen from the dead,

Is become the first-fruits of those who have fallen asleep.

To Him be glory and dominion  
Unto ages of ages.  
Amen.

And what is going on here is no unique exception. What is going on here is the supreme instance of a universal law, the same as in the glorified "Hall of Fame" in [Hebrews 11, RSV](#):

Now faith is the assurance of things hoped for, the conviction of things not seen. For by it the men of old received divine approval. By faith we understand that the world was created by the word of God, so that what is seen was made out of things which do not appear.

By faith Abel offered to God a more acceptable sacrifice than Cain, through which he received approval as righteous, God bearing witness by accepting his gifts; he died, but through his faith he is still speaking. By faith Enoch was taken up so that he should not see death; and he was not found, because God had taken him. Now before he was taken he was attested as having pleased God. And without faith it is impossible to please him. For whoever would draw near to God must believe that he exists and that he rewards those who seek him.

By faith Noah, being warned by God concerning events as yet unseen, took heed and constructed an ark for the saving of his household; by this he condemned the world and became an heir of the righteousness which comes by faith. By faith Abraham obeyed when he was called to go out to a place which he was to receive as an inheritance; and he went out, not knowing where he was to go. By faith he sojourned in the land of promise, as in a foreign land, living in tents with Isaac and Jacob, heirs with him of the same promise. For he

looked forward to the city which has foundations, whose builder and maker is God. By faith Sarah herself received power to conceive, even when she was past the age, since she considered him faithful who had promised. Therefore from one man, and him as good as dead, were born descendants as many as the stars of heaven and as the innumerable grains of sand by the seashore. These all died in faith, not having received what was promised, but having seen it and greeted it from afar, and having acknowledged that they were strangers and exiles on the earth. For people who speak thus make it clear that they are seeking a homeland. If they had been thinking of that land from which they had gone out, they would have had opportunity to return. But as it is, they desire a better country, that is, a heavenly one. Therefore God is not ashamed to be called their God, for he has prepared for them a city. By faith Abraham, when he was tested, offered up Isaac, and he who had received the promises was ready to offer up his only son, of whom it was said, "Through Isaac shall your descendants be named." He considered that God was able to raise men even from the dead; hence, figuratively speaking, he did receive him back. By faith Isaac invoked future blessings on Jacob and Esau. By faith Jacob, when dying, blessed each of the sons of Joseph, bowing in worship over the head of his staff. By faith Joseph, at the end of his life, made mention of the exodus of the Israelites and gave directions concerning his burial. By faith Moses, when he was born, was hid for three months by his parents, because they saw that the child was beautiful; and they were not afraid of the king's edict. By faith Moses, when he was grown up, refused to be called the son of Pharaoh's daughter, choosing rather to share ill-

treatment with the people of God than to enjoy the fleeting pleasures of sin. He considered abuse suffered for the Christ greater wealth than the treasures of Egypt, for he looked to the reward. By faith he left Egypt, not being afraid of the anger of the king; for he endured as seeing him who is invisible. By faith he kept the Passover and sprinkled the blood, so that the Destroyer of the first-born might not touch them. By faith the people crossed the Red Sea as if on dry land; but the Egyptians, when they attempted to do the same, were drowned.

By faith the walls of Jericho fell down after they had been encircled for seven days. By faith Rahab the harlot did not perish with those who were disobedient, because she had given friendly welcome to the spies.

And what more shall I say? For time would fail me to tell of Gideon, Barak, Samson, Jephthah, of David and Samuel and the prophets — who through faith conquered kingdoms, enforced justice, received promises, stopped the mouths of lions, quenched raging fire, escaped the edge of the sword, won strength out of weakness, became mighty in war, put foreign armies to flight. Women received their dead by resurrection. Some were tortured, refusing to accept release, that they might rise again to a better life. Others suffered mocking and scourging, and even chains and imprisonment. They were stoned, they were sawn in two, they were killed with the sword; they went about in skins of sheep and goats, destitute, afflicted, ill-treated — of whom the world was not worthy — wandering over deserts and mountains, and in dens and caves of the earth.

And all these, though well attested by their faith, did not receive what was promised, since God had foreseen

something better for us, that apart from us they should not be made perfect.

The universal law, the Deeper Magic, plays out in Christ, in his saints, and ultimately the whole Church. Never mind that we do not do the feats of saints; we probably shouldn't try, and it is a trick of the demons to tempt inexperienced monks to take on impossible virtues. If we suffer for Christ, however small the way, it genuinely matters.

## A more excellent way

Is there any alternative to the pleasure-pain syndrome?  
St. Paul, in the great hymn to love, writes ([I Corinthians 13](#),  
[RSV](#)):

If I speak in the tongues of men and of angels, but have not love, I am a noisy gong or a clanging cymbal. And if I have prophetic powers, and understand all mysteries and all knowledge, and if I have all faith, so as to remove mountains, but have not love, I am nothing. If I give away all I have, and if I deliver my body to be burned, but have not love, I gain nothing.

Love is patient and kind; love is not jealous or boastful; it is not arrogant or rude. Love does not insist on its own way; it is not irritable or resentful; it does not rejoice at wrong, but rejoices in the right. Love bears all things, believes all things, hopes all things, endures all things.

Love never ends; as for prophecies, they will pass away; as for tongues, they will cease; as for knowledge, it will pass away. For our knowledge is imperfect and our prophecy is imperfect; but when the perfect comes, the imperfect will pass away.

**When I was a child, I spoke like a child, I thought like a child, I reasoned like a child; when I became a**

**man, I gave up childish ways.**

For now we see in a mirror dimly, but then face to face.  
Now I know in part; then I shall understand fully, even as I  
have been fully understood. So faith, hope, love abide, these  
three; but the greatest of these is love.

The part in bold seemed to me, at least at first glance, like it didn't belong. But there is something in the passage that hinges on giving up childish ways. Faith, hope, and love are virtues of Heaven, the virtues of Heavenly life lived on earth. Giving up childish ways, in effect, is giving up the quest for earthly comfort. As C.S. Lewis observed, Heaven cannot give earthly comfort no matter how hard we seek it. Earth cannot give Heavenly comfort: you are shopping at an empty store to ask earth for Heavenly comfort. But earth cannot give earthly comfort either: you are still shopping at an empty store to ask earth for even earthly comfort, and in fact stepping into the pleasure-pain syndrome. The only comfort to be had is Heavenly comfort. The words in bold could be paraphrased, "When I was a child, I sought earthly comfort, inescapably embracing the pleasure-pain syndrome. When I became a man, I put the search for earthly comfort behind me—and sought and received heavenly comfort instead." Those who sow to the flesh will reap pain from the flesh, but those who sow to the Spirit will reap joy from the Spirit. The words about "I put childish ways behind me" serve as a hinge between letting go of the pleasure-pain syndrome, and the virtues of the Life of Heaven begun here, now.

Let us return to the beginning of Cicero's quotation behind "lorem ipsum:" "But I must explain to you how all this mistaken idea of denouncing pleasure and praising pain was born..." Can we

say that Cicero was right all along? Only if we really stretch his words' meaning. Saints in pursuit of Heaven's comfort and Heaven's joy spurn mere material comfort and are purified through material pain. Arguably the text can be stretched to say that the saints reject pleasure in the pursuit of greater pleasure, and they accept pain likewise in the pursuit of greater pleasure. But something deeper than pleasure is going on, and Cicero's passage quoted above is stretched to the point of not meaning very much if it is interpreted this way. While the ancients were very open to the idea of finding "Christians before Christ" among the pagans, it is a real stretch to interpret Cicero's passage as describing a Son of Man who came not to be served but to serve, and give his life as a ransom for many. Perhaps this Son of Man finds the deepest, fullest, richest pleasure there is: but Cicero will not take us there, and his argument is shortsighted with no power to free us from the pleasure-pain syndrome.

Wretched man that I am! Who will deliver me from this body of death? Thanks be to God through Jesus Christ our Lord! So then, I of myself serve the law of God and its heavenly comforts with my mind, but with my flesh I serve the law of sin and its pleasure-pain syndrome.

# **Pope Makes Historic Ecumenical Bid to Woo Eastern Rite Catholics**

Rome (AP). His Holiness Pope Benedict XVI has made a historic ecumenical bid to woo Eastern Rite Catholics and stop treating them as second class citizens. Eastern Rite Catholics are essentially Eastern Orthodox Christians who were received into full communion with the Catholic Church under an agreement intended to let them to preserve their Orthodox liturgy and faith. In the centuries since this historic agreement, Eastern Rite Catholics have found themselves not exactly treated as first-class citizens by the Roman Catholic Church.

In the nineteenth century, the Eastern Rite Catholic priest Alexis Toth entered the U.S. and found that Archbishop Ireland rejected him as a Catholic, not recognizing his Orthodox rite nor even recognizing him or his bishop as clergy, but demanding Roman behavior and Roman rites, nor accepting that Toth quoted chapter and verse demonstrating that he was allowed to continue his traditional practices as an Eastern Rite Catholic priest.

Alexis Toth, regarded today as a saint by the Orthodox Church, was a leader among those moving from being treated as second-class citizens by Rome to come home to the Orthodox Church.

Today, Eastern Rite Catholics enjoy somewhat better treatment, but it is a matter of some debate how much better today's treatment really is. In Rome, priests are basically required to be celibate; in Orthodoxy, prospective priests are usually expected to be married before they are ordained to the priesthood, and Rome respects this by allowing married Eastern Rite Catholics to be ordained priests. However, given the state of U.S. Catholic church politics, Rome is very reluctant to let married men be ordained priest on U.S. soil: Eastern Rite Catholic bishops from the U.S. may only ordain married men to the priesthood if they have special, case-by-case permission to ordain that particular man, and this is actually an improvement: not long ago, Eastern Rite Catholics had to be flown to another continent entirely if married men were to be ordained to the priesthood. This is how Rome allows Eastern Rite Catholics to preserve their Orthodox tradition and practices. (Rumor has it this is not the only rough point of how Rome treats its Eastern Rite Catholics today.)

But the Pope is very keen on restoring communion and seeing that all Eastern Orthodox become Eastern Rite Catholics, or rather restore communion with Rome, if that is really any different. Now that Anglicans have been offered full communion with Rome while keeping a great deal of their liturgy and faith, the Pope is now tackling the ambitious task of allowing Eastern Rite Catholics to keep their liturgy and faith as first-class members within the Roman communion. Some sources suggest the move may be intended to ease Eastern Orthodox apprehensions about being under papal authority implied in restoring communion

with Rome.

At present, details remain sketchy about how the Pope intends to improve Eastern Rite Catholics' standing. Perhaps only time will tell what it is like to be in full communion with Rome while preserving your tradition's liturgy and faith.

# Pride

## The Age of Rampant Pride

Why do the nations conspire, and the peoples plot in vain?

The kings of the earth set themselves, and the rulers take counsel together, against the LORD and his anointed, saying, "Let us burst their bonds asunder, and cast their cords from us."

He who sits in the heavens laughs; the LORD has them in derision.

[Psalm 2:1-4, RSV](#)

These words are timeless, and have a singular relevance to our own day, when it is not just the kings of the earth, the rulers, who counsel against the Lord and his Christ, saying, "Let us burst their bonds apart, and cast their cords from us." Times were bad enough when the kings of the earth pursued this occupation: today this pride is the avocation of the rank-and-file, the spiritual vocation embraced by John Q. Public.

Pride has always been present as an adversary to our well-being, but sociologists say that each generation is more "narcissistic" than the last: each generation is more deeply enmeshed in pride. When I was growing up I was unced on all

emmeshed in pride. When I was growing up I was urged on all fronts to have a healthy self-esteem; I was to feel I was special. Both these things would alarm the Church Fathers; speaking of "a healthy self-esteem" is like speaking of an alcoholic having "a healthy insatiable thirst for for eighty proof hard liquor." The next generation after me is the generation that has to have its birthdays and other celebrations be a cut apart from the "ordinary": the old formula of inviting a child's friends and friend's parents, ensuring a plentiful supply of sugary food, and hanging out for a couple of hours just doesn't cut it. There has to be some special stamp imprinted on it, like a little girl having hours of costume and makeup to dress up as a fairy. To be adequate, a celebration need not merely be a cut above the old formula; it should ideally be a cut above the other "special" celebrations.

Pride has been called "the flaw of Narcissus," and it is astonishing how well pride is represented and portrayed in the story. Before the end of the story, Narcissus was haughty, even scorning those who adored him—it is the character of pride, not only to view oneself highly, but to scorn others. (And it is the nature of humility, not only to view oneself modestly, but to genuinely admire and respect others.) But the central feature of the story is how Narcissus meets his end: even though no other person assaulted him, he was doomed as soon as he saw his own reflection in the water and stared in rapt fascination at his own beauty, until he pined away to nothing. He died because not even his bodily needs could take his attention from his entranced admiration of his own beauty. ("Narcissus" etymologically comes from "narke", meaning sleep or drug-like drowsiness, and Narcissus might as well have been on drugs.) If you want a glimpse into the soul of Narcissism, read the myth of Narcissus.

Pick it up by the heart and it is called narcissism, pride, or self-esteem; pick it up by the head and it is called subjectivism. Subjectivism is insisting on believing what you want to believe, even when you know, or used to know, that it's wrong. The increasing standard of narcissism in people's lives is matched by an increasing standard of subjectivism at the university, an issue argued by the scholar who wrote [C. S. Lewis and a Problem of Evil: An Investigation of a Pervasive Theme](#). Here "problem of evil" does not refer to theodicy, but subjectivism. Subjectivism says, "I will believe what I want to believe," and far enough into it, subjectivism says, "I am right and God is wrong." At a low dose, subjectivism is called "wishful thinking;" at a high enough dose it is called blasphemy. And subjectivism comes from pride and builds up pride.

## Pride Unfurls and Unfolds

The poison of pride unfurls in many ways.

### Gay Pride

Where does "gay pride" fit into this? As a full-fledged member of pride unfurling, and as the wrong medicine. There is a lot of queer pain and suffering, and the idea that being queer is something to take pride in is to seek medication for this. It may be the wrong approach, but just as enough alcohol will seem to solve any problem for the short term, gay pride promises to medicate pain.

And the term is well chosen. It may not call itself subjectivism, but **transgendered surgery is an effort to set right what God got wrong**. Now gay pride may not on the surface claim to be pride; it may be on every conscious level an effort to come to terms with reality and celebrate who you really are. But pride cannot deliver that; only repentance and humility can make such a delivery. Only repentance and humility can make good on the promise. Narcissism in general is counterfeit coin: the classic [Narcissism: Denial of the True Self](#) could well enough have been written about gay pride. I have known one person who faced strong homosexual temptations who was at home with himself and truly happy; he came to terms with

who he was, and he did it as ex-gay.

But if you think, "I'm straight; I don't have to face that issue," you are wrong. There are many ways we drink the same poison; LGBTQ's are just honest enough to correctly name their salve as "pride."

## **Gnosticism**

Gnosticism is another theatre for this to play out in. Some years back, a few lone voices warned that the heresy of Gnosticism was coming back. Now you have to be pretty obtuse to deny a resurgence of Gnosticism; you can say if you want that contemporary attempts to resurrect the heresy are creating another beast altogether, but it is rather provocative to deny that recent years have seen a substantial interest in Gnosticism.

At one level of insight, one may enumerate various ideas and claims found in Gnosticism. At the next level, one may notice that Gnosticism is not a stable system of ideas; it is a process that moves from one point to another, and to study it as a historical phenomenon is to force it into something it isn't, just as a study of untreated cancer across history would be mistaken, grossly mistaken, to find historical vogues, trends, and patterns in how tumors have grown in different ages in history. But there is one more level of insight worth mentioning.

Gnosticism, at its core, is not powered by a framework of ideas (for that matter, neither is Orthodoxy, even if her ideas are more stable). It offers a good news of escape that hinges on a mood of despair, and Gnostic esoterica are a kind of spiritual pornography, almost, that slakes the thirst of someone thirsting for an escape from despair. And there is bad news and good news for people pursuing such projects. The bad news is that escape is not possible beyond a chimera that leaves one thirsting; the

not possible beyond a shimmer that leaves one thirsting, the good news is announced,

Every one who drinks of this water will thirst again, but whoever drinks of the water that I shall give him will never thirst; the water that I shall give him will become in him a spring of water welling up to eternal life.

John 4:13-14, RSV

The bad news is that escape is not possible. The good news is that escape is not needed, and [in the story of St. Photini, the woman at the well](#), she tried to enlist his help in fleeing from her shame and her pain, and he pulled her through her shame, helping her face what she was trying to flee, and left her running without shame through the whole city, "He told me all that I ever did."

The despair that builds a thirst for Gnosticism and escape appears in times of plenty; it can also occur in times of economic collapse and loss. But the final assessment applies to both: escape is not possible. But escape is not needed.

## Humility

And what does this have to do with pride? As much as the spiritual honesty of humility helps open one's eyes to the beauty of others and the world ("[in humility count others better than yourselves](#)"), pride bears blindness and leaves one seeing a despicable world from which one can only wish escape. Hubris is called blinding arrogance, and it alike blinds you from your weaknesses and blinds you to what is delightful and good in the world around you. Walk far enough along the path of Narcissus, and like him you will find yourself despising those who adore you.

And I would like to comment in particular on "**in humility count others better than yourselves.**" This is bitter medicine and an insult to our pride. I don't like it personally, and I'm not sure I've seen a person who can read those words and not squirm. I'm not near that spiritual maturity, but for all that I recognize and confess that this is not only Scripture, but that it specifically is a gateway to joy.

"How?", you may ask: "How on earth?" The answer is almost in the text. If you are proud like Narcissus, you will despise others.

And if you despise people, it is awfully hard to enjoy their company. But if, "in humiliiy," you "cosnsider other people better than yourself," you will learn respect for others who are made in the image of God, and you will enjoy the company of the worst of sinners. Conflicts may happen, but if we follow the supreme humility of one whose (almost) dying words were a prayer for his murderers, "**Father, forgive them; for they know not what they do.**" (Is there humility beyond seeing the good, and seeking the good, for the people who are trying to kill you?)

### **Wishful Thinking**

Let's look at a light, seemingly innocuous form of subjectivism: wishful thinking. I wrote of one specific kind of wishful thinking:

We have a lot of ways of wishing that God had placed us someplace else, someplace different. One of the most interesting books I've glanced through, but not read, was covered in pink rosy foliage, and said that it was dealing with the #1 cause of unhappiness in women's relationships. And that #1 cause was a surprise: romantic fantasies. The point

was that dreaming up a romantic fantasy and then trying to make it real is a recipe, not for fulfillment, but for heartbreaking disappointment in circumstances where you could be truly happy. (When you have your heart set on a fantasy of just how the perfect man will fulfill all your desires and transform your world, no real man can seem anything but a disappointing shadow next to your fantasy.)

And I've done worse, with wishing I was in the world of Arthurian legends, and I was somehow a knight with the Holy Grail. [i even wrote a novel out of that silliness](#). At least a happy romance and marriage is a natural enough wish; the Arthurian legends and the Holy Grail are not. And this list of two kinds of wishful thinking leaves a lot out. In [Exotic Golden Ages and Restoring Harmony with Nature: Anatomy of a Passion](#), the passage above continues,

This is not just a point about fantasies in romance. It is also a point that has something to do with technological wonders, secret societies, fascination with the paranormal, Star Trek, World of Warcraft, television, Dungeons and Dragons, sacramental shopping, SecondLife, conspiracy theories, smartphones, daydreams, Halloween, Harry Potter, Wicked, Wicca, The Golden Compass, special effects movies, alienated feminism, radical conservatism, Utopian dreams, political plans to transform the world, and every other way that we tell God, "Sorry, what you have given me is not good enough"—or what is much the same, wish God had given us something quite different.

And on a banal level, wishful thinking is a way to waste more time at work. for programmers, when you write something and it

doesn't work, it is not the right thing to try again and hope it will fix itself; the right thing to do is investigate what is wrong and fix it. And I was half-shocked when I paid attention to the time and energy I wasted wishfully trying something out again in the wishful hope it would magically fix itself.

## Money and Technology

Dostoevsky, in a quote in [The Brothers Karamazov](#) that I can't immediately trace, makes the point that money is something that people will think is good because it reduces their dependence on their neighbors. And while Alyosha indeed acknowledges that more money means less dependence, he sees this as a bad thing: perhaps it is God's design for people to be dependent on their neighbors and not on sums of money. And this skepticism towards how good money really is is straight from the Bible. To pick one of innumerable quotes, let me cite [the most politically incorrect sermon in history](#):

Do not lay up for yourselves treasures on earth, where moth and rust consume and where thieves break in and steal, but lay up for yourselves treasures in heaven, where neither moth nor rust consumes and where thieves do not break in and steal. For where your treasure is, there will your heart be also.

The eye is the lamp of the body. So, if your eye is sound, your whole body will be full of light; but if your eye is not sound, your whole body will be full of darkness. If then the light in you is darkness, how great is the darkness!

No one can serve two masters; for either he will hate the one and love the other, or he will be devoted to the one and despise the other. You cannot serve God and mammon.

Sandwiched between words about money are words about the health of one's spiritual eye, which is darkened if it is greedy or stingy. If, perhaps, it is proud, with such pride as would substitute dependence on money for dependence on one's neighbor.

### **The Acceleration of Addictiveness**

And whatever cautions the Bible makes about money apply fourfold to our technological labyrinth. The Bible has warnings about alcohol when the strongest drink you could get was at 4% alcohol: weaker than most beer. Today we live in a world when if you have access to alcohol you can probably buy hard liquor at 40% alcohol: a strong enough drink that it is drunk with special little shot glasses that are too small to drink anything one would drink to slake thirst. And it's not just alcoholic beverages that are on steroids. There's something about smartphones that is in the same key.

One of the rules at alcohol, whether at 4% or 40%, is that it needs to be used in a discipline of moderation, with restraint. The wrong use is precisely to lay the reins on the horse's neck and just go with the flow. And smartphones, like the matrix of technologies we live in, need to be used with a discipline of restraint and not lay the reins on the horse's neck.

Once in a while we get a clue that texting and driving is as dangerous as drinking and driving, but we have not as a society put much more restraint than that. One may occasionally read in a newspaper that texting is eating away at teen's sleep because the stream of new texts doesn't shut off at bedtime, but the idea that texting, for instance, should be used in a disciplined way does not dawn on us as a whole

way, does not dawn on us as a whole.

It is pride that seeks independence from one's neighbor, and it is pride that seeks independence from one's surroundings by means of technology. Back in the days of Walkmans, a friend's grandmother commented that running with a Walkman is a way of disdainfully detaching yourself from attentiveness to your surroundings: an old tape-eating Walkman was a way to carry your own reality with you. And carrying one's own reality with oneself is in the service of pride, and not a good thing.

I once thought of writing "The Luddite's Guide to Technology" and describing how to use technology appropriately.

In a word it would have been:

Use technologies in ways that arise from and support spiritual discipline, and do not use technologies in ways that arise from and support pride and other vices, including taking you to an alternate private world.

I stopped my attempt to write it because I was not writing anything particularly good, but I would love to see it written, if only as that summary above.

### **Plato: The Allegory of the... Flickering Screen?**

Someone said that the difference between good and bad literature is that bad literature is used to escape reality, while good literature is used to engage reality. I've said that television is a pack of cigarettes for the mind, but television can be used to check weather and traffic, which is not at all turning on the television and entering a state where your body burns fewer calories than when sleeping. But it's not just television. I had originally intended to revise Plato's famous "Allegory of the

Cave" into [Plato: The Allegory of the Television](#), but I ended with a title of [Plato: The Allegory of the... Flickering Screen?](#) In both cases Plato's lesson is applied twice to bad use of technology in which the user is twice imprisoned and far from [contemplation of God](#). And so much of the value proposition of special effects movies, smartphones, role playing games, video games, and the like is escape. Reality isn't good enough, not for the likes of us. We're tripping over the same root again, the root called "pride."

### **And that's not all.**

More could perhaps be said. What has been said about pride and despairing escapism, or pride and Gnosticism, or pride and technology, might as well be said about magic as an attempt to escape reality and enter another reality, however subtle the means. I haven't talked about spellbound fascination with one's own inner world. (The inner world is real, and it contains Heaven and Hell, but you're selling yourself short if you think it's just a place for "Me! Me! Me!" This is much for the same reason one priest says he doesn't like hearing people talking about "my life:" his answer is that there is only one life, meaning God's Life, and either you're in it or you're not.) I have not touched the dizzying abyss of postmodernism as spiritual ~~drunkenness~~ adventure, or a curious attitude towards sex that sees children as its liability and places its goodness in entirely the wrong place. On that last score, see the discussion in [The Most Politically Incorrect Sermon in History: A Commentary on the Sermon on the Mount](#).

But perhaps this is enough meditation on evil.

## Holy Humility

Is there anything good to be learned? Yes indeed, the humility that opens our eyes to the beauty of God and Creation. St. John of the Ladder asked where humility came from, and wrote only:

Someone discovered in his heart how beautiful humility is, and in his amazement he asked her to reveal her parent's name. Humility smiled, joyous and serene: "Why are you in such a rush to learn the name of my begetter? He has no name, nor will I reveal him to you until you have God as your possession. To Whom be glory forever."

But if pride has served as an opening point, let us close with humility. One picture of humility is illuminated in [Tales From a Magic Monastery](#):

### The Crystal Globe

I told the guestmaster I'd like to become a monk.

"What kind of monk?" he asked. "A real monk?"

"Yes," I said.

He poured me a cup of wine. "Here, take this." No sooner had I drunk it than I became aware of a crystal globe forming around me. It began to expand until finally it

surrounded him too. This monk, who a minute before had seemed so commonplace, now took on an astonishing beauty. I was struck dumb. After a bit the thought came to me, "Maybe I should tell him how beautiful he is—perhaps he doesn't even know."

But I really was dumb—that wine had burned out my tongue! But so great was my happiness at the sight of such beauty that I thought it was well worth the price of my tongue. When he made me a sign to leave, I turned away, confident that the memory of that beauty would be a joy forever.

But what was my surprise when I found that with each person I met it was the same—as soon as he would pass unwittingly into my crystal globe, I could see his beauty too. And I knew that it was real.

Is this what it means to be a REAL monk—to see the beauty in others and to be silent?

This is holy humility. This is what it means to see the image of God in others. This is what it means to "in humility count others better than yourself."

Let us make this our goal.

**"A Professional  
Courtesy to a  
Fellow Poet," or  
"Juggling Hot  
Potatoes," or  
"Invictus," 2nd  
Draft**

[See the video on YouTube!](#))

**"Invictus," *rough draft*:**

Out of the night that covers me,  
Black as the pit from pole to pole,  
I thank whatever gods may be  
For my unconquerable soul.  
In the fell clutch of circumstance  
I have not winced nor cried aloud.  
Under the bludgeonings of chance  
My head is bloody, but unbowed.  
Beyond this place of wrath and tears,  
Looms but the Horror of the shade,  
And yet the menace of the years,  
Finds and shall find me unashamed.  
It matters not how strait the gate,  
How charged with punishment the scroll,  
I am the master of my fate.  
I am the captain of my soul.

---

I therefore wish to extend this classic poem a very minor  
professional courtesy:

**"Inveictiveictus," sent back  
for revisions and extended  
some degree of  
Professional Courtesy**

Out of the pitch black of my sin and vice,  
Chosen only of my own free will,  
I thank the God beyond all knowing  
For my yet still fighting soul.

In the cunning net of His Providence,  
I have spurned kindnesses for my good,  
Gifts I have fought as chance left me,  
Bloodied, but more deeply bowed:

*Saul, Saul, why persecutest thou Me?  
It hurteth thee to kick against the goads.*

Beyond this life of pleasure and pain,  
Lie the Gates of Heaven and Hell,  
Battered I still make my choice,  
Seeking neither to bolt nor bar,  
From inside, the gates of Hell.

Narrow is the path and strait the gate:  
The entrance to Glory beyond,  
All trials and tests named in the scroll,  
Thy Grace my wounds have bound with salve.  
I thank the ranks of men made gods,

Who cheer me on to join their choir,  
Thou blessest me beyond any fate,  
That I could ever know to ask.  
Thy Glory is to transfigure me,  
To Live, Thou Thyself:  
I AM the Master of my Fate!  
I AM the Captain of my Soul!

*Profoundly Gifted*  
*Magazine*  
**Interviews**  
**Maximos Planos**

**Profoundly Gifted:** You did some amazing things and some impressive actions when you were a child prodigy; have you been up to anything since then?

**Maximos:** Quite a lot, really; I've settled into work as a usability / user interface / user experience professional with a humble boss. And I've gotten married; my wife Mary and I have seven daughters, all of them with the middle name of Abigail, or "Father's Joy."

**Profoundly Gifted:** That's it? You haven't studied languages, for instance?

**Maximos:** *Much water will not be able to quench love, and rivers shall not drown it;* that is the important one, but yes; other languages are a bit like Scotch. One is just getting started; two is just about perfect; three is not nearly half enough.

**Profoundly Gifted:** So you're not just a husband and father: you're also a philologist—how many languages do you

know?

**Maximos:** You are paying attention to trivialities if you gloss over my fatherhood to ask a question about my love of languages that I really can't answer.

**Profoundly Gifted:** What can't you answer about how many languages your love of languages includes?

**Maximos:** You aren't a philologist when you speak two languages, or four, or twelve, or eight. You're a philologist when someone asks you how many languages you know, and you have no idea how to answer.

**Profoundly Gifted:** Then what is it? What should I make of it?

**Maximos:** If I may shanghai an opportunity to follow the words, "If there is an elephant in the room, introduce him..."?

**Profoundly Gifted:** Yes?

**Maximos:** Asperger's Syndrome.

**Profoundly Gifted:** It's kind of like profound giftedness, no?

**Maximos:** Let me quietly count to ten... Ok...

I read David Pollock's [Third Culture Kids: The Experience of Growing Up Among Worlds](#), and I said, "That's me!" Then I read Edward Hallowell's [Driven to Distraction](#) and it made sense. Then I read, on a medical practitioner's advice, Tony Attwood's [The Complete Guide to Asperger's Syndrome](#), and my response was some more polite form of **"Dude... pass me a toke of whatever it is that you're smoking!"**

The root problem, which I will get to in a minute, is that when people who are happy to have an Asperger's diagnosis and happy to offer half the people they know an Asperger's diagnosis, there are superficial similarities between profound giftedness and Asperger's traits, things that a competent diagnostician should see far past.

Early in the title, Attwood says that when he diagnoses someone with Asperger's, he says, "Congratulations! You have Asperger's!" But then it goes downhill. Atwood argues that the obvious social impairments one would associate with Asperger's are guilty as charged; Asperger's people don't know (without counseling and / or training) how to hold an appropriate social conversation. However, the strengths one would

associate with Asperger's are all but eviscerated. Asperger's children may have a monologue that sounds like a competent adult discussing the matter, but this "knowledge" is a hollow shell, without much of anything of the deeper competency one would associate with an adult capable of such monologue. The common stereotype of Asperger's patients portrays a slightly odd combination of strengths and weaknesses; Attwood's book is less generous and really only ascribes real weaknesses.

The standard symptoms of Asperger's have a perhaps 50% overlap with standard symptoms of profound giftedness; while it is certainly possible to be a member of both demographics, **the profoundly gifted characteristics resemble Asperger's characters for quite unrelated reasons.** The similarity may be compared to the common cold, on the one hand, in which there is an immune response to a harmful invader, and environmental allergies on the other hand, in which there is a harmful response to something otherwise harmless. Or for those who prefer an example from Charles Baudelaire, there is an image of two females, one an infant too young to have teeth or hair, and the other a woman too old to have teeth or hair. (The coincidence of features is close to being due to diametrically opposed reasons.)

**Profoundly Gifted:** Is the question "Asperger's or profound giftedness?" the sort of question you'd rather un-ask than answer?

**Maximos:** It is indeed. Or at least I'm drawing a blank to see what a three-cornered discussion of normalcy,

Asperger's, and profound giftedness has to add to the older discussion of normalcy and profound giftedness. If we can overcome our chronological snobbishness says that only now could we say something worthwhile about XYZ and giftedness, Leta Hollingsworth decided as a counterbalance to a study of mental retardation a study of some who turned out to have an IQ of somewhere around 180 or higher. She wrote an insightful and descriptive, [Children Above 180 IQ Stanford-Binet](#), much more insightful than the treatment of profoundly gifted scoring "Termites."

Furthermore, and here I am less concerned with the relationship between profound giftedness and Asperger's than improperly read research, there is a consistent finding that IQ-normal, autism-normal children do markedly better at what are unfortunately lumped together as "**theory of other minds.**"

A much better interpretation of Attwood's data might come from splitting the **theory of other minds** into a separate **theory of like minds**, and also a **theory of alien minds**. A theory of like minds works with one's homeys or peeps; hence someone IQ-normal and autism-normal surrounded by IQ-normal and autism-normal classmates will coast on a theory of like minds. But, except in how it may be refined by practice, a theory of like minds that comes virtually free to everyone isn't in particular reserved to a majority of people (not) affected by XYZ condition. With some true exceptions like Tay-Sachs, everybody gets along with their peeps. Gifted and profoundly gifted click with their fellows; Asperger's people click with their fellows; to pick a few

many demographics, various geek subcultures, codependents, addicts, and various strains of queer should click just as well. Everybody gets a theory of like minds virtually free; the breadth of usefulness depends on how rarely or commonly one encounters like minds, and this heavily loads the dice for Attwood's approach.

The comparison Attwood makes in interaction with autism-normal people loads the dice in a way that is totally unfair. The comparison is autism-normals' theory of like minds to Asperger's theory of alien minds; he never, ever tests autism-normals on their ability to relate to alien minds, nor does he ever test Asperger's patients on their ability to relate to like minds. And while being unsure about how far this applies to IQ-normal Asperger's patients, Asperger's patients often make herculean and lifelong efforts to develop "theory of alien minds" aptitude, and the result is not just that they connect, perhaps clumsily, with people of the same age and socioeconomic status; they make very close connections across age, race, and gender, and for that matter animals who may start off by being afraid of them. The theory of alien minds is finely honed, even if it is not a valid substitute for a theory of like minds, and once it is honed, this theory of alien minds reaches much, much further than autism-normals resting on a theory of like minds.

**Profoundly Gifted:** So your parents' policy of non-interference and the Law of the Jungle was too romantic to teach you to be safe?

**Maximos:** More romantic than real life, perhaps, and putting me into a regular kindergarten, sink or swim, is neither

more nor less realistic as putting a rabbit in the midst of coyotes, sink or swim. There was a real solution, but it was more romantic, and I fear being misunderstood. I certainly found it by accident.

**Profoundly Gifted:** What is it?

**Maximos:** A woman has kept a goldfish for years longer than goldfish usually live, in a fishbowl, just by talking to it in Mommy-to-baby love. Years back, hospitals which were ever concerned with sanitation witnessed a dramatic drop in infant mortality when they took the "unsanitary" step of having old women cuddle them.

**Profoundly Gifted:** And how does this relate to bullying?

**Maximos:** Let me raise and address another question first. We raise and send constant signals which are often met with escalation. When we are angry with someone, or wish for a way out of our job, or anything else, we war against others in our thoughts. That warfare is powerful. Often it comes back amplified; we can feed a corrective to the loop by responding meekly and with meek thoughts to a blast of anger. Some martial artists have talked about how few people really want to fight; such people are much less common than people who want to be the unchallenged tough guy. It does happen that there are some people want to do wrong; however, much more common are people who are disarmed when all three claims in *Anger slays even wise men; yet a submissive answer turns away wrath; but a grievous word stirs up anger.* The submissive answer to domineering anger is difficult, but it is possible, and it is a route that a quest for life by the Law of the Jungle will never find.

And bullying isn't just for in the classroom. It's also in professional life. The top quality I search for in a boss is humility. There is something aggravating about high talent. It is common practice to have sent multiple C&D letters, or equivalent, when harassment has continued after being repeatedly told, "No." This is unfortunate, but it is a non-negotiable feature of the landscape.

And, like other things that are never the victim's fault, harassment is never the victim's fault; no matter how good or bad a person's social skills may be, it is never justified to continue harassment until the person being harassed says, "CEASE AND DESIST."

It is possible, in good faith, to do one's best work as the privilege of the inferior before the superior to be praised, in the purest thoughts of respect, and instead be met with anger and retaliation to a perceived challenge. But if this is a live danger if we meet our bosses with thoughts of peacefulness, what on earth is to be done when we throw down work with warfare in our thoughts?

**Profoundly Gifted:** But don't we all do best to avoid needlessly stepping on other people's feet, especially our bosses'?

**Maximos:** Yes and NO.

**Profoundly Gifted:** Yes and NO?

**Maximos:** Have you ever spent a winter in the Midwest, perhaps Illinois? And drove after a heavy snowfall, three to four inches of packing snow?

**Profoundly Gifted:** Yes; it was a bit harrowing, but I made a bit of extra effort and was overall pretty safe.

**Maximos:** What made you safe?

**Profoundly Gifted:** I drove slowly, left plenty of space, and made allowances for skidding. That was enough to have me relatively safe.

**Maximos:** Ever driven in that kind of snowstorm in Georgia and the US South? The same three or four inches?

**Profoundly Gifted:** Not really; it never snowed like that when I was there.

**Maximos:** Years back, Georgia responded to a snowstorm three or four inches deep, and decided, "We will not be caught off guard like this again." And then the next snowstorm the slowplows were rusted to the point of being unusable, and you would have been sharing the road with people who don't have even an Illinois familiarity with driving under heavy snow. Would you consider yourself safe all the same, because you need to drive in snow?

**Profoundly Gifted:** Aah.

**Maximos:** Get used to driving in a blizzard with other people not used to driving in any snow, if you want to be profoundly gifted. The approach that is usually safe sharing the road with drivers who can handle snow, more or less, does not even compare to trying to be safe handling a road with people who just don't know how to drive heavy snow.

And it feels awfully good to be told more than once, "You are the most brilliant person I've ever met," but suppose you are so bright that the average Oxford PhD has never met someone as talented as you? You may be trying to drive safely yourself at least, but you're sharing the road with people who are driving on a

complete snow-packed terra incognita to them.

**Profoundly Gifted:** This sounds like a lonely and sad life.

**Maximos:** That was not my point at all, but what life is sad and lonely when one is searching for humility?

But let me give another detail.

You know, probably ad nauseum, about Leta Hollingsworth's conception of "socially optimum intelligence". The top end of the range varies somewhat depending on who you ask, but it runs something like 120 to 150. At that point you have powers to speak of, but you're still running on the same chassis. And people who are properly above the range are rare, enough to really be exotic or a purple squirrel or something else few people have seen. The powers that come seem almost magical, but the price tag is hefty; the real advantage and the real privilege is at the heart of the gifted range, not the upper extreme.

I found James Webb's [Guiding the Gifted Child](#) to be a treasure chest and a gold mine. One part of it says that children with an IQ above 170 don't have peeps; the way that the book says this is that "children with an IQ above 170 tend to feel like they don't fit in anywhere..."

...But there is another shoe to drop. There is another level, exact IQ unknown, where people are able to make peeps out of anyone. They develop a theory of alien minds so far that the distinction between the theory of like minds and the theory of alien minds no longer matters so much...

...And that is how I have found employment as the local usability and user experience guru. One of the

first things people are taught for usability research is "You are not a user," meaning that however much theory-of-like-minds knowledge you have of how software is meant to be used, you need to grasp a theory-of-alien-minds understanding of how everybody but the software developers understands it...

...Maybe you think I should be doing something more exalted in academia, and maybe I should be, but a humble and gentle boss is a treasure worth gold, and turf wars are just a little less than with academic bullies. Right now I have my wife and our seven daughters, and a steady job, and **godliness with contentment is great gain.**

**Profoundly Gifted:** Well, that about says it.

**Maximus:** Or not.

**Profoundly Gifted:** Or not?

**Maximos:** Or not.

Sweet lord, I have played thee false.

You don't know how I was at a rich kids' school, and the one and only chapel message I heard on theology of play was students who had gone through internships in third world nations, and theology of joy and play was writ large: a girl asked how you talk about germ theory to a runny-nosed little girl who offered you a lick of her lollipop. And really, how can you to people who are poor enough to be happy?

You do not know the time when I was deathly ill and was healed You do not know when I met every earthly betrayal and dishonor, and none to my own credit knew Heavenly honor next to which the summit of earthly honor is but pale and shadow. You do not know the sound

of men weeping when *the sleeper awakes, and the dreams are gone: the apprenticeship is finished and the godhead begins.* You know I have felt sorrows above anything mentioned here, but they are not worth comparing with the glory to come, or even for the glory that exists here now in the vast, vast open freedom of forgiveness, *the utter nakedness of standing open before God,* and the priceless vale of humility that is so low that no man can fall from it.

We, like social Gospel and the liberal left, believe in life before death. *Eye hath not seen, nor ear heard, neither have entered into the heart of man,* the things which here now God worketh in hidden transcendent glory for those who love him.

# "Religion and Science" Is Not Just Intelligent Design vs. Evolution

## A rude awakening

Early in one systematic theology PhD course at Fordham, the text assigned as theology opened by saying, "Theologians are scientists, and they are every bit as much scientists as people in the so-called 'hard sciences' like physics." Not content with this striking claim, the author announced that she was going to use "a term from science," thought experiment, which was never used to mean a *Gedanken* experiment as in physics, but instead meant: if we have an idea for how a society should run, we have to experimentally try out this thought and live with it for a while, because if we don't, we will never know what would have happened. ("Stick your neck out! What have you got to lose?"—"Your head?") The clumsiness in this use of "a term from science" was on par with saying that you are going to use "an

expression from American English", namely rabbit food, and subsequently use "rabbit food" as obviously a term meaning food made with rabbit meat.

In this one article were already two things that were fingernails on a chalkboard to my ears. Empirical sciences are today's prestige disciplines, like philosophy / theology / law in bygone eras, and the claim to be a science seems to inevitably be how to mediate prestige to oneself and one's own discipline.

When I had earlier run into claims of, "Anthropologists are scientists, and they are every bit as much scientists as people in the so-called 'hard sciences,' like physics," I had winced because the claim struck me as not only annoying and untrue, but self-demeaning. But it simply had not occurred to me that theologians would make such a claim, and when they did, I was not only shocked but embarrassed: why should theology, once acclaimed the queen of scholarly disciplines, now seek prestige by parroting the claim to be every-bit-as-much-a-science-as-the-so-called-"hard-sciences"-like-physics (where "so-called" seemed to always be part of the claim, along with the scare quotes around "hard sciences")? To make my point clearer, I drew what was meant to be a shocking analogy: the claim that theologians are "scientists, and every bit as much as people in the so-called 'hard sciences' like physics" was like trying to defend the dignity of being a woman by saying, "Women are male, and they are just as much male as people who can sire a child."

This "physics envy" looks particularly strange next to the medieval Great Chain of Being as it moved from the highest to the lowest: "God, Angels, Man, Animals, Plants, Rocks, Nothing".

Theology is the study of God and Man; no discipline is given a more noble field. And however much other disciplines may have "physics envy", no other discipline looks lower than physics, the

science that studies Rocks and Nothing. There may be something pathetic about an anthropologist trying to step up on the pecking order by claiming to be "just as much scientists as people in the so-called 'hard sciences' like physics." Yet on the lips of a theologian, it bears a faint hint of a CEO absurdly saying, "CEOs are janitors, and they are every bit as much janitors as the people responsible for cleaning wastebaskets."

Furthermore, the endemic claim I saw to introduce a "term from science" was, so far as I could remember:

- Rarely if ever used in any correct fashion.  
The one exception I can remember being Wolfhart Pannenberg's illustration of a point by talking about fields such as one finds in the study of electricity and magnetism: the non-scientist theologians in the room said they were having real trouble understanding the illustration conceptually, which would make it seem somewhat dubious as an illustration to help get a point across.
- Always reflect an effort to claim some of science's prestige. I remember the "you're being quaint" smiles I got when I suggested that a point that Pannenberg was trying to make by comparing something to a field as defined in physics, seemed in fact to be a point that could have been much better made by a comparison to the Force from Star Wars. Why the patronizing smiles? The job of the example from physics was to mediate prestige as well as to illustrate a concept that could have been better explained without involving a particularly slippery concept from physics.

## A first response

Examples of this kind of "science" abounded, and I was perhaps not wise enough to realize that my clumsy attempts to clarify various misrepresentations of science were perhaps not well received because I was stepping on the Dark and Shameful Secret of Not Being Scientific Enough, and reminding them of an inferiority they were trying hard to dodge. And my attempts to explain "Not being a scientist does not make you inferior" seemed to have no soil in which to grow. In an attempt to start an online discussion, I wrote a piece called "Rumor Science":

I really wish the theology students I knew would either know a lot more about science, or a lot less, and I really wouldn't consider "a lot less" to be disappointing.

Let me explain why. When I was working on my master's in math, there was one passage in particular that struck me from Ann Wilson Schaef's *Women's Reality: An Emerging Female System*. Perhaps predictably given my being a mathematician in training, it was a remark about numbers, or rather about how people interact with numbers.

The author broke people down into more or less three groups of people. The first—she mentioned artists—was people that can't count to twenty without taking off their shoes. She didn't quite say **that**, but she emphasized artists

and other people where math and numbers simply aren't part of their consciousness. They don't buy into the mystique. And they can say, and sincerely mean, that numbers don't measure everything. They aren't seriously tempted to believe otherwise.

The second group—she mentioned business people—consists of people for whom math works. Even if they're not mathematicians, math works for them and does useful things, and they may say that numbers don't measure anything, but it is well nigh impossible to believe—saying and meaning that numbers don't measure everything is like saying that cars are nice but they can't get you places.

And the third group in the progression? She mentioned scientists, but what she said was that they know math in and out and know it so well that they know its limitations and therefore they can say and mean that numbers don't measure everything. And in the end, even though the "scientist" and the "artist" represent opposite extremes of mathematical competence, they both know there are things numbers can't measure while the second, middle group for mathematical competence are in a position where they expect numbers to do things that numbers can't do.

I was flattered, but I really think it stuck with me for more reasons than just the fact that she included me in one of the "good" groups. There is a sort of Karate Kid observation—"Karate is like a road. Know karate, safe. Don't know karate, safe. In the middle, squash, like a grape!"—that is relevant to theology and science. It has to do with, among other things, Gödel's Incompleteness Theorem, the question of evolution, and the like (perhaps I should mention the second law of thermodynamics). My point in this is not that

there is an obligation to "know karate", that theologians need to earn degrees in the sciences before they are qualified to work as theologians, but that there is something perfectly respectable about "don't know karate."

I'd like to start by talking about Gödel's Incompleteness Theorem. Now a lot of people have heard about Gödel's Incompleteness Theorem. Not many major mathematical theorems have had a Pulitzer prize-winning book written around them (and by the way, Gödel, Escher, Bach has been one of my favorite books). Nor do many theorems get summarized in Newsweek as an important theorem which demonstrates that mathematical "proofs" are not certain, but mathematical knowledge is as relative as any other knowledge.

Which is a crass error. The theological equivalent would be to say that Karl Barth's unflattering remarks about "religion" are anti-Christian, or that liberation theology's preferential option for the poor means that special concern for the poor is optional and to be dealt with according to personal preference. And saying that about liberation theology is a theological "squash like a grape," because it is better to not know liberation theology and know you don't know than believe that you understand liberation theology and "know" that the word "option" implies "optional." **It's not what you don't know that hurts you, but what you know that ain't so.**

For the record, what Gödel's Incompleteness Theorem means is that for a certain branch of mathematics, there are things that can be neither proven nor disproven—which made his theorem a shocker when there was a Tower of Babel effort to prove or disprove pretty much anything. It

proves that some things can never be proven within certain systems. And it has other implications. But it does not mean that things that are proven in mathematics are uncertain, or that mathematical knowledge is relative. It says you can't prove everything a mathematician would want to prove. But there are still lots and lots and lots of interesting things that can be proven, and Gödel's Incompleteness Theorem does not touch these proofs, nor does it mean that mathematical knowledge is merely relative in humanities fashion.

And I'd like to mention what happens when I mention Gödel's **Completeness** Theorem:  
Dead silence.

The same great mathematical logician proved another theorem, which does not have a Pulitzer prize winning book, which says that in one other branch of mathematics, besides the branch that Gödel's Incompleteness Theorem speaks to, you can have pretty much what Gödel's Incompleteness Theorem says you can't have in the other branch. In other words, you can—mechanically, for that matter, which is a big mathematical achievement—either prove or disprove every single statement. I'm not sure it's as important as Gödel's Incompleteness Theorem, but it's a major theorem from the same mathematician and no one's heard of it.

There would seem to be obvious non-mathematical reasons for why people would want to be informed about the first theorem and not want to mention the second. I consider it telling (about non-mathematical culture). I know it may be considered a mark of sophistication to mention Gödel's Incompleteness Theorem and share how it's informed your epistemology. But it hasn't informed my

epistemology and I really can't tell how my theology would be different if I hadn't heard of it. And my understanding is that other mathematicians tend not to have the highest view of people who are trying to take account of scientific discoveries that an educated person "should" know. There are other reasons for this, including goofy apologetics that make the famous theorem a proof for God. But I at least would rather talk with someone who simply hadn't heard of the theorem than a theologian who had tried to make a "responsible" effort to learn from the discovery.

And my main example is one I'm less sure how to comment on, and not only because I know less biology than math. There was one almost flippant moment in England when the curate asked if anybody had questions about the upcoming Student Evolution conference that everybody was being urged to attend. I asked, "Is this 'Student Evolution' more of a gradual process, or more a matter of 'punk eek'?" (That question brought down the house.)

Punctuated equilibrium, irreverently abbreviated 'punk eek', is a very interesting modification of Darwinian theory. Darwinian evolution in its early forms posits and implies a gradual process of very slow changes—almost constant over very long ("geological") time frames. And that is a beautiful theory that flatly contracts almost all known data.

As explained by my Illinois Mathematics and Science Academy biology teacher, "Evolution is like baseball. It has long stretches of boring time interrupted by brief periods of intense excitement." That's punk eek in a nutshell, and what interests me most is that it's the mirror image of saying "God created the world—through evolution!" It says, "Evolution occurred—through punctuated equilibrium!"

That's not the only problem; evolution appears to be, in Kuhnian terms (Structure of Scientific Revolutions), a theory "in crisis", which is the Kuhnian term for when a scientific theory is having serious difficulties accounting for currently given data and may well be on its way out the door. There are several ways people are trying to cope with this—preserving some semblance of a materialist explanation; there was the same kind of resistance going on before science acknowledged the Big Bang, because scientists who want a universe without cause and without beginning or creator heard something that sounded too much like "Let there be light!" They're very interesting, and intellectually dishonest.

Now I need to clarify; people seem to think you have to either be a young earth creationist or else admit evolution of some stripe. I believe in 13 billion years as the rough age of the universe, not six thousand years; I also believe in natural selection and something called "micro-evolution." (By the way, JPII's "more than a hypothesis" was in the original French "plus qu'un hypothèse", alternately translatable as "more than one hypothesis", and the official Vatican translation takes this reading. One can say that micro-evolution is one of the hypothesis gathered under the heading of evolution.)

I wince when I see theologians trying their dutiful best to work out an obligation to take evolution into account as a proven fact: squash, like a grape. It's not just that science doesn't trade in proof and evolution is being treated like a revelation, as if a Pope had consulted the Pontifical Academy of the Sciences and canonized The Origin of the Species as a book of the Bible. Or maybe that's putting it too strongly.

It would also be strong language to say that many theologians are adopting a carefully critical attitude to classic Church claims and part of their being critical means placing an embarrassingly blind faith in evolution. But that's truer than I'd want to admit.

What about the second law of thermodynamics?

I don't know what the first and third laws of thermodynamics say, and I can't say that I'm missing anything. I don't feel obligated to make the second law, which I am familiar with, a feature of my theology, but if I did, I would try to understand the first and third laws of thermodynamics, and treat it as physics in which those three laws and presumably other things fit into a system that needs to be treated as a whole. I don't know how I would incorporate that in my theology, but I'm supposing for the sake of argument that I would. I would rather avoid treating it the way people usually seem to treat it when they treat that as one of the things that educated people "should" know.

I guess that my point in all of this is that some people think there's a duty to know science and be scientific in theology, but this is a duty better shirked. My theology is—or I would like it to be—closer to that of someone who doesn't understand science, period, than that of people who try to improve their theology by incorporating what they can grasp of difficult scientific concepts that the scientists themselves learned with difficulty.

Rumor science is worse than no science, and an ascientific theology is not a handicap. When I say that I would rather see theologians know either much more or much less science, I'm not hoping that theologians will therefore get scientific

degrees. The chief merit for a theologian to know science is that it can be a source of liberation that frees people from thinking "We live in a scientific age so it would be better for theology to be scientific." I'm not sure I would be able to question that assumption if I knew much less science. But what I believe that buys me is not a better theology than someone scientifically innocent but freedom from the perceived need to "take science into account" in my theology so I can do the same kind of theology as someone scientifically innocent.

I'm not as sure what to say about ecological theology; I wrote [Hymn to the Creator of Heaven and Earth](#) at without scientific reference that I remember, and I believe there are other human ways of knowing Creation besides science. But an ecological theologian who draws on scientific studies is not trying to honor a duty to understand things an educated person should know, but pursuing something materially relevant. Science has some place; religion and science boundary issues are legitimate, and I don't know I can dissuade people who think it's progressive to try to make a scientific theology—although I really wish people with that interest would get letters after their name from a science discipline, or some other form of genuinely proper scientific credentials appropriate to a genuinely scientific theology.

There are probably other exceptions, and science is interesting. But there is no obligation to go from safely on one side of the road to a position in the middle because it is "closer" to a proper understanding of science. Perhaps liberation theologians want people to understand their cause, but it is better not to pretend to know liberation theology

than to approach it in a way that leaves you "knowing" that the preferential option is optional. It isn't what you know that hurts you, but what you know that ain't so—and rumor science, with its accepted list of important scientific knowledge that scholars need to take into account, is one way to learn from what ain't so.

Science is the prestige discipline(s) today; you see psychology wishing for its Newton to lead it into the promised land of being a science in the fullest sense of the term. You don't see psychology pining for a Shakespeare to lead it into the promised land of being a humanity in the fullest sense of the term. And the social disciplines—I intentionally do not say social **sciences** because they are legitimate academic disciplines but not sciences—are constantly insisting that their members are scientists, but the claim that theologians are scientists annoys me as a scientist and almost offends me as a theologian. It should be offensive for much the same reason that it should be offensive to insist on female dignity by claiming that women are really male, and that they are just as much male as people who can sire a child.

It would be an interesting theological work to analyze today's cultural assumptions surrounding science, which are quite important and not dictated by scientific knowledge itself, and then come to almost the same freedom as someone innocent of science.

"My theology," ewwww. (While I was at it, why didn't I discuss plans for my own private sun and moon? I'm not proud of proudly discussing "my theology".) I know the text has a wart or two.

But the piece contains a suggestion: "rumor science" may be a red flag to a real problem in the place we give science.

## Pondering Einstein, or at least dropping his name

That work left out the crowning jewel of scientific theories to ponder in "rumor science": Einstein's "theory of relativity."

Some time later, in my science fiction short story / Socratic dialogue, [The Steel Orb](#), I wrote in fiction something that picked up what I had left out:

Art sat back. "I'd be surprised if you're not a real scientist. I imagine that in your world you know things that our scientists will not know for centuries."

Oinos sat back and sat still for a time, closing his eyes. Then he opened his eyes and said, "What have you learned from science?"

"I've spent a lot of time lately, wondering what Einstein's theory of relativity means for us today: even the 'hard' sciences are relative, and what 'reality' is, depends greatly on your own perspective. Even in the hardest sciences, it is fundamentally mistaken to be looking for absolute truth."

Oinos leaned forward, paused, and then tapped the table four different places. In front of Art appeared a gridlike object which Art recognized with a start as a scientific calculator like his son's. "Very well. Let me ask you a question. Relative to your frame of reference, an object of

one kilogram rest mass is moving away from you at a speed of one tenth the speed of light. What, from your present frame of reference, is its effective mass?"

Art hesitated, and began to sit up.

Oinos said, "If you'd prefer, the table can be set to function as any major brand of calculator you're familiar with. Or would you prefer a computer with Matlab or Mathematica? The remainder of the table's surface can be used to browse the appropriate manuals."

Art shrunk slightly towards his chair.

Oinos said, "I'll give you hints. In the theory of relativity, objects can have an effective mass of above their rest mass, but never below it. Furthermore, most calculations of this type tend to have anything that changes, change by a factor of the inverse of the square root of the quantity: one minus the square of the object's speed divided by the square of the speed of light. Do you need me to explain the buttons on the calculator?"

Art shrunk into his chair. "I don't know all of those technical details, but I have spent a lot of time thinking about relativity."

Oinos said, "If you are unable to answer that question before I started dropping hints, let alone after I gave hints, you should not pose as having contemplated what relativity means for us today. I'm not trying to humiliate you. But the first question I asked is the kind of question a teacher would put on a quiz to see if students were awake and not playing video games for most of the first lecture. I know it's fashionable in your world to drop Einstein's name as someone you have deeply pondered. It is also extraordinarily silly. I have noticed that scientists who have a good understanding of relativity often work without presenting themselves as

OT RELATIVITY OFTEN WORK WITHOUT PRESENTING THEMSELVES AS having these deep ponderings about what Einstein means for them today. Trying to deeply ponder Einstein without learning even the basics of relativistic physics is like trying to write the next Nobel prize-winning German novel without being bothered to learn even the most rudimentary German vocabulary and grammar."

"But don't you think that relativity makes a big difference?"

"On a poetic level, I think it is an interesting development in your world's history for a breakthrough in science, Einstein's theory of relativity, to say that what is absolute is not time, but light. Space and time bend before light.

There is a poetic beauty to Einstein making an unprecedented absolute out of light. But let us leave poetic appreciation of Einstein's theory aside.

"You might be interested to know that the differences predicted by Einstein's theory of relativity are so minute that decades passed between Einstein making the theory of relativity and people being able to use a sensitive enough clock to measure the microscopically small difference of the so-called 'twins paradox' by bringing an atomic clock on an airplane. The answer to the problem I gave you is that for a tenth the speed of light—which is faster than you can imagine, and well over a thousand times the top speed of the fastest supersonic vehicle your world will ever make—is one half of one percent. It's a disappointingly small increase for a rather astounding speed. If the supersonic Skylon is ever built, would you care to guess the increase in effective mass as it travels at an astounding Mach 5.5?"

"Um, I don't know..."

"Can you guess? Half its mass? The mass of a car? Or

Can you guess? Half its mass? The mass of a car? Or just the mass of a normal-sized adult?"

"Is this a trick question? Fifty pounds?"

"The effective mass increases above the rest mass, for that massive vehicle running at about five times the speed of sound and almost twice the top speed of the SR-71 Blackbird, is something like the mass of a mosquito."

"A mosquito? You're joking, right?"

"No. It's an underwhelming, microscopic difference for what relativity says when the rumor mill has it that Einstein taught us that hard sciences are as fuzzy as anything else... or that perhaps, in Star Wars terms, 'Luke, you're going to find that many of the truths we cling to depend greatly on your own point of view.' Under Einstein, you will in fact **not** find that many of the observations that we cling to, depend greatly on your own frame of reference. You have to be doing something pretty exotic to have relativity make any measurable difference from the older physics at all."

## **"Rumor science": The tip of an iceberg?**

But I would like to get on to something that is of far greater concern than "rumor science" as it treats Gödel's Incompleteness Theorem, the second law of thermodynamics, relativity, evolution, and so on. If the only problem was making a bit of a hash of some scientific theories, that would be one thing. But "rumor science" may be the tip of an iceberg, a telling clue that something may be seriously amiss in how theology has been relating to science. There is another, far more serious boundary issue.

There is something about the nature of academic theology today that may become clearer if we ask questions about the nature of knowledge and line up academic theology with Orthodoxy on the one hand and modern science on the other. The table below lists a few questions connected with knowledge, and then a comparison between Orthodox Christianity, academic theology, and modern science in their own columns:

<b>Question</b>	<b>Orthodox Christianity</b>	<b>Academic Theology</b>	<b>Modern Science</b>
"Adam knew Eve..." The primary word in the Old and New		Knowledge is critical, meaning detached: the	You can't know how stars age ..

What is knowledge like?

Testaments for sexual union is in fact 'know', and this is a significant clue about the intimate nature of knowledge.

Knowledge is, at its core, the knowledge that drinks. It connects at a deepest level, and is cognate to how Orthodox say of the Holy Mysteries, "We have seen the true Light!": to receive the Eucharist is to know.

This may not be part of the standard Western picture, but the Orthodox, non-materialist understanding of mind holds that

detached, the privileged position is of the outsider who stands clear of a situation and looks into a window. The devout believer enjoys no real advantage in grasping his religion compared to the methodical observer who remains detached—and the ordinary believer may be at a marked disadvantage.

or the limitations of the ideal gas law from direct personal experience. Science stems from a rationalism cognate to the Enlightenment, and even if one rebels against the Enlightenment, it's awfully hard to know quarks and leptons solely by the intimacy of personal experience.

<p>What aspect of yourself do you know with?</p>	<p>mind nous that there is a sort of "spiritual eye" which knows and which grasps spiritual realities as overflow to its central purpose of worshipping God. The center of gravity for knowing is this spiritual eye, and it is the center of a whole and integrated person. Logical and other "discursive" reasoning may have a place, but the seat of this kind of reasoning is a moon next to the light of the sun which is the spiritual eye, the nous.</p>	<p>Good scholarship comes from putting all other aspects of the person in their place and enthroning the part of us that reasons logically and almost putting the logic bit on steroids. Continental philosophy may rebel against this, but it rebels after starting from this point.</p>	<p>We have a slightly more rigorous use of primarily logical reasoning and a subject domain that allows this reasoning to shine.</p>

observe  
anything new by

How much emphasis do you place on creativity?

original IT IS. THAT which is true is not original, and that which is original is not true. Perhaps people may uncover new layers of meaning, but to measure someone by how many ideas he can claim as "mine" is a strange measure.

have any ideas to claim as "mine." If need be, rehabilitate Arius or Nestorius. (Or, if you are Orthodox, meet current fashions halfway and show that St. Augustine need not be a whipping boy.)

the layman's means of observation, pioneer new equipment or a clever experiment to push the envelope of what can be observed. Publish something original or perish.

There is a very real sense of empiricism, albeit a sense that has very little directly to do with empirical science. Knowledge is what you know through the "spiritual eye" and it is a knowledge that can only be

~~Theologians are just as empirical as physicists, whether or not they know basic statistics. We have such quasi-~~

As much as theology's empiricism is the empiricism of a knowledge of the "spiritual eye" and the whole person, our empiricism is an empiricism of detached, careful, methodical, reasoned

Where  
does your  
discipline  
place its  
empiricism?

realized through  
direct  
participation. An  
"idle word" may  
be a word of that  
which you do not  
have this  
knowledge of, and  
this sin would  
appear to be  
foundational to  
the empiricism of  
science. We really  
do have an  
empiricism, but it  
might be better  
not to engender  
pointless  
confusion by  
claiming to be  
empirical when  
the empiricism  
known to the  
academy is pre-  
eminently that of  
empirical science,  
whether it is  
either actual or  
aspiring science.

SCIENTIFIC  
empiricism as  
can be had for  
the human and  
divine domain we  
cover; there is a  
great deal of  
diversity, and  
some of us do  
not place much  
emphasis on the  
empiricism of  
science, but  
some of us have  
enough of  
scientific  
empiricism to do  
history work  
that stands its  
ground when  
judged by  
secular history's  
standards.

investigation—  
the  
investigation of  
the reasoning  
faculty on  
steroids. Our  
science  
exhibits  
professionalism  
and a particular  
vision of  
intellectual  
virtue. Our  
empiricism  
corresponds to  
this vision, and  
no one has  
pushed this  
empiricism of  
the reasoning  
faculty further,  
and the unique  
technology  
founded on  
science is a  
testament to  
how far we  
have pushed  
this kind of  
empiricism.

When they are lined up, academic theology appears to have a great many continuities with science and a real disconnect with Orthodox Christianity. Could academic theologians feel an inferiority complex about Not Being Scientific Enough? Absolutely. But the actual problem may be that they are entirely too scientific. I am less concerned that their theology is not sufficiently scientific than that it is not sufficiently theological.

## Origins questions: can we dig deeper?

It is along those lines that I have taken something of the track of "join the enemy's camp to show its weaknesses from within" in exposing the blind spots of Darwinism, for instance. In the theologically driven short story [The Commentary](#), the issue is not really whether Darwinism is correct at all. The question is not whether we should be content with Darwinian answers, but whether we should be content with Darwinian questions.

Martin stepped into his house and decided to have no more distractions. He wanted to begin reading commentary, now. He opened the book on the table and sat erect in his chair:

### **Genesis**

1:1 In the beginning God created the heavens and the earth.

1:2 The earth was without form and void, and darkness was upon the face of the deep; and the Spirit of God was moving over the face of the waters.

1:3 And God said, "Let there be light"; and there was light.

The reader is now thinking about evolution. He is wondering whether *Genesis 1* is right, and evolution is simply wrong, or whether evolution is right, and *Genesis 1* is a myth that may be inspiring enough but does not actually tell how the world was created.

All of this is because of a culture phenomenally influenced by scientism and science. The theory of evolution is an attempt to map out, in terms appropriate to scientific dialogue, just what organisms occurred, when, and what mechanism led there to be new kinds of organisms that did not exist before. Therefore, nearly all Evangelicals assumed, *Genesis 1* must be the Christian substitute for evolution. Its purpose must also be to map out what occurred when, to provide the same sort of mechanism. In short, if *Genesis 1* is true, then it must be trying to answer the same question as evolution, only answering it differently.

Darwinian evolution is not a true answer to the question, "Why is there life as we know it?" Evolution is on philosophical grounds not a true answer to that question, because it is not an answer to that question at all. Even if it is true, evolution is only an answer to the question, "How is there life as we know it?" If someone asks, "Why is there this life that we see?" and someone answers, "Evolution," it is like someone saying, "Why is the kitchen light on?" and someone else answering, "Because the switch is in the on position, thereby closing the electrical circuit and allowing current to flow through the bulb, which grows hot and produces light."

Where the reader only sees one question, an ancient reader saw at least two other questions that are

invisible to the present reader. As well as the question of "How?" that evolution addresses, there is the question of "Why?" and "What function does it serve?"

These two questions are very important, and are not even considered when people are only trying to work out the antagonism between creationism and evolutionism.

Martin took a deep breath. Was the text advocating a six-day creationism? That was hard to tell. He felt uncomfortable, in a much deeper way than if Bible-thumpers were preaching to him that evolutionists would burn in Hell.

There is a hint here of why some people who do not believe in a young earth are no less concerned about young earth creationism: the concern is not exactly that it is junk science, but precisely that it is too scientific, assuming many of evolutionary theory's blindnesses even as it asserts the full literal truth of the Bible in answering questions on the terms of what science asks of an origins theory.

There is an Dilbert strip which goes as follows:

**Pointy-haired boss:** I'm sending you to Elbonia to teach a class on Cobol on Thursday.

**Dilbert:** But I don't know Cobol. Can't you ask Wally?  
He knows Cobol!

**Pointy-haired boss:** I already checked, and he's busy on Thursday.

**Dilbert:** Can't you reschedule?

**Pointy-haired boss:** Ok, are you free on Tuesday?

**Dilbert:** You're answering the wrong question!

Dilbert's mortified, "You're answering the wrong question!"

has some slight relevance the issues of religion and science: in my homily, [Two Decisive Moments](#) I tried to ask people to look, and aim, higher:

In the name of the Father, and of the Son, and of the Holy Ghost. Amen.

There is a classic Monty Python "game show": the moderator asks one of the contestants the second question: "In what year did Coventry City last win the English Cup?" The contestant looks at him with a blank stare, and then he opens the question up to the other contestants: "Anyone? In what year did Coventry City last win the English Cup?" And there is dead silence, until the moderator says, "Now, I'm not surprised that none of you got that. It is in fact a trick question. Coventry City has never won the English Cup."

I'd like to dig into another trick question: "When was the world created: 13.7 billion years ago, or about six thousand years ago?" The answer in fact is "Neither," but it takes some explaining to get to the point of realizing that the world was created 3:00 PM, March 25, 28 AD.

Adam fell and dragged down the whole realm of nature. God had and has every authority to repudiate Adam, to destroy him, but in fact God did something different. He called Noah, Abraham, Moses, and Elijah, and in the fullness of time he didn't just call a prophet; he sent his Son to become a prophet and more.

It's possible to say something that means more than you realize. Caiaphas, the high priest, did this when he said, "It is better that one man be killed than that the whole nation perish." (John 11:50) This also happened when Pilate sent Christ out, flogged, clothed in a purple robe, and said,

"Behold the man!"

What does this mean? It means more than Pilate could have possibly dreamed of, and "Adam" means "man": Behold the man! Behold Adam, but not the Adam who sinned against God and dragged down the Creation in his rebellion, but the second Adam, the new Adam, the last Adam, who obeyed God and exalted the whole Creation in his rising. Behold the man, Adam as he was meant to be. Behold the New Adam who is even now transforming the Old Adam's failure into glory!

Behold the man! Behold the first-born of the dead.

Behold, as in the icon of the Resurrection, the man who descends to reach Adam and Eve and raise them up in his ascent. Behold the man who will enter the realm of the dead and forever crush death's power to keep people down.

Behold the man and behold the firstborn of many brothers! You may know the great chapter on faith, chapter 11 of the book of Hebrews, and it is with good reason one of the most-loved chapters in the Bible, but it is not the only thing in Hebrews. The book of Hebrews looks at things people were caught up in, from the glory of angels to sacrifices and the Mosaic Law, and underscores how much more the Son excels above them. A little before the passage we read above, we see, "To which of the angels did he ever say, 'You are my son; today I have begotten you'?" (Hebrews 1:5) And yet in John's prologue we read, "To those who received him and believed in his name, he gave the authority to become the children of God." (John 1:9) We also read today, "To which of the angels did he ever say, 'Sit at my right hand until I have made your enemies a footstool under your feet?'" (Hebrews 1:13) And yet Paul encourages us: "The God of peace will shortly crush Satan under your feet,"

(Romans 16:20) and elsewhere asks bickering Christians, "Do you not know that we will judge angels?" (I Corinthians 6:3) Behold the man! Behold the firstborn of many brothers, the Son of God who became a man so that men might become the Sons of God. Behold the One who became what we are that we might by grace become what he is. Behold the supreme exemplar of what it means to be Christian.

Behold the man and behold the first-born of all Creation, through whom and by whom all things were made! Behold the Uncreated Son of God who has entered the Creation and forever transformed what it means to be a creature! Behold the Saviour of the whole Creation, the Victor who will return to Heaven bearing as trophies not merely his transfigured saints but the whole Creation! Behold the One by whom and through whom all things were created! Behold the man!

Pontius Pilate spoke words that were deeper than he could have **possibly** imagined. And Christ continued walking the fateful journey before him, continued walking to the place of the Skull, Golgotha, and finally struggled to breathe, his arms stretched out as far as love would go, and barely gasped out, "It is finished."

Then and there, the entire work of Creation, which we read about from *Genesis* onwards, was complete. There and no other place the world was created, at 3:00 PM, March 25, 28 AD. Then the world was created.

I wince at the idea that for theologians "boundary issues" are mostly about demonstrating the compatibility of timeless revealed truths to the day's state of flux in scientific speculation. I wince that theologians so often assume that the biggest contribution they can give to the dialogue between

theology and science is the rubber stamp of perennially agreeing with science. I would decisively prefer that when theologians "approach religion and science boundary issues," we do so as boundaries are understood in pop psychology—and more specifically bad pop psychology—which is all about you cannot meaningfully say "Yes" until it is your practice to say "No" when you should say "No": what theology needs in its boundaries with science is not primarily a question of what else we should seek to embrace, but of where theology has ingested things toxic to its constitution.

What gets lost when theology loses track (by which I do not mean primarily rumor science, but the three columns where theology seemed a colony of science that had lost touch with Orthodox faith) is that when theology assumes the character of science, it loses the character of theology.

The research for my diploma thesis at Cambridge had me read a lot of historical-critical commentary on a relevant passage; I read everything I could find on the topic in Tyndale House's specialized library, and something became painfully obvious. When a good Protestant sermon uses historical or cultural context to illuminate a passage from Scripture, the preacher has sifted through pearls amidst sand, and the impression that cultural context offers a motherlode of gold to enrich our understanding of the Bible is quite contrary to the historical-critical commentaries I read, which read almost like phone books in their records of details I'd have to stretch to use to illuminate the passage. The pastor's discussion of context in a sermon is something like an archivist who goes into a scholar's office, pulls an unexpected book, shows that it is surprisingly careworn and dog-eared, and discusses how the three longest underlined passage illuminate the scholar's output.

But the historical-critical commentary itself is like an archivist who describes in excruciating detail the furniture and ornaments in the author's office and the statistics about the size and weight among books the scholar owned in reams of (largely uninterpreted) detail.

And what is lost in this careful scholarship? Perhaps what is lost is why we have Bible scholarship in the first place: it is a divinely given book and a support to life in Christ. If historical-critical scholarship is your (quasi-scientific) approach to theology, you won't seek in your scholarship what I sought in writing my (non-scientific) [Doxology](#):

How shall I praise thee, O Lord?  
For naught that I might say,  
Nor aught that I may do,  
Compareth to thy worth.

Thou art the Father for whom every fatherhood in Heaven  
and on earth is named,

The Glory for whom all glory is named,  
The Treasure for whom treasures are named,  
The Light for whom all light is named,  
The Love for whom all love is named,  
The Eternal by whom all may glimpse eternity,  
The Being by whom all beings exist,

יהוה,

Ο ΩΝ.

The King of Kings and Lord of Lords,  
Who art eternally praised,  
Who art all that thou canst be,  
Greater than aught else that may be thought,  
Greater than can be thought.

In thee is light,  
In thee is honour,  
In thee is mercy,  
In thee is wisdom, and praise, and every good thing.  
For good itself is named after thee,  
God immeasurable, immortal, eternal, ever glorious, and  
humble.

What mighteth compare to thee?  
What praise equalleth thee?  
If I be fearfully and wonderfully made,  
Only can it be,  
Wherewith thou art fearful and wonderful,  
And ten thousand things besides,  
Thou who art One,  
Eternally beyond time,  
So wholly One,  
That thou mayest be called infinite,  
Timeless beyond time thou art,  
The One who is greater than infinity art thou.  
Father, Son, and Holy Spirit,  
The Three who are One,  
No more bound by numbers than by word,  
And yet the Son is called Ο ΛΟΓΟΣ,  
The Word,  
Divine ordering Reason,  
Eternal Light and Cosmic Word,  
Way pre-eminent of all things,  
Beyond all, and infinitesimally close,  
Thou transcendest transcendence itself,  
The Creator entered into his Creation,  
Sharing with us humble glory,

Lowered by love,  
Raised to the highest,  
The Suffering Servant known,  
The King of Glory,  
O ΩN.

What tongue mighteth sing of thee?  
What noetic heart mighteth know thee,  
With the knowledge that drinketh,  
The drinking that knoweth,  
Of the vous,  
The loving, enlightened spiritual eye,  
By which we may share the knowing,  
Of divinised men joining rank on rank of angel.

Thou art,  
The Hidden Transcendent God who transcendest  
transcendence itself,  
The One God who transfigurest Creation,  
The Son of God became a Man that men might become the  
sons of God,  
The divine became man that man mighteth become divine.

## Monty Python and Christian theology

I would like to start winding down with a less uplifting note. A few years back, I visited a friend who was a Christian and a big Monty Python fan and played for me a Monty Python clip:

**God:** Arthur! Arthur, King of the Britons! Oh, don't grovel! If there's one thing I can't stand, it's people groveling.

**Arthur:** Sorry—

**God:** And don't apologize. Every time I try to talk to someone it's 'sorry this' and 'forgive me that' and 'I'm not worthy'. What are you doing now!?

**Arthur:** I'm averting my eyes, O Lord.

**God:** Well, don't. It's like those miserable Psalms— they're so depressing. Now knock it off!

This is blasphemous, and I tried to keep my mouth shut about what my host had presented to me, I thought, for my rollicking laughter. But subsequent conversation showed I had misjudged his intent: he had not intended it to be shockingly funny.

He had, in fact, played the clip because it was something that he worried about: did God, in fact, want to give grumbling complaints about moments when my friend cried out to him in prayer? Does prayer annoy our Lord as an unwelcome intrusion

from people who should have a little dignity and leave him alone  
or at least quit sniveling?

This is much more disturbing than merely playing the clip because you find it funny to imagine God bitterly kvetching when King Arthur tries to show him some respect. If it is actually taken as theology, Monty Python is really sad.

And it is not the best thing to be involved in Monty Python as theology.

One can whimsically imagine an interlocutor encountering some of the theology I have seen and trying to generously receive it in the best of humor: "A book that promises scientific theology in its title and goes on for a thousand pages of trajectories for other people to follow before a conclusion that apologizes for not actually getting on to any theology? You have a real sense of humor! Try to avoid imposing Christianity on others and start from the common ground of what all traditions across the world have in common, that non-sectarian common ground being the Western tradition of analytic philosophy? Roaringly funny! Run a theological anthropology course that tells how liberationists, feminists, queer theorists, post-colonialists, and so on have to say to the Christian tradition and does not begin to investigate what the Christian tradition has to say to them? You should have been a comedian! Yoke St. Gregory of Nyssa together with a lesbian deconstructionist like Judith Butler to advance the feminist agenda of gender fluidity? You're really giving Monty Python a run for their money!"... until it gradually dawns on our interlocutor that the lewd discussion of sexual theology is not in any sense meant as an attempt to eclipse Monty Python. (Would our interlocutor spend the night weeping for lost sheep without a shepherd?)

There are many more benign examples of academic theologav:

many of even the problems may be slightly less striking. But theology that gives the impression that it could be from Monty Python is a bit of a dead (coal miner's) canary.

Scientific theology does not appear to be blame for all of these, but it is not irrelevant. Problems that are not directly tied to (oxymoronic) scientific theology are usually a complication of (oxymoronic) secular theology, and scientific theology and secular theology are deeply enough intertwined.

The question of evolution is important, and it is no error that a figure like Philip Johnson gives neo-Darwinian evolution pride of place in assessing materialist attacks on religion. But it is not an adequate remedy to merely study intelligent design. Not enough by half.

If theology could, like bad pop psychology, conceive of its "boundary issues" not just in terms of saying "Yes" but of learning to stop saying "Yes" when it should say "No", this would be a great gain. So far as I have seen, the questions about boundaries with science are primarily not scientific ideas theology needs to assimilate, but ways theology has assimilated some very deep characteristics of science that are not to its advantage. The question is less about what more could be added, than what more could be taken away. And the best way to do this is less the Western cottage industry of worldview construction than a journey of repentance such as one still finds preached in Eastern Christianity and a good deal of Christianity in the West.

## A journey of repentance

Repentance is Heaven's best-kept secret. Repentance has been called unconditional surrender, and it has been called the ultimate experience to fear. But when you surrender what you thought was your ornament and joy, you realize, "I was holding on to a piece of Hell!" And with letting go comes hands that are free to grasp joy you never thought to ask. Forgiveness is letting go of the other person and finding it is yourself you have set free; repentance is being terrified of letting go and then finding you have let go of needless pain. Repentance is indeed Heaven's best-kept secret; it opens doors.

I have doubt whether academic theology will open the door of repentance; it is a beginner's error to be the student who rushes in to single-handedly sort out what a number of devout Christian theologians see no way to fix. But as for theologians, the door of repentance is ever ready to open, and with it everything that the discipline of theology seeks in vain here using theories from the humanities, there trying to mediate prestige to itself science. Academic theologians who are, or who become, theologians in a more ancient sense find tremendous doors of beauty and joy open to them. The wondrous poetry of St. Ephrem the Syrian is ever open; the liturgy of the Church is open; the deifying rays of divine grace shine ever down upon those open to receiving them and upon those not yet open. The Western understanding is that

the door to the Middle Ages has long since been closed and the age of the Church Fathers was closed much earlier; but Orthodox will let you become a Church Father, here now.

Faithful people today submit as best they are able to the Fathers before them, as St. Maximus Confessor did ages ago. There may be problems with academic theology today, but the door to theology in the classic sense is never closed, as in the maxim that has rumbled through the ages, "A theologian is one who prays, and one who prays is a theologian." Perhaps academic theology is not the best place to be equipped to be a giant like the saintly theologians of ages past. But that does not mean that one cannot become a saintly theologian as in ages past. God can still work with us, here now.

To quote St. Dionysius (pseudo-Dionysius) in [The Mystical Theology](#),

Trinity! Higher than any being,  
any divinity, any goodness!  
Guide of Christians  
in the wisdom of Heaven!  
Lead us up beyond unknowing light,  
up to the farthest, highest peak  
of mystic scripture,  
where the mysteries of God's Word  
lie simple, absolute and unchangeable  
in the brilliant darkness of a hidden silence.  
Amid the deepest shadow  
They pour overwhelming light  
on what is most manifest.  
Amid the wholly unsensed and unseen  
They completely fill our sightless minds  
with treasures beyond all beauty

with treasures beyond all beauty.

Let us ever seek the theology of living faith!

# Religion Within the Bounds of Amusement

On the screen appear numerous geometrical forms—prisms, cylinders, cubes — dancing, spinning, changing shape, in a very stunning computer animation. In the background sounds the pulsing beat of techno music. The forms waver, and then coalesce into letters: "Religion Within the Bounds of Amusement."

The music and image fade, to reveal a man, perfect in form and appearance, every hair in place, wearing a jet black suit and a dark, sparkling tie. He leans forward slightly, as the camera focuses in on him.

"Good morning, and I would like to extend a warm and personal welcome to each and every one of you from those of us at the Church of the Holy Television. Please sit back, relax, and turn off your brain."

Music begins to play, and the screen shows a woman holding a microphone. She is wearing a long dress of the whitest white, the color traditionally symbolic of goodness and purity, which somehow manages not to conceal her unnaturally large breasts.

The camera slowly focuses in as she begins to sing.

"You got problems? That's OK. You got problems? That's OK."

...you got problems? That's OK. you got problems? That's OK. Not enough luxury? That's OK. Only three cars? That's OK. Not enough power? That's OK. Can't get your way? That's OK. Not enough for you? That's OK. Can't do it on your own? That's OK. You got problems? That's OK. You got problems? That's OK. Just call out to Jesus, and he'll make them go away. Just call out to Jesus, and he'll make them go away."

As the music fades, the camera returns to the man.

"Have you ever thought about how much God loves us? Think about the apex of progress that we are at, and how much more he has blessed us than any one else.

"The Early Christians were in a dreadful situation. They were always under persecution. Because of this, they didn't have the physical assurance of security that is the basis for spiritual growth, nor the money to buy the great libraries of books that are necessary to cultivate wisdom. It is a miracle that Christianity survived at all.

"The persecution ended, but darkness persisted for a thousand years. The medievals were satisfied with blind faith, making it the context of thought and leisure. Their concept of identity was so weak that it was entangled with obedience. The time was quite rightly called the Dark Ages.

"But then, ah, the Renaissance and the Enlightenment. Man and his mind enthroned. Religion within the bounds of reason. Then science and technology, the heart of all true progress, grew.

"And now, we sit at the apex, blessed with more and better technology than anyone else. What more could you possibly ask for? What greater blessing could there possibly be? We have the technology, and know how to enjoy it. Isn't God gracious?"

There is a dramatic pause, and then the man closes his eyes. "Father, I thank you that we have not fallen into sin that we do

FATHER, I THANK YOU THAT WE HAVE NOT Fallen INTO SIN, THAT WE DO NOT worship idols, that we do not believe lies, and that we are not like the Pharisees. I thank you that we are good, moral people; that we are Americans. I thank you, and I praise you for your wondrous power. Amen."

He opens his eyes, and turns to the camera. It focuses in on his face, and his piercing gaze flashes out like lightning. With a thunderous voice, he boldly proclaims, "To God alone be the glory, for ever and ever!"

The image fades.

In the background can be heard the soft tones of Beethoven. A couple fades in; they are elegantly dressed, sitting at a black marble table, set with roast pheasant. The room is of Baroque fashion; marble pillars and mirrors with gilt frames adorn the walls. French windows overlook a formal garden.

The scene changes, and a sleek black sports car glides through forest, pasture, village, mountain. The music continues to play softly.

It passes into a field, and in the corner of the field a small hovel stands. The camera comes closer, and two half-naked children come into view, playing with some sticks and a broken Coca-Cola bottle. Their heads turn and follow the passing car.

A voice gently intones, "These few seconds may be the only opportunity some people ever have to know about you. What do you want them to see?"

The picture changes. Two men are walking through a field. As the camera comes closer, it is seen that they are deep in conversation.

One of them looks out at the camera with a probing gaze, and then turns to the other. "What do you mean?"

"I don't know, Jim." He draws a deep breath, and closes his eyes. "I just feel so... so empty. A life filled with nothing but

eyes. I just feel so... so empty. A life filled with nothing but shallowness. Like there's nothing inside, no purpose, no meaning. Just an everlasting nothing."

"Well, you know, John, for every real and serious problem, there is a solution which is trivial, cheap, and instantaneous." He unslings a small backpack, opening it to pull out two cans of beer, and hands one to his friend. "Shall we?"

The cans are opened.

Suddenly, the peaceful silence is destroyed by the blare of loud rock music. The camera turns upwards to the sky, against which may be seen parachutists; it spins, and there is suddenly a large swimming pool, and a vast table replete with great pitchers and kegs of beer. The parachutists land; they are all young women, all blonde, all laughing and smiling, all wearing string bikinis, and all anorexic.

For the remaining half of the commercial, the roving camera takes a lascivious tour of the bodies of the models. Finally, the image fades, and a deep voice intones, "Can you think of a better way to spend your weekends?"

The picture changes. A luxury sedan, passing through a ghetto, stops beside a black man, clad in rags. The driver, who is white, steps out in a pristine business suit, opens his wallet, and pulls out five crisp twenty dollar bills.

"I know that you can't be happy, stealing, lying, and getting drunk all of the time. Here is a little gift to let you know that Jesus loves you." He steps back into the car without waiting to hear the man's response, and speeds off.

Soon, he is at a house. He steps out of the car, bible in hand, and rings the doorbell.

The door opens, and a man says, "Nick, how are you? Come in, do come in. Have a seat. I was just thinking of you, and it is so nice of you to visit. May I interest you in a little Martini?"

nice of you to visit. May I interest you in a little martini?

Nick sits down and says, "No, Scott. I am a Christian, and we who are Christian do not do such things."

"Aah; I see." There is a sparkle in the friend's eye as he continues, "And tell me, what did Jesus do at his first miracle?"

The thick, black, leatherbound 1611 King James bible arcs through the air, coming to rest on the back of Scott's head.

There is a resounding thud.

"You must learn that the life and story of Jesus are serious matters, and not to be taken as the subject of jokes."

The screen turns white as the voice glosses, "This message has been brought to you by the Association of Concerned Christians, who would like to remind you that you, too, can be different from the world, and can present a positive witness to Christ."

In the studio again, the man is sitting in a chair.

"Now comes a very special time in our program. You, our viewers, matter most to us. It is your support that keeps us on the air. And I hope that you do remember to send us money; when you do, God will bless you. So keep your checks rolling, and we will be able to continue this ministry, and provide answers to your questions. I am delighted to be able to hear your phone calls. Caller number one, are you there?"

"Yes, I am, and I would like to say how great you are. I sent you fifty dollars, and someone gave me an anonymous check for five hundred! I only wish I had given you more."

"That is good to hear. God is so generous. And what is your question?"

"I was wondering what God's will is for America? And what I can do to help?"

"Thank you; that's a good question.

"America is at a time of great threat now; it is crumbling

America is at a time of great threat now, it is crumbling because good people are not elected to office.

"The problem would be solved if Christians would all listen to Rush Limbaugh, and then go out and vote. Remember, bad people are sent to Washington by good people who don't vote. With the right men in office, the government would stop wasting its time on things like the environment, and America would become a great and shining light, to show all the world what Christ can do.

"Caller number two?"

"I have been looking for a church to go to, and having trouble. I just moved, and used to go to a church which had nonstop stories and anecdotes; the congregation was glued to the edges of their seats. Here, most of the services are either boring or have something which lasts way too long. I have found a few churches whose services I generally enjoy—the people really sing the songs—but there are just too many things that aren't amusing. For starters, the sermons make me uncomfortable, and for another, they have a very boring time of silent meditation, and this weird mysticism about 'kiss of peace' and something to do with bread and wine. Do you have any advice for me?"

"Yes, I do. First of all, what really matters is that you have Jesus in your heart. Then you and God can conquer the world. Church is a peripheral; it doesn't really have anything to do with Jesus being in your heart. If you find a church that you like, go for it, but if there aren't any that you like, it's not your fault that they aren't doing their job.

"And the next caller?"

"Hello. I was wondering what the Song of Songs is about."

"The Song of Songs is an allegory of Christ's love for the Church. Various other interpretations have been suggested, but they are all far beyond the bounds of good taste, and read things into the text which would be entirely inappropriate in holy

things into the text which would be entirely inappropriate in Holy Scriptures. Next caller?"

"My people has a story. I know tales of years past, of soldiers come, of pillaging, of women ravaged, of villages razed to the ground and every living soul murdered by men who did not hesitate to wade through blood. Can you tell me what kind of religion could possibly decide that the Crusades were holy?"

The host, whose face had suddenly turned a deep shade of red, shifted slightly, and pulled at the side of his collar. After a few seconds, a somewhat less polished voice hastily states, "That would be a very good question to answer, and I really would like to, but I have lost track of time. It is now time for an important message from some of our sponsors."

The screen is suddenly filled by six dancing rabbits, singing about toilet paper.

A few minutes of commercials pass: a computer animated flash of color, speaking of the latest kind of candy; a family brought together and made happy by buying the right brand of vacuum cleaner; a specific kind of hamburger helping black and white, young and old to live together in harmony. Somewhere in there, the Energizer bunny appears; one of the people in the scene tells the rabbit that he should have appeared at some time other than the commercial breaks. Finally, the host, who has regained his composure, is on the screen again.

"Well, that's all for this week. I hope you can join us next week, as we begin a four part series on people whose lives have been changed by the Church of the Holy Television. May God bless you, and may all of your life be ever filled with endless amusement!"

# **Repentance, Heaven's Best- Kept Secret**

## **Rewards that are not mercenary**

We must not be troubled by unbelievers when they say that this promise of reward makes the Christian life a mercenary affair. There are different types of reward. There is the reward which has no natural connexion with the things you do to earn it, and is quite foreign to the desires that ought to accompany those things. Money is not the natural reward of love; that is why we call a man mercenary if he marries a woman for the sake of her money. But marriage is the proper reward for a real lover, and he is not mercenary for desiring it. A general who fights well in order to get a peerage is mercenary; a general who fights for victory is not, victory being the proper reward of battle as marriage is the proper reward of love. The proper rewards

are not simply tacked on to the activity for which they are given, but are the activity itself in consummation.

C.S. Lewis, [The Weight of Glory](#) [PDF] ([purchase](#))

I would like to talk about repentance, which has rewards not just in the future but here and now. Repentance, often, or perhaps always for all I know, bears a hidden reward, but a reward that is invisible before it is given. Repentance lets go of something we think is essential to how we are to be—men hold on to sin because they think it adorns them, as the [Philokalia](#) well knows. There may be final rewards, rewards in the next life, and it matters a great deal that we go to confession and unburden ourselves of sins, and walk away with "no further cares for the sins which you have confessed." But there is another reward that appears in the here and now, and it is nothing that is real to you until you have undergone that repentance. It is like looking forward to washing with fear, wondering if you will be scraped up in getting mud off, and in a very real sense suddenly recognizing that you had not in mind what it was like to be clean.

Let me explain by giving some examples.

## Discovering the treasure of humility

The first illustration I have is not strictly speaking an example of repentance, at least not that I have seen, but might as well be.

One of the hardest statements in the Bible that I am aware of is, "In humility consider others better than yourself" (Phil 2:3). It's a slap in the face to most of us, including me. But humility is only about abasing yourself up to a point. The further you go into humility, the less it is about dethroning "me, me, me," and the more it can see the beauty of others.

If it seems a sharp blow to in humility consider others better than yourself, let me ask you this: would you rather be with nobodies who are despicable, or in the company of giants? Pride closes the eyes to any beauty outside of yourself, and falsely makes them appear to have nothing worthy of attention. Humility opens the eyes to something of eternal significance in each person we meet.

There is one CEO at a place I worked who might as well have taken up the gauntlet of considering others better than himself. (I don't know about his spiritual practices as a whole; that's between him and his shul.) But on this point he has taken up the gauntlet, not of St. Paul necessarily, but of humility.

This CEO showed delight and some awe in each person I saw

him meet. It didn't matter if you were near the top of the org chart, or at the absolute bottom; the CEO was delighted to see you. End of discussion. And he wanted to hear how you were doing, and not in a Machiavellian sense.

Now let me ask a question: who benefitted most from his respect at work (and, I can scarcely doubt, his respect outside of work)? Is it the ambitious leader, the low-level permanent employee, the timid intern? Certainly all these people benefitted, and though it was not so flamboyantly expressed, there is a thread of deep respect running through the whole organization, and some things work smoother than any other place I've been. There are a lot of people who benefit from the CEO's humility. But I insist that the person who benefits most from the CEO's aptitude for respect is the CEO himself. Others may enjoy kind treatment and perhaps be inclined to more modestly follow his example. But he is in that respect at least functioning the way a person functions optimally, or to speak less abstractly, his state puts him in the presence of people he deeply respects and delights in again and again and again. To be proud is to be turned in on yourself, and he has something better: a spiritual orientation that lets him see the genuine beauty in others. (And, to be clear, the phenomenon also plays out more quietly among the rest of the organization.) Humility opens the eyes to the beauty of others. It also has other benefits; humility is less tempted to meet bad news with wishful thinking; the CEO is, I imagine, as sincerely wrong as often as the rest of us are sincerely wrong, but my suspicion is that he is less wrong, and less often wrong, than if he were to freely opt-in to being wrong by freely indulging in wishful thinking. This is another incidental advantage to humility, and perhaps there are others. But I insist that the person who benefits most from the CEO's humility is

the CEO himself. And the reward for him looking on others with delight and awe is that he is put in a condition where he meets others filled with delight and awe. If that sounds like a tautology, it is. The reward for his seeing others through the eyes of humility is that he sees others through the eyes of humility: the biggest reward for humility is, quite simply, humility: virtue is its own reward.

Now humility may express itself in self-abasement, and another powerful gauntlet is thrown down when [The Ladder of Divine Ascent](#) or the [Philokalia](#) speak of "thirsting for the cup of dishonor as if it were honor." I will not treat that at length, beyond saying that it is a mighty door and opens to blessed humility.

What I do wish to point out is that pride turns you in on yourself, blinding you to beauty outside of you and making you fill a bag of sand with holes in satisfying your narcissism, or trying to. Humility opens you up to all the beauty around you, and if you repent of pride and despair of being able to gaze on yourself in fascination, you may be surprised by the joy of gazing on others in joy and fascination, or something better than the transient and fleeting fascination offered by narcissism.

**But what if I can't find anything in a person to respect?**

If you can't find anything in a person to respect, I submit that you are missing something about being human. To quote [Tales of a Magic Monastery](#):

### **The Crystal Globe**

I told the guestmaster I'd like to become a monk.

"What kind of monk?" he asked. "A real monk?"

"Yes," I said, "a real monk."

He poured a cup of wine, and said, "Here, take this."

No sooner had I drunk it than I became aware of a small crystal globe forming about me. It expanded until it included him.

Suddenly, this monk, who had seemed so commonplace, took on an astonishing beauty. I was struck dumb. I thought, "Maybe he doesn't know how beautiful he is. Maybe I should tell him." But I really was dumb. The wine had burned out my tongue!

After a time, he made a motion for me to leave, and I gladly got up, thinking that the memory of such beauty would be well worth the loss of my tongue. Imagine my surprise when, when each person would unwittingly pass into my globe, I would see his beauty too.

Is this what it means to be a real monk? To see the beauty in others and be silent?

Plants and animals command respect, and not just in the sense articulated by green advocates. Empty space itself is itself interesting. How? It is empty space that is much of the study of quantum physics and superstring theory. A great many physicists have earned PhD's, and continue to research, based on the physical properties of empty space. And, more importantly, the whole of God is wholly present in any and every empty space. In that sense, empty space in Orthodox Christianity is more pregnant, more dignified, than what an atheist would consider to be everything that exists. So empty space is worth respecting. But more than that, inanimate things, rocks and such, exist on the level of empty space but fill the space: "Blessed be the Rock" lets an inanimate thing represent God. It exists; it is something rather than nothing, and for that reason it is worth

respecting. Plants exist on one more layer than mere existence; they have the motion, the fire, of life inside them. And animals exist on these layers but exist more fully; they are aware of their surroundings and act. And you and I, and every person you have trouble respecting, exist on all of these layers and more: we are made in the image of God, the royal and divine image, with the potential of the angelic image and of theosis, and are all of us making an eternal choice between Heaven and Hell. Those who choose Hell represent a tragedy; but even then there is the dignity of making an eternal choice; Hitler and Stalin represent the dignity of eternal agency and making a choice between Heaven and Hell, and sadly using that choice to become an abomination that will ever abide in Hell. But they still tragically represent the grandeur of those who exist on several layers and use their free and eternal choice to eternally choose Hell. Some saint has said, "Be kind to each person you meet. Each person you meet is going through a great struggle," and all mankind, including those one struggles to respect, exist on several profound levels and are making an eternal choice of who they will permanently become. And respect is appropriate to all of us who bear the image of God, and have all of the grandeur of God-pregnant empty space, physical things, plants, animals, and a rational and spiritual and royal human existence, even if there is nothing else we can see in them to respect. Being appropriate to treat with respect is not something that begins when we find something good or interesting about a person: it begins long before that.

## Returning from drunkenness to sobriety

In [A Pet Owner's Rules](#), I wrote,

God is a pet owner who has two rules, and only two rules.

They are:

1. I am your owner. Enjoy freely the food and water which I have provided for your good!
2. **Don't drink out of the toilet.**

That's really it. Those are the only two rules we are expected to follow. And we still break them.

Drunkenness is drinking out of the toilet. If you ask most recovering alcoholics if the time they were drunk all the time were their most joyful, merry, halcyon days, I don't know exactly how they'd answer, if they could even keep a straight face. Far from being joyful, being drunk all the time is misery that most recovering alcoholics wouldn't wish on their worst enemies. If you are drunk all the time, you lose the ability to enjoy much of anything. Strange as it may sound, it takes sobriety to enjoy even drunkenness.

Drunkenness is drinking out of the toilet.

Bondage to alcohol is suffering you wouldn't wish on your

worst enemy. If you reject bondage to alcohol and fight your way to sobriety with the help of [Alcoholics Anonymous](#), the reward if you succeed is that you have rejected bondage to alcohol and fought your way to sobriety. The reward for sobriety regained is sobriety regained—and sobriety includes ways of enjoying life that are simply not an option when one is in bondage to alcohol.

The virtue is its own reward.

## **Returning from covetousness to contentment**

Advertising, in stimulating covetousness, stimulates and builds discontent. Covetousness may well enough say, "If I only get \_\_\_\_\_, then I'll be content." But that is fundamental confusion. Getting whatever \_\_\_\_\_ may be may bring momentary satisfaction, but the same spiritual muscles twisted to be discontent with what you had before, will make you become discontent with the \_\_\_\_\_ that you now think will make you happy.

What makes for contentment is learning to be content, and repenting of covetousness and being satisfied with what you have now gives the reward that is falsely sought in indulging covetousness. The reward for repenting of covetousness and learning contentment is that you are freed from covetousness and blessed with contentment.

The virtue is the reward.

## **Returning from lust to chastity**

Lust is the disenchantment of the entire universe; repenting of lust, like repenting of pride and occult-like escapism, opens one's eyes to beauty one cannot see. Lust greatly hinders the ability to appreciate and enjoy things; repentance from lust is occasion for the slow re-awakening of the eyes to everything that lust cannot see—which is a lot.

## **Returning from contraception to how God built marriages to work**

I had a bit of a hesitation in including contraception, because in Orthodoxy "everybody knows" that such things as drunkenness are real sins, while "everybody knows" that contraception is debatable, and probably OK if one gets a blessing etc. And here what "everybody knows" is out-and-out wrong.

The Fathers universally condemn contraception, and the first edition of K.T. Ware's [The Orthodox Church](#) said point-blank, "The Orthodox Church forbids artificial methods of contraception," but subsequent versions moved further and further to permissiveness. But it is not the Orthodox Church that has changed her mind; it is only certain salad bar theology today that wishfully tries to believe that the Orthodox Church says contraception can be permitted.

St. John Chrysostom calls contraception point-blank "worse than murder," and counsels parents to leave their children brothers and sisters, and not mere things, as an inheritance. The Blessed Augustine blasts what is today called "natural family planning," and should be called "contraceptive timing", saying that the heretics who practice what is today called "periodic continence" to frustrate the fertility of sex thereby forbid marriage, earning [the searing rebuke about forbidding marriage](#)

in [1 Tim 4:1-5](#), and says that where there is contraception, there is no wife, only a mistress. St. Maximus Confessor describes sex as being wrong when it is done for some other purpose than making a baby. In my researches, I have yet to hear of any Christian teacher or canonized saint from the first millenium stating or allowing that any form of contraception is permitted in any form. For that matter, I have yet to hear of any of the Reformation offering anything but condemnation to the sin of contraception.

Biologically speaking, the beginning, middle, and end of the purpose of sex is procreation. Sex is not intended merely for pleasure, but each pleasure, such as that of eating (for which we have made Splenda), exists to continue the species, whether through procreation or preserving individuals by nourishing their bodies with food. But I wish to state something more than just the condemnations of contraception, because the condemnations are the guardian of something basically human.

When I was studying in the Bronx, I was bombarded by posters from Planned Barrenhood, which in their most forceful forms said, "Take control of your life!" And in general I am suspicious about the final honesty of advertising, but in this context the advertisement could hardly be more candid. Planned Parenthood's marketing proposition is that you can enjoy the pleasure of sex, perhaps increasingly overclocked by Viagra and ED drugs, while only having children when you individually opt-in, and retain your life in control as a pleasure-seeker. And that goes for Orthodox Christians as much as everyone else: perhaps abortion is out, but contraception, accidents excluded, is how people can pursue the pleasure of sex without the drag of unintended children.

But, before looking at monasticism, let me say that part of

growing to full human stature is not being a permanent pleasure-seeker, and not being in control of oneself. In monasticism this is partly through things such as monastic obedience, an absolute obedience which frees monk or nun from fulfilling self-will. In marriage this comes from having children beyond the point where you can have control as a pleasure-seeker. In that sense disconnecting sex from making babies is in marriage what optional obedience would be for monasticism. It is easier, it is more palatable, and it all but neutralizes the whole point.

The benefit of repenting of contraception is not that God preserves pleasure-seeking. The benefit of repenting of contraception is that you grow to transcend yourself, and marriage reaches its full stature just as obedience to a spiritual physician helps monastics reach full human stature. Marriage and monasticism are different in many ways, and today I think marriage should be recognizing as having some of the status traditionally seen in monasticism. But the point of being an adult is to grow up, to grow by a crown of thorns, to transcend oneself, whether by marriage or by monasticism. The means may be very different, but the goal is self-transcendence, and the marketing proposition of contraception is to short-circuit that hard lesson and allow the adult to remain a sexually active pleasure seeker who does not grow any higher. And this is part of why I wince when I find people I know telling of their contraception; it is something of a missed opportunity, where people have marriage but do not use it to their full stature, opting instead for an "à la carte" version of marriage that is the equivalent of a "monasticism" that allows veto over obedience.

## **Returning from Gnosticism and escape to the here and now**

When I read one title on *Gnosticism*, I was pulled up short by one passage. It described *Gnosticism* not as a set of ideas or hinging on ideas (it can be connected with many ideas), but on a mood, and more specifically that of despair. I was quite surprised by that because the appeal of *Gnosticism* is something enticing, something "sexy," of a sweet forbidden escape. But that is only an enticing bait if one wants escape because one has despair about the here and now that *God* has provided us.

Monks in the desert were perennially warned about escaping the here and now; it is tied to what was, and is, called the "demon of noonday." And a great many things today are laced with that sweetly-coated poison. It is not just *gnosticism*, which I shouldn't have researched, or the occult, or "metaphysics" in the occult sense, or *Harry Potter*, or the *Chronicles of Narnia*. And yes, I did say, *The Chronicles of Narnia*. It is the story of people brought out of the everyday world into another world, and that is a classic bait, and one that is far from exhausted from the short list here.

The reward for rejecting the temptation to escape from the here and now is the discovery of the here and now as something one does not need to escape from. At an advanced level, one

discovers that paradise is present wherever saints are; that is why crude settings at a monastery are genuinely sweeter than more luxurious settings where Mammon is worshiped. But, as in giving up pride, giving up escape sets the stage to enjoy what you wanted to escape from. Before you give it up, what you want is something that almost by definition is something you cannot have: whatever enters the here and now becomes one more dreary fixture of the here and now, maybe not instantly, but at least eventually. But like humility which opens the eyes of others pride cannot see, repenting of escapism in any form is rewarded by finding that one is in God's good Creation and escape is in fact not the best one can hope for: one hopes for engagement in worship of God, and that is what one is rewarded with. The reward for repenting and accepting virtue is that one steps out of escape and accepts virtue: the virtue is its own reward.

## Moving on from grudges to forgiveness

Forgiveness is tied for some of us to repentance of unforgiveness. Perhaps some people forgive easily and quickly, or at least quickly. But when you do not forgive, or do not yet forgive, it seems falsely like you have something over the other person, and it seems like a treasure to hold on to. **But it is no treasure.** It is a piece of Hell: nursing a grudge is drinking poison and hoping it will hurt the other person.

Repentance is stepping out of Hell, and forgiveness is stepping outside of the moment of pain and moving on to other things that do not hurt. It is not easy; it is incredibly hard for some of us; but it is the first step in a journey of healing. And the reward is simply that we step out of the moment of hurt, back in the past, and start to leave the hurt behind.

*...and being blindsided by  
reward*

Some people speak of repentance as unconditional surrender, and it is in fact unconditional surrender. My godfather spoke of repentance as the most terrifying thing a person can experience, because God demands a blank cheque of us, and does not tell us how much he will expect.

But when, and only when, we have made that surrender, we are blindsided by rewards. God may give other rewards too; but he gives rewards. In repentance you realize, "I was holding on to a piece of Hell!" And you let go of Hell and grasp something much better!

Repentance is seen in Orthodoxy as awakening, and the reward is part of the awakening.

*Awake thou that sleepest, and arise from the dead, and Christ shall give thee light.* To those who repent, a reward is promised!

Virtue is its own reward. And it is also the reward of repentance.

*Repent, for the Kingdom of God is near!*

# Romantic Impressions

Robert A. Pirsig's *Zen and the Art of Motorcycle Maintenance* drew a distinction between 'classical' and 'romantic' modes of perception. Classical is concerned with inner workings, with gears and levers that lurk behind the surface; romantic is concerned with impressions and associations. (It does not, in this context, refer in particular to romantic love.) There appears to me to be some similarity to Jung's 'thinking' and 'feeling' preferences, and probably to Snow's two cultures of the sciences and humanities.

As I start fleshing out ideas, I am at my grandparents' house, probably for the last time before they move out; I have looked around at the impressions and memories. What I realized a little while ago, with some degree of surprise, that my conceptual paraphrase, equating classical with what is deep and concerned with what lies beyond the surface, and romantic with what is shallow and only concerned with the surface, was mistaken. Perhaps it is a fair representation of Pirsig's book, which defines 'classical' and explores its inner depths, but does not explore 'romantic' much at all — but it is not a fair understanding of 'classical' and 'romantic'. The romantic mode of perception is also deep and is also concerned with what lies beyond the

surface; this is true in a way that a classical perspective would not recognize. With this realization came an awareness of romantic impressions I've had — impressions which mean something.

The meanings that the impressions hold to me would not necessarily be evident to other readers; for this reason, and because I do not know of an existing genre that serves my purposes, I am writing about the romantic impressions in a non-romantic (some would say 'classical') manner. I will describe the romantic impression first — or, more precisely, the image evoked in my mind — and then talk about what it means to me.

Or that is one way to put it. A slightly more informative statement would be that there are meanings in my mind, and they are represented by visual symbols and romantic images. What I am doing is recording the image, and then recording the meaning behind it and which is manipulated through that symbol. It may be a form of writing that captures nonlinguistic thought better than a direct enfleshing in words — and perhaps something will shine through the poetic images directly that is not captured in the analysis.

# Missionary's Kid Room

## Impression

A missionary's kid jumps up on a top bunk, sitting Indian-style, and is eating noodles with chopsticks.

## Meaning

One of the entries in *You Know You're an MK When...* says, "You worry about fitting in, and wear a native wrap around the dorm."

One division experienced by most people is a division between public and private. It is mauled in various vulgarizations — C.S.

Lewis begins an essay by talking about a bad sermon from a parson eulogizing the family as the perfect place where you can put off all of society's artificial restrictions — and showed how in the parson's case this translated to setting aside every human decency and treating his children in ways he would not consider treating a stranger. It is mauled in various distortions, but it is a legitimate distinction, and some people experience it more intensely than others. There is a public world where one conforms to the agreed-upon compromises necessary for a world of different people to live with each other, and then there is (inside a boundary) a private sphere where agape is still needed, but where there is unique room to be yourself (a cliché — and a

cliché is a cliché because it's true). The basic distinction is human, but **metaculturals** experience it more intensely; it is to us not simply a fact of life, but a basic tension of existence.

Finding another person who can pass through the glass wall is difficult; I've been burned many times. But I have found some people who can pass through, and it is a rich reward. Dealing with someone through the glass wall requires both agape and acting according to standards designed by and for people who do not function as I do — while dealing with someone inside the glass wall "only" requires agape. It is still a high standard, but there is not an expectation which distorts a person who is different and has not yet acquired a great deal of maturity.

What does "through the glass wall" mean? In the movie *Time Bandits*, the bandits are walking through a vast desert wasteland — and bump into a glass wall. It's invisible, but they can't pass through it. They have been walking for hours in pursuit of a castle, which is nowhere in sight — and they start bickering. Tempers flare, and one of them picks up a skull and throws it at another. The other time bandit ducks.

The skull shatters the glass — and through the hole, the bandits suddenly see the castle they were looking for.

What I mean by "through the glass wall" is that, after being burned numerous times in approaching people — in ways that I didn't understand were unusual — I have erected a sort of glass wall that (badly) hides those aspects of me that are alien to most people, and then pull people through the glass wall to something inside that is very different. By 'pull' I don't mean either force or deceit; I rather mean that I draw the other person into my world.

# Friend Cheering

## Impression

One of my friends is jumping along, her arms raised, cheering.

## Meaning

There is a certain quality, loosely that of being '[unashamed](#)'. If the above impression is of having a private world, this is the quality of being unashamed of it, of being comfortable. It is self-awareness without self-consciousness. There is room — not absolute freedom, but definite space none the less — to publicly differ from what is usual. This impression of one of my friends captures this quality.

# **VMWare**

## **Impression**

"VMWare: Providing Linux with backwards compatibility with legacy computational infrastructure."

## **Meaning**

If you're a hacker, any explanation would be superfluous. If you're not a hacker, this one would take a while to explain. If you really want to know, ask a hacker (if you know any), or appropriate newsgroup or mailing list.

# **Tae Kwon Do Demonstration**

## **Impression**

At an Asian culture festival, a group of non-Asians (mostly white) in martial arts uniforms gives a Tae Kwon Do demonstration. The head instructor steps up to the microphone, and says both "If you're surprised at seeing us at an Asian culture festival, don't be," and that they have taken the Tae Kwon Do tradition and removed its competitiveness and militarism.

## **Meaning**

The analysis on this one is a bit more complicated than most. I am not bothered perforce by the presence of non-Asians at an exhibition of Asian culture. What did stick in my mind, quite a bit, was the presence of non-Asians at an Asian culture festival who exhibited attitudes contradictory to those of Eastern culture, or for that matter of Western culture for most of recorded history. I mean specifically the regard for a tradition as something arbitrary, to be changed according to whatever the Zeitgeist is blowing. Environmentalists are fond of the proverb, variously attributed to different aboriginal peoples of Africa and

the Americas, that says, "Be kind to the earth. It was not inherited from our ancestors; it is borrowed from our children."

Members of a great many societies across much of history embody an attitude that could be stated as "Be careful with this tradition. It was not inherited from our ancestors; it is borrowed from our children." Jewish children grow up acutely aware that it would take only one generation of Jews to finish Hitler's work, to sever all future generations from the heritage and identity that has survived for so long under the most difficult of circumstances. This attitude, quite conspicuous by its absence at an Asian culture festival, is present in the medieval mindset — the environment that made cathedrals possible, masterpieces that (in the words of Jeffrey Burke Satinover) "are as impossible for us on spiritual grounds as our photocopiers would have been to medievals on technological grounds." The romantic impression is distinctive as the inverse image of something very, very important.

# **Traveller Addressing Servant in Servant's Native Tongue**

## **Impression**

A traveler who is visiting a house turns to a servant, and addresses the servant in his native tongue.

## **Meaning**

The traveler is someone of grandeur, and he shows this grandeur in the un-thought-of courtesy of speaking to a servant in his native tongue. Speaking in another person's preferred tongue — even if it is only with the twenty words of politeness — is a kindness, if one not often thought of in 21st century America. Showing this courtesy to a servant — someone who is looked down on and ignored when not needed — is a mark of moral grandeur.

This has application, not just in literal languages, but in entering another person's world — "speaking the other person's language" in a figurative sense.

# Merlin Unlocking Gate

## Impression

In Lawhead's *Merlin*, Merlin stands stumped by a locked gate, then as it were shakes off a dust of sleep, remembers his powers, and magically removes the lock. He speaks of "that which men call magic", learned from the fhain.

## Meaning

The meaning of "that which men call magic" — which for me signifies an incredibly diverse (non-magical) collection of skills, such as writing HTML, jury-rigging things, and reading languages (some computer and some human) — is a birthright of gradually collected abilities that is described for my temperament in *Please Understand Me II*. The meaning of what the fhain taught Merlin in Lawhead's book, "that which men call magic", is an intriguing idea which I will not attempt to reproduce here.

# Exception granted

## Impression

An authority figure starts to tell someone that a given rule applies, then remembers who he's talking to, and readily grants an exception.

## Meaning

There are a couple of specific examples — grandfather clauses, pacifists under draft. A draft board might not simply say, "Oh, you're a pacifist. Never mind," but they are illustrations of a basic pattern.

When I read *Please Understand Me* (reviewed in my [canon](#)), I came across an explanation that both accounted for my actions (in a non-insulting way) and made sense of my feelings. The SJ (sensate judging) temperament, which comprises 38% of the population, including most of the people who create and enforce rules, tends to believe that "Having rules and seeing that they are followed is very beneficial to a community," while my temperament, NT (intuitive thinking), which comprises only 6% of the population, could state its perspective as "Rules exist for the betterment of community and may therefore be set aside when they do not contribute to that end." The difference in perspective could be stated as "Rules are almost always good"

versus "Rules are good if they are helpful, and not good if they are not helpful." There are a number of times I have been in situations not anticipated by rules, in which the rules did not serve their intended purpose, and I was reasoning from an NT background that "If I show these people that applying the rules is not beneficial in this context, they will naturally make an exception." The assumption betrays a lack of understanding of SJ perspective on rules, of course, but it was appropriate given my temperament and what I did and didn't know at the time.

This impression is of someone in authority who looks at a situation, sees that applying the rules is not beneficial in that context, and readily grants an exception. It may be born more out of hope than experience, but it is a little picture of paradise — a paradise that sometimes says to people who are different, "The rule in this case was not created in anticipation of your situation, and will not be applied." And who knows? Perhaps some people in authority might read this and exercise judgment so that rules do not harm those people for whom they were not created.

# **It Doesn't Work That Way**

## **Impression**

A child expectantly asks an adult, "You'll make everything better, right?"

The adult sadly answers, "It doesn't work that way."

## **Meaning**

There are a number of things that are, in the minds of people who do not understand them, magical. Among these may be mentioned adulthood, exceptional intelligence, computers, counseling, and medicine. People on the outside have certain expectations. Children expect adults to know what to do in every situation; people of normal intelligence expect a genius to have perfect grades and never make mistakes; people want computers to have humanlike intelligence; codependent people want to enlist the counselor's help in controlling everybody around them; patients want doctors to always have a pill that will make everything better. Those people who are inside the magic circle can only shake their heads and say, "It just doesn't work that way." Genius, for instance, is not an immunity to failure; a genius will actually experience more failure.

It doesn't mean that these domains don't have power — all of them do. Rather, it means that this power isn't what people

expect it to be. Christ came as the long-awaited Messiah — and when he came to preach spiritual deliverance from sin instead of military deliverance from Rome, disappointed many of the people who were waiting for him.

With giftedness, for example, there is a common assumption that it is an automatic badge to success: perfect grades in school, and being better at everything. Not so; many bright individuals have terrible school grades (Einstein was failed at math), and their intelligence functions differently, so that they experience difficulties like those of a foreigner in a very different land.

It may be that, in dealing with a great good, we need to be open to its being good in a way we cannot anticipate — even if our anticipation of its goodness is what draws us to it.

# **The Nest**

## **Impression**

In Robert A. Heinlein's *Stranger in a Strange Land*, Michael Valentine Smith is raised in Martian culture and then brought to earth as a young man. He experiences terrific difficulty in adjustment, but adjusts to human culture first in author Jubal Harshaw's den, and then explores the world on his own before creating his own nest — a unique place that combines Martian and human culture. Inside it, there is little clothing, and no need for money — but this is superficial; more deeply, there is a shared consciousness, a world that is entered when a person steps over the threshold.

## **Meaning**

Michael's nest resonates with me in a very strong sense of home. I do not have any physical place with the external distinctiveness of Michael's nest — a thief who broke in would probably think I am a boring person — but that is not the essence of Mike's nest even in Heinlein's book. It was almost a literary symbol — and people who saw through the external strangeness found an internal wonder, itself even stranger, that was preserved when the people in the nest moved to a hotel hideout. My nest, which I have just begun to build, is found in

part in scattered places (here, there, everywhere: in the schoolyard during first-grade recess; with the cherubim and seraphim; among the farandolae) — most recently in the dance class I have started. I wrote [above](#) about there being a glass wall, and my having been burned again and again after inviting people to pass through it (perhaps I did not understand how difficult it is for other people) — and I have found a few friends who have passed through it without me being burned. With two of them in particular (Robin and Heather Munn, a delightful brother and sister), I am now not intentionally building so much as living inside a nest.

This nest is a symbol of Heaven, and I will never before death be able to have it in full — there are times when I long strongly for it, and am a bit closer, but this nest has the same [fundamental beauty](#) as the Romance described in *Less-Wild Lovers: Standing at the Crossroads of Desire* — or a related one.

# **Holy, Holy, Holy**

## **Impression**

In a room full of men, one man challenges another. The challenged man rises and begins to sing the hymn, "Holy, Holy, Holy." Immediately other men rise, singing, until the room is filled with song.

## **Meaning**

The song is a symbol of the Christian faith. It is something shared, something great that is common to many people. It is worship — that is to say, it is a touch of Heaven here on earth. The harmony among people — a harmony that is assumed not to be there in the challenge — exists in contrast to the classification of private, arbitrary beliefs, a sort of thing you can do as long as you hide it and don't make it anything public to be taken seriously. The singing is public and intended to be taken seriously.

There are other dimensions to be carried as well, although I do not recall them now. It is not an allegory, with exactly one specific meaning; the symbol itself is more ambiguous — it carries multiple meanings, the primary one being the one referred to above.

# **Annular Chessboard**

## **Impression**

A tall person in a black cloak sits in a large hole at the center of an immense circular chessboard, slowly, unhurriedly moving pieces in and out in an intricate and complex pattern.

## **Meaning**

This image is a symbol of genius, but not of my own gifts. My gifts mean experience of both spectacular success and spectacular failure; this image of genius is of a mastermind who has several projects in motion, giving attention to each in due turn. It is something I do in part — but this image is an image of perfection.

# The Mask

## Impression

A man puts on a mask and through it shows himself in a way that would not have come without the mask.

## Meaning

Some of this is hinted at in what I wrote about [my Halloween costume](#). The terms I have used in my own thought (though I don't remember using them with anyone else) concern a "standard translation". In the ordinary course of events, a person reveals himself in certain standard ways — which is not a straight copy, but a translation in which something gets lost. Sometimes nonstandard translations can allow things to be seen — good things — that are not shown in the standard translation.

There are ways in which actions which are on the surface complete fantasy, allow the presentation of things that do not have occasion to be shown normally.

I think something of this is common — acting is concerned not only with using the actor to reveal an arbitrarily chosen different person, but with the development and revelation of the actor (to those who know him) — but my experience of it seems more intense than usual. I was surprised when some friends and I were playing a game I made, and one friend pulled a card from

the deck that said to tell what about her she most wished other people knew, and she said that most people understood the things about her that she wanted to be understood. I had assumed that my intuitions applied to everyone.

# Argentina

## Impression

This impression came to me as I was listening to some Argentinian tango music, and gave new reality to something a church friend, whose family is from Argentina, talked about how it was the most European of South American countries, but the Argentina she knew of is a lost world — the country and the people are still there, but inflation and other factors have made a drastic change.

(This is what I remember from a couple of sources; it is not the result of research, and is not intended to be taken as such. It is listed here as a romantic impression from a historical situation whose full details I do not understand.)

## Meaning

Europe has more the symbolic meaning of home to me than does America, and a piece of Europe in the beautiful land of South America bears some of the romance l'Engle conveys in *A Swiftly Tilting Planet*. Its loss — the lost world symbol, or lost home — be it Atlantis, Ynes Avalach, Arthurian England for me, *Gone With the Wind* for many Southerners, and still other symbols for people of other backgrounds — is tremendously powerful, and those places live on as a memory inside people's

hearts even when they are only a memory.

Another facet is that my sense of self (my personal feeling? my experience of a universal human emotion?) is in someone from a lost realm. There is not too much external evidence that would suggest this — [my high school](#) has its own culture, and I can't go back there, and my excursions into Malaysia and France cannot easily be repeated — but the country in which I have spent the bulk of my life is still the same country and has not changed with any particularly great violence — a society that embraces change will be more altered than one that tries to preserve traditions, but there is a strong continuity. Perhaps it is a part of adult nostalgia for a romanticized childhood — as [Calvin](#) put it, "People who are nostalgic about childhood were never children — but the symbol holds resonances for me, and is reflected in other works as well.

## **Sidhe Nobles in Cafe**

### **Impression**

Two people are sitting in a cafe full of people, talking. That is what can be easily seen. What is less easily seen is that they are færie nobles, an invisible minority and representatives of a lost world.

### **Meaning**

This is a part of the powerful romance captured in the online book excerpts for *Changeling: the Dreaming*. It bears a romance of a lost world, but it also captures something of those who, because of their intelligence, have minds more different than most people would dream to imagine before having encountered them. It also represents, as well as genius, Christians in naturalistic academia — and probably other things as well.

# Double Weapons

## Impression

In a Hollywood action-adventure style, there is a hero wielding two short swords, or two small automatic weapons (the visual symbol varies). It is in the midst of an intense battle, but under the surface of all the chaos there is stillness, control, and peace.

## Meaning

This one may surprise those who know me, and know that I am a pacifist and consider glorified violence in movies to be a significant problem. Why do I include it?

In *Zen and the Art of Motorcycle Maintenance*, a second rate treatment of first rate issues, Pirsig talks about being in Quality (the idea of Quality being similar to the Chinese concept of the Tao, as the book notes). He explains that this relaxed, peaceful state is not only found in meditation; it can be found in racing or heavy combat. I have not experienced this in sparring, but I believe it exists, and there is a powerful impression of a person who is in a situation of sheer chaos and hostility, but the chaos outside the person does not bring chaos within.

## **Boy chasing girl**

### **Impression**

In a room, a college girl dashes through, being eagerly chased by a college boy, who is asking a barrage of teasing questions. There are some adults who are in the room, and they continue on — one of them calmly sipping his tea — without anyone raising an eyebrow.

### **Meaning**

One of my friends, Ashley, has voiced emphatically that she doesn't want to get married and is not domestic. It's not that she doesn't like men — she enjoys men a great deal, and can sit down at a table full of men and not feel self conscious at all. She just wants to be single.

At one point, she was spending a lot of time with one guy in particular, and the two of them started to sit together at Pooh's Corner (a group of people who meet to read children's books aloud).

I waited for a good moment, and then put an arm around her shoulder and said, "So, Ashley, when are you sending me a wedding invitation?"

The look on her face was classic.  
(I'm glad Ashley's such a good sport.)

I enjoy picking on those people who are close to me, especially girls and women. It's a form of affection. Picking on can be mean-spirited — but need not be. I've heard people telling children "Don't pick on people who don't fit in," but not (except by silence and possibly example) acknowledging that picking on someone in the right way, under the proper circumstances, can be part of a close bond.

Inside the glass wall, **touch** is important, as are teasing, tickling, horseplay, and the like. I don't think that these are the most unusual things inside the glass wall — only that they play a part of the picture; they are part of the Nest.

# The Bozone Layer

## Impression

In a classic Far Side cartoon, there is a layer of stacked clowns hovering above the earth's surface. The caption reads:

The Bozone Layer: Shielding the rest of the universe from the earth's harmful effects.

This cartoon is funny, but in the way hackers call 'ha ha only serious' — it describes a truth. Our world is fallen — which means not only 'sinful' as positively understood, but at times positively goofy. I am a part of this, too — I do not see my own absurdities, as I don't see my own blind spots, but from all the ridiculous things I have seen in others, I would be quite surprised if I was somehow exempt from this pervasive human law.

There is a peace that comes from the recognition of this absurdity, especially after trying and failing to make it go away. It is easy to hold an unstated belief that "If I only try hard enough, I can fix this — and if I can't make it all better, I'm failing as a person." The freedom and peace come from realizing that the absurdity is innate and out of our control, that it can perhaps be made better through our influence, but that if we try our best and it's still positively looney, we can live with

ourselves.

The Son of God incarnate did not cause the outrageous things of his countrymen to snap to where they should be; he attacked the absurdity tooth and nail, and his countrymen killed him. That at least should help us to accept that God doesn't expect us to make the world anything near a perfect place: we should try to better it, and be at peace when our imperfect efforts achieve more imperfect results.

# **In the Wasteland**

## **Impression**

There is a hero who is powerful and respected, and has a fall — he is disgraced, his name made a laughingstock, and he is exiled in a wasteland — and forgotten.

In the wasteland — slowly, imperceptibly, not noticed by anyone — he slowly regains his strength. Nobody expects when he returns.

## **Meaning**

Perhaps the oldest recorded example of this impression is Samson's story, but I was not originally thinking of that. I was thinking of what I hope part of my own experience to be. I am in a wasteland now; I am not where I thought I would be five years ago. And I cannot tell the future, to confidently predict any glorious return. But I am in a sort of Sabbath, regaining my strength, refocusing, having lost certain things, and learning how to use other strengths to best advantage. The romance appeals to me; while 'education' commonly describes a first ascent to effectiveness, and 'experience' the slow refinement of skills as one works in the field, I do not know any single word to tell of regained competency after a fall. This image describes it, and it describes what I am trying to do now.

# The Royal Letters

My dear son;

About your last letter, all that you say is true, but the way it is put together is missing something profound.

You say, "Are we not royalty?" Yes, indeed, and there is more to say. We will judge angels. To be human is to be made in a royal image. The oil we are anointed with is cut from the same cloth as the sacred oil anointing prophets, priests, and kings. In English we can say "Sir" and in koine Greek the same word means "Mister" and "Lord." The royal gifts of the Magi, gold an emblem of kingship, frankincense an emblem of divinity, and myrrh an emblem of suffering, are given to Christ and in him extend to the Church. We are indeed royalty, and we are more than royalty.

Now moving on to your second question, "Am I pushing this too far?" That question from you has a guilty-feeling fear to it, awaiting for me to give the real correction. And my answer to that is certain. You are not pushing it too far; you are not pushing it far enough by half. You wonder about being addressed as Your Majesty, and it is my duty to inform Your Royal Highness of something buried in [the Ladder](#), when it says: "Some stand weaponless and without armor before the kings of earth, while others hold insignia of office, shields, and swords. The former

are vastly superior to the latter since they are regularly the personal relations of the king and members of the royal household."

You stand weaponless and without armor, and wish for insignia, shield, and sword. You do not understand that you have more and pine for less. And I long for the day when you wish to be addressed, not as "Your Majesty," but as "you," with no insignia needed.

With love,  
Your father, Oswald

---

My dear, dear son;

Regarding the question you raised in your last letter, I would remind you of the King of Kings.

Two of his disciples, who had been training for years, asked for as much royal honor as there was to have: to be seated at his right and left hand. And he tries to tell them that he doesn't get it. He, the King of Kings, will never wear royal purple on earth except when he is mocked and abused by brutal soldiers; he will never wear a crown except for a twisted crown of thorns. He asks them if they can bear the sufferings of his kingship, and they blindly assure them that they can. Then he holds an example up to them and says that whoever wishes to be great must be a servant and whoever wishes to be first must be the slave of all.

What people miss in their quest for honor is the greatest gem in the crown: humility. St. Dorotheos advises people to build up their spiritual houses with all different kinds of stone: a stone of prayer here, a stone of almsgiving there, a stone of courage still there. But humility is not one more stone; it is the slime which serves as mortar and cements everything together. And this royal dignity is the bedrock that people miss hoping for royal honors, for something to feed their narcissism. Real honor is not having your narcissism fed; it is humbly rejecting narcissism. Real, industrial strength royal honor is found in the King of Kings, Lord of Lords, and God of Gods:

Let nothing be done through strife or vainglory; but in lowliness of mind let each esteem other better than themselves. Look not every man on his own things, but every man also on the things of others. Let this mind be in you,

which was also in Christ Jesus: Who, being in the form of God, thought it not robbery to be equal with God: But made himself of no reputation, and took upon him the form of a servant, and was made in the likeness of men: And being found in fashion as a man, he humbled himself, and became obedient unto death, even the death of the cross.

Wherefore God also hath highly exalted him, and given him a name which is above every name: That at the name of Jesus every knee should bow, of things in heaven, and things in earth, and things under the earth; And that every tongue should confess that Jesus Christ is Lord, to the glory of God the Father.

If you want to know where the glory at the end comes from, look nowhere but the humility at the beginning. If humility is good enough for Christ, let us not consider ourselves too good for it.

Your dearly affectionate father,  
Oswald

---

My dear son Basil;

Now I wish to show you a more excellent way.

St. Athanasios wrote of the dignity of man in *On the Incarnation*: "You know how it is when some great king enters a large city and dwells in one of its houses; because of his dwelling in that single house, the whole city is honoured, and enemies and robbers cease to molest it. Even so it is with the King of all..." Pay attention to how St. Athanasios proclaims the dignity of the human race! The King of Kings is the King for whom every King in Heaven and earth is named. If there is a measure of truth to say that man is the king and priest of Creation, this is because we are created in God's image, and it is the fullness of Truth to know Christ God as King and Lord. It is no accident and no error that the prayers of the Church address God as King, for such he is, incomparably more than any man on earth. Men and kings are as the moon with its reflected light; Christ God is the original Sun, shining in its full glory. If it is a wonder to know men as kings, incomparably greater is it to know Christ God as King of Kings and Lord of Lords.

The [Revelation to St. John](#) tells of glorious creatures at the height of creature glory: "And round about the throne were four and twenty seats: and upon the seats I saw four and twenty elders sitting, clothed in white raiment; and they had on their heads crowns of gold... The four and twenty elders fall down before him that sat on the throne, and worship him that lives for ever and ever..." My dear Basil, you are a king, and I hope that Your Majesty can throw his crown before the throne of the King of Kings and Lord of Lords.

Writing with deepest fatherly affection,  
Your father,

Oswald

# Science and Knowledge: Regenerate Science, *Philosophia Naturalis*, and Human Ways of Knowing

"[Merlin] is the last vestige of an old order in which matter and spirit were, from our point of view, confused. For him, every operation on Nature is a kind of personal contact, like coaxing a child or stroking one's horse. After him came the modern man to whom Nature is something dead—a machine to be worked, and taken to bits if it won't work the way he pleases... In a sense Merlin represents what we've got to get back to in some different way..."

C.S. Lewis, [That Hideous Strength](#)

Is it, then, possible to imagine a new Natural Philosophy, continually conscious that the natural object produced by analysis and abstraction is not reality but only a view, and always correcting the abstraction? I hardly know what I am asking for. I hear rumours that Goethe's approach to nature deserves fuller consideration — that even Dr Steiner may have seen something that orthodox researchers have

missed. The regenerate science which I have in mind would not do even to minerals and vegetables what modern science threatens to do to man himself. When it explained it would not explain away. When it spoke of the parts it would remember the whole. While studying the It it would not lose what Martin Buber calls the Thou-situation. The analogy between the Tao of Man and the instincts of an animal species would mean for it new light cast on the unknown thing, Instinct, by the only known reality of conscience and not a reduction of conscience to the category of Instinct. Its followers would not be free with the words only and merely. In a word, it would conquer Nature without being at the same time conquered by her and buy knowledge at a lower cost than that of life.

Perhaps I am asking impossibilities...

C.S. Lewis, [The Abolition of Man](#)

Put this way, Lewis is advancing the possibility of a regenerate science as a speculation, as a call for something that doesn't yet exist. But in fact a regenerate science does exist, whether "natural philosophy" or not, and this regenerate science is as old as the hills.

Let me quote first lecture material for a friend who is teaching interns about farming:

## Learning with your whole body

I'm assuming that most of you have been to college. Even if you haven't, you've been learning for 12 years in an institution that has taught you that learning is done with the brain, that it comes from words written on screens or paper, and that the way you show what you've learned is to write intelligent words on screens or paper.

Here is the first thing I need you to understand: out here in the garden, you do not learn with your brain. You learn with your hands and with your eyes and with your whole body. Your brain is involved, sure. But don't let it take over.

Don't separate "learning" and "working." Every moment you're in this teaching garden, and even a lot of the time you're working in other parts of the farm, if you pay attention you can be learning constantly.

School teaches us to think of learning as information. It's such a mistake! Yes, there is information that will help you learn to garden, and I'll teach you some of it—but if you don't learn it with your body, it won't be much use to you.

You're going to need educated eyes—you're going to need the ability to look at a plant and know if it's thriving, to look at a little seedling and be able to see in your mind how big it'll be so you can give it enough space, to look at a patch of

weeds and have a sense of how much bigger it'll be next week if you don't kill it now. (The most advanced skill, which I'm still learning, is looking at a row of green beans and estimating—from how thick the blossoms & small beans on it are—how much it's going to produce over the next couple weeks.) You need educated hands—you need to be able to feel, when you're swinging a hoe, whether you're really biting into the roots of the weeds, and you need hands that know how to weed fast and effectively, and how to use a pitchfork, etc, etc. And you need instincts, too—when you've just transplanted a plant, you need to have the instinct to check on it till it's established, same as people have the instinct to check on a baby.

And you learn all that by experience. Writing it down won't help. Doing it while being aware of it is what helps. Be in the moment, don't be thinking of something else while you work. (Well, maybe when you're weeding strawberries!) Get your hands in the dirt and feel it, compare it with how it felt last week, watch and observe the plants as they grow—and watch the weeds as they die! Watch how much quicker they die on a sunny or a windy day, watch how they re-root themselves even from a lying-down position if it's too wet. At some point it all comes together and you start to develop a sort of instinctive understanding of the garden as a natural system. I've been doing this for five years now—I knew next to nothing about gardening before that—and I have a sense now of how all the pieces work together, not in theory but what's happening in real time in my own garden, and it's such a pleasure. It has been such a pleasure to go from someone who learned things only with her brain, to someone with hands and eyes that understand my garden.

I know some of what I'm saying you may already know, but I still think it's worth saying at the start here. I've just seen so often how hard it is to get rid of the idea that reality is in our heads or on paper and start focusing on the reality that's under our feet—to stop going on what you think is supposed to happen instead of looking at what really happens. I know it took me a lot longer than it should have. I still remember my breakthrough moment. I was using the push-cultivator—which I'll teach you how to use—and it was a new tool for us at that point so I didn't know its capabilities. The thing is that when the weeds get to a certain height, the push-cultivator doesn't kill them anymore—you have to use a hoe. But I would push the cultivator on down the row and it would kill a few weeds and knock down the rest and cover them with dirt so the row looked clean, and I never noticed that their roots were still in the soil, and in my head I would make a little check mark—well that row's done. The next week, we'd be looking through the garden to see what needed doing, and there would be a bunch of weeds in that row again, and I'd go, "Wow! They came back fast!" and cultivate again. I still remember the day the little lightbulb came on in my head and I realized I'd never killed those weeds at all. I felt so dumb. That was the day I learned to look at what I was doing. Not just at what I thought I was doing.

And that's a lot of what is involved in learning a skill—not just knowing "how" but involving your hands and eyes and brain all together in the process, so that you can feel how the motion is working and you can see whether it's working—and you remember to double-check the next day whether it worked!

Okay, I have one more story. This one taught me so much. We had a temporary volunteer in the garden for three days. He was this guy who, if you told him how to do something, would look annoyed as if you were patronizing him or something. Because, you know, everybody knows how to hoe, right? Well, I got embarrassed by him being offended and figured he was right, maybe it was rude to try and tell someone how to do such simple stuff. I was a beginner too, at the time. Erin told us to hoe a certain section, and we did it. And we did it backwards. We started at the back of the section and walked backwards to the front as we hoed, so that all the plants we hoed up ended up in a pile in the next bit we had to hoe, covering the weeds there. The result was that at the end of our work all you could see was a pile of dead plants, so it looked great, it looked done. And the next day when those dead plants had dried up and withered away, what you could see was a section that looked like someone had hit it a few times here and there with a hoe—at least half of the weeds were still alive and kicking. The next day Erin took me aside and showed me how to hoe for real: you move forward, and you hoe up every inch of the soil, whether you see a plant there or not. And I've never felt embarrassed to teach anyone to hoe since then. It's a skill.

It's a huge mistake to think of any part of farming as unskilled labor. A skilled worker can weed about five times as fast as a beginner—if not more. Farming is skilled, complicated, grounded work that involves your hands and your eyes and your brain and your whole body—and at some point you may find it starts to involve your heart. You're learning something this year that you can be proud of.

(Heather Munn)

My friend is part of an intentional community and comes from a more ivy-like background; she as a writer was perhaps able to put into words what would perhaps have been water to a fish and perhaps too much "just the way things are" to readily put into words. Except, perhaps, in discomfort at city types who do skilled labor with computers and are above the unskilled labor in a farm... but wouldn't eat except for "unskilled" labor at a farm.

## Regenerate Science

But I am interested in this passage as a lettered glimpse into a regenerate science that does not do to vegetables what modern science threatens to do to men. It is not exotic: but perhaps it shouldn't be exotic in the first place.

Acting on plants bears no animistic or occult overtones or confusions, but it is quite naturally a personal operation. It is, humbly and naturally, sensitive to an I-Thou that never dissolves away into mere I-It. The regenerate science Lewis calls for is not waiting to be concocted by some genius of a bookworm; it has been around all along and remains (humbly) accessible even to bookworms like my friend.

And this regenerate science is not just the biology that is experientially known to a farmer, although I would be very cautious about too quickly dismissing this instance. True, it is a biology of very specific life and plants

I know something of Plants, if not near at Heather's level; perhaps I know more of things on the level of Rocks, having tinkered and created devices out of them, and knowing the language of things.

But there is something entirely appropriate according to proper, mystical Natural Philosophy: one's knowledge of a field is proportionate to one's participation in it. Simply put, Heather has worked a lot with plants and understands a lot,

and not a biology of all life forms or even all farms everywhere: but it may be an attribute of the regenerate science that one knows what one has direct experience of and not everything, everywhere. That locality is arguably a strength.

But to shift focus slightly: Lewis talks about not doing to stones and plants what modern science threatens to do to man himself. This does not in its focus mean destruction of the same in laboratory conditions: though the twentieth century saw lethal experiments on prisoners and 21st century America does experiments on human embryos destroyed by the use that is made of them. However, Lewis's point is somewhat more subtle: "When it explained, it would not explain away." He goes on to raise the question whether science "must always be a [mythical monster, with lethal gaze] basilisk which kills what it sees and only sees by killing." And the regenerate farming science with the manifesto above does not have a basilisk's gaze. Even weeds are not reduced to nothingness, or explained away, or reduced to being a thing that one holds in the head. Live weeds may be literally killed and reduced to being dead weeds: but even as dead weeds they are not reduced to being merely the playing out of impersonal, discarnate ideas that really exist only in scientist's heads. And the practitioner may be very ready to kill weeds, but in a certain sense she seems to love them in knowing them with a love that science does not apply to mankind. Psychology is what we now have as our effort to take an empirical sciences approach to understanding mankind.

while I have worked a little with plants and understand a little, and both are appropriate to the unfolding or natural way of the regenerate science or Natural Philosophy.

## Psychology, a secularized surrogate for theology

My MPhil thesis advisor, Thomas Dixon, wrote [Theology, Anti-Theology, and Atheology: From Christian Passions to Secular Emotions](#). His basic approach was to look at one concrete instance as an example of a broader pattern: theology being replaced by anti-theology which in turn moves to "atheology" ("a naturalistic quasi-theology without God") which is alienated from theological roots but is more estranged from theology than actively fighting against it. He writes, "The details of empirical science are atheological in the sense that a recipe in a cookery book is atheological—both are, if you like, just 'untheological.'"

The specific instance he chose was the nineteenth century moving from the Christian understanding of passions and affections, which exist within an ascetical framework and are understood in moral and ascetical terms as features belonging a fundamentally moral landscape in "pneumatology" understood of a department of practical theology rather than secular phenomena studied by psychologists who are [just-as-much-scientists-as-people-in-the-so-called-hard-sciences-like-physics](#), to Darwin's paper-thin understanding of emotion as discussed in Darwin's *The Expression of Emotions in Man and the Animals*, where "emotion" is not in particular about something or part of any particular habit, moving to the atheology of today's psychological

understanding of emotions, where emotions may be about something and may be part of a healthy or unhealthy habit (as, for instance, alcoholism), but emotions are not seen as theological in character (and it is not terribly obvious to those within how one would go about associating emotions with theology). Much prior to the nineteenth century, it is not clear how people would react to or translate a statement like, "Feelings aren't right. Feelings aren't wrong. They're just feelings."

Dixon, as quoted, says, "The details of empirical science are atheological," and his primary study in the article cited engages the emotions as developed in the category of psychology in the nineteenth century. Even though his point is intended to be an instance of a broader phenomenon or regularity, Dixon, like a good scholar, guards a narrow, tightly focused thesis for his article instead of a sprawling encyclopedia-length book. Dixon in his supervision of me encouraged me to read a book, Mary Midgley's [Science as Salvation](#), favored by one of my thesis reviewers (although, it seems, not especially foreign to his own interests). Midgley in the chapter "The Remarkable Masculine Birth of Time" talked about what I would call a macho, domineering rebellion against an older understanding of nature (you know, "Mother Nature") to be merely cold matter as understood by the Newtonian physics that was heralded through vile, lurid rhetoric and imagery of sexual violence to the woman, Nature. Either Dixon's actual focus of "from Christian passions to secular emotions in 19th century psychology" or a focus he didn't take of "from a religious outlook on Mother Nature to cold matter in Newtonian era physics" would be better than an article with a combined thesis of "from a religious outlook on Mother Nature to cold matter in Newtonian era physics and from

Christian passions to secular emotions in 19th century psychology," and Dixon holds on to his narrow, focused thesis and explores it interestingly and well.

The friend who wrote the above manifesto had earlier talked about trying to understand people. She studied literature in college rather than psychology, and there is something significant in that. One bank president commented that he preferred making literature majors because they made the best bank tellers; in other words, literature majors made the best tellers because they were the best at getting inside people's heads. And better, apparently, than psychology students. Psychologists may claim to be [scientists-and-they-are-just-as-much-scientists-as-people-in-the-so-called-hard-sciences-like-physics](#), but literature in its better moments understands the human person without aping physics—and so much the better. The motive of understanding people is not the only motive one might have for studying literature, but it is an obvious motive, and one of the more important. Not to deify literature departments—they seem to get dumb academic fads thirty years later than everyone else, where the better portion would be simply to abstain—but one of the major currents is a science of understanding the human person, and a science that has some of the attributes of a regenerate science that Lewis seems to expect something very exotic, only to be found in some faroff never-never land. But students of literature who try to understand the human person and fulfill easily half of Lewis's description of a regenerate science have been right under our noses the whole time, and include C.S. Lewis himself.

## The queen of the sciences

Furthermore, theology was once known as the queen of sciences. This did not mean that theologians are scientists; in that sense the claim to be scientists, and especially [just-as-much-scientists-as](#) practitioners of some other discipline, is very much a "physics envy" phenomenon. Dorothy Sayers reiterates that theology is a science, meaning for instance that it is the kind of discipline that has a technical vocabulary and it matters if you use the terms correctly. But she makes no envious or wishful claim that theologians are "scientists," and her usage is somewhat archaic. She does not make the claim, or even seem to betray any particular wish, that theology should be flattered by classifying it with empirical sciences like physics. The older claim that theology is a science should be taken seriously, but with it an understanding that "science" in this usage may be a serious claim, but one tenuously related to whether its bachelor's and master's degrees are 'BS' and 'MS', or 'BA' and 'MA'. The same kind of older usage of "science" is enshrined in the words, "We have it down to a science," which means "We have mastered some precise technique or skill to approach \_\_\_\_\_," and not in particular that it is appropriate subject matter for a scientific journal.

In my mind one of the greatest of sciences is the science of spiritual struggle as articulated in the [Philokalia](#). When I first

read it it struck me as strange; then years later I found a book it seemed all I had wanted to read. The best way I can think to explain it is that I liked, and like, books like Oswald Chambers's [My Utmost for His Highest](#) precisely because they contain some of what is concentrated in the [Philokalia](#). Here is the pre-eminent science of sciences; if one looks at the medieval Great Chain of Being of **God, Angels, Men, Animals, Plants, Rocks, Nothing**, we have the science of God, Angels, and Men. No discipline has a higher ambit, though literature comes closer than some. Physics is the science of Rocks and Nothing; no other discipline has so humble of an ambit. Biology may be appropriately called a hard science and may have an ambit of Animals and Plants, perhaps touching on Men: but I have never read someone flatter himself by saying that people in his discipline are [scientists-and-they-are-just-as-much-scientists-as-people-in-the-so-called-hard-sciences-like-biology](#). The envy is always for physics, and I want to ask, "Don't you find that just a wee bit embarrassing? Don't you appreciate an ambit of Men which you rightly study? Do you really want your study of Men to be in the image of physicists's study of Rocks and Nothing? Is that really how you want to try to mediate prestige to your discipline? Even a biological study of Rotting Excrement, teeming with life, would be a nobler and more elevated ambit than the Rocks and Nothing which physics exquisitely delves into."

## *Real Empirical Science*

I rarely, perhaps only in this piece, use 'science' as including theology, at least outside of a grandfathered special case. The older statement that "theology is a science" says something that was, and is, true. However, today the meaning of the term "science" has shifted, and using the term as including theology is liable to cause confusion outside of a historically literate minority, and I am wary of suggesting that theology is a science when I do not have the luxury of explaining what that means besides the obvious implication that theology is a discipline with mathematical and statistical educated guesses about how the world functions that are tested in practical experiments. And I can and do genuinely believe that the ambit of the [Philokalia](#) is the crowning jewel of the queen of the sciences, next to which there is relatively little warrant to call physics "science," but it would just add confusion to call the [Philokalia](#) excellent science without further clarification.

Further muddying the waters are the kind of claim that inspired one alleged theology article in my most concentrated course in feminist theology to say, [Theologians are scientists, and they are every bit as much scientists as people in the so-called "hard sciences" like physics.](#) The boilerplate, quoted word for word though without attribution (but also, perhaps, without plagiarism as few critics would seriously maintain that the claim

is presented as anyone's original insight), that practitioners of one's own discipline [are-scientists,-and-they-are-every-bit-as-much-scientists-as-people-in-the-so-called-hard-sciences-like-physics](#), enough so that in my theology education academic theologians sought to include science to mediate prestige and would do what I would later figure out was presenting a journalistically-written, op-ed style article from "science" pages about psychology and free will as representing genuine "science" (I tried quite in vain to say, "If for whatever reason you want to claim to understand science in your theology, get letters after your name in the sciences, and if you want to include scientific findings, quote something in a peer-reviewed journal and not something op-ed—perhaps not the greatest emotional intelligence on my part and probably more intimidating because I did not make any effort at all to incorporate ponderous grapplings with science, and I did have the letters BS and MS after my name), it is not enough to be a gentleman and a scholar: one must also claim to be a scientist, no matter how much one's real talents may lie in other directions.

Some scholars, including some historians, attempt to use the term "empirical science" to un-muddy the waters a little. There is a legitimate distinction between the enterprise of empirical science and science-as-worldview; science-as-worldview may be very interesting to study, but it is distinct from the immediate enterprise. Secondly, the term cuts out the various disciplines claiming that they are [scientists-and-they-are-just-as-much-scientists-as-people-in-the-hard-sciences-like-physics](#). It may take a rule of thumb that if the members of a discipline are claiming to be full-fledged scientists, they are outside of what is studied in empirical science. And I might comment that, for all the letters after my name, I've never read or heard of a

textbook or publication in the hard sciences claiming that its practitioners are scientists at all, let alone that they are not one whit less scientific than physicists. One may encounter quaint books like *The Art of Mathematics* which place mathematics among the humanities, or one may encounter claims that physics properly includes metaphysics (without the counterbalancing nuance that learning competency in physics as taught today does not now include learning competency in metaphysics). But the shrill insistence that one is not one whit less a scientist than physics is really nowhere to be found. Disciplines that are as much science as physics don't seem to suffer physics envy. And the use of the term "empirical sciences" whittles a very open-ended term down to the point where it is narrow enough to actually be useful for study.

None the less, I have enough foolhardiness to not only state that the mystical theology of spiritual struggle and growth is not only enough of a science that physics's claim to be science pales in comparison, but that the mystical theology of spiritual struggle and growth is enough of an empirical science that physics's claim to be empirical science pales in comparison.

## ***Experiment: A term disconnected from its roots***

The term 'experiment' comes from the same root as 'experience'; at the birth of early modern science, at the point where there was real contention between Newtonian and Aristotelian physics, an 'experiment' could simply mean doing something straightforward and observing what happened. Aristotelian physics said that heavier items fell faster than light items; Newtonian physics said that things fall basically at the same speed regardless of weight (air friction turns out to account for something, but this is a bit of a side issue). At that point it was practical to test one's experience, dropping a grape and an orange (or a pebble and a fist-sized rock) at the same time and observing whether they both hit ground at the same rough time or whether the heavier item hit the ground much more quickly. I'm going through the muddy spectacles of popularization of history here, but insofar as people were trying to test Newtonian against Aristotelian physics, there was a live possibility of using ordinary means to conduct an experiment where Newtonian and Aristotelian physics would predict appreciably different outcomes. And there can, in fact, be a first-hand knowing, in continuity with a farmer's practical biology that is known with the whole person, that a pebble and a

larger rock will fall through air at the same speed as far as one can tell with the kinds of equipment easily available at the birth of early modern science.

Something has changed along the way. Experiments now regarded as classic and relatively old physics experiments—I can think of the [Millikan oil drop experiment](#) and the [Michaelson-Morley experiment](#), are not, in any sense, matters of interacting with the natural world and observing in a straightforward experiment. I have not seen even a very arrogant physics student look at one of those experiments for the first time and say, "I could have done that." What these experiments instead represent are like **devious** hacks in information technology, where someone thinks of a clever way to trick the computer to do something that shouldn't be possible at all (like programmatically shutting down a computer intended not to allow any programmatic shutdown, by continually overwriting the memory physically closest to a temperature sensor so it would read a false positive overheating and shut down). The classic experiments are no longer about observing whether a grape and an orange fall at the same speed as far as you can tell; they are all devious hacks that trick nature into revealing something about its inner workings that you could not tell. And unless you are very wealthy you cannot do experiments on the sort of equipment private people can own; people do experiments at Fermilab on incredibly delicate atom smashers which are just barely adequate to do what physicists are trying to do. When Albert Einstein's theory of relativity was accepted, apart from possibly the perihelion of Mercury (when Mercury passes the sun, it appears to accelerate and decelerate because its light is bent by the sun's gravity), there was a time period of decades between when relativity and its experiments and thought experiments

could be practically tried out. [The twins paradox](#) was in fact pragmatically tried out, decades after Einstein, when scientists brought an atomic clock, which is still as precise a clock as the human race has managed, on board an airplane, and observed that after flying around there was the predicted clock skew against an atomic clock which had stayed on the ground. But absolutely none of the timekeeping devices in Einstein's lifetime were nearly delicate enough to allow testing the prediction made in the [twins paradox](#). And today there is a somewhat similar position with superstring theory: there is no way that has been projected with today's technology and resources to do an experiment where the differences between what superstring theory predicts, and what older models in physics predict, are anywhere near big enough to measure. Some experiments have been imagined, but they would require, for instance, more energy than has ever been produced in the history of the human race.

I am probably going on even more shaky ground by suggesting that the term 'experiment' no longer applies to significant physics experiments, but I think I can say that the link between experiment in the sense of a physics experiment, and experience in the sense of, for instance, my friend's knowledge of farming biology, is historical, etymological, and not live. Saying that an 'experiment' is something you 'experience' is like saying in U.S. English that someone who never drinks alcohol consumes 'liquors' all the time, as 'liquor', historically at least, can mean a broth that food is steeped with. There may have been a time when people saw 'liquor' as more elastic and naturally including both chicken broth and today's Jack Daniel's; but now one is apt to get confusion if one speaks of a teatotaler consuming liquor. And in the same sense the historical link between 'experiment' and 'experience' has been all but severed; precisely none of my

friend's summons to experience practical farm biology is an 'experiment' in the sense of the physics experiments I have mentioned, and conversely, precisely none of the modern physics experiments covered in my education constitute a way to have the knowing that drinks. We're really talking apples and oranges.

For these reasons, mystical theology is empirical in ways that physics hardly touches. Now I should give one caveat, under teaching as a persuasive activity, that at my high school some of the first experiments were intended to dislodge what might be called "innate believed physics" after science education findings

had found that it takes a certain number of contrary experimental findings to kill a student's assumed physics. And I remember that I had an "innate believed physics" and I did not want to let it go. So the physics experiments that set the stage,

so to speak, were chosen to give mystical, whole-person knowledge rather than simply convey ideas. But that is at least a somewhat provocative position to take in education, and it was used only at the beginning, simply because even the introductory

physics class needed to go much further than experiential "experiments" would show. Such experiments can create trust in

the physics being taught; but they can only teach so much of what was really intended to be a class that went far. And the further the class really pushed into interesting physics, the less it built on direct student experience. Now, of course, there were

experiences of some stripe. One manipulated things used in the experiments, and read measuring instruments, and analyzed the results, and returned to class. All of this is an experience of

some sort, class lectures and tests as much of the labs. But it was not knowledge arising from contact; the experience of reading a measuring instrument was irrelevant to what was being learned, and a teacher who asked, "How's your experiment

going?" to a student reading out an LED display would probably not be happy with an answer of, "There are LED digits that are red, as opposed to green, or dark digits on a silver background, and the background is dark, and they flicker a bit when they change. It looks kind of 80's. Also, the top LED is a bit dim, and there's a dent in the left side. Also, the battery might be starting to go dead." A teacher in the classes wants the student to see past the experience to whatever point of physics was being addressed; the farmer's practical biology knows by seeing through the experience.

By contrast, the knowing of regenerate science, pre-eminently present in the [Philokalia](#), knows by participating, by drinking, by experience, and knows with the whole person. The farming manifesto of this knowing may speak of knowing with the whole body, and get around to knowing with the heart, while the [Philokalia](#) may deal with the heart front and center, although its most concentrated attention to the spirit always, always includes the body. But they are two parts of the same organism, and the knowing in one and the other is empirical in the deepest sense, whereas by comparison, physics is knowledge by hearsay. In physics, even if what you know from your own experiments is experienced or empirical in the proper sense—a point which I am slightly reluctant to grant except perhaps for the sake of argument—a very large portion of your bearings are from the authority of other scientists. The physical theories one works with may be the best provisional educated guess as tested by the scientific enterprise, but the picture I was told of science being distrustful of authority, and mentioning two high school students correcting a calculation by ?Newton? and being accepted in that, is dodgy at best. In both theology and physics there is a great deal that is accepted on authority, but the

amount of theology that one knows with one's whole person greatly exceeds the amount of physics one has by oneself corroborated through experiment, whereby the knowing of theology greatly eclipses that of physics, and furthermore the kind of knowing between the whole person and experiments one has performed is one where the knowing of theology eclipses that of physics. Theologians can say that the sin of an idle word is in anything one says that one has not learned with one's whole person: woe to the physicist who says (even by analogy) that believing what one has not corroborated by one's own personal experiments is simply forbidden.

## **Knowledge is intimate: Understanding feminism**

I have another friend, Heather's brother Robin, who in every other context but one has shown good character and in communication been entirely honest and straightforward. My earliest memories of feminism were of having a sense that it was necessary for Christians to agree with. Later, at one point after some drifting and still assuming feminism was largely true, I was squarely sitting on the fence regarding egalitarianism, he came back from an extended visit with a male relative, and began a rather vile argument that stated in heavily loaded language that we should believe that passages in Paul that feminists like should mean as much as possible what a feminist would mean by them, and passages which the same feminists found inconvenient were problems that should presumably be dealt with as problems. And

I replied, in essence, "Whoa. Wait a minute. That's loaded language... Why don't you repeat what you just said with the language loaded in the opposite direction?"

Later on I would go to write my first little dissertation in theology as [Dark Patterns / Anti-patterns and Cultural Context Study of Scriptural Texts: A Case Study in Craig Keener's Paul, Women, and Wives: Marriage and Women's Ministry in the Letters of Paul](#). My advisor, who was enough of an egalitarian to be a plenary speaker at a Christians for Biblical Equality

conference, advised me to compare Keener's text, chosen as an example of highly inappropriate persuasion, with a feminist / egalitarian treatment that did not pull dirty tricks. The suggestion was wise enough, but both of us searched through Tyndale House in Cambridge's quite literally world-class library on the subject of New Testament Christianity in the Graeco-Roman world, and neither of us could find anything in a passel of feminist texts that didn't pull dirty tricks (though I found one properly feminist treatment that was a little less forceful in shady communication). The closest thing I found to what my advisor suggested was a bit of an outlier of a commentary written by a postmodern, secular Jew who commented on the New Testament text but did not have even the pretension of receiving it as authority or Scripture.

My reason for mentioning that is this. All participants in the conversation, across the board, try to present their case in as powerful a fashion and as compelling a light as they can. This goes for conservatives, moderates, liberals, radicals, monotheists, polytheists, atheists, agnostics, and includes Yours Truly. And if egalitarians and feminists **consistently and repeatedly communicate in a treacherous fashion**, it may well turn out to be a message that goes flat if it is communicated on its merits in a straightforward fashion. I do not say that feminism cannot be communicated without manipulating the audience: but I do say that I have searched for years and not found examples of feminism communicating without manipulating the audience. And I am concerned, less for the immediate affront of an honest and straightforward friend suddenly communicating in a treacherous manner, than a red flag for "What kind of thing, really, is feminism if people only persuade others of it via vile, shady, manipulative communication?"

But that is at best the outer shell of the knowledge I have gained of feminism; it is an intimate knowledge, a knowledge of the heart, a knowledge of the whole person. It goes beyond logical speculations of what feminism must be if it communicates as it does. And this heart has everything to do, for instance, with feminist fairy tales, on which point I realized that I did not realize how wholesome and true traditional fairy tales were until I had grasped feminist fairy tales, from the time when a group of college students who read children's books aloud chose Patricia C. Wade's *Dealing with Dragons*, a feminist fairy tale that like other feminist fairy tales is based on the realization that girls cannot be cured of wanting fairy tales, and so provide something with the external ornaments of a fairy tale that wages all-out war on what is right with fairy tales (*Dealing with Dragons* says, in a well-chosen dust jacket quote, something like "Once upon a time, there was a bad princess," which is at the heart of what the book delivers). I was moved to strong nausea when I tried to accept that that was what the group was reading next. Again, knowledge of the whole person. I do not say knowledge is primarily a matter of what you feel, or that it always or even often causes one to feel XYZ intensely. But I do say that this is within how whole-person knowledge can express itself at something that warped.

C.S. Lewis opened *The Abolition of Man* with an exposé of something highly problematic placed in a children's textbook to educate children; this serves as a springboard which launches into a broad-scale argument about morality, society, and efforts to engineer the abolition of man. However, it is significant that the concrete springboard Lewis chose was the materials society chooses to educate and inculturate children: the hand that propagandizes the cradle is the hand that rules the world.

In that sense, I watched Frozen at a friend's house (the second time through I sat through the whole thing), and saw tradition unravelling in Disney just a little bit more. I noticed with some distance the standard, formulaic, codependent version of fairy-tale love: it can and does happen that there will be a roomful of people of which the vast majority are emotionally healthy and two are codependent, and the two codependent people's eyes meet from across the room and they fall head over heels in infatuation and are convinced they have both found TRUE LOVE and enter a relationship in which both are suffering mightily and struggling to breathe. And, perhaps showing my insularity, I don't remember too many examples of Hollywood films, certainly not children's films, where a man and a woman make friends and slowly realize that they want more than friendship. Now I do believe that years of love in a family represent something much deeper than instantaneous infatuation, that infatuation doesn't last even in a blissfully happy marriage, and I believe various other things, but in Disney's Frozen all these had the spiritual shape of winning a battle and losing the war. I was left wondering how close on the heels of Frozen will come the Disney version of Brokeback Mountain, and was sure that the first queer fairy tale will be something you have to be a complete heel not to make a little accommodation for—and ones coming after it the claws will come out, the same claws that ended the career of a distinguished open-and-free Mozilla employee after it came out that he had made a donation years back to some cause in favor of defending traditional marriage.

Frozen intruded with a literal level on what is archetypal in fairy tales; the glimpses of the princesses guiltily snarfing a bit of chocolate were A DIDACTIC LECTURE IN SENSITIVITY. And Disney used the external shapes of codependent fairy tale romance

while subverting them. And on a literal level, a sister's hold and embrace wrought with deep sorrow is in fact more of true love, classically and analytically speaking, than an infatuated smooch. And could even be felt more, even if that is beside the point. But this is winning a battle and losing the war.

I tried, before my project was shut down by the leadership at Cambridge's theology department, to write a thesis about the holy kiss as my second master's thesis. I remember with irritation one point where my advisor, claiming to help me, suggested I narrow my thesis down to the differences between Jewish and Christian understanding of kissing in the Song of Songs. And I was irritated; I wanted to do a doctrinal study of a non-sexual kiss, and not only was his proposed narrowing down of my thesis not a narrowing down of what I had proposed, but it did not overlap what I wanted to research. And then the University decided two thirds of the way through the schoolyear that my thesis topic, which I had declared explicitly at the beginning of the year, did not belong in my philosophy of religion seminar.

Before that thesis got shot down, I read some very interesting scholarship, found out that the holy kiss ("Greet one another with a holy kiss") was the only act that the Bible calls holy, and found statements like "Examples of the kiss as a means of making or breaking enchantments have been found in the folklore of almost every culture in the Western world." And what I found about the holy kiss and its cultural contexts only made things stand out in much sharper relief. This isn't the practice in most of the world now, but the holy kiss was in ancient times a kiss on the mouth, and it is doctrinally significant that the kiss of communion, with which we kiss Christ as well as fellow faithful, is planted on the "gates and doors," the lips, that

receive Christ himself in holy communion. Not specifically that that is what we should do today, but there is something powerfully archetypal in the holy kiss that exists in continuity with fairy tales' breaking enchantments with a kiss of true love. And Frozen, which is careful not to disturb certain assumptions on the listener's part (for instance, that their-eyes-meet-across-the-room infatuation is TRUE LOVE, or that an act of TRUE LOVE will be a sexual kiss), left me feeling cheated. As much as I cared about the holy kiss as specifically not being sexual, the fitting icon for breaking enchantments in a fairy tale is not a sexual kiss, even though a sexual kiss between the prince who the prince appeared to be, and the princess, would on a literal level been nowhere near the depth of an embrace of sisters' love. On a literal level. But not on the archetypal level of fairy tales. And Frozen uproots a couple more pillars of archetypal fairy tale truth by "correcting" it on a literal level.

Sometime later, I wrote:

## **Barbara's Tale: The Fairy Prince**

Adam looked at his daughter and said, "Barbara, what do you have to share? I can hear you thinking."

Barbara looked at her father and said, "You know what I'm thinking, Daddy. I'm thinking about the story you made for me, the story about the fairy prince."

"Why don't you tell it, Sweetie? You know it as well as I do."

The child paused a moment, and said, "You tell it, Daddy."  
Here is the tale of the fairy prince.

---

Long ago and far away, the world was full of wonder. There were fairies in the flowers. People never knew a rift between the ordinary and the magical.

But that was not to last forever. The hearts of men are dark in many ways, and they soon raised their axe against the fairies and all that they stood for. The axe found a way to kill the dryad in a tree but leave the tree still standing—if indeed it was really a tree that was still standing. Thus begun the disenchantment of the entire universe.

Some time in, people realized their mistake. They tried to open their hearts to wonder, and bring the fairies back. They tried to raise the axe against disenchantment—but the axe they were wielding was cursed. You might as well use a sword to bring a dead man to life.

But this story is not about long ago and far away. It is about something that is recent and very near. Strange doings began when the son of the Fairy Queen looked on a world that was dying, where even song and dance and wine were mere spectres of what they had been. And so he disguised himself as a fool, and began to travel in the world of men.

The seeming fool came upon a group of men who were teasing a young woman: not the mirthful, merry teasing of friends, but a teasing of dark and bitter glee. He heard one say, "You are so ugly, you couldn't pay a man enough to kiss you!" She ran away, weeping.

The prince stood before her and said, "Stop." And she looked at him, startled.

He said, "Look at me."

She looked into his eyes, and began to wonder. Her tears

stopped.

He said, "Come here."

She stood, and then began walking.

He said, "Would you like a kiss?"

Tears filled her eyes again.

He gave her his kiss.

She ran away, tears falling like hail from her eyes.

Something had happened. Some people said they couldn't see a single feature in her face that had changed. Others said that she was radiant. Others still said that whatever she had was better than gorgeous.

The prince went along his way, and he came to a very serious philosopher, and talked with him, and talked, and talked. The man said, "Don't you see? You are cornered.

What you are saying is not possible. Do you have any response?"

The prince said, "I do, but it comes not in words, but in an embrace. But you wouldn't be interested in that, would you?"

For some reason, the man trusted him, and something changed for him too. He still read his books. But he would also dance with children. He would go into the forest, and he did not talk to the animals because he was listening to what the animals had to say.

The prince came upon a businessman, a man of the world with a nice car and a nice house, and after the fairy prince's kiss the man sold everything and gave it away to the poor. He ate very little, eating the poorest fare he could find, and spent much time in silence, speaking little. One of his old friends said, "You have forsaken your treasures!"

He looked at his friend and said, "Forsaken my treasures? My dearest friend, you do not know the beginning of

treasure."

"You used to have much more than the beginning of treasure."

"Perhaps, but now I have the greatest treasure of all."

Sometimes the prince moved deftly. He spoke with a woman in the park, a pain-seared woman who decided to celebrate her fiftieth wedding anniversary—or what would have been the fiftieth anniversary of a long and blissful marriage, if her husband were still alive. She was poor, and had only one bottle of champagne which she had been saving for many years. She had many friends; she was a gracious woman. She invited the fairy prince, and it was only much later that her friends began to wonder that that the one small bottle of champagne had poured so amply for each of them.

The prince did many things, but not everybody liked it. Some people almost saw the prince in the fool. Others saw nothing but a fool. One time he went into a busy shopping mall, and made a crude altar, so people could offer their wares before the Almighty Dollar. When he was asked why, he simply said, "So people can understand the true meaning of Christmas. Some people are still confused and think it's a religious holiday." That was not well received.

Not long after, the woman whom he met in the park slept the sleep of angels, and he spoke at her funeral. People cried more than they cried at any other funeral. And their sides hurt. All of this was because they were laughing so hard, and the funny thing was that almost nobody could remember much afterwards. A great many people took offense at this fool. There was only one person who could begin to explain it. A very respected man looked down at a child and said, "Do

you really think it is right to laugh so much after what happened to her?" And then, for just a moment, the child said, "He understood that. But if we really understood, laughter wouldn't be enough."

There were other things that he did that offended people, and those he offended sought to drive him away. And he returned to his home, the palace of the Fairy Queen.

But he had not really left. The fairy prince's kiss was no ordinary kiss. It was a magic kiss. When he kissed you, he gave his spirit, his magic, his fairy blood. And the world looks very different when there is fairy blood coursing through your veins. You share the fairy prince's kiss, and you can pass it on. And that pebble left behind an ever-expanding wave: we have magic, and wonder, and something deeper than either magic or wonder.

And that is how universe was re-enchanted.

---

Adam looked down at his daughter and said, "There, Sweetie. Have I told the story the way you like it?" The child said, "Yes, Daddy, you have," climbed into her father's lap, and held up her mouth for a kiss.

This story represents a mixed success, and it creaks on a literal level. But it is at least an attempt to be faithful to the archetypal level. And its heavy hand shows what the reader is cheated of in the *ACT OF TRUE LOVE* that Frozen offers.

## Winding Down...

There are other things to be said, notably that while feminism claims to promote the good of women—and, more recently, gender studies claims to promote human flourishing—critiques of them are not thereby assaults on the dignity of woman. It may not be obvious how one could be for the good of women, and not for feminist reforms in the name of the good of women, but those thinkers I am in sympathy with are doing a better job of being for the good of women, and the whole human race. "Gender studies" may well pat itself on the back for being the discipline that promotes human flourishing, but it may be closer to the truth to say that the targets of gender studies attacks are usually attacked for something that is part and parcel of human flourishing. [And that is true even if feminism arose in response to some genuine deteriorations in Western culture.](#)

Feminism is more than anything else the one force that I personally have worked to critique (see partial list of works to the right), and my knowledge of it is intimate, a knowledge of the whole person. C.S. Lewis described regenerate science as something that while it explained would not explain

- [The Commentary](#)
- [The Fulfillment of Feminism](#)
- [Inclusive Language Greek Manuscript Discovered](#)

away, would attend to the It without losing track of what Buber would have called the Thou-situation, would not be free with the words 'merely' and 'only', and would not reduce minerals and vegetables as modern science threatens to reduce man. I do not believe that my work as regards feminism is what Lewis had in mind when he speculated about a regenerate science, for the simple and boring reason that it is not science, at least not in the sense of empirical science, and I can only see contorted

ways of including it under the heading of 'Natural Philosophy.' I can quite directly offer my friend's words about the regenerate science in farming as a candidate for regenerate science; my own work as regards feminism (not necessarily other topics) has the attributes Mr. Lewis would like to see added to Natural Philosophy, but it only strainedly can be forced under the umbrella of Natural Philosophy.

But I submit that my knowledge of feminism is interesting. It has, point for point, all of the things Lewis said he wanted to see in a regenerate science that science, as we now understand it, lacks. And that bears a significance that would not be obvious from saying that the [Philokalia](#) represents the science of sciences and has those attributes Lewis projected in asking for a regenerate science. It is not just the knowledge of those things I most admire that have the attributes of a regenerate science. It is also my knowledge of those things I work hardest to critique that is an intimate knowledge affecting the whole person. This is not something that is automatically true or

- [Knights and Ladies](#)
- [The Patriarchy We Object To](#)
- [A Strange Archaeological Find](#)
- [Unman's Tales: C.S. Lewis's Perelandra, Fairy Tales, and Feminism](#)

available. One article Lewis wrote, [Bulverism](#) from [God in the Dock](#), talks about the fallacy of starting by assuming that your opponent is wrong and then speculating about problems in your opponent's history that would account for the defect. (Mr. Lewis does not completely exclude investigating an opponents' background; he only claims that first you have to show that an opponent's position is wrong through addressing the position itself, and only then may you investigate reasons why your opponent has embraced a false position.) [Bulverism](#) is a way of explaining away, and I do not believe that I do it. I may assert that specific feminist claims are wrong, or do not in fact help us, in an attempt to treat them on their merits, and while my arguments are certainly not perfect, they represent a serious attempt to engage feminism on its merits. Perhaps feminists' personal histories are relevant to the discussion, but I do not recall ever arguing that some detail of feminism is wrong because of some defect that I speculate exists in a feminist's personal history. I may argue that some aspect of feminism creates a problematic future: but I critique from what is out on the table, in plain view, not from my speculations about what is wrong with feminists' personal lives. I believe that even in my most serious and concerted critiques there is a personal and intimate knowledge at play, a knowledge that has the attributes that Lewis requests of a regenerate science. This makes the case more strongly that something of regenerate science is present than if it were only demonstrated that my knowledge of things I admire and most seek to emulate has, for instance, what Buber would call a sensitivity to the Thou-situation.

## Should "science" dissolve into "knowledge"?

As an undergraduate I enrolled in a "philosophy of science" class that I was in love with from the time I learned about it until the time I read the front matter for a reader with material from classics in the philosophy of science.

What was so off-putting to me is that it said that to say that a study, for instance, was done "scientifically" is a compliment, and go on to state that essentially science and scientific ways of working were standards for excellence in all disciplines, even disciplines that did not have the pretension of being sciences. And while I was very enthusiastic to learn about science as one domain of excellence alongside other ways of excellence, I was dismayed to read a text that established science as the paradigm example of excellence in any discipline.

The conception, cultural placement, and status of science we have is problematic. Sciences are today's prestige disciplines; but they are a way of knowing what is lowest on the Chain: Animals, Plants, Rocks, and Nothing. The idea that empirical sciences should be the most exalted and enviable disciplines is a bit like having a culture

Some people may ask, "Aren't you familiar with the increasingly prevalent language of the human animal?" In fact I am, but I take it with a grain of salt.

where dieticians mostly know the relative merits of eating Doritos, Velveeta, and microwave pizza, and do not really have much to say about avoiding most processed food, let alone eating Paleo. "Science" connotes a class all by itself, one that is better than non-science discipline, which is part of why some disciplines with a superior area of study, Man, try to mediate prestige to themselves by inculcating that they are [scientists-and-they-are-just-as-much-scientists-as-people-in-the-so-called-hard-sciences-like-physics](#).

The concept of knowledge, as opposed to science, is perhaps in a better place. There is specific knowledge of Animals, Plants, Rocks, and Nothing. There is natural philosophy. Heather does, in fact, represent a regenerate science that, however modest it may seem, fits the bill of regenerate science very well. But this regenerate science is a department of knowledge, not something superior to the regenerate science by which she also tries to understand other people.

And it may be helpful, instead of thinking in terms of "science" and "non-science," to think in terms of

I do not deny that Man exists as Animal, but I would say that Man exists on the plane of Man, Animals, Plants, Rocks, and Nothing, and though it is not to the point here, can exist on the plane of Angels and God. Man exists indeed as an Animal that moves and thinks; and Man exists as a Plant that has the movements of life, and Man exists as a Rock that obeys the laws of physics (for example, in the kind of knowledge of what physical impact the human body can take, which feeds into car safety devices), and Man exists as a Nothing that is not merely Nothing. But none of these, even

"knowledge," of which one department is the humble knowledge of a humbler domain.

Thoughts?

if the Animal plane comes closest, is a study of Man as Man, and if by "human animal" you mean that Man is studied only as one more Animal, I say that you are not reaching high enough.

# Rules of Engagement

**1: Focus exclusively on God and light, and never on darkness, temptation and sin.** Finally, brethren, whatsoever things are true, whatsoever things are honest, whatsoever things are just, whatsoever things are pure, whatsoever things are lovely, whatsoever things are of good report; if there be any virtue, and if there be any praise, think on these things. A vacation, besides taking you somewhere exotic, puts good before your eyes: but you can do that here and now, without even needing anything exotic. Fix your gaze on what is most worthy of your attention.

**2: Remember that nothing can injure the man who does not harm himself.** St. Job the Much-Suffering may have suffered terribly, but there was only one thing that could do him final harm: his own sin, and he would have been lost if he yielded to his wife's temptation, "Curse God and die." St. Job suffered terribly, and unlike us, the readers of his story, he is never told that he has served as God's champion. However, everything the Devil did added jewels to St. Job's royal and Heavenly crown.

**3: Know that Satan is on a leash.** *People of the Lie*, in many ways a perceptive book, argues that evil is terribly out of control, and that is understandable for a psychiatrist who faces

full force a kind of evil in a profession where the very belief in a Devil is rare enough to be exotic. But God help us if that were the case; none could be saved if we were tempted as much as the devils want. *The Philokalia* talks about how, if we know what burdens a beast of burden can bear, God knows and cares all the more what we can bear. Everything that happens is either a blessing from God, or a temptation that has allowed for our strengthening; the concept of a temptation, rightly understood, encompasses both things that make sin look attractive, and trials and tribulations, or something where both contribute to a single nasty whole. In medieval theology that I haven't been able to trace, Satan is called God's jester, because his foolishness with us is something that God takes up in glory, and a glory that can work in us.

**4: Expect not to understand.** One author I remember said that Christ's disciples were not so much sinful as thick-headed. I would be a bit careful about saying that, unless I say that I am thick-headed, too. God said through Isaiah, *For my counsels are not as your counsels, nor are my ways as your ways, saith the Lord. But as the heaven is distant from the earth, so is my way distant from your ways, and your thoughts from my mind.* One British preacher (this doesn't work as well as with U.S. pronunciation) said that the name "Isaiah" is basically like saying, "Eyes higher!" And we are called to have our eyes higher, including in Isaiah, which has been called the Fifth Gospel and may be the most Messianic book the Old Testament offers.

To pick one example of what might be called thick-headedness for people who do not understand that "the prophet sees through a glass, darkly, while the archivist sees through a microscope, sharply," we have in retrospect that Christ gave decisively clear predictions of his death and resurrection.

However, St. Mary Magdalene came to Christ's tomb for one and only one reason: to offer a last, singularly miserable service to a man dear to her, by embalming his body with aromatics. She was shocked at the empty tomb, and the only thing in her mind was disappointment that someone had seemingly stolen Christ's body and was depriving her even of that last painful service she came to offer Christ. What had actually happened was utterly beyond her reckoning, but the Truth came to her: the grave was empty, defeated, with Christ resurrected beyond all earthly triumph. Much the same is true on the road to Emmaus, when Christ was quickening his disciples all along the way, and when their eyes were finally ready to be open to him, he vanished. Between the Resurrection and Ascension Christ was weaning his faithful to new ways of relating to him, ever beyond their initial reach. And even before then, he was trying to wean people off expectations of a political savior and an earthly king. He came to offer something fundamentally deeper than his disciples (or we) could look for.

I remember one couple who unhappily introduced their three-year-old boy as "an accident", and complained about how hard it was to live their lives the way they wanted with him in the picture. I wanted to ask them, "Why must you look on the means of your deification as a curse?" Having children, whether we intend what God intends, is an opportunity for self-transcendence, where people who have transcended selfishness enough to love another are now given opportunity to transcend a selfishness of two. We may see a lot of other things that violate rights we think we have, and wonder where God is in all of this, but God is present all along; some have said that he is more visibly present in hard times than times of ease. Even if hard times shock us.

**5. Love and respect others.** "Blessed is the man who loves all men equally," said St. Maximus Confessor. We are missing something if we say that some have given themselves to good deeds and some have given themselves to evil: all of us can make an eternal choice between Heaven and Hell because we are made in the image of God, and the most disfigured of us cannot completely exterminate the original beauty. All of us are constituted by the presence of God in the image. There is no shallow obligation to think the best of everyone, let alone whitewash sins. However, even when all sin is taken into account, we are members of the royal race. What sins a person may be rightly judged for are God's concern, and God has not asked our help judging anyone. What divine image, and room for divine transformation, may exist in the vilest other are ours to respect and pray for.

Children who have been taught to respect adults may be more pleasant for adults to deal with, but the point of teaching children to respect adults really is not for the sake of adults, but for the sake of children to be able to benefit from adults.

Ecclesiastical title and robes also don't really exist for the wearer's sake. Calling a priest 'Father' and the connected respect helps laity towards a position where they can benefit from clergy and their role.

**6. Don't wait on living until you have it all together. You probably never will.** Abdicate from being in control of things. If there is a term for being in complete control of your life, it is probably "Hell" or "Gehenna". The Sermon on the Mount speaks at length about being as the birds of the air or the grass of the field, and we, of the royal race, are of inestimably more value than plants and animals, venerable as they may be. There is only one Life: you're in Him, or you're not, and being in self-contained

control over your life even if you can achieve it is not just dubiously achievable: it is dubiously desirable because you want to be independent of the one Life. The alternative is to dance the Great Dance, or as the [Sermon on the Mount](#) addresses our much more basic interests:

No man can serve two masters: for either he will hate the one, and love the other; or else he will hold to the one, and despise the other. Ye cannot serve God and mammon.

Therefore I say unto you, Take no thought for your life, what ye shall eat, or what ye shall drink; nor yet for your body, what ye shall put on. Is not the life more than meat, and the body than raiment? Behold the fowls of the air: for they sow not, neither do they reap, nor gather into barns; yet your heavenly Father feedeth them. Are ye not much better than they? Do you think you can add one single hour to your life by taking thought? You might as well try by taking thought to work your way into being a foot taller!

And why take ye thought for raiment? Consider the lilies of the field, how they grow; they toil not, neither do they spin: And yet I say unto you, Even Solomon in all his glory was not arrayed like one of these. Wherefore, if God so clothe the grass of the field, which to day is, and to morrow is cast into the oven, shall he not much more clothe you, O ye of little faith?

Therefore take no thought, saying, "What shall we eat?" or, "What shall we drink?" or, "Wherewithal shall we be clothed?" (For after all these things do the Gentiles seek:) for your heavenly Father knoweth that ye have need of all these things. But seek ye first the kingdom of God, and his righteousness; and all

these things shall be added unto you. Take therefore no thought for the morrow: for the morrow shall take thought for the things of itself. Sufficient unto the day is the evil thereof.

Christ speaks and assures us of our most basic material needs. There are other and more interesting needs, the need to grow in the divine Life and be freed from domination by our passions. But Christ here highlights things on a more basic level: not only does God wish to lead us in the Great Dance, but he also knows we need food and drink and offers practical care on his terms. The one petition out of the seven petitions in the Our Father, "Give us this day our daily bread", is exaggeratedly modest, or seems such: "Hallowed be thy name" is an earth-shaking desire, as is "Forgive us our trespasses." Asking for just enough providence for today is in fact more significant than asking, "Set providence for my whole life before me now." The smallness of the request is like the Virgin's womb: it is more spacious than the Heavens because it contained One that the Heavens of Heavens cannot contain.

**7. Guard your heart.** The Fathers talked about the importance of working, and monastics have worked to support their own needs, or even made baskets that were burned at the end of the year so that they would not be idle. In ancient times, the preferred handicraft for monastics was basketweaving; in modern times, apart from writing icons, one preferred handicraft for monastics is making incense. In both cases, it may be missing the point to say that it is menial work, and monastics humbled themselves to do menial work. Though I have tried my hand at neither craft, the simple repetitive motions involved appear to be deeply meditative, a project of choice to employ

the hands while the heart is at prayer. Now monastics can and have chosen the worst that was available to them in their humility, but the constant basketweaving of the Fathers may have been a best known option to occupy the hands while drawing the heart further into prayer.

In any case, and not just for monastics, one tenth of what we do is external action, and nine tenths of the work is guarding a heart at prayer. Today's respected forms of work like computer programming may present a bigger challenge to do prayerfully than tasks like janitorial work that are looked down on, but people in either line of work should make 9/10ths their effort to be at peace and at prayer, and 1/10th the external deliverable.

Furthermore, we should beware of all temptation, which starts as a spark and ends, if not stopped, as a raging fire. Love keeps no record of wrongs, and remembrance of wrong is a self-torment; we make what was painful when we went through it to be present to us all again. In this case it may be helpful to silently pray the Jesus Prayer and attend to that rather than leave things to their course and re-attend painful memories.

**8. Expect a road of pain and loss.** Fr. Thomas said, "Have no expectations except to be fiercely tempted to your last breath." Christ's own comment cuts deeper into why: "I am the true vine, and my Father is the husbandman. Every branch in me that beareth not fruit he taketh away: and every branch that beareth fruit, he purgeth it, that it may bring forth more fruit."

There can and should be other things beyond temptation and loss; God is good, and it's meaningless or awfully close to meaningless to say that because God is good any evil that could possibly happen to us is harmless. However, if we "Have no expectations except to be fiercely tempted to your last breath" and "Do the most difficult and painful things first," and

recognize that **we have no rights**, the very letters will begin to shimmer and change. If we recognize that we do not have rights, instead of seeing rights of ours that are violated we may begin to see graces extended to us that we have no right to expect. If we have no expectations except to be fiercely tempted to our last breath, we may recognize graces contrary to these expectations. The pain and the loss are real, and we may be shocked at times by what painful things God allows us. But the journey is purifying, and the God who prunes us does so that we may bear more fruit, and with it a fuller joy.

**9. Observe Orthodox mystagogy, at least on one lesser point.** There is such a thing as a book, or a teaching, that is above one's present pay grade. Maybe it will be in reach later; it is not in reach now. There are classic books that open with exhortations to literary secrecy; far from an author today hoping to reach as broad an audience as possible, they say "Read this but keep it in secret from the many who would not profit from it."

This is not the same point exactly, but there is a much lesser mystagogy than writing a book and asking that it be given a closed circulation. It is, as explained to me, if you know the truth, and you know that another person will reject the truth if you tell it, you hold your tongue instead of trying to argue the other person into accepting the truth. I'm not saying that we're all really emotion and arguments do not persuade; arguments can persuade. This piece is in part argument, and it is legitimately meant to persuade by reasoning about the truth. But if you are dealing with a gay rights advocate or someone who is thoroughly convinced that Islam is a religion of peace, or whatever company may join them in the future, you do not try to argue them into a truth you know they will reject. When Judgment Day comes, it

will better for the other person because they did not reject the truth. And it will also be better for you because you did not set them up for that sin. This is far from the full extent of Orthodox mystagogy; some people have advocated asking a priest or spiritual father to pick out books from them for a time, or said that they weren't ready to read a book first but came back after they had grown spiritually and then found immense profit in the book. There is another thread of mystagogy in that monastics do not parade their mystical experiences for all the world or even all the faithful to see. Mystagogy is foundational to Orthodoxy even if it is pitifully observed now, but it still applies now in that you don't try to use logical arguments to make people accept truths their hearts reject.

There is an alternative to compelling by arguing the truth: compelling by living the Truth. If we embrace a Truth who is ever so much more than right opinion, other people will pick up on it, the same as if we fully respect the image of God in another person, right or wrong. If we grow enough spiritually, people will sense something. Possibly this may create a teachable moment; possibly it won't, but it will reach people's hearts as a logical jackhammer cannot. St. Paul advises believing wives to win over unbelieving husbands without a word; but this is not an exception to an argumentative norm so much as an example that is almost supreme in character. The basic phenomenon reaches from one heart to another.

**10. Read nourishing books in keeping with the Orthodox Church's character as an oral tradition.** There is a wealth of good books at the hands of the Orthodox Church; the collection of the Fathers over the centuries is like an encyclopedia in its length, and the Bible is indispensable. None the less, the Orthodox Church is at heart an oral tradition, and for most

Orthodox Christians, being patristic is not achieved by quasi-academic reading of copious books, but by being in church where the priest mediates Tradition. There is oral tradition implied by the written tradition of the Philokalia, which is less properly a book than a library with different texts at different levels. It's not meant to be read cover to cover, although that may also be permitted; it's intended for a spiritual guide to pull selections for someone under guidance. And treat this text, too, as written property of oral tradition; use it (or not) as your priest or spiritual father guides you.

**11. Banish two thoughts, and retain two thoughts.**

Abandon the thoughts, "I am a saint," and "I will be damned." Instead, think both "I am a great sinner," and "God is merciful." Repentance needs no despair; the worst of earthly sins are like a smouldering ember thrown into the ocean of God's love.

**12. In conjunction with your spiritual father, know your limits and don't try to be perfect.** If someone is harassing you, and both not responding and repeated requests to stop harassment are being answered with harassment, it's time to involve social media or email authorities, or possibly the police, or just block someone on Facebook much earlier. It may be the case that some superspiritual saint could serenely shine through the worst of the harassment, but that is not the case for you and me. We aren't there, at least not yet, and your priest or spiritual father may have very practical words about how mountains are moved here on earth.

# Seven-Sided Gem

This lecture was given Oct. 26, 2001 during the Midwestern Mensa regional gathering, at the Arlington Heights Sheraton.

**Introductory remarks by Dr. Mike Doyle, CEO and Founder of [Eolas Technologies](#):** I first met Jonathan Hayward on the MegaList about a year and a half ago. I was impressed enough by his abilities to hire him at the first opportunity, and he now works as a software developer for Eolas Technologies. Jonathan, in one year, did an independent study of calculus, programmed a four-dimensional maze, and ranked 7th nationally in the 1989 [MathCounts](#) competition.

Then he turned 14 and turned his attention to deeper challenges. He has studied at [Wheaton College](#), the [Sorbonne](#), and the [University of Illinois](#). Like many profoundly gifted, Jonathan moves among a wide range of interests. He is now focused on writing. He has been published in [Ubiquity](#), Noesis, Inner Sanctum, Perfection, and now Vidya, with [Religion Within the Bounds of Amusement](#). Please welcome him as he speaks about his experiences as a profoundly gifted individual.

**Jonathan:** Thank you. It is a privilege to be here; I have been looking forward to this night, a time when we can connect and share—not only through our costumes. More on my costume later.

Before I begin my speech proper, I'd like to deal with a couple of preliminaries. I have a slight speech impediment; I'll try to speak clearly, but you may have to work a little harder to understand me. Second, I'd like to review the seven points of my speech, the seven facets of the seven-sided gem:

- Metaculture: a term which I coined and which I'll explain.
- Ages and cultures: by 'ages' I mean different temporal ages, not how old a person is.
- Beyond the Binet-Simon: alternative approaches to intelligence estimation.
- Inside the glass wall: a private symbol I'll explain.
- A musing life: Do I mean a life that is amusing or a life that has musing? I'll explain that.
- Thinking inside the box: lessons learned from living among IQ normals.
- Mystic, Artist, Christian.

Don't talk about the things you're interested in with someone you've just met. Never mind that, to you, abstract conversation is a staple of acquaintanceship and friendship. To the other person, it may be boring, unpleasant, or a sign of unwanted romantic interest.

Never mind that you have five points of great subtlety and complexity. Pick one, and when you have simplified past the point of distortion, be ready for the other person to say, "Excuse me. Could you say that in English?"

Don't assume that the person in authority believes, "The rules exist for the betterment of the community and are therefore negotiable when they do not contribute to that end." Even if the rules do not consider your case, even if they end up hurting you, expect "The rules are the rules and I am not here

...telling you, expect, "The rules are the rules and I am not here to make exceptions."

Never mind that you can shift your culture at will, or that it is something you must do to connect with others. Don't try explaining it to others, and whatever you do don't ask them to do so. If you do, they will experience culture shock and react accordingly. Never mind that to you, foreign cultures are familiar and familiar cultures foreign. Don't try to explain this either. It asks them to do something completely unfair.

Be very careful in sharing accomplishments, or even things you don't think of as accomplishments, just cherished moments. To the other person, they may well be intimidating to the point of alienation.

Grieve a thousand wounds, but don't fall prey to the worst wound of all. Don't come to believe, "I will never connect with them, and they will never understand me." If you do, you will find yourself in a sort of Hell—not in the world to come, but here on earth. You will be in a Hell of isolation, an alien in an alien land.

They can joke. That's why you're frustrated they don't understand your humor. They can think. That's why you're hurt and upset when they never fathom your deepest thoughts. To those separated by the greatest chasm, is given the greatest ability to bridge chasms.

Perhaps it is harder than doing calculus in middle school or creating a language. It is still something you can do. That intellect that leaves people dazed is the intellect you can use to communicate—connect—in ways that aren't open to them. That burning intensity that's gotten you into so much trouble can put fire in your friendships such as many of your friends would never have otherwise known. That unique inner world, that you've closed the doors to, after being burned time and time again, is a

place you may learn to draw people into. I cannot tell you how, but with a lot of hard work, a lot of patience, a lot of humility, a lot of forgiveness given and received, you may come to a point of synergy past the point where you wished you were not quite so gifted.

An anthropologist at this point might make the case that there is an unbridgeable chasm between the already very bright minds associated with Mensa, and the severely gifted. I'd rather say something different. I'd rather say the severely gifted experience is a crystallization of many things that make the Mensa experience distinctive, and there is a common bond of giftedness as well as the bond of being human. I'd rather say that what gap does exist is one that can be bridged. That is the premise this whole talk is based on.

A much better speaker than I am might be able to explain, in the abstract and in entirety, what the inner world and experience of the severely gifted is like. I can't do that, but I have my sights set on a much more modest goal: to share something of my own inner world and experience, and light a candle of illumination.

When I was a student at Wheaton College, there was a chapel where students lined up and shared some of the, ahem, interesting questions they'd been asked: "You grew up in Japan? Say something in Chinese!" "Say something in African!" "What did it feel like growing up in Finland?" (Uh, I don't know. Slight tingling sensation around the toes?) The chapel was given by missionary's kids/third culture kids, sometimes abbreviated MK/TCK. A third culture kid is a kid who grows up surrounded by one host culture—let us say, blue—to parents who belong to another culture—let us say, yellow. They are neither properly blue nor properly yellow, but create a third culture that draws on

both. This is not a simple average of the two cultures; there are common similarities, whether it's a U.S. kid growing up in Kenya, or a Japanese growing up in the U.S. It is a different mode of experience, a different way of being human. Third culture kids tend to have a tremendous ability to adapt to new cultures, but at times a cost: the price of never being completely at home in a culture, as a fish in water. When I heard that chapel, I said,  
"That's me!"

It is the characteristic of very creative minds to hit a very large nail not quite on the head. I am not literally a third culture kid; by the time I heard that chapel, I had not lived abroad. There was something deep that resonated, however. The best way I can describe it is that a third culture kid creates a third culture after being shaped by the outer forces of the host culture on one hand and his parents on the other, and a severely gifted individual is shaped by the outer forces of an IQ-normal world and an inner world from a different kind of mind: the higher you go on the IQ spectrum, there is less and less more of the same intelligence, and more and more of a different kind of intelligence altogether. I coined the term 'metaculture' to refer to the commonality of experience, a way of not ever being in a culture as a fish is in water. It brings pain, a sense of never fitting in, and at the same time a freedom from some of the blindnesses others can't escape.

In talking about cultures, I'm hesitant to say that they've left an imprint on me, because the metaphor is deficient. It evokes an image of an active, solid, definite culture that leaves a mark on hot wax which is simply there to receive an imprint. The truth is much more interesting: the cultures are themselves, yes, but I am actively drawing, discerning, seeing what in them is of interest to me and can be drawn into myself. Anyone who knows

cultures knows that conveying even one culture in five hours is impossible; I hope not to convey the cultures I visited, so much as give a sense of what sort of thing is interesting.

The summer after that chapel, I lived in Malaysia. My father spent the year teaching, and the rest of the family lived there. I got to spend the summer. I understand why my Mom said it was the best year of her life.

In American culture, there is always a clock tick-tick-ticking. It's not just there when you look down at your watch; it may be more present when you're not looking: when you're visiting your friend and distracted with twenty other things to do that day, or on the road where you move faster than any human athlete can run, and one second's needless delay is one second's torment. In Malaysia, the clock's constant ticking stops. This is not unique to Malaysia; those of you familiar with African cultures, or Latin American, will know something similar, but it is at any rate different from the U.S. It's not exactly true that the Malaysians perceive time slowly where we perceive it quickly, as that the U.S. is conscious of time where Malaysians are conscious of other things. I have continued to shape my sense of time after leaving Malaysia, and come to focus not on time but on people, creation, and some work. If I try to spend a half an hour on my third novel, what will dominate is the half hour, not the novel; I try to give focused presence to what I am doing now and not have a clock cut up my emotions. It is a tremendous boon in writing, or being with people. I try to keep enough of an American time sense to not be needlessly rude by being late to appointments, but on the inside I seek a different time, and I believe my friendships and my creations are the better for it. Dost thou love life? Then do not quantize time, for numbers are not the stuff life's made of.

Some time after that, I studied in Paris at the [Sorbonne](#). It was a wonderful time; part of my heart is still there. During my time as a student, I acquired a taste for alcohol. One thing I realized rather quickly is that five ounces of wine is not much. If I had a glass of wine with dinner and tossed it back after my first bites, I could have another... and another... and another... and become rather quickly inebriated. Or I could simply not have any more wine. Or—there is an alternative—I could sip my wine, savor it.

In doing that, I tasted wine as I had not tasted any beverage before. Because there was so little, I learned to be present and enjoy much more than absently having a hazy awareness that something I liked was passing through my mouth. My absent awareness of sodas was not a bad thing; one thing I learned upon returning is that American soft drinks are not intended to be consumed that way. If you sip a small glass of Mountain Dew, you will soon learn that Mountain Dew isn't meant to be so sipped. I learned to be present, not just to wine and non-alcoholic beverages like fruit drinks and Mocha, but also to food, and to a much broader circle. If I am in a public place, and music I like comes across the air, it is transient; it is fleeting. I cannot make it last any longer, but I can be present to it in the short time it does last. When a friend comes from out of town, in all likelihood her visit will be over before it has begun—but I can be present in that time as well. This presence has added something to my life complimentary to the time sense I acquired from Malaysia.

What's the last culture? One that will take a bit more explaining, as I have to swim upstream against more than one thread of American culture. What is it that I have to swim up against? "This is an idea whose time has come." "It's the wave of

the future." "We're entering the third millenium."

If I were to speak of "an idea whose time has come, and gone," or "the wave of the past," it would be less clear that I was speaking a compliment. If I were to say, in the most reverent of tones, "We're standing at the forty-second latitude and eighty-seventh longitude.", you'd have every right to accuse me of a non sequitur. I believe that "We're entering the third millenium." is also a non sequitur, even though it is spoken as a statement of great significance.

There are two ideas closely intertwined: the doctrine of progress, which says we are better, nobler, wiser people than those who came before—a temporal version of ethnocentrism, which says that ideas like machines grow rust and need to be replaced—and period awareness, which goes beyond the historicist observation that all of us, past and present, exist in a historical-cultural context and are affected by it; period awareness fixes an unbridgeable chasm between the people who walked before and us; they are in a hermetically sealed box. The net respect is to believe that the peoples of the past cannot talk with us: we can point out how they were less enlightened times, but they certainly cannot criticize us.

My second novel, [Firestorm 2034](#), is the story of a medieval in 21<sup>st</sup> century America. In the course of researching medieval culture, thinking about it, and trying to convey it, it left a mark on me in many ways similar to Malaysia and France. Mark Twain's [A Connecticut Yankee in King Arthur's Court](#) is a masterpiece of humor that is often mistaken for a reasonable treatment of medieval culture; my novel reverses it in more ways than one. Not only is it a medieval in America, but more deeply I reject the belief that the most significant difference between the medievals and us is that we have better technology. There is a

wealth of culture and wisdom that has been largely lost.

What is one such area? The present issue of [My Generation](#), the magazine of the [American Association of Retired Persons](#), has a cover story about "Jeff Bridges: Beautiful Dreamer." On the cover, he has black hair tinged with silver, although I would forgive you if you glanced and said it was brown. It's a few inches longer than mine. He's curled up, slouching, with his arms over his knees, wearing faded jeans, white socks, and tennis shoes. The man looks like a teenager. This is not an accident. I have never seen a [My Generation](#) cover with a woman who looks old enough to be admitted to the [AARP](#), and when I first saw that periodical, I mistook it for a *GenX* magazine.

Why? The core idea is that there is a short period of glory—I'll say from fifteen to twenty-five years, although some of you might place the beginning and end a little differently—and before that point, you're only a child, meaning curiously enough that you don't have access to adult pleasures; you can't drink, you can't drive—and after that point, you're a has-been. This message is ubiquitous, present not only in children's TV shows but equally in a magazine for retired people. And, in a certain manner, it makes perfect sense.

It makes perfect sense if there is nothing more to have in life than physical pleasure. Before fifteen, you can't acquire as much pleasure as someone with adult resources; after twenty-five, your capacity for youthful pleasure diminishes. And so, if one starts by assuming that the whole point of life is to have pleasure, that the point of science is to create a Utopia of spoiled children, then it follows quite simply that a child is nothing much and someone past the age of thirty is a has-been.

It follows quite simply for us, but the medievals saw it differently.

The medievals believed that the entire purpose of this life is as a preparation, an apprenticeship, a beginning, to an eternity gazing on God's glory. It means that, even in this life, there is infinitely more to seek than physical pleasure. There is more to desire. There is virtue, both earthly, natural virtues, and the merry, heavenly, deiform virtues. One can begin to be a heavenly person, enjoy Heaven's joys, and know God.

The words, "Eat, drink, and be merry, for tomorrow we may die," voice a pessimistic philosophy: enjoy pleasure because there's nothing more and we have a grim life. The medieval view sought much more than pleasure, and in following it, I want to grow more. I don't believe I'm leaving the time when I can enjoy the only good in life, pleasure. I believe I have different fruits in season coming. Some people dread their thirtieth birthday. I'm looking forward to it. I'm looking forward to turning thirty, forty, fifty, to when my hair turns tweed and then white. I'm looking forward to growing in wisdom: the interesting part of my life isn't ending, but just beginning.

What about intelligence testing? I like Madeleine l'Engle's [A Wind in the Door](#); it's a children's book with a little boy, Charles Wallace, whose IQ is "so high it's untestable by normal means." I like the story and Charles Wallace; I identify with him, and in reference to that passage began to wish the same were true of me, that my IQ were so high it was untestable by normal means. I even tried to convince myself, in moments of pride, that this was true.

It came as a great disappointment to learn not only was this literally true, that my IQ was literally so high as to be untestable by normal means, but that the threshold was so low. If the authors of the Binet-Simon test, paradigm example of the good IQ test, were to be told, "This test you've made, doesn't

really distinguish average from below average, but shows a remarkably fine discrimination at the upper strata of human intelligence," they would have regarded the test as a failure, pure and simple. The Binet-Simon test is a test for inferiority. Sources I've seen differ as to why; one gently states that it was meant to identify special needs people and give them that extra boost of special education they need to function in life. Another says, less charitably, that it's to identify certain people as inferior: exclude them; stop 'wasting' resources on them. In either case, it is less than clear to me that this is the model of test for organizations like Mensa.

Some other high-IQ societies use an adjusted model of test, where they take off the time limit, because they recognize that rushing people doesn't get best behavior, and put all the problems on anabolic steroids. This can probably boost the ceiling a little, but it has its own problems. It's a bit like taking an office where work isn't getting done, and making everybody work twenty more hours a week: if work isn't getting done, five more hours might help a little, but twenty won't fix the problem. Howard Gardner, multiple intelligence theorist, spends most of [Extraordinary Minds](#) arguing for a multiplicity of genius; in the beginning, he asks if there's anything common to all kinds of genius, and says, yes, he'd identify three things:

- There is some domain of performance.
- There is a community that appreciates the genius's performance in this domain.
- Failures.

According to Gardner, a genius fails more, and more spectacularly, than an average person.

This notwithstanding, if you're trying to get into [Mega Society East](#), what counts on the test is not what you get right; it's what you get wrong. It's not the absolutely brilliant answers you had to questions two, five, and seven; it's the fact that you missed something on questions one, four, and nine. Given the cognitive diversity at the upper end of the spectrum, there are limitations to even high-ceiling tests.

Is there any alternative? I would say yes, and I believe a hint of it comes from a story about a high school physics student. After the unit covering air pressure, the teacher wrote on an exam, "Explain how to use a barometer to determine the height of a tall building." The student wrote, "Tie a rope around the barometer, lower it from the top of the building until it hits the ground, make a mark on the rope, pull it up, and measure the length of the rope. (There are other ways of doing this.)"

This put the teacher in a bit of a bind. He called in one of his colleagues, and explained what had happened. The colleague said, "In a way that demonstrates your knowledge of physics, explain how to use a barometer to determine the height of a tall building." The student said, "Go to the top of the building with a barometer and a stopwatch. Drop the barometer, and measure the time before the barometer splatters on the ground beneath. Then use the formula  $y = \frac{1}{2} at^2$  to calculate the height of the building." The teachers conferred and gave him almost full credit.

The teacher asked what some of the other ways were: "Go outside on a sunny day, and measure the height of the barometer, the length of the barometer's shadow, and the length of the building's shadows, and use ratios to determine the height of the building." "This probably isn't the best way, but go into the basement, knock on the superintendent's door, and say,

'Mr. Superintendent! I have a fine barometer for you if you will only tell me the height of the building!'"

What this story screams out to me is not just that the student is bright enough that he could see the desired answer about calculating from the difference in air pressure. I'm positive of that. It's not just that he could give several alternate approaches. It's that he would. It's that he behaved like a gifted mind does when it's been completely insulted.

That gives a hint of an indirect approach: don't try IQ-normal-style cognitive strain questions, but look for a very different kind of thinking, and the effects of living in a world where most other people are two, three, four, five sigma below you. I wrote up the basic ideas, and e-mailed Paul Cooijmans, head of Giga and [Glia](#). He suggested I start my own high-IQ society. I thought that was a little more ambitious than I wanted to take on now, but I did create a test. I wrote it up, gave it to heads of some high-IQ societies to distribute, received very kind responses from Gina LoSasso of the [Mega Foundation](#) and Nik Lygeros of the Pi Society... and have gotten two tests filled out, which I haven't looked at because I want to read them together. The test may turn out to be nothing more than an interesting fizzle. Even then, I thought it might be interesting enough to share.

What about the glass wall? The symbol relates to me to three layers, or levels, of maturity in dealing with others. The first layer is not recognizing there is a difference. In childhood, even when I scored high in the MathCounts competition, I might have realized there was something called intelligence and I had more of it, but not that I thought all that differently: I treated others as if they were the same as me underneath. That is a

recipe for giving and receiving hurt.

When I finally let myself see that there were differences, I tried to fit in through blending in. In the short run, that's much better; there are far fewer incidents. Over time, it costs—the cost of a false self. There were some things in myself I wasn't showing anyone, not even myself.

After that, I began to erect a glass wall about myself, something that would keep things out of view before I was confident people were ready, but not permanently—and would let me draw others in. I don't think this is a final resting place—in fact, I'm almost positive it isn't—but it seems a definite step ahead of the other two steps.

What's inside the glass wall? Much of this speech hints at things inside the glass wall, but I'd like to give one concrete example.

In the book [Fearfully and Wonderfully Made](#), Phillip Yancey helps draw out stories and insights from Paul Brand, the doctor who discovered that leprosy ravages the body by destroying the sense of touch, and with it the ability to feel pain. In one of these stories, Dr. Brand tells how he left a speaking engagement sick, sat hunched in the corner of a train car, wishing the interminable train ride would be over, and finally staggered to his hotel room. He began to undress, and realized to his horror that there was no feeling in his left heel.

He pricked himself with a pin and felt nothing. He jabbed himself harder, watched a drop of blood form, and moaned for the pain that would not come. That night, he lay dressed on his bed. He knew that sulfone drugs would probably stop the spread of the disease quite quickly, but he still could not help imagine it spreading to his hands, his feet. As a doctor who worked with patients who'd lost their sense of touch, he cherished the feel

of earth in his fingers, the feel of a puppy's fur, the affection of a friend. His career as a surgeon would soon end. What's more, what would become of his movement? He, their leader, had assured others that leprosy was the least contagious of all communicable diseases, and careful hygiene could almost ensure that they would not get it. What would it mean if he, their leader, was a leper? That ugly word he'd banished from his vocabulary rose like a monster with new strength.

After a long and sleepless night, Dr. Brand got up, and took a pin to face the gristly task of mapping out the affected area. He took a breath, jabbed himself—and roared in pain. Nothing had ever felt so delicious to him as that one electric jolt of pain.

He realized what had happened. He was sick, with something mundane, and as a sick traveller had forgone his usual motion. His foot had fallen asleep. Dr. Brand was for a time too ashamed to recount that dismal experience, but I'm glad he did. The experience changed his life, and the story has impacted me.

As far as perception goes, I'm not sure if my sense of touch is more perceptive than most people's. Probably a little bit. I can say that it is integrated with other senses. There was one time I was at the supermarket, and the woman in front of me in the checkout line dropped a soda bottle a short distance. Being bored, I gently pinched the bottle, and then made a comment that seemed to me almost too obvious to be worth saying: if you pinch a soda bottle, you can tell if it's safe to open. A bottle that can be safely opened will give slightly to moderate pressure; a bottle that's shaken up is firm as a rock. Her reply, "Oh, is that the trick that you use?" caught me off guard. Feeling a shaken soda bottle like that is no more a trick to me than looking at the stove for dancing orange spots is a trick to see if I've started a grease fire.

As an American who's lived in France, I like to give my friends hugs and kisses. I'm careful how and when I ask, particularly about a kiss on the cheek, and I listen to people with my intuition before asking those questions... but that invitation (accepted or not) is usually tied to when I pull someone inside the glass wall.

What about a musing life? Neil Postman, in [Amusing Ourselves to Death: Public Discourse in an Age of Show Business](#) talks about the dark side of television's effects on culture. Without going into a full analysis of Plato's Allegory of the Television, I will say that television blinds the inner eye by stimulating the surface and starving the depths. A home without a television is like a slice of chocolate cake without tartar sauce.

Without television, what happens? At times, you get bored, and then more bored, and then you come to a place on the other side of boredom with renewed creativity, sensitivity, and insight. I try to live there; like my time sense and the presence learned through wine, it gives focus to musings, such as this talk was woven from. It is a sort of fast for the mind, and makes room for a considerable degree of depth.

What is my interest in thinking inside the box? There's been a lot of homage paid to the many virtues of thinking outside the box. Perhaps many of you have stories to tell of a time when someone was extolling the many virtues of thinking outside the box, but that's not where I'm going. The praises of thinking outside the box are sung because thinking inside and outside the box complement each other, and most people are so often inside the box that it's hard for them to step out. With severely gifted individuals, the real challenge is not thinking outside the box, but thinking inside the box.

There are many times that it's better to think inside the box. Driving to work, for instance. More deeply, communicating and

negotiating requires one to understand and think like the other person, and for many people, this means thinking inside the box.

I'd also like to give one very concrete example of where it's important to think inside the box: manners.

Manners are an arbitrary collection of rules, and there is no unifying principle that everything else flows from. Respecting and valuing the person will not tell you why you should hold a fork like a pen instead of how a little boy wants to hold a knife.

Something that meaningless may be very difficult for you and me to learn, but it is important. Why? To many people, manners are the very foundation of civilized interaction, and it presents them with a needless and pointless obstacle if you say, "I respect you and I do not feel the need to observe manners in your presence."

It's been said, "Never offend people with style when you can offend them with substance;" if people are going to walk away from you offended, let them be offended by something of substance, not by crude manners.

And lastly: mystic, artist, Christian. Why do I group these together? Does being a mystic make one an artist and a Christian? No; nothing like that holds directly, but there is a common thread. It's illuminated by a conversation I had with one friend, where I said that pragmatism was a philosophical disease.

I learned shortly thereafter that pragmatism was quite important to her.

Why would I say something like that? In one conversation a few years earlier, at [Calvin College](#), one of my friends asked me why I wanted something, and didn't like my response. A little probing, and I knew why: while the words he used were, "Why do you want it?", what he meant by it, the only thing he could mean at that time, was, "What do you find it useful for?" The item, whatever it was (I don't remember), was not something I wanted

for its usefulness in letting me get something else; it was something I valued in itself. He couldn't see that.

So I asked him, "Do you value having that arm on your body?" "Uh, yes..." "Why?" "Because if I have an arm, I can grab an apple." "Why do you want that?" "Because if I grab an apple, I can eat an apple." "Why do you want that?" "Because if I eat an apple, I can live and not die!" "Why do you want that?" At that point, he gave the response I'd been waiting for: an impassioned explanation that living and not dying was not simply valued as a means to something else, but something he wanted for itself.

Pragmatism and utilitarianism have a very small circle of things that are valued outside of their usefulness to something else: the Oxford Companion to Philosophy lists only pleasure, which seems a dismally small selection to me. Franky Schaeffer's [Addicted to Mediocrity: 20<sup>th</sup> Century Christians and the Arts](#) talks about the insipid banality in the Christian art tradition: the tradition that once produced Dante and Bach has now produced [John's Christian Stores](#), and a large part of that is because Christians sold their birthright to embrace pragmatism. Where pragmatism draws a small circle of things that are embraced, Christianity, mysticism, and art draw a much larger circle: there's something there that isn't in Dewey and Mill's practical world.

Madeleine l'Engle, in [Walking on Water: Reflections on Faith and Art](#), tells of a time in college when her professor asked on a test how Chaucer chose a particular literary device in a passage, and she wrote in a white heat of fury that Chaucer did not "choose a literary device;" that's not how an artist works at all! I had a loosely similar experience, if not involving anger; I was sharing something I was writing with a new acquaintance, and she complimented my use of personification at a specific point. I had

to reread the passage more than once to see what she meant; she made a straightforward statement, but I had not thought in those terms. A good artist may have excellent technique, but the technique is there because the art is good; the art is not good just because of the technique. Good art comes through something much more, and much more interesting, than technique: listening to the work, serving it, cooperating with it, helping an unformed idea have a shape that others can see.

What about mysticism? There is a problem here; you might say that insofar as mysticism can be explained, it is not mysticism. I will say that the characters I identify with most in literature have been characters who've had a foot in another world. Charles Wallace from Madeleine L'Engle's [A Wind in the Door](#) is not the boy genius, Dexter from Dexter's Laboratory, an abstract personification of intelligence; he is a very real and believable person. He is open to another world, not surprised to think he's seen dragons in the twins' vegetable garden, and he kythes; that is, he has a real and present communication, something beyond communication, with others. You can read about kything in the [100 ways of kything](#) on my webpage.

In Robert Heinlein's [Stranger in a Strange Land](#), Michael Valentine Smith is born as a baby boy on Mars, orphaned by all human travellers, raised on Mars by Martians in Martian culture, and brought to earth as a young man. Let's talk about culture shock for a moment. Smith causes and receives quite a lot of it, as the story narrates his progression from a Martian with the genes and ancestry of a man to a character who is both human and Martian. There are quite a few stumbling points along the way to this. At one point, early in the story, someone asks Michael what is intended to be a very routine question, but Michael doesn't get it. He has heard the words before, but he's

a bit like a top-notch English professor trying to decipher a math paper: even with a glossary to all the symbol, there's a whole way of thinking that goes with the strange words, and Michael doesn't understand it. Heinlein says that half a million years' wildly alien abstractions raced through his mind. I don't have half a million years' worth of much of anything, but I do have wildly alien abstractions. I first became a philosopher as a boy, too young to touch any of my thoughts in language; one of the questions I thought of was, "Am I human?", or, "Am I a being of the same class as those I observe around me?" I observed that my parents were linguistic creatures who moved naturally in language, that I was not linguistic in any comparable way, and concluded that I was not human. Another question I pondered was a short, simple question that could be rendered, "Can there be a perpetual motion machine, and if so, how can it be started?" The second part of the question was tied to the first; the best way I can explain it is that, given time-symmetric laws of physics, if there's a machine that will keep on going forever, then the other side of the coin is that it has been going on forever, and there's no way to start it. In middle school, I started French at about the age of ten, and in a few years was able to think more fluently in French than in English. My accent sounded more typical of a native Parisian French speaker than a Midwestern American English speaker. Why? There are a couple of reasons, differences in how the two languages were taught, but one of the basic ones is that English was here, French was there, and my way of thinking was way out there, and happened to be closer to French than English.

Blajeny, also from [A Wind in the Door](#), is a Teacher from another galaxy, and the lessons he brings are sometimes difficult: not as, "Face your worst fear ever," but as different

from what they'd expect. He tells the children they will be in his class, and Meg is elated that her brother Charles will never have to go to the red schoolhouse again; then he says something that leaves her wondering where his classroom is. Blajeny retreats inside himself, and when she's decided he won't answer, he says, "Here, there, everywhere. In the schoolyard in first-grade recess. With the cherubim and seraphim. Among the farandolae."

I am wearing [the costume you see me in](#) because of how I identify with Blajeny, because there's something of me that shines through him.

Last, what about being a Christian? There's one music professor who said that, rather than thinking that we sing a song one and then it's over, and we sing it later, and so on, we should rather think that as long as there have been created beings, there is an eternal song rising before God, a song rising as incense that will never go out, and that when we sing we step into that song. Christianity is the foundation this whole edifice of thought is built upon, and its crowning jewel. It is the soil in which other things grow, and the thoughts I have given are an example of how Christians may think.

So now in this brief time I have shared a little bit about myself; I have answered a few questions and raised many more.

Come visit my website, at [Jonathan's Corner](#); it's in your program. Of course I'd like to hear from an editor who'd like me to write something, or would like an existing manuscript, or someone who'd like to hear me speak, or someone who'd like a website built, but more than any of that I have given this talk for the same reason I've built my website: to connect. What have I left you wondering about?

# The Royal Letters

My dear son;

About your last letter, all that you say is true, but the way it is put together is missing something profound.

You say, "Are we not royalty?" Yes, indeed, and there is more to say. We will judge angels. To be human is to be made in a royal image. The oil we are anointed with is cut from the same cloth as the sacred oil anointing prophets, priests, and kings. In English we can say "Sir" and in koine Greek the same word means "Mister" and "Lord." The royal gifts of the Magi, gold an emblem of kingship, frankincense an emblem of divinity, and myrrh an emblem of suffering, are given to Christ and in him extend to the Church. We are indeed royalty, and we are more than royalty.

Now moving on to your second question, "Am I pushing this too far?" That question from you has a guilty-feeling fear to it, awaiting for me to give the real correction. And my answer to that is certain. You are not pushing it too far; you are not pushing it far enough by half. You wonder about being addressed as Your Majesty, and it is my duty to inform Your Royal Highness of something buried in [the Ladder](#), when it says: "Some stand weaponless and without armor before the kings of earth, while others hold insignia of office, shields, and swords. The former

are vastly superior to the latter since they are regularly the personal relations of the king and members of the royal household."

You stand weaponless and without armor, and wish for insignia, shield, and sword. You do not understand that you have more and pine for less. And I long for the day when you wish to be addressed, not as "Your Majesty," but as "you," with no insignia needed.

With love,  
Your father, Oswald

---

My dear, dear son;

Regarding the question you raised in your last letter, I would remind you of the King of Kings.

Two of his disciples, who had been training for years, asked for as much royal honor as there was to have: to be seated at his right and left hand. And he tries to tell them that he doesn't get it. He, the King of Kings, will never wear royal purple on earth except when he is mocked and abused by brutal soldiers; he will never wear a crown except for a twisted crown of thorns. He asks them if they can bear the sufferings of his kingship, and they blindly assure them that they can. Then he holds an example up to them and says that whoever wishes to be great must be a servant and whoever wishes to be first must be the slave of all.

What people miss in their quest for honor is the greatest gem in the crown: humility. St. Dorotheos advises people to build up their spiritual houses with all different kinds of stone: a stone of prayer here, a stone of almsgiving there, a stone of courage still there. But humility is not one more stone; it is the slime which serves as mortar and cements everything together. And this royal dignity is the bedrock that people miss hoping for royal honors, for something to feed their narcissism. Real honor is not having your narcissism fed; it is humbly rejecting narcissism. Real, industrial strength royal honor is found in the King of Kings, Lord of Lords, and God of Gods:

Let nothing be done through strife or vainglory; but in lowliness of mind let each esteem other better than themselves. Look not every man on his own things, but every man also on the things of others. Let this mind be in you,

which was also in Christ Jesus: Who, being in the form of God, thought it not robbery to be equal with God: But made himself of no reputation, and took upon him the form of a servant, and was made in the likeness of men: And being found in fashion as a man, he humbled himself, and became obedient unto death, even the death of the cross.

Wherefore God also hath highly exalted him, and given him a name which is above every name: That at the name of Jesus every knee should bow, of things in heaven, and things in earth, and things under the earth; And that every tongue should confess that Jesus Christ is Lord, to the glory of God the Father.

If you want to know where the glory at the end comes from, look nowhere but the humility at the beginning. If humility is good enough for Christ, let us not consider ourselves too good for it.

Your dearly affectionate father,  
Oswald

---

My dear son Basil;

Now I wish to show you a more excellent way.

St. Athanasios wrote of the dignity of man in *On the Incarnation*: "You know how it is when some great king enters a large city and dwells in one of its houses; because of his dwelling in that single house, the whole city is honoured, and enemies and robbers cease to molest it. Even so it is with the King of all..." Pay attention to how St. Athanasios proclaims the dignity of the human race! The King of Kings is the King for whom every King in Heaven and earth is named. If there is a measure of truth to say that man is the king and priest of Creation, this is because we are created in God's image, and it is the fullness of Truth to know Christ God as King and Lord. It is no accident and no error that the prayers of the Church address God as King, for such he is, incomparably more than any man on earth. Men and kings are as the moon with its reflected light; Christ God is the original Sun, shining in its full glory. If it is a wonder to know men as kings, incomparably greater is it to know Christ God as King of Kings and Lord of Lords.

The [Revelation to St. John](#) tells of glorious creatures at the height of creature glory: "And round about the throne were four and twenty seats: and upon the seats I saw four and twenty elders sitting, clothed in white raiment; and they had on their heads crowns of gold... The four and twenty elders fall down before him that sat on the throne, and worship him that lives for ever and ever..." My dear Basil, you are a king, and I hope that Your Majesty can throw his crown before the throne of the King of Kings and Lord of Lords.

Writing with deepest fatherly affection,  
Your father,

Oswald

# Seven-Sided Gem

This lecture was given Oct. 26, 2001 during the Midwestern Mensa regional gathering, at the Arlington Heights Sheraton.

**Introductory remarks by Dr. Mike Doyle, CEO and Founder of [Eolas Technologies](#):** I first met Jonathan Hayward on the MegaList about a year and a half ago. I was impressed enough by his abilities to hire him at the first opportunity, and he now works as a software developer for Eolas Technologies. Jonathan, in one year, did an independent study of calculus, programmed a four-dimensional maze, and ranked 7th nationally in the 1989 [MathCounts](#) competition.

Then he turned 14 and turned his attention to deeper challenges. He has studied at [Wheaton College](#), the [Sorbonne](#), and the [University of Illinois](#). Like many profoundly gifted, Jonathan moves among a wide range of interests. He is now focused on writing. He has been published in [Ubiquity](#), Noesis, Inner Sanctum, Perfection, and now Vidya, with [Religion Within the Bounds of Amusement](#). Please welcome him as he speaks about his experiences as a profoundly gifted individual.

**Jonathan:** Thank you. It is a privilege to be here; I have been looking forward to this night, a time when we can connect and share—not only through our costumes. More on my costume later.

Before I begin my speech proper, I'd like to deal with a couple of preliminaries. I have a slight speech impediment; I'll try to speak clearly, but you may have to work a little harder to understand me. Second, I'd like to review the seven points of my speech, the seven facets of the seven-sided gem:

- Metaculture: a term which I coined and which I'll explain.
- Ages and cultures: by 'ages' I mean different temporal ages, not how old a person is.
- Beyond the Binet-Simon: alternative approaches to intelligence estimation.
- Inside the glass wall: a private symbol I'll explain.
- A musing life: Do I mean a life that is amusing or a life that has musing? I'll explain that.
- Thinking inside the box: lessons learned from living among IQ normals.
- Mystic, Artist, Christian.

Don't talk about the things you're interested in with someone you've just met. Never mind that, to you, abstract conversation is a staple of acquaintanceship and friendship. To the other person, it may be boring, unpleasant, or a sign of unwanted romantic interest.

Never mind that you have five points of great subtlety and complexity. Pick one, and when you have simplified past the point of distortion, be ready for the other person to say, "Excuse me. Could you say that in English?"

Don't assume that the person in authority believes, "The rules exist for the betterment of the community and are therefore negotiable when they do not contribute to that end." Even if the rules do not consider your case, even if they end up hurting you, expect "The rules are the rules and I am not here

...telling you, expect, "The rules are the rules and I am not here to make exceptions."

Never mind that you can shift your culture at will, or that it is something you must do to connect with others. Don't try explaining it to others, and whatever you do don't ask them to do so. If you do, they will experience culture shock and react accordingly. Never mind that to you, foreign cultures are familiar and familiar cultures foreign. Don't try to explain this either. It asks them to do something completely unfair.

Be very careful in sharing accomplishments, or even things you don't think of as accomplishments, just cherished moments. To the other person, they may well be intimidating to the point of alienation.

Grieve a thousand wounds, but don't fall prey to the worst wound of all. Don't come to believe, "I will never connect with them, and they will never understand me." If you do, you will find yourself in a sort of Hell—not in the world to come, but here on earth. You will be in a Hell of isolation, an alien in an alien land.

They can joke. That's why you're frustrated they don't understand your humor. They can think. That's why you're hurt and upset when they never fathom your deepest thoughts. To those separated by the greatest chasm, is given the greatest ability to bridge chasms.

Perhaps it is harder than doing calculus in middle school or creating a language. It is still something you can do. That intellect that leaves people dazed is the intellect you can use to communicate—connect—in ways that aren't open to them. That burning intensity that's gotten you into so much trouble can put fire in your friendships such as many of your friends would never have otherwise known. That unique inner world, that you've closed the doors to, after being burned time and time again, is a

place you may learn to draw people into. I cannot tell you how, but with a lot of hard work, a lot of patience, a lot of humility, a lot of forgiveness given and received, you may come to a point of synergy past the point where you wished you were not quite so gifted.

An anthropologist at this point might make the case that there is an unbridgeable chasm between the already very bright minds associated with Mensa, and the severely gifted. I'd rather say something different. I'd rather say the severely gifted experience is a crystallization of many things that make the Mensa experience distinctive, and there is a common bond of giftedness as well as the bond of being human. I'd rather say that what gap does exist is one that can be bridged. That is the premise this whole talk is based on.

A much better speaker than I am might be able to explain, in the abstract and in entirety, what the inner world and experience of the severely gifted is like. I can't do that, but I have my sights set on a much more modest goal: to share something of my own inner world and experience, and light a candle of illumination.

When I was a student at Wheaton College, there was a chapel where students lined up and shared some of the, ahem, interesting questions they'd been asked: "You grew up in Japan? Say something in Chinese!" "Say something in African!" "What did it feel like growing up in Finland?" (Uh, I don't know. Slight tingling sensation around the toes?) The chapel was given by missionary's kids/third culture kids, sometimes abbreviated MK/TCK. A third culture kid is a kid who grows up surrounded by one host culture—let us say, blue—to parents who belong to another culture—let us say, yellow. They are neither properly blue nor properly yellow, but create a third culture that draws on

both. This is not a simple average of the two cultures; there are common similarities, whether it's a U.S. kid growing up in Kenya, or a Japanese growing up in the U.S. It is a different mode of experience, a different way of being human. Third culture kids tend to have a tremendous ability to adapt to new cultures, but at times a cost: the price of never being completely at home in a culture, as a fish in water. When I heard that chapel, I said,  
"That's me!"

It is the characteristic of very creative minds to hit a very large nail not quite on the head. I am not literally a third culture kid; by the time I heard that chapel, I had not lived abroad. There was something deep that resonated, however. The best way I can describe it is that a third culture kid creates a third culture after being shaped by the outer forces of the host culture on one hand and his parents on the other, and a severely gifted individual is shaped by the outer forces of an IQ-normal world and an inner world from a different kind of mind: the higher you go on the IQ spectrum, there is less and less more of the same intelligence, and more and more of a different kind of intelligence altogether. I coined the term 'metaculture' to refer to the commonality of experience, a way of not ever being in a culture as a fish is in water. It brings pain, a sense of never fitting in, and at the same time a freedom from some of the blindnesses others can't escape.

In talking about cultures, I'm hesitant to say that they've left an imprint on me, because the metaphor is deficient. It evokes an image of an active, solid, definite culture that leaves a mark on hot wax which is simply there to receive an imprint. The truth is much more interesting: the cultures are themselves, yes, but I am actively drawing, discerning, seeing what in them is of interest to me and can be drawn into myself. Anyone who knows

cultures knows that conveying even one culture in five hours is impossible; I hope not to convey the cultures I visited, so much as give a sense of what sort of thing is interesting.

The summer after that chapel, I lived in Malaysia. My father spent the year teaching, and the rest of the family lived there. I got to spend the summer. I understand why my Mom said it was the best year of her life.

In American culture, there is always a clock tick-tick-ticking. It's not just there when you look down at your watch; it may be more present when you're not looking: when you're visiting your friend and distracted with twenty other things to do that day, or on the road where you move faster than any human athlete can run, and one second's needless delay is one second's torment. In Malaysia, the clock's constant ticking stops. This is not unique to Malaysia; those of you familiar with African cultures, or Latin American, will know something similar, but it is at any rate different from the U.S. It's not exactly true that the Malaysians perceive time slowly where we perceive it quickly, as that the U.S. is conscious of time where Malaysians are conscious of other things. I have continued to shape my sense of time after leaving Malaysia, and come to focus not on time but on people, creation, and some work. If I try to spend a half an hour on my third novel, what will dominate is the half hour, not the novel; I try to give focused presence to what I am doing now and not have a clock cut up my emotions. It is a tremendous boon in writing, or being with people. I try to keep enough of an American time sense to not be needlessly rude by being late to appointments, but on the inside I seek a different time, and I believe my friendships and my creations are the better for it. Dost thou love life? Then do not quantize time, for numbers are not the stuff life's made of.

Some time after that, I studied in Paris at the [Sorbonne](#). It was a wonderful time; part of my heart is still there. During my time as a student, I acquired a taste for alcohol. One thing I realized rather quickly is that five ounces of wine is not much. If I had a glass of wine with dinner and tossed it back after my first bites, I could have another... and another... and another... and become rather quickly inebriated. Or I could simply not have any more wine. Or—there is an alternative—I could sip my wine, savor it.

In doing that, I tasted wine as I had not tasted any beverage before. Because there was so little, I learned to be present and enjoy much more than absently having a hazy awareness that something I liked was passing through my mouth. My absent awareness of sodas was not a bad thing; one thing I learned upon returning is that American soft drinks are not intended to be consumed that way. If you sip a small glass of Mountain Don't, you will soon learn that Mountain Don't isn't meant to be so sipped. I learned to be present, not just to wine and non-alcoholic beverages like fruit drinks and Mocha, but also to food, and to a much broader circle. If I am in a public place, and music I like comes across the air, it is transient; it is fleeting. I cannot make it last any longer, but I can be present to it in the short time it does last. When a friend comes from out of town, in all likelihood her visit will be over before it has begun—but I can be present in that time as well. This presence has added something to my life complimentary to the time sense I acquired from Malaysia.

What's the last culture? One that will take a bit more explaining, as I have to swim upstream against more than one thread of American culture. What is it that I have to swim up against? "This is an idea whose time has come." "It's the wave of

the future." "We're entering the third millenium."

If I were to speak of "an idea whose time has come, and gone," or "the wave of the past," it would be less clear that I was speaking a compliment. If I were to say, in the most reverent of tones, "We're standing at the forty-second latitude and eighty-seventh longitude.", you'd have every right to accuse me of a non sequitur. I believe that "We're entering the third millenium." is also a non sequitur, even though it is spoken as a statement of great significance.

There are two ideas closely intertwined: the doctrine of progress, which says we are better, nobler, wiser people than those who came before—a temporal version of ethnocentrism, which says that ideas like machines grow rust and need to be replaced—and period awareness, which goes beyond the historicist observation that all of us, past and present, exist in a historical-cultural context and are affected by it; period awareness fixes an unbridgeable chasm between the people who walked before and us; they are in a hermetically sealed box. The net respect is to believe that the peoples of the past cannot talk with us: we can point out how they were less enlightened times, but they certainly cannot criticize us.

My second novel, [Firestorm 2034](#), is the story of a medieval in 21<sup>st</sup> century America. In the course of researching medieval culture, thinking about it, and trying to convey it, it left a mark on me in many ways similar to Malaysia and France. Mark Twain's [A Connecticut Yankee in King Arthur's Court](#) is a masterpiece of humor that is often mistaken for a reasonable treatment of medieval culture; my novel reverses it in more ways than one. Not only is it a medieval in America, but more deeply I reject the belief that the most significant difference between the medievals and us is that we have better technology. There is a

wealth of culture and wisdom that has been largely lost.

What is one such area? The present issue of [My Generation](#), the magazine of the [American Association of Retired Persons](#), has a cover story about "Jeff Bridges: Beautiful Dreamer." On the cover, he has black hair tinged with silver, although I would forgive you if you glanced and said it was brown. It's a few inches longer than mine. He's curled up, slouching, with his arms over his knees, wearing faded jeans, white socks, and tennis shoes. The man looks like a teenager. This is not an accident. I have never seen a [My Generation](#) cover with a woman who looks old enough to be admitted to the [AARP](#), and when I first saw that periodical, I mistook it for a *GenX* magazine.

Why? The core idea is that there is a short period of glory—I'll say from fifteen to twenty-five years, although some of you might place the beginning and end a little differently—and before that point, you're only a child, meaning curiously enough that you don't have access to adult pleasures; you can't drink, you can't drive—and after that point, you're a has-been. This message is ubiquitous, present not only in children's TV shows but equally in a magazine for retired people. And, in a certain manner, it makes perfect sense.

It makes perfect sense if there is nothing more to have in life than physical pleasure. Before fifteen, you can't acquire as much pleasure as someone with adult resources; after twenty-five, your capacity for youthful pleasure diminishes. And so, if one starts by assuming that the whole point of life is to have pleasure, that the point of science is to create a Utopia of spoiled children, then it follows quite simply that a child is nothing much and someone past the age of thirty is a has-been.

It follows quite simply for us, but the medievals saw it differently.

The medievals believed that the entire purpose of this life is as a preparation, an apprenticeship, a beginning, to an eternity gazing on God's glory. It means that, even in this life, there is infinitely more to seek than physical pleasure. There is more to desire. There is virtue, both earthly, natural virtues, and the merry, heavenly, deiform virtues. One can begin to be a heavenly person, enjoy Heaven's joys, and know God.

The words, "Eat, drink, and be merry, for tomorrow we may die," voice a pessimistic philosophy: enjoy pleasure because there's nothing more and we have a grim life. The medieval view sought much more than pleasure, and in following it, I want to grow more. I don't believe I'm leaving the time when I can enjoy the only good in life, pleasure. I believe I have different fruits in season coming. Some people dread their thirtieth birthday. I'm looking forward to it. I'm looking forward to turning thirty, forty, fifty, to when my hair turns tweed and then white. I'm looking forward to growing in wisdom: the interesting part of my life isn't ending, but just beginning.

What about intelligence testing? I like Madeleine l'Engle's [A Wind in the Door](#); it's a children's book with a little boy, Charles Wallace, whose IQ is "so high it's untestable by normal means." I like the story and Charles Wallace; I identify with him, and in reference to that passage began to wish the same were true of me, that my IQ were so high it was untestable by normal means. I even tried to convince myself, in moments of pride, that this was true.

It came as a great disappointment to learn not only was this literally true, that my IQ was literally so high as to be untestable by normal means, but that the threshold was so low. If the authors of the Binet-Simon test, paradigm example of the good IQ test, were to be told, "This test you've made, doesn't

really distinguish average from below average, but shows a remarkably fine discrimination at the upper strata of human intelligence," they would have regarded the test as a failure, pure and simple. The Binet-Simon test is a test for inferiority. Sources I've seen differ as to why; one gently states that it was meant to identify special needs people and give them that extra boost of special education they need to function in life. Another says, less charitably, that it's to identify certain people as inferior: exclude them; stop 'wasting' resources on them. In either case, it is less than clear to me that this is the model of test for organizations like Mensa.

Some other high-IQ societies use an adjusted model of test, where they take off the time limit, because they recognize that rushing people doesn't get best behavior, and put all the problems on anabolic steroids. This can probably boost the ceiling a little, but it has its own problems. It's a bit like taking an office where work isn't getting done, and making everybody work twenty more hours a week: if work isn't getting done, five more hours might help a little, but twenty won't fix the problem. Howard Gardner, multiple intelligence theorist, spends most of [Extraordinary Minds](#) arguing for a multiplicity of genius; in the beginning, he asks if there's anything common to all kinds of genius, and says, yes, he'd identify three things:

- There is some domain of performance.
- There is a community that appreciates the genius's performance in this domain.
- Failures.

According to Gardner, a genius fails more, and more spectacularly, than an average person.

This notwithstanding, if you're trying to get into [Mega Society East](#), what counts on the test is not what you get right; it's what you get wrong. It's not the absolutely brilliant answers you had to questions two, five, and seven; it's the fact that you missed something on questions one, four, and nine. Given the cognitive diversity at the upper end of the spectrum, there are limitations to even high-ceiling tests.

Is there any alternative? I would say yes, and I believe a hint of it comes from a story about a high school physics student. After the unit covering air pressure, the teacher wrote on an exam, "Explain how to use a barometer to determine the height of a tall building." The student wrote, "Tie a rope around the barometer, lower it from the top of the building until it hits the ground, make a mark on the rope, pull it up, and measure the length of the rope. (There are other ways of doing this.)"

This put the teacher in a bit of a bind. He called in one of his colleagues, and explained what had happened. The colleague said, "In a way that demonstrates your knowledge of physics, explain how to use a barometer to determine the height of a tall building." The student said, "Go to the top of the building with a barometer and a stopwatch. Drop the barometer, and measure the time before the barometer splatters on the ground beneath. Then use the formula  $y = \frac{1}{2} at^2$  to calculate the height of the building." The teachers conferred and gave him almost full credit.

The teacher asked what some of the other ways were: "Go outside on a sunny day, and measure the height of the barometer, the length of the barometer's shadow, and the length of the building's shadows, and use ratios to determine the height of the building." "This probably isn't the best way, but go into the basement, knock on the superintendent's door, and say,

'Mr. Superintendent! I have a fine barometer for you if you will only tell me the height of the building!'"

What this story screams out to me is not just that the student is bright enough that he could see the desired answer about calculating from the difference in air pressure. I'm positive of that. It's not just that he could give several alternate approaches. It's that he would. It's that he behaved like a gifted mind does when it's been completely insulted.

That gives a hint of an indirect approach: don't try IQ-normal-style cognitive strain questions, but look for a very different kind of thinking, and the effects of living in a world where most other people are two, three, four, five sigma below you. I wrote up the basic ideas, and e-mailed Paul Cooijmans, head of Giga and [Glia](#). He suggested I start my own high-IQ society. I thought that was a little more ambitious than I wanted to take on now, but I did create a test. I wrote it up, gave it to heads of some high-IQ societies to distribute, received very kind responses from Gina LoSasso of the [Mega Foundation](#) and Nik Lygeros of the Pi Society... and have gotten two tests filled out, which I haven't looked at because I want to read them together. The test may turn out to be nothing more than an interesting fizzle. Even then, I thought it might be interesting enough to share.

What about the glass wall? The symbol relates to me to three layers, or levels, of maturity in dealing with others. The first layer is not recognizing there is a difference. In childhood, even when I scored high in the MathCounts competition, I might have realized there was something called intelligence and I had more of it, but not that I thought all that differently: I treated others as if they were the same as me underneath. That is a

recipe for giving and receiving hurt.

When I finally let myself see that there were differences, I tried to fit in through blending in. In the short run, that's much better; there are far fewer incidents. Over time, it costs—the cost of a false self. There were some things in myself I wasn't showing anyone, not even myself.

After that, I began to erect a glass wall about myself, something that would keep things out of view before I was confident people were ready, but not permanently—and would let me draw others in. I don't think this is a final resting place—in fact, I'm almost positive it isn't—but it seems a definite step ahead of the other two steps.

What's inside the glass wall? Much of this speech hints at things inside the glass wall, but I'd like to give one concrete example.

In the book [Fearfully and Wonderfully Made](#), Phillip Yancey helps draw out stories and insights from Paul Brand, the doctor who discovered that leprosy ravages the body by destroying the sense of touch, and with it the ability to feel pain. In one of these stories, Dr. Brand tells how he left a speaking engagement sick, sat hunched in the corner of a train car, wishing the interminable train ride would be over, and finally staggered to his hotel room. He began to undress, and realized to his horror that there was no feeling in his left heel.

He pricked himself with a pin and felt nothing. He jabbed himself harder, watched a drop of blood form, and moaned for the pain that would not come. That night, he lay dressed on his bed. He knew that sulfone drugs would probably stop the spread of the disease quite quickly, but he still could not help imagine it spreading to his hands, his feet. As a doctor who worked with patients who'd lost their sense of touch, he cherished the feel

of earth in his fingers, the feel of a puppy's fur, the affection of a friend. His career as a surgeon would soon end. What's more, what would become of his movement? He, their leader, had assured others that leprosy was the least contagious of all communicable diseases, and careful hygiene could almost ensure that they would not get it. What would it mean if he, their leader, was a leper? That ugly word he'd banished from his vocabulary rose like a monster with new strength.

After a long and sleepless night, Dr. Brand got up, and took a pin to face the gristly task of mapping out the affected area. He took a breath, jabbed himself—and roared in pain. Nothing had ever felt so delicious to him as that one electric jolt of pain.

He realized what had happened. He was sick, with something mundane, and as a sick traveller had forgone his usual motion. His foot had fallen asleep. Dr. Brand was for a time too ashamed to recount that dismal experience, but I'm glad he did. The experience changed his life, and the story has impacted me.

As far as perception goes, I'm not sure if my sense of touch is more perceptive than most people's. Probably a little bit. I can say that it is integrated with other senses. There was one time I was at the supermarket, and the woman in front of me in the checkout line dropped a soda bottle a short distance. Being bored, I gently pinched the bottle, and then made a comment that seemed to me almost too obvious to be worth saying: if you pinch a soda bottle, you can tell if it's safe to open. A bottle that can be safely opened will give slightly to moderate pressure; a bottle that's shaken up is firm as a rock. Her reply, "Oh, is that the trick that you use?" caught me off guard. Feeling a shaken soda bottle like that is no more a trick to me than looking at the stove for dancing orange spots is a trick to see if I've started a grease fire.

As an American who's lived in France, I like to give my friends hugs and kisses. I'm careful how and when I ask, particularly about a kiss on the cheek, and I listen to people with my intuition before asking those questions... but that invitation (accepted or not) is usually tied to when I pull someone inside the glass wall.

What about a musing life? Neil Postman, in [Amusing Ourselves to Death: Public Discourse in an Age of Show Business](#) talks about the dark side of television's effects on culture. Without going into a full analysis of Plato's Allegory of the Television, I will say that television blinds the inner eye by stimulating the surface and starving the depths. A home without a television is like a slice of chocolate cake without tartar sauce.

Without television, what happens? At times, you get bored, and then more bored, and then you come to a place on the other side of boredom with renewed creativity, sensitivity, and insight. I try to live there; like my time sense and the presence learned through wine, it gives focus to musings, such as this talk was woven from. It is a sort of fast for the mind, and makes room for a considerable degree of depth.

What is my interest in thinking inside the box? There's been a lot of homage paid to the many virtues of thinking outside the box. Perhaps many of you have stories to tell of a time when someone was extolling the many virtues of thinking outside the box, but that's not where I'm going. The praises of thinking outside the box are sung because thinking inside and outside the box complement each other, and most people are so often inside the box that it's hard for them to step out. With severely gifted individuals, the real challenge is not thinking outside the box, but thinking inside the box.

There are many times that it's better to think inside the box. Driving to work, for instance. More deeply, communicating and

negotiating requires one to understand and think like the other person, and for many people, this means thinking inside the box.

I'd also like to give one very concrete example of where it's important to think inside the box: manners.

Manners are an arbitrary collection of rules, and there is no unifying principle that everything else flows from. Respecting and valuing the person will not tell you why you should hold a fork like a pen instead of how a little boy wants to hold a knife.

Something that meaningless may be very difficult for you and me to learn, but it is important. Why? To many people, manners are the very foundation of civilized interaction, and it presents them with a needless and pointless obstacle if you say, "I respect you and I do not feel the need to observe manners in your presence."

It's been said, "Never offend people with style when you can offend them with substance;" if people are going to walk away from you offended, let them be offended by something of substance, not by crude manners.

And lastly: mystic, artist, Christian. Why do I group these together? Does being a mystic make one an artist and a Christian? No; nothing like that holds directly, but there is a common thread. It's illuminated by a conversation I had with one friend, where I said that pragmatism was a philosophical disease.

I learned shortly thereafter that pragmatism was quite important to her.

Why would I say something like that? In one conversation a few years earlier, at [Calvin College](#), one of my friends asked me why I wanted something, and didn't like my response. A little probing, and I knew why: while the words he used were, "Why do you want it?", what he meant by it, the only thing he could mean at that time, was, "What do you find it useful for?" The item, whatever it was (I don't remember), was not something I wanted

for its usefulness in letting me get something else; it was something I valued in itself. He couldn't see that.

So I asked him, "Do you value having that arm on your body?" "Uh, yes..." "Why?" "Because if I have an arm, I can grab an apple." "Why do you want that?" "Because if I grab an apple, I can eat an apple." "Why do you want that?" "Because if I eat an apple, I can live and not die!" "Why do you want that?" At that point, he gave the response I'd been waiting for: an impassioned explanation that living and not dying was not simply valued as a means to something else, but something he wanted for itself.

Pragmatism and utilitarianism have a very small circle of things that are valued outside of their usefulness to something else: the Oxford Companion to Philosophy lists only pleasure, which seems a dimly small selection to me. Franky Schaeffer's [Addicted to Mediocrity: 20<sup>th</sup> Century Christians and the Arts](#) talks about the insipid banality in the Christian art tradition: the tradition that once produced Dante and Bach has now produced [John's Christian Stores](#), and a large part of that is because Christians sold their birthright to embrace pragmatism. Where pragmatism draws a small circle of things that are embraced, Christianity, mysticism, and art draw a much larger circle: there's something there that isn't in Dewey and Mill's practical world.

Madeleine l'Engle, in [Walking on Water: Reflections on Faith and Art](#), tells of a time in college when her professor asked on a test how Chaucer chose a particular literary device in a passage, and she wrote in a white heat of fury that Chaucer did not "choose a literary device;" that's not how an artist works at all! I had a loosely similar experience, if not involving anger; I was sharing something I was writing with a new acquaintance, and she complimented my use of personification at a specific point. I had

to reread the passage more than once to see what she meant; she made a straightforward statement, but I had not thought in those terms. A good artist may have excellent technique, but the technique is there because the art is good; the art is not good just because of the technique. Good art comes through something much more, and much more interesting, than technique: listening to the work, serving it, cooperating with it, helping an unformed idea have a shape that others can see.

What about mysticism? There is a problem here; you might say that insofar as mysticism can be explained, it is not mysticism. I will say that the characters I identify with most in literature have been characters who've had a foot in another world. Charles Wallace from Madeleine L'Engle's [A Wind in the Door](#) is not the boy genius, Dexter from Dexter's Laboratory, an abstract personification of intelligence; he is a very real and believable person. He is open to another world, not surprised to think he's seen dragons in the twins' vegetable garden, and he kythes; that is, he has a real and present communication, something beyond communication, with others. You can read about kything in the [100 ways of kything](#) on my webpage.

In Robert Heinlein's [Stranger in a Strange Land](#), Michael Valentine Smith is born as a baby boy on Mars, orphaned by all human travellers, raised on Mars by Martians in Martian culture, and brought to earth as a young man. Let's talk about culture shock for a moment. Smith causes and receives quite a lot of it, as the story narrates his progression from a Martian with the genes and ancestry of a man to a character who is both human and Martian. There are quite a few stumbling points along the way to this. At one point, early in the story, someone asks Michael what is intended to be a very routine question, but Michael doesn't get it. He has heard the words before, but he's

a bit like a top-notch English professor trying to decipher a math paper: even with a glossary to all the symbol, there's a whole way of thinking that goes with the strange words, and Michael doesn't understand it. Heinlein says that half a million years' wildly alien abstractions raced through his mind. I don't have half a million years' worth of much of anything, but I do have wildly alien abstractions. I first became a philosopher as a boy, too young to touch any of my thoughts in language; one of the questions I thought of was, "Am I human?", or, "Am I a being of the same class as those I observe around me?" I observed that my parents were linguistic creatures who moved naturally in language, that I was not linguistic in any comparable way, and concluded that I was not human. Another question I pondered was a short, simple question that could be rendered, "Can there be a perpetual motion machine, and if so, how can it be started?" The second part of the question was tied to the first; the best way I can explain it is that, given time-symmetric laws of physics, if there's a machine that will keep on going forever, then the other side of the coin is that it has been going on forever, and there's no way to start it. In middle school, I started French at about the age of ten, and in a few years was able to think more fluently in French than in English. My accent sounded more typical of a native Parisian French speaker than a Midwestern American English speaker. Why? There are a couple of reasons, differences in how the two languages were taught, but one of the basic ones is that English was here, French was there, and my way of thinking was way out there, and happened to be closer to French than English.

Blajeny, also from [A Wind in the Door](#), is a Teacher from another galaxy, and the lessons he brings are sometimes difficult: not as, "Face your worst fear ever," but as different

from what they'd expect. He tells the children they will be in his class, and Meg is elated that her brother Charles will never have to go to the red schoolhouse again; then he says something that leaves her wondering where his classroom is. Blajeny retreats inside himself, and when she's decided he won't answer, he says, "Here, there, everywhere. In the schoolyard in first-grade recess. With the cherubim and seraphim. Among the farandolae."

I am wearing [the costume you see me in](#) because of how I identify with Blajeny, because there's something of me that shines through him.

Last, what about being a Christian? There's one music professor who said that, rather than thinking that we sing a song one and then it's over, and we sing it later, and so on, we should rather think that as long as there have been created beings, there is an eternal song rising before God, a song rising as incense that will never go out, and that when we sing we step into that song. Christianity is the foundation this whole edifice of thought is built upon, and its crowning jewel. It is the soil in which other things grow, and the thoughts I have given are an example of how Christians may think.

So now in this brief time I have shared a little bit about myself; I have answered a few questions and raised many more.

Come visit my website, at [Jonathan's Corner](#); it's in your program. Of course I'd like to hear from an editor who'd like me to write something, or would like an existing manuscript, or someone who'd like to hear me speak, or someone who'd like a website built, but more than any of that I have given this talk for the same reason I've built my website: to connect. What have I left you wondering about?

# A Shaft of Grace

I would like to talk about a religious experience. I use the term 'religious experience' with some caution as it is not what is usually called a religious experience. It did not include any dreams, or visions, or insights out of nowhere; intuition was present but did not help. But it was in the fullest sense a religious experience, at least as much as any semblance of vision or ecstasy that I've had.

I had been sinking into an increasing despair at politics, economics, and what that may mean for me. I was facing the possibility that I may well not die an old man. Furthermore, my job hunt was slower than usual. And despite the Lord's impressive Providence for me at earlier times and situations in my life, often seemingly miraculous, I was worried that I might eventually be thrown into a situation—possibly a concentration camp—where I might, in Bach's words, "outlive my love for Thee." Do not say, "It could not happen here;" stranger things have happened.

All quite a lot. This past Sunday (29/12/13), I went to the Cathedral, made a miserable confession, participated in the liturgy, and then drove to my favorite Indian restaurant to have a nice meal before going home to return and fight my darkness. On the sidewalk out of the restaurant, I ran into an old friend. He mentioned another mutual friend he was going to meet.

and I went to say hello to both of them before eating by myself:

I didn't shun their company, but I didn't want to intrude on their meeting. But they had planned a get-together, and had not invited me only because they did not think of whether I would be in Wheaton. And so I joined them for dinner, in which I thawed in response to a friend's conversation, and one of them picked up the cost of my meal. This was followed by several hours of sheer joy as we went to one of their apartments, and people played games and I enjoyed the company of old friends and two new.

And that was it. The gathering at the apartment dissolved after a couple of hours, and it doesn't look like even half of that group of friends will gather together in the near future. (I asked.) But without words, without any special intuition—the only real intuition I had was while I was driving to the restaurant was that I should turn aside to another place—it was as if God had showed, "I am still sovereign. I can do whatever I want." God can, in a heartbeat, make a job show up. He has not done so yet, in a heartbeat or otherwise. But he can still provide for me, and I am not in despair, but trust.

The rule in childbearing is a few minutes of ecstasy, nine months of carrying, and then two decades of raising children. And in another department, one tastes a meal for half an hour and then digests and acts on it. After that mountaintop experience, to use the Protestant term, I have been voluntarily dislodged from despair, and am off to work: jobhunting instead of a regular job, but off to spiritual work and repenting of my sins. It is the Orthodox understanding that God gives miracles to cover for human weaknesses, and if God gave me a powerful day's experience with friends and good times, that is not a reward for grandeur so much as a crowbar to loosen real

problems. And, God willing, a seed planted for me to grow. I do not seek to return to that experience, because, in the words of Lewis in [Out of the Silent Planet](#), "A pleasure is full-grown only as a memory." The latter part of that day was delightful, and I pursue it by doing the work I have after then: first writing the first part of [Merlin's Well](#), then working on publishing it on Amazon, then writing this article, then returning to work on the front end of a web application, all the while searching for my next job.

I have not acted worthily along the way, but I'm looking forward to the next installment.

# The Sign of the Grail

George had finally gotten through the first week at Calix College, and the chaos was subsiding. Bored for a minute, and too exhausted from the busy work to start researching something, he sat down, tried to remember something strange that he meant to investigate, and tried some more.

When he finally gave up and tried to think about what else he could do, he remembered a book he had seen in his closet, perhaps left over by a previous resident. He pulled out a fan and a lamp that were placed on it, and pulled out a large book. The entire leather cover had only eleven letters, and the dark leather showed signs of wear but seemed to be in remarkably good condition. The golden calligraphy formed a single word: Brocéliande. All across the front lay dark, intricate leather scrollwork.

What was "Brocéliande?" After looking at the leather and goldwork a short while, George opened Brocéliande and read:

The knight and the hermit wept and kissed together, and the hermit did ask, "Sir knight, wete thou what the Sign of the Grail be?"

The knight said, "Is that one of the Secrets of the

Grail?"

"If it be one of the Secrets of the Grail, that is neither for thee to ask nor to know. The Secrets of the Grail are very different from what thou mightest imagine in thine heart, and no man will get them by looking for secrets. But knowest thou what the Sign of the Grail be?"

"I never heard of it, nor do I know it."

"Thou wete it better than thou knowest, though thou wouldst wete better still if thou knewest that thou wete."

"That be perplexed, and travail sore to understand."

The hermit said, "Knowest thou the Sign of the Cross?"

"I am a Christian and I know it. It is no secret amongst Christians."

"Then know well that the sacred kiss, the kiss of the mass, even if it be given and received but once per year, is the Sign of the Grail."

"How is that? What makes it such as I have never heard?"

"I know that not in its fullness. Nor could I count reasons even knew I the fullness of truth. But makest thou the Sign of the Cross when thou art alone?"

"Often, good hermit; what Christian does not?"

"Canst thou make the Sign of the Grail upon another Christian when thou art alone?"

George's cell phone rang, and he closed the book and ran to hear the call better. When he came back, though he spent an hour searching, he could not find his place in the heavy book. He turned outside.

There were a lot of people, but what he saw was the castle-like stonework of the campus, the timeworn statues, and finally

the great wood with its paths, streams, and meadows. He got lost several times, but not truly lost, as he was exploring and finding interesting places no less when he lost his sense of direction. The next time he found his way, he went to the cafeteria and sat down at a table, part listening and part sifting through thoughts. When he got home, his mind was hungry again, and he opened Brocéliande to the middle:

Merlin howled.

"Lord of Heaven and Earth, I have everything I want, or rather everything I fled to. I have left the city and the company of men, and am become as a wild beast, living on grass and nuts.

"Is this because of whose son I am? Some say I have powers from my father, serving the Light only because the prayers spoken when some learned of that dread project. Yet here outside of castle and city I have learned things hidden from most men. I can conjure up a castle from the air, but not enter and live in one: I live in the wood as a man quite mad."

Then he looked around. The trees were a verdant green, yet he found apples. Presently he came to the fountain of Brocéliande; he rang not the bell but drew deep and drank a draught. The forest were his labyrinth and his lair.

A hawk came and set him on the branch close up. Merlin said to it, "Yet I can speak with thee: no element is a stranger to me."

A sound of footsteps sounded, and Merlin ran not away. Merlin his sister Ganeida laid a hand on Merlin his arm. "Come, Merlin. This is unworthy. I have brought thee food for a journey: King Arthur summoneth thee to his court."

Merlin beheld the wood called Brocéliande. He beheld its holly, its ivy, its trees shaken by storm and wind. He thought of the animals. And there was something about this forest that drew him: it seemed larger on the inside than the outside, and there was something always that seemed shining through it, like faint and haunting music which he had by struggles learned to catch as he withdrew from castles and the world of men.

Then Ganiada did start to sing a different song, a plain and simple folk tune, and Merlin his heart settled, and he did walk with his sister.

George slowly closed the book.

He imagined the scene; there was something about Merlin that haunted and eluded him. There was—

There was a knock on the door.

He opened it. It was one of the people from dinner.

"Do you want to see a movie?"

"What movie?"

"We're still deciding. But there are a few of us going to the theater."

George thought for a moment. Up until that point he thought he didn't want to read more of the book for now. When he declined the invitation, there was a fleeting insight which he forgot the next moment.

The next day in class, the figure of Merlin had a stronger grip on his imagination.

If George had less energy, his classes might have suffered more. As it was, he was getting by, and he slowly began to realize that there was something more that gripped him than horses, swords, and armor. He kept opening more to see the beautiful fantasy so different from his world. At one point he turned the

fantasy, so different from his world. At one point he turned the page:

Then Queen Guinevere did sigh and wept sore.

A lady asked, "Milady, what is it?"

"This Grail cometh even now. Is it accursed?"

"The Round Table shattered sore hard and knights return  
with strange tales. Such a holy thing this Grail is called, yet  
when it cometh the rich Grail yet burneth like fire. Already  
King Arthur his work is unraveling.

"Will it even take from me my Sir Lancelot? Or can I take  
even my Lancelot from the Holy Grail?"

There was something in the back of George's mind. He sat  
back, thinking, and then closed the book to make a brief visit to  
the unspoilt beauty of the wood.

When he went in, he noticed a great beech tree, lying,  
weeping. It seemed that there was something trying to get out  
of the verdure. There were ferns and moss around, and he  
walked and walked. The path took many turns, and George began  
to realize several things. First, it was dark. Second, he was lost.  
Third, a chill was setting in. Fourth, he could not see even the  
stars.

Before long he was running in heavy, icy rain, branches  
lashing, until a branch hitting his chest winded him. He sat down  
in stinging pain and regained his breath, then felt around and  
crawled beneath an outcropping. Here the rain at least would not  
get to him any more. He spent the night in waking shock at what  
this great pristine nature, unsullied by human contamination, was  
really like: the forest seemed to be without reason or order  
right down to the awkward surface of the rock that he was  
painfully lying on. Long-forgotten fears returned: when a little

light broke through the clouds, were those things he saw rocks, fallen trees, or goblins? He spent a long time shivering, and when the sun rose, he thirsted for light, and got up, only half awake, and followed it until he came to the edge of the forest and saw the castle-inspired buildings of the college. A short while later he was warming up with a welcome blanket and the welcome sound of voices in conversation.

Something was eating away at the back of George's mind. Perhaps because of his weariness, his attention in class was chiefly on the flicker of the fluorescent light and how the buildings, which on the outside were so evocative of castles, were so modern on the inside. The one thing that caught his mind was a set of comments about either how we must be individuals and do our own thing or else we are all community and individuality is an illusion. He wanted to be haunted and meet hints of a larger world, and others' passionately held opinions seemed like they were taken from Newsweek and USA Today.

What was on TV? He stopped in the lobby and saw a show with a medieval set, very carefully done to convey a medieval flavor, and watched until a heroine looked at a magical apparition in a full-length mirror and said, "I am having... a biochemical reaction!" He could not explain what failed to confront him, but he walked out. It was Freya's Day, commonly shortened to "Friday." When he learned how the days of the week were named, for Norse gods or celestial bodies—namely, Sun's Day, Moon's Day, Tiw's Day, Wotan's Day, Thor's Day, Freya's Day, and Saturn's Day—something seemingly pedestrian met him with a touch of a larger world. Now, it seemed, things that looked like they could tell of a larger world confronted him with the utterly pedestrian?

His homework did not take long.

Then, amidst Bon Jovi blaring through the hall, George began read. What he was reading seemed to affect him more like a song would than a story: a lullaby almost. He read of Arthur walking into battle, carrying an icon of the Virgin above him. There were mighty blows, armies with their mounted shock troops, great knights clothed in chainmail hauberks astride elephantine destriers, and in the center Arthur holding what seemed to be a story within a story, an icon that opened out onto something larger, and yet something he could not see in his mind's eye.

Then at another place he read as Arthur crossed land and sea and placed his sword on the ground and claimed a second Britain, and then gave of his knights, his brothers, and his substance to make a place like Great Britain, with forests and orchards, fields and towns, until he had given what he could of his spirit to make a Little Britain.

George looked through and began to see things weaving in and out: an intensity, a concentration, and not just that he was entering another time but he was entering another time, though he could not tell how it was different: he only sensed that time moved differently, and that his watch told something very different.

Then all of this seemed to crystallize as a grievously wounded Sir Lancelot came to an hospitable knight and Elaine his daughter spent endless time healing his wounds. Love so overwhelmed her that she poured herself out with such intensity that when Lancelot left for the only woman he could love, her body emptied of spirit and life floated on a bier in a boat until Arthur's court wept at the most piteous tale of her love. George found himself wishing he could weep.

—over hill over dale until the night was black and neither

...over him, over all and the night was black, and neither  
candle nor star pierced it. The great knight his destrier  
shook the earth. The great knight was clad in a double coat  
of mail and the shaft of his greater spear was as a weaver's  
beam. Then he did stop to dismount and his own steps shook  
the earth.

Before him was a chalice of purest gold, radiant with light  
—radiant as the day. He walked before it, his steps shook  
the earth, and he stood taller than ever he did stand, until  
his hand grasped it.

The light blazed brighter and a voice in the air spake,  
"Lancelot, Lancelot, why mockest thou me?" The light blazed,  
and Sir Lancelot fell against the ground in tremors, and his  
horse fled far away in terror.

Then Sir Lancelot spake a question which I will not tell  
you.

The voice answered with words not lawful for man to  
write, and the pure gold chalice vanished and the light with  
it.

The knight wist not why he ran, and later he awoke him in  
a strange place where there were neither man nor beast in  
sight.

George closed the book. He had been reading for a long time,  
he told himself. What was there to do?

He looked around the school website for clubs and  
organizations, and none of the many things people were doing  
caught his eye. He walked around the campus, looking at the  
buildings. He went to the library and wandered around the  
bookshelves, and picked up a few items but set them down. Then  
he returned to his room and sat down for a while.

He was bored for the rest of the day.

That night, as he dreamed, he saw a castle, and walked into it. Whenever he looked at his body, he saw what looked like his ordinary clothing, and yet he believed he was wearing armor. He walked through hallways, chambers, the great hall, even dungeons, trying to see what he was searching for. At last he was in a room where he heard people, and smelt something ineffable. He caught a glimpse of a chalice that he could not see, yet he sensed its silhouette, bathed in indescribable light on either side, and he saw light rising above its core. But he never succeeded in seeing it.

He awoke from the strain to see it. He heard birdsong, and the fingers of the light of the dawn were brushing against his face.

Something crystallized in George's mind, and he did not need to tell himself, "I am on a quest."

The next day he went into the city to look around in the medieval institute, and tried to see what was there. He managed to walk at a brisk pace, almost run, through the museum, and was nervous over whether he would get out by the time he had to leave to catch dinner. Nothing caught his eye; nothing seemed interesting; everything seemed good only for a glimpse.

There was something eating at him.

During the next week, George discovered online reproduction sword dealers and looked at the perfectly machined character of the many closeup images available online. He didn't buy anything, but after the week thinking and failing to find other places, George returned to the museum. Maybe there was something he had missed.

He stopped at the first sword.

The sword, or what was left of it, looked like it had been eaten by worms, if that were possible. The deeply pitted surface

intrigued him; it had all the surface of the complexity of a rock, and he thought that if he could take a magnifying glass or a zoomed-in camera lens to this or that part, it could pass for the intricate surface of a volcanic rock.

The handle didn't look right at all. It was a thin square rod connecting a thick blade and a thicker pommel, and seemed the very definition of "ergonomically incorrect," as if it had been designed to gouge the wearer's hand or generate blisters. It held for George something of the fascination of a car wreck. Why on earth had the museum put such a poor-quality specimen on display?

Then he read the rather large plaque.

The plaque read:

This sword was excavated in what is now Cornwall in Great Britain and dates to the 5<sup>th</sup> or 6<sup>th</sup> century AD. It is considered to be remarkably well-preserved, being one of few such finds to be straight and in one solid piece, the metal part lacking only a handguard, and is one of this museum's prized holdings and one of the most valuable gifts from an anonymous donor. The handle, of which only the metal tang remains, was probably wood or possibly other organic materials.

Think for a moment about the time and place this sword would have come from. Everything was made by hand, and there was little wealth: owning a sword would have been like owning a car today. Microscopic examination suggests that this sword was made for someone wealthy, as there are tiny fragments of gold embedded in the blade.

What was life like when nothing was made by machines or mass-produced and therefore things were more expensive

and there was less you could buy? What was life when you could not travel faster than a horse and what we today call information could not travel faster than people? What would your life have been like when you would have probably been born, lived, and died within a few miles of the same spot?

Life was hard.

But then look at the other side of the coin: can you think of anything people then would have had that you do not have today?

George looked at the sword, and tried to imagine it whole. At least he could tell what shape it suggested. And he tried to think about what the placard said, with none of the technologies he was used to. What would one do? Practice at swordplay? Wander in the forest?

George saw in his mind's eye Sir Lancelot kneeling on one knee, his sword point in earth, his sword pointing down, taking an oath. Then George looked over the sword again and it looked like Lancelot's sword: he imagined Sir Lancelot—or was it George?—laying his right hand on the sword and taking a mighty oath, and for a moment the sword in the museum took its full cruciform shape. And then as his eyes traced over the contours of the sword, it looked almost a relic, and he saw now one thing, now another: one scene from Brocéliande gave way to another, and something tugged at his heart.

He tried to imagine a great feast given by King Arthur to his nobles. There was something of that feast right in front of him, and it seemed to suggest an unfolding pageant. Knights and ladies dined with uproarious laughter, while minstrels sung enchanting ballads, and—

George realized someone was tapping on his shoulder. "Sir? Excuse me. but it's time for you to leave."

George turned and saw a security guard, and in puzzlement asked her, "Why? Have I done something wrong?"

She smiled and said, "You haven't done anything wrong, but I'm sorry, the museum is now closing. Come back another day!"

George looked out a window and saw that the daylight had completely fled. He realized he was very hungry.

He left after briefly saying, "Thank-you."

When he arrived home he was even hungrier, but even before he began eating he began looking through the same sites, selling swords.

None of them looked real to him.

After eating part of his meal, George opened Brocéliande, flipping from place to place until an illustration caught his eye.

He read:

Merlin walked about in the clearing on the Isle of Avalon. To his right was the castle, and to his left was the forest. Amidst the birdsong a brook babbled, and a faint fragrance of frankincense flowed.

Sir Galahad walked out of the castle portal, and he bore a basket of bread.

Then Galahad asked Merlin about his secrets and ways, of what he could do and his lore, of his calling forth from the wood what a man anchored in the castle could never call forth. And Galahad enquired, and Merlin answered, and Galahad enquired of Merlin if Merlin knew words that were more words than our words and more mystically real than the British tongue, and then the High Latin tongue, and then the tongue of Old Atlantis. And then Galahad asked after anything beyond Atlantis, and Merlin's inexhaustible fount ran dry.

Then Sir Galahad asked Merlin of his wood, of the stones and herbs, and the trees and birds, and the adder and the dragon, the gryphon and the lion, and the unicorn whom only a virgin may touch. And Merlin spake to him of the pelican, piercing her bosom that her young may feed, and the wonders, virtues, and interpretation of each creature, until Galahad asked of the dragon's head for which Uther had been called Uther Pendragon, and every Pendragon after him bore the title of King and Pendragon. Merlin wot the virtue of the dragon's body, but of the dragon's head he wot nothing, and Sir Galahad spake that it was better that Merlin wist not.

Then Sir Galahad did ask Merlin after things of which he knew him nothing, of what was the weight of fire, and of what is the end of natural philosophy without magic art, and what is a man if he enters not in the castle, and "Whom doth the Grail serve?", and of how many layers the Grail hath.

And Merlin did avow that of these he wist not none.

Then Merlin asked, "How is it that you are wise to ask after these all?"

Then Galahad spake of a soft voice in Merlin his ear and anon Merlin ran into the wood, bearing bread from the castle.

George was tired, and he wished he could read more. But he absently closed the book, threw away what was left of his hamburgers and fries, and crawled into bed. It seemed but a moment that he was dreaming.

George found himself on the enchanted Isle of Avalon, and it seemed that the Grail Castle was not far off.

George was in the castle, and explored room after room,

entranced. Then he opened a heavy wooden door and found himself facing the museum exhibit, and he knew he was seeing the same 5<sup>th</sup>-6<sup>th</sup> century sword from the Celtic lands, only it looked exactly like a wall hanger sword he had seen online, a replica of a 13<sup>th</sup> century Provençale longsword that was mass produced, bore no artisan's fingerprints, and would split if it struck a bale of hay. He tried to make it look like the real surface, ever so real, that he had seen, but machined steel never changed.

Then George looked at the plaque, and every letter, every word, every sentence was something he could read but the whole thing made no sense. Then the plaque grew larger and larger, until the words and even letters grew undecipherable, and he heard what he knew were a dragon's footsteps and smelled the stench of acrid smoke. George went through room and passage until the noises grew louder, and chanced to glance at a pool and see his reflection.

He could never remember what his body looked like, but his head was unmistakably the head of a dragon.

George sat bolt upright on his bunk, awake in a cold sweat, and hit his head on the ceiling.

The next day, George went to the medieval history library that was almost at the center of the campus, housed in a white limestone tower with one timeworn spire, and intricately woven with passages like rabbit holes. The librarian was nowhere in sight, and owing to his eccentricities the library still had only a paper card catalog, emanating a strange, musty aroma. George started to walk towards it, before deciding to wander around the shelves and get a feel for things medieval. The medieval history librarian was rumored to be somewhat eccentric, and insisted on a paper card catalog with no computers provided, which many of

the students said might as well have been medieval.

His first read traced the development of symbol from something that could not give rise to science to something that apparently paved the way in that a symbol and what it refers to were no longer seen as connected. It seemed hard to follow, some where the argument was obscure and even more when he followed the reasoning: he grasped it and grasped it not. As he read, he read of the cultivation of cabbages and tales of kings, and whether grotesques could let pigs have wings. He read of boys doing the work of men and men who acted like boys, of children who asked for bread and their fathers would give them stones in their bread, of careful historians ages before the great discovery of history and classicists preserving the ancient life after the ancient life met its demise, of strange things that turned familiar and yet familiar things turned strange, of time becoming something a clock could measure, of those who forged, those who plagiarized, and arguments today why no medieval author should be accused of plagiarism for what he copied, and yet he read of a world where few died of old age and minor cuts and illnesses could kill. He read of the problem of underpopulation, the challenge of having enough births, and untold suffering when there were not enough people.

Yet to speak this way is deceptive, because all these wonders and more were made pedestrian. The more he studied, the fewer wonders he met, or at least the fewer wonders he could find, and the more he met a catalog of details. He read the chronicles of kings and those seeking what could be recovered through them, and however much he read King Arthur was not mentioned once.

Though he spent weeks searching in the library, the haunting beauty of Brocéliande had been rare to begin with and now he wot of it not none.

And the fruitless search for the history of Arthur led him to knock on the librarian's door.

"I'm in a bad mood. Leave me alone!"

"Please."

"You can come in if you must, but you would be better off leaving."

"I've looked all over and found neither hide nor hair of a book on King Arthur. Does this library have nothing on him?"

"King Arthur? No, not this part of the library; look in the appropriate sections on the electronic card catalog in the regular library."

"But I want to know the history of Arthur."

"The history of King Arthur?!? What can you possibly mean?"

"I had been reading about King Arthur outside the library."

"The general library has a number of the original sources, along with more literary criticism than one person can possibly read, and what little the history of literature knows about more and less obscure authors. And our literature department has several renowned scholars on Arthurian literature. But why are you trying to find King Arthur in a medieval history library? That's as silly as looking for the history of the animals in Aesop's fables."

"You don't believe in Arthur?"

"No, I don't. Though I could be wrong. A lot of scholars, wrong as they may be, believe there was an Arthur around the 6<sup>th</sup> century, a warrior owning a horse, though the consensus is that he was not a king. These—"

"So Arthur was a knight and not a king?!?"

"No, he wasn't a knight. He couldn't have been. If there ever was such a person."

"But you said he had a horse and—"

"You're making a basic historical mistake if you're imagining a warrior then, even one with a horse, as a 'knight'. It would like a historian five or six centuries from now studying our technology, and knowing that Saint Thomas Aquinas was an author, imagining him doing Google searches and composing, in Latin of course, on his computer's word processor.

"Warriors owned horses, but stirrups hadn't reached Arthur's supposed land, and without a stirrup it is almost impossible to fight while mounted. A horse was a taxi to get a warrior to battle to fight on foot like everybody else, and nothing more. A warrior with a horse was a warrior with a better taxi to get to the scene of battle. A knight, on the most material level, is an almost invincible mounted shock troop compared to the defenseless-as-children so-called 'infantry.' And then you have the ideal, almost the mythos, of chivalry that developed about these mighty brutal warriors.

"The Arthurian legends were never even close to history to begin with, even if they hadn't grown barnacles on top of barnacles, like... a bestseller with too many spinoffs. All the versions have their own anachronisms, or rather the earlier versions are nothing like anachronisms, projecting a legendary past for the kind of knight that was then becoming fashionable. You have a late medieval Sir Thomas Mallory fitting knights with plate armor that would have been as anachronous for an Arthur of the 5<sup>th</sup> or 6<sup>th</sup> century to wear as it would have been for a knight of Mallory's day to be equipped with today's Kevlar version of a bulletproof vest.

"I don't think it's a particularly big deal for there to be anachronisms; the idea that anachronism is a problem is a complete anachronism in evaluating medieval literature; saying that Chrétien de Troyes built an anachronous social ideal is as

silly as complaining that the accounts of animals in a medieval bestiary are not doing the same job in the same way as a scientific biology textbook. Of course they aren't, but you're being equally silly to read a medieval bestiary as something that should be empirical scientific biology.

"Of course, getting back to anachronism, Mallory has guns which—"

"Guns?!? Machine guns? Handguns? Rifles?" George said.

"Nothing fancy, just early cannon, not a modern assault rifle. But there are none the less guns in the pivotal late medieval version of the story, which had Arthur's son and nephew, Mordred, besieging—"

"Which one was Mordred, and what was the other one's name?" George said.

"'Which one'? What do you mean..." The librarian said, pausing. "Aah, you get it. For that matter, the stories tend to include endless nobles whose family tree is, like a good nobility family tree, more of a family braid, and—"

It was around then that the conversation became something that George remembered with the confused memory of a dream. He knew that the librarian had explained something, but the closest he could come to remembering it was a discussion of how networked computers as the next generation of computing contributed to a unique medieval synthesis, or what actually seemed to make more sense of the shape of that "memory," the sound of an elephant repeatedly ramming stone walls.

What he remembered next was walking—walking through the library, walking around campus, walking through the forest, and then...

Had he been asked, he might have been collected enough to say that this was the first time in a long while he was not on a

quest.

What was he doing now?

Was he doing anything?

Where was George?

He was lost, although that didn't register on his mind. Or perhaps he wasn't lost, if "lost" means not only that you don't know where you are, but that you wish you knew.

George was in the city somewhere, if that was where he was. A great forest of steel, glass, and brick. Some was adorned by graffiti, other bits by ugly paint. This was definitely not the castle to him, but the wild wood, much more the wild wood than what was merely a place with many trees and few buildings. What made the wood a wood and not like a castle, anyway?

George looked around. In front of him was a boarded-up restaurant. The sign said, "Closed for minor renovations. REOPENING SOON." Its paint looked chipped and timeworn, and from what he could see looking in the dirty windows, it was dusty inside. What, exactly, did the menu say? George could see the menu, and some pictures of what was probably supposed to be food, but even though he was on the edge of hunger, the hazy blurs did nothing to make his mouth water.

George walked a good distance further, and saw the bright colors of a store, and heard music playing. He wandered in. Inside, the store was bustling with activity. Just inside, there was a demonstration of electronic puppies: an employee was showing the puppy off. On a whim, George walked over.

The young woman was saying words commands which the puppy sometimes did not respond to. She handed it to children to pet, who responded with exuberant warmth. But the more George watched the scene, the more the whole scene seemed off-kilter.

The puppies were cute, but there seemed to be something

much less cute when they moved. What was it? The puppy's animation seemed neither like a cute stuffed animal nor like a toy robot. It seemed like a robot in a puppy costume, but the effect was... almost vampiric.

Then George looked at the employee again. She was quite attractive, but her smile and the exaggerated energy for her role... reminded George of makeup almost covering dark circles under someone's eyes.

He ducked into an aisle. Below were not only unflavored dental floss and mint floss, but many different kinds of floss in all different colors, thicknesses, and several different flavors. But the choices in the actual floss were dwarfed by the choices in the cases: purple-and-pink containers of floss for preteen girls, larger rough-looking containers made of dark stonelike plastic for a man's man, and sundry groups—including trainers for babies who were still teething. George saw a sign above a display that said, "We bring you the freedom TO CHOOSE!"

He tried not to think about sledgehammers. He tried.

George was looking for a reason to stay in the store. There was eye-catching color everywhere, and he saw a section of posters, and started flipping through art posters, looking for something to buy, until he saw the sign above the posters. It said, "Priceless masterpieces from the greatest museums of the world, conveniently made available to you in American standard poster size and format, for only \$4.99 each."

Somehow the store's showmanlike displays seemed a bit hollow. George left.

George wandered out, something not quite clicking in his mind. He knocked on the building next door, and a voice said, "Just a minute; come in." He opened the door and saw a sight in shadows. A man was heading out a door. "As soon as I've finished taking

out the trash and washed my hands, I can help you."

A short while later, the man emerged. "Hi. I'm Fr. Elijah." He extended his hand, his head and hands standing out against the darkness and his dark robe, and shook George's hand. George said, "I'm George."

"What can I do for you?"

George stopped, and thought. He said, "I was just looking around while I was waiting for my thoughts to clear."

Fr. Elijah said, "Are you a student?"

George said, "Yes."

Fr. Elijah said nothing, but it did not seem he needed to say anything just then. George was growing calm.

"May I offer you something to drink? I was just going to make tea, and I don't have a full range of soft drinks, but there should be something worth drinking. There's a pitcher of ice-cold water if you don't care for an old man's coffee or tea."

George said "Yes."

"Wonderful. Come with me." The two began walking, and they sat down.

George looked at him.

Fr. Elijah said, "Please sit down," motioning to an armchair. "Did you want coffee, water, or tea? I have cookies. Oh, and there's milk too."

George smiled. "Could I have a chalice of milk?"

Fr. Elijah turned to get the cookies, a cup and some milk. George said, "I meant to say a cup of milk. Sorry, I was trying to be a little more serious."

Fr. Elijah said, "You can explain, or not explain. It's your choice. But I think you were being serious. Just not the way you expected. But we can change the subject. Do you have a favorite book? Or has anything interesting happened to you lately? I can

at least listen to you."

George said, "I was just at the store nearby."

Fr. Elijah asked, "What do you think of it?"

George said, "Are you sure you won't be offended?"

Fr. Elijah said, "One of the things I have found in my work is that people can be very considerate about not being offensive, but sometimes I have something valuable to learn with things people think might offend me."

"Ever wonder about the direction our society has headed? Or see something that left you wishing you could still wonder about that?"

"A lot of people do."

"I was already having a bad day when I wandered into a store, and just when I thought things couldn't get any more crass, they got more crass. I've just been invited to buy an identity with the help of a market-segment dental floss container."

"You're a man after my own heart. I've heard that the store manager has some pretty impressive connections. I've heard that if none of the dental floss containers in the store suit the identity you want to have, and you ask the manager, he can get your choice of floss in a custom container made by a sculptor to meet your whims!"

"But isn't there more to life than that?"

"I certainly hope so! Oh, and did I mention that I've found that store an excellent place for important shopping for April Fools' Day? I'm hoping to get my godson horribly artificial sugary-sweet tasting lacy pink floss in a container covered by red and white hearts and words like 'Oochie-poo.' He'll hit the roof! On second thought, he'll be expecting such a gift... I should probably give it to him on what you'd consider August 12."

"Why? What's special about August 12?"

"That's a bit of a labyrinth to sort out. Some Orthodox keep the old Julian calendar, while some keep the 'new' civil calendar, which means that those who preserve the old calendar, even if we manage not to go off in right field, are thirteen days 'late' for saints' days, celebrating July 30, the Feast of Saint Valentine, on what you'd consider August 12. What you call Valentine's Day is the Western celebration of the saint we celebrate on another day, and it's a bit of a Western borrowing to use it for pseudo-romantic purposes to pick on my godson, as that saint's feast did not pick up all the Western romantic connotations; Saint Valentine's story is a typical story of a bishop who strengthened people against paganism and was martyred eventually. Every day is a feast of some sort, and every feast—that is, every day—has several saints to celebrate... but I'm going on and on. Have I confused you yet?"

"Um, 'right field'? What does that mean?"

"Oops, sorry, personal expression. In the West people go out in left field and go loony liberal. In Orthodoxy, people go out in right field and go loony conservative. Some of the stuff I've been told would make me at least laugh if I didn't want to cry so badly. Sorry, I'm rambling, and I was trying to hear you out when it looked like you've had a rough day, right up to a store telling you there was nothing more to hope for in life than things like dental floss with a container designed for your market segment.

Let me let you change the subject."

"Um, you're probably wondering why I said, 'chalice of milk.'"

"I would be interested in hearing that, but only if you want to tell. I have a guess, but I really don't want you to feel obligated to say something you'd rather not."

"What is your guess?"

"That you said 'chalice of milk' for an interesting reason that

probably has an interesting connection to what, in life, you hope goes beyond the trivialities you were pushed into at that store. A chalice, whatever that means to you, is something deeper and richer."

George opened his mouth, then closed it for a moment, and said, "Does a chalice mean anything to you?"

"Oh, yes. A chalice means quite a lot to me."

"What does it mean to you?"

"George, have you ever seen a chalice?"

"No, but it's pretty important in something I've read."

"Would you like to see a chalice?"

"The chalice I've read about was made of purest gold. I'd imagine that if you have a fancy wine glass, maybe lead crystal, it would look poorer than what I'd imagine, and there are some things that are big enough that I'd rather not imagine."

"Well, there are some things that are bigger than can be seen, and that includes a chalice. But the chalice I have—I can't show it to you now—has the glint of gold, which has more layers than I can explain or know."

"Is there a time you can show it to me?"

"Yes, come during the Divine Liturgy, and you can see the chalice from which I serve the Eucharist. I can't explain—I know this offends some people, and I will understand if you are offended—that it would not be good for me to give you the Eucharist if you are not Orthodox. But you can see the chalice as it holds a treasure infinitely more valuable than its goldwork."

"What is that?"

"The Eucharist."

"Isn't that just a symbol?"

"Hmm, there are six hundred ways to respond to that. I can get into some of the intricacies later. If you want. Or we need

never talk about it. But...

"Saying the Eucharist is 'just a symbol' is as silly as saying that the Eucharist is 'just the body and blood of Christ'. What else do you want it to be—a designer container of dental floss?"

George's laugh was interrupted by a knock at a door. Fr. Elijah looked at his watch, and his face fell. He said, "Just when the conversation was getting interesting! I'm sorry; I have an appointment."

George said, "Well, I won't take any more of your time; I'll come on Sunday. What time?"

"The Divine Liturgy starts at 9:00 Sunday morning; I'm sorry, that isn't a very good time for college students. Arriving five minutes late isn't a big deal. Most of the professors of campus can give you directions to my parish, the Church of the Holy Trinity. And bother that I have to end our talk!"

"That's OK. Do you have some literature that you want to give me? Where are your pamphlets?"

"Hmm, that would take some time to explain, and I can explain later if you want. But I don't have any pamphlets. If you want a book I can go to the library and you can borrow one. But Orthodox people don't usually feel obligated to stuff your pockets with as much paper as we can and leave you walking away feeling guilty that you dread the prospect of reading it. Come back; I enjoyed talking with you, and if you want I can get something from the library. But only if you want. Please excuse me." Fr. Elijah stood up and bowed slightly, but reverently, to George as they shook hands.

"Coming!" Fr. Elijah said. "I'm sorry; I was just trying to wrap up a conversation. Please come in. It's been a long time since I've seen you, and I've been looking forward to it."

George stepped out, and walked out. He stopped by a window

to look into the Church building again.  
He could tell nothing that looked to him like a chalice, but  
everywhere was the glint of gold.

George wandered back with a spring in his step.  
He returned home and opened Brocéliande, and read:

Blaise turned at a slow step. "Why callest thou thyself  
empty? Hast thou none, my son?"

Merlin answered him. "Forgive me, my master, my lord."

The wind was deadly still.

Blaise turned even more fully. "What is it, my pupil?"

Merlin reached out his hand. A mighty wind blew, such as  
openeth doors that be closed and closeth doors that be  
open.

An apple tree shook of a violence and apples met their  
place on the humble earth, all apples did so which fell, save  
one which Merlin his hand did close upon it.

The wind blew and blew, stronger and stronger it blew,  
and Blaise looked upon Merlin, and spake: "Flyest thou now,  
my hawk?"

Merlin his chaste teeth closed in on the apple, and the  
great and mighty wind closed a door against the stone and  
hushed to become a soft murmuring breeze, as a still small  
voice.

Merlin looked upon his master. "Though the Grail remain a  
secret and a secret remain the Grail, men shall know it even  
under its cloak of samite most red. When a man shall grasp  
the secret of the Grail then shall he grasp the mystery of  
the Trinity."

Blaise looked upon his servant. "And who shall be in that  
grasp?"

Merlin spoke softly: "My lord, I will be not."

merlin spake sorry. my lord, I wit me not.

Blaise said, "My lord, it is well with thee."

Merlin abode in a quiet still spirit.

The hours and days passed quickly, until it was Sunday and George left a little early and arrived at the Church of the Holy Trinity early, looked at his watch and saw 8:53 AM.

He stepped inside and found things suddenly cool. There was a dazzling darkness, with pure candlelight and lamplight glittering off of gold, with fragrances of smoke and beeswax and incense. There was a soft chanting, and the funny thing was that it was hard to say whether the Church seemed full or empty. He saw few people, even for the small space, but he had rather a sense that the place was full of worshipers, mostly unseen. He could feel glory, almost as a weight.

There seemed to be a continuous faint commotion as people entered, went to the front, doing something he could not tell, and walked around. He stood as most people were standing, although some were sitting and people seemed to bow or move their hands. It is not exactly that George did not feel conspicuous as to how he was standing out, as that that was not quite the greatest way he felt conspicuous.

How did he feel conspicuous? George found no answer he liked. The whole situation seemed foreign to him, and for the first time it did not seem so much that he was examining something but that something, or someone, was examining him and judging him.

Something happened. Or rather, this time the something that happened meant that people were sitting down, in pews around the edges or on the floor, and the chant had become ordinary speech. Fr. Elijah said,

In the Name of the Father, of the Son, and of the Holy Ghost. Amen.

Last week after Liturgy, little John came up to me and said, "Fr. Elijah, I have a question." "What, I asked." "I saw Indiana Jones and the Raiders of the Lost Ark Friday and it was really, really cool! Could you tell me all about the Ark?"

So I paused in thought, and exercised a spiritual father's prerogative. I said, "You know what? That's a good question.

Let me think a bit and I'll answer that question in my homily." And when his father said, "But weren't you going to —" I said, "Don't worry about that. I'll blame the homily on him, and if people find it duller than a worn-out butter knife, they can call you at work and complain." And finally I got him to crack a faint smile.

So this is the homily I'm blaming on him. First of all, the Ark of the Covenant is a spiritual treasure, and is spiritually understood. It is not lost, but it is found in a much deeper way than some expect. For it is both a what and, more deeply, a who. You can look up in fact where it is, and the amazing thing is that it is still guarded as a relic rather than treated simply as something that merely belongs in a museum, and the hidden Ark is in fact greater than if it were displayed in a showcase. It is one of many treasures the Church guards, and it is at the Church of our Lady Mary of Zion in the Ethiopian city of Axum. I've been there, even if I could not see the Ark. But the Ark which holds the bread from Heaven and the tablets on which the Ten Commandments were inscribed is in the shadow of the Ark to whom we sing, "Rejoice, O Volume wherein the Word was inscribed" and whose womb is a garden of spiritual treasures, "more spacious than the Heavens" as we say, by

whom we are given the greater and in fact greatest Bread from Heaven. When we read of the Ark coming to King David and of the Theotokos or Mother of God coming to Lady Elizabeth, there are some surprising parallels which seem stunning until we recognize that that is just how Luke might be telling us that the Theotokos is someone to whom the Ark hints. There is a profound connection to the Arthurian legends, in which the Sir Galahad is granted to see into the Holy Grail and beholds a wonder beyond the power of words to tell. And it is in fact a misunderstanding on a number of levels to think that that rich Grail is confined to—

If George were sitting on a chair, he might have fallen off it. He was, fortunately, sitting on the floor. When he caught himself enough to follow the words, he listened closely:

...these other images. It was from the virgin earth that the first Adam, by whom we all live natural life, was taken. It was from the parched earth of the Virgin Theotokos that the last Adam, by whom we are called to the divine life, was given. And still this is not to tell how the first Adam, wanting to become God, lost his divinity, until God became the Last Adam, raising up Adam that all of us who bear Adam's likeness might become divine, bearing the likeness of God. Death entered when we took and ate the fruit from the Tree of the Knowledge of Good and Evil, and now everlasting begins when we obey the summons to take and eat the Fruit from the Tree of Life.

Is it possible to call Mary Magdalene the Holy Grail? Yes and amen. We can call Mary Magdalene the Holy Grail in a very deep sense. She spoke before the Emperor, and that incident is why after all these years Christians still color

incident is why after all these years Christians still color Easter eggs, red eggs for the Orthodox Church as they were for Mary Magdalene, when she presented a red egg to the Emperor, perhaps miraculously. There are only a few dozen people the Church has ever honored more. She bears the rank of "Equal to the Apostles," and an angel told her the mysterious news of the Resurrection, and it was she who told the Apostles who in turn would be sent ("Apostle" means "Sent One") to the uttermost ends of the earth.

The Holy Grail is that vessel which first held the blood of Christ, and it is the shadow of that symbol in which the body and blood of Christ become real so that they can transform us. The Eucharist is misunderstood through the question of just what happens when the priest consecrates the gift, because the entire point of the transformation of the gifts is the transformation of the faithful so that we can be the Body of Christ and have the divine blood, the royal bloodline, the divine life coursing through our veins. God the Father the Father for whom every fatherhood in Heaven and earth is named. Father, Son, and Holy Spirit are each the King for whom every kingdom is named, so that the Kingdom of Heaven is more, not less, of a Kingdom than the kingdoms we can study on earth.

In the third prayer before communion, we are invited to pray, "O Thou Who by the coming of the Comforter, the Spirit, didst make thy sacred disciples precious vessels, declare me also to be a receptacle of his coming." Mary Magdalene bears powerful witness to what a disciple can be if she becomes a humble earthen vessel in which there is another coming of Christ. She became the Holy Grail, as does every one of us transformed by the power of Christ's

body and blood. If you only ask questions about the transformation of bread and wine, the Holy Grail is merely a what... but if you recognize the larger transformation that has the smaller transformation as a microcosm, the Holy Grail can also be a who: you and I.

It would take much longer to even begin to speak of that nobility of which you will only find the trace and shadow if you study royalty and their bloodlines. I have spoken enough.

In the Name of the Father, and of the Son, and of the Holy Ghost. Amen.

George was at once attracted, entranced, repulsed, and terrified. It seemed like more than he had dared to dream was proclaimed as truth, but that this meant he was no longer dealing with his choice of fantasy, but perhaps with reality itself. The chanting resumed. There was a procession, and what was in it? Ornate candles, a golden spoon and something that looked like a miniature golden lance, something covered with a cloth but that from its base might have been an intricately worked golden goblet, a cross that seemed to be glory itself, and other things he could not name. It was not long before George heard, "The holy things are for those who are holy," and the reply—was it a correction?—immediately followed: "One is holy. One is Lord, Jesus Christ, to the glory of God the Father. Amen."

George wanted to squirm when he heard the former, and when he heard the latter, he headed for the door. The spiritual weight he had been feeling seemed more intense; or rather, it seemed something he couldn't bear even though he hoped it would continue. He felt, just for a moment that this was more than him having an experience, but he failed to put his finger on what more it might be.

Once outside, he tried to calmly walk home, but found himself running.

George found himself walking, but in completely unfamiliar surroundings. He spent a good deal of time wandering until he recognized a major road, and walked alongside it until he returned home, hungry and parched.

He opened Brocéliande for a moment, but did not feel much like reading it. George went to check his email, began looking through his spam folder—to see if anything important got through, he told himself—and found himself wandering around the seedier side of the net.

In the days that followed, people seemed to be getting in his way, his homework was more of a waste of time, and somehow Brocéliande no longer seemed interesting.

Friday, George missed dinner and went, hungry, to a crowded store where a white-haired man stood right between him and the food he wanted... not only blocking the aisle with his cart, but adding a third 12-pack of soda to the bottom of his cart... and seeming to take forever to perform such a simple task.

After waiting what seemed too long, George refrained from saying "Gramps," but found himself hissing through his teeth, "Do you need help getting that onto your cart?"

The white-haired man turned around in surprise, and then said, "Certainly, George, how are you?"

George stopped.

It was Fr. Elijah.

"Can, um, I help you get that in your cart?"

"Thank you, George, and I would appreciate if you would help me choose another one. Do you have a favorite soda?"

"This may sound silly, but Grape Crush. Why?"

"Help me find a 12-pack of it. I realized after you came that

it was kind of silly for me to inviting people like you inside and not having any soda for them, and I've been procrastinating ever since. Aah, I think I see them over there. Could you put that under your cart?"

George began walking over to the Grape Crush.

Fr. Elijah asked, less perfunctorily, "How are you, George?" and reached out his hand. At least George thought Fr. Elijah was reaching out his hand, but it was as if Fr. Elijah was standing on the other side of an abyss of defilement, and holding out a live coal.

Fr. Elijah shook George's hand.

George tried to find his footing on shifting ground, and managed to ask, "Fr. Elijah, how are you going to get that soda out to your car?"

"Usually someone from the store helps me put things in my trunk or something; I've never found a grocery store to be a place where nothing is provided."

The chasm yawned; George felt as if he were clothed in filthy rags.

"Um, and at home?"

"The Lord always provides something. Sorry, that sounded super spiritual. Usually it's not too long before someone strong comes by and can carry things."

George tried to smile. "I'm fine. How are you?"

Fr. Elijah made no answer with words. He smiled a welcoming smile, and somehow the store began to remind him of Fr. Elijah's office.

George kept waiting for Fr. Elijah to say something more, to answer, but Fr. Elijah remained silent. There seemed to be a warmth about him, as well as something he feared would burn his defilement, but Fr. Elijah remained silent, and pushed his cart,

which had a small armload of groceries and a heavy weight of soda cases, to the register.

"I can help you load things into your car, Fr. Elijah."

Fr. Elijah turned with warmth. Gratitude was almost visible in his features, but he remained strangely silent.

George momentarily remembered to grab a sandwich, then returned to Fr. Elijah in line.

George began to wonder why Fr. Elijah was not speaking to him. Or rather, that was the wrong way to put it. George could not accuse Fr. Elijah of being inattentive, but why was he silent?

George began to think about what he had been doing, and trying not to, to think of something else, to think of something else to talk about. But images returned to his mind, and a desire to—he certainly couldn't mention that.

Where were they? Fr. Elijah had just pushed the cart to his car, and slowly fumbled with his keys to unlock his trunk. George thought with a shudder about what it would be like to an old man to load cases of soda, even 12-packs.

"I can help you unload the soda at your house."

Fr. Elijah turned and made the slightest bow.

Once inside the car, George made a few nervous remarks about the weather. Fr. Elijah simply turned with what must have been a fatherly smile, but said nothing.

George did not consider himself strong, but it was only a few minutes for him to get the handful of cases of soda tucked into a slightly messy closet.

Once back in the car, Fr. Elijah seemed to arrive almost immediately at the dorm.

George said, "Now I remember. I wouldn't ask for another ride back, but I should have asked to borrow a book from your library."

Fr. Elijah turned. "Should you?"

George said, "What do you mean, should I? Are you mad at me? Didn't you tell me that I could borrow any book in your library if you wanted?"

Fr. Elijah said, "For all I am concerned now, you may borrow the whole library, if you want to. Or keep it, if you want."

"Then why don't you want me borrowing a book now?"

"I have many good books you could read, but right now, you don't really want one of my books."

"What do you mean?"

"If you genuinely want to borrow a book, I will gladly talk with you and suggest what I think would be your deepest joy. But why are you asking me for a book now?"

"I thought it would be polite to..."

Fr. Elijah waited an interminable moment and said, "Something is eating you."

George said, "You have no right to—"

Fr. Elijah said, "I have no right to this discussion, and neither do you. Thinking in terms of rights is a way to miss the glory we were made for. But let us stop looking at rights and start looking at what is beneficial. You don't have to answer, but are you happy now?"

George waited, and waited, and waited for an escape route to open up. Then he said, and the saying seemed like he was passing through white-hot ice, "I've been looking at—"

Fr. Elijah said, "Stop, You've said enough."

George said, "But how did you know?"

Fr. Elijah sighed, and for a moment looked like he wanted to weep. "George, I would like to say something deep and mysterious about some special insight I have into people's souls, but that is not it. I am a father, a confessor, and one of the

biggest sins I hear in confession—'biggest' not because it is unforgivable; Jesus was always ready, more than ready, to forgive this kind of sin, but 'biggest' because it keeps coming up and causing misery, is the sort of sin you've been struggling with. I count myself very fortunate that I grew up in an age when you could have all the basic utilities without getting all sorts of vile invitations coming whether you want them or not, and I am glad that I do not feel obligated to purchase some nasty pills because I'm not a real man unless I have the same drives I had at the age of eighteen. What a miserably small and constricted caricature of manhood! I count myself a real man, much more because I have not suffered what tends to become such a dreary dissipation and deflation of any real manhood."

George said, "You're not mad?"

Fr. Elijah raised his hand, moved it up and down and side to side, and said, "I am blessing you, priceless son."

George said, "How can I be free of this?"

Fr. Elijah said, "Come with me. Get back in the car."

They drove for a few more minutes, neither one needing to say anything, until George noticed with alarm the shape of the hospital.

George said, "Where are we going?"

Fr. Elijah said, "To the emergency room."

George looked around in panic. "I don't have money for—"

"Relax. None of the treatment you will be receiving will generate bills."

"What on earth are you—"

"I'm not telling you. Just come with me."

They walked through a side door, George's heart pounding, and George noticed two people approaching immediately.

Fr. Elijah turned momentarily, saying, "Buenos noches,

Señoras," and motioned with his hand for them to follow him.

As they and George followed, Fr. Elijah said, "Because of the triage in an emergency room, and because mere seconds are a matter of life and death in treating really severe injuries, people with relatively 'minor' injuries that still need medical attention can wait for an interminable amount of time."

Fr. Elijah suddenly stopped. George saw a boy with skinned knees, whose mother was slowly working through paperwork. Fr. Elijah said, "Take away his pain."

George looked at him, halfway to being dumbfounded.

"What?"

Fr. Elijah said, "You heard me." Then he turned and left, so that George saw only Fr. Elijah's back and heard from him only broken Spanish.

George felt grateful that at least he wasn't too easily grossed out. He could look at lacerated flesh and eat if he needed to. George sat next to the boy, smelled an overwhelming odor from his blood, and suddenly felt sick to his stomach.

George tried to refrain from swearing about what Fr. Elijah could possibly have meant. Badger the hospital into giving anaesthesia sooner? Kiss it and make it better? Use some psychic power he didn't have? Find a switch on the back of the kid's neck and reboot him?

For a while, nothing happened, until the boy stopped sobbing, and looked at him, a little bit puzzled.

George said, "Hi, I'm George."

The boy said, "Mr. George."

George tried to think of something to say. He said, "What do you get when you cross an elephant with a kangaroo?"

"What?"

"Really big holes all over Australia."

The boy looked at him, but showed no hint of a smile.

"Do you not get it?" George asked.

The boy said, very quietly, "No."

"An elephant has a lot of weight, and a kangaroo bounces up and down. If you put 'weight' and 'bouncy' together, then you get something that, when it bounces, is so heavy it makes big holes in the ground."

The boy said nothing until George added, "That's what makes it funny."

The boy made himself laugh loudly, and just as soon winced in pain.

George tried to think of what to do. After a while, he asked, "What's your favorite color?"

When the boy said nothing, George looked at his face and was surprised at the pain he saw.

"What is your name?"

"My name is Tommy."

George thought about what to say. He began to tell a story. He told of things he had done as a boy, and funny things that had happened (the boy didn't laugh), and asked questions which met with incomprehension. And this went on and on and on.

George wondered why he was having so much fun.

Then George looked at Tommy.

When was the last time George had even begun to do something for someone else?

George realized three things. First, he had stopped talking. Second, a hand was holding tightly to his sleeve. Third, there was something he was trying very hard not to think about.

George looked, and Tommy asked, "Mister, are you a knight? I want to be a knight when I grow up."

George had never before felt such shame that he wished the

earth would swallow him up.

"Mister?"

"No, I am not a knight."

"You seem like a knight."

"Why?"

"You just do. Do you know anything about knights?"

"I've been reading a book."

"What's it called?"

"Brocéliande."

"Tell me the story of Brookie-Land."

"I can't."

"Why?"

"Because I haven't read all of it."

"What have you read?"

George closed his eyes. All he could remember now was a flurry of images, but when he tried to put them together nothing worked.

George was interrupted. "Do you have a suit of armor?"

Immediately, and without thought, George said, "What kind of armor? I mean, is it chain mail, like a steel, I mean iron, sweater, or is it the later plate armor that gets into the later depictions?"

Because if there were a King Arthur, he would—"

"Did King Arthur know powerful Merlin? Because Merlin could —"

"I've read a lot about Merlin—he could build a castle just with his magic. And it apparently matters whose son he is, but I couldn't—"

"I want you to show me—"

A voice cut in. "Tommy!"

"Yes?" the boy said.

"The doctor is ready to see you... Sir, I'm sorry to interrupt,

but—"

"Why does the doctor want to see me?"

"Because she wants to stitch up your knees, Silly Sweetie. Let the nurses roll you away. I'm glad—"

Tommy looked in puzzlement at his knees, saw how badly lacerated they were, and began screaming in pain.

There was a minor commotion as the nurses took Tommy in to be stitched up, or so George would later guess; he could never remember the moment. He only remembered walking around the emergency room, dazed.

Truth be told, though, George felt wonderful. He faintly noticed hearing Fr. Elijah's voice, saying something in Spanish, and joined a group of people among whom he felt immediate welcome. Then the woman who was on the bed was taken in, and Fr. Elijah, and to his own surprise, George, bid farewell to the other members of the group.

George and Fr. Elijah were both silent for a long time in the car.

Fr. Elijah broke the silence.

"Would it be helpful to talk with me about anything?"

"I have to choose just one?"

"No, you can ask as many questions as you want."

"Besides what I started to tell you—"

"Yes?"

"When I was talking with that boy, I mean Tommy, the boy you introduced me to, I—I'm not sure I would have said exactly this, but I've been spending a lot of time reading Brocéliande and no time choosing to be with other people... would you keep that book for me, at least for a time?"

"I certainly could, but let's look at our option. You sound less than fully convinced."

"I don't want to give it up."

"Well, yes, I wouldn't want to give it up either. But is that it?"

"No... I'm really puzzled. Just when I thought I had managed to stop thinking about never-never land and start thinking about Tommy, the kid asked me about never—I mean, he said that he wanted to grow up to be a knight, and he asked me if I was a knight. Which I am not."

"That's very mature of you..."

"And?"

"What would you imagine yourself doing as the right thing?"

"Getting away from that silly desire and be with other people instead."

"Hmm."

"Hmm what?"

"Have you ever read C.S. Lewis's 'The Weight of Glory'?"

"No."

"Ok, I want to stop by my office before I drop you off at home, because I'm going to go against my word and give you literature to read. Although I only want you to read a few pages' essay out of the book, unless you want to read more essays—is this OK?—"

"I suppose."

"Because C.S. Lewis talked about the idea of unselfishness as a virtue, and said that there's something pitiable about letting unselfishness be the center of goodness instead of the divine love. Or something like that. And the reason I remembered that is that somewhere connected with this is this terrible fear that people have that their desires are too strong, and maybe their desires are too much in need of being deepened and layered, except I think he only said, 'too weak.' Today I would add: in a

much deeper way that you can remedy by dangerous pills in your spam.

"Maybe you don't need to get rid of that book at all... maybe you should lend it to me for a time, and let me enjoy it, but maybe not even that is necessary."

"Why?"

"My guess is that if you read enough in that book—or at least the ones I've read—you may notice a pattern. The knight goes to the company of the castle and then plunges into the woodland for adventure and quests, and you need a rhythm of both to make a good story. Or a good knight."

"I fail to see how I could become a knight, or how knighthood applies to me."

"Hmm..."

"Hmm what?"

"Maybe that's a can of worms we can open another time... For now, I will say that the reason the stories have knights doing that is not because the knights wore armor and rode horses, but because the people telling the stories were telling the stories of men. Who need both castle and wood. Keep reading *Brocéliande*, and push it further. Push it to the point that your college and your city are to you what the castle was to the knight. Or even so that you don't see the difference. And alongside your trek into the enchanted wood, meet people. I would suggest that you find a way to connect with people, and work with it over time. If

I may offer a prescription—"

"Prescription?"

"A priest is meant to be a spiritual physician, or at least that is what Orthodox understand. And part of the priest's job is to prescribe something. If you're willing."

"I'll at least listen."

"First, I want you to spend some of your time with other people. Not all."

"Doing what?"

"That's something you need to decide, and even if I can offer feedback to you, I would not make that decision for you. You need to have a think about it."

"Second, something for you to at least consider... Come to me for confession. I cannot give the sacrament I give to Orthodox, but I can bless you. Which isn't the immediate reason I mention it. Even if I were not to bless you, and even if Christ were not listening to your confession, there would still be power in owning up to what you have done. It gives power in the struggle."

"Third, do you access the Internet through a cable or through wireless?"

"An ethernet cable. I don't have a laptop, and I've heard that the wireless network on campus is worth its weight in drool."

"Do you have a USB key?"

"Yes."

"Then give me your Ethernet cable."

"What kind of Luddite—"

"I'm not being a Luddite. I'm offering a prescription for you... There are different prescriptions offered for the needs of different people."

"So for some people it is beneficial to visit—"

"For me it has been. When I was trying to figure out what was going on, I went to a couple's house, and with their permission started looking through the pictures in their spam folder until I'd had more than enough. And I wept for a long time; I suddenly understood something I didn't understand about what I was hearing in confession. I still pray for the people photographed and those looking at the photograph, and some of the women's

faces still haunt me—"

"The faces haunt you?"

"Yes. Understand that at my age, some temptations are weaker... but I looked at those faces and saw that each one was somebody's daughter, or maybe somebody's son, and my understanding is that it's nothing pleasant to pose for those pictures. At least the faces I saw reminded me of an airline stewardess trying really hard to smile peacefully to someone who is being abrasive and offensive. But as I was saying, I count my hour of looking to be of the greatest spiritual benefit. But it would not benefit you, and it is my judgment that in your case a little of what programmers call a 'net vacation'—though I invite you to use lab and library computers—could help you in—"

"Do you know what it's like to give up the convenience of computers in your room?"

"Do you know what it's like to ride a horse instead of a car for a short time? I do..."

"But riding a horse is at least... like... um... it's more like Arthur's world, isn't it?"

"If you want to look at it that way, you're welcome to..." Fr. Elijah stopped the car and stepped out, saying, "Please excuse me for a moment." The shuffling seemed to drag on, and Fr. Elijah stepped out with a book and got back in the car. "Oh, and I almost forgot. Please don't make this a matter of 'I won't do such-and-such or even think about it,' because trying not to think about a temptation is a losing game. I am inviting you to a trek from castle to wood, and wood to castle, with both feeding into a balance. Here is the book with 'The Weight of Glory' and other essays. Now..."

Calix College was in sight almost immediately, and Fr. Elijah waited outside George's dorm for what became a surprisingly

long time... he wondered if he should go up and see if George had changed his mind, and—

George walked out and handed him a cable in the dark. It was thick and stiff.

"I thought Ethernet cables weren't this thick and stiff."

"It's my power cable. I put stuff I need on my USB key."

"Good man."

"Goodbye."

"Goodbye, and George, one other thing..."

"Yes?"

"There is no better time to be in a Church than when you know how unworthy you are."

"Um..."

"What?"

"I appreciate how much you're stretching, but..."

"George, I want to ask you something."

"I've been serving the Divine Liturgy for thirty-eight years now. How long have I been worthy to do so?"

"Is this a trick question? All thirty-eight?"

"It is indeed a trick question, but the answer is not 'thirty-eight.' I have never been worthy to serve the Divine Liturgy, nor have I ever been worthy to receive communion, nor have I ever been worthy to pray at Church, or anywhere else. We can talk about this if you like, but am not just being polite when I say that there is no better time to enter the Church than when you know yourself unworthy. Maybe we can talk later about what trumps unworthiness. For now, I wish you good night, and I would be delighted to see you join and adorn our company on Sunday."

George climbed up in his room and sat in his armchair, and it felt like a throne. He was exhausted—and on the other side of shame. He began dutifully opening the C.S. Lewis book, glanced at

the title, then tossed it aside. It was not what he really wanted. He picked up Brocéliande, wiped the dust off the cover with his hand, and opened to its middle, to its heart. George read:

rode until he saw a river, and in the river a boat, and in the boat a man.

The man was clad all in black, and exceeding simple he appeared. At his side was a spear, and was a basket full of oysters filled.

"I ask your pardon that I cannot stand. For the same cause I can not hunt, for I am wounded through the thighs. I do what I might, and fish to share with others."

The knight rode on, Sir Perceval he hyght, until he came upon a castle. And in that castle he met a welcome rich, before a King all in sable clad round, and a sash of purple royal girt about his head, and full majestic he looked.

Then in walked a youth, bearing a sword full straight, for it were not falchion neither scimitar, but a naked sword with a blade of gold, bright as light, straight as light, light as light. The very base of that sword were gem work, of ivory made and with sapphires encrusted. And the boy was girt tightly with a baldric and put the sword in its place. In utmost decorum the sword hung at his side.

The boy placed what he shouldered at the feet of the King.

Spake the King: "I ask your forgiveness that I do not rise. Partake of my feast."

Simpler fare was never adorned by such wealth of wisdom. The body was nourished, and ever more spirit in the fare that was read.

Anon processed one man holding a candelabra of purest

gold with seven candles, anon another, anon a maiden mother holding a Grail, it was such a holy thing! Anon a lance that ever bore three drops of blood. And ever Perceval wondered, and never Perceval spake, though it passed many a time. With a war inside him Sir Perceval kept him his peace. Anon the King spake, "See thou mine only food," and anon came the Grail holding not a stone neither a snake but a single wheaten host, afloat as a pearl in a sea of wine, red as blood. And never the King ate he none else.

Here a page was ripped out from Brocéliande, with yellowed marks where once tape failed to mend what was torn.

The damsel arose from her weeping. "Perceval! Perceval! Why askedst thou not thine enquiry?"

George soon fell into a deep and dreamless sleep. Saturday he rested him all the day long: barely he stirred. In his dream, George heard a song. All was in darkness.

The song it came out of a mist, like as a mist, melodic, mysterious, piercing, like as a prayer, mighty, haunting, subtle, token of home and a trace of a deep place. How long this continued he wot not.

The one high, lilting voice, tinged with starlight, became two, three, many, woven in and out as a braid of three strands, or five, or ten, as a Celtic knot ever turning in and out. And as it wove in and out, it was as the waters of a lake, of an ocean, of a sea, and George swam in them. George was ever thirsty, and ever he swam. He swam in an ever-rippling reflection of the Heavens at midnight, a sea of unending midnight blue and living sapphire.

George's feet sunk and he walked on the noiseless loam. Up

about him sprung blades of grass and he walked into a forest growing of emerald and jade atop pillars of sculpted earth. Anon he walked slowly and slowly he saw a farm with the green grass of wheat growing of the fertile fecund field.

Upon a ruins he came, a soft, silent place where a castle still lingered and the verdant moss grew. Then through a city he walked, a city alive and vibrant in its stones, though its streets were a for a moment at a rest from its men. And in that city, he walked into the Church his heart, and found a tome opened upon a wooden stand entwined by vines.

George looked for a moment at the volume, and for a moment he saw letters of sable inscribed in a field argent. Then the words shifted, grew older, deepened into the depth of a root and the play of quicksilver. The script changed, the words spoke from afar, and became one word whose letters were hidden as behind a veil, one word inscribed at once in ciphers of luminous gold and congealed light that filled the book and shone all around it until—

George was awake, bright awake, wide awake, looking at a window the color of sunrise.

He arose to greet the coming of the dawn.

George went to Church and arrived almost an hour earlier than the 9:00 Fr. Elijah had given, and found to his surprise that although there were few other people, things had already begun. The fragrance of frankincense flowed and gold glittered, and he caught a word here and a phrase there—"Volume wherein the Word was inscribed," "Holy God, Holy Mighty, Holy Immortal," "Blessed is the Kingdom," "Lord have mercy." Then he heard a phrase he had heard innumerable times in other contexts. A shibboleth later taken from the New Testament, "The just shall live by faith," completely broke the illusion. George had had

plenty of time to get sick of words he knew too well, or so it appeared to George. Yes, he was glad people understood them, but wasn't there more to understand than that? Even if they were both straightforward and important...

The homily began.

In the Name of the Father, and of the Son, and of the Holy Ghost. Amen.

One of the surprises in the Divine Comedy—to a few people at least—is that the Pope is in Hell. Or at least it's a surprise to people who know Dante was a devoted Catholic but don't recognize how good Patriarch John Paul and Patriarch Benedict have been; there have been some moments Catholics aren't proud of, and while Luther doesn't speak for Catholics today, he did put his finger on a lot of things that bothered people then. Now I remember an exasperated Catholic friend asking, "Don't some Protestants know anything else about the Catholic Church besides the problems we had in the sixteenth century?" And when Luther made a centerpiece out of what the Bible said about those who are righteous or just, "The just shall live by faith," which was in the Bible's readings today, he changed it, chiefly by using it as a battle axe to attack his opponents and even things he didn't like in Scripture.

It's a little hard to see how Luther changed Paul, since in Paul the words are also a battle axe against legalistic opponents. Or at least it's hard to see directly. Paul, too, is quoting, and I'd like to say exactly what Paul is quoting.

In one of the minor prophets, Habakkuk, the prophet calls out to the Lord and decries the wickedness of those who should be worshiping the Lord. The Lord's response is to say that he's sending in the Babylonians to conquer and if

say that he is sending in the Babylonians to conquer, and if you want to see some really gruesome archaeological findings, look up what it meant for the Babylonians or Chaldeans to conquer a people. I'm not saying what they did to the people they conquered because I don't want to leave you trying to get disturbing images out of your minds, but this was a terrible doomsday prophecy.

The prophet answered the Lord in anguish and asked how a God whose eyes were too pure to look on evil could possibly punish his wicked people by the much more wicked Babylonians. And the Lord's response is very mysterious:

"The just shall live by faith."

Let me ask you a question: How is this an answer to what the prophet asked the Lord? Answer: It isn't. It's a refusal to answer. The same thing could have been said by saying, "I AM the Lord, and my thoughts are not your thoughts, nor are my ways your ways. I AM WHO I AM and I will do what I will do, and I am sovereign in this. I choose not to tell you how, in my righteousness, I choose to let my wicked children be punished by the gruesomely wicked Babylonians. Only know this: even in these conditions, the just shall live by faith."

The words "The just shall live by faith" are an enigma, a shroud, and a protecting veil. To use them as Paul did is a legitimate use of authority, an authority that can only be understood from the inside, but these words remain a protecting veil even as they take on a more active role in the New Testament. The New Testament assumes the Old Testament even as the New Testament unlocks the Old Testament.

Paul does not say, "The just shall live by sight," even as he invokes the words "The just shall live by faith "

He inverts the words, "The just shall live by faith."

Here's something to ponder: The righteous shall walk by faith even in their understanding of the words, "The just shall live by faith."

In the Name of the Father, and of the Son, and of the Holy Ghost. Amen.

George was awash and realized with a start that he was not knocked off his feet, gasping for air. He felt a light, joyful fluidity and wondered what was coming next. This time he realized he was sure he saw a chalice; the liturgy seemed to go a little more smoothly and quickly.

As soon as he was free, Fr. Elijah came up to him. "Good to see you, George. How are you?"

George said, "Delighted... but I'm sorry, I haven't read 'The Weight of Glory' for you yet."

Fr. Elijah said, "Good man... no, I'm not being sarcastic. Put first things first, and read it when you have leisure. How did you find the homily?"

George said, "It was excellent... by the way, it was really for me that you preached last week's homily, right? You seemed to be going a good bit out of your way."

"It was really for you, as it was also really for others for reasons you do not know."

"But weren't you getting off track?"

"George, I have a great deal of responsibility, concerns, and duties as a priest. But I have a great deal of freedom, too. I can, if you want, draw on King Arthur and his court every service I preach at from now until Christmas."

"How much do you mean, I mean literally? One or two? Four or five?"

"Huh? 'Literally'? Um, there is a temptation in the West to

devote entirely too much time to what is literal. I was exaggerating when I said every service from now until Christmas... but, if you want, I'd be perfectly happy to do that literally, for every service you're here." Fr. Elijah extended his hand. "Deal?"

George paused in thought a moment. "Um, you've said that I could take all the books in your library and keep them if I want. I know you were exaggerating, but..."

"Yes, I was. But I am not exaggerating when I say that you can take them if you want."

"Don't you love books?"

"Immensely, but not as much as I want to love people! They're just possessions, and there are much greater treasures in my life than a good book, even though books can be quite good. Can we agree that I'll preach on something in Arthurian literature every liturgy I preach at until Christmas?"

"What if I'm not here?"

"We can make it part of the deal that I'll only preach on that topic if you're here."

George hesitated, and then shook his hand. "Deal."

Fr. Elijah smiled. "Some people have said my best homilies and best surprises have come from this kind of rash vow."

George started to walk away, and then stopped.

Fr. Elijah said, "Is something on your mind?"

George said, "What if other people don't like you preaching on something so odd? What will you do if people complain?"

Fr. Elijah said, "Then I can give them your cell phone number and have them call you at all hours of the day and night to grouse at you for foisting such a terrible proposal on me. Now get some coffee. Go! Shoo!"

After getting home, George did his laundry, looked to see if anyone was hanging out in the lounge (everybody was gone), and

played games in the computer lab. It was a nice break.

The next day in math class, the teacher drew a grid on the board, drew dots where the lines crossed, erased everything but the dots, and set the chalk down. "Today I'd like to show a game. I'm handing out graph paper; draw dots where the lines cross.

We're going to have two people taking turns drawing lines between dots that are next to each other. If you draw a line that completes a little square, you get a point. I'd like a couple of students to come up and play on the board." After a game, there was a momentary shuffle, and George found himself playing against the kid next to him. This continued for longer than he expected, and George began to piece together patterns of what would let his opponent score points, then what laid the groundwork for scoring points...

The teacher said, "Have any of you noticed things you want to avoid in this game? Why do these things lead to you giving points to your opponent when you don't want to, or scoring points yourself? This kind of observation is at the heart of a branch of mathematics called 'combinatorics.' And almost any kind of game a computer can play—I'm not talking about tennis—is something that computers can only play through combinatorics. I'd like to show you some more 'mathematical' examples of problems with things we call 'graphs' where a lot of those same kinds of things are—"

She continued giving problems and showing the kinds of thought in those problems.

George felt a spark of recognition—the same thing that attracted him to puzzles. Or was it something deeper? Many "twenty questions" puzzles only depended on identifying an unusual usage of common words, "53 bicycles" referring to "Bicycle" brand playing cards rather than any kind of vehicle, and

so on and so forth. Some of what the teacher was showing seemed deeper...

...and for the first time in his life, the ring of a buzzer left George realizing he was spellbound in a math class. It set his mind thinking.

In English class, he winced, as just as before-class chatter seemed about to end, one of the other students said, "A man gets up in the morning, looks out his window, and sees the sun rising in the West. Why?"

George was not in particular looking forward to a discussion of literature he wasn't interested in, but he wanted even less to hear people blundering about another "twenty questions" problem, and cut in, "Because the earth's magnetic poles, we suppose, were fluctuating, and so the direction the sun was rising from was momentarily the magnetic West."

The teacher laughed. "That isn't the answer, is it?"

The student who had posed the question said, "Um... it is..."

The professor said, "So we are to imagine someone going to a gas station, saying, 'Which way is East?', and the attendant responding with, 'Just a sec, lemme check... I know usually this way is East, but with the Earth's magnetic fluctuations, who knows?' You know that in a lot of literature, East and West are less like numbers than like colors?"

"Um... How could a direction be like a number or a color?"

"There's colorful difference and colorless difference. If I tell you there are 57 pens in my desk, I haven't said anything very colorful that tells much about pens, or about my desk. But if I tell you a rose is a delicate pink, I've told you something about what it's like, what it's like, to experience a rose."

"So what color is East, then? Camouflage green?"

"East isn't a color, but it's like a color where camouflage

green and fiery red are different. In both Greek and Russian, people use the same word for 'East' and 'sunrise'... and if you're really into etymology, English does this too, only we don't realize it any more. 'East' in English originally means 'sunrise,' as 'Easter' comes from the Anglo-Saxon name of a goddess of light and spring. Such terrible things the Orthodox miss out on by their quaint use of 'Pascha.' For us, the 'big' direction, the one which has the longest arrow or the biggest letter, the one all other directions are arranged around, is North; in Hebrew, it's East. There is a reason many churches are arranged East-West and we often worship towards the East, and that has meant something for the U.S... Would you agree that we are part of the West?"

"So our land is the worst land?" George said.

"Well, if you read enough Orthodox nut jobs, yes... particularly if this land is their home. But U.S. land, or part of it at least, is called utter East... the one U.S. state where Orthodoxy isn't edgy, exotic, fruitcake or 'other,' is Alaska, where there has been a native Orthodox presence, strong today, for over two hundred years. You know how, in *The Voyage of the Dawn Treader*, C.S. Lewis has a wood nymph speak an oracle that has drawn Sir Reepicheep all his life?

"Where sky and water meet,  
Where the waves grow sweet,  
Doubt not, Reepicheep,  
To find all you seek,  
There is the utter East.

"There's something big you'll miss about the holy land of Alaska if you just think of it as fully a state, but just one more state just like every other state. It's the only state if 'state'

state, just like every other state. It's the only state, if state is an adequate term, with a still-working mechanical clock on the outside of a public building that was made by an Orthodox saint.

Among other things.

"And the idea of holy land that you would want you to travel to feeds into things, even in Protestant literature like Pilgrim's Progress, which you will misunderstand if you treat the pilgrimage as just there as a metaphor for spiritual process. I have found it very interesting to look at what people classify as 'just part of the allegory,' even though we will read no simpler allegory among the readings for this class. Now in reading for today, have any of you had an experience like Pilgrim's wakeup call at the beginning of Bunyan?"

George's head was swimming.

Why were his classes so dull before this week? He remembered previous math lessons which, in various ways, failed to give him puzzle solving, and in annoyance, turned to previous English lessons, when—

—why hadn't he paid attention? Or, more accurately, when George had paid attention, why hadn't he let it be interesting?

Philosophy also turned out to be interesting; the professor began the unit on medieval philosophy by asking, "How many angels can dance on the head of a pin?", eliciting various forms of derision, then asking people what they were deriding, began asking "How many of you can touch the head of the same pin at once?", produced a pin, and after students made various jostling efforts, asked whether a pin could accommodate a finite or infinite number of angels.

This was used to a class discussion about the nature of matter and spirit and whether angels dancing on the head of a pin would push each other away the way human bodies would...

and at the end of class the professor began asking if people wanted to talk about how unfortunate it was that medieval philosophers had to use the poetic image of angels dancing on the head of a pin where others would have used the colorless language of analytic philosophy.

In chemistry, the professor did nothing in particular to make things interesting. George still enjoyed the lecture as it built to a discussion of isotope distributions as used to compute average molecular weights.

George was quite surprised when the weekend approached, spent the weekend playing card games, and wondered at how quickly Sunday came.

On Sunday, George entered the strange world of the Church building. It seemed more, not less, strange, but things began to make sense. "In the Name of the Father, and of the Son, and of the Holy Ghost. Amen." was something he noticed often, and he, if not understanding, was at least comfortable with the continual hubbub as people seemed to be moving about, sometimes to the front.

As the service passed, he found his eyes returning to, and then fixed on, an icon that showed three ?angels? sitting around a stone table. In the back was a mountain, a tree, and a building, a faroff building that George somehow seemed to be seeing from the inside...

The perspective in the picture was wrong. Wait, the perspective wouldn't be that wrong by accident... the picture looked very distorted, and George wanted to reach out and—

George looked. The perspective vanished, not at some faroff place on the other side of the picture, but behind him, and the picture seemed at once faroff and something seen from inside.

And what was it, almost at the heart of the icon, or

somewhere beneath it, that the three peaceful, radiant, great ? angels? almost seemed clustered around? It looked like a chalice of gold.

George was looking, trying to see into the picture, wishing he could go closer, and seeing one person after another come closer in the dance of song and incense. George instinctively found himself backing up, and then realized people were sitting down and Fr. Elijah began:

In the Name of the Father, and of the Son, and of the Holy Ghost. Amen.

Sir Thomas Mallory in *Le Morte d'Arthur* has any number of characters, and I want to describe one of them, Sir Griflet, who is completely forgettable if you don't know French: he appears briefly, never stays in the narrative for very long, never does anything really striking at all. His lone claim to fame, if you can call it that, is that Mallory refers to him as "Sir Griflet le fils de Dieu." For those of you who don't know French, we've just been cued in, in passing, that by the way, Sir Griflet is the Son of God.

Now why would this be? There some pretty striking things you can do if you are a character in that work. Sir Griflet is not a singular character who has the kind of energy of Sir Galahad, or in a different but highly significant way, Merlin. For that matter, he does not have even a more routine memorability like Sir Balin who wielded two swords at the same time. He's just forgettable, so why is he called le fils de Dieu, I mean the Son of God?

In Chretien de Troyes, who is a pivotal author before Mallory, a character with a name that would become "Griflet" is equally pedestrian and is named "fis de Do", son

of Do, which has a root spelling of D-O where the word for God in that form of French is D-E-U. So a starkly pedestrian character, by an equally pedestrian language error, seems to have his father's name mixed up with how you spell the word for God. How pedestrian, disappointing, and appropriate.

There is a somewhat more interesting case in the story of a monk who believed that Melchizedek was the Son of God, and this is not due to a language error. If you were listening when the readings were chanted from the Bible, you would have heard that Melchizedek was "Without father, without mother, without descent, having neither beginning of days nor end of life: but made like unto the Son of God, abideth a priest continually." This may be surprising to us today, but that's because most of us have lost certain ways of reading Scripture, and it was a holy monk who thought this. He made a theological error, not a mere language error, and when his bishop asked his assistance in praying over whether Melchizedek or Christ was the Son of God, he arrived at the correct answer.

Now let me ask you who is really the Son of God. Do you have an answer now?

I'm positive you're wrong. It's a forgettable person like Sir Griflet or Melchizedek.

When the Son of God returns in glory, he will say, "Depart from me, you who are damned, into the eternal fire prepared for the Devil and his angels. For I was hungry and you gave me nothing to eat; I was thirsty and you gave me nothing to drink; I was a stranger, and you showed me no hospitality; naked, and you did not clothe me; sick or in prison, and you did not visit me." And when the damned are confounded and ask when they could have possibly failed to

do that, he will answer them, "I swear to you, just as you did not do it to one of the least of these, you did not do it for me."

We, in our very nature, are symbols of the Trinity, and this does not mean a sort of miniature copy that stands on its own in detachment. The Orthodox understanding of symbol is very difficult to grasp in the West, even if you haven't heard people trying to be rigorous or, worse, clever by saying "The word is not the thing it represents." And talking about symbols doesn't just mean that you can show reverence to a saint through an icon. It means that everything you fail to do to your forgettable neighbor, to that person who does absolutely nothing that draws your attention, you fail to do to Christ.

And if you are going to say, "But my neighbor is not Christ," are you not straining out a gnat and swallowing a camel in what you are being careful about? Your neighbor as such is not Christ as such. True, but this is really beside the point. It betrays a fundamental confusion if any of the damned answer their Judge and say, "But I wasn't unkind to you. I was just unkind to other people." We are so formed by the image of Christ that there is no way to do something to another person without doing that to Christ, or as this parable specifically says, fail to do. And I'd like you to stop for a second. The last time you were at an unexpected funeral, did you regret more the unkind thing you said, or the kind word you failed say, the kind action you failed to take? Perhaps it may be the latter.

Christ hides in each of us, and in every person you meet. There is a mystery: the divine became human that the human might become divine. The Son of God became a man that men might become the Sons of God. God and the Son of God

might become the Sons of God. God and the Son of God became man that men might become gods and the Sons of God. Christ took on our nature so that by grace we might become what he is by nature, and that does not just mean something for what we should do in our own spiritual practices. It means that Christ hides in each person, and to each person we owe infinite respect, whether they're boring, annoying, mean, lovely, offensive, fascinating, confusing, predictable, pedestrian, or just plain forgettable like old Sir Griflet.

You owe infinite respect.

In the Name of the Father, and of the Son, and of the Holy Ghost. Amen.

Did George want to go up to the icon? He went up, feeling terribly awkward, but hearing only chant and the same shuffle of people in motion. He went up, awkwardly kissed the three figures someplace low, started to walk away in inner turmoil, turned back to the image, bowed as he had seen people see, and kissed the chalice of wine.

It was not long before he saw Fr. Elijah come out with a chalice, and draw from it with a golden spoon. This time he noticed people kissing the base of the chalice. There was nothing awkward about them, and there seemed to be something majestic that he began to catch a glimmer of in each of those present.

George later realized that he had never experienced worship "stopping" and coffee hour "beginning." The same majestic people went from one activity into another, where there was neither chanting nor incense nor the surrounding icons of a cloud of witnesses, but seemed to be a continuation of worship rather than a second activity begun after worship. He was with the

same people.

It didn't occur until much later to George to wonder why the picture had a chalice... and then he could not stop wondering. He picked up Brocéliande and read:

The knight and the hermit wept and kissed together, and the hermit did ask, "Sir knight, wete thou what the Sign of the Grail be?"

The knight said, "Is that one of the Secrets of the Grail?"

"If it be one of the Secrets of the Grail, that is neither for thee to ask nor to know. The Secrets of the Grail are very different from what thou mightest imagine in thine heart, and no man will get them by looking for secrets. But knowest thou what the Sign of the Grail is?"

"I never heard of it, nor do I know it."

"Thou wote it better than thou knowest, though thou wouldst wete better still if thou knewest that thou wote."

"That is perplexing and hard to understand."

The hermit said, "Knowest thou the Sign of the Cross?"

"I am a Christian and I know it. It is no secret amongst Christians."

"Then know well that the sacred kiss, the kiss of the mass, even if it be given and received but once per year, is the Sign of the Grail."

"How is that? What makes it such as I have never heard?"

"I know that not in its fullness. Nor could I count reasons even knew I the fullness of truth. But makest thou the Sign of the Cross when thou art alone?"

"Often, good hermit; what Christian does not?"

"Canst thou make the Sign of the Grail upon another Christian when thou art alone?"

"What madness askest thou?"

"Callest thou it madness? Such it is. But methinks thou wete not all that may be told."

"Of a certainty speakest thou."

"When thou dwellest in the darkness that doth compass round about the Trinity round about that none mayeth compass, then wilt thou dwell in the light of the Sign of the Grail with thy fellow man and thy brother Christian, for the darkness of the Trinity is the light of the Grail."

George got up, closed the book, and slowly put it away. He wondered, but he had read enough.

George dreamed again of a chalice whose silhouette was Light and held Light inside. Then the Light took shape and became three figures. George almost awoke when he recognized the figures from the icon. George dreamed much more, but he could never remember the rest of his dream.

That week, Fr. Elijah's homily was in George's mind. He passed the check-in counter as he walked into the cafeteria, began to wonder where he might apply Fr. Elijah's words... and stopped.

The line was moving slowly; he had come in late after wandering somewhat. Sheepishly, he stopped, looked at the woman who had scanned his ID, and extended his hand. "Hi, I'm George."

The woman pushed back a strand of silver hair. "Hi. It's good to meet you, George. I'm Georgina."

George stood, trying to think of something to say.

Georgina said, "What are you majoring in?"

"I haven't decided. I like reading... um... it's really obscure"

I haven't decided. I like reading... um... it's really obscure, but some stuff about Arthur."

"King Arthur and the Round Table?"

"Yes."

"Wonderful, son. Can you tell me about it sometime? I always love hearing about things."

George said, "Ok. What do you... um..."

"I been working at this for a long time. It's nice seeing all you students, and I get some good chats. You remind me of my grandson a little. But you're probably pretty hungry now, and the lines are closing in a few minutes. Stop by another day!"

George ate his food, thoughtfully, and walked out of the cafeteria wishing he had said hi to more of the support staff.

That week, the halls seemed to be filled with more treasure than he had guessed. He did not work up the courage to introduce himself to too many people, but he had the sense that there was something interesting in even the people he hadn't met.

On Wednesday, George went to register for his classes next semester, and realized his passwords were... on his computer, the one without a power cord.

After a while, thinking what to do, he knocked on a floormates' door. "Um, Ivan?"

"Come in, George. What do you want?"

George hesitated and said, "Could I borrow a power cord? Just for a minute? I'll give it right back."

Ivan turned around and dragged a medium-sized box from under his bed. It was full of cables.

"Here, and don't worry about returning it. Take a cord. Take twenty, I don't care. I have them coming out of my ears."

George grabbed one cord, then remembered he did not have the cord for his monitor. He took another. "I'll have those back"

the cord for his monitor. He took another. I'll have these back in a minute."

"George, you're being silly. Is there any reason you need not to have a power cord?"

"Um..." George opened his mouth and closed it. Then he hesitated. "No."

George left, registered online, shut his computer down, left the room, did some work at the library, and went to bed.

Thursday he was distracted.

Friday, it was raining heavily, and after getting soaked in icy rain running to and from his classes, George decided he would check his email from his room... and found himself wandering through the spam folder, and threw the cords out in the dumpster.

Sunday he walked into church with hesitation, and Fr. Elijah almost immediately came over. "Yes, George?"  
George hesitated.

Then he told Fr. Elijah what was going on.

Fr. Elijah paused, and said, "George, do you know about the Desert Fathers?"  
"No."

"A group of people a bit like the hermits in Arthurian legend. Some people think that Merlin was originally based on such monks... but aside from that speculation, they were much holier than either of us. And there was one time when someone asked them, 'What do you do?' And what do you think the Desert Father said?"

"Pray? Worship? Live a good life?"

"'We fall and get up, fall and get up, fall and get up.' That is the motion of Orthodox life, and if you see prostrations, you will literally see us fall and get up. I'm not sure if you think that if you repent of a sin once, the burden's over and it's all behind

you repent of a sin once, the hard part is over and it's all behind you. In my sins, I have to keep repenting again and again. You have fallen, now get up. And get up again. And again. And again. And keep getting up.

"The Lord bless you, in the Name of the Father, and of the Son, and of the Holy Spirit. Amen."

George walked away still feeling unworthy, and everywhere saw a grandeur that seemed to be for others more worthy than him. Everything around him seemed royal, and Fr. Elijah preached:

In the Name of the Father, and of the Son, and of the Holy Ghost. Amen.

In our commemorations, we commemorate "Orthodox kings and queens, faithful princes and princesses," before we commemorate various grades of bishops. The bishop is in fact royalty; instead of calling him "Your Majesty," we call him "Your Grace," "Your Eminence," "Your Holiness," "Your All Holiness." If you do research, you will find that the bishop is more than a king: the bishop is the Emperor, and wears the full regalia of the Roman Emperor.

One question that has been asked is, "The king for the kingdom, or the kingdom for the king:" is the king made king for the benefit of the kingdom, or is the kingdom a privilege for the benefit of the king? The Orthodox choice of now requiring bishops to be monks is not because married persons are unfit, or rather necessarily more unfit, to serve. Most of the apostles in whose shadows the monastic bishops stand were married, and the monk bishops I have met consider themselves infinitely less than the married apostles. But a monk is given to be a whole burnt offering where nothing is kept back and everything is offered to God

to be consumed by the holy sacrificial fire. (Or at least that's what's supposed to happen, but even if this is also what's supposed to happen in a marriage, it's more explicit in monasticism.) And it is this whole burnt offering, unworthy though he may be, who makes a bishop: Orthodoxy answers "the king for the kingdom:" the king is made king for the benefit of the kingdom, the bishop serves as a whole burnt offering for the benefit of the diocese.

Now let me ask: Which of us is royalty? And I want you to listen very carefully. All of us bear the royal bloodline of Lord Adam and Lady Eve. It's not just the bishops. I will not go into this in detail now, but the essence of priesthood is not what I have that "ordinary" Orthodox don't have. It's what I have that Orthodox faithful do have. And without you I can celebrate the liturgy. And the essence of royalty is not what a king or bishop has that a "commoner" or faithful does not have; it's what king and bishop share with the ordinary faithful. The Greek Fathers have no sense that "real" royal rule is humans ruling other humans; that's a bit of an aberration; the real royal rule is humans ruling over what God has given them and over themselves, and doing that rightly is a much bigger deal than being one of the handful of kings and bishops.

And each of us is called to be what a bishop is: a whole burnt offering in humble service to the kingdom—large or small is not really the point—over which the Lord has appointed us king. It may mean showing conscience by cleaning up your room—and if you have a first world abundance of property, it is a very small way of offering them back to the Lord to keep them in good order. It means carefully stewarding precious moments with other people,

maybe saying, "I hope you have a wonderful day," and saying it like you mean it, to support staff. And it means humbly ruling your kingdom within, in which both Heaven and Hell may be found. It is when you serve as king, the king made for the kingdom, that your kingdom will be your crown and glory.

In the Name of the Father, and of the Son, and of the Holy Ghost. Amen.

After Church, a young woman stormed up to Fr. Elijah. She had, at as far arm's length from her body as she could hold it, a clear trash bag holding a pink heart-shaped piece of artisan paper that appeared to have writing on it. She stopped opposite Fr. Elijah and said, "Do you know anything about this note?"

Fr. Elijah smiled gently. "It appears someone has sent you some sort of love note. How sweet!"

"Were you involved?"

"What, you think I would do something like that? I'm hurt!"

The young woman stood up straight and put her hand on her hip. Fr. Elijah turned to George and said, "Would you like to know what's going on?"

The young woman said, "Yes, I'd love to hear you explain this."

Fr. Elijah said, "George, the elephant population in Sri Lanka is in some peril. They're not being hunted for their ivory, let alone for their meat, but there is a limited amount of land, and farmers and elephants are both trying to use an area of land that makes it difficult for them to both support themselves. So some people tried to think about whether there was a way to make a win-win situation, and make the elephants an economic asset. They asked themselves whether elephants produce anything. And it turns out that something that eats the

enormous amount of food an elephant eats does, in fact, produce a lot of something."

George said, "I don't see the connection. Have I just missed that you're changing the subject?"

The young woman said, "He hasn't changed the subject."

Fr. Elijah said, "They're using it to make hand-crafted artisan paper, colored and available in a heart shape, which you can buy online at [MrElliePooh.com](http://MrElliePooh.com) if you're interested."

George looked at Fr. Elijah in shock and awe.

The woman said, "Grandpappy, you are such a pest!"

Fr. Elijah lightly placed an arm around her shoulder and said, "George, I'd like to introduce you to my granddaughter Abigail. She has a face as white as alabaster, raven-black hair, and lips are red as blood. And she has many merits besides being fun to pick on."

Abigail stuck out her tongue at her grandfather and then shifted to his side. "And my grandfather does many fine things besides be obnoxious... Can't live with him, can't shoot him... You should get to know him, if you haven't." She gave him a gentle squeeze. "There are brownies today, George, and they're great! Can I get you some?"

George read in Brocéliande, and wandered in the wood, and the castle of Calix College, and the surrounding city. Fr. Elijah began to introduce fasting, and George found something new in his struggles... and began to make progress. Nor was that the only thing in George's life. He began to find the Middle Ages not too different from his own... and he was puzzled when he read in Brocéliande:

And in that wood anon saw Sir Yvain a lion fighting against a primeval serpent, and the serpent breathed fire

against the lion his heel, and a baleful cry did the lion wail.

Then Lord Yvain thought in his heart of which animal he should aid, and in his heart spake, "The lion is the more natural of the twain." And anon he put his resources on the side of the lion, and with his sword he cleft the ancient serpent in twain and hew the serpent his head in seven, and warred against the wicked wyrm until he were reduced to many small bits. And he cleaned his sword of the serpent his venomous filth, and anon the lion kept him at his side.

And anon Sir Yvain slept and an advision saw: an old woman, whose colour was full of life and whose strength intact and yet who were wizened, riding upon a serpent and clothed in a robe black as coal, and spake and said, "Sir

Yvain, why have ye offended me? Betake ye as my companion." Then Sir Yvain refused her and there was a stench as brimstone aflame. Then a woman clad in white, riding astride a lion, new as white snow did courtesy and said, "Sir Yvain, I salute thee." And about her was a fragrance of myrrh.

Anon Sir Yvain awoke, and sore amazed was he, and none could interpret his advision.

George spoke with Fr. Elijah, and asked him what the passage meant. Fr. Elijah said, "What does this passage mean? You know, that isn't as big a question in Orthodoxy as you think... but I'll try to answer. In fact, I think I'll answer in a homily."

"It had better be impressive."

"Fine. I'll preach it as impressive as you want."

"When?"

"On Christmas."

That evening, George called Fr. Elijah to say that he was going home for Christmas and then later in the week said "Fr

home for Christmas... and then, later in the week, said, "Fr. Elijah? Do you know anybody who could keep me? My parents were going to buy me a ticket home with frequent flier mileage on an airline, but my grandfather is ill and my mother used up those miles getting a ticket... and money is tight... I don't know what I'm going to do."

"Well, you could talk with your College and try to get special permission to stay over break... but I'd prefer if you stayed with me. Because we agreed that I would only preach on the Arthurian legends, including your Old Law and New Law, if you were there... and I was so looking forward to preaching a Christmas homily on the Arthurian legends."

"Can't you preach it without me?"

"We agreed and shook hands. I have that homily for Christmas, but only if you're there."

"Um... I would be an intruding—"

"George, I am a priest because I love God and I love people. And I do meet people quite a lot, but my house is empty now. It would be nice to have some young energy and someone to share more than a Christmas dinner with?"

"Are you sure?"

"You know how to get to my place. I'll see you whenever you want to come over."

On Christmas, Fr. Elijah preached,

In the Name of the Father, and of the Son, and of the Holy Ghost. Amen.

Christ is born! Glorify him!

In the Arthurian legends, there is a story of a knight who sees a serpent fighting a lion, kills the serpent, and wins a kind response from the lion. In some versions the knight has a vision in which one woman appears on the serpent and

another on the lion, and we learn that these women represent the Old Law and the New Law.

What are the Old Law and the New Law? One can say the Torah or Law of Moses, and the Gospel, and that is true up to a point, but the "Old Law" is not just a take on Judaism. Sir Palomides, a Saracen, described with profound confusion between Islam and paganism (and the problem with Islam is not that it is pagan but that it is not pagan enough—it is more emphatic about there being one God, even more than the one God is), becomes a Christian and is asked to renounce the Old Law and embrace the New Law. Even if Sir Palomides is in no sense a Jew.

In the ancient world, it is not enough to say that the Orthodox Church understood itself as the fulfillment of Judaism, politically incorrect as that may be. The Orthodox Church was even more fully the fulfillment of paganism, and if you understand what was going on in Plato, you understand that paganism was deepening. The Orthodox Church is the place where that final deepening of paganism took place. And I would like to explain for a moment why Orthodoxy is pagan and neo-"pagan" forms like Druidry aren't.

The popular stereotype is that paganism was merry and free until Christianity's grim hand came down, and that's like saying that difficult toil was carefree until someone came along and with a grim hand invited people to a feast. Pagan virtues—courage, justice, wisdom, moderation—are retained in Christianity, but they are not the virtues of joy by themselves. C.S. Lewis said that if you're not going to be a Christian, the next best thing is to be a Norseman, because the Norse pagans sided with the good gods, not because they were going to win, but because they were going

to lose. The Norse decision was to meet the Day of Doom, called Ragnarok, and go down fighting on the right side. And so the Norse have a tale of the war-god Tyr who took and kept an oath even at the price of letting a wolf bite off his right hand, and there is something very much like ancient paganism in keeping an oath though it cost your right hand.

What Orthodoxy offered paganism in the ancient world was precisely not a grim hand flattening everything, but retaining the virtue already recognized in paganism while deepening them with faith, hope, and love that live the life of Heaven here on earth. The Christian virtues of faith, hope, and love are the virtues that can see beauty, that bring Heaven down to earth, that can call for the whole Creation to worship God: as we sing at the Eucharist, joining the Song that summons the host of angels, sun, moon and stars, heavens and waters above the heavens, sea monsters and all deeps, fire and hail, snow and frost, stormy wind fulfilling his command, mountains and hills, fruit trees and cedars, beasts and all cattle, creeping things and flying fowl, kings and all people, princes and rulers, young men and maidens, old men and children—all called in the Psalmist's summons to praise the Lord.

If you want to know how today's "neo-paganism" can fail to be pagan, I would recall to you the Medieval Collectibles website which offers a medieval toilet cover so you can have a real medieval coat of arms on your, um, "throne." The website's marketing slogan is "Own a piece of history," but you're not owning a piece of history... or think of the interior decorator who was told, "I want an authentic colonial American bathroom," to which the decorator replied, "Ok, so exactly how far from the house do you want it?"

Some have noted that the majority of books written by Orthodox today are by Western converts, and there is a reason for that. The Reformation almost created literate culture, but the opposite of literate is not illiterate, but oral, in a way that neo-paganism may want to create but is awfully hard to recreate. Even in its spiritual reading the Orthodox Church remains an oral culture in its core while it uses writing: many of its most devout would never write a book, and even now, sensible Orthodox will answer the question, "What should I read to understand Orthodoxy?" by saying "Don't read, at least not at first, and don't ever let reading be the center of how you understand Orthodoxy.

Come and join the life of our community in liturgy."

Orthodoxy is not better than classical paganism in this regard, but it is like classical paganism and it keeps alive elements of classical paganism that neo-paganism has trouble duplicating. (A neo-"pagan" restoration of oral culture bears a hint of... I'm not sure how to describe it... an oxymoron like "committee to revitalize" comes close.) After years of the West tearing itself away from nature, people in the West are trying to reconnect with nature, and some neo-"pagans" are spearheading that. But look at Orthodoxy. Come and see the flowers, the water and oil, the beeswax candles and herbs, the bread and wine that are at the heart of Orthodox worship: the Orthodox Church has not lost its connection with the natural world even as it uses technology, and it may even have a fuller connection with the natural world than paganism had; classical Rome could sow salt in the soil of Carthage and go out of their way to pollute out of spite, which even environmentally irresponsible companies rarely do today. Which isn't getting into the full depth of a

spiritually disciplined connection to nature like that of St. Symeon the New Theologian—in the Orthodox Church we call him "new" even though he's from the fourteenth century—but it's missing the point to ask if Orthodoxy is pagan because of the role of the saints in worshiping God. If you want the deep structure, the culture, the way of life, of paganism, the place where you will find it most alive is precisely Orthodoxy.

The Arthurian author Charles Williams makes a very obscure figure, the bard Taliesin, the pilgrim who comes to Byzantium sent to bring a treasure and returns with the Pearl of Great Price, the New Law. In Stephen Lawhead, it is Merlin who appears as the culmination of the Druidic Order and the apex of the Old Law: the old learned brotherhood is disbanded and Merlin proclaims the New Law, and this is really not just a story. The Evangelical Orthodox Church was formed when a group of Protestants tried to do something very Protestant, reconstruct the original Christian Church through studying old documents. Very Protestant. And they came to a certain point, that when they quizzed an Orthodox priest, they realized something. And the Evangelical Orthodox Church entered the Orthodox Church because they realized that the Old Law of Protestant searching to reconstruct the ancient Church needed to be fulfilled in what they realized was the New Law. The Holy Order of MANS—MANS is an acronym, but not in English; it stands for *Mysterion, Agape, Nous, Sophia*, some terms from Greek that are deep enough to be hard to translate, but something like "profound mystery, divine love, spiritual eye, wisdom." Do these mean something Christian? Do they mean something esoteric? In fact the Holy Order of MANS was

something of both, and they pushed their tradition deeper and deeper... until the Holy Order of MANS was dissolved and many of its people followed their leader's sense that their Old Law led to this New Law. If you know the story of the Aleut religion in Alaska, the shamans—and it is difficult to explain their "shamans" in contemporary terms; perhaps I should refer to them as people who had tasted spiritual realities—said that certain people were coming and to listen to the people who were to come. And the people the shamans foretold were Orthodox monks who had in turn tasted of spiritual realities, such as St. Herman of Alaska. Not, necessarily, that moving from paganism to Orthodoxy was that big of a change for them. It wasn't. But the Aleuts recognized in these monks something that was very close to their way of life, but something that could deepen it, and it was because of their depth in their Old Law as pagans that they were ready for an Orthodox New Law. Stephen Lawhead has a lot of carefully researched history—at times I wished for a little less meticulous research and a little more riveting story—but whether or not anything like this can be confirmed archaeologically in the Celtic lands, the same kind of thing can be confirmed, even as having happened very recently.

But when I say "Merlin," many of you do not think of the herald of the New Law, and for that matter many of the older sources do not do this either. If a boy today is enchanted by just one character from the Arthuriad, it is ordinarily not King Arthur, Pendragon though he may be, nor Sir Galahad, who achieved the Holy Grail in some versions, nor Sir Lancelot, who is proven to be the greatest knight in the world, nor the Fisher-King, nor the fairy enchantress

Morgana le Fay, nor King Arthur's peerless Queen Guinevere, whose name has become our "Jennifer." It is the figure of Merlin.

Today, if you ask what Merlin was—and I intentionally say, "what," not "who," for reasons I will detail—the usual answer is, "a wizard." But if you look at the stories that were spread from the Celtic lands, the answer is, "a prophet." In the Old Testament, one of the prophets protests, "I am neither a prophet, nor a prophet's son," and another prophet says something to the Lord that somehow never gets rendered clearly in English Bible translations never choose to get right: "You violated my trust, and I was utterly betrayed." The Hebrew word for prophet, 'nabi', means "called one," and one never gets the sense in reading the Old Testament prophets that the prophets, when they were children, said, "I want to grow up to be a prophet" the way people today say, "I want to be the President of the United States."

And this idea of Merlin as prophet is not just a different or a more Christianly correct word. The Arthurian legends may be thought of today as "something like fiction;" even when people in the Middle Ages questioned their historical accuracy, those people were throwing a wet blanket on something a great many people took as literal fact. There is a book called *The Prophecies of Merlin*, which was taken extremely seriously for centuries, as the word of a prophet.

And one gets the sense that in modern terms Merlin's identity was not a self-definition that he chose, not in modern terms, but something that was thrust upon him.

It may sound strange to some if I say that the earlier attempt to build a castle on Merlin's blood, and Merlin's

later calling a castle out of the wind, relate to Christ. But if you think I am pounding a square peg into a round hole, consider this: Sir Galahad, whom some consider a painfully obvious Christ-figure, whose strength is as the strength of ten because his heart is pure and who is always strong in the face of temptation, enters the world after Sir Lancelot, the greatest knight in the world and a man who goes above and beyond the call of duty of faithfulness in his devotion to another man's wife, goes to a castle, is given the Arthurian equivalent of a date-rape pill in the form of a potion that makes him think his hostess is the woman he's been carrying on with, and that night sires Galahad. You may call this a magical birth story if you like, but it doesn't give us much advance notice that the son born will turn out to be the Arthurian icon of purity who will achieve the Grail.

So how is Merlin, who reeks of magic, introduced? In the oldest surviving work that flourished outside of Celtic circles, in fact written by a Celtic bishop, Merlin appears when King Vortigern searches for a boy without a father, and hears Merlin being teased for being without a father.

And let me be clear, this is not because his father has passed away. We learn that the Devil wished to be incarnate, could only come into the world of a virgin, found a virgin who was spiritually pure, having only slipped in her prayers once, and thus the person meant to be the anti-Christ was conceived. The Church, just in time, said powerful prayers and the boy, born of a virgin without a sire, commanded all the power over the natural world he was meant to, but would serve the good. Now is anyone going to say that that's not a reference to Christ? Merlin is most interesting because of how the story itself places him in the shadow of Christ.

One thing that's very easy to overlook is that in the story where there's a terrible storm and Christ is sleeping in the front of the boat while his disciples are asking if he doesn't care that they were going to die, is not just that the disciples were right: in that part of the world there were storms that could very quickly flood a boat and kill people when the boat sank. Christ stands up, and says something to the storm before rebuking the disciples for their lack of faith. And that's when the disciples really began to be afraid. Mark's Gospel is the one Gospel with the simplest, "I don't speak Greek very well" Greek, and at this point he uses the King James- or Shakespeare-style Greek Old Testament language to say that when Jesus commands the storm to be still and it actually obeys him, that is when they are most terrified.

Before Jesus stopped the storm, they were afraid enough; they knew the storm they saw was easily enough to kill them. But this was nothing compared to the fear out of which they asked, "Who is this, that even the wind and the waves obey him?" This person who had been teaching them had just displayed a command over nature that left them wondering who or what he was, a "what" that goes beyond today's concern about "who am I?" and has something that cannot be reached by angst-ridden wrestling with who you are.

Something like that question is at the heart of debates that people argued for centuries and are trying to reopen. What, exactly, was Jesus? Was he an ancient sage and teacher? Was he a prophet? A healer or a worker of wonders? Someone who had drunk of deeper spiritual realities and wanted to initiate others into the same? Was

he something more than a man, the bridge between God and his world?

The answer taken as final was the maximum possible. It was "Every one of these and more." It pushed the envelope on these even as it pushed into a claim for the maximum in every respect: Christ was maximally divine, maximally human, maximally united, and maximally preserved the divine and human while being the final image both for our understanding of what it is to be God and what it is to be human.

And what, finally, would we have if we deepened Merlin? What if he were the son, not of the worst finite creature, but of the best and infinite Creator? What if he had not simply power over nature but were the one through whom the world was created and in whom all things consist? What if we were dealing with, not the one who prophesied that a few would find the Holy Grail, but the one who gave the Holy Grail and its gifts that are still with us? What if Merlin were made to be like the pattern he is compared to? When Merlin is deepened far enough, he becomes Christ.

The Christian lord of Cyprus was out hawking when his dearly beloved hawk—I don't know if the hawk was a merlin, but I can say that a merlin is a type of hawk—became entangled in the brush in the wood. Loving the hawk dearly, he ordered that the branches be cut away so that he would still have this hawk, and when that was done, not only was his hawk found, but an icon showing the Queen and Mother of God on a throne, and the Divine Child enthroned upon her lap and an angel on either side. They found what they were looking for, but they also found a singularly majestic icon of the Incarnation.

The Christ Mass, the Nativity, is an invasion in the dead of winter. It is the feast of the Incarnation, or more properly one of the feasts of the Incarnation, which is not something that stopped happening once after the Annunciation when the Mother of God bore the God-man in her womb.

Everything that the Christ Mass stands for will eventually be made plain, but the Christ Mass is a day of veiled glory. When God became man, he was born in a stable. When Christ returns, he will appear riding on the clouds. When he came, a choir of angels proclaimed the news to shepherds and a few knees bowed. When he returns, rank upon rank of angels will come in eternal radiant glory and every knee will bow and every tongue will confess that Jesus Christ is Lord, to the manifest glory of God the Father. When he came once, a star heralded the hour of his birth. When he returns, the stars will fall as ripe figs from a tree and the sky itself will recede as a vanishing scroll. Every thing that is a secret not will be made plain, but he first came in secret...

...and he comes today in secret, hidden in us. For the Incarnation was not finished after the Annunciation, but unfolds still as Christ is incarnate in the Church, in the saints like St. Herman of Alaska, a wonderworker who was seen carrying logs weighing much more than himself, stopped a forest fire, calmed a stormy sea, and left behind a body preserved from corruption as it was on display for a month at room temperature, and left behind much of the Aleut Orthodox community that remains to this day—and also in us. And the Incarnation is still unfolding today. The castle of the Arthurian world is more than stone walls and a

porticullis; the castle is almost everything we mean by city, or society, or community. And it is the castle writ large that we find in the Church, not only a fortress waging war against the Devil but a people ruled by her Lord. This Castle is at once founded upon a fluid more precious than ichor, not the blood of a boy without a father but the blood of a God-man, without father on the side of his mother and without mother on the side of his Father. It is the Castle still being built by the wind of his Spirit still blowing—and remember that the world behind the Medieval West did not always stow "spirit" and "wind" in sealed watertight compartments: the wind blows where it will and the Spirit inspires where it will, so this Castle has a Spirit blowing through it that is more windlike than wind itself.

And until the Last Judgment, when every eye will see him, even those that pierced him, it is his will to be incarnate where he is hidden behind a veil to those who cannot see him: incarnate in the Church and in each of us, called to be his saints, and called to become Christ.

Christ is born! Glorify him!

In the Name of the Father, and of the Son, and of the Holy Ghost. Amen.

Fr. Elijah turned around, stopped, bent his head a moment, and at last turned back. "Oh, and one more thing... George's number is in the parish directory, and these homilies that talk about King Arthur and his court have been all his fault. If there's anything at all that you don't like about them, I invite you to call him at all hours of the day and night to grouse at him for foisting such terrible ideas on me."

That evening, George came, and after some hesitancies, said,

"What are you talking about?"

When can I become Orthodox?

"At Pascha. We can continue working, and you will be received in the Church."

George thanked him, and began to walk out.

"Um, Fr. Elijah, aren't you somewhat surprised?"

"George, I was waiting for you to see that you wanted to become Orthodox. Go back to your reading."

The Christmas break passed quickly, and the first class after break was the introduction to computer science. The professor said, "Most of my students call me Dr. Blaise, although you can use my last name if you're comfortable. I wanted to offer a few remarks.

"Many of your professors think their class is your most important class, and that entitles them to be your number one priority in homework and demands outside the classroom. I don't.

I believe this class is a puzzle piece that fits into a larger puzzle. Exactly how it fits in will differ, depending on whether you become a major—which I invite you to consider—or whether you choose an allied major but focus on something other than computer science, or whether your interests lie elsewhere and I am broadening your horizons even if your main interests lie somewhere else. I will try to help give you a good puzzle piece, and in office hours especially I want to support you in helping fit this piece of the puzzle into the broader picture.

"My best student was a mechanic; car and airplane mechanics, for instance, are solving a problem with a system, and I have never been so stunned at how quickly a student learned to debug well as with this mechanic. I've found that people who know something about physics, mathematics, or engineering pick up computer work more quickly even if you don't see a single physics equation in this class: learn physics and programming is a little

easier to learn. And it goes the other way, too, one of my

easier to learn. And it goes the other way too: one of my colleagues in the math department explained that students who know the process of taking something and writing a computer program to reach the desired results, correctly, are prepared to do something similar in mathematics, and take something and write a correct proof to reach the desired results. Learn something in one hard science and you have an advantage in others."

One student raised her hand. "Yes?" Dr. Blaise asked.

"What about those of us interested in philosophy or religion? What if we're doing something computers won't help us with? Are you going to teach us how to use word processors?"

"Well, I'd point out that there is a long tradition of studying mathematics—geometry—as a sort of mental weightlifting before studying philosophy or theology. Or some of my poet friends say that it's a way of poisoning the mind, and I'll respect them if they want to say that. But for many of you, it is useful, even if we don't teach word processing—ask the lab tech for sessions that will teach you how to use computer software. Computer science is about something else; computer science isn't any more about how to use computers than astronomy is about how to use telescopes."

The student raised her hand again, slightly, and then put it down.

Dr. Blaise said, "I'd like to hear your thought. If you aren't convinced, other people probably aren't convinced either, and it will do everybody good to have it out in the open."

"Um... But why does..." She paused, and Dr. Blaise smiled. "I want to study English."

"Good stuff. So does my daughter. It's a bit of a cross-cultural encounter, and I think it can benefit English students for the same reason my majors benefit from taking English

For the same reason my majors benefit from taking English classes. But never mind programming specifically; I want to talk about how the disciplines can integrate. Programming won't help you the same way as some of the humanities will, but I'd like to talk about how things might fit together.

"I saw one of your English professors, a lovely medievalist who knows the Arthurian legends well. She was talking with one of the campus ethicists, who has interests in the history of moral theology. The topic of discussion? One that you might wince at, on the short list of positions the Catholic Church is unpopular for: contraception. And the ethicist said he'd found something he thought the medievalist literature professor might find interesting.

"The history of contraception, like almost any other big question, involves a lot of other things. And one of those things involves a suggestion by John Noonan, not for one of several proposed answers for a question, but of an answer to a puzzle that has no other answers, at least as of the time Noonan wrote.

"The vision of courtly love, and what is celebrated in that love between a man and a woman—probably another man's wife, for what it's worth—is an ideal that was all about celebrating 'love', and in this celebration of 'love,' there was a big idea of 'Play all you want; we will encourage and celebrate play, whether or not you're in marriage; just be sure that you do it in a way that won't generate a child.'

"Scholars do have difficulty keeping a straight face in the idea that the courtly romances are coded messages about secret Cathar teachings. They aren't. But they flourished as nowhere before in a land where something of Catharism was in the air, and, like contraception, the idea of celebrating 'love' and encouraging people, 'Play, but do it in a way that don't generate a child' is not exactly Cathar, but is the sort of thing that could

child is not exactly Cathar, but is the sort of thing that could come if Catharism was in the air.

"And, the ethicist went further, the Arthurian romances are done in such a way that it is very difficult to demonstrate any clear and conscious authorial understanding of Cathar teachings, let alone coded messages sent to those 'in the know'... but that doesn't mean that Catharism had nothing to do with it. And not just because strict Cathars would have taken a dim view of this way of taking their ball and running with it. A very dim view, for that matter.

"Catharism, called Gnosticism as it appeared in the ancient world and various other things as it resurfaces today, has various things about it, and not just wanting to celebrate love to high Heaven while understanding this wonderful 'love' as something which one should be able to do without generating children. That's not the only thing, and it is one point of including Cathar elements without doing them very well.

"Catharism, or Gnosticism or whatever the day's version of it is called, is deeply connected with magic, and this occult element has a lot of ideas, or something like ideas, if you get very deep into it. And in the Arthurian legends, there is an occult element, but it isn't done very well. There are dweomers all over the place, and Merlin and almost every woman work enchantments, not to mention that all sorts of items have magical 'virtues', but the English professor had almost no sense that the authors were really involved with the occult themselves. It was kind of a surface impression that never had any of the deeper and darker features, or the deeper secret doctrines of one in the know. It kind of portrays magic the way a poorly researched TV show portrays a faroff land—there may be a sense of interest and enchantment untainted by actual understanding of what is being

portrayed.

"And besides that surface impression, there is something of self-centered pride. The only people who really have a pulse are nobles living in large measure for themselves, knights who are trying to do something impressive. Commerce never seems to really taint the screen of luxury; furthermore there is a sense that being in fights for one's glory is no great sin, and it doesn't really matter what those fights do to the others. It's a very different view of fighting from 'just war.'

"The Arthurian legends are undoubtedly classics of world literature, and it is terribly reductive to say that they're simply a bad version of Cathar doctrine. That denigration of their literary qualities is not justified, just as dismissing Star Wars as just a bit of violent Gnosticism or Catharism or whatever is out of line. Star Wars would never succeed if it were just dressed up Gnosticism.

"But it does raise the question of whether the literature of courtly love, so foundational to how people can understand 'love' today and understand what it means to celebrate 'love' and say that the Catholic Church hates love between men and women if it will not recognize that contraception will help that love be celebrated with less unwelcome 'consequences'... It raises the question, not of whether the literature is bad literature and not worth study, but whether it is very good literature that contains something fatal."

There was one more question, and Dr. Blaise began discussing computer science. At least George believed later that the professor had been discussing computer science, and trusted others' reports on that score.

But George did not hear a word more of what Dr. Blaise said that day.

The computer science class was a night class, and when it was finished, George found himself surprised when he entered the parsonage.

Fr. Elijah was sitting, his back to the door, staring into the fireplace. A large volume, looking like an encyclopedia volume, was sitting open on Fr. Elijah's sparsely appointed desk. Fr. Elijah, his back still to the door, said, "Come in, George. What is the matter?"

George said, "I hope I didn't interrupt—"

Fr. Elijah said, "I was just resting a bit after reading something. St. Maximus's language gives me such trouble."

George rushed over to the desk. "Maybe I can help." He looked, and looked again, until he realized the volume had columns of Latin and Greek. The volume was printed, but it looked old, and there were worm holes.

"Come in and sit down, George. You don't need to be reading St. Maximus the Confessor quite yet, even if your Greek is better than mine, or you find the Latin easier. Now sit down. You didn't come here so you could help me understand the Greek, even if I wouldn't be surprised if, bright lad as you are, you know Greek a good deal better than I do."

"It's Greek to me," George said, forcing a smile, and then shaking. Fr. Elijah rose, turned around, and said, "Sit down in my chair, George, and enjoy the fire. I'll step out into the kitchen, make some hot cocoa, and then we can talk. I wish my cat were still around; she was a real sweetheart, and she would sit in your lap and purr. Even if it was the first time she met you." Fr. Elijah left, silently, and went about making hot cocoa. He returned, holding two mugs, and gave one mug to George. "I put extra marshmallows in yours."

Then Fr. Elijah sat down in a smaller chair, in the corner, and

sat, listening.

George blurted out, after some silence, "I think the Arthurian stuff I read may be Gnostic."

Fr. Elijah took a sip.

"One of the people in my class said that Arthurian literature arose because of the Cathars."

Fr. Elijah took another sip.

"Or something like that. It seems that a lot of what people do as glorious things in courtly literature is Gnostic."

Fr. Elijah took a slow sip, and asked, "Like what?"

"Well, the ideal of love is big on celebrating love, only it's better if children don't get in the way, and you're careful to keep children out of the way. And there's magic all over the place, and nobles are superior."

Fr. Elijah took another sip.

"At least that's how I remember it, only I'm probably wrong."

Fr. Elijah stroked his beard for a moment and said, "Well, that's a big enough question that we should respect the matter by not trying to sort it out all at once. Let's not assume that because it is so big a question, we are obligated to rush things. If it is a big question, we are more obligated not to rush things."

"Why?"

"Ever hear of Arius or Arianism?"

"You mean racism?"

"No, not that spelling. A-R-I-U-S and A-R-I-A-N-I-S-M. The race-related bit is spelled with a 'Y'."

"Ok."

"Arius was a deacon who was really worried that his bishop was saying something wrong. So he rushed to correct his bishop, and in his rush to correct the Orthodox Church founded a heresy. He gets it worse in the Orthodox liturgy than even

Judas; various other heretics are accused of being taught by Arius.

"There were two mistakes he made. The biggest and worst mistake was fighting the Orthodox Church when they said he was wrong, and that was the real problem with Arius. But another mistake was trying to rush and fix the problem of heresy he thought his bishop was guilty of.

"Holier men than either of us have rushed and said something heretical in their rush job. I'm not sure either of us are going to go warring against the Church and trying to fix it has thought about our correction and said 'No,' but if you've raised a big question, or your class has, that's all the more reason not to rush."

George said, "So what should we do?"

Fr. Elijah said, "Take a deep breath and a sip of cocoa," and waited. Then he said, "Now what is it that has you so wound up?"

"I thought there was really something in what I was reading."

"There probably is."

"But the idea of love, and all the magic, are some sort of second-rate Cathar stuff."

"Why do you think that?"

"Well, I'm not sure... um... well, they're big on the experience of love."

Fr. Elijah sank a little into his chair. "In other forms of Gnosticism, there is an idea of some things as experience... and they are understood as experiences, significant as experiences, and not as significant for other reasons... and I can see some pretty Gnostic assumptions feeding into that ideal of love. You may be right..."

"But isn't love to be celebrated? How else could it be celebrated?"

"In the New Testament times, celibacy was encouraged despite the fact that it was giving up something big. But the something big is not the obvious 'something big' people would be worried about giving up today... it's having children to carry on one's name. There is a good deal more.... People, even with hormones, were interested in some other things besides pleasurable experiences. There is more I could explain about what else besides 'being in love' could make a happy marriage between happy people, but... Sorry, I'm ranting, and you're not happy."

"Fr. Elijah, if what I'm saying makes sense, then why on earth did you preach those homilies? Were you lying... um, I mean..."

"Don't look for a nicer word; if you think I might have been lying, I would really rather have you bring it out into the open than have it smouldering and damaging other things. No, I'm not angry with you, and no, I wasn't lying."

"Then why—"

"George, allow me to state the very obvious. Something was going on in you. And still is. It seemed, and seems to me, that you were coming alive in reading the Arthurian legends. As a pastor or priest or spiritual father or whatever you want to call me, I made an appropriate response and preached homilies that blessed not just you, but also several other people as well. Now, maybe, you are shattered, or maybe you are ready to begin hungering for something more. You know how, in classic Gnosticism, there's a distinction the Gnostics hold between the so-called 'hylic' people who don't have much of any spiritual life, meaning people who aren't Christian in any sense, and the 'psychic,' meaning soulish, not ESP people, of Christians who have a sort of half-baked spiritual awakening, and the 'pneumatic,' meaning spiritual, Gnostics who are the real spiritual

elite?"

George said, "It doesn't surprise me. It's absolute bosh from beginning to end. It has nothing to do with the truth."

Fr. Elijah closed his eyes for a moment. "George, I am not quite sure I would say that."

"What, you're going to tell me the Gnostics had it right?"

"They had more right than you think; they're seductively similar to Christianity. They wouldn't have anywhere near the effect they're having if it were any other way."

"You know how Orthodox Christianity is patted on the head as a sort of lesser outer revelation that is permissible for those who have reached the outer courts but are not ready to enter the inner sanctum of the Gnostics' secret knowledge? That's backwards. The Gnostic 'knowledge' might be excusable for people who have not reached the inner reaches of Orthodoxy. It is the Gnostic that is the light-weight spiritual reality. And it is the light-weight spiritual reality that is the Old Law which the New Law fulfills more than the Old Law can fulfill itself. You reacted to something in the Arthurian legends because there is something there, and if you now know that they are not the New Law, I will ask you to excuse me if I still hold those legends to be an Old Law that finds its completion in the New Law. The highest does not stand without the lowest, and part of the New Law is that it makes a place for the Old Law. Including that spark of life you saw in the Arthurian legends."

"But why preach as if you found so much in them? I were to ask you to do something silly, like preach a sermon on how things have been censored out of the Bible, would you do that too?"

George took a breath. "I'm sorry; you can change the subject if you want."

Fr. Elijah said, slowly, "I have a question for you, and I want

you to think carefully. Are you ready for the question?"

George said, "Yes."

"Can we know, better than God, what the Bible should say?"

"No."

"But quite a lot of people do think that. A lot of people seem to be trying to help the Bible doing a better job of what it's trying so hard to say, but can't quite manage. Or something like that."

"I've read some liberals doing that."

"It's not just liberals. Let me give one example. George, have you been big in Creation and evolution debates?"

"Not really."

"Christians have several options, but for the Newsweek crowd, there are only two options. Either you're a young earther, or you're an evolutionist, and the new 'intelligent design' is just the old creationism with a more euphemistic name. Rather depressing for a set of options, but let's pretend those are the only two options.

"Now are you familiar with what this means for dinosaurs?"

"Um..."

"The connection isn't obvious. We've seen, or at least I have, cartoons in magazines that have cave men running from T. rexes or hunting a brontosaurus. Which is, to an evolutionist, over a hundred times worse than having cave men whining loudly about the World Wide Wait. There's a long time between when the last dinosaurs of any kind, and the first humans of any kind, were around. As in hundreds of millions of years longer than humans have been around in any form. On that timeline, it's a rather big mistake to have humans interacting with dinosaurs.

"But if you have a young earth timeline, with the whole world created in six days, then it's not such a ludicrous idea that

humans might have interacted with dinosaurs... and your English Bible offers an interesting reason to believe that humans have seen living dinosaurs. Have you read the book of Job?"

George said, "Um, no. It's one of a lot of..."

Fr. Elijah interrupted. "There's a lot in the Bible to read, and even people who read the Bible a lot don't read it quickly unless they're speed-reading, and then it still takes them a couple of weeks. If you can call that 'reading the Bible;' I've tried it and I think it's one of the sillier things I've tried—a sort of spiritual 'get rich quick' scheme. I was smart enough to stop. But if you check your English Bible, you will see in Job a creature called the 'behemoth,' perhaps because the translators on the King James Version didn't know how to translate it, and the 'behemoth,' whatever that may be, is a mighty impressive creature. We are told that it is not afraid though the river rushes against it, suggesting that whatever the behemoth is, it is a big beast. And we are told that it stiffens or swings its tail like a cedar, the cedar being a magnificent, and quite enormous, tree which reaches heights of something like one hundred fifty to two hundred feet. And regardless of where you stand on Creation and evolution, the only creature that has ever walked the earth with a tail that big, or anywhere near that big, is one of the bigger dinosaurs. So the Bible offers what seems to be excellent evidence that people have seen dinosaurs—alive.

"Which is all very lovely, of course given to the English Bible. But first, the 'behemoth' is in fact an overgrown relative of the pig, the hippopotamus, and second, it isn't really talking about his tail. The same basic image is translated unclearly in the Song of S—"

George spit out a mouthful of soda and took a moment to compose himself. "I'm sorry. Did I—"

Fr. Elijah looked around. "I'm sorry. I shouldn't have said that as you were taking a sip. Let me get you a napkin. Here."

George said, "Ok, so maybe there are some other vivid images that have been, bowlderized—you know, edited for television.

Anything more? Were any ideas censored?"

Fr. Elijah said, "A bit murky, but I'm tempted to say 'yes.' One idea has been made less clear; there may be other tidbits here and there. A couple of forceful passages that may be interpreted as implying things about contraception don't come across as clearly. But that may not be censorship; there is a double meaning that is hard to translate correctly in English. I don't find the English translation strange. But there's one story in the Old Testament, where the future King David is running from King Saul, who is leading a manhunt and trying to kill David. There are a couple of points that David could have killed Saul, and at one of these points, David's assistant either encourages David to kill Saul or offers to kill Saul himself, and David says what your English Bible puts as, 'I will not lay my hand on the Lord's anointed,' or something like that. Would you like to know what it says in Hebrew or Greek, or in Latin translation?"

George said, "Um..."

Fr. Elijah got up. "I wasn't expecting that you would; it's really not that important or even as impressive as some people think. If you don't know those languages, it may be easiest to see in the Latin. Aah! Here's my Latin Bible. Just a minute. Let me get my magnifying glass." After almost dropping a dark green Bible with golden letters on the cover, and an interminable amount of flipping, he said, "What is this word here?"

"I don't know Latin."

"Never mind that. What does that word look like?"

"It's a lowercase version of 'Christ,' with an 'um' added."

"Yes indeed. And at the top it says the name of an Old Testament book, in Latin 'Liber Samuhelis.' What do you think the word you pointed out means?"

"I told you that I don't know Latin."

"What's an obvious guess?"

"Um..." George paused. "Christ."

"Yes indeed."

"What does the lowercase 'c' mean?"

"It means nothing. As a matter of language-loving curiosity, the text is in Latin; either in the manuscripts or in this printed Bible, capitalizations follow a different rule, and 'christus'/'christum' /... isn't automatically capitalized. Now why is the Old Testament book of Samuel using the equivalent of the 'Christ'?"

"Because the Latin is messed up?"

"Ernk. Sorry. Bzzt. Thank you for playing, but no. The Latin is fine. It's the English that's messed up. The Latin correctly translates, 'I will not lay my hand on,' meaning violently strike, 'the Lord's Christ.' Didn't you know that the word 'Christ' means 'anointed'?"

"Yes, but..."

"The Bible, Old Testament and New, uses 'Christ' for those who are anointed—the Son of God, prophets, priests, kings, and ultimately the people of God. The whole point of becoming Christian is to become by grace what Christ is by nature, and even if we can never be perfect in Christ, there is something real that happens. If you ever become Orthodox, you will be 'Christed,' or in the related and standard term, 'chrismated,' meaning, 'anointed with holy oil.' And, at a deeper level, the anointing is about anointing with the Holy Spirit, as Christ was. And the New Testament in particular says a lot about Christ, but

the Bible calls Christ or Christs others who are anointed. But the Bible translations, coincidentally by people who have much less room for this in their theology, introduce a division that isn't in Hebrew, Greek, or the Catholic Church's Latin, and translate the Hebrew 'moshiah' or the Greek 'christos' one way when it refers to the one they think is 'really' Christ, and another way when it refers to other Christs even if what the text says is, quite literally, 'Christ.' They introduce a very clear divide where none exists in the text, using a language shenanigan not entirely different from some mistranslations translating 'God' with a big 'G' when the Bible talks about the Father, and a 'god' with a little 'g' when the Bible refers to Christ. Perhaps your Bible's translators still say 'anointed one,' but there is some degree of censorship. The reader is saved the shock of too many correctly translated and explicit statements that we are to be little Christs, Sons of God, living the divine life—there's a word for the divine life in Greek that is different from the word for mere created life, and that dimension doesn't seem to come through. It's not all censorship, but there's something not quite right about the translators who refuse to either consistently say 'Christ,' or else consistently say 'Anointed One,' so that the readers never get the something important in the Bible that Western Christianity does not always get. But there is enough mystery in the Bible. Sacred Scripture is unfathomable even apart from relatively few areas where the translators try to make sure that the reader does not get the full force of the what the text is saying. God exceeds our grasp; he is and ever shall be Light, but whenever we try to shine a light to search him out, its beam falls off in darkness, and the God who is Light meets us beyond the cloud of darkness enshrouding him.

"I say this to answer your question, which I know was purely

rhetorical. I'd prefer not to scandalize people and have to clean up the pieces later, but even the tough old women you see in our parish aren't so prissy as you might think. But I want to more directly speak to your intent, and the deep question behind your asking if, because you had hypothetically asked me, I would preach a sermon about the Bible and censorship. I wasn't crossing my fingers or simply saying what I thought would please you, when I preached about the Arthurian legends, and there is nothing I wish to take back. I really was preaching in good faith."

"Then I don't want Brocéliande for now."

George said, "You may like the book. I don't. I don't want it any more."

"Then may I take a look at it? I would like to have it, to look at. If you don't want it any more, that's fine, but you can have it back any time."

"Fine. Maybe it will be better for you than for me."

"By the way, what are you doing for Spring Break?"

"Dunno. Do you have any suggestions?"

"There are some truly beautiful places where you could get blasted out of your mind, acquire a couple of new diseases, and if you time it right, come back still in possession of a rather impressive hangover."

"Um..."

"Yes?"

"Why don't we just cut to the chase and get to your real suggestion?"

"Aah, yes. It turns out that there's a finishing school which is offering a week-long intensive course in the gentle art of polite conversation, but—oh, wait, I was going to suggest that to my granddaughter Abigail. I would never make such a suggestion to you. Finishing school—what was I thinking? What I was really

wondering was whether you have considered one of the alternative spring breaks."

"Like Habitat for Humanity? But I have no skill in construction."

"That's not really the point. Last I checked, Habitat for Humanity had nothing on their website about how only seasoned construction workers can be of any use."

"But aren't there a lot of things that could go wrong?"

"Like what?"

"I might hit myself on the thumb with a hammer."

"If you're worried about being at a loss for words, last April Fool's Day my godson gave me a book listing bad words in something like a thousand languages, and you can borrow it.

There are worse things in life than hitting your thumb with a hammer, and if it's that big of an issue, I'd be happy to ask the head of Habitat for Humanity to refund your wasted time. If you're worried about getting sunburned, the store next door has an impressive collection of sunscreen containers, giving you options that rival those for dental floss. I personally recommend the SPF 30 in your choice of soft pastel-hued plastic bottles with a delicate floral scent created through a carefully blended confection of unnatural chemicals. I don't think that Habitat is going anywhere where you'd be in real danger of snakebite, but I can help find a kit you can use to bite the snake back. Have I left something out?"

A week later, and (though he did not tell Fr. Elijah) realizing that Abigail was also a student at Calix College, George returned. Fr. Elijah said, "Why the long face, George? Just a minute while I make some tea."

"Um, I'm not signed up for the alternative spring break."

"George, I only asked you to consider... tell me what's on your

mind... if you want to."

"I was in line, and I just missed signing up."

Fr. Elijah sat in silence.

"I could have gone, but there was a girl in line after me, and she really wanted to go. I let her have the last slot."

"Excellent. Some would call it sexist, but I'd call it one of the finer points of chivalry."

Fr. Elijah paused and then said, "Could you come with me to the house for a second?"

George gulped.

Fr. Elijah led George out to the house and rummaged on a shelf before pulling out a CD. "George, could you put this in the CD player and hit play? I've figured out how to use the CD player several times, but I keep forgetting, and I don't want to keep you waiting." He handed the CD to George and said, "I'll be right out. I need to make a phone call." He stepped into another room and closed the door.

George looked at the CD, did a double take, and looked at the player. He began to hear a rap beat.

As I walk through the valley where I harvest my grain,  
I take a look at my wife and realize she's very plain.

But that's just perfect for an Amish like me.

You know, I shun fancy things like electricity.

At 4:30 in the morning I'm milkin' cows.

Jebediah feeds the chickens and Jacob plows... Fool!

And I've been milkin' and plowin' so long that

Even Ezekiel thinks that my mind is gone.

I'm a man of the land! I'm into discipline!

Got a Bible in my hand and a beard on my chin.

But if I finish all my chores and you finish thine,

—

Then tonight we're gonna party like it's 1699!  
We been spending most our lives, living in an Amish  
paradise.

I've churned butter once or twice, living in an Amish  
paradise.

It's hard work and sacrifice, living in an Amish paradise.  
We sell quilts at discount price, living in an Amish paradise.

A local boy kicked me in the butt last week.

I just smiled at him and turned the other cheek!

I really don't care; in fact, I wish him well.

'Cause I'll be laughing my head off when he's burning in Hell!

But I ain't never punched a tourist even if he deserved it

An Amish with a 'tude? You know that's unheard of!

I never wear buttons but I got a cool hat.

And my homies agree, I really look good in black... Fool!

If you'll come to visit, you'll be bored to tears.

We haven't even paid the phone bill in 300 years

But we ain't really quaint, so please don't point and stare;

We're just technologically impaired!

There's no phone, no lights, no motorcar,

Not a single luxury,

Like Robinson Caruso,

It's as primitive as can be!

We been spending most our lives, living in an Amish  
paradise.

We're just plain and simple guys, living in an Amish paradise.

There's no time for sin and vice, living in an Amish paradise.

We don't fight. We all play nice, living in an Amish paradise.

Hitchin' up the buggy, churnin' lots of butter,

Raised a barn on Monday, soon I'll raise another!

Think you're really righteous? Think you're pure in heart?

Well, I know I'm a million times as humble as thou art!  
I'm the pious guy the little Amlettes wanna be like,  
On my knees day and night, scorin' points for the afterlife,  
So don't be vain and don't be whiny,  
Or else, my brother, I might have to get medieval on your  
heinie!

We been spending most our lives, living in an Amish  
paradise.

We're all crazy Mennonites, living in an Amish paradise.  
There's no cops or traffic lights, living in an Amish paradise.  
But you'd probably think it bites, living in an Amish paradise.

Fr. Elijah walked back into the room and served the tea,  
smiling gently.

George said, "Um..."

Fr. Elijah said, "Yes?"

"I'm not sure how to put this delicately."

"Then put it indelicately. Bluntly, if you wish."

"I hadn't picked you out for a Weird AI fan."

"It was a present."

"Who would buy you a Weird AI CD?"

"A loved one."

"Um... do you ever do something less spectacular, like play  
chess?"

"I'm not a big fan of chess, and besides, I've visited the  
chess club at the Episcopalian church, and it seems the Anglican  
Communion isn't going to produce that many more good chess  
players."

"Why?"

Fr. Elijah sipped his tea. "Can't tell a bishop from a queen."

George coughed, sputtered, tried to keep a straight face, and  
then tried to steer the conversation back "When were you given

...continued to steer the conversation back. "When were you given  
the Weird AI CD?"

"For April Fools' Day. The present is much appreciated."

"I like Weird AI, but why did you play that?"

"Because I was just on the phone."

"And?"

"I've just arranged for you to spend your Spring Break at an  
Amish paradise."

"Um..."

"Yes?"

"Are you joking?"

"No."

"Are you being serious?"

"Yes."

"Are you being sadistic again?"

"Yes, I'm being very sadistic."

"Why?"

"I'm not saying."

"I'll be bored to tears."

"Perhaps. But boredom can be good, and not just because it  
can build character."

"Um... Never mind. I've grown rather fond of computers. I've  
found out the hard way that I rather need them."

"If it's that hard for you to spend a few days without spam,  
you can use your cell phone to read all the insulting messages  
telling you that you can't handle money, or that you need snake  
oil diets, or some part of your body is too small, or you're not  
man enough for a relationship with a real woman and must  
content yourself with pixels on a screen. And if you forget leave  
your cell phone at home, you might be able to borrow one of  
theirs."

"Amish don't use phones or the Internet. They're 'iust

...technologically impaired;' didn't the song say that?"

"You can ask them; I'm sure one of them would be willing to lend you his cell phone."

"Um..."

"Let's forget about that; we can talk about it later if you want. Anyway, after school gets out, come over here with your bag. Someone else is doing some running, and will give you a ride. He's a bit hard of hearing, so he's not much good for chatting in the car, but he's a great guy. But you can gripe to him about how backwards the Amish are."

"Oh, and one more thing... I'm not exactly sending you into bear country, but if one of the workmen were attacked by a bear, I'd be very worried."

"Um..."

"Yes?"

"That seems obvious."

"But not for the reason you think. I'll explain why after you return."

There was a knock on the door, and Fr. Elijah opened it.

"George, I'd like to introduce you to Jehu. Jehu, this is George. Oh, George, I'm sorry for being a pest, but could you open your bag and pull out everything inside?"

George looked at Fr. Elijah, rolled his eyes, and began unpacking.

"Which of these items mean anything at all to you? Which have a story, or were expensive, or were a gift?"

George looked at Fr. Elijah, who stood in silence.

"You can put anything that means anything to you in this closet; it will be here when you get back. I'm not sending you to a den of thieves, but..."

George began shuffling and sorting while Fr. Elijah waited.

When he was finished, Fr. Elijah said, "How much does your windbreaker mean to you?"

"It's new, but I want to have it with me on the trip."

"Take it off. You have an old sweatshirt or two."

"Sorry, I insist on this one. It doesn't mean that much to me."

Fr. Elijah said, "If you must..."

George said, "I've taken enough out. Have a good evening." He stiffly shook Fr. Elijah's hand. "You better have a good reason for your odd behavior."

Fr. Elijah said, "I can explain later, if you need me to."

George repacked the remaining half of his luggage into the duffle bag, and left with Jehu.

Some days later, Fr. Elijah heard a knock and opened the door. "George, George! How are you? I must hear about your trip. That's a lovely jeans jacket you have there. Is there a story behind it?"

George gave Fr. Elijah a look that could have been poured on a waffle, and then began quickly taking his coat off.

Fr. Elijah said, "You wouldn't throw a coat at an old man who doesn't have the reflexes to block it... I must hear the story about the coat, though."

George closed his mouth for a second, and then said, "Filthy sadist!"

Fr. Elijah said, "It sounded like you had an interesting trip."

"Did you call and ask them to be obnoxious?"

"I did no such thing."

"Honest?"

"I called and asked them to go easy on you."

"You called and asked them to go easy on me?"

"Well, you seem to have gotten through the matter without

getting any black eyes."

"You call that going easy? These guys are pacifists, right?"

"That depends on your idea of a 'pacifist'. If you mean that they don't believe you should use violence to solve conflicts, then yes, they are pacifists."

George said, "And..."

"But does that make them wimps? In any sense at all?"

"You did say that you would be worried if one of them were attacked by a bear... Why?"

"I'd be worried for the bear."

George sunk down into his chair.

"You must have some stories to tell."

"They wanted help raising a barn, and they wouldn't let me do any of the stunts they were doing without a harness, but when I went to the outhouse, things shook, and when I opened the door, I was over ten feet in the air."

"Earthquake?"

"Forklift. I don't know why they had one."

"Did you ever think you would sit on such a high throne? I have a suspicion that's higher than even my bishop's throne."

"We are not amused."

"You are using the royal 'We,' Your Majesty. Excellent."

"The first day, I didn't take off my shirt at work, but I did take off my windbreaker, and when I left, they nailed it to the beams!"

"Excellent. Is that why Your Majesty has a new, handmade jeans jacket?"

George gave Fr. Elijah another look that could have been poured on a waffle.

"I should maybe have told you... They don't think anything of nailing down any clothing that's taken off as a practical joke. Did

you ever get an opportunity to nail down some clothing or something of theirs?"

"Yes, but like a gentleman, I did not."

"That was rude of you."

"You mean they're offended at what I didn't do?"

"No; I just said it was rude. They wouldn't be offended. But what I was going to say is that the women have lots of denim, and are very adept at sewing new clothes; it's almost like making a paper airplane for them. Or maybe a little bigger of a deal than that. But you seem to be laboring under a sense that since the Amish are such backwards people, they aren't allowed to have a sense of humor. Were you surprised at the sense of humor they had?"

"Filthy sadist!"

"So did you get bored with nothing interesting to do besides surf the web through your cell phone?"

George said, "Filthy sadist!" Then he paused.

Fr. Elijah sat back and smiled. "George, I believe you have a question."

George hesitated.

"Yes? Ask anything you want."

George hesitated again, and asked, "When can I come back?"

Fr. Elijah just laughed.

George walked around, and had a few chats with Abigail on campus. She started to occupy his thoughts more... and George wondered if he really wanted to dismiss all of the literature of courtly love.

He tried to put this out of his mind the next time he saw Fr. Elijah.

He thought he'd pay a visit, and knocked on Fr. Elijah's door.

Fr. Elijah said, "I'm glad you're here, George. Did you know

that a man-eating tiger got loose on the campus of Calix College?"

George stood up and immediately pulled his cell phone out of his pocket. "Do the police—"

"Sit down, George, and put your cell phone away, although I must commend your gallant impulse. This was before your time, and besides, George, it starved."

George said, very forcedly, "Ha ha ha."

"Sit down, please. Have you had any further thoughts about your holiday with the Amish?"

"It seems a bit like King Arthur's court. Or at least—"

"Why would that be?"

George sat for a while, and said nothing.

"Are you familiar with Far Side comic strips?"

"Yes."

"I expected so. You like them, right?"

"Yes, but I haven't read them in a while."

"Do you remember the strip with its caption, 'In the days before television'?"

"Can't put my finger on it."

"It shows a family, mesmerized, sitting, lying, and slouching around a blank spot where there isn't a television... I think you've had a visit to the days before television. You didn't even need a time machine."

George sat in silence for a moment.

Fr. Elijah continued, "If you want, I can show you the technique by which the Bible is censored, and how the translators hide the fact that they've taken something out of the text. But do you know the one line that was censored from the movie production of *The Lion, the Witch, and the Wardrobe*

—the Disney one, I mean?"

"I didn't notice that anything was censored."

"Well, you're almost right. Now it seems to be religion that is censored, Christianity having replaced sex as the publishing world's major taboo, and Disney did not censor one iota of the stuff about Aslan. But there is one line of the book that almost gets into the movie, but then Father Christmas merely makes a smile instead of verbally answering the question. Do you know what that line is?"

"What?"

"'Battles are ugly when women fight.'"

"Um... I can see why they would want to smooth over that."

"Why? Battles are ugly when men fight. There is a reason why Orthodox call even necessary fighting 'the cross of St. George.' 'Cross,' as in a heavy, painful burden. I've dealt pastorally with several veterans. They've been through something rough, much rougher than some people's experience with, say, cancer. And it is my unambiguous opinion, and that of every single soldier I've spoken to at length, that battles are ugly... whether or not women fight. Therefore, battles are ugly when women fight, and you'd really have to not understand battle, think it's the same thing as a violent fantasy or watching an action-adventure movie, to deny that battles are ugly when whatever group fights."

"So why make such a big deal over a single line, 'Battles are ugly when women fight?' Why is that one line worth censoring when Disney has the guts to leave Aslan untouched? What's a bigger taboo in the media world than Christ?"

"Umm... I can't put my finger on it."

"Ok, let me ask you... What do you think of the Amish women?"

George tried not to stiffen.

"I'm sorry, George, I meant besides that... When you're my age you can forget that for women to dress very modestly can—"

"Then what did you mean?"

"Imagine one of those women in a fight."

George tried not to make a face.

Fr. Elijah said, "My understanding is that they're strong and hard workers, probably a lot stronger than many men you know."

George said, "Um..."

"Would you deny that they are strong? And tough, for that matter?"

"No..."

"Does it bother you in the same way to imagine an Amish man having to carry a gun into combat?"

"No. He'd be pretty tough."

"But the women are pretty strong and tough too. Why does it bother you to think about one of them entering combat and fighting?"

George said nothing.

"The women strike you as stronger and tougher than many men that you know. So they're basically masculine?"

"Fr. Elijah... the women there almost left me wondering if I'd met real women before, and the men left me wondering if I'd met real men before. I don't know why."

"I think I have an answer for why the idea of an Amish woman fighting in battle bothers you more than an Amish man fighting in battle."

"What?"

"I've been reading through Brocéliande. Let me read you a couple of passages." Fr. Elijah returned momentarily, and flipped through Brocéliande before reading:

Sir Galahad he rode, and rode and rode, until saw he a dragon red. Anon the wyrm with its tail struck a third of the trees against the earth that Sir Galahad they might slay.

Anon Sir Galahad warred he against the wyrm.

The dragon charged, and anon Sir Galahad his horse trembled, and Galahad gat him down to earth. The dragon laughed at Sir Galahad's spear which brake to-shivers, and breathed fire red as Hell.

Sir Galahad gat him behind his shield, and then charged with his sword, though it should break as rotted wood. Anon the dragon swept him, though his helm saved Sir Galahad his head from the rocks.

Then Sir Galahad, who his strength was as the strength of a thousand because his faith was pure, leapt him and wrestled against the beast. Anon the beast turned and tore, against the knight, until the knight he bled sore. Never was such combat enjoined, but the knight held his choke until the dragon his death met.

Fr. Elijah pulled the bookmark out, and found one of several other bookmarks:

Rose the smoke of incense, of frankincense pure the garden did fill. 'Twere many women present, that hyght Lady Eva, and Lady Elizabeth, and Lady Anna, and Lady Martha, and Queen Mary. Sang they a song, 'twere of one voice, and in that song kept they a garden: in the garden was life. Queen Mary a radiant Child gave suck, and others gave life each in her way.

Verdant was the place of their labour.

Fr. Elijah said, "I think you're missing the point if you're

trying to tell if there are differences between men and women  
by asking who is tougher."

"Why?"

"It's like asking what the differences are between apples and oranges, and then thinking you need to justify it with a measurement. So you may say that apples are bigger than oranges, until you realize that navel oranges are the size of a grapefruit and some varieties of apples don't get that big. So maybe next you measure a sugar content, and you get really excited when you realize that maybe oranges have a measurably lower Ph than apples—a scientist's way of measuring how sour they are—until someone reminds you that crabapples are so tart you wouldn't want to eat them. And all this time you are looking for some precise scientific measurement that will let you scientifically be able to distinguish apples and oranges...

"Is it simply a measure of some difference in physical strength that makes you not like the idea of an Amish woman in battle? If you knew that the women were equally as strong as the men, identically strong, or tough or whatever, would that address..."

George hesitated. "But..."

Fr. Elijah sat silently.

"But," George continued, "the idea of an Amish woman in battle... I know some girls who wanted to go into the military, and it didn't bother me that much. And the Amish women are pacifists."

"So if those women were gung-ho military enthusiasts, even if they weren't soldiers, then you wouldn't mind—"

"Ok, ok, that's not it. But what is it about the Amish?"

"George, I think you're barking up the wrong tree."

"So what is the right tree? Where should I be barking?"

"When people notice a difference with another culture, at least in this culture they seek some 'That's cultural' explanation about the other culture."

"So there's something about this culture? Ours?"

"George, let me ask you a question. How many times in the Arthurian legends did you see someone invite a man to be open about himself and have the courage to talk about his feelings?"

George was silent.

"We still have the expression, 'wear the pants,' even though it is no longer striking for a woman to wear trousers. It used to be as striking as it would be for a man to wear a skirt."

"Um... you don't approve of women wearing pants?"

"Let's put that question on hold; it doesn't mean the same thing. Abby wears trousers all the time. I wouldn't want her to do otherwise."

"But..."

"George, when have you seen me at the front of the church, leading worship but not wearing a skirt?"

"Um..."

"But I wouldn't want you wearing a skirt. The question of wearing a skirt, or pants, or whatever, is like trying to make a rule based on size or tartness or whatever to separate apples from oranges."

"It's the wrong question, then?"

"It's fundamentally the wrong question... and it misleads people into thinking that the right question must be as impossible to answer as the wrong question. Never mind asking who is allowed to wear pants and who is allowed to wear a skirt. We're both men. I wear a skirt all the time. You shouldn't. And, in either case, there is a way of dressing that is appropriate to men, and another to women, and that propriety runs much deeper

than an absolute prohibition on who can wear what. And this is true even without getting into the differences between men's and women's jeans, which are subtle enough that you can easily miss them, but important."

"Like what?"

"For starters, the cloth is hung on men's jeans so that the fabric is like a grid, more specifically with some of the threads running up and down, and others running side to side. On women's clothing, jeans included, the threads run diagonally."

"And this is a deliberately subtle clue for the super-perceptive?"

"It changes how the cloth behaves. It changes the cloth's physical properties. Makes women's clothing run out faster, because it's at just the right angle to wear out more quickly. But it also makes the cloth function as more form-fitting. On men's jeans, the cloth just hangs; it's just there as a covering. On women's jeans, the cloth is there to cover, but it's also there to highlight. This, and the cut, and a few other things, mean that even if men and women are both wearing jeans, there are differences, even if they're subtle enough that you won't notice them. Men's jeans are clothing. Women's jeans are more about adornment, even—or especially—if it's something you're not expected to notice."

"So we do have differences?"

"We do have differences despite our best efforts to eradicate them. We want men to be sophisticated enough to cultivate their feminine sides, and women to be strong enough to step up to the plate."

"Um, isn't that loaded language?"

"Very. Or maybe not. But one of the features of Gnosticism is that there keeps popping up an idea that we should work towards

androgyny. Including today."

"Like what?"

"Um, you mean besides an educational system that is meant to be unisex and tells boys and girls to work together and be... um... 'mature' enough not to experience a tingle in the relationship? Or dressing unisex? Or not having too many activities that are men only or women only? Or not having boys and men together most of the time, and women and girls together? Or having people spend long periods of time in mixed company whether or not it is supposed to be romantic? Or an idea of dating that is courtly love without too many consciously acknowledged expectations about what is obviously the man's role, and what is obviously the women's role? Or—"

"Ok, ok, but I think there was more—"

"Yes, there is much more to the Amish, or the Arthurian legends, than what they hold about men and women. But there is also much more in what they hold about men and women—all the more when they are telling of Long Ago and Far Away, so that political correctness does not apply to them, so that men who go on great quests can be appreciated even by a woman who thinks men would be better off if they would just learn to talk more about their feelings and in general hold a woman's aspirations of conversational intimacy. And the Amish are 'technologically impaired,' or whatever you want to call them, so they're allowed to have real men and real women despite the fact that they are alive today. But the pull of men taught to be men, and women taught to be women, is powerful even if it's politically incorrect, and—"

George interrupted. "Is this why I was trying to keep a straight face when you were asking me to imagine an Amish woman carrying a gun?"

Fr. Elijah thought. "For an Amish man to have to fight in battle would be bad enough. An Amish woman entering a battlefield would be something that would cut against the grain of their life as women. It's not so superficial as the women being dainty and not strong enough to hold a gun."

"The men seem stronger and tougher than the women, though."

"Yes, but is it only a matter of being tougher? Is what you observed simply a matter of the women being tough but the men being tougher?"

George was silent.

Fr. Elijah looked at his watch and winced. "Always when I'm having a good conversation... George, I'm sorry, but I've got someone coming over any minute, and a bit of preparation.

Sorry..."

George picked up his belongings, and Fr. Elijah blessed him on his way out. Then George stepped out, and Fr. Elijah momentarily opened the door. "Oh, and by the way, George, I have some more of that paper, if you want to write her a love note." He closed the door.

George scurried away, hoping that Fr. Elijah hadn't seen him blush.

It was not much later that April Fool's Day came, falling on a Sunday. George did not feel brave, and paid a visit to Bedside Baptist. The days seemed to pass quickly with Abigail in the picture.

On Earth Day, George listened and was amazed at how many references to Creation he heard in the liturgy—not just the reference to "his mother, the earth," but how plants and trees, rocks, stars, and seas, formed the warp and woof by which the Orthodox Church praised her Lord. The liturgy left him wishing

Fr. Elijah would put off his preaching and say something to  
celebrate earth day...

Fr. Elijah stood up.

In the Name of the Father, and of the Son, and of the  
Holy Ghost. Amen.

Today is Earth Day, and I thought that that would  
provide an excellent basis for my preaching today. The very  
opening chapters of *Genesis* are not about man alone but man  
and the whole Creation. There are some very interesting  
suggestions people have made that when *Genesis* says that  
we were told not only to "be fruitful and multiply," but "fill  
the earth and subdue it," the word translated "subdue" is  
very gentle, almost an embrace, as a mother nurtures a child.

Which is a very lovely image, but is absolute hogwash.

The word translated "subdue" is the word Christ uses for  
exactly what Christians must not do by "lording their  
authority" over other Christians as the heathen do. The  
book of *Genesis* tells of this beautiful Creation and then has  
God charge us with a charge that could much better be  
translated, "trample it under foot." And what better day  
than Earth Day than to talk about why we should trample the  
earth under foot, told to us in a text that is resplendent  
with natural beauty?

Many people today call the earth 'Gaia', and that is well  
and good. Today one calls a man 'Mr.' and a woman 'Miss' or  
'Ms.' or 'Mrs.' if there is no other honorific, and as much as  
adults all bear that title, in Latin every woman bears then  
name of 'Gaia' and every man bears the name of 'Gaius.' And  
if we are speaking of the earth, it is well and proper to call  
her *Gaia*; only someone who understands neither men nor

women would think of her as a goddess.

women would think of her as sexless!

If you are dealing with a horse, for instance, it helps to keep in mind that they are prey animals with a lot of fear.

Never mind that they're much bigger than you; they're afraid of you, as you would be afraid of a rat, and need to be treated like a small child. But you can only deal with a horse gently after it is broken and after you have made it clear that it is you holding the reins and not the horse. You need to be able to treat a horse like a little child if you are to handle them... but if you spoil it, and fail to establish your authority, you have a terrified small child that is stronger than an Olympic athlete. You do need to be gentle with a horse, but it is a gentleness that holds the reins, with you in charge.

There are a number of fundamental difficulties we face about being in harmony with nature, and one of the chief ones is that we are trying to be in harmony with nature the wrong way. We are trying to take our cue from our mother the earth, perhaps instead of taking our cue from technology. And it is excellent to treat Gaia gently, and perhaps technology is in fact quite a terrible place to take our cue from, and something else we absolutely need to trample under foot, but there is something mistaken about the rider taking his cue from the horse. In *Genesis* we are called to rule material Creation as its head: we are to give it its cue, rather than following. Perhaps you have seen the *Far Side* cartoon that says, "When imprinting studies go awry" and shows a scientist last in line with ducklings follow a mother duck... which is very funny, but not a recipe for a life well lived. We are made from the same clay as horse and herb, but unless we are deeply sunk into the even worse cues

we will take from technology when we fail to rule it, we do not serve our best interests—or the earth's—when we ask her to dance and expect her to be our lead.

But enough of what is politically incorrect in the West, where we say that men should not lead and mean, in both senses, that humans should not lead the rest of Creation and that males should not lead females. I could belabor why both of those are wrong, but I would like to dig deeper, deeper even than saying that lordship applies to every one of us even if we are all "a man under authority," including me.

Patristic exegesis of the rule over Creation is first and foremost of a rule over our passions and over ourselves. We are not fit to lead others or Creation if we have not even learned to lead ourselves; "better is a man who controls his temper than one who takes a city." If you are following a Western model, then you may be thinking of a big enterprise for us to start ruling Creation which is really beside the point. If you save yourself through ascetical mastery, ten thousand will be saved around you. Never mind that this is mystical; it is a matter of "Seek first the Kingdom of God, and all these things shall be added unto you." You become a leader, and a man, not by ruling over others, but by ruling over yourself.

We are in Great Lent now, the central season of the entire Orthodox year, not because it is about ruling others or about ruling Creation—it isn't—but because it is about ruling ourselves. We are not to seek a larger kingdom to rule outside ourselves; we are to turn our attention to the kingdom within, and rule it, and God will add a larger kingdom outside if we are ready. The first, foremost, and last of places for us to exercise lordship is in ourselves, and our

rule over the Creation is but an image of our rule over ourselves, impressive as the outer dominion may be.

We bear the royal bloodline of Lord Adam and Lady Eve, and we are to be transformed into the image of Christ. Let us seek first the Kingdom of God, with all that that means for our rule over ourselves.

In the Name of the Lord and Father, and of the Son who is Lord, and of the Heavenly King, who is the Holy Ghost,  
Amen.

After his Sunday dinner, George thought it would be a good time to wander in the wood.

In the forest, he found himself by a babbling brook, with the sound of a waterfall not far off. George brushed off a fallen mossy log and sat down to catch his breath.

George began listening to the birdsong, and it almost seemed he could tell a pattern. Then two warm hands covered his eyes.

George tried to look up, remembered his eyes were covered, and brought his own hands up to his face, briefly touching a small, soft pair of hands. Then he said, "It's definitely a man..."

Then George turned. Abigail was sticking out her tongue.

Abigail's dress was a rich, deep, deep red, the color of humble earth seen through a ruby. A pair of bare white feet peeked out from beneath a long flowing skirt, a wide, golden straw hat sat atop her locks, and dark, intricate knotwork lay across her heart.

George looked down at his own feet and saw his own worn combat boots, before looking at Abigail's face. She smiled and said, "Boo!"

George said, "What are you doing here?"

"What are you doing here?"

"What are you doing here?"

"Taking a walk, as I do from time to time."

"Must be pretty rare for you, if this is the first time I've seen you."

"You're in the woods more often than I am?"

A squirrel darted out, climbed across Abigail's foot, and scurried away.

George asked, "It wasn't afraid of you?"

"Most of them aren't, at least not that much of the time." George looked at her, and she said, "It's not such a big deal, really. Read any good books lately?"

"No, and—ooh, I told Fr. Elijah I'd read C.S. Lewis, something or other about 'glory.' I need to get back to him."

"Maybe it's a box you're not meant to open, at least not yet... if I know Grandpa, he's probably forgotten about it completely."

"But I should—"

"You should leave it a closed box, if anything. How are you?"

George looked at the forest—how like a garden it looked—and then Abigail. He was at something of a loss for words. He looked down at her alabaster feet, and then her face. "Having a good day."

She smiled, and a sparrow flew between them. "There's a hawk in here somewhere, only it's hard to find. You can spend a lot of time exploring this forest. I'm having a good day, too."

George sat for a while, trying to think of something to say, and Abigail said, "You're being pretty quiet now."

George said, "I've been looking at majoring in math."

Abigail said, "Um..."

"You know how to tell if a mathematician is an extravert?"

"Nope."

George looked down and said, "He looks at your feet when they're talking to you."

Abigail giggled. "Have you heard my Grandpappy's theory on how PMS got its name?"

George said, "Um..."

She giggled again. "Something about 'Mad Cow Disease' being taken."

George stiffened, and looked for something to say.

Abigail said, "Stop it, George. Just stop it. Don't you get it? Don't you stand and listen or sing the hymn where the the Mother of God is honored as the Ewe that bore the Lamb of God and the Heifer that bore the Unblemished Calf?"

George's mind raced. "I suppose that if, in the same breath, Christ is called—"

Abigail interrupted. "Next time you're in Church, listen, really listen, as the Mother of God is honored, then listen as Christ our God is worshiped. There's a difference. Don't try to analyze it or even put your finger on it. Just listen, and... George, do you understand women? At all?"

George looked for something to say, but found nothing.

A dark cloud blew across the sky, and cold rain began to fall more heavily until it poured.

George said, "May I lend you my jacket?"

Abigail said, "I'm fine."

The rain grew colder, and began to pelt. George and Abigail both rose and began scurrying towards campus. George took off his jacket and started to place it around Abigail's shoulders.

Abigail said, "I don't—"

George looked down and said, "I'm wearing boots and you have bare feet," and wrapped his jacket around her shoulders. Then a gust of wind tore at Abigail's hat, but George caught it.

Then they ran back, with George shivering under his threadbare T-shirt. When they got back, he went to his dorm

and she to hers. George called Abigail and was fine and she was OK

and she to hers. George called Abigail and confirmed she was OK, took three long, hot showers, and spent the rest of the evening sinking into a lounge chair in his bathrobe, sipping cocoa, and thinking.

Tuesday evening, George found time to visit Fr. Elijah. He wanted to talk about another subject. Definitely another subject.

"Fr. Elijah, are you busy?"

"I hope not... come in."

"After all this, I still want the Holy Grail."

"Excellent thing, my son... the chief point of life is to search for the Holy Grail."

"But will I find it? I mean... I'm not sure what I mean."

"May I show you something old?"

"As far as material age goes, it is much older than the Holy Grail."

The old man opened a desk drawer, and fished out a small box.

"I thought this might interest you," he said, and took something out of the box, and placed it in George's hand.

George looked the item over. It looked like a piece of bark, not much larger than a pebble, and yet it seemed heavy for a piece of bark. "Is this stone or wood? I can't tell which it is."

"Is it stone or wood? In fact, it is petrified wood... from the Oak of Mambre."

"Oak of Mambre? Should I have heard of it before?"

"You probably have, and if you can't remember it, there is something you're missing."

"What is the Oak of Mambre?"

"I'll tell you in a bit. When you grasp the Oak of Mambre, you hold the Holy Grail."

"How?"

"The Oak of Mambre is older than any of the civilizations you

The Oak of Mambre is older than any of the civilizations you know; for that matter, it might be older than the practice of writing. Do you know about Abraham?"

"The one Paul calls the father of all who believe?"

"Yes, that Abraham. The Bible tells how Abraham met three men who came to him, and showed the most lavish hospitality, giving them the costliest meal he could have given. And it was then that the men promised the impossible. It is clear enough later that these men were in fact angels, were in fact God.

"From the West, you may not know that even if we Orthodox are big on icons, it's fingernails to a chalkboard when Orthodox see the Father portrayed as the proverbial old man with a beard. Christ may be portrayed because of his incarnation; the same is not true of the invisible Father, who is not and never will be incarnate. Icons of the Father have been fundamentally rejected, but there was one exception. From ancient times there has been an icon of Abraham's hospitality to the three men, or three angels, and centuries ago one iconographer showed something deeper: it is the same three men or angels, but instead of a table with a lamb as in the old version of the icon, there is an icon with a chalice atop an altar. In both the old and the new form of the icon, the Oak of Mambre is in the back, and it is this same oak for which I have shown you a fragment."

"Is it holy because it is old?"

"Being old does not make a thing holier. The pebbles in your yard are of stone ages older than the oldest relic. Though they are, admittedly, part of the earth which received Christ's blood on the cross, and which Bulgakov rightly calls the Holy Grail.

"A thing is kept and preserved because it is holy, and if people will try to keep a holy thing for a long time, it will probably be old to most of the people who see it. Same reason most of the people who have seen the Liberty Bell saw it when it

most of the people who have seen the Liberty Bell saw it when it was old because people have been keeping it for a long time, much longer than the time when it was new, so most of the people who have seen, or will see, the Liberty Bell, see it as an old treasure. But back to holy things: a holy thing is, if anything, timeless: when there arose a great evil in Russia and Marx's doctrine helped people try to make paradise and caused a deep, deep river of blood to flow, the communists in the Orthodox heartland of Russia made martyrs, and in that torrential river of blood made more Orthodox martyrs than the rest of history put together. God will preserve saints' relics from that, and it may be that there are more relics from the past century than all centuries before. And they are not the less holy because they are new. But let us return to the Oak of Mambre and why, if you grasp it, you hold the Holy Grail."

"Ok. Why is that?"

"The Church has decided that the only legitimate way to portray an icon of the Trinity is in the hospitality of Abraham. And the Icon of the Holy Trinity is the deepest icon of the Holy Grail—deeper even than an icon that I can show you that shows the Mother of God as a chalice holding her Son. Where is the Holy Grail in this icon?"

"Is it that little thing in the center?"

"In part. Where else is it?"

George looked long and hard, seemed to almost catch something, before it vanished from his face.

"There are different interpretations," Fr. Elijah said, "and the icon conceals things; even the angel is a protecting veil to a reality that cannot be seen. But in the layers of this icon, the deepest glimpse sees the Father on the left, the Spirit on the right, and the Son in blood red clothes in the center, encased as in a chalice, showing the reality in Heaven for which even the

in a chance, showing the reality in Heaven for which even the Holy Grail is merely a shadow."

George turned the stone over in his hand with awe, closed his eyes, and then looked at the relic he held in his hand. "So I am holding the Holy Grail."

Fr. Elijah said, "Yes, if you look on it with enlightened eyes. Where else do you meet the Holy Grail?"

"In every person I meet?"

"'Tis hard to answer better than that. When you become Orthodox, you will receive the Eucharist and kiss the chalice, and, perhaps, find that the Holy Grail is achieved not by an unearthly isolated hero, but by a community in common things."

"But why do people kiss the Holy Grail? I mean the chalice?"

"If you call it the Holy Grail, even if your tongue slips, you may be understanding it. The Western view is that there is one original chalice and the others are separate sorts of things; in Orthodoxy, what is the same between the Holy Grail and 'another' chalice runs infinitely deeper than what separates them; the 'real' thing is that they are the same."

"But why the kiss?"

"Let me ask you a question. Do you think a kiss has more to do with worship, or with mental calculations?"

"Does it have to do with either?"

"You haven't read the Bible in Greek."

"What does the Greek Bible have to do with it?"

"Quite a lot, but it will take me a bit to explain why. But there is a deep tie."

"The main word for reverence or worship, in the Greek Bible, literally means to kiss. Part of what you'll keep coming to again and again is that the West understands the mind as the thing that calculates, and the East understands the mind as what knows, and is enlightened, because it tastes and even more

knows, and is enlightened, because it tastes and even more deeply because it worships. I don't know how to put this clearly, in terms that will make sense to someone who does not know the spiritual realities involved. There is a false kiss—I dare say, the kiss of Judas or a kiss that is hollow like the kiss of Judas—that is nothing more than a calculated act. But there is also a kiss that has something to do with worship, and it is no error that Orthodoxy has things 'with love and kisses.' We embrace icons, crosses, holy books, each other with reverence that includes a kiss. And rightly done, such kisses are connected to worship."

"I still don't understand why."

"Let me make a momentary detour; I'll get back in a moment. Old texts can be at once something we genuinely experience a deep connection to, and something treacherously unfaithful to our assumptions. What would you say, for instance, that the medieval Scholastics are talking about when they use the word that is usually translated, 'intellect'?"

"I try to keep my mind free of preconceptions, especially when dealing with something unfamiliar."

"So you'd be open to anything they'd say about the intellect's ability to draw logical conclusions from one thing to another?"

"They can let the intellect draw conclusions however they want to."

"But here's the thing. They don't. It is a fundamental error to read 'intellect' as 'the thing that reasons by logical deduction. Saying that the 'intellect' is what makes deductions by reasoning from one thing by another is like saying that an object's height is what you measure with a bathroom scale, or that its weight is measurable with a ruler. It's a fundamental error; the intellect is precisely what does not reason from premises to conclusions."

"Then what is the intellect?"

Then what is the intellect?

"I usually don't use the term 'intellect' for it; the closest English equivalent I can think of is 'spiritual eye'. But even that misses what exactly this spiritual eye connects with. And this spiritual eye was known to the Greek Fathers no less than the Latin scholastics; if anything, the Greek Fathers were more attuned to it. Scholastic theology is an exercise, to a large degree, of that which reasons; the theology of the Fathers comes from another place. The spiritual eye is that which connects with spiritual realities, that which worships above all—and if you want a good, short definition for what 'intellect' means besides 'what IQ is supposed to measure,' use the definition 'where one meets God.' If reasoning deduces what you may not see yet, the spiritual eye sees, and knows by what it can see, not by what it can pull from other things it already has. This reasoning from one thing shines like the sun in Western Scholasticism."

"And that's something you don't have in Orthodoxy?"

"We do have it. But reasoning shines like the moon: it reflects the light of the sun in each of us, the sun of our mind's spiritual eye. It plays more of a supporting role."

"And what does all of this have to do with your ritual kiss?"

"There was an awful video I heard was shown in one of your college's psychology classes; I don't know if you've seen it. It was talking about one psychological theory, and discussed how reward and such could be used to reduce autistic behaviors. And it showed a scientist, or psychologist, or something, who was patiently training a little girl to not do whatever he was trying to stop her from doing, and the girl lit up when he gave her a kiss. And then, along with a fake-sounding Mommy-ese talking in a high-pitched voice which I assure you was not spontaneous, he

started to use almost forced kisses to, well..."

George cut in. "Manipulate her?"

"Yes, you found the word I was looking for. The one time I heard Abigail talking about that video, she said there was a bit of bristling going through the class; the students were uncomfortable with something about that video and its one more mere technique, a mere tool, for changing a little girl's behavior."

"Is the spiritual eye, or whatever, spontaneous? Is it about spontaneity?"

"I'll have to think about that... I'm not sure I've seriously thought about whether the spiritual eye is spontaneous. But spontaneity is not the issue here. The point has to do with what place a kiss should come from if it is not to be hollow. Have you noticed that none of the icons I've showed you have a signature?"

"Because the iconographers are not supposed to be what we think of in the West as artists, with their own signature style and their big egos?"

"A little bit. Iconography is art, and artistry and talent do mean anything: the iconographer is not a cog in a machine—and may be doing something much bigger than trying to use art supplies for self-expression. There is something self-effacing about iconography—something very self-effacing—but you find that when you bow down and efface yourself, it is you doing something much bigger than otherwise. Writing icons is a form of prayer, a spiritual exercise, and it is said—just like we speak of 'writing' icons rather than 'painting' them—that it is inadequate for an iconographer to sign the icon, because the icon is written, not merely by the iconographer's hand, but by his his spiritual eye. It is ever much more than a merely material process, and when you become Orthodox you may sense icons

that have spiritual depth and icons that let you see no further than the wood, and if you receive this gift, you will be responding to the spiritual process out of which the icon arose."

"I have sensed something... the icons still look like awkward pictures to me, but I'm starting to find something more."

"That is good. And your mouth—with which you breathe in your spirit, and show the reason of speech, and will receive the Eucharist—is not that by which you may give a kiss; it is that through which you may give the kiss that comes from and to some extent is the embrace of your spiritual eye. That's when a kiss is furthest from the hollow kiss that Judas gave. The knowledge of the spiritual eye is something I have discussed as sight, but in the ancient world all people recognized something touch-y about all the five senses, not just one. And this knowledge and drinking are exemplars of each other, draughts from the same fountain, and it is not an accident that 'know' has a certain sense in the Bible between, for instance, Adam and Eve: the spiritual eye knows by drinking in, and it is a fundamental error to think that the holy kiss has nothing to do with knowledge."

"This sounds like a fairy tale."

"Maybe you know your fairy tales, and know that there is something magic about a kiss. As one scholar put it, examples of the kiss as a means of making and breaking enchantments have been found in the folklore of almost every culture in the Western world. Orthodoxy has something more than this enchantment. There is a spiritual mingling, and even the Eucharist is understood as a kiss, and a kiss that embraces others: in the Eucharist, the body of Christ is offered up, including a token of bread for every parishioner—before being distributed. Have you not noticed that the best bishops and the

most devout of the Orthodox, give the best kisses? But let me step back a bit.

"The difference in understanding symbol is one of the biggest differences between East and West. In the West, at least in its modern forms, a symbol is a detached and somewhat arbitrary representation. In the East a symbol is connected, cut from the same cloth as it were. The difference between Orthodoxy and various Protestant schools is not whether the Eucharist is a symbol, but what that means—that the Eucharist is an arbitrarily detached token, connected only in the viewer's mind, or whether it is connected and in fact the same on a real level.

"We are made in the image of God, which means that how you treat others is inseparable from how you treat God: you treat God with respect, love, or contempt as you meet him in the person of others. And the things that we reverently kiss in Orthodoxy are all connected with God. We show our reverence to God in how we treat them. And if a person is being transformed according to the likeness of Christ, then it is fitting to reverently kiss that person and show respect for the Lord.

"To give the holy kiss rightly is a microcosm of faith and community. You cannot do it alone, nor can you do it apart from worship. If you look at the things that fit together in a fitting kiss, you have love, God, your neighbor... there are a great many actions that are listed in the Bible, and many of them are holy actions, but only one is called holy: the holy kiss. If you grasp the Holy Grail in your heart, and you grasp this kiss in its full sense, you will know that the sacred kiss in which our souls are mingled is the Sign of the Grail. It is the eighth sacrament."

George was silent for a long time. "I don't think I know enough to be Orthodox."

Fr. Elijah said, "Join the club! I know I don't know enough."

"But you're a priest!"

"And you cannot become Orthodox without entering the royal priesthood. You aren't ready to be Orthodox just because you know a certain amount; you're ready when you're ready for the responsibility, like getting married, or getting a job, or any other of a number of things. You are ready when you are ready to take the responsibility to return the Creation as an offering to God and shoulder a priestly office. And, in your case, I might add, when you enter the great City and Castle called the Church, and are ready for the Sign of the Grail."

"All I know now is my own unworthiness."

"Good. You're growing! Ponder your unworthiness and give it to God. Do you want to take Brocéliande back now?"

George gladly took the book back. He returned to his room, and some time later, George began reading:

The hermit spoke. "Listen as I tell the history of Saint George.

"The King wept sore. 'The land is weeping, the land itself weeps. The dragon hath devoured every damsel of the land, every last one, and now it seeketh mine own. I bewail the death of my joy and my daughter.'

"Then Saint George said, 'By my faith I will protect her and destroy this fiend,' and Saint George prayed and gat him his destrier and armed him and fewtered his spear and rode out and faced the sea.

"And the dragon arose from the sea and his deeps. And venom were in the wyrm his heart, and the grievous stench of death stank all round.

"Then the serpent charged upon Saint George the ever

victorious knight, and the dragon breathed fire which brake  
and were quenched upon Saint George his shield, a grand  
cross gules upon a field or.

"Then Saint George made him the Sign of the Cross.

"Then Saint George smote the dragon, the great paladin  
his great spear dove into the dragon his mouth and dolve far  
beyond that insatiate devouring maw, until the dragon his  
head were riven asunder from the dragon his body trampled  
by Saint George his horse. And Saint George hurled the  
wurm his head into the dark thrice cursed valley far outside  
of the castle.

"That day the King and the whole castle made such  
merriment as had never been since, for we do not know  
merriment today. There were jugglers and jesters and a  
table full filled, and before evensong the King gave George  
the hand of the King his daughter. That were the gayest of  
all."

The knight asked the hermit, "Why speakest thou me of  
this history?"

The hermit spake unto him and answered, "Sir knight,  
thou hast given me not thine name. What be it?"

"Thou entreatest of me my name? Thou askest what none  
hath asked of me aforetimes. My name is called Sir Perceval.  
And now I ask of thee of what I have asked not aforetimes.  
Had Saint George heard tell of whom doth the Grail serve?"

George slowly closed the book, and put it on a shelf. He  
momentarily wondered why he treated Brocéliande as something  
to read alone. There was something that seemed just out of his  
reach.

And then George realized something deep, deep inside  
himself

.....

Then it was Holy Week.

Or at least George wanted it to be holy week for him, too.

George found himself standing in Church, in the holiest of surroundings, and struggling to pray. Memories arose; painful memories of stinging things done by those he loved. Voluptuous images sometimes followed. He struggled to pray, but his mind remained locked in earthly struggles. His body ached in the long services: there were icons, chanting, and incense without, and struggles within. He wanted to rest in worship, and he couldn't.

In his mind, he remembered a moment when a beggar had come to him, and wouldn't stop pleading no matter how much he annoyed George. The image filled his mind, and George was startled when he turned and saw the beggar's face on the wall.

Why was that?

George was looking at an icon of Christ.

He had fallen short, and not only in seeing that beggar as nothing but an annoyance. Did George really have no common bond with that beggar?

For that matter, did George have no common bond with the civilization that he disdained, the civilization that included everybody he knew from the beggar to his parents, the civilization that gave him everything from his clothing to his language? Was it there for no other purpose than for him to criticize and feel superior to?

Fr. Elijah, moving amongst the congregation, swung the censer before George in veneration.

George barely noticed that some of these thoughts were giving way, and he was aware, with almost a painful sharpness, of something else.

George mulled over Fr Elijah's words about hollow kisses, and

then started to see how hollow George was.

Unworthy thought he felt, George stood with growing awe and wonder, waiting until Great and Holy Thursday, the one day in holy week where wine was allowed. "Ordinary" wine was allowed, held in honor and in remembrance of the Last Supper, when wine became the blood of Christ and the eucharistic chalice was forever given to men. This day, if anything, was to George the feast of the Holy Grail.

And so he stood entranced, as if he were entering from afar. He watched the Last Supper as here and now, as Fr. Elijah stood "in the flame" before the altar, and then listened as he read the Gospel according to St. John the Evangelist, of the night when Christ loved his disciples to the last, and prayed out from the glory he shared with the Father before the worlds had begun.

And Fr. Elijah read and read, reading until George's body ached from standing.

Then someone walked over to twelve unlit candles, and lit one.

The first.

George's heart sank. There were eleven candles still to go.

The readings continued, and became shorter, until the twelve candles were lit. George began to feel anger at the unending readings—until he heard Christ's words from the garden of Gethsemane: "What, could you not watch with me one hour?"

Who were those words spoken to?

And then, when the readings had run their course, the liturgy followed—at once unlike an intimate gathering in an upper room in external appearance, but yet like the place that feels like home though nothing on the outside resembles the home. George thought for a moment about a historical reconstruction of the Last Supper pursued through academic rigor in archaeology... and then realized he needed no such thing. He was watching the Last

Supper all around him, and in the words of Fr. Elijah's remark,  
"You didn't even need a time machine."

Or was this liturgy a spiritual time machine? Certainly time flowed in the most interesting ways, now quickly, now slowly, swirling about in eddies... there was something George could not put his finger on, but he understood for a moment what could make a person imagine a way to turn back time.

And so George found himself almost surprised when Fr. Elijah said, "He gave it to his holy disciples and apostles, saying, 'Take, eat; this is my body which is broken for you, for the forgiveness of sins.'"

Then the faithful sealed this with their, "Amen."

Then Fr. Elijah said, "Likewise, he took the cup of the fruit of the vine, and having mingled it, offering thanks, blessing, and sanctifying it, he gave it to his holy disciples and apostles, saying, 'Drink of this, all of you. This is my blood of the new covenant, shed for you and for many, for the forgiveness of sins.'"

The disciples around him sealed this, with their, "Amen."

George looked in wonder at the chalice that was raised. He thought, "This is it. This is the Holy Grail, forever given, that belongs to Christ's disciples."

As the liturgy continued, and Fr. Elijah proclaimed the Holy Gifts, the people continued to seal the Gifts with their "Amen," and George watched as they received from the chalice, and kissed the chalice in reverence, and (though George paid this little attention) Fr. Elijah's hand.

George found himself basking in the glow of that long moment for as the liturgy continued and Fr. Elijah anointed those around him that they may be healed in soul and body.

As he walked home, he thought, "I have seen the Holy Grail. It has been under my nose. Very soon I will be one of those who

share it, one of those the Holy Grail belongs to."

When George got home, he slept as peacefully as he slept in ages.

Then George entered the Church on Great and Holy Friday.

The whole service moved slowly, felt like something great but alien that slipped through George's fingers no matter what he did to grasp it. Around him were some who were silent, some who were singing, and some who were weeping. A great cross was brought out, and a great icon of Christ hung on it with nails.

And then something clicked in George's heart.

Some years before, he had been at a martial arts demonstration and saw a fifth degree black belt standing like a picturesque statue, looking quaint and exotic, holding a beautiful pair of fans. And then, for an instant, there was a flurry of motion as he was attacked by six other black belts with swords. And then, an instant later, George saw a fifth degree black belt standing like a picturesque statue, looking quaint and exotic, holding a beautiful pair of fans, and all around him were six other black belts with swords, on the ground, crying.

That had for long been the greatest display of power George had seen.

Now something was at the back of his mind.

Here was a new image of strength.

Were they the same?

Were they different?

Was the true nature of strength, strength in weakness?

The fifth degree black belt showed strength behind apparent weakness—or at least what looked like weakness to an outsider like George; he had no idea what it would look like to someone who was not a barbarian like him. To him, the martial arts demonstration seemed to show strength, if a show was needed,

and a strength great and powerful enough to vastly understate  
itself. And the One before him on the cross showed more of the  
same... or was that really true?

Was it?

Something about that did not sit well.

Inside George's heart flashed an icon that had been on his  
mind—of a Man, his head bent, a purple robe about his wounded  
body. The robe was royal purple to mock the "pretender," his  
hands were bound, and a crown of thorns rested atop his bent  
head.

Atop the icon was an inscription in Greek and in English:

Ο ΒΑΣΙΛΕΥΣ ΤΗΣ ΔΟΞΗΣ  
THE KING OF GLORY

George raised his eyes to the crucified God.

This was another kind of strength.

George began to weep.

This was the strength that prayed, if there was any way, that  
the cup might pass from him.

This was the strength that prayed, "Thy will be done."

This was the strength that drank the cup to the dregs, and  
shattered it forever.

This was

THE KING OF GLORY  
THE KING OF KINGS  
THE LORD OF LORDS  
THE GOD OF GODS  
THE LION OF JUDAH  
THE FIRSTBORN OF THE DEAD  
THE RESURRECTION AND ETERNAL LIFE

THE NEW MAN AND THE LAST ADAM  
THE UNCREATED GOD  
THE DIVINE, ORDERING WISDOM  
THROUGH WHOM ALL THINGS WERE MADE  
BY WHOM ALL THINGS WERE MADE  
IN WHOM ALL THINGS CONSIST  
THE LORD OF THE CHURCH AND ALL CREATION  
THE BRIDEGROOM OF THE CHURCH AND ALL CREATION

Had *George* ever known what it was to worship?  
*George* stood in awe of the one who was, in truth, the Holy  
Grail...  
or rather, the one for whom the Holy Grail was but a shadow.  
And who was *George* next to such holiness and power?  
Unclean and defiled.

When *George* had thought about going to his first confession,  
it had looked to him like the least attractive part of the picture  
of becoming Orthodox. But now, even if he knew even more  
dread, he wanted, not so much to be unburdened for himself, but  
to turn himself in and render what was due.

He didn't just think he needed to. He simply knew that it was  
something that he owed with from the core of his being.

What evil had he not practiced?

He prayed aloud, "Lord Jesus Christ, Son of God, have mercy  
on me, a sinner," and then in spirit and body fell prostrate  
before his God and Lord.

*George* returned home, mindful of his sin, but ever so much  
more mindful of the greatness of the Lord and Savior.

He spent Saturday in the terrifying struggle to repent of his  
sin, to face his sin and write the spiritual blank check that he  
feared in the unconditional surrender of rejecting sin.

When he confessed his sin, Fr. Elijah blessed him, said "I'm

When he confessed his sin, Fr. Elijah blessed him, said, "I'm sorry I can't give you the sacramental absolution yet—that will follow your chrismation," and then said, "Welcome home, son.

Keep repenting."

And then the vigil was upon them.

It began with George standing in the center of the action as he stood before the congregation and, answering Fr. Elijah, renounced the Devil and all his works, rejecting sin, schism, and heresy, and vowed himself to Christ as a member of the Orthodox Church.

Then Fr. Elijah anointed George with sacred chrism, chrismating him with the fragrant oil of anointing that sealed George as a little Christ, as spiritual prophet, priest, and king, as one of the faithful in the Orthodox Church. This oil of spiritual blessing that worked in him more deeply even as it was wiped away from his skin—the emblem of the Spirit that penetrated like a sword. Fr. Elijah absolved George of his sins, and then the newly illumined servant of God George, stood before the congregation.

Then George faded into the background while the vigil unfolded, and he could never remember all of it—only that it seemed like a treasurehouse from which more and more wondrous treasure was brought forth. George remembered later the incense, the chant of "Christ is risen from the dead, trampling down death by death," the call of "Christ is risen!" and its answer, "He is risen indeed!", repeated triumphantly, in English, in Slavonic, in Arabic, in Spanish... and most of all George remembered the faces around them. There was something more deeply radiant and beautiful than that of someone who had won millions of dollars. The vigil lasted for hours, but though George ached, he barely minded—he almost wished it would last for

hours more

hours more.

When it was time for the homily, Fr. Elijah stood up, his face radiant, and read the age-old homily of St. John Chrysostom, read at all kinds of Orthodox parishes on Pascha for ages:

If any man be devout and loveth God,  
Let him enjoy this fair and radiant triumphal feast!

If any man be a wise servant,  
Let him rejoicing enter into the joy of his Lord.

If any have labored long in fasting,  
Let him now receive his recompense.

If any have wrought from the first hour,  
Let him today receive his just reward.

If any have come at the third hour,  
Let him with thankfulness keep the feast.

If any have arrived at the sixth hour,  
Let him have no misgivings;  
Because he shall in nowise be deprived therefore.

If any have delayed until the ninth hour,  
Let him draw near, fearing nothing.

And if any have tarried even until the eleventh hour,  
Let him, also, be not alarmed at his tardiness.

For the Lord, who is jealous of his honor,  
Will accept the last even as the first.

He giveth rest unto him who cometh at the eleventh hour,  
Even as unto him who hath wrought from the first hour.

And He showeth mercy upon the last,  
And careth for the first;  
And to the one He giveth,  
And upon the other He bestoweth gifts.

And He both accepteth the deeds,  
And welcometh the intention,

And honoureth the acts and praises the offering.  
Wherefore, enter ye all into the joy of your Lord;  
Receive your reward,  
Both the first, and likewise the second.  
You rich and poor together, hold high festival!  
You sober and you heedless, honor the day!  
Rejoice today, both you who have fasted  
And you who have disregarded the fast.  
The table is full-laden; feast ye all sumptuously.  
The calf is fatted; let no one go hungry away.  
Enjoy ye all the feast of faith:  
Receive ye all the riches of loving-kindness.  
Let no one bewail his poverty,  
For the universal Kingdom has been revealed.  
Let no one weep for his iniquities,  
For pardon has shown forth from the grave.  
Let no one fear death,  
For the Saviour's death has set us free.  
He that was held prisoner of it has annihilated it.  
By descending into Hell, He made Hell captive.  
He embittered it when it tasted of His flesh.  
And Isaiah, foretelling this, did cry:  
Hell, said he, was embittered  
When it encountered Thee in the lower regions.  
It was embittered, for it was abolished.  
It was embittered, for it was mocked.  
It was embittered, for it was slain.  
It was embittered, for it was overthrown.  
It was embittered, for it was fettered in chains.  
It took a body, and met God face to face.  
It took earth, and encountered Heaven.

It took that which was seen, and fell upon the unseen.  
O Death, where is thy sting?  
O Hell, where is thy victory?  
Christ is risen, and thou art overthrown!  
Christ is risen, and the demons are fallen!  
Christ is risen, and the angels rejoice!  
Christ is risen, and life reigns!  
Christ is risen, and not one dead remains in the grave.  
For Christ, being risen from the dead,  
Is become the first-fruits of those who have fallen asleep.  
To Him be glory and dominion  
Unto ages of ages.  
Amen.

And then the prayers moved very quickly—joyously—radiantly  
—and the Eucharist was served, George being called up first  
among the faithful to receive it.  
Then the newly illumined servant George received Jesus  
Christ as his Lord and Savior.  
And George kissed Fr. Elijah's hand and the chalice,  
forgetting it was the Holy Grail.  
And when the liturgy finished, Fr. Elijah announced to the  
congregation, "You may kiss the convert."  
Then the feast began,  
a faint fragrance of frankincense flowed,  
and a fragrant fragrance of flowers flowed.  
Fr. Elijah spoke a blessing,  
over a table piled high with finest meats  
and puddings  
and every good thing,  
and the fruit of the vine poured out.

Every door and every window was opened,  
and the wind blew where it willed,  
and the wind blew where it pleased,  
and George settled in to his home,  
grateful to God.

Then someone told a Russian folktale,  
and someone began singing,  
and people began dancing,  
and a little boy chased a little girl,  
clutching a flower.

And men and women,  
children,  
young and old,  
saluted George with a kiss,  
every last one  
of his brethren.

And the crystalline light  
of a sapphire sky  
blew through the window,  
and angels danced,  
and saints below cracked red Pascha eggs,  
red in the footsteps of Mary Magdalene,  
a holy grail,  
and George laughed,  
and wanted to weep,  
for joy.

Then George and Abigail talked long.

George could never remember now long the celebration  
seemed to last. It seemed that he had found a garden enclosed,  
a fountain sealed, filled with every kind of wonder, at once  
Heaven and home, at once chalice and vine, maiden and mother,

ancient and alive. It was the family George had forever wanted to enter.

Then George kissed Abigail—a long, full kiss—and absolutely nothing about it was hollow.

When he stepped back, Fr. Elijah tapped him on the shoulder. "By the way, George... I know this is down the road, but let me know when you two get engaged. I'd be happy to do your wedding."

George looked at Abigail, paused, and said, "Abigail, do you see how the candlelight glistens off your Grandpappy's bald spot? Isn't it romantic?"

Fr. Elijah and Abigail turned to each other and said, "It's about time!"

Then Fr. Elijah said, "Welcome to the Castle of the Saints, George. Welcome home."

# Silence: Organic Food for the Soul

We are concerned today about our food,  
and that is good:  
sweet fruit and honey are truly good and better than raw sugar,  
raw sugar not as bad as refined sugar,  
refined sugar less wrong than corn syrup,  
and corn syrup less vile than Splenda.  
But whatever may be said for eating the right foods,  
this is nothing compared to the diet we give our soul.

The ancient organic spiritual diet  
is simple yet different in its appearances:  
those who know its holy stillness  
and grasp in their hearts the silence of the holy rhythm,  
Lord Jesus Christ, Son of God, have mercy on me, a sinner,  
grasp the spiritual diet by their heart,  
by its heart,  
by God's heart.

What treasure looks good next to it?  
It is said that many would rather be rich and unhappy  
than poor and happy,  
stranger still than thinking riches will make you happy:  
Blessed stillness is a treasure,

and next to this treasure,  
gold and technology are but passing shadows,  
no better to satisfy hunger than pictures of rich food,  
no better to satisfy thirst than a shimmering mirage,  
for like the best organic food,  
a diet of stillness gives what we deeply hungered for,  
but deeply missed even seeking  
in our untiring quest to quench our thirst with mirages.

And we have been adept at building mirages:  
anything to keep us from stillness.  
Perhaps technology, SecondLife or the humble car,  
perhaps romance or conversation,  
perhaps philosophy or hobbies,  
not always bad in themselves,  
but always bad when pressed into service  
to help us in our flight from silence,  
which is to say,  
used the only way many of us know how.

There is a mystery,  
not so much hard to find as hard to want:  
humble yourself and you will be lifted up,  
empty yourself and you will be filled;  
become still and of a quiet heart,  
and you will become home to the Word.

"But my life is hard," you say,  
"You might be able to afford luxuries like these,  
but I can't."

Take courage.

[Read the lives of the saints,](#)  
and find that stillness grows,  
not on the path that is spacious and easy to walk,

but the way that is narrow and hard:  
strength is not found  
in ease and comfort,  
but among athletes with no choice but to strive.

We believe in life before death:  
we live the life of Heaven here on earth,  
and those things in life that seem like Hell  
are our stepping stones:

"she shall be saved in childbearing:"  
from the politically incorrect Bible.

Can't women have something more equitable?  
But the truth is even more politically incorrect.

That is how all of us are saved:  
in suffering and in struggle,  
such as God gives us,  
and not when dream,  
and by our power  
we make our dreams come true.

[Weston Price](#) fans,  
who say that an ancient diet nourishes  
far better than modern foods  
manipulated like plastic,  
newfangled corn and sunflower oil,  
gone rancid then masked by chemical wizardry,  
marketed as health food in lieu of wholesome butter,  
could be wrong in their words  
how we need ancient nourishment and not plastic foods.  
They could be wrong about our needs,  
but it is a capital mistake to say,  
"That may have worked in golden ages,  
but we need a diet that will work

for us now in our third millenium."  
If [Weston Price's movement](#) is right,  
then we need the nourishment of timeless traditions,  
now more than ever.  
Saying "No, we need something that will work today,"  
is like saying, "No, we're very sick,  
we are weak and we must focus on essentials:  
healthy people may visit a doctor, but not us."  
But even if the food we eat matters, and matters much,  
the question of what we feed our body  
is dwarfed by the question of what we feed our souls,  
and over the centuries  
our spiritual diet has turned  
from something organic and nourishing  
to something that might almost be plastic:  
inorganic, yet made from what spiritual leaders call rancid.  
The right use of technology is in the service of spiritual  
wisdom,  
but the attractive use of technology is to dodge spiritual wisdom,  
for one current example,  
cell phones and texting not only a way to connect,  
but a way to dodge silence,  
a way to avoid simply being present to your surroundings,  
and this is toxic spiritual food.  
Cell phones have good uses,  
and some wise people use them,  
but the marketing lure of the iPhone and Droid,  
is the lure of a bottomless bag:  
a bottomless bag of spiritual junk food:  
portable entertainment systems,  
which is to say,

portable "avoid spiritual work" systems.  
Someone has said,  
"Orthodoxy is not conservative:  
it is radical,"  
which is striking but strange politically:  
if Orthodoxy is not captured by a Western understanding of  
conservatism,  
further off the mark is it to try to capture it with any Western  
idea of radicalism.

but there is another sense in which it is true:  
not in our design to transform the world,  
but in God's design to transform us.

I thought I was a man of silence.  
I avoid television, occasionally listen to music,  
but never as a half-ignored backdrop.

Recently I learned,  
by the grace of a God who is radical,  
that I did not know the beginning of silence.  
"Hesychasm," in the Orthodox term,  
described by a rhythm of praying,  
Lord Jesus Christ, Son of God, have mercy on me, a sinner,  
in the Church under the authority of a good priest,  
an authority for your sake and mine,  
is a doorway to strip off layers of noise,  
and maybe a portal to joy.

So small-looking on the outside,  
and so spacious if you will step in.  
Concerned about organized religion?  
Eastern Orthodoxy is quite disorganized, some have said,  
but we won't go into that.

Negativity about organized religion

is part of the toxic spiritual diet  
it is so hard to avoid.

Some have said that people concerned about organized religion  
are really concerned about someone else having authority over  
them.

Though I am self-taught in some things,  
an author with a few letters after his name  
but not even a high school course in non-academic writing,  
Aristotle's words are apropos:

"He who teaches himself has a fool for a master."

There are always choices we must make for ourselves,  
Orthodoxy actually having wisdom to help free us in these  
choices,

but trying to progress spiritually without obedience to a spiritual  
guide who can tell you "No,"  
is like trying to be healthier without paying attention to stress in  
your life, or what you eat, or exercise.

I speak from experience:

I still trip in the light,

but I do not want to go back to how I tripped in the dark.

"Keep your eyes on Jesus,  
look full in his wonderful face,  
and the things of this world  
will grow strangely dim  
in the light of his glory and grace,"  
says the cherished Protestant hymn:  
but it does not say how,  
and silence is how.

Do you long for honors the world bestows,  
and are never satisfied with what you have?

Mirages look good,

but the place of a mirage is always outside our grasp,  
something it looks like we might reach tomorrow,  
not something that is open to us right now.  
And it is not until we let go of the mirage we want so much  
that we see right next to us  
a chalice  
of living water  
that can quench our thirst now.  
Pride, lust, anger and remembrance of wrongs, envy, wanting  
to use people—  
all of these urge us to look away  
wanting to quench our thirst on mirages  
and blind our eyes  
to the chalice  
of living water  
that we are offered,  
and offered here and now.  
And it isn't until you rest and taste the waters,  
the living waters of the chalice that is always at hand,  
that you realize how exhausting it is  
to chase after mirages.  
The Church prays through the Psalm,  
"But I have quieted and calmed my soul,  
like a child quieted at its mother's breast,  
like a child that is quieted is my soul."  
When a child quieted at its mother's breast,  
cares melt away,  
and to the soul that knows silence,  
the silence of Heaven,  
for Heaven itself is silent  
and true silence is Heavenly,

the things of this world grow strangely dim.  
Do you worry? Is it terribly hard  
to get all your ducks in a row,  
to get yourself to a secure place  
where you have prepared for what might happen?  
Or does it look like you might lose your job,  
if you still have one?

### The Sermon on the Mount

urges people to pray,  
"Give us this day our daily bread,"  
in an economy  
when unlike many homeless in the U.S. today,  
it was not obvious to many  
where they would get their next meal.  
And yet it was this [Sermon on the Mount](#)  
that tells us our Heavenly Father will provide for us,  
and tells us not to worry:  
what we miss  
if we find this a bit puzzling,  
we who may have bank accounts, insurance, investments  
even if they are jeopardized right now,  
is that we are like a child with some clay,  
trying to satisfy ourselves by making a clay horse,  
with clay that never cooperates, never looks right,  
and obsessed with clay that is never good enough,  
we ignore and maybe fear  
the finger tapping us on our shoulder  
until with great trepidation we turn,  
and listen to the voice say,  
"Stop trying so hard. Let it go,"  
and follow our father

as he gives us a warhorse.

If you have a bank account, or insurance, or investments,  
you may be better at making your clay statue,  
better than the people who heard the [Sermon on the Mount](#),  
but the Lord says to us as much as them,  
"Let your worries be quieted  
as you enter silence,"  
to give us a warhorse.

And when we let go of taking on God's job,  
of taking care of every aspect of our future,  
we find that he gives us better than we knew to seek:  
if we thirst for worldly honor to make us feel significant,  
if we covet luxuries to make us feel better,  
and we learn holy silence,  
the things of the world grow strangely dim.

People hold on to sin because they think it adorns them.

Repentance is terrifying,  
because it seems beforehand  
that repentance means you will forever lose some shining part of  
yourself,

but when you repent,  
repentance shows its true nature  
as an awakening:

you realize, "I was holding on to a piece of Hell,"  
and, awakened, you grasp Heaven in a new way.  
Let go of the mirage of doing God's job of providence,  
by your own strength,  
and let go of the mirage of getting enough money  
to make you happy,  
and when you give up this misshapen clay horse,  
find a warhorse waiting for you:

God will provide better than you know to ask,  
perhaps giving you a great spiritual gift  
by showing you you can live without some things,  
and this just the outer shell holding spiritual blessings  
next to which billions of dollars pale in comparison.

("Who is rich? The person who is content.")

And if like me you are weak and wish you had more honor,  
you may taste the living water next to which worldly honor is an  
elusive mirage  
always shimmering, always luring, and never satisfying, at least  
not for long,  
and ride the warhorse,  
and wonder why you ever thought worldly honor would make you  
happy.

A saint has said,  
that when you work,  
seven eights of the real task  
is watching the state of your heart  
and only one eighth is the official task.

Proverbs likewise tells,  
"Keep your heart with all vigilance,  
for from it flow the springs of life."

Guard your heart.

"Finally, brethren, whatsoever things are true,  
whatsoever things are honest,  
whatsoever things are just,  
whatsoever things are pure,  
whatsoever things are lovely,  
whatsoever things are of good report;  
if there be any virtue,  
if there be any praise,

think of these things."

What you put before your heart matters.

Your heart will be conformed to whatever you place before it:

a good deal of your spiritual diet  
is simply what you place before your mind:

mental images above all else,

"Be careful, little eyes..."

There is a distinction between

where one meets God,

and that which reasons from one thought to another:

to us today, "mind" or "intellect" is that which reasons,

but the Church has long known the heart of the intellect or mind:

where one meets God.

And the poisoning of our spiritual diet

has moved us

from knowing the mind as the heart that meets God

to growing and over-growing that which reasons,

so that it is at the heart of our lives,

in Christians as much as the atheist,

is the secular view of mind,

like psychology,

in its secular flight

from religious knowing

of who the human person is

and what is the heart of the human mind.

Learn to live out of that by which you worship:

drink living water,

because it is exhausting

to chase after mirages

in worrying and scheming

in the part of us which reasons,

that which is only the moon  
made to reflect the light  
of the sun,

that by which we worship,  
the spiritual eye  
made for a God who is Light.

"We have a sister,  
whose breasts are not grown,  
what shall we do for our sister  
in the day when she shall be spoken for?

If she be a wall,  
we will build on her a palace of silver:  
and if she be a door,  
we will inclose her with boards of cedar."

In your mind be a garden locked and a fountain sealed,  
that which worships  
not forever dispersed,  
forever exhausted,  
in treating that which reasons  
as the heart of your mind:

learn the prayer of the mind in the heart.

The ancient organic spiritual diet is prayer, silence, fasting,  
liturgy, giving to the poor, tithing, reading the Bible and the  
Fathers and saints' lives, and many other things.

You eat it as you would eat an elephant:  
one bite at a time.

Your task today is to eat one day's worth:  
tomorrow's concerns are tomorrow's concerns.

# Singularity

**Herodotus:** And what say thee of these people? Why callest thou them the Singularity, Merlin?

**John:** Mine illuminèd name is John, and John shall ye call me each and every one.

**Herodotus:** But the Singularity is such as only a Merlin could have unravelled.

**John:** Perchance: but the world is one of which only an illuminèd one may speak aright. Call thou me as one illuminèd, if thou wouldst hear me speak.

**Herodotus:** Of illumination speakest thou. Thou sawest with the eye of the hawk: now seest thou with the eye of the eagle.

**John:** If that be, speak thou me as an eagle?

**Herodotus:** A point well taken, excellent John, excellent John. What speakest thou of the Singularity?

**John:** A realm untold, to speak is hard. But of an icon will I speak: inscribed were words:

'Waitress, is this coffee or tea?'

'What does it taste like?'

'IT TASTES LIKE DIESEL FUEL.'

'That's the coffee. The tea tastes like transmission fluid.'

**Herodotus:** Upon what manner of veneration were this icon worshipped?

**John:** That were a matter right subtle, too far to tell.

**Herodotus:** And of the inscription? That too be subtle to grasp.

**John:** Like as a plant hath sap, so a subtle engine by their philosophy wrought which needeth diesel fuel and transmission fluid.

**Herodotus:** [laughs] Then 'twere a joke, a jape! 'Tis well enough told!

**John:** You perceive it yet?

**Herodotus:** A joke, a jape indeed, of a fool who could not tell, two different plants were he not to taste of their sap! Well spoke! Well spoke!

**John:** Thou hast grasped it afault, my fair lord. For the subtle engine hath many different saps, no two alike.

**Herodotus:** And what ambrosia be in their saps?

**John:** Heaven save us! The saps be a right unnatural fare; their substance from rotted carcasses of monsters from aeons past, then by the wisdom of their philosophy transmogrified, of the subtle engine.

**Herodotus:** Then they are masters of Alchemy?

**John:** Masters of an offscouring of all Alchemy, of the lowest toe of that depravèd ascetical enterprise, chopped off, severed from even the limb, made hollow, and then grown beyond all reason, into the head of reason.

**Herodotus:** Let us leave off this and speak of the icon. The icon were for veneration of such subtle philosophy?

**John:** No wonder, no awe, greeteth he who regardeth this icon and receive it as is wont.

**Herodotus:** As is wont?

**John:** As is wanton. For veneration and icons are forcèd secrets; so there is an antithesis of the sacra pagina, and upon its light pages the greatest pages come upon the most filled with lightness, the icons of a world that knoweth icons not.

Let me make another essay.

The phrase 'harmony with nature' is of popular use, yet a deep slice of the Singularity, or what those inside the Singularity can see of it, might be called, 'harmony with technology'.

**Herodotus:** These be mystics of technology.

**John:** They live in an artificial jungle of technology, or rather an artificial not-jungle of technology, an artificial anti-jungle of technology. For one example, what do you call the natural use of wood?

**Herodotus:** A bundle of wood is of course for burning.

**John:** And they know of using wood for burning, but it is an exotic, rare case to them; say 'wood' and precious few will think of gathering wood to burn.

**Herodotus:** Then what on earth do they use wood for? Do they eat it when food is scarce or something like that?

**John:** Say 'wood' and not exotic 'firewood', and they will think of building a house.

**Herodotus:** So then they are right dexterous, if they can build out of a bundle of gathered sticks instead of burning it.

**John:** They do not gather sticks such as you imagine. They fell great trees, and cut the heartwood into rectangular box shapes, which they fit together in geometrical fashion. And when it is done, they make a box, or many

boxes, and take rectangles hotly fused sand to fill a window. And they add other philosophy on top of that, so that if the house is well-built, the air inside will be pleasant and still, unless they take a philosophical machine to push air, and whatever temperature the people please, and it will remain dry though the heavens be opened in rain. And most of their time is spent in houses, or other 'buildings' like a house in this respect.

**Herodotus:** What a fantastical enterprise! When do they enter such buildings?

**John:** When do they rather go out of them? They consider it normal to spend less than an hour a day outside of such shelters; the subtle machine mentioned earlier moves but it is like a house built out of metal in that it is an environment entirely contrived by philosophy and artifice to, in this case, convey people from one place to another.

**Herodotus:** How large is this machine? It would seem to have to be very big to convey all their people.

**John:** But this is a point where their 'technology' departs from the art that is implicit in τέχνη: it is in fact not a lovingly crafted work of art, shaped out of the spirit of that position ye call 'inventor' or 'artist', but poured out by the thousands by gigantical machines yet more subtle, and in the wealth of the Singularity, well nigh unto each hath his own machine.

**Herodotus:** And how many can each machine can convey? Perchance a thousand?

**John:** Five, or six, or two peradventure, but the question is what they would call 'academical': the most common use is to convey one.

**Herodotus:** They must be grateful for such property and such philosophy!

**John:** A few are very grateful, but the prayer, 'Let us remember those less fortunate than ourselves' breathes an odor that sounds truly archaic. It sounds old, old enough to perhaps make half the span of a man's life. And such basic technology, though they should be very much upset to lose them, never presents itself to their mind's eye when they hear the word 'technology'. And indeed, why should it present itself to the mind his eye?

**Herodotus:** I strain to grasp thy thread.

**John:** To be thought of under the heading of 'technology', two things must hold. First, it must be possessed of an artificial unlife, not unlike the unlife of their folklore's ghouls and vampires and zombies. And second, it must be of recent vintage, something not to be had until a time that is barely past. Most of the technologies they imagine provide artificially processed moving images, some of which are extremely old—again, by something like half the span of a man's life—while some are new. Each newer version seemeth yet more potent. To those not satisfied with the artificial environment of an up-to-date building, regarded by them as something from time immemorial, there are unlife images of a completely imaginary artificial world where their saying 'when pigs can fly' meaning never is in fact one of innumerable things that happen in the imaginary world portrayed by the technology. 'SecondLife' offers a second alternative to human life, or so it would seem, until 'something better comes along.'

**Herodotus:** My mind, it reeleth.

**John:** Well it reeleth. But this be but a sliver.

For life to them is keeping one's balance on shifting sand; they have great museums of different products, as many as the herbs of the field. But herein lies a difference: we know the herbs of the field, which have virtues, and what the right use is. They know as many items produced by philosophy, but they are scarce worse for the deal when they encounter an item they have never met before. For while the herbs of the field be steady across generations and generations, the items belched forth by their subtle philosophy change not only within the span of a man's life; they change year to year; perchance moon to moon.

**Herodotus:** Thou sayest that they can navigate a field they know not?

**John:** Aye, and more. The goal at which their catechism aims is to 'learn how to learn'; the appearance and disappearance of kinds of items is a commonplace to them. And indeed this is not only for the items we use as the elements of our habitat: catechists attempt to prepare people for roles that exist not yet even as the students are being taught.

Though this be sinking sand they live in, they keep balance, of a sort, and do not find this strange. And they adapt to the changes they are given.

**Herodotus:** It beseemeth me that thou speakest as of a race of Gods.

**John:** A race of Gods? Forsooth! Thou knowest not half of the whole if thou speakest thus.

**Herodotus:** What remaineth?

**John:** They no longer think of making love as an action that in particular must needeth include an other.

**Herodotus:** I am stunned.

**John:** And the same is true writ large or writ small. A storyteller of a faintly smaller degree, living to them in ages past, placed me in an icon:

The Stranger mused for a few seconds, then, speaking in a slightly singsong voice, as though he repeated an old lesson, he asked, in two Latin hexameters, the following question:

'Who is called Sulva? What road does she walk? Why is the womb barren on one side? Where are the cold marriages?'

Ransom replied, 'Sulva is she whom mortals call the Moon. She walks in the lowest sphere. The rim of the world that was wasted goes through her. Half of her orb is turned towards us and shares our curse. Her other half looks to Deep Heaven; happy would he be who could cross that frontier and see the fields on her further side. On this side, the womb is barren and the marriages cold. There dwell an accursed people, full of pride and lust. There when a young man takes a maiden in marriage, they do not lie together, but each lies with a cunningly fashioned image of the other, made to move and to be warm by devilish arts, for real flesh will not please them, they are so dainty in their dreams of lust. Their real children they fabricate by vile arts in a secret place.'

The storyteller saw and saw not his future. 'Tis rare in the Singularity to fabricate children 'by vile arts in a secret place' But the storyteller plays us false when he

secret place. But the story never plays as false when he assumes their interest would be in a 'cunningly fashioned image of the other'. Truer it would be to say that the men, by the fruits of philosophy, jump from one libidinous dream to another whilest awake.

**Herodotus:** Forsooth!

**John:** A prophet told them, the end will come when no man maketh a road to his neighbors. And what has happened to marriage has happened, by different means but by the same spirit, to friendship. Your most distant acquaintanceship to a fellow member is more permanent than their marriage; it is routine before the breakable God-created covenant of marriage to make unbreakable man-made covenants about what to do if, as planned for, the marriage ends in divorce. And if that is to be said of divorce, still less is the bond of friendship. Their own people have talked about how 'permanent relationships', including marriage and friendship, being replaced by 'disposable relationships' which can be dissolved for any and every reason, and by 'disposable relationships' to 'transactional relationships', which indeed have not even the pretension of being something that can be kept beyond a short transaction for any and every reason.

And the visits have been eviscerated, from a conversation where voice is delivered and vision is stripped out, to a conversation where words alone are transmitted without even hand writing; from a conversation where mental presence is normative to a conversation where split attention is expected. 'Tis yet rarely worth the bother to make a physical trail, though they yet visit. And their philosophy as it groweth yet

they yet visit. And their philosophy, as it groweth yet more subtle, groweth yet more delicate. 'Twould scarcely require much to 'unplug' it. And then, perhaps, the end will come?

**Herodotus:** Then there be a tragic beauty to these people.

**John:** A tragic beauty indeed.

**Herodotus:** What else hast thou to tell of them?

**John:** Let me give a little vignette:

Several men and women are in a room; all are fulfilling the same role, and they are swathed with clothing that covers much of their skin. And the differences between what the men wear, and what most of the women wear, are subtle enough that most of them do not perceive a difference.

**Herodotus:** Can they not perceive the difference between a man and a woman?

**John:** The sensitivity is dulled in some, but it is something they try to overlook. But I have not gotten to the core of this vignette:

One of them indicateth that had they be living several thousand years ago they would not have had need of clothing, not for modesty at least, and there are nods of agreement to her. And they all imagine such tribal times to be times of freedom, and their own to be of artificial restriction.

And they fail to see, by quite some measure, that prolonged time in mixed company is much more significant than being without clothing; or that their buildings deaden all of a million sources of natural awareness: the breeze blowing and the herbs waving in the wind; scents and odours as they appear; song of crickets' kin chirping and song of bird the sun as it

...there is the chirping and song of birds, the sun as it shines through cloud; animals as they move about, and the subtleties and differences in the forest as one passes through it. They deaden all of these sensitivities and variations, until there is only one form of life that provides stimulation: the others who are working in one's office. Small wonder, then, that to a man one woman demurely covered in an office has an effect that a dozen women wearing vines in a jungle would never have. But the libertines see themselves as repressed, and those they compare themselves to as, persay, emancipated.

**Herodotus:** At least they have the option of dressing modestly. What else hast thou?

**John:** There is infinitely more, and there is nothing more. Marriage is not thought of as open to children; it can be dissolved in divorce; it need not be intrinsically exclusive; a further installment in the package, played something like a pawn in a game of theirs, is that marriage need not be between a man and a woman. And if it is going to be dismantled to the previous portion, why not? They try to have a world without marriage, by their changes to marriage. The Singularity is a disintegration; it grows more and more, and what is said for marriage could be said for each of the eight devils: intertwined with this is pride, and it is only a peripheral point that those who further undefine marriage speak of 'gay pride'. A generation before, not mavericks but the baseline of people were told they needed a 'high self-esteem', and religious leaders who warned about pride as a sin, perhaps as the sin by which the Devil fell

from Heaven, raised no hue and cry that children were being raised to embrace pride as a necessary ascesis. And religion itself is officially permitted some role, but a private role: not that which fulfills the definition of religare in binding a society together. It is in some measure like saying, 'You can speak any language you want, as long as you utter not a word in public discourse': the true religion of the Singularity is such ersatz religion as the Singularity provides. Real religion is expected to wither in private.

The Singularity sings a song of progress, and it was giving new and different kinds of property; even now it continues. But its heart of ice showeth yet. For the march of new technologies continues, and with them poverty: cracks begin to appear, and the writing on the wall be harder to ignore. What is given with one hand is not-so-subtly taken away with the other. The Singularity is as needful to its dwellers as forest or plain to its dwellers, and if it crumbles, precious few will become new tribal clans taking all necessities from the land.

**Herodotus:** Then it beseemeth the tragedy outweigheth the beauty, or rather there is a shell of beauty under a heart of ice.

**John:** But there are weeds.

**Herodotus:** What is a weed?

**John:** It is a plant.

**Herodotus:** What kind of plant is a weed? Are the plants around us weeds?

**John:** They are not.

**Herodotus:** Then what kinds of plants are weeds?

**John:** In the Singularity, there is a distinction between 'rural', 'suburban', and 'urban': the 'rural' has deliberately set plants covering great tracts of land, the 'suburban' has fewer plants, if still perhaps green all around, and the 'urban' has but the scattered ensconced tree. But in all of them are weeds, in an urban area plants growing where the artificial stone has cracked. And among the natural philosophers there are some who study the life that cannot be extinguished even in an urban city; their specialty is called 'urban ecology'. The definition of a weed is simply, 'A plant I do not want.' We do not have weeds because we do not seek an artificial environment with plants only present when we have put them there. But when people seek to conform the environment to wishes and plans, even in the tight discipline of planned urban areas, weeds are remarkably persistent.

And in that regard, weeds are a tiny sliver of something magnificent.

**Herodotus:** What would that be?

**John:** The durability of Life that is writ small in a weed here in the urban, there in the suburban is but a shadow of the durability of Life that lives on in the sons of men. Mothers still sing lullabies to their dear little children; friendships form and believers pray at church far more than happened in the age where my story was told, a story dwarfed by what was called the 'age of faith'. The intensity of the attacks on the Church in a cruel social witness are compelled to bear unwilling witness to the vitality of the Church whose death has been greatly exaggerated: and indeed that Church is surging with

vitality after surviving the attacks. The story told seems to tell of Life being, in their idiom, 'dealt a card off every side of the deck'—and answering, 'Checkmate, I win.' I have told of the differences, but there are excellent similarities, and excellent differences. For a knight whoso commandeth a wild and unbridled horse receiveth greater commendation than a knight whoso commandeth a well-bred and gentle steed.

**Herodotus:** The wind bloweth where it listeth. The shall live by his faith. Your cell, though it be wholly artificial, will teach you everything you need to know.

**John:** Thou hast eagerly grasped it; beyond beauty, tragedy, and beyond tragedy, beauty. Thou hast grasped it true.

# "Social Antibodies" Needed: A Request to Orthodox Clergy

Some time ago, a pastor contacted me and asked permission to quote one of my poems. We've been in contact at least occasionally, and he sent me an email newsletter that left me asking him for permission to quote.

Let me cite the article in full (©2014 Pastor Vince Homan, used by very gracious permission):

When there are many words, sin is unavoidable, but the one who controls his lips is wise. Proverbs 10:19

I recently violated a longstanding position I have held; to avoid all further interaction with social media, particularly Facebook. It wasn't necessarily because of any moral high ground; it was more because I had already mastered e-mail and was satisfied with my online accomplishments. In addition, I didn't have any additional time or interest to keep up with pithy little sayings, videos, cartoons, social life, or even cute kiddie pictures. But now I am back in the cold

or even cute kiddie pictures. But now I am happily in the fold of Facebook users (particularly if there is a picture of one of my grandbabies on it). In addition, it has allowed me to discover that there are literally dozens of people who are just waiting to be my friends. However, the real reason I'm on Facebook is work related. Thanks to the good work done by a few of our church members; both of our churches have excellent Facebook pages. In order to access those pages, I needed an account, so—here I am. And though all seems well with the world of Facebook, I am discovering that it is not always the case. For all the "warm fuzzies," and catching up with friends and family it offers ... there is also a dark side.

At a recent continuing education event I attended, the speaker presented some dire consequences to uninhibited use of social media. He reported that social media had replaced money as the number one contributor to marriage problems. He said it wasn't so much affairs that online relationships led to; rather it was the persistent flirting that broke down barriers and hedges, which once protected the marriage. Such interaction often led to a downward spiral, corrupting and compromising the marriage vow. One in five divorces involves the social networking site Facebook, according to a new survey by the American Academy of Matrimonial Lawyers. A staggering 80% of divorce lawyers have also reported a spike in the number of cases that use social media for evidence of cheating, with Facebook by far the biggest offender. Flirty messages and and photographs found on Facebook are increasingly being cited as proof of unreasonable behavior or irreconcilable differences. Many cases revolve around social media users who get back in touch with old flames they hadn't heard from in many years.

PBS recently hosted a webinar, *This Emotional Life*, about the internet's impact on relationship and marriage.<sup>[i]</sup> One of the panelists, Theresa Bochard, explored the issue a bit farther in an article originally published on PsychCentral.com. She said that after reading hundreds of comments and emails from people who have been involved in online relationships or emotional affairs as well as the responses on several discussion boards, she concluded that while the internet and social media can foster intimacy in a marriage, it seems to do more harm than good. She reported that an astounding 90% of opposite-sex online relationships were damaging to the marriage. Facebook affairs are threatening healthy couples too.

"I have suggested to myself to write a thank you note to the inventors of Facebook and Myspace because they have been responsible for a significant percentage of my income," says marriage counselor Dr. Dennis Boike. He's not kidding. "I'm having people say I never would have expected me to do this. It's in the privacy of my computer. I'm not going out anywhere, I'm not dressing for it, I'm not smelling of another's perfume. There are no tell-tale signs except my computer record." But a new study suggests Facebook can also help disconnect you from your better half. The site, which boasts more than 350 million active users, is mentioned in over 20% of divorce petitions, according to Divorce-Online.

Prominent Houston divorce attorney Bucky Allshouse can understand why. "It's really kind of shocking what people put on Facebook," says Allshouse. Perhaps it's not so shocking that the social networking site can essentially pour kerosene on "old flames." Most online relationships start out

benign: an email from a person you knew in college, friending an ex-boyfriend or girlfriend on Facebook (as suggested by Facebook: "people you might know"), getting to know a co-worker or acquaintance better online. But the relationship can take a dangerous turn very quickly if you're not careful and even more easily if you are doing most of the talking behind a computer.

We have no non-verbals with which to interpret people's conversation when we communicate online. What we say can be misinterpreted and come off in a way we don't intend. Or worse, we purposely allow our conversation to drift into an unhealthy area, where we put out "feelers" to see if the person we are communicating with will do the same. We will text things to people that would make us blush if we said them in person. All too often the end result is flirting, compromising our values, and allowing the secrecy of social media to sweep us off our feet and into a quagmire of social dysfunction. This is not a victimless choice. Many times, inappropriate conversations through social media lead to great pain with children, spouses, parents, and friends.

One such instance occurred when Jonathan found Sharon on Facebook, 20 years after he dumped her one week after their high school prom. She had never married, while he had and was also the father of two teenagers. During months of emailing and texting, Sharon proved a sympathetic listener to his sense of isolation and loneliness within his own marriage. He found they could talk easily, picking up with the friendship they had had years before. They shared feelings they had never shared with others. After a few months, they decided to cross a few states and meet half way. Then, they talked of marriage. Shortly after, Jonathan went

through with his divorce and months later he and Sharon married. Not surprisingly, and after only four months, they divorced. What happened? Fantasy was hit hard by reality. They went into a marriage without really spending time to know each other as they are today. Their romance was fueled by their history (as 18-year-olds) not their adult present. The romantic idea of reconnecting with an old lover, at a time Jonathan was unhappy in his marriage, was a recipe for danger.

In talking about it later, Jonathan realized he had not intended to start up a romance; he hadn't intended to leave his marriage in the first place. As he and Sharon shared feelings, he felt more cared for by her than by his wife. When asked who raised the issue of marriage, he wasn't sure. "Perhaps she pushed it, but I may have been just been musing something like, 'Wouldn't it have been great if we got married,' and that led her to talk about marriage. I wonder if I led her on. Did I promise more than I had realized and then feel in love with my own fantasy?"<sup>[ii]</sup>

When we cross barriers that were intended to keep us safely within the parameters of our marriage vows, we start in internal conflict—one that attacks our emotional and mental center. Conversations with people of the opposite sex can lead to flirtations. Flirtations can lead to imaginations which lead to fixations ... and there is a fine line between fixation and passion. Promiscuity is rarely a random act. It is pre-meditated. Something triggers our thoughts. And that something can be social media.

Christians must be wary of intimate conversations with people of the opposite sex; it is a trap that too many good people have been caught in. Paul wrote: "We are casting down

imaginations, and every high thing that is exalted against the knowledge of God, and bringing every thought into captivity to the obedience of Christ" (2 Cor. 10:5). It is good advice; cast down imaginations ... take every thought captive, because it is often out of our imaginations and thoughts that bad choices are born. Jesus said something similar. Speaking to the disciples he warned, "But the things that come out of a person's mouth come from the heart, and these defile them. For out of the heart come evil thoughts—murder, adultery, sexual immorality, theft, false testimony, slander" (Matthew 15:18-19). The battleground is not the computer or cell phone; it is the heart and the mind. But secretive messaging avenues like social media offers can help plant the seed for a battle that good people lose every day.

Dr. Karen Gail Lewis, a marriage and family therapist of 39 years and author of numerous relationship books, offers these social networking guidelines for married couples.

1. **Be clear about your agenda in contacting the other person.**
2. **Limit the frequency of your time online.** This sets a good boundary around the social networking contact.
3. **Don't talk intimately.** By not sharing intimacies with your correspondence, you reduce the chance of sending a message that you want a more intimate relationship.
4. **Let your spouse know with whom you are contacting.** This openness makes it clear you have nothing to hide. (I would add, especially so if you are contacting a person of the opposite sex).<sup>[iii]</sup>
5. **Share your outgoing and received emails/texts with your spouse.** Sharing communications removes any

chance for jealousy or misunderstandings (I would add, share passwords with your spouse; give them full access to your social media sites).[iv].

6. **Do not meet in person unless your spouse is with you.** Meeting up with old friends with your spouse by your side is a reminder that you two are a team and removes sending mixed messages to your former lover. This also reinforces the importance of fixing your marriage before playing with the flames of old flames.[v].

Jesus taught us to be wise as serpents and harmless as doves (Matthew 10:16). Social media is a place that Scripture applies. I believe in the sanctity of marriage. I believe a person places their personal integrity and honor on the line in the marriage vow more than anything else in their life. And I believe marriage is under attack from multiple directions. I have officiated at many young couples weddings. I spend time with each one, warning them of the potential pitfalls and dangers; encouraging them to make their marriage a priority each day. Because I know the reality; many of the ones I marry won't make it. It's not because they are bad people or people of no character; but they get caught in a trap, and they can't seem to find a way out. And I also know most of them deeply regret their decisions after the fallout of their choices turn to consequences.

Social media can be a wonderful thing. I love keeping in touch with family and looking at pictures of the grandbabies. Now our churches are using social media to share the gospel. But Christians should be wary of the potential dangers. We must keep up our barriers at all times. James warned,

" Temptation comes from our own desires, which entice us and drag us away. These desires give birth to sinful actions. And when sin is allowed to grow, it gives birth to death. So don't be misled, my dear brothers and sisters" (James 1:14-16). Indeed, we must not be misled, rather be guided by the protective barriers God has placed around us; especially so if we are married. We must watch our words carefully and keep our thoughts captive. The sanctity of our marriage vow demands it.

Grace and Peace,

Pastor Vince

[iii] Parenthetical mine

[iv] Parenthetical mine

[v] <http://www.hitchedmag.com/article.php?id=903>

This article left me reeling.

In part, I wondered if my collection in [The Luddite's Guide to Technology](#) as it then existed was simply wrong. Or if someone might rightly say to me, "What you give in [The Luddite's Guide to Technology](#) is helpful up to a point, at least for someone with a similar background to yours. However, regular people need much more concrete guidance." What struck me very concretely about Pastor Vince's article is that it gave very practical advice on how married people can appropriately handle Facebook.

The article reminded me of remarks I'd seen by people interested in making computers that people can actually use that the Apple Macintosh was the first computer worth criticizing. Perhaps some detail of the guidance in the article above could be criticized: perhaps much of it should be criticized: but it may be the first article I've seen on the topic that was worth criticizing.

## The concept of "social antibodies": it's not just Facebook

[Paul Graham's "The Acceleration of Addictiveness"](#) is worth reading in full. (It's also worth quoting in full, but he's asked nicely that people link to it instead of reposting, which is a fair request. So I am linking to it even though I'd prefer to reproduce the whole article.)

[The Acceleration of Addictiveness](#) talks about a little bit bigger picture about things that are addictive. Though he mentions Facebook as something that's even more addictive than television, he's clear that the big picture is more than addictive little Facebook. Graham talks about a concept of "social antibodies" which I think is incredibly useful.

Decades ago, smoking cut through the US like a hot knife through butter. But, while smoking is still dangerous and there still continue to be new smokers, we no longer have glamour shots of celebrities holding cigarettes in some flashy, sophisticated, classy pose. Smoking is no longer "sexy;" over the past 20 years it has been seen as seedy, and "smoker" is not exacty the kindest thing to call someone. (I remember one friend commenting that he could think of a number of terms more polite than "smoker," none of which were appropriate to the present company.) As a society, the US has developed social antibodies to smoking now.

There are many things that we need "social antibodies" for, and we keep developing new technologies, Facebook included, that need social antibodies. The six prescriptions in the quoted articles are essentially social antibodies for how to use Facebook without jeopardizing your marriage. They may seem harsh and excessively cautious, but I submit that they are easier to go through than divorce. Much easier. A piece of cake! And I quote Pastor Vince's article because it's something we need more of.

## **A helpful parallel to technology: Wine as an example**

Simply not drinking alcoholic beverages is an option that I respect more as I think about it, but for the sake of this discussion, I will leave it on the side. I am interested in helpful parallels for "social antibodies" in moderation and restraint in using technology, and as much as I may respect people who do not drink, that option is not as interesting for my investigation. This is especially true because people living in my society assume that you are not abstaining from every technology that can cause trouble. So with a respectful note about not drinking alcohol at all, I want to look at social antibodies for moderate, temperate, and appropriate use of wine.

Wine and liquor slowly increased in strength in Western Europe, slowly enough that societies had at least the chance to build social antibodies. This makes for a marked contrast to escape through hard liquor among Native Americans, where hard liquor blew through decimated nations and peoples like escape through today's street drugs would have blown through a Europe already coping with the combined effects of the bubonic plague and of barbarian invasions. Perhaps there are genetic differences affecting Native Americans and alcohol. A Native American friend told me that Native American blood can't really

cope with sugar, essentially unknown in Native American lands apart from some real exceptions like maple syrup. And lots of alcohol is worse than lots of sugar, even if some of us wince at the level of sugar and/or corn syrup in the main US industrial diet. (Even those of us not of Native American blood would do well to restrict our consumption of artificially concocted sugars.)

But aside from the genetic question, introducing 80 proof whiskey to societies that did not know how to cope with beer would have been rough enough even if there were no genetic questions and no major external stresses on the societies. If there was something of a stereotype about Native Americans and whiskey, maybe part of that is because hard liquor that had been developed over centuries in the West appeared instantaneously, under singularly unfortunate conditions, in societies that had not even the social antibodies to cope with even the weaker of beers.

I cite [St. Cyril of Alexandria, The Instructor, Book Two, Chapter II: On Drinking](#) as a model for approaching alcohol (and, by extension, a serious reference point in understanding moderate use of technology), with some reservations. The translation I link to is obscure and archaic, and if you can get past that, the individual prescriptions are the sort that would only be all kept (or, for that matter, mostly kept) by the sort of people who are filled with pride that they observe ancient canons more strictly than any canonical bishop. In other words, don't try these directions at home unless you know you are in agreement with your priest or spiritual father. But [the chapter of The Instructor on wine](#) offers a **priceless** glimpse into real, live social antibodies on how to navigate dangerous waters. This is a live example of the sort of things we need. [The book as a whole](#) covers several topics, including clothing and boundaries

between men and women, and they could serve as a model for pastoral literature to address the challenges offered to spiritual life today. Not specifically that online interactions between men and women **introduce** an element of danger. That element of danger has always been there, and always will be there. But online interactions frame things a little differently. This means that people with social antibodies that would show appropriate caution face-to-face might not recognize that you have to compensate when dealing with the opposite sex online, or might not intuit exactly how you have to compensate when dealing with the opposite sex online.

I would like to close this section with a word about wine and why I drink it. The politically incorrect way of putting this point is to say that wine is something which literally and figuratively is not part of Islam. Islam works out, in stark relief, what it means to subtract the Incarnation from Christian faith. It means that not only has the Son of God not become incarnate in Christ, but all the more does God become incarnate in his children. It means that Holy Communion is just a symbol, and wine could absolutely, absolutely never become the blood of God. Water is necessary and wine is not, [as St. Clement tells us](#), but the Orthodox Church that regards Islam as a Christian heresy used fermented wine exclusively in the Eucharist, and condemned heretics' use of pure water for the same purpose. And my reason for drinking a little wine is that wine has an elasticity that bears the meaning of Jesus's first miracle, turning water into even more wine when wine ran out at a wedding where the guests were already pretty drunk, and it bears the meaning of the Holy Mysteries: few if any material substances are as pregnant with spiritual depth as wine. [Ecclesiastes](#) is perhaps the most dismal book in the entire Bible, and "[Go, eat thy bread with mirth, and drink thy wine with](#)

a joyful heart" is close to being the only invitation to joy in the book. I do not say that this is a reason why people who have decided not to drink should change their mind. However, the theological motive to drink in Christianity comes from a higher plane than the admittedly very real reasons to be careful with alcohol, or else abstain. It's deeper.

## Is the iPhone really that cool?

One news story reported that police officers had started using drug dealers' confiscated iPhones, and realized they were incredibly useful. And I wouldn't dispute that at all.

I would say that having an iPhone is a little, but not quite, like being able to call 911, which is the most important number for you to be able to call. 99% of the time it is inappropriate and perhaps illegal to call 911, but the (less than) 1% of the time you should be calling 911, it can save your life. Literally. And I use my iPhone over 1% of the time; besides built-in phone, email, notes, and looking things up on the web, and including my personal logistical dashboard, and apps like GPS, my iPhone makes me more productive, and unsexy nuts and bolts usage has been very useful.

So I wouldn't agree with [Come With Me If You Want to Live - Why I Terminated my iPhone](#) that the iPhone is simply "Terrible For Productivity." It certainly can be, and unrestrained use will be. And for that matter I've seen a lot of exquisitely produced apps in the App Store, and though I've written one iPhone app, I've found precious few apps that look genuinely useful to my purposes. But I am glad I have my iPhone, am not struggling to rein in inappropriately heavy use, and I believe it makes me more productive.

The LinkedIn article [Come With Me If You Want to Live - Why I Terminated My iPhone](#) talked about how one family decided to get rid of their iPhones. The author talked about how the iPhone had taken over their lives. They suggested that trying to use their habit to use the iPhone in moderation was a nonstarter, however enticing it may look. And, on a sobering note, they had earlier tried to avoid using smartphones, even for work. And I am convinced they made the right choice: not having any smartphone use is better than addictive smartphone use, hands down. And while I am cautious about advertising responsible smartphone use to people who can't live without their iPhone—the analogy drawn in [the LinkedIn article](#) was, "In hindsight, it's like an alcoholic saying 'I thought I could have it in the house and not drink it.'" But I have iPhone use which is defensible, at least in my opinion; I have drawn a boundary that is partly tacit and partly explicit, and while it can be criticized, it is a non-addictive use of the iPhone. I average less than one text a day; I do not compulsively check anything that's out there. A few of the guidelines I found are,

1. **Limit the time you spend using your smartphone.** The general Orthodox advice is to cut back a little at once so you never experience absolute shock, but you are always stretched a little bit outside your comfort zone. That may be a way to work down cell phone use, or it may not. If you compulsively reach for your smartphone, you might leave it in one room that you're not always in. Put a boundary between yourself and the smartphone.
2. **Limit how often you check your cell phone unprovoked.** When I'm not at work, I try to limit checking email to once per hour. Limit yourself to maybe once per hour, maybe

more, maybe less, and restrain yourself.

3. **When you're going to bed for the day, you're done using your smartphone for the day.** I am not strict in this; I will answer a call, but checking my iPhone, unprovoked, after my evening prayers or my bedtime is a no-no.
4. **Don't use the iPhone as a drone that you need to have always going on. This includes music, texting, games, and apps, including Vince's hero, Facebook.** Perhaps the single biggest way that this violates Apple's marketing proposition with the iPhone is that the iPhone is designed and marketed to be a drone that is always with us, a bit of ambient noise, delivering precisely what the Orthodox spiritual tradition, with works like [The Ladder](#), tell us is something we don't need.

The iPhone's marketing proposition is to deliver an intravenous drip of noise. The Orthodox Church's Tradition tells us to wean ourself from noise.

5. **iPhones have "Do Not Disturb" mode. Use it.** And be willing to make having "Do Not Disturb" as your default way of using the phone, and turn it off when you want "Please Interrupt Me" mode explicitly.
6. **Don't multitask if you can at all avoid it.** I remember reading one theology text which claimed as a lesson from computer science, because people can switch between several applications rapidly, that we should take this "lesson" to life and switch between several activities rapidly. And in a business world where multitasking has been considered an essential task, people are finding that multitasking is fool's gold, an ineffective way of working that introduces a significant productivity tax where people could be doing much better. Smartphones make it trivially easy to multiask.

Don't, unless a situation calls for it.

I note with some concern that the most I've been shocked at someone using an iPhone was when 12 and under kids were manipulating the iPhone, not to get something to done, but to activate the iPhone's smooth animations. Looking over their shoulders in shock has felt like I was eavesdropping on a (non-chemical) acid trip. Children's use of iPhones driven by slick animated transitions between applications are even more unhelpful than what the business world means by multitasking. (This feature of kids' use of iPhones has made me kind of wish iPhones were not used by people under 18.)

Now I should post this with a clarification that this is, so to speak, pastoral advice to myself. I've found the basic approach helpful, and priests and spiritual fathers may draw on it if they choose in their best judgment to take something from it, but I have not been ordained or tonsured, and I would fall back on the maxim, "As always, ask your priest." My reason to post them is to provide another reference point beyond those given to "social antibodies" in dealing with technology. With these antibodies, I hold the reins, or at least I hold the reins a little better than if I didn't have these antibodies. But I am aware of something vampiric, something that sucks out energy and life, in even my more moderate use of some technologies, and I am a little wary of comparing my use of technology to moderate and sober use of alcohol. Appropriate use of alcohol can be good, and apart from the risk of drinking getting out of control, it is an overall positive. I'm leery of claiming the same for my use of technology, even if I've tried hard to hold the reins and even if I may do better than average. There is something that has been drained from me; there is something that has been sucked out of

me. Maybe I am less harmed than others: but my use of technology has harmed me. I am wary of saying now, "I've found the solution."

In dealing with another passion besides sexual sin, namely anger, people have started to develop "social antibodies:" as mentioned briefly by Vince Homan, we don't have the important channels of people's nonverbal communication, which flattens out half the picture. And when we are angry, we can flame people in emails where there is no human face staring back to us, only letters on the screen that seem so right—or perhaps not nearly right enough!—and write hurtful flames unlike anything we would dare to say in person, even to someone who hurt us deeply. And on that score, people seem to me to have developed social antibodies; I've been in lots of flamewars and given and received many unholy words, but I don't remember doing that recently, or seeing flames wage out of control on many mailing lists, even if admittedly I don't spend much time on mailing lists. But sexual dangers are not the only dangers online, and for online flaming, most of the people I deal with do not flame people like I did when I was first involved in online community. I've acquired some "social antibodies," as have others I meet online. Some social antibodies have already developed, and the case is not desperate for us as a Church learning how to handle technology in the service of holy living instead of simply being a danger.

## Pastoral guidance and literature needed

I visited Amazon to try to get a gauge on how much Orthodox pastoral resources about appropriate use of computers, mobile, internet, and technology were out there, a sort of [The Instructor](#) for technology today, and my search for [orthodox internet](#) found 109 resources from Christianity, Judaism, and the occult, none of which seemed to be about "How does an Orthodox Christian negotiate the social issues surrounding computers, smartphones, tablets, the Internet, apps, and technology?" Some other searches, such as [orthodox pastoral internet](#), [orthodox pastoral smartphone](#), and [orthodox pastoral technology](#) turned up nothing whatsoever. A search for "[orthodox technology](#)" turned up one page of search results with... several connected works of my own. Um, thanks, I think. I guess I'm an expert, or at least a resource, and even if I didn't want to, I should probably make myself available to Orthodox clergy, with my spiritual father and bishop foremost. But this compliment to me, if it is such (maybe it means I'm off the rails) caught me quite off-guard; I was expecting to see at least some publications from people with pastoral authority and experience. But seeing as I'm the local expert, or at least a first author for this particular topic, I'll briefly state my credentials. I have been an Orthodox Christian for a decade, so no longer a recent

convert, [have works on social dimensions of technology dating back as far as 1994](#), have two years of postgraduate theology under slightly silly conditions at [Cambridge](#), and two more years under very silly conditions at a sort of "Monty Python teaches theology" PhD program (one Orthodox priest consoled me, "All of us went through that"), but did not complete the program. I grew up with computers back when my home computer access meant going to an orange and black terminal and dialing up a Dec MicroVAX on a 2400 (or less) baud modem, was on basically non-web social networks years before it became a buzzword, have worked with the web since before it went mainstream, much of it professionally. I've been bitten by some of the traps people are fighting with now. And I'm also kind of bright. So I guess I am, by default, a local expert, although I really think a responsible treatment of the issues raised here would see serious involvement from someone with pastoral qualifications and experience. I haven't been tonsured, at least not yet, and perhaps not ever.

But I would ask priests reading this piece to consider a work on a sort of technological appendix to [The Rudder](#), or maybe I shouldn't say that because I have only barely sampled [the ancient canons](#). But I would like to see ideally two pastoral works parallel to [The Instructor, Book II](#): one for pastoral clergy use, and one for "the rest of us faithful." When I was a lay parish representative at a diocesan conference, there was talk about appropriate use of the internet; Vladyka PETER read something that talked about the many legitimate benefits we have received from using computers, but talked about porn on the internet, which is a sewer I haven't mentioned; he said that young people are spending hours per day looking at porn, and it's more addictive than some street drugs, and he commented how porn

has always been available, but you used to have to put on a disguise and a trenchcoat, and go leave your car in front of a store with the windows covered up, where now, it finds you and it comes free with a basic utility in the privacy of your home. And the biggest thing I can say about freedom from porn comes from the entry for porn in [The Luddite's Guide to Technology](#):

There is a story about a philosopher who was standing in a river when someone came to him. The philosopher asked the visitor, "What do you want?" The visitor answered, "Truth!" Then the philosopher held the visitor under the water for a little while, and asked him the second time, "What do you want?" The visitor answered, "Truth!" Then the philosopher held the visitor under water for what seemed an interminable time, and let him up and asked, "What do you want?" The visitor gasped and said, "Air!" The philosopher said, "When you want Truth the way you want air, you will find it."

The same thing goes for freedom from the ever-darker chain called pornography, along with masturbation and the use of "ED" drugs to heighten thrills (which can cause nasty street drug-like effects [and a doomed search for the ultimate sexual thrill that decimates sexual satisfaction] even in marriage).

And I would like to suggest some guidelines for fighting Internet porn, quite possibly the most commonly confessed sin among young men today. Sexual sins are among the most easily forgiven: but they are a deep pit. So, in the interest of providing a "dartboard" draft that's put out for people to shoot at. I am intentionally saying more rather than less because it's easier for a pastoral conversation to select from a set of options than

a pastoral conversation to select from a set of options than furnish arbitrarily more additional options. Here are several things I'd consider, both sacred and secular:

I have heard of some helpful things being said in response to confession of sexual sin, such as, "St. Basil said that a man in lust is like a dog licking a saw; the salt it likes tasting is the taste of its own woundedness," and so there is a vicious cycle.

However, I have not heard of a list anywhere near this complete being given when a man confesses a very common (now) sin. Maybe parts of it could be incorporated into advice given at confession.

1. **If your right eye offends you, tear it out and throw it away from you: for it is better for you that one part of your body should die than that your whole body should be thrown into Hell.**

These words are not to be taken literally; if you tore out your right eye you would still be sinning with your left eye, and the Church considers that it was one of Origen's errors to castrate himself. But this is a forceful way of stating a profound truth. There is an incredible freedom that comes, a yoke that is easy and a burden that is light, when you want purity the way you want "Air!", and you apply a tourniquet as high up as you need to to experience freedom.

Give your only computer power cable to a friend, for a time, because you can't have that temptation in the house? That is really much better than the alternative. Have the local teenager turn off display of images in Chrome's settings? That is really much better than the alternative. Webpages may look suddenly ugly, but not nearly as ugly as bondage to porn. Only check email at the library? That is really much better than the alternative. These tourniquets may be

revised in pastoral conversation, but tearing out your right eye is much more free and much less painful than forever wanting to be free from addiction to porn, but also secretly hoping to give in to the present temptation; as the Blessed Augustine prayed, "Lord, give me chastity, but not yet."

There is a great deal of power in wanting purity **now**, and once you go slash-and-burn, the power is amazing.

2. **Install content-control software, such as [Norton Family](#) / [Norton Family Premier](#), and have things set up so that only the woman of the house knows the password to make exceptions.** There are legitimate needs for exceptions, and I remember being annoyed when I went to customize [Ubuntu Christian Edition](#) and finding that a site with all sorts of software to customize the appearance of Ubuntu was blocked, apparently because of a small sliver of soft porn in the wallpaper section of a truly massive site. There will be legitimate exceptions, but it cuts through a lot of self-deception if you get the exception by asking your wife.
3. **Don't bother trying to find out how to disable porn-mode "Incognito Mode" on your browser; set up a router to log who visits what websites.** However much browser makers may tout themselves as being all for empowerment and freedom, they have refused to honor the many requests of men who want freedom from porn and parents who care for their children in many, many voices asking for a way to shut off porn mode.

[There is an antique browser hidden in /usr/bin/firefox on my Aqua-themed virtual machine](#), but even with that after a fair amount of digging, I don't see any real live option to browse for instance Gmail normally with a browser that doesn't offer porn mode. But there is something else you should

know.

Routers exist that can log who visits what when, and if you know someone who is good with computers (or you can use paid technical support like [the Geek Squad](#)), have a router set up to provide a log of what computers visited what URLs so that the wife or parents know who is visiting what. The presence of a browser's porn mode suddenly matters a lot less when a router records your browsing history **whether or not** the browser is in porn mode.

4. **Rein in your stomach. Eat less food. Fast.** It is a classic observation in the Orthodox spiritual tradition that the appetites are tied: gluttony is a sort of "gateway drug" to sexual sin, and if you cut away at a full stomach, you necessarily undermine sexual sin and have an easier contest if you are not dealing with sexual temptation on top of a full stomach.

And it has been my own experience that if I keep busy working, besides any issues about "Idle hands are the Devil's workshop," the temptation to amuse and entertain myself with food is less. So that cuts off the temptation further upstream.

If you eat only to nourish the body, it helps. Even if nourishing food tastes good, cutting out junk like corn-syrup-loaded soft drinks, or anything sold like potato chips in a bag instead of a meal, and moderating consumption of alcohol (none before going to bed; it doesn't help), will help.

5. **When you are tempted, ask the prayers of [St. John the Much-Suffering of the Kiev Near Caves](#), perhaps by crossing yourself and saying, "St. John the Much-Suffering, pray to God for me."** In the Orthodox Church you may ask the prayers of any saint for any need, but St.

John is a powerful intercessor against lust. That is part of why I asked [Orthodox Byzantine Icons](#) to hand-paint an icon of St. John for me: a little so I would have the benefit of the icon myself, and the real reason because I wanted [Orthodox Byzantine Icons's catalogue](#) to make available the treasure of icons of St. John the Much-Suffering to the world, which they would.

As I write, the icon is in the process of production, and I hope that it will be available within a couple of weeks. **Ask to know when the icon of St. John the Much-Suffering is available.**

Other saints to ask for prayer include [St. Mary of Egypt](#), [St. Moses the Hungarian](#), [St. Photina](#), [St. Thais of Egypt](#), [St. Pelagia the Former Courtesan](#), [St. Zlata the New Martyr](#), [St. Boniface](#), [St. Aglaida](#), [St. Eudocia](#), [St. Thomais](#), [St. Pelagia](#), [St. Marcella](#), [St. Basil of Mangazea](#), [St. Niphon](#), and [St. Joseph the Patriarch](#). (Taken from [Prayers for Purity](#).)

6. **Buy and pray with a copy of [Prayers for Purity](#) when you are tempted, and when you have fallen.** It is an excellent collection and helps when you know you should praying but words are not coming to mind.
7. **If you have been wounded, bring your wound to confession the next weekend. (And try to have a rule of going to church each week.)**

It can be powerful, when you are facing a temptation, not to want to confess the same sin again in a couple of days.

But in parallel with this remember when a visitor asked a saintly monk what they did at the monastery, and the saintly monk answered, "We fall and get up, fall and get up, fall and get up." Fall down seven times and rise up eight: fall down seventy-seven times and rise up seventy-eight: keep on

repenting for as long as you need to to achieve some freedom, and know that some saints before you have risen after falling very many times.

8. **Buy a prayer rope, and use it.** When you are tempted, keep repeating a prayer for one prayer rope, and then another, and another, if you need it. Pray "Lord Jesus Christ, Son of God, have mercy on me, a sinner," or to St. John the Much-Suffering, "Holy Father John, pray to God for me," or to St. Mary of Egypt, "Holy Mother Mary, pray to God for me."
9. Use the computer only when you have a specific purpose in mind, and not just to browse. Idle hands are the Devil's workshop; **For the fascination of wickedness obscures what is good, and roving desire perverts the innocent mind.; Do not look around in the streets of a city, or wander about in its deserted sections. Turn away your eyes from a shapely woman, and do not gaze at beauty belonging to another; many have been seduced by a woman's beauty, and by it passion is kindled like a fire.**  
Men's roving sexual curiosity will find the worst-leading link on a page, and then another, and then another. Drop using roving curiosity when you are at a computer altogether; if you need to deal with boredom, ask your priest or spiritual father for guidance on how to fight the passion of boredom. But don't use the Internet as a solution for boredom; that's asking for trouble.
10. **Use a support group, if one is available in your area.** If I were looking for a support group now, I would call Christian counseling centers in the area if available. Talking with other people who share the same struggle can help.
11. **Use [XXXchurch.com](http://XXXchurch.com), or at least explore their website.**

Their entire purpose is buying you your freedom from lust.  
12. **Yearn for purity.**

In the homily [A Pet Owner's Rules](#), I wrote:

God is a pet owner who has two rules, and only two rules. They are:

1. I am your owner. Enjoy freely the food and water which I have provided for your good!
2. **Don't drink out of the toilet.**

...

Lust is also drinking out of the toilet. Lust is the disenchantment of the entire universe. It is a magic spell where suddenly nothing else is interesting, and after lust destroys the ability to enjoy anything else, lust destroys the ability to enjoy even lust. Proverbs says, "The adulterous woman"—today one might add, "and internet porn" to that—"in the beginning is as sweet as honey and in the end as bitter as gall and as sharp as a double-edged sword." Now this is talking about a lot more than pleasure, but it is talking about pleasure. Lust, a sin of pleasure, ends by destroying pleasure. It takes chastity to enjoy even lust.

When we are in lust, God does not seem real to us. Rejecting lust allows us to start being re-sensitized to the beauty of God's creation, to spiritual sweetness, to the lightness of Heavenly light. Lust may feel like you're losing nothing but gaining everything, but try to be mindful of what you lose in lust.

And that's my best stab at making a "dartboard," meant so people will shoot at it and make something better, and more

complete and less one-sided in navigating the pitfalls of technology. This isn't the only trap out there—but it may be one of the worst.

I would suggest that we need a comprehensive—or at least somewhat comprehensive—set of guidelines for Orthodox use of technology. Such a work might not become dated as quickly as you may think; as I write in the resources section below, I unhesitatingly cite a 1974 title as seriously relevant knowing full well that it makes no reference to individually owned computers or mobile devices: it's a case of "The more things change, the more they stay the same." Or, perhaps, two works: one for clergy with pastoral responsibilities, and one for those of us laity seeking our own guidance and salvation. I believe that today, we who have forms of property and wealth undreamed of when Christ gave one of the sternest Luddite warnings ever, **Do not store up for yourselves treasures on earth**, can very easily use things that do not lead to spiritual health: sometimes like how Facebook can erode marriages that are well defended as regards old-school challenges.

The best I know, secondhand perhaps, is that today's Church Fathers, on Mount Athos perhaps, are simply saying, "Unplug! Unplug! Unplug!" What they want instead sounds like a liberal political-social experiment, where people who have grown up in an urban setting and know only how to navigate life there, will move en masse and form some sort of Amish-like rural communities.

Or perhaps something else is envisioned: mass migration to monasteries? Given all that monasticism offers, it seems sad to me to receive the angelic image, of all reasons, only because that's the only remaining option where you can live a sufficiently Luddite life. I have heard of spiritual giants who incomparably excel me saying that we should stop using recent technology at

all. I have yet to hear of spiritual giants who incomparably excel me, and who live in places where technology is socially mandated, advise us to unplug completely. For that matter, I have yet to hear of any Orthodox clergy who live in places in the world where technology is socially mandated say, only and purely,  
"Unplug! Unplug! Unplug!"

The Orthodox Church, or rather the Orthodox-Catholic Church, is really and truly Catholic, Catholic ultimately coming from the Greek kata, "with", and holos, "whole", meaning "with the whole", meaning that the entirety of the Orthodox Church belongs to every Orthodox-Catholic Christian: the saints alike living and dead, the ranks of priesthood and the faithful, and marriage and monasticism in entirety belong to every Orthodox Christian, every Orthodox-Catholic Christian: and giving the advice "Unplug! Unplug! Unplug!" as the limits of where the Orthodox-Catholic Church's God and salvation can reach, is very disappointing. It's comparable to saying that only monastics can be saved.

Total avoidance of all electronic technology is guidance, but not appropriate guidance, and we need advice, somewhat like the advice that began on how to use Facebook, to what I wrote about iPhones or internet porn. A successful dartboard makes it easier to say "What you said about \_\_\_\_\_ was wrong because \_\_\_\_\_ and instead we should say \_\_\_\_\_ because \_\_\_\_\_." And I am trying to raise a question. I am trying to raise the question of how Orthodox may optimally use technology in furtherance of living the divine life.

## **Is astronomy about telescopes? *No!***

I would close with a quote about technology—or is it?  
Computer science giant Edgser Dijkstra said,

Computer science is no more about computers than  
astronomy is about telescopes.

And how much more must Orthodox discussion of how to use  
technology ascetically be no more about technology than  
astronomy is about telescopes? The question is a question about  
spiritual discipline, of how the timeless and universal wisdom of  
[the Bible](#), [the Philokalia](#), and [the canons of the Seven Ecumenical  
Councils](#).

## Resources for further study

All the Orthodox classics, from [the Bible](#) on down. The task at hand is not to replace the [Philokalia](#), but to faithfully adapt the [Philokalia](#) (and/or [the Seven Ecumenical Councils](#) to a new medium, as it were. The principles of [the Bible](#), [the Philokalia](#), and [the Seven Ecumenical Councils](#) are simply not dated and simply do not need to be improved. However, their application, I believe, needs to be extended. We need ancient canons and immemorial custom that has the weight of canon law: however ancient canons express a good deal more about face-to-face boundaries between men and women than boundaries in Facebook and on smartphones. We need guidance for all of these.

[St. Clement of Alexandria, The Instructor, cjsh.name/instructor](#). I reference [Book II](#) and its chapter on [wine](#) as paradigms we might look too.

[Jerry Mander, Four Arguments for the Elimination of Television, cjsh.name/elimination](#). Mander is a former advertising executive who came to believe things about television, with implications for computers and smartphones, For instance, he argues that sitting for hours seeing mainly the light of red, green, and blue fluorescent pixels is actually awfully creepy. Mander has no pretensions of being an Orthodox Christian, or an Orthodox Jew for that matter, sounded an alarm

in his apostasy from advertising that is worth at least hearing out. (Related titles, good or bad, include [The Plug-in Drug](#) and [Amusing Ourselves to Death](#).)

# Some Thoughts About Heaven

The book of Hebrews talks about how this world is not really our home, about how we are wanderers who are passing through on our way to a better country, a Heavenly one.

As wealthy and non-persecuted Christians, we form a distinct minority among the historic community of Christians... while there may be some exceptions, suffering is a present and notable reality for most people across most of time.

Contemporary American culture is a painkilling culture which tries to use distractions to mask the reality of suffering, but historic Christianity has taken a different approach.

One of the things done in historic Christianity, in part in response to suffering, instead of trying to make everything be perfect on earth (which is what the Teacher in Ecclesiastes put a lot of effort in to, coming to the conclusion that "Everything was meaningless... under the sun." (Eccl. 2:11) — without involving God, everything is meaningless, and the attempt to make a life without suffering is vain), is instead to place a major emphasis on Heaven, and on hoping for what we will have in Heaven.

There was one believer who was being tortured in China, inside a container of water through which electric shocks were run. In between the shocks, he asked his torturers, "How much?"

How much are you getting paid for this?" He was able to patiently wait through the pain, knowing that he was going to be paid an eternal reward in Heaven; his torturers eventually gave up in frustration.

Heaven is perhaps the ultimate embodiment of Paul's words about how God can do "immeasurably more than we all ask or imagine." It will have wonders far beyond our current ability to fathom, and, as Lewis wrote in his introduction to *The Great Divorce*, any detailed description we can write must be highly speculative. Paul and John barely scratched the surface in their writings about Heaven, and they both had detailed visions of Heaven (which I have not). But there are some things which are available for us to look forward to in Heaven, and even they are amazing...

Here are some of the things which I am looking forward to in Heaven:

- We will see God face to face, and develop with him the most full and intimate relationship which we can have.
- We will be freed from the now unending struggle with sin and temptation. We will no longer, in a spiritual sense, shoot ourselves in the foot.
- Evil will no longer impede the action of good. It will be like, after all your life walking with a heavy load on your back, having that load taken off and being able to dance freely.
- God's redemption will be complete. This will mean, among many other things, that things will be better than had there never been a Fall.
- More will be said of this later.
- As to God's specific redemption — God who has manifested his power by choosing the weak to shame the strong, the

poor to shame the rich, the foolish to shame the wise (I Cor. 1:27 and context) — I would like to quote another chapter of "The Way of the Way".

- 

## XXXIX Heaven

The blind will see God's face.  
The dumb will sing praises to him.  
The deaf will listen to the eternal song.  
The lame will dance for joy.  
Those convulsed by spasms will rest in perfect  
stillness.  
The leprous will feel God's touch.  
But all this is dwarfed by the shadow of the wonder  
beyond wonders.  
Sinners will be made holy.

- We will be in community with all of the saints across all of time... with Mary, with Paul, with Peter, with John, with Abraham, with Moses, with Elijah... We will be able to speak with the many giants whom history has paid scant attention to but who are great heroes in God's Hall of Fame... with everyone. We will be reunited with loved ones who have passed away. With all of them we will be able to slowly develop close friendships.
- A child once described Heaven as one big, long hug... We will be able to hug and kiss and tickle and chase and roughhouse with the other saints.
- Perhaps one of the greatest treasures we will have in Heaven

will, apart from God, the angels, and the other saints (for God and all that there is will, in a very real sense, belong to us), not be so much in what we have as who we become. We will become perfect in virtue, fully united with God (and yet even now we are of one spirit with the Father (Rom. 6:17)), and we will have great joy in God and in who we will be even if there were no other blessing to Heaven.

I'm not sure how to express this adequately... Much of Western thought has sought to create happiness by the control of external circumstances — what possessions you have, how other people treat you, and so on and so forth. And indeed, those things have a great impact on day-to-day mood swings. But other philosophies (ergo, many Eastern, and for that matter at least some of Western — ergo, the Catholic ascetic tradition)) have sought another route, that of changing internal circumstances. When Paul says that he has discovered the secret of being happy in every circumstance, he doesn't give something which will radically alter external circumstances to what he would like. Rather, he says that it is what he has in Christ that makes him happy — if that may be called internal (I am using clumsy wording to try to avoid conveying the impression that God is just a part of us), with due respect to the fact that God is more than us and exists independently of us, it is internal circumstance, who we are in relation to God, that can make us happy.

God is not, ultimately, God because he lives in Heaven, or because he is omnipotent and omniscient, or because he created "Heaven and earth, ... all things visible and invisible"... A malevolent deity could theoretically have all those attributes and still most definitely not be God. He is

God because he IS. Those other things are consequences of who HE IS (which capital letters are what the sacred Hebrew name 'Yahweh' means).

And we will be children of God, conformed to the likeness of Christ, ever changing from glory to glory.

- We, as Christ's bride, will be united to him. Christ, who gave his life for us as his body and bride to make us holy, has been keeping himself pure for us, and will make us pure for him. Then we will be united with him, and it will be like a wedding night.

And — this thought struck me over the summer — we aren't the only ones who are eagerly awaiting that time. Christ is, too.

- God created us as persons, with both an individual and a community side. In this fallen world, societies have usually quashed at least one of these sides — this is collectivism and individualism respectively — and often at least part of both. In Heaven, we will be made perfect in both our individual and community sides.

On the individual side... For me to become more like Christ does not mean that I should speak Aramaic and Greek, create yokes and other wooden items, and wear first century clothing. It means that I should speak English and French, study mathematics and pursue my other interests, and wear twentieth century clothing. Imitating him more closely, becoming more and more the person he wants to be, means in some ways becoming more and more clearly distinguished from any other person — just as, the more and more an object comes into view, clear lighting, and good focus, it looks more and more unlike any other object. So, by becoming more and more like Christ, I will become more and

more unique and distinctive, more and more the one single person God wants me and no one else to be.

On the community side... It means that we will all be united with God, perfectly and seamlessly integrated. It means that we will be brought completely into moral and spiritual connection. It means that we will have close and intimate relationships that (even though husband and wife can now become one flesh, which will not be possible then) we know only the slightest hints of here. It means that there will be perfect order. As a body, we are not a conglomeration of cells of different species, but rather cells of one single organism that all bear the one single and universal genetic code — the genetic code of true life.

To bring them together... We are different parts that will make up one single pattern together with God. We are like the different parts of one single body — for if you take one of those parts and cut it off from the body, it will die and cease to be itself; united as a part of the body, it is both every bit as much integrated as it could possibly be, and every bit as distinguished from the other as it could be. (In this regard we are both unlike a drop of water returning to the ocean, which becomes united only when it ceases to be a drop — which is how the Hindu faith pictures a spirit being united with God — and like a drop drawn from the ocean, which becomes its own entity only by ceasing to be a part of what it was before.)

- I have a lot of interests, and if I had a thousand lives to live, I would be quite able to find interesting things to do in each one. I have chosen primarily to study mathematics, but I would very much enjoy studying languages... or medicine... or writing... or...

In Heaven, there will be time and opportunity to cultivate each of those possibilities in as much detail as I want. And this is equally true of the interests of other people as well.

- We will be able then to drink freely from the wellspring of Truth. Now, we see darkly and through a glass; then, we shall see fully, face to face.
- "In my Father's house there are many rooms..." It is difficult for me to imagine that the dwelling-places prepared for each of us in God's mansion are not specially and uniquely prepared for each person, and that we will not perhaps at least have some creative power and choice in what is put in the rooms (but even if we don't, it will be good and perfect).
- In Eden, man was given the power to create. That ability has been twisted by the Fall, but we can still create incredibly beautiful materials now. I can't wait to see what creation will be like in Heaven.
- An acquaintance, who is a musician, talked about what it will be like to spend thousands and thousands of years working at perfecting melodies.
- Role play is an enjoyable recreation now, with a fallen creativity and imagination and nothing created except in the imagination... in whatever forms it may take in Heaven...
- The Second Coming will be the last chapter in one story — the story of the Great War, which began when the highest angel set himself against God and a third of the angels joined him to become dragons, worms, serpents, demons, and devils, which has been unfolding throughout all of history, with the Incarnation as its central event, in which every person has a role, and which will close with the total defeat of Satan and all his minions and the perfection of the saints to be united with Christ. But it will also be the first chapter

in another story, a story greater still, a story in which we are "ever changing from glory to glory", a story with an infinitude of chapters, a story which not only words but knowledge and imagination utterly fail me to describe.

- In Eden, man saw by lights God created. In the New Jerusalem, there will be no lights, for the Lamb himself will be their light. (Rev. 22)
- In Eden, man was given a natural, physical body. In the New Jerusalem, men will be resurrected, and their bodies will be resurrected to become even more glorious, even more wonderful — supernatural, spiritual bodies.
- In Eden, man was created in the image of God, and in the psalms, men are even called gods. In the New Jerusalem, the redeemed will share in the divine nature. (II Peter 1:4)

# So You've Hired a Hacker (Revised and Expanded)

There is a wonderful variety among humans. Ethnicity and culture provide one of the most important dimensions—but there can be profound differences between two people who look the same. If neither appreciates the differences, and thinks, "He's just like me—only not doing a very good job of it," there will be conflicts that can be prevented. If they understand their differences, both can profit. This document is written so that you can understand your hacker and enjoy a more productive working relationship.

Managers and hackers both vary, but there are some things that come up again and again. That's why this document exists. I am concerned with a particular kind of clash that most hackers have with many managers—a conflict that is more easily resolved if both parties understand each other.

What are some of the common differences between managers and hackers? There are several, but let me list five important ones:

<b>Managers</b>	<b>Hackers</b>
Tends to be very	Intent on

<p>concerned with morality, and wants to connect with society and contribute. Rises to positions of responsibility, not only in business, but in church and volunteer organizations. Lives by responsibility and duty.</p>	<p>cultivating knowledge and skill. Rises to tremendous levels of competency with technology and other things. High level of discipline used to continually refine abilities.</p>
<p>Thinks concretely. Good at small talk, and at the logistical details needed to run a business.</p>	<p>Thinks abstractly. Good at deep discussions, and thinking about the hard concepts needed to work with technology.</p>
<p>Measures own contribution to society by the extent to which he adds to rules and sees that people live by following rules. Tends to equate rules with morality or the good of society.</p>	<p>Far more aware of the limitations of rules. Does not equate rules with morality or the good of society. Very likely to notice rules that are hurting your company—yes, they do exist, and they're</p>

	more common than you think.
Closely resembles about 40% of the population; most people have dealt with many similar people before, and can easily understand managers.	Thinks in an uncommon way found in perhaps 5% of the population; will encounter many people who have never known well anyone who is similar. Can't count on other people understanding him.
Is such a dominant force in human society that he can easily forget that others might be different. Works well with people because of how much he holds in common with so many others. Needs to work at understanding people like hackers.	May have intense powers of concentration. Prizes an offbeat and clever sense of humor. At times, painfully aware of inconsistencies that are invisible to the people who are acting hypocritically. Marches to the beat of a different drummer, and needs to work at understanding people like managers.

Managers and hackers complement each other. If they work

at it, they can enjoy a long and fruitful working relationship.

# Questions and Answers:

## Section 1: Basic Understanding

1.1: Won't my hacker break into my computer and steal my trade secrets?

Point of clarification. There are two communities of people that call themselves 'hackers'.

One of these groups is the one you've heard about—those who take pride in breaking into other people's computers.

That is all the media understands 'hacker' to mean, but there is another community, an older and much more interesting one, that is insulted by being mistaken for the first community. They are as insulted as an automotive engineer would be if the media said 'automotive engineer' when they meant 'car thief', and the engineer learned through bitter experience that, whenever he told people he was an automotive engineer, people thought he was only a car thief.

Your hacker is an automotive engineer, not a car thief. He is a hacker because he loves computers, and loves to do impressive things with them. He doesn't want to steal your trade secrets, and it would be good manners of you not to confuse "automotive engineer" hackers with "car thief" hackers—whom he refers to as 'crackers', or the extremely negative 'script kiddies'

pejorative script kiddies .

## 1.2: Was it a good idea to hire a hacker?

It depends on the job. A hacker can be dramatically more effective than a non-hacker at a job, or dramatically less effective. Jobs where hackers are particularly good are:

- Systems administration
- Programming
- Design
- Web-related development

Jobs where hackers are particularly bad are:

- Data entry
- "Computer operator", where the "computer operator" has to use software (especially Microsoft software) that he can't improve.

More generally, a job that requires fast and unexpected changes, significant skill, talent, and is not very repetitive will be one a hacker will excel at. Repetitive, simple jobs are a waste of a good hacker, and will make your hacker bored and frustrated. No one works well bored and frustrated.

The good news is, if you get a hacker on something he particularly likes, you will frequently see performance on the order of five to ten times what a "normal" worker would produce. This is not consistent, and you shouldn't expect to see it all the time, but it will happen. This is most visible on particularly difficult tasks.

## 1.3 Wait, you just said "ten times", didn't you? You're not serious, right?

Yes, I am serious; a hacker on a roll may be able to produce, in a period of a few months, something that a small development group (say, 7-8 people) would have a hard time getting together over a year. He also may not. Your mileage will vary.

will vary.

IBM used to report that certain programmers might be as much as 100 times as productive as other workers, or more. This kind of thing happens.

#### 1.4 How should I manage my hacker?

The same way you herd cats. It can be quite confusing; they're not like most other workers. Don't worry! Your hacker is likely to be willing to suggest answers to problems, if asked. Hackers are known for coming together and producing impressive software without any business people to tell them what to do. That's how Perl was produced. And Linux. And quite a few other things, great and small. Most hackers are nearly self-managing.

#### 1.5 I don't understand this at all. This is confusing. Is there a book on this?

There are several books that explain important pieces of the puzzle, and some of them are listed in a reading list [below](#). If you read from the list and ask your hacker to help you connect the dots, you've got a good chance at understanding your hacker much better.

## Section 2: Social issues

2.1: My hacker doesn't fit in well with our corporate society. She seems to do her work well, but she's not really making many friends.

This is common. Your hacker may not have found any people around who get along with hackers. You may wish to consider offering her a position telecommuting, or flexible hours (read: night shift), which may actually improve her productivity. Or, even better, hire another one.

2.2: My hacker seems to dress funny. Is there any way to

impress upon him the importance of corporate appearance?

Well... let's look at your view of clothing first, so that you'll have a better chance at understanding how your hacker sees things differently.

You believe in showing respect for the company and those you work with. To you, much of that respect revolves around little details. These details are to you much of the substance of respect—such as that classy suit you wear to the office. So when a hacker wears jeans and a t-shirt to work, he must be showing disrespect, right?

Not really. Those jeans—kneeholes and all—are what he wears to see his best friend, whom he respects deeply. If your hacker happens to be a Christian, he may wear jeans and a T-shirt to church on Easter. I sometimes do, and when I dress up for church, it is more to avoid distracting other churchgoers than any need of fancy clothes in order to worship God. Hackers look past appearances, and it seems strange to them that you think they need uncomfortable clothes to work well: if it's what's inside the clothing that matters, why not wear something comfortable and be able to concentrate better?

If your hacker isn't dressing up, how can he still respect your company? He works hard, solves problems, and probably thinks about ways to help your company be more productive—even when he's at home. If he wants to wear comfortable clothing at work, it's not disrespect; he just understands what IBM, Microsoft, and Ford all recognize: employees are most productive when they choose what to wear—not their company. If you ask your hacker respectfully, he'll probably wear clothing without any holes, and might even dress up for a few special occasions.

Your suit is a professional asset. It helps other people see your professionalism. Your hacker's t-shirt is also a professional asset. It's part of a culture that judges a person by what's inside his clothing, and he works better when comfortable. He doesn't try to get you to dress like him; why don't you extend the same courtesy to him?

2.3: My hacker won't call me by my title, and doesn't seem to respect me at all.

Your hacker doesn't respect your title. Hackers don't believe that management is "above" engineering; they believe that management is doing one job, and engineering is doing another. They may well frequently talk as if management is beneath them, but this is really quite fair; your question implies that you talk as if engineering is beneath you. Treat your hacker as an equal, and she will probably treat you as an equal—quite a compliment!

2.4: My hacker constantly insults the work of my other workers.

Take your hacker aside, and ask for details of what's wrong with the existing work. It may be that there's something wrong with it. Don't let the fact that it runs most of the time fool you; your hacker is probably bothered by the fact that it crashes at all. As your customers will be—consider your hacker to be an early warning system. He may be able to suggest improvements which could dramatically improve performance, reliability, or other features. It's worth looking into.

You may be able to convince your hacker to be more polite, but if there appear to be major differences, it's quite possible that one or more of your existing staff are incompetent by his standards. Note that hackers, of course,

have different standards of competence than many other people. (Read "different" as "much higher".) Is this necessarily appropriate? All people have weaknesses. It would perhaps be nicer if hackers were more charitable to people who can't match their talent, but you're lucky to have someone on staff who's competent enough for this to be a problem.

### **Section 3: Productivity**

3.1: My hacker plays video games on company time.

Abraham Lincoln said, "If I had ten hours to chop down an oak tree, I'd spend the first eight sharpening my axe."

Some jobs are done best by getting your hands dirty immediately: if you hire a kid to rake your leaves, you probably want him to start raking as soon as he arrives. But if you contacted a building contractor to make a new office building in the morning, and he was pouring concrete by the end of the day, you would not be impressed—at least not in a good way. Something is very wrong: there are all sorts of things that need to happen first. If your contractor begins work by pouring concrete, you will end up paying for some very expensive mistakes that could have been completely avoided by simple preparation.

Your hacker is probably honest, too honest to start off by writing poor-quality code "so my manager will think I'm working." He'd rather be productive and spend two weeks preparing rather than two years fixing needless mistakes.

Perhaps it would be easier if hacker ways of preparation coincided with what you do when working—writing memos or something like that. But there is an elusive productive zone,

and your hacker is doing whatever he can to gain that productivity. I often write best after taking meandering walks—and, if you have difficulty believing that walks are a way to produce something good, I'd encourage you to read [A Dream of Light](#)—which, walks and all, took me very little time to write. I averaged over ten times the normal speed of a professional writer. Your hacker who plays games on company time is using the same areas of his mind as I did. Your hacker is sharpening his axe, and it's a good idea for him to do so.

Hackers, writers, and painters all need some amount of time to spend "percolating"—doing something else to let their subconscious work on a problem. Your hacker is probably stuck on something difficult. Don't worry about it.

3.2: But it's been two weeks since I saw anything!

Your hacker is working, alone probably, on a big project, and just started, right? She's probably trying to figure it all out in advance. Ask her how it's going; if she starts a lot of sentences, but interrupts them all with "no, wait..." or "drat, that won't work", it's going well.

3.3: Isn't this damaging to productivity?

No. Your hacker needs to recreate and think about things in many ways. He will be more productive with this recreation than without it. Your hacker enjoys working; don't worry about things getting done reasonably well and quickly.

3.4: My hacker is constantly doing things unrelated to her job responsibilities.

Do they need to be done? Very few hackers can resist solving a problem when they can solve it, and no one else is solving it. For that matter, is your hacker getting her job

done? If so, consider these other things a freebie or perk (for you). Although it may not be conventional, it's probably helping out quite a bit.

3.5: My hacker is writing a book, reading USENET news, playing video games, talking with friends on the phone, and building sculptures out of paper clips. On company time!

He sounds happy. The chances are he's in one of three states:

- Basic job responsibilities are periodic (phone support, documentation, et al.) and there's a lull in incoming work.  
Don't worry about it!
- Your hacker is stuck on a difficult problem.
- Your hacker is bored silly and is trying to find amusement. Perhaps you should find him more challenging work?

Any of these factors may be involved. All of them may be involved. In general, if the work is challenging, and is getting done, don't worry too much about the process. You might ask for your corporation to be given credit in the book.

3.6: But my other workers are offended by my hacker's success, and it hurts their productivity.

Do you really need to have workers around who would rather be the person getting something done, than have it done already? Ego has very little place in the workplace. If they can't do it well, assign them to something they can do.

## **Section 4: Stimulus and response**

4.1: My hacker did something good, and I want to reward him.

Good! Here are some of the things most hackers would like to receive in exchange for their work:

- Understanding.
- Understanding.
- Understanding.
- Respect.
- Admiration.
- Compliments.
- Discounts on expensive toys.
- Money.

The order is approximate, but the most important one is the most difficult. If you can give that to your hacker, in his eyes you will be a cut above most other bosses—and he just might work for you longer.

Try to remember this good thing your hacker just did the next time you discover he just spent a day playing x-trek. Rather than complaining about getting work done, write it off as "a perk" that was granted (informally) as a bonus for a job well done. Don't worry; hackers get bored quickly when they aren't doing their work.

4.2: My hacker did something bad, and I want to punish him.

Don't. 30 years of psychological research has shown that punishment has no desirable long-term effects. Your hacker is not a lab rat. (Even if he were a lab rat, punishment wouldn't work; at least, not if he were one of the sorts of lab rats the psych research was done on.) If you don't like something your hacker is doing, express your concerns. Explain what it is that bothers you about the behavior.

Be prepared for an argument; your hacker is a rational entity, and presumably had reasons. Don't jump on him too quickly; they may turn out to be good reasons.

Don't be afraid to apologize if you're wrong. Your hacker will never think less of you if you admit to a mistake. He

might be disappointed if you've made a mistake and can't admit it, but he will never look down on you for admitting you were wrong. If your hacker admits to being wrong, don't demand an additional apology; so far as the hacker is concerned, admitting to being wrong probably is an apology.

4.3: I don't get it. I offered my hacker a significant promotion, and she turned it down and acted offended.

A promotion frequently involves spending more time listening to people describing what they're doing, and less time playing with computers. Your hacker is enjoying her work; if you want to offer a reward, consider an improvement in title, a possible raise, and some compliments.

Make sure your hacker knows you are pleased with her accomplishments—that's what she's there for.

4.4: My company policy won't let me give my hacker any more raises until he's in management.

In the Bible, Paul describes roles in the Christian church, and then compares these community members to parts of the human body (I Corinthians 12:14-26, NIV):

Now the body is not made up of one part but of many. If the foot should say, "Because I am not a hand, I do not belong to the body," it would not for that reason cease to be part of the body. And if the ear should say, "Because I am not an eye, I do not belong to the body," it would not for that reason cease to be part of the body. If the whole body were an eye, where would the sense of hearing be? If the whole body were an ear, where would the sense of smell be? But in fact God has arranged the parts in the body, every one of them, just as he wanted them to be. If they were all one part,

where would the body be? As it is, there are many parts,  
but one body.

The eye cannot say to the hand, "I don't need you!"  
And the head cannot say to the feet, "I don't need you!"  
On the contrary, those parts of the body that seem to  
be weaker are indispensable, and the parts that we think  
are less honorable we treat with special honor. And the  
parts that are unpresentable are treated with special  
modesty, while our presentable parts need no special  
treatment. But God has combined the members of the  
body and has given greater honor to the parts that  
lacked it, so that there should be no division in the body,  
but that its parts should have equal concern for each  
other. If one part suffers, every part suffers with it; if  
one part is honored, every part rejoices with it.

This is a deep insight into human community. It's not just  
about religion. Executives, managers, programmers,  
salespeople, secretaries, and other employees all contribute  
something fundamental to a company. Janitors? Those people  
are important? Well, if janitors aren't important, fire them,  
and streamline your business. The halls may be a bit stinky  
with all that rotting trash, and two of the secretaries may  
sneeze every time someone walks by and kicks up dust. Your  
insurance covers emergency treatment and rabies shots  
when a rat creeps out of a mound of garbage and bites you,  
right? Your star saleswoman couldn't close a key sale  
because she was in the hospital with food poisoning after...  
wait a minute. Maybe those janitors we all look down on  
deserve a second look. Maybe they contribute more to the  
physical well-being of other employees than almost anyone

else you have on staff. Maybe they're important after all.

Eye, hand, stomach, and sturdy back muscles all contribute something. Sometimes the observation—"My group adds something unique and vital, something that no other department gives."—to a conclusion that is not justified: "My group's contribution to the company is better and more important than anyone else."

This conclusion also affects how companies allocate money: the people who set salaries believe they're the most important employees. Because it's management who sets the salaries, the belief:

A manager is a more important employee than a non-  
manager

creates a policy like

Every manager must be paid more than any non-  
manager

or

No matter how much an employee does for the company, there's an artificial limit on how much you can reward him unless he gives up his work, which he is good at, and becomes a manager instead.

If that's what you believe—a prejudice that would shock any true leader—then I don't think I can help you much. I would simply encourage you to finish the job. Send a memo out to all employees saying:

We believe that every manager makes a more

important contribution to this company than any non-manager. If you're not a manager, you're only a second-class citizen with our company. If you don't like this, you can leave.

And be ready for an exodus. Your hackers won't be the only ones to decide you're too stupid to work with. They'll just be the first.

Does that sound unattractive? You do have a better alternative. Your hacker can quite possibly earn \$200/hour or more, if he wants—his talents are worth it. If your company policy imposes a salary ceiling on non-managers, your company policy is broken. Fix your company policy, find a loophole (say, a consultant given a contracted permanent consulting position with benefits), or else get ready to have one of your most productive employees leave because your company policy is broken and you couldn't work around it. I can't believe the hacker on my staff is worth as much as we're paying.

Ask the other in the staff what the hacker does, and what they think of it. The chances are that your hacker is spending a few hours a week answering arcane questions that would otherwise require an expensive external consultant.

Your hacker may be fulfilling another job's worth of responsibilities in his spare time around the office. Very few hackers aren't worth what they're getting paid; they enjoy accomplishing difficult tasks, and improving worker efficiency.

## **Section 5: What does *that* mean?**

5.1: My hacker doesn't speak English. At least, I don't think

so.

Your hacker is a techie, and knows a number of powerful concepts that most English-speakers don't know. He also knows words for those concepts. Guess what? The concepts are unusual concepts, and the words are unusual words. He doesn't use standard words for many things because there aren't any standard words to explain the cool things he does.

Your best bet is to pick up a copy of TNHD (The New Hacker's Dictionary). It can be found at <http://catb.org/jargon> or from a good bookstore. If you have trouble understanding that reference, ask your hacker if she has a copy, or would be willing to explain her terms.

Most hackers are willing to explain terms. Be ready for condescension; it's not intended as an insult, but if you don't know the words, she probably has to talk down to you at first to explain them. If you're bothered by this, think about explaining to a non-professional how to keep a project on task—if you can't use any words longer than five letters. That's what your hacker is doing when she tries to explain technical concepts in non-technical words. Please understand if she sounds a little condescending.

It's a reasonably difficult set of words; there are a lot of them, and their usage is much more precise than it sounds. Hackers love word games.

It is also possible that English is not your hacker's native language, and that it's not yours either. Feel free to substitute a more appropriate language.

5.2: I can't get an estimate out of my hacker.

This is easier to understand with an analogy. Imagine two situations:

In the first situation, you drive for work on the same

roads, at the same time, as you have for the past five years, and listened to the traffic report in the shower.

In the second situation, you are out in the middle of nowhere, travelling to see a distant relative, and you realize that you've forgotten to buy a hostess gift for the people you're driving to visit. You stop by a gas station to ask where you can find a gift shop which would sell a dolphin statuette. The attendant says, "Take the road you're on, and turn off onto the second side street you see. Keep on going until you hit the second stop sign after John's general store. It's in the third town you'll see."

Now, in both cases, think about answering the question, "How long will it take?"

In the first case, you probably know the answer: "Twenty-six minutes, twenty-two if I hit the lights right." In the second case—well, given that you don't know how long the route is, what the speed limits are, or how you will find the sign once you reach the right town, the best answer is, "I don't know."

When you ask a hacker how long a task will take and he says, "I don't know," he isn't being difficult. Fixing a broken network, when you don't know why it's down, is much more like the second situation than the first. You don't need to throw a pity party for your hacker because he has to work in unfamiliar territory and doesn't even know how long a task will take. He doesn't look at it that way; he likes the challenge. But it does mean that he accepts tasks before he knows exactly how he'll do them, and he is responsible enough to say "I don't know," and not tell you something he's simply made up. Your hacker is a driver who thrives on finding his way in unfamiliar territory, with washed-out

bridges and incomplete directions among the surprises. You might be glad you have someone who likes that kind of assignment.

Your hacker hasn't figured out how hard the problem is yet. Unlike most workers, hackers will try very hard to refuse to give an estimate until they know for sure that they understand the problem. This may include solving it.

No good engineer goes beyond 95% certainty. Most hackers are good engineers. If you say that you will not try to hold him to the estimate (and mean it!) you are much more likely to get an approximate estimate. The estimate may sound very high or very low; it may be very high or very low. Still, it's an estimate, and you get what you ask for.

5.3: My hacker makes obscure, meaningless jokes.

Another one that's a little hard to explain.

Imagine that you are visited by a brilliant wayfarer. He strives to understand those around, silently tolerates a great many things that seem strange to him, and brings with him cultural treasures unlike anything your culture has to offer. One day, he tries to share some of them with you.

Should you be bothered?

That's what's happening when your hacker tells you obscure technical jokes. He could be trying to make you feel stupid, but let's be charitable. Your hacker is uncommonly intelligent—he might be a member of Mensa. Intelligent people think a little bit differently, and a genius may seem like someone from another world. Your hacker probably understands you better than you understand him—and when he shares jokes with you, he's giving you a chance to see something special. If you feel brave, you might even ask him to explain some of them.

But don't be bothered when he tells you jokes that take a while to explain. Some of them are quite interesting.

5.4: My hacker counts from zero.

So does the computer. You can hide it, but computers count from zero. Most hackers do by habit, also.

## Section 6: Is there anything else I should know?

6.1: I've found this document to be tremendously helpful. Is there anything I can do to say thank-you?

Wonderful of you to ask, and you certainly can. There are two authors who've contributed to this document, an original and a revision author. Both would appreciate cash donations (e-mail the [original/revision](#) authors for details). **The revision author would be very happy to receive a link to his home page: [Jonathan's Corner \(Sitemap\)](#) (Browse around and see what he has to offer!)**

You might also consider buying a couple of books through the links on these pages; you get cool books, and the authors get pocket change. :) The books listed in the original version will give money to the original author, while the books added in the revision will give money to the revision author.

If you'd like to give something to one of the authors, but don't know which, why not flip a coin?

6.2: Are there any books that will help me understand my hacker?

Excellent question. Yes, there are. The following list is suggested:

- [Please Understand Me](#) or [Please Understand Me II](#)  
What I said above about common manager/hacker differences was drawn from [Please Understand Me](#) as

well as experience. Most hackers are intuitive thinking types, while managers who are confused by hackers tend to be sensate judging types. If you're in a hurry, buy *Please Understand Me* and read the descriptions for sensate judging and intuitive thinking types. You may find them tremendously helpful in understanding hackers. I've found them tremendously helpful in understanding managers.

*Please Understand Me* came out in the 1970s and describes what people are like. *Please Understand Me II* came out in the 1990s and describes both what people are like and what they can do. (It's about twice as long.)

I prefer *Please Understand Me*.

- [The New Hacker's Dictionary \(available online\)](#)  
Read the introduction and appendices; they're worth their weight in gold. Then read a definition a day—you'll learn a lot. This book is probably the #1 hacker classic, and provides an invaluable asset into understanding hacker thought. Don't worry if parts of it are hard to understand—you'll still learn something, and your hacker can probably explain the harder parts.
- [Stranger in a Strange Land](#) or [Firestorm 2034](#)  
*Stranger in a Strange Land* is a classic novel about a person who is raised by Martians and is brought to earth, a Martian mind in the body of a young man. There are not any hackers in this story, but if you can understand the protagonist in this story, you may find it much easier to understand and appreciate your hacker. Think of it as driving an automatic after you've learned to drive a stick.

*Firestorm 2034* is a story about a medieval genius

brought to the 21<sup>st</sup> century. He is traumatized by his first contacts with computers, but grows to be fascinated, and learns to program. The reader is with him as he understands technology and makes a discovery in artificial intelligence. This book was written to convey insight into certain kinds of people. If you read it, you should find it easier to understand your hacker—and perhaps grasp technology a little better, to boot! It is my second novel.

Ok, why is an unknown author putting his book next to a Heinlein classic? A few reasons:

- It draws heavily on Heinlein's work.
- It's less than a third as long as Stranger. To a busy leader, that counts for a lot.
- It's written by someone who understands technology, and who weaves technology deeply into the story.
- Readers like it. One actually said he liked it better than Stranger.
- There's less stuff that's likely to offend you.
- I have been published in more than one respected journal. The editor of the high-IQ journal Ubiquity saw my work, and asked to feature me in their fall/winter 2001 issue—with a biography, a few writings, a painting, and a four dimensional maze.

I'm not completely unknown as an author. But it's your call which novel to read—and I won't question your judgment if you choose Stranger.

- [Guiding the Gifted Child](#)

This award-winning title is a very practical book because it conveys understanding. It does a good enough job of

it to be useful to several different kinds of people. It will help you understand the sort of people who become hackers.

This also is the only book on this list specifically intended to help people guide hacker-like people.

- [The Cathedral and the Bazaar](#)

Perhaps this has happened already. Or perhaps it will happen any day.

You try to reason with your hacker, and say, "Windows was made by the heavily funded efforts of a major corporation. Linux was made by some programmers on their spare time, and you can get it for free. Is Linux really as good as Windows?"

Your hacker rolls his eyes, appears to be counting to ten, gives you a very dirty look, and slowly says, "Is the upcoming band performance next door—live, in concert—really as good as this scratched-up CD?"

Your hacker believes that open source software is normally better than Microsoft, and has very good reason to do so. This book explains why—and it may help you to get better software for less money, and put your business in a more competitive position. As far as hacker culture goes, it only illuminates a small part, but it does so very well.

Unfortunately, none of these books was specifically written to explain hacker culture to non-hackers.

Fortunately, your hacker can help you connect the dots and put things together. Just ask him!

6.3: Has this FAQ been published?

The original version, in some form, has been bought by [IBM DeveloperWorks](#), which funded part of the work. You

could read their version (nicely edited) by following this link (non-functional as of 12/31/01; I've contacted IBM requesting a current URL and am waiting to hear back). IBM has also bought another article, the Manager FAQ, a guide to managers for hackers who are frustrated and confused by corporate life. The original author is justifiably happy with his work.

I am working towards publishing the revised and expanded version.

What's the copyright status on this? Can I make copies and share it with a friend who's confused by his hacker?

You may distribute as many copies of this document as you want. The original FAQ has the following notice:

This document is copyright 1995, 1996, 1998, 1999 Peter Seebach. Unaltered distribution is permitted.

When I let the original author know I was interested in a revision, and asked what the copyright status was, he said it was covered by the [Artistic License](#). All changes in this revision are also covered by the Artistic License, all added material copyright 2001 by Jonathan Hayward. Distribute freely.

What's the author's e-mail, and what's the official distribution site?

The original is officially distributed at <http://www.plethora.net/~seeb/faq/hacker.html> by [seeb@plethora.net](mailto:seeb@plethora.net), and the revision is at [cjayward.com/hacker/](http://cjayward.com/hacker/) by [jshayward@pobox.com](mailto:jshayward@pobox.com).

Are there any people the revision author would like to thank?

Yes. Jonathan Hayward would very much like to thank the original author, Peter Seebach, for writing an excellent FAQ.

original author, Peter Seebach, for writing an excellent FAQ  
and for giving him permission to modify it.

Any disclaimers?

DISCLAIMER: Both authors are hackers. Bias is  
inevitable.

Revision 1.0—Last modified June 9, 2001

# The Spectacles

I got up, washed my face in the fountain, and put out the fire. The fountain was carved of yellow marble, set in the wall and adorned with bas-relief sculptures and dark moss. I moved through the labyrinth, not distracting myself with a lamp, not thinking about the organ, whose pipes ranged from 8' to 128' and could shake a cathedral to its foundation. Climbing iron rungs, I emerged from the recesses of a cluttered shed.

I was wearing a T-shirt advertising some random product, jeans which were worn at the cuffs, and fairly new tennis shoes. I would have liked to think I gave no hint of anything unusual: an ordinary man, with a messy house stocked with the usual array of mundane items. I blended in with the Illusion.

I drove over to Benjamin's house. As I walked in, I said, "Benjamin, I'm impressed. You've done a nice job of patching this place since the last explosion."

"Shut up, Morgan."

"By the way, my nephews are coming to visit in two weeks, Friday afternoon. Would you be willing to tinker in your laboratory when they come? Their favorite thing in the world is a good fireworks display."

"Which reminds me, there was one spice that I wanted to give you. It makes any food taste better, and the more you add, the better the food tastes. Pay no attention to the label on the

bottle which says 'arsenic'. If you'll excuse me one moment..." He began to stand up, and I grabbed his shoulder and pulled him back down into the chair.

"How are you, Benjamin?"

"How are you, Morgan?"

I sat silent for a while. When Benjamin remained silent, I said, "I've been spending a lot of time in the library. The sense one gets when contemplating an artistic masterwork is concentrated in looking at what effect *The Mystical Theology* had on a thousand years of wonder."

He said, "You miss the Middle Ages, don't you?"

I said, "They're still around—a bit here, a piece there. On one hand, it's very romantic to hold something small in your hand and say that it is all that is left of a once great realm. On the other hand, it's only romantic: it is not the same thing as finding that glory all about you.

"The pain is all the worse when you not only come from a forgotten realm, but you must reckon with the Illusion. It's like there's a filter which turns everything grey. It's not exactly that there's a sinister hand that forces cooperation with the Illusion and tortures you if you don't; in some ways things would be simpler if there were. Of course you're asking for trouble if you show an anachronism in the way you dress, or if you're so gauche as to speak honestly out of the wisdom of another world and push one of the hot buttons of whatever today's hot issues are. But beyond that, you don't have to intentionally cooperate with the Illusion; you can 'non-conform freely' and the Illusion freely conforms itself to you. It's a terribly isolating feeling."

Benjamin stood up, walked over to a bookshelf, and pulled out an ivory tube. "I have something for you, Morgan. A pair of spectacles."

"Did you make these?"

"I'm not saying."

"Why are you giving me eyeglasses? My eyes are fine."

"Your eyes are weaker than you think." He waited a moment, and then said, "And these spectacles have a virtue."

"What is their virtue? What is their power?"

"Please forgive me. As one who has struggled with the Illusion, you know well enough what it means to deeply want to convey something and know that you can't. Please believe me when I say that I would like to express the answer to your question, but I cannot."

I left, taking the glasses and both hoping that I was concealing my anger from Benjamin and knowing that I wasn't.

---

I arrived at home and disappeared into the labyrinth. A bright lamp, I hoped, would help me understand the spectacles' power. Had I been in a different frame of mind, I might have enjoyed it; I read an ancient and mostly complete Greek manuscript to The Symbolic Theology to see if it might reveal new insights. My eyes lingered for a moment over the words:

That symbol, as most, has two layers. Yet a symbol could have an infinite number of layers and still be smaller than what is without layer at all.

I had a deep insight of some sort over these words, and the insight is forever lost because I cared only about one thing, finding out what magic power the spectacles held. I tried to read a cuneiform tablet; as usual, the language gave me an embarrassing amount of trouble, and there was something strange about what it said that completely lacked the allure of being exotic. Wishing I had a better command of languages, I moved about from one serpentine passageway to another, looking at places, even improvising on the organ, and enjoying none of it.

Everything looked exactly as if I were looking through a children's toy. Had Benjamin been watching too much Dumbo and given me a magic feather?

After a long and fruitless search, I went up into my house, put the spectacles in your pocket, and sat in my chair, the lights off, fatigued in mind and body. I do not recall how long I stayed there. I only know that I jumped when the doorbell rang. It was Amber. She said, "The supermarket had a really good sale on strawberries, and I thought you might like some."

"Do you have a moment to to come in? I have Coke in the  
fridge."

trriage.

I had to stifle my urge to ask her opinion about the spectacles' virtue. I did not know her to be more than meets the eye (at least not in the sense that could be said of Benjamin or me), but the Illusion was much weaker in her than in most people, and she seemed to pick up on things that I wished others would as well. We talked for a little while; she described how she took her family to a pizza restaurant and her son "walked up to a soda machine, pushed one of the levers you're supposed to put your cup against, jumped in startlement when soda fell on his hand, and then began to lick the soda off."

"I've got to get home and get dinner on, but—ooh, you have new glasses in your pocket. Put them on for a moment."

I put my spectacles on, and she said something to me, but I have no idea what she said. It's not because I was drained: I was quite drained when she came, but her charm had left me interested in life again. The reason I have no idea what she said to me is that I was stunned at what I saw when I looked at her through the spectacles.

I saw beauty such as I had not begun to guess at. She was clad in a shimmering robe of scintillating colors. In one hand, she was holding a kaliedoscope, which had not semi-opaque colored chips but tiny glass spheres and prisms inside. The other hand embraced a child on her lap, with love so real it could be seen.

After she left, I took the spectacles off, put them in their case, and after miscellaneous nightly activities, went to bed and dreamed dreams both brilliant and intense.

---

When I woke up, I tried to think about why I had not recognized Amber's identity before. I closed my eyes and filtered through memories; Amber had given signals of something interesting that I had not picked up on—and she had picked up on things I had given. I thought of myself as one above the Illusion—and here I had accepted the Illusion's picture of her. Might there be others who were more than meets the eye?

I came to carry the spectacles with me, and look around for a sign of something out of the ordinary. Several days later, I met a tall man with crownrowed greying hair. When I asked him what he studied in college, he first commented on the arbitrariness of divisions between disciplines, before explaining that his discipline of record was philosophy. His thought was a textbook example of postmodernism, but when I put my spectacles on, I saw many translucent layers: each layer, like a ring of an oak, carried a remnant of a bygone age. Then I listened, and his words sounded no less postmodern, but echoes of the Middle Ages were everywhere.

I began to find these people more and more frequently, and require less and less blatant cues.

---

I sat in the living room, waiting with cans of Coca-Cola. I enjoy travelling in my nephews' realms; at a prior visit, Nathan discovered a whole realm behind my staircase, and it is my loss that I can only get in when I am with him. Brandon and Nathan had come for the fair that weekend, and I told them I had something neat-looking to show them before I took them to the fair.

I didn't realize my mistake until they insisted that I wear the spectacles at the fair.

---

I didn't mind the charge of public drunkenness that much. It was humiliating, perhaps, but I think at least some humiliations are necessary in life. And I didn't mind too much that my nephews' visit was a bummer for them. Perhaps that was unfortunate, but that has long been smoothed over. There were, however, two things that were not of small consequence to me.

The first thing that left me staggered was something in addition to the majesty I saw. I saw a knight, clad in armor forged of solid light, and I saw deep scars he earned warring against dragons. I saw a fair lady who looked beautiful at the skin when seen without the spectacles, and beautiful in layer after layer below the skin when seen with them. The something else I saw in addition to that majesty was that this beauty was something that was not just in a few people, or even many. It was in every single person without exception. That drunken beggar everyone avoided, the one with a stench like a brewery next to a horse stable—I saw his deep and loyal friendships. I saw his generosity with other beggars—please believe me that if you were another beggar, what's his was yours. I saw the quests he made in his youth. I saw his dreams. I saw his story. Beyond all that, I saw something deeper than any of these, a glory underneath and beneath these things. This glory, however disfigured by his bondage to alcohol, filled me with wonder.

The reason the police kept me in the drunk tank for so long was that I was stunned and reeling. I had always known that I was more than what the Illusion says a person is, and struggled to convey my something more to other people... but I never looked to see how other people could be more than the grey mask the Illusion put on their faces. When I was in the drunk tank, I looked at the other men in wonder and asked myself what magic

lay in them, what my spectacles would tell me. The old man with an anchor tattooed to his arm: was he a sailor? Where had he sailed on the seven seas? Had he met mermaids? I almost asked him if he'd found Atlantis, when I decided I didn't want to prolong the time the police officer thought I was drunk.

This brings me to the second disturbing find, which was that my spectacles were not with me. I assumed this was because the police had locked them away, but even after I was released, determined inquiry found no one who had seen them. They looked interesting, oddly shaped lenses with thick gold frames; had a thief taken them when I was stunned and before the police picked me up?

The next day I began preparing for a quest.

---

It filled me with excitement to begin searching the black market, both because I hoped to find the spectacles, and because I knew I would experience these people in a completely new light.

I had dealings with the black market before, but it had always been unpleasant: not (let me be clear) because I did not know how to defend myself, or was in too much danger of getting suckered into something dangerous, but because I approached its people concealing the emotions I'd feel touching some kind of fetid slime. Now... I still saw that, but I tried to look and see what I would see if I were wearing my spectacles.

I didn't find anything that seemed significant. The next leg of my journey entailed a change of venue: I dressed nicely and mingled with the world of jewellers and antique dealers. Nada.

I began to search high and low; I brainstormed about what exotic places it might be, and I found interesting people along the way. The laborers whom I hired to help me search the city dump almost made me forget that I was searching for something, and over time I chose to look for my spectacles in places that would bring me into contact with people I wanted to meet...

Some years later, I was returning from one of my voyages and realized it had been long (too long) since I had spoken with Benjamin. I came and visited him, and told him about the people I'd met. After I had talked for an hour, he put his hand on my mouth and said, "Can I get a word in edgewise?"

I said, "Mmmph mph mmmph mmph."

He took his hand off my mouth, and I said, "That depends on whether you're rude enough to put your hand over my mouth in mid-sentence."

"That depends on whether you're rude enough to talk for an

hour without letting your host get a word in edgewise."

I stuck my tongue out at him.

He stuck his tongue out at me.

Benjamin opened a box on his desk, opened the ivory case inside the box, and pulled out my spectacles. "I believe these might interest you." He handed them to me.

I sat in silence. The clock's ticking seemed to grow louder, until it chimed and we both jumped. Then I looked at him and said, "What in Heaven's name would I need them for?"

# Spirit

**Links:** Read anything good lately?

**Dexios:** An article that tries to catch you by beginning, "They really should have put it into my contract: I, the undersigned, hereby agree to spend one-half to three-quarters of all class time explaining why watching Dawson's Creek and thinking vague thoughts about God is not a valid substitute for attending mass." The students weren't affected by the usual exhortations, until she happened on a visit to monastic worship.

**Links:** ...And?

**Dexios:** The students were perfectly welcome, but the monks were there worshipping God and the students were welcome to join the monks worshipping God. And that got their attention when a whole legion of ill-starred [attempts to get their attention](#) failed. One student said, "With all the other masses, it's like it was all about me or something. With this mass, I got the feeling it was about God." And that succeeded where words about "It's commanded," or "It's good for you," failed.

The students weren't really asking "Why should I go to mass?" at all; they said that because they couldn't form the words to ask what they really meant.

**Links:** And that was...?

**Dexios:** "Why should I go to **that** mass?"

**Links:** Wow. I'm surprised you're siding with a bunch of rebellious—how old are they?

**Dexios:** Students at a Catholic high school. And as to rebellious—teenagers are likely to rebel and be rebels without a cause if they have too much trouble finding a good enough cause, but there's something that has to do with spirit that isn't rebellious at all. They rejected counterfeit coin.

**Links:** "Spirit?" As in—

**Dexios:** Um, as in—[pause]

**Links:** —as in something you're thinking about?

**Dexios:** Yes.

**Links:** So you're saying these students were super spiritual?

**Dexios:** Yes. No. Saying that they're super spiritual is an answer to the wrong question. Sure, I'd love to bring two (or however many it was) busloads of kids to our parish and show them how Orthodox worship is taken seriously even if you're not monks, but if you're thinking of spirit as some special quality that has an incense rising up from the best people's heads, that's exactly what it's not. I would say it's natural, if people hadn't heard a million voices saying that appetite is the only thing that's natural about us. These kids weren't showing spirit because they were being urged to be spirit enough to want real worship and not a show—if anything, they were spirit enough for that despite people urging them that shows dressed up as worship were good enough for them. And the author of the

article didn't say that every now and then she sees a kid with a halo and that kid wants a real worship service, and is so spiritually snobbish that only a monastic service will satisfy him. (She said the services were "relaxed, by monastic standards," whatever that means.) What she was saying was that everyday, normal kids kept asking her why they should go to mass until she showed them...

A real mass. Or rather, one where monks were there to worship God and other people were quite welcome to join them in worshipping God.

**Links:** [pause] In Spirit and in Truth.

**Dexios:** In Spirit and in Truth. And I realized just now that the article has more going on in it than just spirit. It has a million other substitutes for spirit that people aren't happy with. Maybe it wasn't just spirit that resonated with me.

**Links:** Where else?

**Dexios:** Maybe your art history education simply talked about different eras and cultures choosing different strengths to develop—

**Links:** —it did—

**Dexios:** —but in mine there was a story of progress: at first medieval art was crude, and then changes began in medieval art that resulted in art getting better and better at being like a photograph until eventually artists weren't an expensive substitute for a photograph. The history of Western art was a history of progress, starting with medieval art that didn't look like a good photograph up to Enlightenment neo-classicism that could give a good photograph a run for

its money. Which is exactly right, except that it's backwards.

**Links:** Let me guess. You're going to say that the medieval art was spiritual, or spirit?

**Dexios:** Something like that, because the baseline for medieval art was similar [to icons](#). They hadn't gone to such scientific lengths to get a scientifically correct rendition of the human body for the mirror image of why pastors get their science illustrations wrong.

Pastors and theologians get their science wrong because their focus is on theology and just a little science is brought in to make a point—and the fact that the science is usually wrong shows that their hearts are in the right place. But scientific art, unlike medieval art but like "The Oaths of the Horatii" by Jacques Louis David, for which he sketched first skeletons and then muscles and then bodies and only then painted bodies complete with clothes, represents a fall from a spiritual center of gravity.

**Links:** But the material world is good, and understanding it is good.

**Dexios:** Um...

**Links:** Which of those do you want to deny?

**Dexios:** Do you believe I have to deny that the material world is good? Or, alternately, that understanding the material world is good?

**Links:** Unless you want to say some very strange things about science.

**Dexios:** Ugh, I was hoping to avoid saying strange things about science. But first of all, you seem to be treating "understanding the natural world" and "science" as

interchangeable, so that it is inconceivable what "understanding the human body" could mean besides "learning scientific facts about the body."

**Links:** And how exactly would I learn about the body apart from science?

**Dexios:** Let's see, you could look **A**ppreciate art that portrays the human form, or discover how your body behaves by playing **B**aseball, or have a **C**hiropractic massage, if there is such a thing, or **D**ance, or—

**Links:** —didn't you say something about "alignment of the stars, alignment of the bones..." yesterday?

**Dexios:** You interrupted me! I was hoping to work my way up to something profound. But let's put massage under '**M**' and forget about the alignment of the bones. I don't want to get into alternative medicine, besides saying that it seems a hint that people have some sense that their bodies have to have more to do with spirit than the almost mechanical view of "Western medicine", which is powerful and yet considered narrow in some circles.

And now for something related to the other horn for your dilemma.

Having enough to eat is good. So is having clothing, and a roof over your head in nasty weather. But the [Sermon on the Mount](#) tells us not to seek after these things: yes, we need them, and the Heavenly Father knows this well enough. But we are to seek first the Kingdom of Heaven and his perfect righteousness, making our center of gravity there, and making a spiritual center of gravity. Oh, and by the way, the other things will be given to us as well, even though that

isn't the point. The point, if I may use slightly non-Sermon-on-the-Mount language, is to have a spiritual center of gravity.

**Links:** But aren't you changing the subject of the [Sermon on the Mount](#)? Unless you talk about being poor in spirit, the [Sermon on the Mount](#) doesn't use the word "spirit."

**Dexios:** Matthew's Gospel talks about the Kingdom of Heaven and John's talks about abundant or eternal Life. As concepts they are not identical but you cannot treat them as dealing with separate realities, which would make the crudest fallacy. The [Sermon on the Mount](#) barely uses the word "spirit," but nothing from the ages is a better resource on living as spirit. And the distinction between 'Spirit', big 'S', and 'spirit', little 's', is not what you think.

**Links:** What do you mean?

**Dexios:** The distinction doesn't exist in Greek, or at least is not forced in that if you write "spirit" you have to decide if it has a big or little 's'. A lot of people think they need to place a vast chasm between big 'S' spirit and little 's' spirit so that it's almost two different words. But body is not so much the opposite of spirit as where spirit unfurls, and our spirits, little 's', are not so much the opposite of the Holy Spirit as where God's Spirit unfurls.

But this is a minor point. Nitpicking about a little or big 'S' on "Spirit", I mean. Body is profoundly important. Far from being a mere enemy of spirit, it is a proper counterpart, and that means that when you know the proper meaning of body, you know that it is where spirit unfurls, and the difference between a holy icon

and secular art is not that secular art takes a high view of the body in contrast to holy icons, but icons take a high view of the body by letting it get inspired by spirit. Literally and figuratively, body is meant to be where spirit unfurls, and the monk who lives a life of "contemplation" and the "secular" Christian who lives contemplation in the world are both spirit at work. But may I make a more concrete illustration of spirit? In social ethics, perhaps?

**Links:** What are Orthodox social ethics?

**Dexios:** "Our social program is the Trinity," as Orthodox seem to not be able to stop repeating. I'm not sure you have to say "Trinity" instead of, say, plugging in spirit, but what it is becomes clearer by contrast with Catholic social ethics. Catholic social ethics addresses a question that isn't addressed in the Bible, or at least looks at its question in a very different light.

**Links:** What did they see? A better way to solve an old problem?

**Dexios:** Well, that would at least be their interpretation, and when they present things their way, it's kind of hard to see any other way of seeing it.

**Links:** What is the basic question?

**Dexios:** The basic question they address is, "What should be done about the poor," and the way they interpret that question is, "What societal structures should be erected so that poverty isn't the same sort of issue?"

**Links:** But isn't that how the problem is approached today?

**Dexios:** Maybe, but its differences from how the Gospel interprets the problem are profound. If you look in the Bible, poverty looms large. Where the Old Testament

theocracy had done things by force, the New Testament calls people to responsibility and generosity.

"Give to the one who asks of you" and all that. But nowhere in the Gospel is there an agenda for societal reform. There are no quasi-statist outlines for how the government should take from the rich and redistribute to the poor: Christians are told what they should do, not how the government should approach things differently.

It is not, in terms of the Gospel precepts, an improvement to go from people learning to be sons of God and in their sonship exercising almsgiving and generosity as profound and powerful spiritual discipline, to coercion that transfers other people's resources while denying them the power to choose and all but snatching from their hand most opportunities to be generous. It is apparently perceived that by thinking in the terms of secular ideologies in imitation of various secular and anti-Christian movements, the Catholic Church is growing enough to take an effective approach that will make a real difference. Or perhaps it is not growth but a failure to understand what exactly is going on in Christ's movement.

**Links:** But the New Testament is not pure capitalism.

**Dexios:** Indeed not. I operate within a capitalist system because that is where God has placed me; but that doesn't mean that I have to make capitalism my God.

**Links:** I've read that in the ancient Church there were some rather communist people who were big into selling lands and liquidating property.

**Dexios:** Yes, and they are not a support for imposing communism.

**Links:** They seem pretty communist in what they chose to me.

**Dexios:** They seem pretty communist in what they chose to me too. The Bible has high praise for people who in their sonship choose to give away everything that makes them wealthy. I've heard today about one man who gave away his Ferrari to become a monk. That discipleship is singularly beautiful, and it is not the same thing as imposing a plan that takes away other people's wealth and the opportunity to even be generous in giving it away. There are few things a capitalist community needs more than the salt and light of people who show that there are bigger things in life than wealth.

But that does not mean that the high virtue of selling one's property and giving away the proceeds should be forced and have its virtue and power flattened out. [The story of Ananias and Sapphira](#) seems to have a clear point. Ananias and Sapphira owned their property and were under no obligation to sell it. When they did sell it, although they pretended to lay all of the money at the apostles' feet they were under no obligation to donate any of it, let alone all of it. Their sin was in lying to God and saying that they had given everything when they kept something back. For that sin alone God struck them both dead. Even if the story implies something deeper about selling one's property and laying the proceeds about the apostles' point, it gets to that point by explicitly saying that there is no obligation to give. Which perhaps suggests that giving at its best is not a matter of what is required but the deiform, Christian, flowing, free virtue of generosity

which is infinitely more than duty.

**Links:** I think I am beginning to see what's wrong with thinking Acts encourages communism.

**Dexios:** I should hastily clarify that most of the Catholic social teaching I've read does not endorse communism; they take somewhat different positions but the general drift is that even though the encyclicals adopt features of socialism, socialism and communism were off limits to Catholics.

**Links:** Then why try so hard to show that the New Testament endorses voluntary giving rather than involuntary communism?

**Dexios:** Because people trying to get you to see things the Catholic social ethics say, in effect, "Why are you fussing so much about us asking for a few coercive measures to give from the rich to the poor? Can't you see that the New Testament waxes eloquent about the glory of Early Church communism, which goes much further than the modest and sensible measures we happen to ask for?" But it doesn't—perhaps Christians in their discipleship and giving went further than these social reforms would ask for; they went further in that. But the "communism" in the New Testament was a matter of voluntary discipleship and generosity, not coercion. And therefore the New Testament is a profound warrant to rising above greed and giving up possessions, but that passage at least is not a warrant for the kind of social reform it is used to endorse.

**Links:** If I can sum up what you're saying, you're saying, "Care for the poor in the Gospel is an aspect of spirit and discipleship, and by trying to institute compulsory

programs that destroy the opportunity for voluntary generosity, you're destroying the opportunity for spiritual discipleship." Correct?

**Dexios:** That is correct.

**Links:** Then what do they say to that objection? Or do they not address it?

**Dexios:** Um... that is hard to unravel. Do you want me to try?

**Links:** At least try.

**Dexios:** Are you familiar with behaviorism? Behaviorism's fallen out of favor, but it is a psychological school that dealt with how people behave after reward and punishment—but with no acknowledgment of emotions, beliefs, or other internal states—

**Links:** How does that draw people?

**Dexios:** That's not clear to me, but it was influential. At any rate, and this is the analogy I'm trying to draw, that in behaviorist teaching, people do not say, "There is no soul," but they draw the student to look at things so that the possibility of a soul is never even considered. This was said to introduce Michael Polanyi, a philosopher who worked with tacit and personal scientific knowledge. Similarly, the Catholic social ethics sources I've read do not raise the objection of sonship and voluntary giving to explicitly rebut it, but rather frame things so that concept is never even thought of or considered.

There are a couple of ways of doing this, but besides not considering it, they quote Biblical and patristic praise for voluntary giving as a straightforward example for why we should support coercive social programs. No explanation is offered; no acknowledgment is given that

giving as a matter of New Testament spiritual discipleship could be something other than a support for institutional and partly statist programs that work by coercion. Most readers, I expect, will look at things the way they're supposed to see, and think that New Testament praise of giving applies to giving through social programs.

One thing that did surprise me was that it wasn't just conservatives who were offering criticism. There were apparently some people on the left who were all for social programs and planning, but weren't entirely thrilled that the Pope was entering their domain. It might have come across as an intrusion from another domain, like advice to mathematicians on how to solve the  $3x+1$  problem.

**Links:** The  $3x+1$  problem? What's that?

**Dexios:** Take a counting number; if it's even, divide by two, but if it's odd, multiply by three and add one. If you get a calculator and keep doing this, you'll see that any number you try gives 4, then 2, then 1, then cycles back to 4, 2, 1, etc. But even though if you'll do this many times and the same thing keeps happening, it's proven obnoxiously hard to prove that the thing that happens every time you try does, in fact, happen no matter what number you start with. A lot of mathematicians have spent a lot of effort without solving it, but actually solving the problem has proven as elusive as designing a society without problems, or at least without major ones. Solving the problem will be an incredibly big deal, maybe the mathematical event of the century, should it ever be solved.

But can you imagine how the mathematical community would respond if the Vatican tried to advise it on the most productive way to try to solve the  $3x+1$  problem?

**Links:** Um... but the Papacy is not ordinarily associated with authority in mathematics. Isn't ethics a little less unusual of a thing for the Vatican to be talking about?

**Dexios:** It's not strange that a Pope was talking about ethics; the surprising thing is that the Pope was answering a question that has little in the way of spirit. Almost every little question and every specific answer in these encyclicals is about what is to be coerced. The encyclicals manage to talk about care for the poor without almost ever exhorting Catholics and the rich to be generous. The idea that caring for the poor could be an occasion for virtue has remnants here and there, but the basic substance of the answer was in terms of what coercive mechanisms should take of those who have, not how the rich should voluntarily give or how people should grow in virtue.

Spirit is not something abstract from daily decisions; it is present, among other things, in being generous to beggars and allowing your money and what you do with it to be progressively transformed into spirit. When the question of caring for the poor becomes something where one person's generosity is ridiculed and the question is framed as what should be coercively taken from people and made as a coerced gift without generosity, then an area that has much room for spirit to be manifest is drained of spirit.

Other criticisms came that papal teaching was Utopian, that it was a thinly disguised Marxism, and I

forget what else—there was one encyclical entitled "Mater et Magistra", "Mother and Teacher", and one pundit said there was something making the rounds about "Mother, yes; teacher, no." Usually the critiques came from conservatives, but there were liberals who wished the Vatican would proclaim the Gospel. Maybe I'm being naive, but it doesn't seem impossible to me that atheists who are big into social planning, and who do not believe in the Gospel, none the less think that the Pope can give something by preaching the Gospel that they with their social plans cannot. I think there's a lot of respect in that. What I would suggest is running through most, if not necessarily all, is that once upon a time the Pope used his authority to make saints, and now he seems to be exchanging his birthright for something much less, making social blueprints.

**Links:** But you must acknowledge that society is better off for such efforts, right?

**Dexios:** There is a certain set of blind spots that accompanies those assumptions; it is blind spots, I suggest, that has people look at pre-Vatican-II Catholics living in terms of spirit, giving to the world as saints, and caring for the poor in their generosity, and treat that as something murky and confused that Catholics have outgrown in the progress since Vatican II.

One of the things that comes with the social prescriptions, alongside a coercive character that stunts generosity, is that whatever the solution is, the answer is an institution, perhaps a state organization or something done by it. And no one questions whether this

is the best way to do things; one would think it was the only way conceivable. But in fact it is not the only way.

In the ancient world, a great many things that have today been transformed into big, impersonal institutions—charity, hospitality, medicine, what would today be insurance, manufacture and production, commerce, and so on and so forth—were handled by smaller and more personal institutions. I might comment by the way that it's lost on most people today is that when women were associated with the home that meant they were associated with the beating heart of charity, hospitality, manufacture, and many other things, so that the image of the depressed housewife with no company and nothing but housework to do is as anachronous to read into the ancient world as telephones or the internet: what feminism is reacting to is not the traditional society's place for women, but what is left of it after that place, and most of what is connected to it, is torn to shreds.

Even today there are some things we do not relegate to impersonal institutions—romantic love and friendship, for instance. And I don't know if there is a resurgence of home business due to the internet—perhaps certain modern changes cannot represent the last word.

But when Popes started to decide they needed a social teaching to fill out a deficiency, everything besides being coerced is filtered through impersonal institutions. And though one may see a pause once or twice to make fun of people being generous to beggars the way they did on the ancient world, the vision of progress does not stop to question whether filtering

everything through a big institution was a big idea. I haven't read through all the sources, but I haven't read anything yet that stopped to explain "Here's why John 3:16 did not say, 'For God so loved the world that he formed a sanitized, impersonal organization.'"

Perhaps I am asking society to open a door that was forever closed; the earliest encyclicals tried to resurrect medieval-style guilds, and it is not clear to me why other sources mock this decision to try to resurrect a vibrant institution that worked long and well in one time in favor of speculation about institutions not proven to work in any time. My point is not that many things are done by impersonal organization today but that when the Catholic Church opens its mouth for social teaching, no one seems to consider that anything besides an impersonal organization powered by coercion could be desirable. By contrast, our social program is spirit: God so continues to love the world that he continues to send his saints, his sons, that whosoever believes through their life of spirit and their divine love might have eternal life from his only-begotten Son. (And a million smaller and less eternal changes, too.)

**Links:** So then another way to get at the point of "Our social program is the Trinity" is to say, "The Orthodox Church's approach to living socially does not need a Utopian blueprint for society."

Would I be correct in hearing queer quotes when you use the word "progress"?

**Dexios:** I usually hear "fashions" when I read a Catholic social ethicist writing about progress. It is progress given the assumptions of a particular perspective, and

(usually) given a lack of understanding of what was moving away. Again to return to my example of deprecating pre-Vatican-II days when Catholics tried to become saints and, I would say, benefit society by becoming spirit—and the "progress" to an activist approach to society—what we have is not a movement from the less advanced to the more advanced but a fashion shift from something that has fallen out of favor to something that will presumably fall out of favor. And in this case, a step back.

**Links:** What do you mean?

**Dexios:** To borrow an image which Catholic author Peter Kreeft borrowed from C.S. Lewis, ancient ethics asked three ethical questions while modern ethics answers one (usually, but maybe two). To visualize these questions with the image of a fleet of ships at sea, the first question is how the ships can avoid bumping into each other, and this question is shared by ancient and modern ethics. The second question is how the ships can keep shipshape and maintain themselves inside, and even though this question cannot really be separated from the first question, only some modern ethics addresses it. The third question, which is the most important one, is why the ships are out at sea in the first place.

If we look at the deprecated, Orthodox model of becoming saints and being Heavenly minded enough to be of earthly good, then on a proper understanding that approach is something that says something to answer each of these questions; on that count at least, it is robust. If we look at the activist model, then things are reduced to one question, how the ships can be kept

from bumping into each other, perhaps forcibly. It does reasonably well given that narrowing of focus, but it only answers that one question.

Now I would suggest that it is dubiously a moral advance to addressing three major questions to addressing one. Perhaps moral depth cannot always be settled by counting questions addressed, but this moral "advance" has been achieved by almost completely shutting off two out of three substantial questions.

Which would appear to be not progress, but impoverishment.

**Links:** I think I can see how when you see the word "progress" you want to supply an English translation of "fashion". Or would you rather say "regress"?

**Dexios:** I don't want to analyze whether "regress" would be true, but I would rather speak of "fashion." When fashions shift, people go from emphasizing some things to others. People become sensitized to some things and blinded to others. And, perhaps, sometimes, there will be real regress some times and real progress others. But there is a tendency for a fashion to see its waxing popular as progress, and I wish people could have the ability to say, "Maybe this is progress, maybe this is regress, and maybe this is just a fashion shift that, like most fashion shifts, looks like genuine progress once you adopt its peculiar sharp sensitivities and its peculiar blind spots." And no fashion shift is devoid of spirit, but if you are looking for where spirit is to be found, the house of fashion delivers less than it promises.

**Links:** It seems to me that Utopian dreams have never been fully realized but they have been realized somewhat,

and that makes a big difference. You know that the wealthy nations may owe some of their wealth to oppression but some of it is due to the Utopian dreams of Adam Smith among others, who have discovered Midas's secret?

**Dexios:** Don't you mean Midas's curse?

**Links:** Don't you mean Midas's blessing?

**Dexios:** In the story of Midas, Midas gained the "blessing" of turning everything he touched to gold. And it was wonderful, or it seemed wonderful, to kick pebbles and watch gold nuggets fall to earth. But then food turned to inedible gold, and drink likewise, and if I understand the story correctly he embraced his daughter only to have her reduced to nothing but a golden statue. Then he began to be blessed, and spiritual gold was forged when he realized that maybe turning everything to gold wasn't such a good idea. Unfortunately, we haven't gained the same transformation to spiritual gold when we are bombarded by advertisements.

Malcolm Muggeridge said that nothing proves "Man does not live by bread alone" like discovering the secret of mass-producing bread, and we have not only enough bread for everybody but enough meat for most beggars to eat meat regularly. People say, "I'm not rich; I'm in debt," and have no idea that they can purchase a month's food without suffering real financial injury. Which, to a great many people who don't know where their next meal is coming from, might as well be the ability to buy a BMW without facing any real financial obstacles. It seems for many of us by definition rich means "having more money than us because we couldn't

possibly be rich."

**Links:** What's the downside?

**Dexios:** One U.S. woman was visiting a woman in Central America, I forget where. They were having coffee when she looked around her hostess's kitchen and met a dawning realization... "There isn't any food on your shelves."

"No... but there will be... and it's a good thing that I don't have any food now, because if I had it, why would I need to trust God for? But I will have food later..."

**Links:** We're spiritual kindergardeners, aren't we?

**Dexios:** If even that. That woman is spirit. She is sonship and sainthood. She is the [Sermon on the Mount](#), and if we patronize her when we patronize "those less fortunate than ourselves," we might also patronize St. Francis of Assisi for not knowing how to make a difference in the world. Not that I envy her poverty. But I envy her finding the [Sermon on the Mount](#) in her poverty, and it's easier for a camel to go through the eye of a needle than for a rich man to have what she has.

If capitalism is the most effective Utopian vision, it produces a Utopia for spoiled children. It may well deliver what the Utopian specifics in Catholic social teaching wouldn't get working, but what capitalism delivers and what much Catholic Utopianism tries to deliver does not make people better, or nobler, or wiser. In the particular classically liberal capitalist societies I know, most people have about as many creature comforts as we know how to make—air conditioning in Habitat for Humanity houses, meat for the homeless,

television for everyone who's not homeless—and medicine and safety push back suffering and death so that you have a good chance of not dying young, and many, many people die segregated off in nursing homes so the rest of society does not have to be visibly reminded that people grow old and die. Utopia is not something that may someday exist if social planners someday get things right; it exists here and now because social planners got what they were trying to do right.

**Links:** But is suffering good? Does the Bible ever talk about wonderful suffering?

**Dexios:** Let me quote:

More than that, we rejoice in our sufferings, knowing that suffering produces endurance, and endurance produces character, and character produces hope. [Rom 5.3-4](#). I consider that the sufferings of this present time are not worth comparing with the glory that is to be revealed to us. For the creation waits with eager longing for the revealing of the sons of God. [Rom 8.18-9](#). For as we share abundantly in Christ's sufferings, so through Christ we share abundantly in comfort too. If we are afflicted, it is for your comfort and salvation; and if we are comforted, it is for your comfort, which you experience when you patiently endure the same sufferings that we suffer. Our hope for you is unshaken; for we know that as you share in our sufferings, you will also share in our comfort. [I Cor 1.5-7](#). ...that I may know him and the power of his resurrection, and may share his sufferings, becoming like him in his death, that if possible I may attain the

resurrection from the dead. [Phil 3.10](#). Now I rejoice in my sufferings for your sake, and in my flesh I complete what is lacking in Christ's afflictions for the sake of his body, that is, the church. [Col 1.24](#). For it was fitting that he, for whom and by whom all things exist, in bringing many sons to glory, should make the pioneer of their salvation perfect through suffering. [Heb 2.10](#). But rejoice in so far as you share Christ's sufferings, that you may also rejoice and be glad when his glory is revealed. [I Pet 4.13](#).

At least for people like us who live in Utopia, you can think that all the things a spoiled child wants are your right and if you are really suffering—maybe you won't be so crass as to say that any suffering is God's punishment, but you'll still think it's an interruption that keeps you from the normal course of Christian life. But honoring God in suffering is the normal course of Christian life. Besides what I quoted, there's the book of Job where God lays his honor on the line based on what Job will do when he has miserable suffering. I don't know how to capture all the complexity of the Biblical views on suffering, but if suffering is praised as a sharing in the sufferings of the Son who was made perfect through suffering, then maybe it's not doing the world a favor to engineer away suffering, even if that is possible.

It's not just that the Gospel works best without suffering and now we may have good enough social plans to get the Gospel to where it works best. I fear Catholic social plans if they botch and have weird side effects like social plans sometimes do, but I fear them

even more if they achieve what they want. Perhaps this is easy to say from Utopia, but having what Utopia provides, I have real doubts about whether it makes me spirit. In those things that most make me a mature man, I think Utopia is overrated. I may have some maturity through the discipline of going against the flow, but there's a way where comfort can make faith lukewarm where intense persecution would make it stronger.

Catholic social planning is trying to make good that is only available to a majority available to everyone. I wish they had a somewhat bigger version of good to be sharing.

**Links:** So you are suspicious of efforts to help the poor.

**Dexios:** I am suspicious of some efforts and participate in others. I try to feed the hungry, and besides directly showing kindness to beggars I support charities—but these charities provide more than a spoiled child would want. They support people's spiritual needs, like churches. I don't believe education needs to be put on quite as high a pedestal as some people give it, but I support education.

I guess I need to clarify. My point wasn't to say exactly what everybody in the world should have; when someone speaks to me out of pain, I rarely talk about pain as occasion for spiritual growth. But in Catholic social teaching people seemed to be saying "Wouldn't it be nice if people had this, and this, and this," and listed a number of things that for the most part do not make people better, or nobler, or wiser. There may be a discussion of duties alongside rights, but much of the encyclicals were about how much it would be better to

have such things, and living in a society where most people do have those sort of things, I needed to say, "This is not what you think it is."

**Links:** Is there anything specific that you would say that you want for the poor, and that you would try to help them come to it?

**Dexios:** Absolutely.

I want them to become spirit in as full a sense as possible. I want them to glorify God and enjoy him forever. I want them to live the life of Heaven that is meant to be here and now and not just after our resurrection. I want them to be transfigured, spirit, soul, and body, into the likeness of Christ, and to be little Christs. I want them to become divine, partakers of the divine nature. I want them to own the Kingdom of Heaven and live the Divine Life. And maybe it would be nice if some of them could send missionaries to the first world, to share some of their riches. And I would like the world to profit from their wealth as the poor are chosen to shame the rich. And not just to follow the vogues of the first world.

**Links:** Question: What do you think about non-Christian texts, like the Tao Te Ching, Bhagavad-Gita, or Gospel of Thomas?

**Dexios:** Um...

**Links:** You're going to say something nasty about Eastern religions, aren't you?

**Dexios:** Asking what I think about non-Christian texts like the Tao Te Ching, the Bhagavad-Gita, or the Gospel of Thomas is like asking what I think about different forms of indoor exercise, like weightlifting, aerobics,

and sticking your face in the fan.

The Tao Te Ching is spirit, and indeed words can be spirit, not just Christian words. So is the Bhagavad-Gita. From all I have heard, they are deep, deeper than a whale can dive, and they have taught healthy communities what it means to be human for thousands of years.

But a society that embraces Gnosticism sticks its face in the fan. Gnosticism unlike Hinduism and Taoism comes up again and again and each time it's a downward spiral that does not give spirit to a society that embraces it the way Hinduism and Taoism do.

**Links:** I've read some Gnostic sacred texts and they engaged my spirit like almost nothing else; they drew me in.

**Dexios:** I'm not surprised. Gnostic scripture is spiritual porn. Sorry to use that image, but...

**Links:** Are you just calling names, or is there a substantive reason for that unflattering comparison?

**Dexios:** Marriage is spirit, and it incorporates a number of things into its partnership, including what repeated studies have found is the best environment to enjoy sex. But no marriage that's lasted much longer the honeymoon has got there simply by sailing on pleasure; marriage is a crown of thorns, like monasticism, and part of the benefit it provides is not just an environment for children to grow up, but an environment for the parents to grow up. The best marriages are not a Utopia for spoiled children but a little Utopia for mature adults.

Marriage is like spirit and spirit is like marriage,

including what can be misunderstood as the spiritual erotic, a haunting, exotic factor that belongs there even if it is ultimately beyond the erotic. But that doesn't mean that exotic haunting all day long is what you should be getting. It doesn't mean, in other words, that Gnosticism is the best way to be spirit.

**Links:** Have you read the Gnostic Scriptures?

**Dexios:** I've read a good number of Gnostic sacred texts.

There are a lot of people today who've heard that the Gnostic scriptures show the human face of Jesus, and the canonical Gospels make him seem so divine he's not human. I've heard some people say that the best way to rebut that is to actually get people to read the Gnostic sacred texts, because the Gnostic sacred texts give some people what other people try to get from LSD, and their Christ is exotic and spiritual and several other things that do not include being human, not like the Jesus who wept at Lazarus' death and prayed in the Garden of Gethsemane with sweat like drops of blood—something medical that occasionally happens when people are too stressed out to possibly describe and that we do not need to explain away.

**Links:** So if people actually READ the texts they'll stop saying "Here at last is the human face of Jesus."?

Um, from the look on your face, you don't like that question.

**Dexios:** Let me draw an analogy. There was one time when some art was displayed at a coffeeshop, and some people thought it was a big deal because it showed nudity. It struck me as... maybe I haven't always been chaste in looking at nude artwork, but I honestly didn't

see what the big deal others saw. In a sense it wasn't any more exciting than a cartoonish schematic diagram; it didn't pose a problem to me because I didn't understand how the art worked.

Then... I had been looking at the art and not understanding it, and suddenly something clicked and I did understand it, and when it communicated to me... Other artwork can just celebrate the human form, if this was like a schematic diagram it was schematic and focused attention on the sexual. When it clicked, the artwork went from simply being weird to being much more seductive than what we're told a "celebration of the human form" is supposed to be.

And that is exactly what happened when I read enough Gnostic scripture. I read a little and it seemed weird. I read more and it clicked and I felt its pull. And I have been changed somewhat, and not entirely for the better.

**Links:** How could it change you?

**Dexios:** Once you have drunk from a well, you thirst for it.

**Links:** Do you really think that Gnosticism and The da Vinci Code are such a bad well to thirst for, such a bad spirit? There's more spirit in The da Vinci Code, though maybe not as you're using the term, than anything else to hit the shelves for a while. And it's well-written.

**Dexios:** I know it's well-written; after reading a bunch of Christian reports accusing it of being garbage literature, I feel its pull. I read it and to my consternation I want Mary Magdalene to be the Grail, and I seem to want to exchange a eucharistic Cup by which the Lord's blood pulses in believer's veins to

believing that there is a very dilute royal bloodline alive in a few people I haven't met, which is an exchange of gold for copper, but still something the book left me wanting. There is indeed a lot of spirit in it; it makes a good lure.

**Links:** Calling the book's good points a "lure" is harsh, if the only real thing you're going to acknowledge it is—what is it that this "lure" points to?

**Dexios:** Despair.

I was quite struck when I read a book entitled *Against the Protestant Gnostics*, written by a Protestant, by the way, and it said that Gnosticism besides being an a-historical phenomenon entirely hinged on one mood: despair.

The hope Dan Brown offers in *The da Vinci Code* is a hope of despair. It's a hope that there's some sexy secret to be had behind appearances, behind the here and now, and whatever else he may have wrong about earlier forms of Gnosticism being lovely and humane, he's dead right about digging for something deeply hidden. You may have heard that some Gnostics taught that the world around us was made by an impotent, inferior, evil God and is evil. Even if not everybody said that in so many words the here and now that God gives us is something despicable. It is something to despair in and try to get around for some good that maybe more spiritual people can find. Is this good news?

**Links:** Hmm. I'd just assumed that the worst thing about Dan Brown was his anti-Catholicism. But you're pretty critical of the Catholic Church too.

**Dexios:** Indeed, because it misses the mark. It comes close

in some ways, but it misses the mark. But Dan Brown doesn't seem hostile to the Catholic Church because of where it misses the mark, because of where it hits it.

Whatever its imperfections may be, the Catholic Church has for about two thousand years been teaching people to be human and live lives of spirit, and live them in the here and now. Whatever other fussing I may make of the Catholic Church, it would be strange of me to deny that the Catholic Church offers something better than despair. Maybe I could wish they would do a better job of it, but the Catholic Church offers hope, and not just because a recent Pope had some very uplifting words about living in hope. Hope is a very deep root in the Catholic Church, and it lends shape to all sorts of other things.

**Links:** So maybe Dan Brown doesn't offer the purest form of spirit, or maybe people would be better off if they could get to spirit in not such a despairing way. But doesn't Dan Brown deserve credit for at least getting people to devote attention to matters of spirit?

**Dexios:** There's a story where a princess is having a dreamlike meeting with her fairy grandmother many generations removed. Her nurse doesn't believe the princess's extraordinary tales about the grandmother, and when the princess wants to know, "Is it naughty of Nurse to not believe in you?" the grandmother only says, "It would be naughty of you."

Quite probably there are people for whom Dan Brown is a step up, who move from unspiritual despair to spiritual despair. Quite certainly there are people learning from better sources, such as Taoism and

Hinduism again, and are brought into spirit. And certainly I am glad that the high school students who ask, "Why go to mass?" can join monastic Catholic worship, not so much because it is monastic as because it is worship worthy of human beings. But I as Orthodox could not join them.

**Links:** Why not?

**Dexios:** Because however God deals with other people, it would be naughty of us.

God can move through non-Orthodox resources, and non-Christian ones. But when he places someone in full communion with his Church, the Orthodox Church, things that are permissible under partial communion are no longer permissible: though I am loth to speak of communion as a resource, God will work through other resources in a genuine way to people who only have those other resources, but when we have the opportunity to drink from the pure source we are not to take our substance from downstream. And it would be naughty of us, whether or not it would be naughty of others, to refuse to recognize the Orthodox Church of Christ as the fountain from which we drink.

**Links:** It would be depriving spirit of flourishing in body, wouldn't it?

**Dexios:** I know that I'd say that for Dan Brown and other people who think that being Gnostic is the hidden root of spirituality. Against these I say that spirit is a great banner that when it unfurls gives shade to people—watching, travelling, listening to music, Starbuck's—

**Links:** Starbuck's? Doesn't that, well—

**Dexios:** If you mean to purchase your identity at Starbuck's

then it will run short. But if you learn to enjoy things in the spirit, if you know there is more to life than food and drink, then an occasional treat can include Starbucks. Stewardship isn't tight-fisted, and if you don't need commercial products like some kind of sacrament, you are freed to truly enjoy them.

**Links:** But what if the way people are naturally led to approach Starbucks is as a sacrament?

**Dexios:** What if? So we live in a wealthy society. So when someone asks, "Was economic wealth made for man, or man for economic wealth?" people just hit the snooze button. So advertising is an abominable manipulation to make people covet things they don't need. If you are to live a life of spirit, then that means living a life of spirit in this economy, living simply and generously, and not laying the reins on the horse's neck. Your responsibility is to let what you buy be body where your life of spirit is manifest, and if Starbucks tries to sell you an identity, and that identity is inimical to living a life of spirit, your responsibility is still to live a life of spirit that unfurls itself in how you use wealth.

**Links:** This makes sense now that you say it, but where did you get that?

**Dexios:** That is one of the things that may, or may not, be added to us if we seek first the Kingdom of God, and it is not essential for everyone.

**Links:** Then what is essential?

**Dexios:** Spirit. Contemplation. Don't ask where to strike the balance between action and contemplation. Pursue contemplation, and don't be surprised if after a time the way God tells you to contemplate is to plant a tree.

**Links:** Where did you get "plant a tree" from?

**Dexios:** Martin Luther. When he was asked what he would do if he knew the Lord were returning tomorrow, instead of talking about praying long prayers or wailing about his sins, he simply said what he was planning on doing, which was to plant a tree. If it was really OK for him to plan to plant a tree, as he did, then there's no particular reason that if the Lord were returning the next day he should be suddenly embarrassed about legitimate, spiritual activity and try to be super-spiritual.

Contemplation seems to include a lot of planting a tree. It can mean entering a monastery, but it can also mean working a job, making friendships, shooting hoops, and playing with the neighbor's children. If we go to church, or try to cultivate a discipline of quiet, that means quite a lot of "secular" things, a "secular" body for spirit to be manifest in. And people who give up on doing big things for God often end up doing tremendous things for God as part of their contemplation.

**Links:** Huh? How does that work? Or are you just being down on activists?

**Dexios:** Ever hear about a Wesley boy trying to do serious work for God?

**Links:** No.

**Dexios:** One of the Wesley brothers believed that missionaries were the biggest super-Christians, and so got everything arranged to be a big missionary for God.

And then he hit rock bottom. He failed as a missionary, returned a failure, and then fell lower than rock bottom when, on the ship, there was a terrible

storm, and he was afraid for his life and puzzled about why there were men on deck singing. When he asked them if they were afraid, they said that no, they were not afraid, because they believed in Jesus. That finished him.

Only after that happened did he become one of the biggest forces in American Christianity.

**Links:** You make God sound cruel.

**Dexios:** If you expect God to share an activist mentality then God looks very cruel, but God isn't a secular activist. This wasn't even a social justice issue; Wesley said "God, I'll be a really good hammer and do really impressive work," and if anything, God said, "I don't want a hammer. I want a son." People who try to be activists sometimes make the best sons after they fail as activists, but the reason God didn't endorse Wesley's plan about how he was going to make a difference was that God makes a difference through people, and however big and important the work is that needs to be done, God makes sons first and foremost, and never circumvents sonship to "cut to the chase" and get to the important part, because to him sonship is the important part, and he can equip people to do results once they fail as hammers if need be.

There's a big difference between "I'll do the best I can" and "I'll lay myself before God and work as he is at work." The difference is whether your power is a matter of spirit. There was a visiting African pastor who came to the U.S. and said, "It's amazing what you can do without the Holy Spirit;" that stinging compliment is one God's sons need not hear. The

[Sermon on the Mount](#) says more about where our power should come from than what we should achieve; the Gospel is about trusting God, not just about the fate of our souls but getting things done here on earth. It's challenging and it becomes all the more challenging when you realize how broken of a world we live in.

And perhaps God also does things through people who think they know how mountains are moved here on earth and try to short-circuit God's call to become a son like his Son. God could still work with them if they more fully spirit. Spirit has its own power in God.

**Links:** Let me change the subject, or maybe I'm not changing the subject. Where do the seven sacraments fit into this?

**Dexios:** Baptism, Holy Communion, Holy Matrimony, the Sign of the Cross, reverently Bowing, the Holy Kiss, and the Blessing of Fruit—

**Links:** —that's a rather strange list of seven sacraments!

**Dexios:** It seems perfectly natural to me. If it seems strange to you, then perhaps there's something you don't understand about the usual list. Holy Communion, Baptism, Confirmation, Confession, Ordination, Marriage, and Unction for Healing are not the Seven Exceptions. They may be the biggest seven—but you don't understand them until you realize that there's either one sacrament or a thousand, and that a thousand little things in our piety are the same sort of thing as The Big Seven. Like blessing fruit to celebrate the Feast of the Holy Transfiguration!

**Links:** But why bless fruit then? Do you also bless candles to celebrate the Annunciation?

**Dexios:** I'd have to look up when we bless candles, but it does not seem strange to me to bless fruit. The Transfiguration is not just when the Son of God shone, but it is specifically when his body, the first of the material world to be drawn into spirit, shone. It was a first taste of the Transfiguration when the rest of his kingdom comes in force, and the Holy Transfiguration of Christ ultimately becomes the holy transfiguration of the whole Creation, and its fruits. Today people might pick something else to represent Creation's productivity, but grapes and fruit come from Creation and are a part of it, and in a sense by blessing fruit on the Feast of the Holy Transfiguration we know what it means, that it's not just something way back when that's only about Christ, but about something that is meant to expand through the whole Creation of which Christ is head. Just as Christ is to be the first of many sons and draw mankind into him, so his body is the first case of matter drawn into the divine, of body that is spirit, and his coming was the beginning of a shockwave that keeps reaching out.

**Links:** So is the Transfiguration a big enough deal that it's worth adorning with a sacrament, like many other holidays.

**Dexios:** That makes it sound like something external. The spirit of the Transfiguration is the spirit of sacrament, and of icons. I've said earlier that spirit transforms body, or should; now I'll go further and say that God makes us spirit through body. If you try to understand Holy Communion and ask the wrong questions, you're in danger of stopping at learning what happens after the

priest has consecrated the elements, even though it's important that the bread and wine have become the body and blood of Christ they represent. That's only half the story. The rest of the story is when this bread and wine that have become the body and blood of Christ are partaken by the faithful, and the faithful are transformed. Our bodies are not a mere ornament as we partake of the divine nature; we partake of the Church and Creation, and the divine life, precisely when we receive what has been transformed that it may transform us. God makes us spirit through not only our bodies but his material creation: the Word became flesh, and the flesh became Word, and the Word keeps becoming flesh, and the flesh keeps becoming Word, and the shockwave ever reaches outward.

**Links:** And the Church has a lot of blessings, from a traveller's blessing to blessing Pascha baskets, doesn't it? And there are many sacred actions as we say our prayers, aren't there? I imagine if you counted all the sacramental rites and sacred actions you'd actually wind up with more than the figure of one thousand that you grabbed.

**Dexios:** But the nature of a sacrament doesn't really end up there. Ultimately the world is icon and sacrament. A man is the microcosm of the universe, but you have to understand that the "universe" is the spiritual as well as physical world, and that "microcosm" means that the spiritual and physical are all bound up in miniature. In a man who is spirit, they are more tightly bound together: you can look at most people's faces and if they're not masking then you can see into their spirit; spirit and

body do not war against each other. And if you understand how our bodies are in fact the bodies of our spirits, and our spirits are the spirits of our bodies, then you understand that in "man writ large", the universe that is the opposite of man the microcosm, then matter is pregnant with spirit.

Perhaps the crowning jewel is the kind of rite over which a priest presides. It is a crowning jewel of the warp and woof of "mundane" life, if life is ever "mundane" properly understood. For one example, you may have heard of the clergy shortage in Alaska: something like a third of the state population is Orthodox but there are precious few priests. And a congregation asked the bishop what to do as they cannot often have a priest to worship. The bishop said only two things. One of them I will not mention. The other was to eat together.

Holy Communion casts a long shadow. Part of this means that a priest can bless fruit and anyone can partake of it, and maybe there's a blessing even if it's not a big deal as the Eucharist. But you're missing something if that's the only place you look.

A meal with other people is part of the Eucharist unfurling. It's not directly the Eucharist, but if you understand what the Eucharist is then a common meal stands in its luminous shadow. The bishop's advice was not simply a substitute for imperfect times; even when there is a priest it is good for the Eucharist to unfurl into a common meal, and however nice it is for the priest to bless the food that's not all that is going on. Table fellowship is common communion and "common"

conceals a wealth of majesty. It's not a really different thing from the Eucharist.

**Links:** [pause] It seems like I want to learn it all. What else is there to learn?

**Dexios:** Not to learn everything. You can learn about the priest, whose role I haven't covered, but what I've said about us needing monks applies even more strongly to one person given over to be spirit in a way that helps others be spirit. There is spiritual discipline, which almost as many different shapes as sacrament—I haven't talked about fasting: the demons always fast but only someone like us with body and spirit can be transformed and have his body become spirit by fasting. I haven't talked about—  
If you want to become more spirit, why don't you think of an act of spirit and do that?

# The Steel Orb

I awoke, seared by pain. The images dispersed. What were they?

a flat rectangular courtyard, where brick pillars enshrined a walkway, and in the center was a great pool, filled not with water but with silt impressed with intricate patterns—a place that was silent and still, cool in the shade, with robed men moving slowly and conversing without breaking the stillness

alleys and courtyards and tunnels and passageways that made for a labyrinth, with a byzantine structure only exceeded by turgid forms beneath its surface—I was moving through it before I had grasped its rhythm

a vortex, draining life and beauty, draining the life out of—there was also a single grain of incense, its fragrance filling—there had been a storm, with wind and water and lightning moving faster than I could keep pace with, a storm, a storm—then I awoke.

I had washed up on a beach, barely conscious, torn by thirst. I did not see the city in the distance; I saw only a man, clad in a deep blue robe. I tried to call out to him, but I was torn by violent coughs.

Then the scene blurred, and I passed out of consciousness.

---

When I regained consciousness, I was in a room. There was a man whose hand was on my heart; he looked familiar, I thought.

A woman handed him a cup, which he placed to my lips.

Time passed. I could feel warmth and coolness moving through me. My thoughts slowly quickened. He reverenced me, making on himself the great sign, bowing, and kissing me. I went to stand, but he held me down. "Take a time of rest now. In a day I will introduce you to the city."

I looked at him. The blue robe looked familiar. A question did not arise in my mind; I only wondered later that I did not ask if he had been expecting me, or if he knew I wanted to be a Teacher. Something in his repose kept the question from arising.

The woman looked at me briefly. "My name is Pool. What languages do you know?"

If anything, I sank further back into my chair. I wished the question would go away. When she continued to listen, I waited for sluggish thoughts to congeal. "I... Fish, Shroud, Inscription, and Shadow are all languages that are spoken around my island, and I speak all of them well. I speak Starlight badly, despite the fact that they trade with our village frequently. I do not speak Stream well at all, even though it is known to many races of voyagers. I once translated a book from Boulder to Pedestal, although that is hardly to be reckoned: it was obscure and technical, and it has nothing of the invisible subtlety of 'common' conversation. You know how—"

The man said, "Yes; something highly technical in a matter you understand is always easier to translate than children's talk. Go on."

"And—I created a special purpose language," I said, "to try to help a child who couldn't speak. I did my best, but it didn't work."

I still don't understand why not. And I—" I tried to think, to remember if there were any languages I had omitted. Nothing returned to my mind.

I looked down and closed my eyes. "I'm sorry. I'm not very good with languages."

The woman spoke, and when I looked up I noticed her green veil and the beautiful wrinkles about her eyes. "You novices think you know nothing and need to know everything. When I was near your point in life, I knew only six tongues, and I'm still only fluent in four." She revered me, then stepped out the window. Her husband followed, although their spirits still seemed to blow in the wind through the window.

I fell into a deep and dreamless sleep, and I awoke with a start. The man was just stepping into the window, and I could hear a clink of silver. "Will you come to the marketplace? I want you to find the Galleria."

He still had not told me his name, nor I mine, but as we walked, I told him about the great storm; it was wild on land but wilder at sea. He wondered that I survived the storm, let alone that I washed up; he quoted the proverb, "Where the wind blows, no one knows." We came to a merchant with dried fruits; he looked at some oranges. "Have you seen Book since you came back?"

"Yes, but I didn't get to talk with him long."

"What did he say?"

"He only said two things. The first was, 'Put my little daughter down!' Then the second was... let me see if I can remember. He began to say, 'No, don't throw her in the—' But I couldn't hear the rest of what he hoped to say, because he threw a bucket of salt water at me. Which reminds me, I don't have salted fish today, but I have some of the finest oranges

from the four corners of the world. This orange grew in an orchard where it is said that the trees once bore jewels. I could sell you this fine assortment for two silver pieces each."

My host sounded astonished. "Two silver pieces each? You are a dear friend, of much more value than the wares you sell. I doubt if you paid two silver pieces for this whole lot of fruit—look at this one! It must have rotted before it was dried. I can talk a bit, but I'm only buying wheat today." He turned away.

The merchant grabbed his arm. "Don't go yet. I'll give you a friend's price." I think he said something else impressive, but their haggling could not hold my interest. The market was pungent with strange smells. I recognised the smell of spices, but what else was there? Something strange. I could hear a tantalizing sound of gears, but that was not it. There was a soft sound of wind. What was evading my mind?

I realised my host was walking, holding a bag with some dried oranges. I hastened to follow him.

"My name is Fortress," he said.

"I am Unspoken."

"Unspoken... That's an ambiguous name. You seem to be shrouded in mystery. Have you seen the Galleria?"

We stopped in the Temple, drinking the flow of chant and incense, and reverencing the holy icons. Then we walked out. Fortress showed me a hedge maze in a public park, with a great statue in the centre. I looked at the pedestal, and something caught my eye. "There's a passage down hidden in the pedestal to the statue. Where does it go?"

He laughed. "You're subtle."

I waited for him to continue.

He remained silent.

I asked him, "Will it help me find the Galleria?"

He said, "It helps me find the Galleria. It will only distract you from it. The far wall of the pedestal opens to a passage down, but it only reaches a network of caves where boys play.

There is nothing in there that will interest you."

"Then what," I asked, "am I to do to find the Galleria?"

"Why don't you search? The Galleria is not outside the boundaries of this little labyrinth. Only beware of the first solution you want to latch onto. That is often a distraction, and if you are to find a solution you are looking for, you need to be able to grasp something slippery in a place you are not looking."

I knocked on earth with my ear to the ground; I looked at the cracks between stones; I even scraped a piece of chalk someone had left on the stones, trying to see if its trace would show me a different stone. I found a few loose items; someone had forgotten a brush, and I pushed a lot of earth aside. I searched and searched, but I found no sign of a passage, no sign of anything unusual save the echoes of a hollow shaft in the stone beneath the statue. It was easy for me to find the mechanism to open the pedestal; indeed, I saw a boy emerge from it. I looked around near the statue: could I be missing a second passage nearby? Yet here the search was even more frustrating.

Fortress gave me a slice of orange, and I searched, hot, parched, the whole day through. I was near the point of tears; nothing in the ground offered the faintest trace of a way down.

I sat back in desolation. I rested my back against a hedge; I could see the sleepy sun's long golden fingers sliding across the hedge. I closed my eyes for a few minutes to rest; I opened my eyes, and could see that the sun's fingers had shifted. My bleak eyes rested on a funny bulge in the hedge. That was odd; it looked almost as if—I stared. Standing out from the hedge, illuminated in stark relief, was a bas-relief sculpture.

Someone in a robe—what color robe?—swam in the ocean. He swam down, down, down, down, deeper than a whale can dive, and still deeper. Something about the picture filled me with cool, and I began to see through it, began to see the web that it was—I felt a touch on my head. "You've found the Galleria. Would you like to go home now?"

I looked. Past Fortress I saw another picture of a swordsman wielding the great Sword, slicing through darkness and error. The Sword swung around him, slicing through monsters around him, and then with no less force slicing through the monsters inside him. I could see—what? It hurt him to cut at errors inside him, but he wielded the Sword against the darkness without and within. I looked entranced.

"Stand up." Fortress was looking at me. "You've seen enough for now; I normally only look into one picture, and you have looked into two after finding the entrance into the Galleria. We will see more of the city later; now, you are tired."

It wasn't until I began walking home that I realized how exhausted I was. I ate my meal in silence, lay in my bed, and sunk into sleep. I awoke, still tired, and was relieved when Fortress told me that he had one proper lesson for me but he would need several days' mundane work for me after that, and it would be a while before anything else exciting happened.

There was one workroom, one that had a forge, an unstable stack of cups with gears and levers, and a box of silt for drawing. There were several mechanical devices in various states of disassembly; Fortress picked up one of them, and turned a crank. I could see gears turning, but the white bird on top moved very erratically.

Fortress looked at me. "Does it work?"

"Not very well."

"What part is causing the problem?"

I turned the device over in my hands, pushed and pulled at one axle, and turned the crank. After some time, I said, "This gear here isn't connecting. It's worn and small."

"So if I replace that gear, it will work better?"

I hesitated and said, "No."

"Then what is the problem?"

"The entire device is loose. The teeth aren't really close enough anywhere; there's room for slipping."

"Then is that one gear the problem?"

"No. It is only the easiest thing to blame."

"Then you did not help yourself or me by telling me that it was that one gear."

I opened my mouth to protest, but he held up his hand and said, "People will often ask you treacherous questions like that, and they usually won't know what it is that they're doing. A Teacher, such as you seem to want to be—"

"How did you know I wanted to be a Teacher?"

"How could I not know you wanted to be a Teacher? A Teacher, such as you seem to want to be—" he continued, "gives an answer that will help the other person, even if that answer is not expected, even if the other person doesn't want to hear it."

Fortress shook the clockwork and said, "What would make it work?"

I said, "You could replace all the gear heads with something larger?"

He said, "What if you couldn't do that? What if the gear heads were made of delicately crafted gold?"

I hesitated, and said, "I can't think of anything that would help."

"Anything at all?"

I hesitated again, and said, "If you made the casing smaller, it would work. But how would you—"

He reached down and pulled two metal plates, plus some other hardware and tools, setting them before me. I took the tools, disassembled the original device, and reassembled the new device with a slightly smaller frame.

It worked perfectly.

He asked, "Is there any way for the bird to bob up and down, as well as turn?"

I tried to think of how to answer him, but this time I really could think of nothing. My sense of mental balance, my sense that my understanding was big enough to encompass his Lesson, was wavery. I was unsure.

He took a metal rule, and smoothed the surface of the silt inside the box. He then began drawing with a stylus.

"What if the rod were not solid, but had a cam and inner workings like this? Wouldn't that work?"

I looked at him, slightly dazed. "You must be a great metalworker. Can you do that?"

He paused a moment and said, "I might be a great metalworker, and I might be able to do that, but that is not why I am asking. Would it work?"

"Yes."

"Could you make it roll?"

"Yes. Put it in a hollow round casing and then it would roll as part of the casing."

He laughed and said, "Could you have the front move forward and the back stay in place—without it breaking?"

I cleared the silt's surface, and began to work diagrams—rejecting several as they failed, working one almost to completion—and then saying, "But that would require a shell that

is both strong and elastic, and I have not heard of any who can make a shell like that."

He seemed unconcerned. "But would it work?"

"If I had such a shell, yes, it would work."

"Then you have created it. Could you make one that gives birth to another like itself?"

I sketched a descending abyss of machines within machines, each one smaller than its parent.

"Could you make one that gives birth to another machine, just like itself?"

"Yes, if they were all constantly expanding. By the time a child gave birth, it would be the size of its parent when the child gave birth."

He seemed impressed, not only at what I said, but at how quickly. He closed his eyes, and said, "I will only ask you one more question. How would you design a machine that could design machines like itself?"

I looked at him, at the disassembled machines, at the silt, and then to a place inside myself. "I can't, and I can't learn now."

He looked at me, opened his mouth, and closed it. He said, "We can move to another Lesson. For now, I want you to look at the gears, separating the worn ones from the ones that are new, so that I can melt down the worn ones. You've got a meticulous day ahead of you."

He left, and I began to work through the gears. The work began to grow monotonous. He returned with a leather sack over his shoulder. "I just acquired a number of broken clockwork devices which I want you to disassemble and separate into parts that are usable and parts that need to be melted down. I'll be back shortly with some metal to melt down and forge new gears out of." He set down the sack, and I looked in disbelief at the

intricate machines with innumerable small parts. I had a bleak sense of how long a stretch of dullness was ahead of me. I started to lay them out so I could disassemble them.

He returned, holding a pike in his hands. "You seem strong, and you've had some time to recover. Come with me. Thunder has spotted a bear."

---

Fortress stood, armed with a sword, a crossbow, and several quarrels. He had given the pike to me; we followed several other men and spread out into the woods. Fortress told me, "I want you just to search, and cry out if you see the bear—we'll come. Don't attack the bear; just set the pike if it charges, and run once it's hit. I think you have a good chance of noticing the bear. Don't take any unnecessary risks."

We spread out, and I moved along, my feet slipping noiselessly on the forest soil. It was more of an effort than it should have been; my body seemed to move with all the fluidity of sludge.

The forest looked more rugged than usual; the storm which almost killed me had torn through the forest, and the storm's mark was far heavier on the forest than the city. I thought of the saying that a storm is liquid fire.

I looked at a tree that had fallen. The dead tree had broken a branch on another tree, and left an unpleasant wound. I cut the hanging branch with my pike, to leave better wound. Then I placed my hand on the tree to bless it, and left it to heal.

I thought of how the hunt would go. Someone would see it, then the men would gather. Those the bear faced away from would fire a volley of arrows. Those it chased would run while others taunted it. When the hunters left the city, there was an edge of excitement; I don't think it would be the same if it were not risky.

I continued to move along noiselessly, and looked for a creek. I was thirsty. I blessed another tree, hoping it would heal: the storm had left some rather impressive wreckage. It was dead silent, and when I cut a damaged branch from a third tree, two things happened. First, I heard a babbling brook, and realized how parched I was. Second, part of my pike caught on the tree,

and I couldn't wrest it free.

Leaving the pike for a moment, I stole away from the tree and refreshed myself at the brook. I sat for a moment and rested, breathing in simple joy. Then I heard a stick snap on the other side of a rocky outcropping. I realised I could hear some very loud pawprints.

I slithered up the rock, and looked around. I saw nothing. Then I looked down, and saw the biggest bear of my life.

It looked around.

It smelled.

I held tight against the rock.

Something under my right hand moved noiselessly. My fingers wrapped around a large stone, the size of a man's skull.

Fear flowed through me. And excitement. I lifted the rock, slowly, noiselessly, and brought my legs in. I lifted the rock. I felt with my left hand, and found a rock the thickness of my wrist. A flick of my wrist, and it crashed thirty cubits away.

The bear turned its head, and began to run.

As it ran, I jumped.

I began to fall.

I could see the forest moving as if it had almost stopped. Between every beat of my heart, a thousand things happened. I landed on the bear's back, astride it as if I were riding it.

Immediately the bear tensed, and began to turn.

The rock, still in my hand, crushed the bear's skull.

I could hear a crunch, and the bear's body suddenly went limp.

My hand released the stone.

The stone began to fall, about to roll over on my leg and crush me.

My hand caught a thin branch from a tree.

I pulled my legs up and pulled the branch as hard as I could.  
I tore it off.

The bear's body turned.

Something slapped my other palm.

I pulled with all my strength, and my body lifted from the  
bear.

The bear hit the ground.

I looked around.

Most hunting parties killed a bear every few years.

I had heard of a warrior who had killed a bear alone.

I had never heard of someone kill a bear with only the  
weapons the forest provided.

I lowered myself to the ground.

I watched the bear breathe its last.

I shouted with a roar like a storm's fury.

Other men began to arrive. Their jaws dropped when they saw  
me standing over the bear's carcass—empty-handed.

Fortress walked up to me.

I smiled, with a smile of exhilaration such as I had never  
smiled before.

He looked into me, looked at all the other men, then curled up  
his hand and slapped me.

The slap resounded.

I touched my face in disbelief. I could feel hot blood where  
his nails had struck me.

"You disobeyed," he said.

He looked into me.

"Next time you do that," he continued, "it will be a bear's  
claw that slaps you. I don't know what the bear will look like, but  
it certainly will be a bear's claw that slaps you."

---

I feigned happiness as I walked back. I tried not to stomp. It seemed an age before I came back to the house; I climbed up the wall and into my room and sat on my bed, furious. The sounds of jubilation around me did not help.

He came up, and said, "We've been invited to visit someone while people are building a fire."

A man was at the entryway; I followed him, and my hosts, through some streets into a room. There was something odd, it seemed; I could not have thought of this at the time, but while the other people paid no heed to my anger, but all of the people with me subdued their joy. Suddenly we walked in a door, and I saw a beautiful girl, holding a clay tablet and a stylus. The whole world seemed brighter.

Fortress said, "How is our lovely ventriloquist?"

She looked at him as if her face were melting. I looked at Fortress, and he raised his hand slightly. He would tell me the story later.

The man exchanged reverences with me and said, "Welcome, bear slayer. My name is Vessel. My daughter is Silver, and my wife is Shadow. Find a place to sit. Will you have a glass of wine?" His wife unstopped a bottle.

The girl said, "Father Dear, will you tell us a story? You tell us the best stories."

I said, "Please. I miss listening to a good storyteller."

Vessel said, "In another world, there was a big forest on an enormous mountain. There were plants that grew gems as their flowers, only they were so rare it would be easier to take the gems from a mine—and people didn't harvest them, because the plants were so beautiful. It would have been a sacrilege.

"There was a dark stone hut, round as a leaf, and in it a

Teacher as old as the mountains, with wisdom deep as its mines. He had a gravelly voice, like a dull and rusty iron dagger slowly scraped across granite. He—"

Silver interrupted. "Bear slayer, some time you must listen to my father sing."

The man continued as if nothing had been said. "The forest was rich and verdant, and every morning it was watered by a soft rain."

At the sound of the word "rain," I suddenly felt homesick. It rained frequently on my island, but here—I had not seen rain at all.

Silver said, "Rain is a natural wonder that happens when a great ball of grey wool, lined with cotton of the purest white, sails in the Abyss and drops packets of water. Apparently this wonder has been seen in this city, though not within the time it would take a mountain to be ground to dust. This did not stop my father from making a tub on the top of our roof, putting sealed pipes down, so that he could pour water from a pipe in our room if Wind were ever silly enough to blow some of that grey wool over this city."

Vessel placed a hand over his daughter's mouth and continued. "He was a many-sided sage, learned in arts and wisdom. Among the things he crafted were a ferret, so lifelike you could believe it was real. If you forcefully squeezed both sides, it would walk along in its own beautiful motion."

Silver pulled her Father's hand down and said, "I think I saw one of those wonders from a travelling street vendor. I looked at some of the craftsmanship and heard some of the gears turning. It must have been made by someone very competent, probably not someone from this city. That didn't stop Father Dear from

—"

The man stood up swiftly, flipping his daughter over his shoulder, and walked into the hallway. Shadow said, "That story didn't last long, even for our family. May I serve you some more wine?"

Vessel walked out, holding a key. "Please excuse the disturbance. I have locked Silver in her room. As I was—"

Silver slid through the doorway, stretching like a cat waking from its sleep, and ostentatiously slid two metal tools into a pouch in her sleeve. "I'm disappointed, Father Dear. Normally when we have guests, you at least put something heavy in front of the door."

Some time later, I saw Vessel and Silver sitting together. Pool, Silver, and Shadow had left, and I could hear the warm rhythm of women's talk and laughter from a nearby room. Fortress said, "We were waiting for you. The other hunters have pulled the bear in. Come to the roast!"

I wanted to ask them something, but there were more footfalls outside. I could already hear the drummers beginning to beat out a dance, the singers with their lyres, the priests with their merry blessings, the game players, and the orators with their fascinating lectures. It was not long before we were at the city center.

---

A young man pulled me off to the side; I saw, on a cloth on the ground, what looked like several pieces of a puzzle. "And now," another man said, "you push the pellet in, and fit the pieces together." He moved his fingers deftly, and I could see what looked like an ordinary crossbow bolt.

"What is that?" I said.

"Let me show you," he said, handing me a cocked crossbow.

"Do you see that bag of sand on the roof?"

"Yes."

"Shoot it."

I slowed down, took aim, waited for the target to come to the right place, then fired the crossbow. There was an explosion, and I felt something sting my face. When I realized what was happening, I could feel sand falling in my hair.

I looked at him, confused, and he said, "It's an explosive quarrel. The head contains a strong explosive."

"Why was the shaft made of puzzle pieces? I don't see what that added to the explosion."

He laughed. "The pieces fly out to the sides, instead of straight back at you. It's quite a powerful explosion—you might find it a safer way to kill a bear."

I made a face at him, but I was glowing. So these people knew already that I had killed the bear.

I spoke to one person, then another, then heard people clapping their hearts and calling out, "Speech! We want a speech from the bear-slayer!"

I stood, at a loss for words, then listened for the Wind blowing—but I heard only my name. I listened more, but heard nothing. Then I said, "I am Unspoken," and then the Wind blew through me.

"I am Unspoken," I continued, "and I love to peer into unspoken knowledge and make it known, give it form, or rather make its form concretely visible. Each concrete being, each person, each tree, each divine messenger, is the visible expression of an idea the Light holds in his heart, and which the Light wants to make more real. And his presence operates in us; he is making us more real, more like him, giving us a more concrete form. You know how a creator, making art or tool or book, listens to what a creation wants to see, wrestles with it and at the same time bows low before it, sees how to make it real; that is how the Light shines in us. And when we listen to the Unspoken and give it voice, we are doing what a craftsman does, what the Light does with us. How do we give voice to an unspoken idea, an unspoken expression? We can't completely do so; what we can say is always a small token of what we cannot say. But if the Wind is blowing through us, we may make things more visible." I continued at length, turning over in my spirit the ideas of tacit knowledge and invisible realities, visible, and the divine act of creation reproduced in miniature in us. I traced an outline, then explored one part in great detail, then tied things together. When my words ended, I realised that the Wind had been blowing through me, and I felt a pleasant exhaustion. The festivities continued until we greeted the dawn, and I slept through most of the next day.

All this excitement made my chores in the workshop an almost welcome relief. It began to wear thin, though, after perhaps the third or fourth consecutive day of dismantling tiny devices and then staring at tiny gear teeth to see if they were too worn to use. I began to grow tired of being called 'bear-slayer'—was there nothing else to know about me?—and there was an uneasy silence between Fortress and me about what I had done. He did

not mention it; why not? I was afraid to ask.

I worked through each day, and had an hour to my own leisure after the songs at vespers. Mostly I walked around the city, exploring its twists and passageways. It was on one of these visits that I heard a whisper from the shadows, beckoning. It sounded familiar.

"Who is it?" I said.

The voice said, "You know me. Come closer."

I waited for the voice to speak. It, or rather she, was alluring.

I stepped forward, and sensed another body close to my own.

A hand rested lightly on my shoulder.

"Meet me here tomorrow. But now, go home."

As I walked home, I realized whose voice it was, and why I didn't recognize it. It was someone memorable, but she had changed somehow, and something made me wary of the change. Yet I wondered. There was something alluring about her, and not just about her.

---

The following morning, Fortress looked into me and said, "No."

Then he left me in the workshop, and I was torn as I sifted through the day's parts. I was trying to understand my intuitions—or at least that's what I told myself. What I didn't tell myself was that I understood my intuitions better than I wanted to, and I was trying to find some way of making what I understood go away. I touched my cheek, and felt the healing wounds. Then I made up my mind to stay in the building that night.

Evening came, and I realised how long I'd been sitting one place. So I got out, and began walking the other way—just a short distance, to stretch my legs. Then I remembered a beautiful building in the other direction, and I walked and walked. Then I remembered something I had overheard—Fortress's first rebuke had not been everything it seemed. And I found myself in the same place, and felt a soft hand around my wrist. As we walked, and as I could feel my heart beating harder, the ground itself seemed to be more intense. I followed her through twisted passageways, then climbed down several rungs to a place barely lit by candlelight. A strange scent hung around the air. There was something odd, but I could not analyse what. I saw a man in a midnight blue robe bow deeply before me.

"Welcome, Bear Slayer. You did right to kill the bear."

"How did you know—" I began.

"Never mind that. You did the right thing. Fortress is a fine man and a pillar of the community, and we all need him picking apart devices, day after day—or has he asked you to take that task so he can do something interesting? Never mind. Fortress is a fine man, but you are called to something higher. Something deeper."

My heart pounded. I looked. He looked at me with a gesture

of profound respect, a respect that—something about that respect was different, but whenever I tried to grasp what the difference was, it slipped out of my fingers.

"Your name is indeed Unspoken, and it is truer than even he knows. You were touching an unspoken truth when you left your pike and attacked the bear."

I couldn't remember any unspoken Wind, or any sense of good, when I disobeyed, and I was excited to learn that what I wanted to remember was true.

"And I have many things to teach you, many lessons. You were not meant to be staring at gear after gear, but—"

It seemed too good to be true, and I asked him, "When will I be able to begin lessons?"

He said, "You misunderstand me. I will teach you. But go back to him; you have learned enough for tonight. My lessons will find you, and show you something far greater than sorting gear after gear, a power that—but I say too much. Go. I will send for you later."

My stomach was tight. I was fascinated, and trying not to realise that something wanted to make me retch. "But please," I said. My voice cracked.

The man shook his head.

I said, "At least tell me your name."

"Why do you ask my name?"

I heard a sound of a blade being drawn, and a crowd parted to reveal a man holding an unsheathed sword. "Clamp! Do not send him out yet!"

The man who had spoken to me drew a dagger, his face burning red. "Poison! How dare you!"

"How dare I? You should not have held the place of glory to begin with. You—"

"Do you challenge me?"

"I do."

What happened next I am not completely sure of. Part of it I could not even see. But what I did see was that Poison was great enough a swordsman to make a mighty swing in a tight room.

I saw him swing.

Then I saw Clamp raise his dagger to parry.

Then I heard a high pitched shattering sound.

Then there was a flurry of motion, and Clamp fell over, dead.

In his hand was a sword hilt, and nothing more.

Clamp turned to me, and said with surprising sweetness, "Do come back, my child. Fortress is a fine man, and no doubt he will teach you many important things. We will see each other later."

I was almost dumbfounded. I stammered, "How did you—

What kind of power lets you—"

He bowed again, very deeply. "Farewell to you. We will meet again."

"Please."

"You need sleep. You have a long day ahead of you."

I stood in place, then slowly walked out. I was elated when I heard his voice call after me, "If you really must know something... Everything you have been told, everything you believe, is wrong. Illusion. You just began to cut through the Illusion when you killed the bear. 'Wisdom is justified by her children.' But don't try to understand the Illusion—it is a slippery thing, profoundly unspoken, and we will see each other soon enough. I'll find you; my classroom is everywhere. Do sleep well. Fortress is a fine man, worthy of respect and worthy to teach you, and I do not doubt he will teach you many exciting and important things."

I walked back, my heart full of recent happenings. I got into

bed, and pretended to sleep.

That morning, I felt like my body was made of frosty sludge. I got up, and when Fortress looked at me, I forced myself to bow to him.

That was the last time I bowed to him in a long while, or indeed showed him reverence of any sort. I resented it even then.

I resented the day's sweeping and cleaning, but some of my thoughts congealed. Some of my unspoken thoughts began to take solid form. The respect I had been shown—it was different from the respect I was used to. It meant something different, something fundamentally different. It said, "From one noble soul to another." And the place of meeting was devoid of any adornment, any outer beauty. It had the sense of a place of worship, but as a place it was empty, almost as if it were irrelevant to—there was another thought in the back of my mind, but I could not grasp it.

That night, I thought I heard the sound of Fortress crying. I smiled and slept soundly.

---

The next morning, Fortress said, "Unspoken, you've seen a lot of gears, but I don't think I've shown you how to make a cam. Cams are terrifically interesting, both in terms of making them and what you can make with them. I'd like to show you how to make cams, then some intriguing devices that use cams. Thank you for the sorting you've done; we should be able to pull exactly the parts we need. Let me heat up the fire, and then we can both work together." He looked at me, and seemed surprised at the boredom in my face. We did exactly what he said, and I made several new types of cam, one of which he really liked. There was wind blowing in my ear, but I couldn't open up and listen to it—I merely wondered that this new activity was even duller than sorting broken parts.

At the end of the day, I said, "When are we going to have a Lesson? I mean a real one?"

He looked at me, held his breath, and said, "I can only think of one Lesson for now. It is not one that you would like."

I said, "Please?"

He said, "Humility is the hinge to joy and the portal to wonder. Humility is looking at other things and appreciating them, instead of trying to lift yourself up by pushing them down. If you push things down, that is the road to misery. Pride pushes things down, and it cuts it off the one thing that could bring joy.

"You are seeking joy where joy is not to be found. Seek it elsewhere, and it will find you."

I hastened out to the street.

Once on the street, I went where I had gone before, but no one reached out to me. I explored, and found several people talking, gardens, statues, and a bookstore I'd not seen before, but there was nothing that interested me. Where was Clamp?

I went back home, and Fortress said, "Have you heard of the Book of Questions?"

I feigned interest. "I've heard about it, and it sounded fascinating," I said, truthfully. "I'd like to hear what you can tell me," I lied.

"I was just thinking about one of the questions, 'What is reverence?'"

"There are three things that we do when we reverence each other. We make on ourselves the great sign, and we bow before each other, and we kiss each other.

"The Sign of the Cross is the frame that sets the display of reverence in place. We embrace each other in the Cross's mighty shadow.

"Bowling is the foundation of all civilized discourse. When we bow, we lower ourselves before another; we acknowledge another's greatness. That is the beating heart of politeness; that is the one reason why politeness is immeasurably more than a list of social rules.

"A kiss is everything that a bow is and more. A kiss is a display of reverence, and of love. Do you know why we kiss on the mouth?"

I looked at him, not seeing his point. "What do you mean? Where else would one kiss?"

"I have travelled among the barbarian lands, and there are tribes where a kiss on the mouth is the sort of thing that should be saved for one's wife, or at most one's family." He must have seen the look on my face; he continued, "No, they are not distant from each other, and yes, they live together in genuine community. It is altogether fitting and proper, and our embrace would be out of place in that land. Just because you or I would find it strange to pull back from our brethren this way, as if we

were talking to someone through a wall, does not change the fact that it is woven into a beautiful tapestry in their community.

"But let us return to our lands. Kissing on the mouth is significant because it is by our mouth that we drink from the Fountain of Immortality. We reverence the Temple when we enter it, kissing the door and entrance; we ourselves are the Temple, and our mouths are the very door and entrance by which the King of Glory enters when we Commune. Our mouths are honored in a very special way, and it is this very place that we show our reverence.

"But there is another reason. It is by our mouths that we breathe the wind, that we spirit; it is the very spirit that is present in the mouth, and our spirits are knitted together. So the kiss is everything the bow is, and more, and it is the fitting conclusion when we reverence each other. It is communion."

I listened with interest. His words almost pulled me out of my misery.

He closed his eyes, and then said, "Do you know how long it is since you have kissed me?"

I began to approach him.

He pushed me away. "Stop. Go and learn to bow, truly bow. When you have learned to bow, then you may kiss me."

I walked out of the room, pretending to conceal my fury.

---

Dull, empty day passed after dull, empty day. Fortress tried to teach me things, and I really had no doubts that he was a fine man, but... whatever the great Illusion was, he not only believed it; he couldn't think to question it. I found Silver from time to time, and had comfort by her, but... I didn't understand why she wouldn't take me in to the group. And the rest of the world grew bleaker and bleaker.

Then it happened.

I snuck behind her one day, never giving a hint of my presence, until I found myself led into the chamber, the meeting place. They were chanting; there was something elusive about the chant, and I remained hidden in the shadows. Then Clamp himself saw me in the dark, and said, "Welcome. You have made it." There was a wicked grin on his face.

"Why did you not call me back? Why did Silver not lead me here? Was I not worthy?"

"You were not. Or, I should say, you were not worthy then. We were testing you, to see when you would make your own way in—then you were worthy. That you have come is proof that you are worthy—or at least might be. It does not speak well of you that you took so long. Look at me. Your very face tells me you have been drained by things unworthy of you—dull people, trivial lessons, a warhorse being taught the work of a mule.

"Or at least that's what I could say being generous. I think you are still enmeshed in the Illusion—it is still quite strong in you. So strong that it can probably affect what you see, make what is before your eyes appear to be what it is not.

"There is another test before you. Take this dagger."

He placed in my hand a stone dagger with a serpentine curve to it. It was cold; a coldness seemed to seep through my body

and my heart began to pump the icy chaos of a sea at storm. I  
felt sick.

"There is a clay dummy in the next room, exquisitely  
fashioned. Place this dagger where its heart would be. You will  
cut through the illusion, and be ready to drink of the Well of  
Secrets."

I walked. Aeons passed each footstep; each footfall seemed  
like a mountain falling and beginning to crumble. And yet it  
seemed only an instant before I was in the next room.

My stomach tightened. I could not say what, but something  
was wrong. There was something like a body that was deathly  
still.

I could see the feet only; the face was covered. Some Wind  
blew in the recesses of my heart, and I tried to close it out.

I walked over, my stomach tighter. The Wind inside me was  
blowing louder, leaking, beginning to roar. And then I smelled a  
familiar smell. How could they make clay smell like—

I twisted the dagger and tore the cloth off the dummy's  
face. It looked like Fortress. Then Wind tearing through me met  
with the breath of his nostrils.

I gasped.

I threw up.

There was a sound of laughter around me—or laughing; I could  
never call it mirth. It was cruel and joyless, and tore into me.

And still I retched.

"Do you need help? Or are you really so weak as that?"

"Maybe you didn't belong here; not all who merely force their  
way in are truly worthy."

I looked around on the ground, and saw Fortress's staff.  
In a moment I snatched the staff, and cast away the dagger.

I stood, reeling.

"I am not worthy. I am not worthy to be here, still less to be with Fortress. And I'd like to take a heroic last stand, and say that if you're going to kill him—if whatever black poison you've used won't already do so—you'll have to kill me first, but I would be surprised if I could achieve any such thing against you. I cannot call myself Fortress's disciple; that illusion is broken to me. But if I may choose between reigning with you and being slaughtered with Fortress, I can only consider being slaughtered with Fortress an honor that is above my worth and reigning with you to be unspeakable disgrace!"

Clamp looked at me with a sneer. "I don't know why I ever let you in, disciple of Fortress." He grabbed a sword, and made one quick slice.

I felt hot blood trickling down my chest.

"Go on, to your fascinating gears and your deep, deep lessons. Carry your Teacher. We'll meet again. Now I don't think you're worth killing. I don't know what I'll think then."

The blood flowing down my chest, I picked up my unconscious Teacher and his staff.

"The path out is that way. Never mind the drops of blood; you won't reach us this way again."

As I carried his heavy body towards the marketplace and then his home, I panted and sweated. Fortress seemed to be regaining consciousness. I staggered across the threshold and then laid him on the bed.

Pool looked ashen. "Are you all right, Salt?"

Fortress looked at her. "Never mind me; the poison they used is short-lived. I'll simply need more sleep for a few days, and life will go on. Look at Unspoken. I have not been that stunned by a man's behavior in many years."

I collapsed on the floor, then rose to my knees. "Fortress. I

have sinned against Heaven and before you. If you have any mercy, show one more mercy that I do not deserve. Give me money that I may return to my island, and no more inquire into things too wonderful for me."

Fortress turned to Pool. "Get one gold sovereign, a needle, and thread."

I looked at him. "One gold sovereign? But that would buy more than—"

"Bite this," he said. "I'll try to make the stitches small."

---

"I still do not understand," I said.

"Never mind. Tell me what our robes mean."

"Your robe is blue, the color of starry Heaven. Your gift is the one thing needful, to be focused on the Light himself. My robe is green, the color of earth. My gift is to attend to many things on earth. I have wanted to gain the higher—"

"The green robe, and all that it symbolises, is needed, and I do not think you appreciate your gift. And not only because both of us look to the Light and attend to the Creation it illuminates.

Place the two colors on the Cross."

"That is a child's exercise."

"Place the two colors on the Cross."

"The blue robe is the color of the vertical arm of the cross, the great tree whose roots delve fathoms down into earth and whose top reaches to Heaven. It is our connection with the Light.

The green robe is the color of the cross's horizontal arm, connecting us with other creations. Is there a reason you ask me this?"

He placed his finger at the top of my chest, at the very center—at the top of my wound.

Then he ran his finger down the freshly stitched skin.

I winced in pain.

"It seems you are not a stranger to the blue robe."

My jaw dropped when his words unfolded in my mind.

"Fortress, I cannot believe you. Before, you were being generous. Now you are being silly. This wound is not the arm of the cross reaching from Heaven down to earth. I earned this by my own wickedness, and you would destroy me if you knew what evil I had done."

"Are you sure?"

"Fortress, this evil is far worse than lust. It lures you with excitement, then drains the wonder out of every living thing. What are you doing?" I stared in horror as he removed his robe.

"Look at me."

I closed my eyes.

"Trust me."

I opened my eyes, and looked upon his body. Then I looked again. There was a great, ugly, white scar across the top of his chest. He made the sign of the cross on himself, and when his fingers traced out the horizontal arm of the cross, the green arm, I saw his fingers run over the scar.

"I know that pain better than you think."

I was unable to speak.

"Pool is getting you something to eat. You've had quite a difficult time, and your pain will continue. Let's spend tomorrow at the Temple, and then we can get to tinkering."

I was weak, and my wound pained me, but there was a different quality to the pain.

---

I felt weak. Still, as I entered the Temple, it didn't matter. Once inside the doors, I was in Heaven, and Heaven shone through earth more clearly than it had for long. I smelled the fragrant incense, the incense that ascends before the divine Throne day and night and will ascend for ever.

I walked into the middle part of the Temple, and lay down on the cool, unhewn stone floor, drinking in the glory. I looked through the ceiling at the Heavens: the ceiling was beautiful because it was painted with the blood of sapphires, and more beautiful because it was not sealed. It had chinks and holes, through which the Heaven's light shone, through which the incense continued to rise, and through which Wind blew. I could hear it howl and whisper, and I looked at the Constellations, all seven of which blazed with glory.

I saw the Starburst, a constellation in which one single Glory shot out many rays, and then these many rays coalesced into the one Glory. I let it resonate. I thought of the Creator, from whom all things come and to whom all things return. I thought of learning one thing, then learning many things, then finding the one interconnected whole behind them all.

I looked at the Window of Heaven: a saint shining through a picture. What was it of symbol that was captured so well? In the Constellation one could see the present connection between the saint and the Icon he shone through, indeed itself a window into how the divine Glory shines in a man.

I saw the threefold Tower: on the ground level was body, and then the lower of the upper floors was that which reasons and assembles thinking together, and the higher of the upper level was that which sees in a flash of insight precisely because it is connected, indeed the place one meets the Glory. What were

some of the other nuances of these levels?

Then I looked at the Sword, the Great Sword in the War that has been fought since before ever star shone on dew-bejewelled field and will be fought until stars themselves are thrown down, trampled under those who laughed as children among the dew. It sweeps wherever there is Wind, larger than a mountain, smaller than a gem-collecting aphid, stronger than the roaring thunder, so sharp that it sunders bone and marrow. Why, indeed, was it given to men?

The Chalice, the great and Sacred Chalice itself, that held the fluid more precious than ichor, the fount of incorruptibility, a fount that will never be quenched though the mountains should turn to dust and dust turn to mountains. The Chalice from which we drink, the Chalice we kiss when we kiss the—why again should men be so highly exalted?

The Rod and Staff, as ever, were crossed against each other. "Your Rod and Staff comfort me," rise in the chant. The Staff's curves offered comfort to a straying sheep, I knew. And the Rod that went with it—a club with metal spikes, ready to greet predators. A shepherd was a hardened man, an armed guard ready to fight with his life when wolves came to destroy his sheep.

And last, the Steel Orb—a ball, rolling all around an animal hide as the hands at its edge moved up and down, making a slope now here, now there, now a valley, now a shifting plain. The Steel Orb indeed moved throughout the two levels—or was it really one?—of the threefold Tower, now here, now there, now met by complex construction, now silence, now a flash of inspiration. The Steel Orb is the inner motion that is inseparably connected with the world of invisible truths. It is the ear that listens when the Wind blows. It is the placid pool that reflects all that is around

it.

I closed my eyes. Then I looked at the Eighth Constellation, the whole starry roof. The *Greatest Feast*, when death itself began to move backwards, must have come early that year, about as early as possible; the Constellations stood fixed as they had appeared the year the Temple had begun, just after the day began, and the great Vigil began. There couldn't really be a more representative night to represent the year, nor a better time of that day to stand in.

My breath was still; I stood up, revered Fortress and the other Icons, then found the waiting priest and cast off my sins in penitent confession. I do not even remember feeling relieved from that, which is strange: I stood in the stillness as it became song, as voices rose in chant, and the morning was greeted and the divine liturgy began.

I do not remember the liturgy; I do not remember even when the liturgy ended and the priest held a healing service and anointed me with the oil of restoration. What I remember was when it ended, and there were people all around me, their faces alight. It was like waking from a dream, a dream of which one remembers nothing save that there was an inexpressible beauty one cannot remember.

I walked home in Fortress's shadow, and only then remembered something that didn't fit. I remembered—or thought I remembered—the priest's strange advice after my confession: "Be careful. You have a difficult journey ahead of you."

---

Fortress sat down in front of the work bench. He picked up one gear, then set it down, then rooted through some axles, and sat back.

"Unspoken, I've asked you to sort gears, take machines apart, put machines together, melt gears down, and forge new gears from the molten metal. I've asked you to repair machines, and tell me when gears were made of too soft of a metal. What I haven't asked you to do is tinker. So we'll have a race. Today you can think, and I'll make a mechanical cart. Then you can make a mechanical cart tomorrow. And we'll see, not whose cart can go fastest, but whose cart can go farthest in the smooth part cloister. This will be part ideas and part choosing the best parts. Why don't you go up to your room? You'll have the range of this workshop tomorrow."

I paced up and down my room. I thought. There were several coiled springs in the workshop; having seen some of his previous designs, I was almost sure he would make something spring-powered that would go the distance the spring kept. And how was I to outdo that? He would probably know what spring was best, and he would almost certainly know how to choose parts that moved with each other.

A faint whisper of Wind blew in my mind. I turned over different designs of springs—could I make something more powerful with two springs? The Wind grew, slightly more forceful, and I tried to make it tell me how to best use springs. It became more and more forceful, but I was afraid to drop everything and listen. I began to see, not springs at all, but a burning—

Then I sensed something.

There was something that radiated beauty and fascination. I

could not see it. But I sensed it.

"Who are you?" I said.

"I am your Guardian," came the answer. "I was sent to you."  
I looked. I still could not see anything, but the beauty is  
overwhelming.

"What is the idea that is slipping? It has fire, and I hot  
steam, and—"

"Pay no mind to that. It is nothing."

"How can I build a better spring?"

"Don't. Build a simple, spring-driven cart out of good parts.  
Then take a knife, and nick the axle on your Teacher's wagon.  
That is all. It will bind slightly, and your cart will go further. Or  
it should."

"But—is that fair?"

"Is that fair? He took the first choice of everything, and you  
know you lack his year's practice. Come. He wants you to surprise  
him. He wants you to show ingenuity. This is something he  
wouldn't expect of you."

I thought I could see colors glowing, shifting, sparkling.  
Somewhere, in the recesses of my being, it was as if a man  
jumping up and down and shouting. It was almost enough to draw  
me away.

"But how can I find his cart? Surely he will hide it, so it will  
not be a temptation to me."

"Never mind that. I will show you. Just watch me. I was sent  
here to draw you into Heaven's beauty."

Entranced, I watched the colors shift. It tasted—I tasted  
the same excitement, the icy brilliance of lightning and the  
tantalizing heat of lust. I never knew that Heaven could be so  
much like my former craft.

The next day I built a craft, but no pleasure came from it. It

was drained of pleasure, but I was looking for that enticing presence. It seemed to have gone.

Where was Fortress's cart? I couldn't see it. I looked in nooks and crannies. Something seemed wrong. Then... I was aware of the bad intuition first. But I heard a shimmer. "Look right in front of you."

Ahead of me, on top of a pile of disassembled devices, was a cart.

I took a blade, and nicked one of the axles.

The shimmer spoke. "One more thing.

"Look at me."

I looked, and the beauty seemed at once more intense and hollow—and I could not look away.

"Sing an incantation over it."

"What?"

It seemed as if a dark hand was pushing me forward.

I chanted, and watched in horrid fascination. Something seemed to shimmer about my cart. Whenever I looked at it, it seemed the same, but whenever I turned away, it seemed as if there was some beautiful incense rising from it.

The next day, it easily won.

Fortress looked at his cart crossly, with consternation and puzzlement. He seemed to be looking through it.

---

The next thing I remember was retching, on the workbench. Fortress and a priest were standing over me, although I did not notice them at the time. All I could notice for the time being was an overpowering stench. I wanted to keep retching forever. My spirit was sapped.

"That was not a *Guardian*," the priest said. "You have listened to a *Destroyer*."

"If you meet that presence again, make the Sign of the Cross and say, 'Lord, have mercy.'"

I looked at him weakly. "What can I do? I thought I had repented."

"You have repented, and you need to repent again. Pray and fast this week, then make your confession, and come to the Table. Don't go anywhere near that shimmer, no matter how attractive it is. Run, and invoke the Holy Name. And talk with Fortress and me. And if you fall again, repent again. The saints are all praying for you."

I tried to take it in. His words stung me—not because of what he said, but because of why it would be appropriate to say them.

He revered me, bowing low. I felt something in his reverence.

---

With Fortress's leave and the priest's, I went to the monastery to spend my time in prayer and fasting. I took a lump of dry bread each day, and some water.

As the hours and prayers passed, my head seemed to clear.

Foul desires raged, but I just resisted them.

The third day after I was at the temple, I ate nothing, and sang songs, and my body seemed lighter. I remembered the secret learnings I'd made, and they seemed vile, paltry. As the sun set, I suddenly thought of Silver. I was off here, selfishly caring for myself, while she was in the vile grip that squeezed me! I stole out of the monastery, and found her almost immediately.

She placed an arm around my waist. I pulled back, but she held me and said, "I'm just placing an arm around your waist. What is it?" I spoke with urgency and concern, and she 'just' ... I do not wish to recall the full shame, but when it was over, Clamp stood over me and threw a hemp belt. "Bind his hands."

---

As I was walking, captive, I thought of the advice the priest had given me. But how was I to make the sign of the cross? I could try. I tried to move my hands, hoping something miraculous might happen.

Clamp struck my face, and said, "Don't try to wriggle out." My face stung. I held my tongue, and then let out a rebel yell:

"LORD, HAVE MERCY!"

The world seemed to move like melting ice.

Drip.

Drip.

Drip.

I watched every detail of rage flare in Clamp's face.

I heard a shift of cloth and bodies moving.

I saw his hand raised, to strike a crushing blow to my face...

...and descend...

...and caught in the talons of an iron grip.

I did not turn my head. I was too bewildered to look and see why my face was not stinging.

I had somewhere heard that voice before. It seemed familiar.

And it was speaking quietly.

I had heard this voice speak quietly in contentment. I had heard it speak quietly to tell a secret. I had heard this voice speaking quietly in banter. What I had not heard was this voice speaking quietly because it was beyond rage, a rage that had gone beyond burning fire to be cold enough to shatter ice.

"Let him go," the voice hissed.

I recognized the voice of my Teacher.

"Let him go," Fortress glared.

Clamp laughed, and let go of me. "Fortress! How wonderful to see you! May I get you a glass of wine?"

Fortress began working on my bands. He said nothing.  
Clamp said, "A great Teacher like you has much to offer,  
could probe much secret wisdom. You seemed to have a knack for  
—"

I felt my stomach quiver.  
A crowd was beginning to form around us: no one was right by  
us, but many were looking.

Fortress said, "No."  
My stomach knotted. I had an overwhelming sense that I  
should move.

I obeyed it.  
Clamp looked at Fortress.  
Fortress looked at Clamp.

The anger in Fortress's face began to vanish.  
Clamp seemed to be leaving fear and entering terror.  
I backed off further.

I saw a faint ripple of muscles across Clamp's body.  
I began to scream.

Metal sang as a sword jumped from its sheath.  
I saw, moment after horrid moment, the greatsword swing  
into the side of Fortress's head.  
Then I heard a shattering sound, and when I realised what  
was happening, Clamp had been thrown up against the far wall,  
while Fortress was in the same place.

The sherds of a sword hilt dropped from Clamp's hand.  
The anger vanished from Fortress's face. He looked, and said,  
"Come back, Clamp. We need you."

I could hear the sadness in his voice.  
Clamp ran away in abject terror.  
I had been fasting. Even if I had not been fasting, I would  
have...

I fainted.

---

My head slowly began to clear—much more slowly because  
Fortress was carrying me again.

"I'll sleep at your doorway at the monastery," Fortress said,  
"and fast with you."

I closed my eyes. "I'm sorry. I don't deserve to—"

"Not as punishment, Unspoken. You've endured punishment  
enough; harsh fasting and vigils are a much lighter load than—but  
you are weak and vulnerable now. You need the support. And I  
would like to share this with you."

The fasting passed quickly. Or more properly, it moved very  
slowly, and it was hard, but there was cleansing pain. The Wind  
moved through me, and gave me respite from my burdensome toil  
of evil.

When it was the eighth day, Fortress and I returned to the  
Temple. A mighty wind was blowing all around, and its song and  
its breath moved inside. Wind blew through every jewel of the  
liturgy. And there was—I couldn't say.

After the end of the liturgy, when I was anointed for healing,  
Fortress said, "Let's go home and get to work. Pool has some  
money to buy a chicken, and—why are you hesitating?"

"Could I return to the monastery and fast for another week?"

"Why? You have done what the priest asked. You needn't do  
more. There is no need to engage in warfare above your strength.

Remember, the Destroyers always fast."

"That's not why."

"Why, then?"

"That's what I am trying to find out."

---

I prayed and fasted, and my head seemed to clear. I succeeded that week from returning to my vomit; I think it was because Fortress spent the week with me, and he was generous to spend that long without seeing Pool. He prayed with me, and at the end, my mind took on a new keenness. I still did not know what it was the Wind was trying to tell me.

But I no longer resisted it. Fortress gently said, "You have fasted further, and I will trust you that it was the right thing to do. But why not let this fast meet its summit in a feast? I can buy a chicken, and we can sit down at table."

"But the—"

"Do not worry about that. If the Wind holds a message for you, the Wind will make that clear enough. Let's return."

Once home, I asked him a simple question. I think the question was, "Why are you so concerned for me?" Or it might have been, "What is your experience with the poison I tasted?" Or something else. And he gave a long and interesting answer to me.

I don't remember a word he said.

---

My stomach was full of roast chicken, dried lemon, and all the bread I wanted. Pool was generous with wine. Fortress's voice was humming with the answer to whatever question I asked, and I could hear the chatter and laughter of small children in the background. It concentrated my thoughts tremendously.

What was your error?, the Wind whistled in my ear.

In a moment, I searched through the evils I committed and drew in a breath. Pride, I said in my heart. The primeval poison that turned the Light-Bearer into the Great Dragon. The one evil that is beyond petty sins like lust.

You embraced that evil, but what was your error?

I drew in another breadth. Everything. Lust. Magic. Scorning the beauty of the Light. Seeking to order the world around myself. As I think over the great evils that exist, I do not see that I am innocent of any one of them, nor free of their disease.

Those wrongs have been obliterated forever. They are no more. You are innocent of them. You are being healed. The vilest of these, your pride itself, is a smouldering coal thrown into the infinite Ocean. What was your error?

I do not understand. I have hardly made errors greater than these—if 'error' is even the word. Do you mean something small by 'error'?

No, something great and terrible. What was your error?

I do not understand.

What was your error?

With my inner eye, I saw the pelt and the Steel Orb, only frozen. The Steel Orb needed to move, but it was locked in place. Those words haunted me, chased me, yelled at me. I long lie awake that night, searching to see what was being asked. At last, as the pale light of the dawn began its approach, I drifted

into sleep.

I saw, in vivid detail, the moments of my descent. Only it was different in my dream. When I had actually lived it, I saw things through a veil, through an Illusion. I suffered empty pain, and thought I was gaining wholeness. Now the illusion was stripped away, and I saw every moment how I had thrown away gold to fill my hands with excrement. And every time, the Glorious Man looked at me and asked what the Wind had asked, "What was your error?"

I saw a time when I listened eagerly. I was being told secrets, hidden truths beyond the ken of the ordinary faithful. I was, I had thought, being drawn into the uppermost room and tasting with delight its forbidden fruit. The Glorious Man looked into me, looked through me, and asked, "What was your error?" I was awake, bolt upright in my bed. My body was rigid. In the window I saw that the dawn had almost come. "Fortress!" I called.

In an instant, Fortress was by my side. "What is it?"

"You have felt the pain I felt."

"Every evil by which you have poisoned yourself, I have done, and worse."

"What was your error?"

He paused a moment, and said, "Pride."

"No. What was your error?"

"More evil than I can remember."

"When you descended into that living Hell, did you embrace evil alone, or did you embrace evil and error?"

He drew in a breath. "Climb up to the roof with me."

---

The dawn was breaking; stream after stream of golden, many-hued light poured over the edge of the city. We both sat in silence.

Fortress seemed completely relaxed.

I was not.

"Fortress, I did not win our race."

Fortress's eyes greeted the sun.

"I know."

He drank in more of the light, and said, "Would you like to have another race?"

Time passed.

"You can choose who makes his wagon first."

"You make your wagon first."

I drew a breath.

"It must be painful for a Teacher to watch his pupil descend into filth and have to rescue him and carry him back."

"To me, that is a very good day."

I looked at his face, trying to find sarcasm or irony.

I found none.

"Why?"

"Clamp was my pupil."

I didn't know what to say. I fumbled for words. I tried to meet his pain.

"You seem very happy for a man with no children."

I saw tears welling up in his eyes.

I began to stammer.

He said, "Let's go and build our cars. If you want, you can take the silt board so you can design your wagon while I'm building mine. A fair match would be balm to my soul."

---

I looked at the board. Something was ticking in the back of my mind—fire on the spring, was it? But why? I set to work on the board, trying to reconcile something burning with a spring and gear box. Something was knocking in the back of my mind, but I couldn't listen to it. In the end I told myself I'd make a spring driven wagon with a lamp on top: a large one, that would burn brightly.

The next day, I set about smithing the lamp. I enjoyed it, and it was a thing of beauty. Almost at the end of the day my eye fell on something, and I saw that Fortress had left the best spring for me.

The next day we raced, and I lit my lamp. It burned brightly. It finished two laps, while Fortress's cart made fully twenty laps round the cloister, but he liked the lamp; its flame was a point of beauty. "Keep trying," he said, "although I'm not going to ask why you put a lamp on. I'll be in the workshop sorting gears; could you care for customers?"

---

At the evening meal Fortress seemed preoccupied; it looked  
as if he was listening.

We sat in silence.

He moved, as with a jolt. "Unspoken, what were you saying to  
me when we greeted the coming of the dawn?"

My face turned red.

"No, sorry. I mean, before then."

"I don't know. My sense was that it was something important,  
but I doubt if—"

Fortress dropped his bread and moved to give Pool a deep  
kiss. "Come with me, Unspoken."

---

As we walked, he turned to me and said, "The Great Fast is approaching, and we all need to purify ourselves. You especially."

"But I am working on—"

"That is why you especially need to be purified. Forget that completely."

I recognized the route to the monastery.

"There are some things I can give you, but you need to be at the monastery. As much as you are able, submit discipline as if you were a monk. Draw on their strength. Afflict yourself. Gaze on the glory of the Light."

"But—"

"Trust me."

Not long after, we arrived at the monastery. He spoke briefly with the head monk, Father Mirror, and revered me. "The Mother who held the Glory in her arms now holds you in her heart and in her prayers." Then he left.

---

The rhythm of the calendar, of the week, of the day, became clearer. My head itself became clearer. With the discipline I became hazier and the Glory became clearer.

I was praying in my cell, and suddenly it was illuminated with beauty and light, so that the flame of my lamp could not be seen.

I was dazzled, and at the same time uneasy.

I looked, and I saw the form of the Glorious Man. He looked at me and said, "You have done well."

I felt as if there was something jumping up and down, shouting for attention, inside me.

"I will tell you what you are to write about your error."

I was fascinated. Or almost fascinated. I turned my ear to the man jumping up and down. And wrenched myself away.

I bowed my head, and said, "Glorious One, I am not worthy."

Immediately I reeled. A stench, that felt as if I was touching fetid—I do not want to say what it smelled like. I fell backwards, reeling and gasping for breath.

I heard a shuffle of cloth, and then footprints. The chief monk stepped in. He looked displeased, although I wasn't sure he was displeased at me. He bid the other monks leave, and said to me, "My son, tell me everything."

I hesitated. "You need to sleep so you can greet the morning in chant."

"My son, another of my brother monks can lead that greeting even if you are still talking when it comes."

I opened my mouth, and talked, and talked, and talked. He seemed surprised at times, but looked on me with kindness. At the end he said, "I will take the cell next to you and pray with you. The whole monastery will pray over you."

"I am not worthy—"

"And I am not worthy to serve you and give you what strength I can. If it were a question of being worthy—" he shuddered.

"Sleep, and rise for the morning chant if you can."

That night I was riven by my dreams.

---

Evils in me that I thought were dead rose up with new life. I interrupted Father Mirror often, and he told me to pray, "Heavenly Glory, if you want me to fight these impulses, that I will do." And I did. Gradually the fight became easier. I began to count the days, and contemplate the Glory.

As time passed, I lived to join the monks, the stars and the rocks, beings of light, in contemplation above everything else. I looked into the Glorious Light when—

I felt a hand shaking me. I opened my eyes, and collected my presence. Then I closed my eyes and looked away.

"What is it?"

His face was radiant. "I was looking on the Glorious Light, and —"

Silence.

"I am not worthy to look on you. That light is shining through your face. Leave me alone."

"My brother."

I said nothing.

"Look at me."

I turned to face him, keeping my eyes down.

"You would not see this light coming from my face unless it were coming from your face as well."

"You mock me. My face? I am not a monk, nor have I gone through years of discipline. And I have—"

"The Wind blows where it will. You could not see this light at all unless your face were radiant."

I said nothing.

"I have come to call you. It is time for the Great Vigil."

"Time for the Great Vigil? The Great Feast tonight? But it is scarcely a day that has passed since—"

"I know. I am not ready either. But the Feast is here. And those prepared and unprepared are alike compelled by the joy."

I went through the *Great Vigil* at the monastery, revered each of the monks. Then Father Mirror accompanied me home, the dark streets lit by the brilliance of his face. I joined Fortress and Pool in the revelry; I danced with Pool. Then Fortress walked home, one arm over Pool's shoulder and one arm around mine. When we stepped across the threshold, Fortress said, "It is time for a race."

---

I let Fortress build his wagon first, and insisted that he take the best spring. Then I sat down with the silt tablet.

My intuition had been to mix fire and water. Or something like that. Or burn water. Or—I sketched one design after another, trying to see how they would help a spring, or gears for that matter. Towards the end of the day, I sat down, perplexed, and wiped the slate clean. I had given up.

That night, I prayed my giving up. Then—it took me a long time to get to sleep.

In the morning, I left the springs alone entirely. I pulled out the metal lamp and made a nearly-sealed water tank to go above it. I put the water tank above the flame, and fitted something special to its mouth. By the end of the day, I was exhausted, and my fingers were sore.

The next day, Fortress wound the spring, and I took a tinderbox and lit the flame. He looked at me slightly oddly, and when he turned his cart around at the end of the first lap, looked at me gently.

My cart hadn't moved.

At the end of the second lap, he asked me, "Did your cart move?"

I said nothing.

At the end of the fourth lap, he said, "Your cart is moving." And it was. Steam from the heated tank was moving one part, which turned gears, to the effect that it was moving very slowly. And it continued moving slowly for the rest of the day, finally stopping after it had run a full seventy-two laps.

Fortress walked away from me with a look of amazement.

"Unspoken, I've got to tell my friends about you."

---

As I was drifting off to sleep, the Wind whistled in my ear:  
What was your error?

The Steel Orb broke free from one spot, and began to roll, first one way, then another. It seemed to be exploring its strength, moving just a little this way, just a little that way.

I wrestled in my thoughts, like a man trying to lift a greased boulder. I was not trying to lift it yet; my fingers slid over the surface, seeking purchase.

Thoughts flowed through my mind, wordless thoughts that slid away whenever I tried to capture them in worded form. I grasped after them with patient, eager expectation.

I did not notice when I descended into the depths of slumber.

I was staring into a dark, deep, colorless, shapeless pool, and trying to see its color and shape. There was light behind me, but for the longest time I did not look into it. Then I looked into the light, and turned, and—

A voice said, "Awaken!" and I was shaken awake.

Fortress and Father Mirror were both crouching over me. I sat up, nervously.

"What is it?" I said, flinching against a rebuke.

"Last night, I was speaking with the bishop," Father Mirror said, "when a messenger arrived, limping. He had been severely delayed. A Holy Council has been summoned, and the bishop requests that Fortress, you, and I join him on his travels."

"Me? I would just be a burden."

"Never mind that. He did not tell me his reasons, but he specifically requested that you join him immediately."

"What about—"

"No 'what about'. Will you obey?"

I turned to Fortress. "May I use your crossbow?"

"A crossbow has been packed on your horse."

"On the way out, may I visit a friend?"

"Quickly."

Still in a daze, I revered Pool and bade her farewell. Then Fortress gave his farewell, and we found the horses.

I knocked on a door—I thought it was the right door—and said, "I've been summoned on a journey by the bishop, and I do not understand why. But may I buy all of your explosive quarrels?"

I have some money I could offer."

"Bear slayer, you may have them. Without money. Just let me get them." He stepped in, and seemed to be taking a long time. I heard more and more rummaging, and Father Mirror sounded impatient. Then he came out, looking sheepish. "I'm sorry. I can't find them. I've looked all around. I wish I—"

"Don't worry about it," I said. "Just remember me."

Before the sun was above the mountains, we were on the Road.

---

We rode along at a cantor. The horses were sleek and strong,  
and I placed myself opposite the bishop.

He placed himself next to me.

"My son, I offer my apologies, but I wish to talk with you."

"Why?"

"Tell me about what you did wrong. And what you've done  
since."

I told him, and he said, "There is something more. What more  
is there?"

"I don't know how to say. It's just that... something about it  
seems different from struggling with sin. Like there's something  
different involved, that is error."

"All sin is error. Pride especially is illusion."

"But... Would you say we believe the same things? Perhaps you  
understand them better than I, but would you say we believe the  
same things?"

"Yes, certainly. But they do not believe the same thing. It is  
not a single mistaken belief."

"What would you say if I said it wasn't just an error in the  
specific thing one believes, but an error so deep that... an error  
whose wake said, 'What you believe is private?'"

The bishop turned towards me.

His eyes narrowed.

"The highest part of the inner person is mind, but it is not  
private. In an immeasurably greater way than the five senses, it  
connects with and wrestles with and apprehends and conquers  
and contemplates the spiritual realities themselves. Those who  
choose error grapple with these realities in the wrong way like—  
like a man trying to climb a mountain upside down. The mountain  
is there, and the hands and feet are there, but they're not

connected the right way."

The bishop was silent.

"But... When I stepped into that vortex, I had something of a sense that I was breaking away from the mountain, like it was an illusion, and creating my own private hill, and forging the limbs of my body that I could use to connect with it. I—"

The bishop remained silent.

I fumbled. A flash of insight struck. "I was stepping into a secret, hidden reality, rejecting ordinary people's reality. That is pride. But normally when we say 'pride', we mean an evil of which one part is illusion. Here there it is more like the Illusion is the spiritual reality, and bitter pride is its handmaiden. No; that's not quite right. The relationship is—"

He looked at me. "That's enough for now. Let us chant psalms together. I want to hear more, but please, my son, don't believe I'm only concerned with getting that out of you." He paused a moment, long enough for me to realize how tense my body was.

"Now Fortress told me you're quite a tinker?"

---

"He glared," the bishop said, "and said, 'and I will not speak with anyone lower than a bishop!'"

"What did you say," I asked.

"I looked at him wearily, and said, 'Believe and trust me, good man, when I say that no one here is lower than a bishop.'"

He paused a moment and continued, "Unspoken—"

A flood of memories came back. It was not what he said, but how he said it. He had spoken in my island's dialect. His accent was flawless.

"How do you know my island's dialect?" I asked. "I come from an insignificant and faroff island. Nothing important has ever come from that island, and nothing ever will."

"That's easy enough," he said, "I was born there.

"Unspoken, I am a man like you." He paused, and continued, "There is a place I was born. I have a father and mother, and brothers and sisters. I remember the first time I skipped a stone, the thrill when I reinvented the pipe organ. I contemplate and pray, hunger and—"

"Your Grace, how did your father introduce you to the art of memory?"

"When I was a boy, I loved to swim. I swam as much as I was allowed, and some that I wasn't. There was a lagoon, with a network of underwater caves, and some of them I was allowed to explore. My uncle chipped and ground a mica disc enclosed in a ring of copper, and showed me how to close my eye around it. I could see under the water, and I watched the play of light inside the one largest cave. My uncle also gave me a bent spear, with the head pointing sideways, and I speared many meals with it.

"One day my father looked at me and said, 'Fire, if you could decorate the cavern in the big pool, what would you put there?'"

"I thought and said, 'Blankets along the wall so I could feel something soft.'

"He said, 'What else?'

"I said, 'Nothing else.'

"What might you imagine?'

"There's nothing else that would work.'

"And things that wouldn't work?'

"I hesitated, and said, 'A candle to see by, and something to write with.'

"What else?'

"Come. You are wilder than that.'

"Color, as when the leaves of the forest go green.'

"And what if there were passageways branching off? What would you like to see there?'

"He led me to imagine this vast network of rooms and passageways, each one different, each one holding something different, each one different to be in. It was a wonderful game, and swimming was almost as enjoyable as this activity.

"One day, my father added another dimension. He walked up to me with a rope and said, 'Do you see this rope?'

"Yes,' I said.

"What is the strangest thing that could happen to it in the antechamber to your labyrinth?'

"If it were not soaked, for it to fall down to the floor.'

"My father was silent.

"Or it would be peculiar for it to fall, not up or down, but to the side.'

"I expected a smile. My father looked at me and said, 'Surely you have imagined things stranger than that.'

"I said, 'It could coil and uncoil, slithering around the walls before coming together to a bundle—and then coming together

and vanishing.'

"My father smiled and said, 'And what of that plate there? What could happen to it in the room under?'

"I laughed at the things I imagined; such strange things happened to the things in my rooms, and I invented things on my own. Then I began to be bored, and my father saw my boredom.

'This game bores you. Let's move on to something else.

"'Look up. Note what position the stars are in. After ten nights' span, I will open the cover of a box and you will behold forty things you've not seen before. Then I will leave you with the box and eat a large loaf of bread. When I have returned, I will return and we will climb that peak, and when we reach the top, you will tell me everything you saw in the box.'

"I jumped slightly, and waited for him to explain himself.

"When no explanation came, I said, 'I can't carry a wax tablet when I'm climbing the peak.'

"He said, 'Nor would I allow it if you could.'

"I said, 'Then how will I do it?'

"He said, 'I've already told you.'

"I was angry. Never had he been so irrational as this. For seven days I searched my heart in wrath, searching. On the eighth day I rested from my wrath and said, 'He will say what he will say. I renounce anger at his request.'

"He had begun his odd request by releasing me from my labyrinth; I delved into it. I imagined the first room, but I couldn't banish the rope coiling and uncoiling. I swam to another room, only to have something else greet me. I swam around, frustrated again and again when—

"My face filled with shame.

"I spent the next two days playing, resting, swimming. I moved through the imaginary labyrinth. When my father pulled

the cover off the box, I placed everything in my imaginary labyrinth, one in each room, exactly as he had taught me. It took him a while to eat the bread, so I stared at the box's rough leather lining. We walked, and talked, and the conversation was... different. I enjoyed it.

"He asked me, 'What was in the box?'"

"I said, 'A key, a stylus, a pebble, a glazed bead, a potsherd, a gear, an axle, a knife, a pouch, a circle cord, some strange weed, a stone glistening smooth by the river's soft hands, a statuette, a crystalline phial, a coil of leather cord, a card, a chisel, a mirror, a pinch of silt, a candle, a firecord, a badly broken forceps, a saltball, a leaf of thyme, an iron coin, some lead dregs, a bite of cured fish, a small loaf of spiced bread, some sponge of wine, a needle, a many-colored strand of parchment, an engraved pendant—hmm, I'm having trouble remembering this one—a piece of tin wire, a copper sheet, a pumice, a razor, a wooden shim, a pliers, and a measuring ribbon.'"

"'I count thirty-nine,' he said. 'Where's the fortieth?'"

"I ran through my rooms and hesitated. 'I memorized thirty-nine things, then stared at the rough leather inside the box. I didn't see another; I don't even have the trace of memory like when there's another one that I can't quite spring and catch.'"

"When I said, 'rough leather inside the box,' he seemed pleasantly surprised. I didn't catch it at the time, but I understood later.

"And that was how my father let me taste the art of memory.

How did your father teach you the art of memory?"

"I don't have as good a story to tell. He introduced me to the more abstract side—searching for isomorphisms, making multiple connections, encapsulating subtle things in a crystalline symbol."

"Oh, so you've worked with the abstract side from a young

age. Then I have something to ask of you."

"Yes?"

"I want to speak with you further. I'd like if you could inscribe in your heart the things you tell me. When we return—pardon, if we return, if we are shown mercy—I may send you to the monastery and ask you to transcribe it so it can be copied."

My heart jumped.

---

His Grace Fire asked me, "If you were to crystallize your dark journey in one act you did, what would it be?"

I slid my mind through my sins. I watched with a strange mixture of loathing, shame, and haunting desire as I—  
"Stop," he said. "I shouldn't have asked that. I tempted you."

I looked at him and blinked. "None of the actions I did encapsulates the journey."

He cocked one eyebrow.

"Or rather, all of them did, but the entire dark path is captured by one action he didn't do. I neither gave nor received reverence."

"That doesn't seem surprising," he nodded. "Pride is—"

"That's also true," I said.

He looked at me.

"In our reverence, we greet one another with a holy kiss. That is hard to appreciate until you have tried to step outside of it. We try to be spiritual people, but however hard we try, matter is always included. Every one of the Mysteries includes matter. We worship with our bodies. Fasting does us good because we are creatures of body—all of the Destroyers fast, all of the time, and never does any of them profit by it. Our great hope is that we will be raised in transformed, glorified and indestructible bodies to gaze on the Light bodily for ever.

"More to the point, the holy kiss is the one act in the entire Sacred Scriptures that is ever called holy."

He blinked. "I hadn't thought about it that way, but you are right."

"And... there was licentiousness; we could do wrong with our bodies, but this is only for the reason that the holy kiss was not possible. The spiritual embrace draws and works through body,

because body is part of spirit. Their asceticism and libertinism alike exist because of a wedge between spirit and body."

"How can they do that? That is like driving a wedge between fire and heat."

"Of course you can't," I said, "but they think they can."

"My son," he said, "you are placing things upside down. We fast to subdue our bodies, which have become unruly; spirit and matter are not equal partners, nor is matter the center of things. In this world or the next."

"You're wrong," I said. "You only say that because your approach to spirit has always assumed matter. If you had genuinely lived the life and practice of believing that matter was evil, was not our true selves, not illusion, you would understand and not say that."

I winced when I realized what he'd just said. I waited for his rebuke. Or a slap.

"Go on," he said. "I'm listening."

"Or maybe that was too bold. Spirit is supreme; the *Glory* is spirit, and those who worship him must worship him in spirit and in truth. But... struggling to subdue matter, and impregnate it with spirit, does not let you realize what place matter has. Returning from despairing in matter as evil is very different."

"Despair?"

"Despair..." I thought. "Matter is evil, probably the evil creation of an evil god. If that is true, you cannot relate to the cosmos with joy, not even abstemious joy. You must despair in it. And—I think this is connected, it's all connected—if the entire cosmos is an illusion which we must escape, then no less is its creator the same sort of thing. There's a perverse acknowledgment, I think, that the cosmos must reflect its Creator and radiate its glory. Because if they believe this

horrible thing about the cosmos, they believe the same about its Creator, and as they transgress the cosmos as an obstacle they get past, so they transgress its Creator as an obstacle to get past. From what I've heard, their pictures of subordinate gods vary, but one of the few common features is that since this cosmos is evil or illusory, and this cosmos must reflect its Creator, the Creator himself must be something we need to get past if we are to find real good."

"You are describing an error that is really more than one error."

"Yes. Things are... private. They consider themselves more spiritual, more of the spiritual power we use to touch spiritual realities, yet somehow they have a hydra's different pictures of what those spiritual realities themselves. In some of them it almost sounds as if that spiritual apprehension is private."

"I won't ask you to inventory everything that was private. Did you see any of the Scriptures?"

"Not many. And those I read were... odd."

"Odd?"

"The Gospels are wondrous documents indeed."

"Indeed."

"But they never pander. Never does a writer say, 'I tell these things that you may be titillated.' However amazing or miraculous the events are, the miracles are always secondary, signs that bear witness to a greater good.

"And I appreciated this after the few occasions I was able to read their Gospels. Those books do not tell the story of when Heaven and Earth met; the ones I read don't tell a story at all; they are collections of vignettes or stories, that suck you in with the appearance of hidden wisdom. They appeal to someone despairing of this cosmos and seeking what is hidden behind it.

Your Grace, only when I had tried to dive into those crystallized vortices had I realized how pedestrian the Gospels are: the Glorious Man shines with the uncreated Light and we blandly read that his clothes are white as no fuller on earth could reach them."

"Hmm," he said. "That's like—a bit like the difference between marriage and prostitution. In many ways."

"And... if you understand this basic despair, a despair that forges the entire shape of their relationship to Creation and Creator, you will understand not only their excessive asceticism and their license, their belief that the Light is not good, but also their magic. The incantations and scrolls are in one sense the outermost layer of a belief: if this Creation is evil and illusion, if one must transgress it to find truth, then of course one does not interact with it by eating and drinking, ploughing and sewing. One must interact in hidden, occult ways, and gain powers."

"I see. But don't get into that; I'd rather not have you remember that poison. And I assume you could say much more, but I'm beginning to get the picture, and I want to pray and contemplate the Glory before meeting any more of it.

"How would you summarize it, in a word?"

"There are many ways our Scriptures can be summarized in a word: 'Love the Glory with all of your inmost being and your soul and your might, and love your neighbor as yourself.' 'He has shown you, O man, what is good, and what does the Glory require of you, but to do justice, and love mercy, and walk humbly in the Light.' 'The Glory became a Man and the Glorious Man that men might become Glorious Men and Glories.' And this error could be summarized in many ways..."

"Your spirit too pure for this unworthy cosmos."

"Take a rest," he said. "I think you've said enough for now."

Let's pray."

"Oh, and one other thing. When your heart is set on pushing past the *One Glory*, there seem to many gods offering their protection and guidance."

"Pray, child. You've said enough."

---

We reached another city, and Fortress said, "We have a decision to make. The city we want to reach is due East. The road turns, and heads almost directly south."

I said, "Why?"

"Because East of the city is the dark forest."

The bishop looked at him. "I think we can enter the city and buy a good meal. But we lack the time to take the Southern route."

Less than two hours later, we were re-supplied and heading East. It was weeks before we met anything worse than stepping in poison ivy.

At night, I was awoken by the sound of a foot shuffling. I looked around; it was still Fortress's watch, and Bishop Fire and Father Mirror were already getting up. The campfire was burning low, and in the flickering torchlight I saw a ring of many eyes.

"Black wolves," Fortress whispered. "Stand up and mount your horse slowly."

I reached across my bedroll. Fortress hissed, "No. We can't afford that. I don't know what—"

I slid up on my horse and slowly reached for my crossbow. Fortress hissed, "Are you crazy? There are more wolves than quarrels, and they'd be on us by your third shot." Then he cocked his head and said, "Whisper soothing in your horse's ear. And be ready to gallop."

The wolves had become visibly closer in this scant time; one started to run towards Fortress's horse. Then Fortress reared and parted his lips, and bellowed.

I have never heard a man roar that loudly. Not before, not after. It hurts my ears to think about it. He roared like thunder, like waterfall, like an explosion. The wolf was stunned, and

immediately he was galloping forward, the wolves running from him in abject terror. It was all I could do to control my horse, and it took some tracking before Fortress found Father Mirror.

We sat in our saddles; every sound, every smell, seemed crisper. Then I realized that tendrils of dawn were reaching around, and as we rode on, we descended into a clearing and His Grace said, "Look! The great city itself: Peace."

---

It seemed but an hour and we were inside the great city itself. Having taken time to drink our fill of water, but not eat, we came into the great chamber where the holy bishops and the other attendees were gathered.

I could hear Wind blowing. I tried to listen.

"And I know," an archbishop said, "that not everyone can scale the hidden peaks. But you misunderstand us gravely if you think we are doing a poorer job of what you do."

Several heads had turned when we entered. An archbishop said, "Your Grace Fire! May the Glory grant you many years. Have you any thoughts?"

The Wind whispered in my ear, and quite suddenly I climbed on top of a table in an empty part of the chamber. I ignored the shock of those around me, so intently was I listening to the Wind's whisper.

"If that is anything," I shouted, "but a lie from Outer Darkness, may the Glory strike me down!"

I heard a click, and then several things happened at once. I was thrown violently forward, and I heard an explosion. I felt an unfamiliar sensation in my back, and I tasted blood.

A deathly silence filled the room. I began to move, and slowly picked myself up. "I repeat," I said. "If that is anything but a lie from Outer Darkness, may the Glory strike me down."

There was another explosion, and I felt fire on my back. I stood unmoved.

"I repeat. If that is anything but a lie from Outer Darkness, may the Glory strike me down!"

The Wind whispered, "Duck!"

I ducked, and a crossbow quarrel lodged itself in the wall.

Time oozed forward.

There was a scuffle, and four soldiers entered. One of them was holding a crossbow. Three of them were holding Clamp.

"Fathers and brothers, most reverend bishops and priests, deacons and subdeacons, readers and singers, monks and ascetics, and fellow members of the faithful, may the *Glory* reside in Heaven forever! I speak from painful awareness that what that son of darkness says is false. That is how it presents itself: a deeper awareness, a higher truth.

"This Council was summoned because you know that there is a problem. There are sins that have been spreading, and when you encourage people to penitence, something doesn't work. It is as if the disease of sin separated us from our natural union with the Light, and when the chasm was deep, the *Glorious Man* became Man, the *Great Bridge* that could restore the union... and something strange happened. Men are sliding off the Bridge.

"Fathers and brothers, the problem we are dealing with is not only a chasm that needs to be bridged. The problem is a false path that leads people to slip into the chasm.

"This error is formless; to capture it in words is to behead the great Hydra. It will never be understood until it is understood as error, as deadly as believing that poison is food.

"It is tied to pride; far from enjoying *Creation*, visible and invisible, however ascetically, it scorns that which we share, and the path of salvation open to mere commoners. It's the most seductive path to despair I've seen. I know. I've been there. The teaching that we are spirit and not body, that there is a sharp cleavage between spirit and body... I don't know how to distinguish this from proper asceticism, but it's very different.

When we fast, it is always a fast from a good, which we acknowledge as good when we give it back to the Light from whom every good and perfect gift shines. This is a scorn that

rejects evil; I don't know all the mythologies, but they do not see the world as the shining of the Light. The true Light himself would never stain his hands with it; it is the evil creation of a lesser god.

"And it is despair. It tingles, it titillates, it excites at first, and all this is whitewash to cover over the face of despair. Everything that common men delight in is empty to them, illusory joy. The great Chalice, that holds the meat of the Glorious Man's own flesh and holds the fluid more precious than ichor, his own true blood, the fluid that is the divine life—that all who partake see what they believe and become what they behold, younger brothers to the Glorious Man, sons of Light, sustained by the food of incorruption, servants in the Eternal Mansion who are living now the wonder we all await—I will not say what exciting thing they propose to replace it by. Some manage, I know not how, to find greater wonder in saying the Man was not the Glory and the Chalice as we know it is nothing. But it is in the beginning as sweet as honey, and in the end as bitter as gall and as sharp as a double-edged sword. In a word, it says, 'Your spirit is too pure for this unworthy cosmos.'

"It is not healthy to dwell long on such things; I will not tell how its broken asceticism turns to people believing they can do whatever they wish with their bodies. (If the body is evil, not our true self...) He who long gazes into darkness may find his eyes darkened very soon or very slowly. In either case it is not good. But I will say this: Gaze on the Light, be strengthened by the Glorious Man, and listen to the Wind, and the better you know it, the less Darkness will look like Light. And we can rise against this error as error."

The archbishop who spoke when I entered said, "Would His Grace Fire please speak? I believe he has been rudely

interrupted."

His Grace Fire looked at him levelly. "I have already spoken," he said, "and I have nothing further to say."

Then His Grace turned to me. "Unspoken. Your robe is damaged beyond repair. Would you like a green or blue robe to replace it?"

My voice quivered. "A green robe was chosen for me. I need to—"

"That isn't what I asked of you. Would you like a green or blue robe to replace it?"

I looked at Fortress.

He fell on his face prostrate before me and said, "Dear Unspoken, you have surpassed my humble tutelage for ever. I release you."

I turned back to His Grace Fire. "A blue robe."

Then I turned to Father Mirror. "To gaze on the glory as a member of your monastery."

A flask of oil was in the bishop's hands. "Unspoken, I give you a new name. You have spoken the unspoken. You have delved into the unspoken, searched it out, drawn forth jewels. I anoint you Miner."

All was still as he anointed my forehead, my eyes, my mouth, the powers of my body.

The Council's decision was swift. My words had opened a door; insight congealed in the hearts of those present. It moved forward from discussion to decrees, and decrees in turn gave way to the divine liturgy.

I had never been at a Meal like that, and have never been at one since. The uncreated Light shone through every face. I saw a thousand lesser copies of the Glorious Man. The Wind blew and blew. The Glory remained with us as we rode home.

We rode in to the city, and I saw Pool. She—she looked different. But I couldn't say why. Was I seeing a new beauty because of the Light? I sat silently and watched as Fortress dismounted. She walked up to him, and slowly placed one arm over one of his shoulders, and then the other arm over the other of his shoulders, and looked at him and said, "There is life inside me."

His eyes opened very wide, and then he closed them very tightly, and then he gave Pool the longest kiss I have ever seen.

---

"Wait," Father Mirror said. "First discharge your duty to our bishop. You will have this life and the next to gaze on the *Glory*.

My guest room is free to you for as long as you need."

I looked at him wistfully.

"The highest oath a monk takes is obedience. That oath is the crystallization of manhood, and when you kneel before me as your father, your spirit will fall in absolute prostration before the Father of Lights for whom every fatherhood in Heaven and on earth is named. And if you are to be in obedience to me, you can begin by waiting to take that oath."

I waited.

The days passed swiftly. Quills and scrolls were given to me, and I inscribed three books. I wrote *The Way of Death*, in which I wrote about the error as a path, an encompassing way of living death, in which error, evil, and sin were woven together. I contemplated, prayed, and spoke with Fortress and others. Then I wrote *The Way of Healing*, in which I answered the question, "If that is the path we should avoid, what path should we walk instead?" Then I wrote *The Way of Life*, in which I left the way of death behind altogether, and sought to draw my reader before the throne of the *Glory* himself. I wrote:

But what can I say? The Light is projected down through every creature, everything we know, yes, even the Destroyers themselves. But if we try to project upwards and grasp the Light, or even the hope that awaits us, it must, it must, it must fail. "In my Father's house there are many rooms." These rooms are nothing other than us ourselves—the habitations and places into which we invite friend and stranger when we show our loves, and the clay that is being

shaped into our glory, the vessels we will abide in forever.

The Tree from which we were once banished, has borne  
Fruit without peer, and we will eat its twelve fruits in the  
twelve seasons. Yet a tree is smaller than a man, and a man is  
smaller than—

The temple where we worship, where Heaven and earth  
meet, is now but the shadow cast when the Light shines  
through the Temple that awaits us. The Light is everywhere,  
but we capture him nowhere. He is everything and nothing; if  
we say even that he Exists, our words and ideas crumble to  
dust, and if we say that he does not Exist, our words and  
ideas crumble beyond dust. If we look at the Symbols he  
shines through, everything crumbles, and if we say that  
everything crumbles, those words themselves crumble.

I end this book here. Leave these words behind, and gaze  
on the Glory.

I dropped my pen and sat transfigured in awe. I was  
interrupted by shaking. "It's time for the Vigil?"

I began to collect myself. "Vigil?"

"The Vigil of when Heaven and earth met, and the Word  
became flesh."

I opened my eyes. I realized the end of a fast had arrived.

"The books are finished."

"Finished?"

"Finished."

I do not remember the Vigil; I saw through it, and was  
mindful only of the Glory. The head monk learned I had finished,  
and the bishop was called.

Then came the feast. Pool held a son at her breast, and  
looked dishevelled, tired, radiant. Fortress beamed. His Grace  
Five spoke on the three gifts given the Glorious Mary: Gold

Fire spoke on the three gifts given the Glorious Man. Gold, Frankincense, and Myrrh. Gold was a reverent recognition of his kingship, Myrrh a reverent recognition of his suffering, and Frankincense a reverent recognition of his divinity. He turned these three over and over again, blending them, now one showing, and now another. His words burned when he said that in the person of the Glorious Man, these gifts were given to the entire community of Glorious Men.

The feast was merry, and when it wound down, Father Mirror welcomed me into the community. It was a solemn ceremony, and deeply joyful. I swore poverty, chastity, and obedience. I found what I had been seeking when I fled my island. Then I was clothed—I was given the shroud, the cocoon of metamorphosis by which I was to be transfigured during the rest of my life.

After I retired to my room, I heard a knock at my door, followed by quick footsteps. I looked around, but saw no one.

Then I looked down, and saw a gift box. It was empty. Or was it?

Inside was a single grain of Frankincense.

# Stephanos

The crown of Earth is the temple,  
and the crown of the temple is Heaven.

Stephan ran to get away from his pesky sister—if nothing  
else he could at least outrun her!

Where to go?

One place seemed best, and his legs carried him to the chapel  
—or, better to say, the temple. The chapel was a building which  
seemed larger from the inside than the outside, and (though this  
is less remarkable than it sounds) it is shaped like an octagon on  
the outside and a cross on the inside.

Stephan slowed down to a walk. This place, so vast and open  
and full of light on the inside—a mystically hearted architect  
who read *The Timeless Way of Building* might have said that it  
breathed—and Stephan did not think of why he felt so much at  
home, but if he did he would have thought of the congregation  
worshipping with the skies and the seas, the rocks and the trees,  
and choir after choir of angels, and perhaps he would have  
thought of this place not only as a crown to earth but a room of  
Heaven.

What he was thinking of was the Icon that adorns the Icon  
stand, and for that matter adorns the whole temple. It had not  
only the Icons, but the relics of (from left to right) Saint

Gregory of Nyssa, Saint John Chrysostom, and Saint Basil the Great. His mother had told Stephan that they were very old, and Stephan looked at her and said, "Older than email? Now that is old!" She closed her eyes, and when she opened them she smiled. "Older than email," she said, "and electric lights, and cars, and a great many of the kinds of things in our house, and our country, and..." her voice trailed off. He said, "Was it as old as King Arthur?" She said, "It is older than even the tale of King Arthur and his Knights of the Round Table."

As he had kissed the relics, he had begun to understand that what made them important was something deeper than their old age. But he could not say what.

But now he opened the doors to the temple, smelled the faint but fragrant smell of incense—frankincense—and was surprised to see another Icon on the stand. (Oh, wait, he thought. There were frequently other Icons.) The Icon was Saint Mary of Egypt. (This Icon did not have any relics.) He looked at the Icon, and began to look into it. What was her story? He remembered the part of her story he liked best—when, very far from being a saint at the beginning of her life, she came to a church and couldn't go in. An invisible force barred her, and a saint, the Mother of God, spoke to her through an Icon. Stephan vaguely remembered Father saying something about how it was also important how after years of fasting from everything but bread or vegetables, she was discovered but refused to go back to places that would still have been a temptation to her.

She was very gaunt, and yet that gauntness held fierce power. When he had looked into the Icon—or through it, as one looks through a window—he kissed her hand and looked at the royal doors, light doors with a kind of wooden mesh (it was beautiful) and a tower of three Icons each. The royal doors were at the

center of the low, open wall that guarded the holy of holies within the temple, a special place crowned by the altar. The top two Icons told the place, not of the Annunciation to the Mother of God, but the Annunciation of the Mother of God. He looked into the pictures and saw the Annunciation of the Mother of God: not when the Archangel said, "Hail, O favored One! The Lord is with you," but when the Virgin listened and replied, "Behold the handmaiden of the Lord. Let it be done to me according to your word."

The spine of Eve's sin was snapped.

Death and Hell had already begun to crumble.

After looking through these pictures—it was not enough to say that he simply looked at them, though it was hard to explain why—he turned around and was absorbed into the Icon painted as a mural on the sloped ceiling that was now before him.

If that was the answer to Eve's sin, this was the answer to Adam's sin.

The Icon was an Icon the color of sunrise—or was it sunset? Then he saw something he hadn't seen before, even though this was one of his favorite Icons. It was an Icon of the Crucifixion, and he saw Christ at the center with rocks below—obedience in a garden of desolation had answered disobedience in a garden of delights—and beyond the rocks, the Holy City, and beyond the Holy City a sky with bands and whorls of light the color of sunrise. Now he saw for the first time that where Christ's body met the sky there was a band of purest light around it. Christ had a halo that was white at the center and orange and red at the sides—fitting for the Christ who passed through the earth like a flame.

The flame made him think of the God Who Cannot Be Pushed Around. This God sent his Son, who was also the One Who Cannot

Be Pushed Around. In his teaching, in his friendship, in his healing the sick and raising the dead, every step he made was a step closer to this, the Cross. And yet he did this willingly.

Stephan turned, and for a moment was drawn to the mural to the right, which was also breathtakingly beautiful. Two women bore myrrh (the oil that newly chrismated Orthodox have just been anointed with) to perform a last service—the last service they could perform—to a dearly loved friend. And yet they found an empty tomb, and a majestic angel announcing news they would not have dared to hope: the Firstborn of the Dead entered death and death could not hold him. Its power had more than begun to crumble. But then Stephan turned back, almost sharply. Yes, this was glory. This was glory and majesty and beauty. But

Stephan was looking for the beginning of triumph...

...and that was right there in the Icon the color of sunrise.

The Cross in itself was the victory of the God Who Cannot Be Pushed Around. However much it cost him, he never let go of his plan or his grace. Christ knew he could call for more than twelve legions of angels—but he never did. He walked the path the

Father set before him to the very end.

Stephan stood, his whole being transported to the foot of the Cross. However long he spent there he did not know, and I do not know either. He looked through the Icon, and saw—tasted—the full victory of the God Who Cannot Be Pushed Around.

When he did look away, it was in the Light of that God.

Everything now bore that Light. He went over to the relics of the patron saints of his land, and though they were much newer than the relics of Saint Gregory of Nyssa, Saint John

Chrysostom, and Saint Basil the Great, that didn't seem to matter. It was like dust from another world—precious grains of sand from Heaven—and the Icon of Saint Herman of Alaska and

Saint Innocent holding up a tiny building was richly colorful—"like a rainbow that has grown up," he heard one of the grown-ups say.

Then he walked over to the Icon of Saint Ignatius of Antioch, holding a scroll that was open partway, with his letter to the Romans: "Let me be given to the wild beasts, for by their means I can attain to God. I am God's wheat, and I am being ground by the teeth of the beasts, so that I may an"—but here the quotation stopped, leaving him wondering. That Icon itself was one of several old-looking, yellowed Icons—though not nearly the oldest around—held in a deep, rich brown wooden frame carved with grapevines and bunches of grapes, as many things in that room were carved (though some had intricate interwoven knots).

Stephan said, "I want to be a martyr just like you, Saint Ignatius. Pray for me."

Then he walked over to an Icon that was much smaller, but showed a man standing besides a rustic settlement with an outer wall and turrets and doors and buildings inside. It looked medieval to him, and he wished he could enter that world. It was darkened and yellowed and had a gold leaf sky, and something was written at the top, but he couldn't read it because it was in a very old language: Old Slavonic.

Right by that Icon was Saint Anthony, the father of all monastics. He had a piercing gaze, and Stephan had the feeling he needed to confess something—but he couldn't think of anything besides his bout with his sister, and she had been a pest. He looked away.

Stephan looked at the Icon on the left of the wall, and saw the prince, Saint Vladimir, with buildings and spires behind him that looked like they were having a party.

Then Stephan stood in front of the main Icon of the Mother of God holding God the Son, though he stood some distance back.

The background was gold, and this drew him in a different way than the Icon of Saint Vladimir. This more than any other did not work like a photograph. (Or at least he was more aware of this now.) It might look odd to people who were just used to photographs, but you could say that a photograph was just a picture, but to say this was just a picture would show that you missed what kind of a picture you were looking at. But he had trouble thinking of how. He didn't so much sense that he was looking inot the Icon as that the Mother of God and the Son of God were looking at him. He didn't even think of the Icon being the Icon of the Incarnation and First Coming.

Then he looked at the Icon of the Last Judgment, where Christ the King and Lord and Judge returns holding a book of judgment, a book that is closed because there is nothing left to determine.

He thought intensely. The First Coming of Christ was in a stable, in a cave, and a single choir of angels sung his glory. The Second and Glorious Coming he will ride on the clouds, with legion on legion of angels with him. The First Coming was a mystery, one you could choose to disbelieve—as many people did. There will be no mistaking the Second Coming. In the First Coming, a few knees bowed. In the Second Coming, every knee will bow, in Heaven and on earth and under the earth, and every tongue will confess that Jesus Christ is Lord, some in bliss and rapture and others in utter defeat. At the First Coming, a lone star in the sky heralded Christ's birth. At the Second Coming, the stars will fall to earth like overripe figs and the sky recede as a vanishing scroll.

What were those chilling, terrifying words of Christ? "Depart from me, you who are damned, into the eternal fire prepared for the Devil and his angels. For I was hungry and you gave me

nothing to eat, thirsty and you gave me nothing to drink, sick and in prison and you did not visit me, lacking clothes and you did not give me the dignity of having clothes to wear." Then the condemned will say, "Where did we see you hungry and not feed you, or thirsty or sick or in prison and not take care of you?" And the King and Lord and Judge will say, "I most solemnly tell you, as much as you did not do it for the least of these brothers and sisters, you did not do it for me."

Stephan looked at the Icon and said, "I wish Dad would let me give money to beggars when I see..." Then his voice trailed off. The words didn't feel right in his mouth. He looked at the solemn love in the Icon, and then his mind was filled with the memory of his sister in tears.

He slowly backed down from the Icon, feeling the gaze of the King and Lord and Judge. He turned to almost run—he was in too holy of a place to run, and...

Something stopped him from leaving. After struggling inside, he looked around, and his eyes came to rest on the Icon of the Crucifixion that was the color of sunrise. Now he had not noticed them earlier this time, but he saw the Mother of God on one side and the beloved disciple on the earth. What had he just heard in church on Sunday? "Christ said to the beloved disciple, who is not here named because he is the image of every disciple, 'Behold your Mother,' and to his Mother, 'Behold your Son.' Listen to me very carefully. He did not say, 'Behold another man who is also your son,' but something much stranger and more powerful: 'Behold your Son,' because to be Orthodox is to become Christ." Stephan started to think, "Gold for kingship, incense for divinity, myrrh for suffering—these are Christ's gifts but he shares them with the Church, doesn't he?" He looked up, and then looked down.

"But I need to go and apologize for hurting my sister."  
Then Christ's icon walked out the door.

# A Strange Archaeological Find

To my most excellent friend and pupil:

Yes, you are correct about the letter's origins, and you are right to be somewhat confused. This one's going to take a more than a few words.

Literature from almost any place can be timeless. This people had an epic poem that appeared to be about cat and mouse, but was really about much more: the struggle between good and evil, and the vindication of the oppressed. We do not have a complete manuscript, but we know their children would listen to these poems for hours. I know the criticisms of that literature, and they are all true—but the literature is universal and timeless. I read some of it to my youngest, and he was laughing.

However, not everything they made is that universal. You asked if the document you'd found showed unusual local color.

I'd rather call it a slagheap of discarded local paints and pigments. Making sense is going to take some explaining, but keep your cheer. By the time you're done, you may find some other things less difficult to think about.

Remember the lecture illustration of the potato. At one end is the potatoes of France, somewhat universally known, at the other

is the entirety of man, or what is universally human; at the other end, the full specificity of one man. Understanding man, or understanding one man, means in part moving in an infinitely differentiated space full of nuance. I don't need to remind you that the actual lesson has other dimensions as well, in part because we aren't getting that far with this letter.

Now think about those things that are corporate to a people. Take a thin slice of the potato, and throw the rest away—yes, I know, that's most of the potato. Now there's... I'll explain what the other slice is in a bit, but imagine another, even thinner slice of the slice, so what's left is a line—a line that looks like a point if you view it the wrong way.

What is that second slice? Step into a friend's field, and leave a rock to remember your place. Now walk to his house, counting the steps. Then walk back, and walk to some other landmark—a tree, perhaps, and count your steps. Now forget the earth beneath your feet, the grass you see, the children smiling, and the birds overhead—not quite 'forget', that's too strong, but push them back as secondary. What counts, what makes that place uniquely itself, is the number of steps you counted in going to the house and the tree. Of course the steps can be used to find that place, but imagine further that the number of steps make that place what it is—and it would be quite different if the house had been built ten paces further.

They do this with the number of winters that have passed. That is the second slice, and it is viewed end-on, so as to only be a point—but the strange thing is they do not think this is part of the picture, but that it is the picture. In a strange way, that line, viewed end-on, is much bigger than the potato we think of; it's not just a teacher's illustration, even one that is repeated very often, but an idea so basic and foundational that most of them

aren't aware they believe it. They might perhaps be shocked, and think the other person is irrational, if someone were to deny the significance of one of the mantras that encapsulates this view, but... I'm trying to think of an example... I'll have to get back to you on that.

That is one major piece of background. Another that I'll mention—and this is not universal to the people, but something that tends to infect the more intelligent... ok, a bit of background.

We have, and use, one basic kind of candle. Once I was able to visit an archaist who had been able to revive one of the candles they were using. He invited several of us in, pulled a lever...

The candle was encased in a goblet, and it had a dazzling brilliance—as if there was a bonfire burning, and yet its flame was no larger than a small candle's, and it did not flicker at all, nor did it make smoke. The light was not red nor orange, not even yellow, but purest white like the sun—and when I broke my gaze and looked away, the other things in the room looked as if there were a little sun in the room. It was one of the most beautiful things I have ever seen.

As I was saying, they had several kinds of candle, but one thing they had in common was not only that they produced light, but that when they ran out, the wick turned black. One of their jokers, in an inspired moment, produced a theory that what were called 'light sources' were instead things that sucked dark: darkness was heavy, which is why if you swim down in a lake you will find more and more dark. It was absolutely brilliant humor, all the moreso if you know what sort of thing it parodied.

There are multiple theories like that, and there was... well, this will require a bit of background as well. Any magical system of merit doesn't just try to get things done; it has a theory

about why the magic works, and underneath there is a story. One of their magical theories essentially said there was a nonexistent spirit which, despite its nonexistence, hovered over the earth and made more of organisms that were excellent and fewer of organisms that were poor. This theory was woven into a narrative about great mounds of rock and fire, then earth, then lightning striking a lake and bringing something to life, then the spirit working that one living thing into a symphony of diversity, organisms coming and going, until at last mortal gods walked the earth... and then, in the truly greatest speaking, all returns to elemental chaos. It is a truly great myth, and I am saddened that our storytellers do not recount anything like it.

There is an idea of a 'meme', which is an idea, story, or joke, construed as a living thing that this sort of spirit is operating on. I was interested when I encountered the idea, and read with even more interest when the Principia Cybernetica described memes in explicitly more anthropomorphic terms than people. Here, I was certain, was a masterpiece of comedic genius...

...and then one of my colleagues explained that it wasn't. It was deadly serious. I thought it parodied dirty sleight-of-hand in anti-Christian polemics... but it didn't. It couched terms in heavily prejudicial language, like their example question of, "Have you stopped beating your wife?" but somehow even very bright Christians accepted what far less intelligent ones intuited to be unfair and insulting.

Now I remember one of the catch-phrases, in terms of how important the number of passed winters was for them. I'd have to look at their literature for more, but one of them was, "We're entering the third millenium." As spoken, it was not simply the answer to a trivial question, but a statement of great metaphysical import. From what little I can tell, if someone

contradicted this association, it was to them as if he had contradicted that the sun was white.

I think I've given enough of a preface to look at the letter—rather than writing a full letter of preliminaries. Here's the opening:

Several things relate here. Trying to 'see' what happened in history, particularly where we are looking at the origins of Christianity, is to me somewhat akin to being in a river trying to look back through all the moving water and intuiting what the source looked like when the water you are in now started to flow. 'Tis murky indeed... Those historians and theologians, who might have us believe they are not looking back through the murky river as we are but rather hovering over the source in a helicopter somehow transported back through time, are slipping in a priestly function in so doing.

I'd like to say a few things. As regards your main questions on this passage, you got one right and one wrong. The Helicopter was a giant mechanical bird capable of carrying men—oh, about that question, these things were produced by magic, but it was not occult practice to use them; this is not an occult reference, and I don't want to delve into why not. You were right about that.

What you were wrong about is your reading that the people being criticized are looking downstream while the letter's author is in the priveleged Helicopter able to look down on the ancient Christians and the people he was criticizing. That isn't what he was saying at all... wait, I know why you would think that. You might be right in that that is what he was really saying. Kind of like the koan I'll adapt:

---

An ancient Christian looked troubled.  
One later Christian said, "He is troubled."  
Another Christian said, "How do you know whether or  
not he's troubled? You're not him!"  
The other replied, "How do you know whether or not I  
know whether or not he's troubled? You're not me!"

The tone and spirit of the letter indeed suggests that the ancient Christians, and the author's conservative contemporaries, are trapped in a river, while the author is hovering about freely in the Helicopter. However, that is not the intent. The intent was to accuse the conservatives of doing something that would appear strange given the assumptions of a metaphor that runs counter to their thought, as for that matter it did for ancient Christian thought.

Further complicating our task is our respective cultural memes and our personal ongoing process of regeneration. The former contains all the turbidity thrown up by all previous good thinking and confused thinking. The latter usually contains some unrecognized proclivities.

The reference to 'cultural memes' carries quite a lot more freight than the already substantial freight they associate with cultures. I'm trying to think of something to use as a metaphor to convey what is meant here, and I am failing. It's a bit like saying "two people are uniquely themselves and cannot converse otherwise", except that what it plays out as is not a celebration of God's gift of humanity, where God made each man unique and catholic, but being uniquely themselves is construed as an impediment to catholicity: Gregory's skill in choosing nautical

metaphors is an impediment to talking with Jane, because most people don't work that way. It's not exactly the doctrine of the Fall, either, saying that there are dark marks on each person and society, and that that hinders communication. It's more... the central dogma of their magic is that there is no magic, and there is an essentially amoral and even material conception of human culture: culture is a spiritually inert weight which slows and weighs people down, except that's not right either. My head is spinning now, and you probably understand less about them than you did at the beginning of this paragraph.

The last sentence seems to stem from individualism, in that corporate personality, the spirit of a society, is a source of turgidity, but God does work with people, and he sometimes gives them special abilities despite his difficulties in blessing communal knowledge.

Hence my insistence that we know what we are thinking with as well as what we are thinking about.

No, this sentence is not corrupt. I checked.

Perhaps the best way to put it stems from a friend's comment that if he takes a strong and immediate dislike to someone, it is quite often because the other person exemplifies one of his vices. There's some resonance with Confucius's words, "When I see a virtuous man, I try to be like him. When I see an evil man, I reflect on my own behavior."

I understand your suggestion that the reading be emended, "Hence my insistence that conservatives know what we think they are thinking with, as well as what we are thinking about," but you have to understand that the statement as read, literally, can be made in perfectly good faith. Some people talked about the importance of knowing what they were thinking with; the

people they criticized often did so.

Regarding what is called feminism, our very use of the term indicates the influence of our cultural meme and our submission to someone else's cultural agenda.

You were right on this time. He's not an etymologist. However, there are reasons besides individual carelessness that this would be presented as serious analysis.

You know that the New Testament writers tended to read any ambiguity for all it was worth, in their favor. The considered people tended to be much more tightly rigorous in treating Biblical texts, but relaxed rigor and made "Just-So" stories about words in their own time: "family man" was taken by their feminist dictionary to be a mark of sexism (because that quality is assumed in a woman so much that we don't have a specific term for a family woman), but you can rest assured that, had the language had a term "family woman" but not "family man", the dictionary entry would have talked about how sexist it was to have a word used to talk about a woman as a "family woman", but not even have a word to refer to a "family man".

If you ask a historian or an etymologist, their very use of the term feminism indicates something very prosaic: a movement started, calling itself feminism, and the name has stayed the same across time. This is a run-of-the-mill linguistic occurrence, closely related to the growth of dead metaphor, and has the same political significance as the fact that the gesture they use to greet a friend originated as a gesture of mistrust used to keep a stranger from drawing a weapon: none.

However, this sort of folk analysis is innately valuable for historians. You need to keep your eyes open for passages like this: some sentences can tell more than a page of

THIS; some sentences can tell more than a page of straightforward explanation.

In the context of biblical discussion, much progress has been made on 'gender passages' such as 1 Timothy 2.

In their conception, that one thin slice of potato is magnified in part by a conception of progress, a conception that ideas, like machines, grow rust and need to be replaced for no other reason than being old. As such, their use of the term 'progress' means something different from our understanding of a student acquiring the expertise of his master. It means that people are becoming better, wiser, and nobler than the people who came before.

Given that I am writing to you and not speaking publicly, I'm not going to traipse through and analyze the texts referred to. I can say, without bothering to look them up, that they are using their immense scholarly resources to make themselves stupider than they actually are, dredging up some pretext to reverse a conclusion that is obvious to a child of twelve. You and I do this for humor; they were quite serious.

The starting point for learning this is via Christians for Biblical Equality. See the link to their website on the links page of [www.intelligentchristian.org](http://www.intelligentchristian.org). I am convinced they are right.

Yes, there is a reason for the use of the term 'Biblical equality'. Specifically, the name functions as whitewash when even backwoods farmers have caught on that there are problems with feminism. As far as accuracy goes, one in two isn't bad for these things; it isn't Biblical (note that the Bible doesn't qualify as a suggested starting point for Biblical equality) but the

choice of term makes up, if one may follow their linguistics: they seek e-quality, the absence of qualitative or distinctive traits such as God created every person to exhibit. Their way of leveling the ground also levels the people who are standing on that ground. A cue to this is found in their use of the term 'gender' where previous thinkers had referred to 'sexuality'.

The older term, 'sexuality', evokes a man and a woman on a couch, but that moment is the visible shoot atop a network of roots. The deep root stated, in essence, that different physical characteristics are not the end of different personhood, but the very beginning: that masculinity and femininity are attributes of the spirit, and that differences of spirit run deeper than differences of body. The feminist movement's search for equality discarded this, believing there are only physical differences, and if there's any differences in people's minds, they must be arbitrary social constructions, namely 'gender'.

The surface issue most commonly discussed—the only issue, to many listeners—is the issue of whether women should be ordained. In this regard, the people who were for women's ordination couldn't see why it shouldn't be that way, and the people against couldn't explain. If there's no essential difference, if as the feminists said we are one type of soul that happens to be encased in two types of body, then it is an unambiguous consequence that women should be ordained.

I trust you will see that something important has slipped into that nice-looking statement. If not—think closely about "one type of soul that happens to be encased in two types of body."

What is being said? This doesn't just impact sexuality. The teaching that we are soul encased in body is ancient, and it lies at the root of that great Hydra, Gnosticism. Gnosticism starts

out very rigidly ascetic, trying to be spiritual by shunning anything bodily—because we're spirits and not bodies. Then it shifts, and ascetics are shocked when their spiritual children engage in every form of bodily vice—because we're spirits and not bodies, so it doesn't matter what we do with our bodies. I've studied it, and it happens every time.

I would recall to you an early lecture, where I distinguished a philosophical conclusion from a practical conclusion: there's a deeper resemblance than philosophy being practical, but I wish to talk about them as distinct ideas. A philosophical conclusion is what a philosopher will develop from an idea with an hour's thought, and it does not much concern me here. A practical conclusion is what will happen over time if you start a community believing an idea and come back to it later. Gnostic libertinism is the practical conclusion of Gnostic asceticism.

Does the Biblical egalitarian perspective have a practical conclusion? It does, and it is something even that Biblical egalitarian could have seen—could have seen without engaging in the execrated practice of opening a history book. The perspective did not originate with him; it happened before, and the late forms were around for him to see.

The claim bandied about is that women should be ordained. Well... it appears that women had been ordained before and after the Biblical egalitarians, and so far as I read, God's blessing was on it. However, that's really just a glint on the surface. What lies deeper, and the reason people were so bent on having half the priests be priestesses, is the idea that there is no fundamental difference between men and women beyond what impacts the mechanics of reproduction—because if there isn't, then of course it's ridiculous to only ordain men. That assumption was not given critical examination.

What happened after that is what had happened every other time, and what he could have verified by opening his eyes. If the teachings about masculinity and femininity are erased from Christian doctrine, a few proof texts about women's roles won't last long... very few years pass before people explain them away, as appears "progress" in misinterpreting the Timothy passage above. The Bible is an interlocking whole, a great sculpture in perfect balance—and if you pull away one part you don't like, others will not stay in place. So we celebrate the ordination of women, or—in more honest terms—celebrate the annihilation of belief that sexuality could inform how people contribute to the body of Christ.

After that, why be so unenlightened as to maintain sex roles anywhere else? Why not gay marriage? By that time, it was difficult to have anything besides a gay marriage, even with a man and a woman both involved: it was some legal contract involving sex, but disconnected with any expectation of loyalty or openness to children, so why not a marriage between two men?

Sure, the Bible has a couple of proof texts about that, but they're not really any harder to "explain" and "investigate" than those that suggest human sexuality contributes to the Church...

It wasn't an accident, by the way, that feminism specifically celebrated lesbianism. There were of course other factors, but part of it was the dismantling of an older teaching that celebrated sex as the interaction between two very opposite poles.

By this time, a sculpture that had been hanging precariously slid further down. Somewhere along the line any revelation of God as masculine and not feminine was dismantled—because "we need to keep an open mind and not confine God to traditional canons of gender", meaning in practice "we need to confine God

to our anti-traditional abhorrence of sexuality." You'll remember the Re-Imagining conference which there was that big hubbub about—celebrating the goddess and more fundamentally believing that all the Biblical images their movement didn't like were arbitrary imaginations put in by unenlightened men. I frankly don't see why anyone, conservative or liberal, made such a stink about that. It wasn't any worse than what was happening elsewhere; it just dropped the usual mask.

A little leaven leavens the whole lump. Where people raised the axe and chopped away one troublesome root of the Ancient Tree, what invariably happened was that that wasn't the one troublesome root; now that it was gone, their vision cleared to see that there was another one of equal trouble... and another... and another... and by the time the Tree fell, people were glad for the death of an ancient menace. The phenomenon is a bit like a fire—the more it has, the more it wants.

I am leery of the unrecognized use of logical systems which were developed outside scripture.

I understand your point, but I really don't think he's trying to be ironic. "A meme is not a social construct like a syllogism; it reflects the terrain of which the syllogism is a very imperfect map." Agreed, this is a bad way of putting it, but... the best I can explain it is that he is brilliant, knows many of the facets of knowing how to think, but doesn't understand how to think. Reminds me of when I had a student trained in memory but not our thought, who answered perfectly my questions until I stumbled on the fact that he didn't understand what was being talked about—he memorized words, and did so far better than I ever will, but didn't grasp the ideas the words were meant to hold. This is different: the author knows large chunks of the

...Irenaeus wrote how false teachings were as if someone had taken a jewel statue of the king, and reassembled it to an imperfectly executed statue of a fox, and said the fox were the king. There are real jewels there, but the statue isn't right.

As we now know through complexity studies, the old Aristotelian view that A and non-A were mutually exclusive is suspect.

In response to your question, I'm more hesitant to say that he's gone from believing in infallible logic to believing infallible complexity study has debunked fallible logic. It comes closer to say that logic is old and favored by many traditional theologians, and therefore in double jeopardy—complexity studies provide a good platform to attack it. If Aristotle had developed complexity studies and more recent endeavors had found logic, I believe this statement would show how logical inquiry reveals inherent problems in complexity studies.

At any rate, after tasting old wine, he has tasted the new, and said, "The new is better."

There is one reason to be particularly cautious in your use of logic.

He's not saying what you think he's saying. He's not describing logic as being like an array of tools, where you should use a file rather than a hammer to smooth a piece of wood. The direction he's going is more, after having seen that different tools perform different tasks, to say that you need to be careful in using a saw to cut wood, because there are so many things a saw isn't good at. It might be like an oral person with a well-

trained memory discovering the power of writing, and doubting the justification of memorizing the stories he tells.

That is the instinctive, post-fall, unregenerative, inclination of males to engineer.

In another context, you would be right; the long string of words would convey something wonderful and poetic that one word will not tell. Here, it is there to achieve a quite different effect that one word wouldn't:

#### Instinctive

I know that instincts are good: the instincts to preserve oneself, or seek company, or procreate are part of the goodness of man. You have to keep in mind who is using the word, though. Remember what the feminist position implies for a theology of body: it is a husk, an exterior, and therefore to say someone is acting on instinct, is to say he is living by something base and exterior, and is less than a man.

He is not building up to a panegyric on the glory of intelligent creation; he's using what is meant to be a very pejorative term.

#### Post-fall

I've seen this usage before, and I don't know what to make of it. What I can tell you is that it serves as a kind of loaded language to dismiss a feminist's opponent; the opponent is "locked into a post-fall mode of thinking", quite often without a proper explanation of why he is wrong. It's a sort of irrefutable trump.

The propositional content of this epithet is debatable; it states that the Fall created an urge which has just been

declared part of our created instinct. It's rather confusing if you try to reason it out, and much better if you don't reason it out, and just let the words flow over you and show that whatever's being discussed is bad.

### Unregenerative

This word may be read as saying that something is not itself part of the regeneration process; unless of the whole of a Christian's life (barring sin) is part of the regenerative process, this could just be part of a holy life that is not concerned with the facet called regeneration. However, in poetic context, this is part of the buildup saying that whatever follows is bad.

### Males

Here we do not even see 'men', which in use by a feminist refers to less than one-half of men, but 'males'... the term reminds me of a related language, where it is considered to use the terms 'male' and 'female' of a human: they are used in biology, but of humans it is quite vulgar.

One other nuance, present if not obvious, is not simply as you or I would make a such a statement: you or I would refer to women half of the time when we were saying something sexually specific. They wouldn't. This statement says something very insulting about 'males', not because this sample happens to refer to us, but because no male feminist would dare to make such statements about women. A female feminist may say more abrasive things about traditional women, but a male feminist will nearly never do so. This provides a very interesting glimpse into their view of equality.

### Engineer

Literally speaking, the term refers to part of how man

participates in culture and the glory of God: that marvelous candle I described earlier was engineered. However, it is used in a metaphorical sense here, and is highly pejorative. The implication is that the accused is engineering something that was never meant to be engineered.

The interesting thing, especially with the last one, is... traditional theology is something organic that has been passed down from generation to generation, tended with the utmost of care by thinkers far too humble to try to engineer it, and is now being rejected in favor of something that has been engineered. That's why the spiritual climate produced the ill-starred Re-Imagining conference, something that wouldn't occur to the traditional theologians who're accused of engineering. This irony plays out in the next line:

Disguised in much theological discussion is the 'what should Christianity be like if I designed it?' agenda.

It is painfully obvious to you and me that making "much progress" on Pauline passages is seeing what Christianity would be like if they designed it, but the irony is apparently not evident there.

The list of indictments brought against traditional theology can be interesting. Looking closely may reveal things the accusers perceive because it is part and parcel of their world.

I don't think Christianity, or any generic god-conscious theology, was designed or engineered by the living God in an anthropomorphically satisfying way.

An astute observation; there is probably fertile ground for your research into why a person making this claim would do so in

your research into why a person making this claim would do so in the context of criticizing traditional theology for not being anthropomorphically satisfying to people sharing his agenda.

It matters not whether the logic we use comes from Aristotle, Plato or Alfred E Newman, let's spell it out when we use it and justify why we use it.

Regarding your question, about why he neither spells out his logic nor justifies it: I honestly don't know. Perhaps he was rushed (an unusually common emotion for them), and he decided this was a poorer use of a small perceived available time than points of greater perceived substance, such as the subsequent list of opponents using personal attacks.

One of the tip-offs of the male dominator Christian theologians

Thinking about your intuition, I decided to check the archives.

An earlier note among the group had understood and responded in depth: specifically, that domination is what a feminist would expect of tradition because of his stereotype, and it is something read in, but is present neither in the Bible, nor in the theologians being represented. The 'misogynist' Paul is among few ancient writers who didn't tell husbands to keep women in line; he addresses women as moral agents, placing submission in their hearts, and then tells the men to love the women, naming as their example the most costly love of all—much more costly than submission. The group member responding had said, in so many words, that the sigil of male headship and authority is not a crown of gold but a crown of thorns. Man will occasionally stumble over the truth, but most of the

time he will pick himself up and continue on. The feminist position needs the traditional position to be abrasive to women—and if the Bible or traditionalists clarify, never mind; the abuse will be made up in the feminist's mind so he can still vilify the benighted.

Is their use of personal attack on egalitarian theologians.

I've done some reading of them. Once I was privileged to visit an arcane library that had nearly half the issues to [First Things](#) and [Touchstone](#), and I don't remember an article where one of them personally attacked an opposing theologian. There was quite a lot of polemic, and one devastating satire in *The Other Face of Gaia*, but... they show a remarkable amount of restraint, and I'm getting sidetracked.

What I was going to say is that these people viewed being nice and love as the same thing, so that talking about being loving but not nice is equivalent to Plato talking about being eudaimonic and being evil—a perceived contradiction in terms. In this case...

I can see how some Biblical passages would lose some of their force. They had a concept of being 'unsanitary', kind of an amoral sense that you could get sick from something, and they knew disgust, but they didn't have a sense of being polluted and defiled... so few nonscholars would read Jesus' comparison of pillars of community to whitewashed tombs as being not merely an insult but a metaphor of their being so unholy that a person whose shadow fell on them would be defiled for a whole week. Likewise... they usually thought cannibalism was wrong, and knew the plot of *Oedipus Rex*, but they would still read 'brood of vipers' as simply comparing people to snakes and not with the full realization that Jesus compared them to creatures thought to

kill their mothers and eat their way out—cannibalism and matricide being two of the most revolting things an ancient listener could think of. I can see how they might miss much of the abrasiveness, but there are so many other passages: "Now the Spirit expressly says that in the last times some will renounce the faith by paying attention to deceitful spirits and the teachings of demons through the hypocrisy of liars whose consciences are seared with a hot iron." You've read the Bible more than once; you could supply your own examples.

Somehow they were able to read these passages and not question the belief that the limits of niceness are the limits of love. I don't know how to explain why; that's just how it is. And so apparently the theologians mentioned are dismissed because they fail to meet a standard the Bible itself rejects.

Wayne Grudem, for example, has vilified Cathie Kroeger. He did this in print some time ago and it still hurts Cathie. I saw her, her husband Dick along with Elaine Storkey at Cathie's home a few weeks ago and it is obvious the personal attacks have done damage.

I talked with a colleague, and I believe Arius also sustained emotional damage from what happened at Nicaea.

J I Packer has written some nasty things, using vocabulary stemming from secular conflict.

In reference to 'vocabulary stemming from secular conflict'... I understand your asking where the article author gets his vocabulary from, but I'd prefer to abstain from judgment. I don't know that we have the background to evaluate this.

James Dobson, who is a psychologist of non-biblical

James Dobson, who is a psychologist of non-biblical foundations, has led the fight against the publication of more gender equal translations.

I've done some research, and I think he's referring to the obvious James Dobson... I wanted to do further research, because it's not at all obvious to me why he's categorized as a theologian... a sharp popularizer, to be granted, and a shade of demagogue; his psychological expertise is held in light esteem by psychologists now and was apparently held in light esteem then...

perhaps the author was using the term 'theologian' as a convenient designation for "anyone prominent who disagrees with him." I don't mean that as a joke; if I had to choose between asking a brilliant theologian or a demagogue like Dobson to lead a fight, I'd pick the demagogue hands-down. (Perhaps the author wasn't familiar with very many real theologians' defense of sexuality.)

The idea of gender equal translations is interesting. Assuming a more modest objective of correcting gender bias without reading asexuality into God, the argument is made that the original languages used terms that were effectively asexual, so faithfully rendering them were asexual... and the terms in the original language were grammatically masculine which were understood to include the feminine. What's interesting here is that the terms in English were grammatically masculine and understood to include the feminine, universally and without question until feminists decided them to have gender bias.

It's kind of like someone going into a room where you enjoy seeing by candlelight, and then someone comes and brings in a blinding torch—and you get irritated and ask why, so he explains that you need the extra light because your eyes are dazzled.

Dobson's wife writes that the foundation of Christian marriage is the submission of the wife to the husband.

I don't share her perspective, but it is not clear to me why this statement is particularly significant. A more rigorous, if also more vivid, statement is found in Martin Luther's statement that if your theology is perfect except for what the world, the flesh, and the Devil are at that moment attacking, then you are preaching nothing.

Many people pick one or more specializations or areas of emphasis; it's an understandable temptation to think that your specialization is the center of the universe. If you're smiling at this, you might take a moment to remember the many times you have viewed history as the foundation to all scholarly inquiry. It's not; it has a place among the Disciplines, and I am glad to study it, but history is not the foundation to Discipline.

It doesn't surprise me that a woman allied with Dobson would think submission was the foundation of Christian marriage; it has the dual qualities of being important and under attack. What I fail to see is why her statement should be that significant.

I favour and encourage the popularization and democratization of bible study and take the view that if a theologian can understand then so can I. And if I can understand it then it can be produced in a popularly understandable form.

Part of this passage is very confusing; before and after, he is frustrated by popularized and democratized Bible study which leads people to contradict his conclusion. I'm not going to sort through that, but I wish to summarize one element: There's a kind of proverb, very common, where someone

meeting a specialist would say, "In a sentence, explain what it is that you know." What is interesting is that this was not perceived as a riddle of heroic proportions, or even a ridiculous question; they believed instead that the burden of effort was on the specialist, and if he could not convey what knowledge he had obtained by years of excellent study, then he didn't know what he was talking about. The attitude in this challenge is apparently present in what is proposed.

On one level, there is confusion; given that the Bible is beyond any one person's understanding, the Bible was available, not merely in one or two translations, but so many translations we don't have a count. Many of these were simplified. What appears to be said is not a Wycliffe call to make the Bible available to the common man, but a call for propaganda that will obscure what is presently obvious to the lay reader.

Instead we get more structure from these men who design and engineer. As I say, structure can speak louder than words. Structure can speak louder than the word of God. And for some, structure can become the word of God.

You have seen an article demonstrating how structure can speak louder than the word of God, an article that seeks and begs that the structure become the word of God. Read it closely. The allegation is made that structure and engineering are the realm of the tradition with no consideration made for how they might belong to the re-imaginers. Go to the [First Things](#) archive and read *The Skimpole Syndrome: never mind if you dislike it*, but is that the writing of an engineer? Then read materials from [Re-Imagining 2000](#) and ask if you see a reverent and trusting preservation of a transcendent and divine gift.

I don't know what, if anything, will come of it, but I took the opportunity to suggest once again to Cathie, Dick and Elaine that they begin producing their own translations of the gender passages along with an outline of the reasons for their differing translation and links for further study.

Why are they making a translation? Well, stop and think. I've made translations for the following reasons:

- To take a text not available in a given language, and make an understandable rendering.
- To take a text available only available in an arcane dialect of a given language, and make it understandable.
- To produce something that is close on a word-to-word level.
- To produce a text that renders thought-for-thought.
- Some careful balance of the previous two goals.
- To document linguistic ambiguity.

What is interesting here is that they aren't making a translation for any of those reasons. There's one reason you or I might not normally think of: to obscure a text's meaning.

You know that translations then tended to gut the Song of Songs, but there's really more going on here. The one I think was called the Now Indispensible Version was one where the scholars wanted to render the cruder passages accurately, but their elders said that part of God's word wasn't fit for public consumption. Translation bugaboos we will always have with us, but for some translations it is the *raison d'être*. The New World Translation of the Holy Scriptures opens the Great Beginning with, "In [the] beginning the Word was, and the Word was with God, and the Word was a god." The original for that verse says, literally, "And God was the Word;" Greek did not give John a

more emphatic way to say, "And the Word was God." So why this translation? It is a translation made by heretics for the express purpose of being able to say, "Flip, flip, flip. The Bible doesn't really say that. See! My translation doesn't say so right here!"

That is exactly the kind of translation that is being requested here.

Clearly, from the discussion within our own intelligent group, the egalitarian information is not getting out.

I examined the archives: we know that egalitarian information was getting out in the group, and we know that because some very wise people rejected it, and stated that they had done so. The remark here is reminiscent of people who believe that, if you don't share their perspective, it can only be because you don't understand what they're saying. The mentioned article was actually a response sparked by someone who had weighed egalitarianism in the balance, and found it wanting.

Graham

One last note, because I know what you chose not to write.

He was not dead in mind.

He was absolutely brilliant—brighter than you. Graham Clinton was a leader of the International Christian Mensa. Mensa is a society that allows people who have a certain quantified wisdom such as is found with one man among fifty, and their leaders are often even sharper. Graham Clinton was someone who worked through struggle, held a great deal of compassion for his neighbor, and did many good works—and I have intentionally shown you his writing so that you may see someone brilliant and a leader among Christians. He also spent some time at a very good

seminary. He did not hold ecclesiastical title, but he was concerned (and talented) for a Christian life of the mind.

Satan will attack us wherever he can, and may be far more powerful on our strengths than our weakness. The letter I cite, and the movement from which it came, was not a movement of half-wits; it held many sharp people. It takes quite a lot of wits to make yourself that stupid. Compassion doesn't hurt; Graham could never have fallen for this poison did he not hold a great deal of compassion.

You do well enough in gawking at foreigners. That's commendable; it's good amusement. I might suggest there is more you could learn from your gawking—in particular, that their foibles are all too often our foibles dressed up in other clothes. All of the darkness in that letter is darkness I find in my own heart.

Would you come over here for a season? I miss you, and the discussions seemed to be livelier when they had your questions.

Cordially yours,  
Sutodoreh  
The year of our Lord 2504.

# A Strange Picture

As I walked through the gallery, I immediately stopped when I saw one painting. As I stopped and looked at it, I became more and more deeply puzzled. I'm not sure how to describe the picture.

It was a picture of a city, viewed from a high vantage point. It was a very beautiful city, with houses and towers and streets and parks. As I stood there, I thought for a moment that I heard the sound of children playing—and I looked, but I was the only one present.

This made all the more puzzling the fact that it was a disturbing picture—chilling even. It was not disturbing in the sense that a picture of the Crucifixion is disturbing, where the very beauty is what makes it disturbing. I tried to see what part might be causing it, and met frustration. It seemed that the beauty was itself what was wrong—but that couldn't be right, because when I looked more closely I saw that the city was even more beautiful than I had imagined. The best way I could explain it to myself was that the ugliness of the picture could not exist except for an inestimable beauty. It was like an unflattering picture of an attractive friend—you can see your friend's good looks, but the picture shows your friend in an ugly way. You have to fight the picture to really see your friend's beauty—and I realized that I was fighting the picture to see the city's real

... because that I was fighting the pressure to see the only, or best, beauty. It was a shallow picture of something profound, and it was perverse. An artist who paints a picture helps you to see through his eyes—most help you to see a beauty that you could not see if you were standing in the same spot and looking. This was like looking at a mountaintop through a pair of eyes that were blind, with a blindness far more terrible, far more crippling, than any blindness that is merely physical. I stepped back in  
nausea.

I leaned against a pillar for support, and my eyes fell to the bottom of the frame. I glanced on the picture's title: Porn.

# **The Swiss Army Knife and God**

## **The great Swiss Army Knife and its kin**

It has become fashionable to say a bit of nuance when something is compared to a Swiss Army Knife: a Swiss Army Knife is a collection of second-rate tools: the can opener may be better than nothing, but it is a surrogate for a real can opener. At least it seems to be sophisticated nuance, but I write after having opened a can with my Swiss Army Knife when a "real" can opener was right in the drawer in front of me.

A spider's web is small, flimsy, easy to overlook, and in houses something people sweep away as a nuisance. Yet none of these faults are brought to mind when something is compared to the world wide web, or someone discussing history compares the 19th century establishment of nationwide railways crossing the U.S. to the establishment of the web. For that matter, there is a positive connotation to the spider's web that we do not evoke: a spider's web is what provides spiders something to eat, and some of us (including yours truly) are privileged to make a living from the web. The web is an intricate mesh of cross-linking, and the

idea of one node connected to the other is the prime metaphor evoked when we speak of the "web."

I carry four Swiss Army Knives, or at least material Swiss Army Knives, besides my wallet.

The first is [a Swisschamp my parents got for me in England](#) when we traveled when I was a teen, and I've made a couple of custom modifications to it: I filed away at part of the metal saw/nail file/metal file to make a harder-than-steel blade for cutting at screens, and I also narrowed the end of the tweezers to try and make it work better as a splinter tweezers. I've stopped carrying it once or twice, but so far at least I have gotten back to carrying it again. I know its features by heart: large blade, small blade, metal saw, metal file, nail file, nail cleaner, added harder-than-steel blade, wood saw, scissors, magnifying glass, Phillips screwdriver, pliers, large slotted screwdriver, can opener, wire stripper, small slotted screwdriver, can opener, corkscrew, jeweler's screwdriver, pin, wood chisel, additional slotted screwdriver, hook, reamer, pen, toothpick, tweezers (sadly replaced with a regular tweezers when I sent it in for repairs—I'm sure they meant it well).

The second Swiss Army Knife I carry is one that I purchased in a moment of "sacramental shopping" against my best judgment: my watch was having problems, but I already had a perfectly useful way to tell time. I had quite vulgarly agreed with the contents of my spam folder to believe that I needed an extra special watch and it would make me special. And so I purchased a [Casio Pathfinder watch](#), water resistant to 100 meters, and besides the normal time, five alarms, stopwatch, and timer one might expect of a digital watch, it has a compass, barometer/altimeter, a surprisingly useless thermometer, tells time in other time zones, is set each night by a signal from an

atomic clock and is probably within a second of the "official" absolute time without my ever setting it, and recharges by solar power even when I do nothing to make sure it gets light. It has never been below the highest level of charge. Oh, and its color is a military olive green with black highlight, so it fits in with my green and earth tone wardrobe. I have, as it turns out, used the compass, and I do hope it lasts me a while, but I regard the purchase as an ersatz sacrament, vulgar as a "replica luxury watch" hawked in spam.

[The third Swiss Army Knife I carry is an iPhone](#); I upgraded in the recent past from my iPhone 1 to an iPhone 4 because AT&T's rate limiting was getting to be a quite practical limitation; sending a thank-you note after a job interview was like breathing through a straw. I have not upgraded to the 4 S; it sounds impressive, but my present iPhone 4 works as nicely today as when I got it, good enough that the fact that something better is out there does not concern me.

(No, not Android; I've tried Android and didn't like it. I've wished I knew enough video editing to take one of the initial commercials, which said things like "iDon't have a real keyboard", to say all but the last "iDon't", and then edit in, "iDon't have a second-rate user interface," and then let the commercial give its final, "Droid does!")

My fourth Swiss Army Knife, which I use rarely, is/was (it is lost now) [an Ubuntu USB key](#): it can store files and it can boot (or install) Ubuntu Linux. While I use thend as someone answered a forum question, "I've installed Linux, now where I can get some games," and answered, "Linux is the game!" other three Swiss Army Knives all the time, this one is there but there are not too many situations to use it. I did install Linux at a friend's house when he requested it and there was no question of going

somewhere else to get media, but the way life moves today I spend little time using it; there may be students storing all their homework on a USB key, but I don't find myself using it often.

Part of the reasons people compare things to Swiss Army Knives (and call Perl "Unix's Swiss Army Chainsaw", Python being a lightsabre that cuts like a hot knife through butter), is that there is a mystique to this one bit of Swiss machinecraft that can do so many things. As a relatively young boy, I believe after addictively watching *MacGyver*, I was asked what I wanted for Christmas and said I wanted a Swiss Army Knife, and my Mom, who would not have been making the choice out of financial constraint, purchased me a wooden-handled pocketknife with two (literal) blades, and said, "See, I got you a Swiss Army Knife!" I tried to contain my disappointment; it was as if I had asked for a bacon cheeseburger, and imagined a good sit-down restaurant bacon cheeseburger piled high with toppings, and was told in perfect sincerity, "Here's the hamburger you asked for," and been given a tiny White Castle burger.

It was perhaps out of this experience that I made a purchase for a boy at church: his parents had told him, perhaps not strangely, that he could own a

The good thing about a Swiss Army knife or especially iPhone is that it somewhat allows you to carry your own world around with you—or is it? That carrying your own world and being somewhat independent of your surroundings bears an uncanny resemblance to the demon that is called pride. A Swiss Army Knife might not be as good as the mystique would have it: we have the opposite of the monastic maxim, "Your cell [and surroundings] will teach you everything you need to know."

pocketknife (I believe he owns a couple), but he could not carry anything dangerous. I think sometime back I had given him a vaguely Swiss Army-like folding tool, but more recently I found out there was [a Leatherman expressly designed to be able to be taken through airport security](#), having been cleared approval with the TSA and 315 airports, and they had rather ingeniously made a mechanical folding pliers that was a bit small, but folded out to a pliers, scissors, nail file, carabiner, and (I believe) a screwdriver designed to work with either slotted or Phillips screws, and a tweezers, but all of this without being like a weapon. And he thanked me for it, once initially as one would expect from politeness, and once a week later (and he showed me its features!). The gift had scored home with him, and I believe my actions were conditioned (though I did not think of it at the time) by my disappointment when my parents admittedly entrusted me with a blade, but did not give the abounding mechanical clockwork-like coolness that motivated my request for a Swiss Army Knife.

## Is Orthodoxy a Swiss Army Knife? (Is God?)

The liturgical flow of day and year is intricate, with its ebb and flow and nooks and crannies, and the exact combination of songs, musical tones, readings, and so on for a Divine Liturgy are something that may not be exactly repeated for hundreds of years. And a certain sense you can say that God is a Swiss Army Knife, and the saints are his blades—or, really, the whole race of mankind.

But on a deeper level the image does not fit, and here we run into a basic difficulty in theology. There are two basic modes of theology in talking about God, and they are opposite. One mode, the cataphatic, is to say that God is described by the images of his Creation, that he is King and Father, and so on. And there is some element of truth even in comparing HE WHO IS to solid stone: "[Blessed be my rock](#)," the Psalmist bard proclaims. But in a deeper sense these images all ultimately fail, as loudly proclaims apophatic theology. The image of God as stone fails more quickly, but ultimately even the images of a Father and King run dry.

And HE WHO IS, one God in Trinity, is utterly and completely simple, and simple beyond any created simplicity. The beauty of a Swiss Army Knife is that it is many things folded into its handle; it is a beauty of multiplicity that falls infinitely short of God. God may be seen in many saints, but they are all brought to his

oneness. And this oneness reflects down: the virtues may look like a Swiss Army Knife of the soul, and they indeed are in a certain sense, but on a more profound level there is a unity to the virtues (and the vices). The deepest virtue is only one virtue, and indeed *Christ names one virtue as the foundation of all Scripture:*

Jesus said unto him, "Thou shalt love the Lord thy God with all thy heart, and with all thy soul, and with all thy mind. This is the first and great commandment. And the second is like unto it, Thou shalt love thy neighbour as thyself. On these two commandments hang all the law and the prophets."

The spiritual life is one of simplicity, praying the Jesus Prayer, "Lord Jesus Christ, Son of God, have mercy on me, a sinner," and the Swiss-like clockwork of the liturgy is paradoxically an entryway into this simplicity.

The most interesting way a Swiss Army Knife illumines God is not in its similarity, but precisely how its *fundamental beauty* differs from God's *fundamental beauty*.
