# 1054 and All That

## The Confused Person's Guide to Being Even More Confused About Orthodoxy

Eastern Orthodoxy is exactly like Roman Catholicism, except that it is Oriental and exotic. The Catholic Church split off from the Orthodox Church because the Orthodox would not accept the *filioque* clause, an anti-Arian shibboleth which offended the traditional Orthodox reverence for Constantine (a baptized Arian). The Orthodox Church is very wise because it has traditionally used the Julian Calendar to have an extra thirteen days to prepare and contemplate before each day. Each year, the Orthodox Church also rolls a die and holds Easter up to six weeks later than in the West, just to make things more confusing.

The Orthodox Church, sometimes called the Church of the Seven Ecumenical Councils, held seven ecumenical councils in response to controversies that arose. The main results were that the Church officially ruled out certain misunderstandings of Christ. The first council was the Council at Nicaea, modern day Nice, where Saint Nicholas of Myra and Lycia (our jolly old Saint Nick) boxed Arius on the ear. The Council at Nicaea rejected Aryanism, which teaches that Christ had blonde hair and blue eyes (a misunderstanding which is still prevalent in the land of blonde hair and blue ears). The other councils are really not that important, as they dealt with abstruse ancient controversies and don't

have much to say about the modern and practical questions people struggle with today, such as whether Jesus was really tempted like us, or was just play-acting. The word "ecumenical" comes from the Greek οικουμενη, meaning the whole civilized world. Catholics and Orthodox disagree whether there are still being ecumenical councils; the Catholics, who are traditionally more universal and embracing, believe that a council without Orthodox bishops can still be ecumenical, while the Orthodox (considered by the Catholics to be schismatic) do not believe one can hold an ecumenical council without healing certain divisions, a task which faces any number of daunting obstacles, ranging from the Catholic Church's progressive Westernization to the Archbishop of Canterbury's demonstration that [an Anglican can be a Druid](#). (If you find this confusing, don't worry. Most Orthodox don't understand it either.) Most devout Orthodox are wary at best of ecumenism as Protestant in spirit, but even these Orthodox should none the less be distinguished from the "True Orthodox", the preferred designation for a loose confederation people and groups who regard themselves as properly Orthodox and Novatians as liberal ecumenists.

Understanding the Orthodox understanding of understanding is a point that is not often appreciated, partly because the syntax of "understanding the Orthodox understanding of understanding" is very confusing. The Orthodox believe, as Catholics still do on paper if not in practice, that we have a logos (from the Greek λογος, meaning the part of the mind we use to keep track of facts related to corporate logos), and a noose (from the Greek νοος, meaning the part of the mind we use to grasp spiritual realities), and with typical ingenuity the Orthodox insist on using the noose for practical matters. The noose is very different from any Western understanding of mind, but if I explained it you wouldn't believe the claim that Orthodoxy is ordinary, concerned with the here and now, and not exotic in the way people assume. Some Orthodox, caught up in the Celtic culture boom, want to represent the noose with a stylized knot.

The words at the institution of Holy Communion, λαβετε φαγετε (literally, "Take, eat") have been misunderstood in the West (i.e. Catholics and Protestants) to mean "Take, understand." In the East, among Orthodox, people have insisted on preserving the apostolic meaning unchanged and have therefore reacted against the West and taken the text to mean "Take, but do not understand." The Orthodox is

taken the text to mean, Take, but do not understand. The Orthodox is free to say that the Eucharist is a symbol, on the understanding that this does not mean anything like the Western understanding of "just a symbol." The Orthodox is also equally free to claim that transubstantiation occurs, on condition that "transubstantiation" does not mean what the Catholic doctrine says it means.

Grace is like the sun in Orthodoxy: not only do we see it, but it allows us to see everything else. "Grace" characteristically means different things for Catholic, Orthodox, and Protestant; for Catholics "grace" is what we create by our works, for Orthodox "grace" is when God gives himself, and for Protestants "Grace" is a woman's name. Grace is behind works, sacraments, and everything else—food and drink, for that matter. Orthodox believe that God's grace rains down from Heaven, and because "He has established the *round* world so sure, it shall never be moved," God's grace then collects at the center of the earth.

Fully Orthodox believers may be divided into cradle Orthodox, who don't understand Orthodoxy very well and tend not to take it seriously, and convert Orthodox, who overdo *everything*. Orthodox are required to remain in communion with their bishops, which means community and a degree of submission to authority; people who fail to do this are called non-canonical, schismatic, etc. Non-canonical "Orthodox" are notorious for a rigid legalism in their interpretation of ancient canons. Canonical Orthodox take the matter much more lightly and often do not know the difference between a canon and a cannon.

There are many ranks of clergy, including (but not limited to) readers\*, subdeacons, deacons, archdeacons, proper subdeacons, sub-sub-deacons, ostriches, priests, arch-priests, archimandrites, bishops, arch-bishops, bishops of the caves, metropolitans, patriarchs, prophets, ascetics, protons, neutrons, and Abednegons. There is a proper way of addressing each of these ranks, and it is traditional to embarrass your priest by not knowing how to address the higher ranks of clergy or (at your option) not being sure how to address *any* clergy.

\* Remember that Orthodoxy originated at a time when most people didn't know how to read and write, and Orthodoxy hasn't seen mass literacy as reason to change its practices. The positive way of stating this is that Orthodoxy, while incorporating the act of writing, preserves many of the attributes and the essential spirit of an oral tradition and culture, an achievement which may be appreciated in light of the anthropological

observation that the opposite of "literate" is not "illiterate" but "oral". In other words, a Catholic is an Orthodox who can read.

Orthodoxy has been blessed by many great theologians, including Saint Dionysius the Aeropagite, who was not Saint Dionysius the Aeropagite but another writer known as Saint Dionysius the Aeropagite, and Saint Maximus Confessor, who stalwartly resisted the heresy that Christ lacked a human will, and whose intricate analysis of will concluded that we have something called a "gnomic" will and Christ does not. Augustine is not revered nearly so much in the East, owing to the fact that he became a Christian and in fact a bishop without realizing he was supposed to stop being a Manichee. (This is why Augustine is considered the founder of American Catholicism.) The Orthodox consider the patristic era to be a golden age for theology; it ended in the ninth century and has produced a small number of patristic theologians since its close.

In contrast to American individualism, the Orthodox Church talks about how when we come closer to Christ the more closely we resemble each other. This spirit of uniformity is demonstrated by her saints, who have been known to live on top of a pillar, make acts of public foolishness a form of spiritual discipline, or walk around after their deaths.

Icons are called "windows of Heaven" and, apart from being an emblem of matter drawn into spiritual glory, provide a place where saints can look in and see how people like them were on earth. This is a humbling enough experience for the saints, so that they no longer have problems with pride.

Please *do* ask why we aren't up to date enough to have women priests. Some Orthodox consider feminism to be an interesting spot of local color in our time and place, and at any rate the Orthodox will remember feminism as it remembers other challenges which lasted a mere century or two and which you probably haven't heard of. The Orthodox Church will continue discipling boys and girls, men and women, to be the men and women God created them to be, long after feminism is one more -ism that people of the future will learn about when they study the history of abandoned fashions. And besides, Orthodoxy is gender balanced. Cradle Orthodoxy is a woman thing, and convert Orthodoxy is a man thing.

It is an Orthodox principle that there should be one Orthodox Church in each country. That is why, if you are an American, you have your choice of Greek Orthodox, Russian Orthodox, Orthodox Church in America, Antiochian Orthodox

America, Antiochian Orthodox...

Metania (μετανοια) is from meta (μετα) as in "metacognition" or "metaphysics", for a philosophical analysis of other things, and noia (νοια), which means mind but is not to be confused with the noose above. Hence "metania" means a philosophical discussion of how our minds should be functioning if we are Orthodox. This is very important in convert Orthodoxy; cradle Orthodox think converts miss metania completely. "Metania" also refers to an action performed with the body in worship, thus exemplifying the Orthodox penchant for conflating mind and body.

One closing word. Part of what distinguishes Orthodox theology is that it is no more systematic than the Church Fathers. In keeping with this tradition, this introduction is proudly disorganized.

# An Abstract Art of Memory

**Abstract.** Author briefly describes classic mnemotechnics, indicates a possible weakness in their ability to deal with abstractions, and suggests a parallel development of related principles designed to work well with abstractions.

Frances Yates opens *The Art of Memory* with a tale from ancient Greece<sup>[1]</sup>:

At a banquet given by a nobleman of Thessaly named Scopas, the poet Simonides of Ceos chanted a lyric poem in honor of his post but including a passage in praise of Castor and Pollux. Scopas meanly told the poet that he would only pay him half the sum agreed upon for the panegyric and that he must obtain the balance from the twin gods to whom he had devoted half the poem. A little later, a message was brought in to Simonides that two young men were waiting outside who wished to see him. He rose from the banquet and went out but could find no one. During his absence the roof of the banqueting hall fell in, crushing Scopas and all the guests beneath the ruins; the corpses were so mangled that the relatives who came to take them away for burial were unable to identify them. But Simonides remembered the places at which they had been sitting at the table and was therefore able to indicate to the relatives which were their dead.

After his spatial memory in this event, Simonides is credited with having created an art of memory: start with a building full of distinct

places. If you want to remember something, imagine a striking image with a token of what you wish to remember at the place. To recall something naval, you might imagine a giant nail driven into your front door, with an anchor hanging from it; if you visualize this intensely, then when in your mind's eye you go through your house and imagine your front door, then the anchor will come to mind and you will remember the boats. Imagining a striking image on a remembered place is called *pegging*: when you do this, you fasten a piece of information on a given peg, and can pick it up later. Yates uses the terms *art of memory* and *artificial memory* as essentially interchangeable with *mnemotechnics*, and I will follow a similar usage.

There is a little more than this to the technique, and it allows people to do things that seem staggering to someone not familiar with the phenomenon[2]. Being able to look at a list of twenty items and recite it forwards and backwards is more than a party trick. The technique is phenomenally well-adapted to language acquisition. It is possible for a person skilled in the technique to learn to read a language in weeks. It is the foundation to some people learning an amount of folklore so that today they would be considered walking encyclopedias. This art of memory was an important part of the ancient Greek rhetorical tradition[3], drawn by medieval Europe into the cardinal virtue of wisdom[4], and then transformed into an occult art by the Renaissance[5]. Medieval and renaissance variations put the technique to vastly different use, and understood it to signify greatly different things, but outside of Lullism[6] and Ramism[7], the essential technique was the same.

In my own efforts to learn the classical form of the art of memory, I have noticed something curious. I'm better at remembering people's names, and I no longer need to write call numbers down when I go to the library. I was able, without difficulty, to deliver an hour-long speech from memory. Learning vocabulary for foreign languages has come much more quickly; it only took me about a month to learn to read the Latin Vulgate. My weaknesses in memory are not nearly so great as they were, and I know other people have been much better at the art than I am. At the same time, I've found one surprise, something different from the all-around better memory I suspected the art would give me. What is it? If there is a problem, it is most likely subtle: the system has obvious

benefits. To tease it out, I'd like to recall a famous passage from Plato's *Phaedrus*[\[8\]](#):

*Socrates:* At the Egyptian city of Naucratis, there was a famous old god, whose name was Theuth; the bird which is called the Ibis was sacred to him, and he was the inventor of many arts, such as arithmetic and calculation and geometry and astronomy and draughts and dice, but his great discovery was the use of letters. Now in those days Thamus was the king of the whole of Upper Egypt, which is in the district surrounding that great city which is called by the Hellenes Egyptian Thebes, and they call the god himself Ammon. To him came Theuth and showed his inventions, desiring that the other Egyptians might be allowed to have the benefit of them; he went through them, and Thamus inquired about their several uses, and praised some of them and censured others, as he approved or disapproved of them. There would be no use in repeating all that Thamus said to Theuth in praise or blame of the various arts. But when they came to letters, This, said Theuth, will make the Egyptians wiser and give them better memories; for this is the cure of forgetfulness and folly. Thamus replied: O most ingenious Theuth, he who has the gift of invention is not always the best judge of the utility or inutility of his own inventions to the users of them. And in this instance a paternal love of your own child has led you to say what is not the fact: for this invention of yours will create forgetfulness in the learners' souls, because they will not use their memories; they will trust to the external written characters. You have found a specific, not for memory but for reminiscence, and you give your disciples only the pretence of wisdom; they will be hearers of many things and will have learned nothing; they will appear to be omniscient and will generally know nothing; they will be tiresome, having the reputation of knowledge without the reality.

There is clear concern that writing is not what it appears, and it will endanger or destroy the knowledge people keep in memory; a case can be made that the phenomenon of Renaissance artificial memory as an occult practice occurred because only someone involved in the occult would have occasion to keep such memory after books were so easily available.

What kind of things might one wish to have in memory? Let me quote

one classic example: the argument by which Cantor proved that there are more real numbers between 0 and 1 than there are counting numbers (1, 2, 3...). I paraphrase the basic argument here:

1. Two sets are said to have the same number of elements if you can always pair them up, with nothing left over on either side. If one set always has something left over after the matching up, it has more elements.
2. Suppose, for the sake of argument, that there are at least as many counting numbers as real numbers between 0 and 1. Then you can make a list of the numbers between 0 and 1:

```

1: .012343289889...
2: .328932198323...
3: .438724328743...
4: .988733287923...
5: .324432003442...
6: .213443765001...
7: .321010320030...
8: .323983213298...
9: .982133982198...
10: .321932198904...
11: .000321321278...
12: .032103217832...

```

3. Now, take the first decimal place of the first number, the second of the second number, and so on and so forth, and make them into a number:

```

1: .012343289889...
2: .328932198323...
3: .438724328743...
4: .988733287923...
5: .324432003442...
6: .213443765001...
7: .321010320030...
8: .323983213298...
9: .982133982198...
10: .321932198904...
11: .000321321278...
12: .032103217832...

```

Result:

-----

.028733312972...

4. Now make another number between 0 and 1 that is different at every decimal place from the number just computed:

.139844423083...

5. Now, remember that we assumed that the list has all the numbers between 0 and 1: every single one, without exception. Therefore, if this assumption is true, then the latter number we constructed must be on the list. But where?

The number can't be the first number on the list, because it was constructed to be different at the first decimal place from the first number on the list. It can't be the second number on the list, because it was constructed to be different at the second decimal place from the second number on the list. Nor can it be the third, fourth, fifth... in fact, it can't be *anywhere* on the list because it was constructed to be different. So we have one number left over. (Can we put that number on the list? Certainly, but the argument shows that the new list will leave out another number.)

6. The list of numbers between 0 and 1 doesn't have all the numbers between 0 and 1.
7. We have a contradiction.
8. We started by assuming that you can make a list that contains all the numbers between 0 and 1, but there's a contradiction: any list leaves numbers left over. Therefore, our assumption must be wrong. Therefore, there must be too many real numbers between 0 and 1 to assign a separate counting number to each of them.

Let's say we want to commit this argument to memory. A mathematician with artificial memory might say, "That's easy! You just imagine a chessboard with distorted mirrors along its diagonal." That is indeed a good image if you are a mathematician who already understands the concept. If you find the argument hard to follow, it is at best a difficult thing to store via the artificial memory. Even if it can be done, storing this argument in artificial memory is probably much more trouble than learning it as a mathematician would.

Let me repeat the quotation from the Phaedrus, while changing a few words:

*Jefferson:* At the Greek region of Thessaly, there was a famous old poet, whose name was Simonides; totems seen with the inner eye were devoted to him, and he was the inventor of a great art, greater than arithmetic and calculation and geometry and astronomy and draughts. Now in those days Rousseau was a sage revered throughout the West, and they called the god himself *Rationis*. To him came Simonides and showed his invention, desiring that the rest of the world might be allowed to have the benefit of it; he went through it, and Rousseau inquired about its several uses, and praised some of them and censured others, as he approved or disapproved of them. There would be no use in repeating all that Rousseau said to Simonides in praise or blame of various facets. But when they came to inner writing, This, said Simonides, will make the West wiser and give it better memory; for this is the cure of forgetfulness and of folly. Rousseau replied: O most ingenious Simonides, he who has the gift of invention is not always the best judge of utility or inutility of his own inventions to the users of them. And in this instance a paternal love of your own child has led you to say what is not the fact; for this invention will create forgetfulness in the learner's souls, because they will not remember abstract things; they will trust to mere mnemonic symbols and not remember things of depth. You have found a specific, not for memory but for reminiscence, and you give your disciples only the pretence of wisdom; they will be hearers of many things and will have learned nothing; they will appear to be omniscient and will generally know nothing; they will be tiresome, having the reputation and outer shell of knowledge without the reality of deep thought.

It is clear that if we follow Thomas Aquinas's instructions on memory to visualize a woman for wisdom, we may recall wisdom. *What is less clear is that this inner writing particularly helps an abstract recollection of wisdom.* It may be able to recall an understanding of wisdom acquired without the help of artificial memory, but this art which allows at times stunning performance in the memorization of concrete data is of more debatable merit in learning abstraction. It has been my own experience that abstractions can be forced through the gate of concreteness in artificial memory, but it is like forcing a sponge through a funnel. While I

admittedly don't have a medieval practitioner's inner vocabulary to deal with abstractions, using the artificial memory to deal with abstractions seems awkward in much the same way that storing individual letters through artificial memory[9] is awkward. The standard artificial memory is a tool for being reminded of abstractions, but not for remembering them. It offers the abstract thinker a seductive way to recall a great many concrete facts instead of learning deep thought.

The overall impression I receive of the artificial memory is not so much a failed attempt at a tool to store abstractions as a successful attempt at a concrete tool which was not intended to store abstractions. It is my belief that some of its principles, in modified form, suggest the beginnings of an art of memory well-fitted to dealing with abstractions. The mature form of such an endeavor will not simply be an abstract mirror image of a concrete artificial memory, but it is appropriate enough for the first steps I might hazard.

Consider the following four paragraphs:

1. Physics is like music. Both owe something of substance to the Pythagoreans. Both are aesthetic endeavors that in some way represent nature in highly abstracted form. Both are interested in mechanical waves. Many good physicists are closet musicians, and all musical instruments operate on physical principle.
2. Physics is like literature. Both are written in books that vary from moderately easy to very hard. Both deal with a distinction between action and what is acted on, be it plot and character or force and particle, and both allow complex entities to be built of simpler ones. Practitioners of both want to be thought of as insightful people who understand reality.
3. Physics is like an adventure. Both involve a venture into the unknown, where the protagonist tries to discover what is happening. Both have a mystique that exists despite most people's fear to experience such things themselves. To succeed in either, one is expected to have impressive strengths.
4. Physics is like magic. Both flourished in the West, at the same time, out of the same desire: a desire to understand nature so as to control it. Both attract abstract thinkers, are practiced in part through the manipulation of arcane symbols, and may be found in the same

person, from Newton to Feynman[10]. Magical theory claims matter to be composed of earth, air, fire, and water, while physics finds matter to be composed of solid, liquid, gas, and plasma.

What is the merit of these comparisons? They recall a story in which a literature professor asked Feynman if he thought physics was like literature. Feynman led him on with an elaborate analogy of how physics was like literature, and then said, "But it seems to me you can make such an analogy between any two subjects, so I don't find such analogies helpful." He observed that one can make a reasonably compelling analogy even if there's no philosophically substantial connection.

*The laws of logic and philosophy are not the laws of memory.* What is a liability to Feynman's implicit philosophical method is a strength to memory. The philosophical merit of the above comparisons is debatable. The benefit to memory is different: it appears to me that this is an abstract analogue to pegging. A connection, real or spurious, aids the memory even if it doesn't aid a rigorous philosophical understanding. In pegging, it is considered an advantage to visualize a ludicrously illogical scene: it is much more memorable than something routine and sensible. Early psychological experiments in memory involved memorization of nonsense syllables. The experimenters intentionally chose meaningless material to memorize. Why? Well, if the subject perceived meaning, that would provide a spurious way for the subject to remember the data, and so proper Ebbinghausian memory study meant investigating how people investigate memory material which was as meaningless as possible. Without pausing to develop an obvious critique, I'd suggest that this spurious route to memory is of great interest to us. Meaningful data is more memorable than meaningless, and this is true whether the meaning perceived is philosophically sound or obviously contrived. I might suggest that interesting meaning provides a direct abstract parallel to the striking, special-effect appearance of effective images in pegging.

I intentionally chose not to compare physics to astronomy, chemistry, computer science, engineering, mathematics, metaphysics, or statistics, because I wanted to show how a different concept can be used to establish connections to a new one. Or, more properly, different concepts. *Having a new concept connected to three very different ones will capture different facets than one anchor point, and possibly cancel out some of*

*each other's biases.* A multiplicity of perspectives lends balance and depth. This isn't to say similar concepts can't be used, only that searching for a partial or full isomorphism to a known concept is easier than encoding from scratch. If memorable connections can be made between physics and adventure, music, English, and magic, what might be obtained from comparison with mathematics, chemistry, and engineering? A comparison between physics and these last three disciplines is left as an exercise to the reader, and one that may be quite fruitful.

Is this a desirable way to remember things? I would make two different comments on this score. First, when learning Latin words, I would first peg it to an English word with a vivid image, then later recall the image and reconstruct the English equivalent, then recall the image and remember the English, then the image would drop out so I would directly remember the English, and finally the English word would drop out too, leaving me with a Latin usage often different from the English equivalent used. Artificial memory does not circumvent natural memory; instead it streamlines the process and short-circuits many of the disruptive trips to the dictionary. Pegs vanish with use; they are not an alternate final product but a more efficient route for concepts more frequently used, and a cache of reference material. Therefore, even if remembered comparisons between physics and adventure/music/English/magic fall short of how one would desire to understand the concept, a similar flattening of the learning curve is possible. Second, I would say that *even if you fail to peg something, you may succeed.* How? In trying to peg a person's name, I hold that name and face in an intense focus—quite the opposite how I once reacted: "I'll never remember that," a belief which chased other people's names out of my mind in seconds. That focus is relevant to memory, and it has happened more than once that I completely failed to create a peg, but my failure used enough mental energy that I still remembered. If you search through your memory and fail to make even forced connections between a new concept and existing concepts, the mental focus given to the concept will leave you much better off than if you had thrown up your hands and thought the self-fulfilling prophecy: "I will never remember that!"

Certain kinds of emotional intelligence are part of the discipline.

Learning to cultivate *presence* has to do with an emotional side, and I have written elsewhere about activities that can help to cultivate such presence[[11](#)]. We learn material better if we are interested in it; therefore consciously cultivating an interest in the material and seeing how it can be fascinating is another edge. Cultivating and guarding your inner emotional state can have substantial impact on memory and learning abstractions. Much of it has to do with keeping a state of presence. Shutting out abstractions is one obvious way to do this; another, perhaps less obvious, is to avoid cramming and simply ploughing through material unless it's something you don't really need to learn. Why?

If there is a sprinkler that disperses a fine mist, it will slowly moisten the ground. What if there's a high-volume sprinkler that shoots big, heavy drops of water high up in the air? With all that water pounding on the ground, it looks like the ground is quickly saturated. The appearance is deceptive. What has happened is that the heavy drops have pounded the surface of the ground into a beaten shield, so there really is water rolling off of a very wet surface, but go an inch down and the soil is as parched as ever. This sort of thing happens in studying, when people think that the more force they use, the better the results. Up to a point, definitely, and perseverance counts—but I have found myself to learn much more when I paid attention to my mental and emotional state and backed off if I sensed that I was leaving that optimal zone. I learn something if I say "This is important, so I'll plough through as much as I can as quickly as I can," but it's not as much, and keeping on task needs to be balanced with getting off task when that is helpful.

Consider the following problem:[[12](#)]

In the inns of certain Himalayan villages is practiced a most civilized and refined tea ceremony. The ceremony involves a host and exactly two guests, neither more nor less. When his guests have arrived and have seated themselves at his table, the host performs five services for them. These services are listed in order of the nobility which the Himalayan attribute to them: (1) Stoking the Fire, (2) Fanning the Flames, (3) Passing the Rice Cakes, (4) Pouring the Tea, and (5) Reciting Poetry. During the ceremony, any of those present may ask another, "Honored Sir, may I perform this onerous task for you?" However, a person may request of another only the least noble of the tasks which the other is performing. Further, if a

least noble of the tasks which the other is performing. Further, if a person is performing any tasks, then he may not request a task which is nobler than the least noble task he is already performing. Custom requires that by the time the tea ceremony is over, all the tasks will have been transferred from the host to the most senior of the guests. How may this be accomplished?

Incomprehensible appearances notwithstanding, this is a very simple problem, the Towers of Hanoi. Someone who has learned the Towers of Hanoi may still solve the tea ceremony formulation as slowly as someone who's never seen any form of the problem[13]. A failure to recognize isomorphisms provides one of the more interesting passages in Feynman's memoirs[14]:

I often liked to play tricks on people when I was at MIT. One time, in a mechanical drawing class, some joker picked up a French curve (a piece of plastic for drawing smooth curves—a curly, funny-looking thing) and said, "I wonder if the curves on this thing have some special formula?"

I thought for a moment and said, "Sure they do. The curves are very special curves. Lemme show ya," and I picked up my French curve and began to turn it slowly. "The French curve is made so that at the lowest point on each curve, no matter how you turn it, the tangent is horizontal."

All the guys in the class were holding their French curve up at different angles, holding their pencil up to it at the lowest point and laying it along, and discovering that, sure enough, the tangent is horizontal. They were all excited by this "discovery"—even though they had already gone through a certain amount of calculus and had already "learned" that the derivative (tangent) of the minimum (lowest point) of *any* curve is zero (horizontal). They didn't put two and two together. They didn't even know what they "knew."

What is going on here is that Feynman perceives an isomorphism where the others do not. There may be a natural bent to or away from perceiving isomorphisms, and cognitive science suggests most people have a bent away. The finding, as best I can tell, is not so much that people *can't* look for isomorphisms, as that they *don't*. The practice of

looking for and finding isomorphisms has something to give, because something can be treated as already known instead of learned from scratch. I might wonder in passing if the ultra-high-IQ rapid learning and interdisciplinary proclivities stem in part from the perception and application of isomorphisms, which may *reduce* the amount of material actually learned in picking up a new skill.

The classical art of memory derives strength from a mind that works visually; a background in abstract thought will help one learn abstractions. It has been thought[15] that people can more effectively encode and remember material in a given domain if it's one they have worked with; I would suggest that this abstract pegging also creates a way to encode material with background from other domains. An elaborate, intense, and distinct encoding is believed to help recall[16]. Heightening of memorable features, in what is striking or humorous[17], should help, and mimetics seems likely to contain jewels in its accounts of how a meme makes itself striking.

Someone familiar with artificial memory may ask, "What about places (*loci*)?" Part of the art of memory, be it ancient, medieval, or renaissance, involved having an inner building of sorts that one could imagine going through in order and recalling items. I have two basic comments here. First, a connection could use traditional artificial memory techniques as an index: imagine a muscular man with a tremendous physique running onto the scene, grabbing an adventurer's sword, shield, and pack, sitting down at a pipe organ which has a large illuminated manuscript on top, and clumsily playing music until a giant gold ring engraved with fiery letters falls on the scene and turns it to dust. You have pegged physics to adventure, music, literature, and magic; if you wanted to reconstruct an understanding of physics, you could see what it was pegged to, and then try to recall the given similarities. Second and more deeply, *I believe that a person's entire edifice of previously acquired concepts may serve as an immense memory palace*. It is not spatial in the traditional sense, and I am not here concerned with the senses in which it might be considered a topological space, but it is a deeply qualitative place, and accessible if one uses traditional artificial memory for an index: these adaptations are intended to expand the repertoire of what disciplined artificial memory can do, not abolish the traditional discipline.

Symbols are the last unexplored facet. Earlier I suggested that a chessboard with mirrors along its diagonal may be a good token to

chessboard with mirrors along its diagonal may be a good token to represent Cantor's diagonal argument, but does not bring memory of the whole proof. Now I would like to give the other side: an abstraction may not be fully captured by a symbol, but a good symbol helps. A sign/symbol distinction has been made, where a sign represents while a symbol represents and embodies. In this sense I suggest that tokens be as symbolic as possible.

Why use a token? Aren't the deepest thoughts beyond words? Yes, but recall depends on being able to encode. I have found my deepest thoughts to not be worded and often difficult to translate to words, but I have also found that I lose them if I cannot put them in words. As such, thinking and choosing a good, mentally manipulable symbol for an abstraction is both difficult and desirable. My own discipline of formation, mathematics, chooses names for variables like 'x', 'y', and 'z' which software engineers are taught not to use because they impede comprehension: a computer program with variable names like 'x' and 'y' is harder to understand or even write to completion than one which with names like 'trucks\_remaining' or 'customers\_last\_name'. The authors of *Design Patterns*[18] comment that naming a pattern is one of the hardest parts of writing it down. The art of creating a manipulable symbol for an abstraction is hard, but worth the trouble. This, too, may also help you to probe an abstraction in a way that will aid recall.

To test these principles, I decided to spend a week[19] seeing what I could learn of a physics text[20] and Kant's *Critique of Pure Reason*[21]. I considered myself to have understood a portion of the physics text after being able to solve the last of the list of questions. I had originally decided to see how quickly I could absorb material. After working through 10% of the physics text in one day, I decided to shift emphasis and pursue depth more than speed. In reading Kant, the tendency to barely grasp a difficult concept forgotten in grasping the next difficult concept gave way, with artificial memory, to understanding the concepts better and grasping them in a way that had a more permanent effect. I read through page 108 of 607 in the physics text and 144 of 669 in Kant's *Critique of Pure Reason*.

The first day's physics ventures saw two interesting ways of storing concepts, and one comment worth mentioning. There is a classic skit, in which two rescuers are performing two-person CPR on a patient. Then one of the rescuers says, "I'm getting tired. Let's switch," and the patient

gets up, the tired rescuer lies down, and the other two perform CPR on him. This was used to store the interchangeability of point of effort, point of resistance, and fulcrum on a lever, based on an isomorphism to the skit's humor element.

The rule given later, that along any axis the sum of forces for a body in equilibrium is always zero, was symbolized by an image of a knife cutting a circle through the center: no matter what angle of cutting there was, the cut leaves two equal halves.

These both involved images, but the images differed from pegging images as a schematic diagram differs from a computer animated advertisement. They seemed a combination of an isomorphism and a symbol, and in both cases the power stemmed not only from the resultant image but the process of creation. The images functioned in a sense related to pegging, but most of the images so far developed have been abstract images unlike anything I've read about in historical or how-to discussion of the art of memory.

The following was logged that night. The problem referred to is a somewhat complex lever problem given in three parts:

In reviewing the day's thoughts at night, I recognized that the problems seem to admit a shortcut solution that does not rigorously apply the principles but obtains the correct answer: problem 12 on page 31 gives two weights and other information, and all three subproblems can be answered by assuming that there are two parts in the same ratio [as] the weights, and applying a little horse sense as to which goes where. It's a bit like general relativity, which condenses to "Everything changes by a factor of the square root of  $(1 - (v^2/c^2))$ ." I am not sure whether this is a property of physics itself or a socially emergent property of problems used in physics texts.

I believe this suggests that I was interacting with the material deeply and quite probably in a fashion not anticipated by the authors.

In reading Kant, I can't as easily say "I solved the last exercises in each section" and don't simply want to just say, "I read these pages." I would like to demonstrate interaction with the material with excerpts from my log:

...I am now in the introduction to the second edition, and there

are two images in reference to Kant's treatment of subjective and objective. One is of a disc which has been cut in half, sliced again along a perpendicular axis and brought together along the first axis so that the direction of the cut has been changed. The other is of a sphere being turned out by [topologically] compactifying  $R^3$  [Euclidean three-space] by the addition of a single point, and then shifting so the vast outside has become the cramped inside and the cramped inside has become the vast outside. Both images are inadequate to the text, indicating at best what sort of thing may be thought about in what sort of shift Kant tries to introduce, and I want to reread the last couple of pages. Closer to the mark is a story about three umpires who say, in turn, "I calls them as they are," "I calls them as I see them," and "They may be strikes, they may be balls, but they ain't nothing until I calls them!"

---

Having reread, I believe that the topological example is truer than I realized. I made it on almost superficial grounds, after reading a footnote which gave as example scientific progress after Copernicus proposed, rather than that the observer be fixed and the heavens rotate, the heavens are fixed and the observer rotate. The deeper significance is this: prior accounts had apparently not given sufficient account to subjective factors, treating subjective differences as practically unimportant—what mattered for investigation was the things in themselves. Thus the subjective was the unexamined inside of the sphere. Then, after the transformation, the objective was the unexaminable inside of the new sphere: we may investigate what is now outside, our subjective states and the appearances conformed to them, but things in themselves are more sealed than our filters before: before, we didn't look; after, we can't look. What is stated [in Kant] so far is a gross overextension of a profound observation.

The below passages refer to pp. 68-70:

Kant's arguments that space is an *a priori* concept can be framed as showing that there exists a chicken-and-egg or bootstrapping gap between them and sense data.

What is a chicken-and-egg/bootstrapping gap? In assisting with English as a Second Language instruction, I was faced with a difficulty in explanation. Assuming certain background, it is possible for a person not to know something while there is a straightforward way of explaining—perhaps a very long way of explaining, but it's obvious enough how to explain it in terms of communicable concepts. Then there is the case where there is no direct way to explain something: one example is how to explain to a small child what air is. One can point to water, wood, metal, stone, food, and a great many other things, but the same procedure may not yield understanding of air. It may be possible with a Zen-like cleverness to circumvent it—in saying, for example, that air is what presses on your skin on a windy day—but it is not as straightforward as even an involved and difficult explanation where you know how to use the other person's concepts to build the argument.

owner person's concepts to build the one you want.

In English as a Second Language instruction, this kind of gap is a significant phenomenon in dealing with students who have no beginning English knowledge, and in dealing with concepts that cannot obviously be demonstrated: 'sister' and 'woman', when both terms refer to an adult, differ in a way that is almost certainly understood in the student's native tongue but is nonetheless extremely difficult to explain. When I first made the musing, I envisioned a Zen-like solution. Koans immortalize incidents in which Zen masters bypassed chicken-and-egg gaps in trying to convey enlightenment that cannot be straightforwardly explained, and therefore show a powerful kind of communication. That is what I envisioned, but it is not how English is taught to speakers of other languages. What happens in ESL classes, and with younger children, is a gradual emergence that is difficult to account for in the terms of analytic philosophy—a straightforward explanation sounds like hand-waving and sloppy thinking—but with enough repetition, material is picked up. It may have something to do with a mechanism of learning outlined in Polanyi's *Personal Knowledge*, which talks about how i.e. swimmers learn from coaches to inhale more air and exhale less completely so that their lungs act more as a flotation device than a non-swimmers, *even though neither swimmer nor coach is likely aware of what is going on on any conscious level*. People pick things up through at least one route besides grasping a concept consciously synthesized from sense data.

Kant's proof that a given concept is *a priori* essentially consists of argument that the concept that cannot be synthesized from sense data through the obvious means of central route processing. He is probably right in that the concepts he classifies as *a priori*, and presumably others as well, cannot just be synthesized from sense data through central route processing. It does not follow that a concept must be *a priori*: there are other possibilities besides the route Kant investigates that one can acquire a belief. I do believe, though, that we come with some kind of innate or *a priori* knowledge: the difficulties experienced in visualizing four dimensional objects suggest that our dealing with three-dimensional space is not simply the result of a completely amorphous central

nervous system which we happen to condition to deal with three dimensions; there is something of substance, comparable in character to a psychologist's broader understanding of memory, that we are born to. An investigation of that would take me too far afield.

---

P. 87. "Now a thing in itself cannot be known throu[gh] mere relations; and we may therefore conclude that since outer science gives us nothing but mere relations, this sense can contain in its representation only the relation of an object to the subject, and not the inner properties of the object in itself."

There is a near-compatibility between this and realist philosophy of science. How?

Recall my observation about chicken-and-egg gaps and how they may be surmounted (here I think of Zenlike short-circuiting of the gap rather than the vaguely indicated gradual emergence of concepts which haven't been subject to a detailed and understood explanation). What goes on in a physics experiment? The truly famous ones since 1900—I think of the Millikin oil-drop experiment—include a very clever hack that tricks nature into revealing herself. People, not even experimental physicists, can grab a handful of household items and prove that electric charge is quantized.[\[22\]](#) Perhaps that was possible in Galileo's day, but a groundbreaking experiment involves a brilliant, clever, unexpected trickery of nature that is isomorphic to a Zen short-circuiting in a chicken-and-egg gap, or a clever hack, and so on and so forth. Even a routine classroom experiment uses technology that is the fruit of this kind of resourcefulness. People do something they "shouldn't" be able to do. This is possibly how we might learn intuitions Kant classifies as *a priori*, and how experimental scientists cleverly circumvent the roadblock Kant describes here. It might be said that understanding this basic problem is prerequisite to a good realist philosophy of science.

'Hack', in this context, refers to the programming cleverness described in *Programming Pearls*[\[23\]](#). I analyzed that fundamental mode of problem solving and compared it with its counterpart in "Of Technology, Magic, and Channels"[\[24\]](#). There are other observations and interactions with the text, but I believe these should adequately make the point.

I chose Kant because of his reputation as an impenetrable analytic philosopher. With the aid of a good translation and these principles, I was at times surprised at how easy it was to read. By the end of the week, I

had another surprise when I decided to reread George MacDonald's *Phantastes*[\[25\]](#), a work which I have greatly enjoyed. This time, my experience was different. I felt my mind working differently despite a high degree of mental fatigue. The evocative metaphor fell dead, and I found myself reading the text as I would read Kant, thinking in a manner deeply influenced by reading Kant, and in the end setting it down because my mind had shifted deeply into a mode quite different from what allows me to enjoy *Phantastes*. I was surprised at how deeply using abstract memory to read Kant had affected not only conscious recall of ideas but also ways of thought itself.

I do not consider my recorded observations to be in any sense a rigorous experiment, but I believe the experience suggests it's interesting enough to be worth a good experiment.

Here are twelve proposed principles, or rules of thumb, of abstract memory:

1. Be wholly present. Want to know the material. Make it emotionally relevant and connected to something that concerns you. Don't take notes[\[26\]](#).
2. Encode material in multiple ways. Some different ways to encode are: analogies to different abstractions, list distinctions from similar abstractions, paraphrase, search for isomorphisms, use the concepts, and create visual symbols.[\[27\]](#)
3. At least in the beginning, mix a little bit of reading material with a lot of processing. Don't plough through anything you want to remember. Work on drawing a lot of mist in, not pounding with heavy drops that will create a beaten shield.
4. Don't read out of a desire to finish reading a text. Read to draw the materials through processed thought.
5. Process in a way that is striking, stunning, novel, and counter-intuitive: in a word, memorable.
6. Process material on as deep a level as you can.[\[28\]](#)
7. Search for subtle distinctions between a concept under study and its near neighbors.
8. Converse, interact with, and respond to the abstractions. What would you say if an acquaintance said that in a discussion? What questions would you ask? Write it down.

9. Know how much mental energy you have, and choose battles wisely. Given a limited amount of energy, it is better to fully remember a smaller number of critical abstractions than to have diffuse knowledge of many random ideas.
10. Guard your emotions. Be aware of what emotional states you learn well in, and put being in those states before passing your eyes over such-and-such many pages of reading material.
11. Review material after study, seeking to find a different way of putting it.
12. Metacogitate. Be your own coach.

Committing these principles to memory is left as an exercise to the reader.

What can I say to conclude this monograph? I can think of one or two brief addenda, such as the programmer's virtue of laziness[29], but in a very real sense I can't conclude now. I can sketch out a couple of critiques that may be of interest. Jerry Mander[30] critiques the artificial unusuality of television and especially advertising, in a way that has direct bearing on traditional mnemotechnics. He suggests that giving otherwise uninteresting sensation a strained and artificial unusuality has undesirable impact on how people perceive life as seen outside of TV, and the angle of his critique is the main reason why I was hesitant to learn artificial memory. There may be room for similar critiques about why making ridiculous comparisons to remember ideas creates a bad habit for someone who wishes to think rigorously. There is also the cognitive critique that the search for isomorphisms will introduce unnoted distortion. One thinks of the person who says, "All the religions in the world say the same thing." There is a common and problematic tendency to be astute in perceiving substantial similarities among world religions and all but blind in perceiving even more substantial differences. That is why I suggest comparing with multiple and different familiar concepts, rather than one. I could give other thoughts about critiques, but I'm trying to explain an art of memory, not especially to defend it. My intention here is not to settle all questions, but open the biggest one and suggest a direction of inquiry by which an emerging investigation may find a more powerful way to learn abstractions.[31]

## Notes

1. Yates, Frances A., *The Art of Memory*, hereafter *AM*, Chicago: University of Chicago Press, 1966, pp. 1-2. The text is a treasure trove on the development of mnemotechnics, also referred to here as artificial memory or the art of memory. [Back](#)

# Acknowledgments

There are a number of people who helped make this website possible. I'd like to thank:

- Steve Adams for invaluable help in getting hovering JavaScript menus to work.
- My family, for supporting me as I've been working on this.
- Anthony Trendl, who encouraged and convinced me to revamp my website the first time.
- Innes Sheridan, Lester Barker, and [Michael Rascia](#), who took various pictures for my site.
- [IMSA](#), which was a cool experience, and which hosted my writings for several years.
- All of the people who have given me awards, or who have taken precious time out of their lives to evaluate my site (even if they didn't give me an award).
- *Tamuril*, for giving me the kick in the seat of the pants that I needed, by rejecting my application upgrade and saying in essence, "I've given you as many points as I can without you sprucing up your graphics more," and then offering help and feedback when I asked for it.
- Those who have helped with my writing, including *Suma Ramachandran* ([The Sign of the Grail](#)).
- Nicoletta, for suggestions for [The Angelic Letters](#).
- **All** of my visitors:
  - Those who [link to Jonathan's Corner](#) and let other people know about it.
  - Those who just visit—*this site was made for you!*

# Actually, to Me, It Is a Very Good Day

Let me begin by sharing my favorite *For Better or for Worse* strip. On a night that is dark, wet, and probably quite cold, John Patterson steps into a cab and says, "What a miserable day!" The cabby surprises him by saying, "Actually, to me, it is a very good day."

John is surprised, but the cabby explains. "You see," he says, "I am from Sudan. I have seen my friends shot and killed. I have a wife whom I have not seen in two years, and a son whom I have never seen. But every day I save a little, and I am that much closer to bringing them here." At the end of the trip, John rather pensively pays and tips the cabby.

Then he steps in the door—it is still dark, wet, and probably rather cold—and his wife says, "What a miserable day!"

John simply puts his arms around her and their little girl, and said, "Actually, to me, it is a very good day."

This is a good vignette to be mindful of, and if economic times are rougher now than when these words first appeared, it does not diminish their truth in the *least*. To me, it is a very good day.

To me, it is a very good day.

And let me explain what I mean.

One of my goals in life has been to be a scholar, and I've tried hard to earn credentials to teach in theology. Given the difficulties Ph.D. holders have getting a job, it seemed to me to be rather silly to apply for a job without getting the standard "union card:" a Ph.D.

I became a graduate student in theology while overcoming cancer, and earned a master's in theology under Cambridge's philosophy of religion seminar. And, after some time to recover, I entered a Ph.D. program.

And

And...

I've spent a lot of time looking for a way to explain what happened in the Ph.D. program. Eventually, I began to suspect that I might be having such difficulty finding an appropriate way to explain those events because they are not the kind of thing that *can* be explained appropriately.

So let me say the following.

- I'm a pretty bright guy. Ranked 7th in a nationwide math contest. Did an independent study of calculus in middle school. Studied over a dozen languages. And so on.
- I honestly found more than one thing at the university to be *worse* than suffering chemo. (And chemotherapy included the worst hour of merely physical pain in my life.)
- The university is not budging in their position that, as my GPA in all that happened was 3.386/4.0 and a 3.5 was required, I have washed out of their Ph.D. program.

And I'm not sure, after an experience like that, that I'm really in the best position to apply to another program: references are important, and it would show a profound naïveté to tell a professor, "I know you retaliated for my gestures of friendship, but you'll still be kind and give me a good letter of reference, right?" I am not in the best position to apply to another Ph.D. program. And I wish to very clearly say, *today is a very good day to me.*

The goals I was pursuing are a privilege and not a right. For that matter, the job I have now is not something to be taken for granted. I have a job that is meeting all my basic expenses. Most jobs you have at least one pest to deal with. Not this one; there is not a single person at my job that I would rather not deal with. They're all decent people.

If I had my way and got my Ph.D., there are other things that probably would not have happened, including my books being published. And I am quite glad for that. And even in theology, I may never be involved with theology on the terms I envisioned, but that is not nearly so final as it sounds, and I would like to be clear about that.

A Christian in the West may or may not find it strange to place theology in the category of "academic disciplines." In Orthodoxy the placement is strange indeed, because theology, even in its treatment of texts, is much more a spiritual discipline of prayer than a technical

discipline of analysis. And in that sense, the door to theology is as open to me as it ever was: it is a door that I can enter through repentance, and is as open to me now as much as any time.

To me, it is a very good day.

And perhaps I may well leave behind something value, but perhaps God did not intend it to be scholarship. Perhaps I was just meant to write.

And on that note, I would like to share some snippets, some highlights, from my books.

The books include several shorter works building up to a long piece; [The Sign of the Grail](#) tells the story of a young man whose world begins to deepen when he discovers, in his college dorm room, a book of Arthurian legends:

After eating part of his meal, George opened *Brocéliande*, flipping from place to place until an illustration caught his eye. He read:

Merlin walked about in the clearing on the Isle of Avalon. To his right was the castle, and to his left was the forest. Amidst the birdsong a brook babbled, and a faint fragrance of frankincense flowed.

Sir Galahad walked out of the castle portal, and he bore a basket of bread.

Then Galahad asked Merlin about his secrets and ways, of what he could do and his lore, of his calling forth from the wood what a man anchored in the castle could never call forth. And Galahad enquired, and Merlin answered, and Galahad enquired of Merlin if Merlin knew words that were more words than our words and more mystically real than the British tongue, and then the High Latin tongue, and then the tongue of Old Atlantis. And then Galahad asked after anything beyond Atlantis, and Merlin's inexhaustible fount ran dry.

Then Sir Galahad asked Merlin of his wood, of the stones and herbs, and the trees and birds, and the adder and the dragon, the gryphon and the lion, and the unicorn whom only a virgin may touch. And Merlin spake to him him of the pelican, piercing her bosom that her young may feed, and the wonders, virtues, and interpretation of each creature, until Galahad asked of the dragon's head for which Uther had been called Uther

Pendragon, and every Pendragon after him bore the title of King and Pendragon. Merlin wot the virtue of the dragon's body, but of the dragon's head he wot nothing, and Sir Galahad spake that it was better that Merlin wist not.

Then Sir Galahad did ask Merlin after things of which he knew him nothing, of what was the weight of fire, and of what is the end of natural philosophy without magic art, and what is a man if he enters not in the castle, and "Whom doth the Grail serve?", and of how many layers the Grail hath. And Merlin did avow that of these he wist not none.

Then Merlin asked, "How is it that you are wise to ask after these all?"

Then Galahad spake of a soft voice in Merlin his ear and anon Merlin ran into the wood, bearing bread from the castle.

George was tired, and he wished he could read more. But he absently closed the book, threw away what was left of his hamburgers and fries, and crawled into bed. It seemed but a moment that he was dreaming.

George found himself on the enchanted Isle of Avalon, and it seemed that the Grail Castle was not far off.

George was in the castle, and explored room after room, entranced. Then he opened a heavy wooden door and found himself facing the museum exhibit, and he knew he was seeing the same 5<sup>th</sup>-6<sup>th</sup> century sword from the Celtic lands, only it looked exactly like a wall hanger sword he had seen online, a replica of a 13<sup>th</sup> century Provençale longsword that was mass produced, bore no artisan's fingerprints, and would split if it struck a bale of hay. He tried to make it look like the real surface, ever so real, that he had seen, but machined steel never changed.

Then George looked at the plaque, and every letter, every word, every sentence was something he could read but the whole thing made no sense. Then the plaque grew larger and larger, until the words and even letters grew undecipherable, and he heard what he knew were a dragon's footprints and smelled the stench of acrid smoke. George went through room and passage until the noises grew louder, and chanced to glance at a pool and see his reflection.

He could never remember what his body looked like, but his head

HE COULD NEVER REMEMBER what his body looked like, but his head was unmistakably the head of a dragon.

And the story of this nightmare is part of the story of how he begins questing for the Holy Grail and ultimately wakes up in life.

A short story builds up in [The Christmas Tales](#):

*The crown of Earth is the temple,  
and the crown of the temple is Heaven.*

Stephan ran to get away from his pesky sister—if nothing else he could at least outrun her!

Where to go?

One place seemed best, and his legs carried him to the chapel—or, better to say, the temple. The chapel was a building which seemed larger from the inside than the outside, and (though this is less remarkable than it sounds) it is shaped like an octagon on the outside and a cross on the inside.

Stephan slowed down to a walk. This place, so vast and open and full of light on the inside—a mystically hearted architect who read *The Timeless Way of Building* might have said that it breathed—and Stephan did not think of why he felt so much at home, but if he did he would have thought of the congregation worshipping with the skies and the seas, the rocks and the trees, and choir after choir of angels, and perhaps he would have thought of this place not only as a crown to earth but a room of Heaven.

What he was thinking of was the Icon that adorns the Icon stand, and for that matter adorns the whole temple. It had not only the Icons, but the relics of (from left to right) Saint Gregory of Nyssa, Saint John Chrysostom, and Saint Basil the Great. His mother had told Stephan that they were very old, and Stephan looked at her and said, "Older than email? Now *that* is old!" She closed her eyes, and when she opened them she smiled. "Older than email," she said, "and electric lights, and cars, and a great many of the kinds of things in our house, and our country, and..." her voice trailed off. He said, "Was it as old as King Arthur?" She said, "It is older than even the tale of King Arthur and his Knights of the Round Table."

This story, incidentally, is set in a real place. I have been there.

One of the medium-sized works in [A Cord of Seven Strands](#) is a narrative as of a dream:

You pull your arms to your side and glide through the water. On your left is a fountain of bubbles, upside down, beneath a waterfall; the bubbles shoot down and then cascade out and to the surface. To your right swims a school of colorful fish, red and blue with thin black stripes. The water is cool, and you can feel the currents gently pushing and pulling on your body. Ahead of you, seaweed above and long, bright green leaves below wave back and forth, flowing and bending. You pull your arms, again, with a powerful stroke which shoots you forward under the seaweed; your back feels cool in the shade. You kick, and you feel the warmth of the sun again, soaking in and through your skin and muscles. Bands of light dance on the sand beneath you, as the light is bent and turned by the waves.

There is a time of rest and stillness; all is at a deep and serene peace. The slow motion of the waves, the dancing lights below and above, the supple bending of the plants, all form part of a stillness. It is soothing, like the soft, smooth notes of a lullaby.

Your eyes slowly close, and you feel even more the warm sunlight, and the gentle caresses of the sea. And, in your rest, you become more aware of a silent presence. You were not unaware of it before, but you are more aware of it now. It is there:

Being.

Love.

Life.

Healing.

Calm.

Rest.

Reality.

Like a tree with water slowly flowing in, through roots hidden deep within the earth, and filling it from the inside out, you abide in the presence. It is a moment spent, not in time, but in eternity.

[Firestorm 2034](#) tells the story of a brilliant medieval traveler transported to some twenty or thirty years in our future. It's a little like a story told more compactly and more like a dream:

It was late in the day, and my feet were hurting.

I had spent the past three hours on the winding path up the foothills, and you will excuse me if I was not paying attention to the beauty around me.

I saw it, and then wondered how I had not seen it—an alabaster palace rising out of the dark rock around it, hidden in a niche as foothill became mountain. After I saw it, I realized—I could not tell if the plants around me were wild or garden, but there was a grassy spot around it. Some of my fatigue eased as I looked into a pond and saw koi and goldfish swimming.

I looked around and saw the Gothic buildings, the trees, the stone path and walkways. I was beginning to relax, when I heard a voice say, "Good evening," and looked, and realized there was a man on the bench in front of me.

He was wearing a grey-green monk's robe, and cleaning a gun. He looked at me for a moment, tucked the gun into a shack, and welcomed me in.

Outside, the sun was setting. At the time, I thought of the last rays of the dying sun—but it was not that, so much as day giving birth to night. We passed inside to a hallway, with wooden chairs and a round wooden table. It seemed brightly enough lit, if by torchlight.

My guide disappeared into a hallway, and returned with two silver chalices, and set one before me. He raised his chalice, and took a sip.

The wine was a dry white wine—refreshing and cold as ice. It must have gone to my head faster than I expected; I gave a long list of complaints, about how inaccessible this place was, and how hard the road. He listened silently, and I burst out, "Can you get the master of this place to come to me? I need to see him personally."

The servant softly replied, "He knows you are coming, and he will see you before you leave. In the mean time, may I show you around his corner of the world?"

I felt anger flaring within me; I am a busy man, and do not like to waste my time with subordinates. If it was only one of his underlings who would be available, I would have sent a subordinate myself. As I thought this, I was surprised to hear myself say, "Please."

We set down the chalices, and started walking through a maze of passageways. He took a small oil lamp, one that seemed to burn

passageways. He took a small oil lamp, one that seemed to burn brightly, and we passed through a few doors before stepping into a massive room.

The room blazed with intense brilliance; I covered my eyes, and wondered how they made a flame to burn so bright. Then I realized that the chandeliers were lit with incandescent light. The shelves had illuminated manuscripts next to books with plastic covers—computer science next to bestiaries. My guide went over by one place, tapped with his finger—and I realized that he was at a computer.

Perhaps reading the look on my face, my guide told me, "The master uses computers as much as you do. Do you need to check your e-mail?"

I asked, "Why are there torches in the room you left me in, and electric light here?"

He said, "Is a person not permitted to use both? The master, as you call him, believes that technology is like alcohol—good within proper limits—and not something you have to use as much as you can. There are electric lights here because their brilliance makes reading easier on the eyes. Other rooms have torches, or nothing at all, because a flame has a different meaning, one that we prefer. Never mind; I can get you a flashlight if you like. Oh, and you can take off your watch now. It won't work here."

"It won't work? Look, it keeps track of time to the second, and it is working as we speak!"

The man studied my watch, though I think he was humoring me, and said, "It will give a number as well here as anywhere else. But that number means very little here, and you would do just as well to put it in your pocket."

I looked at my watch, and kept it on. He asked, "What time is it?"

I looked, and said, "19:58."

"Is that all?"

I told him the seconds, and then the date and year, and added, "But it doesn't feel like the 21st century here." I was beginning to feel a little nervous.

He said, "What century do you think it is here?"

I said, "Like a medieval time that someone's taken a scissors to. You have a garden with perfect gothic architecture, and you in a monk's robe, holding an expensive-looking rifle. And a computer in a

library that doesn't even try to organize books by subject or time."

I looked around on the wall, and noticed a hunting trophy. Or at least that's what I took it for at first. There was a large shield-shaped piece of wood, such as would come with a beautiful stag—but no animal's head. Instead, there were hundreds upon hundreds of bullet holes in the wood—enough that the wood should have shattered. I walked over, and read the glass plate: "This magnificent deer shot 1-4-98 in Wisconsin with an AK-47. God bless the NRA."

I laughed a minute, and said, "What is this doing in here?"

The servant said, "What is anything doing here? Does it surprise you?"

I said, "From what I have heard, the master of this place is very serious about life."

My guide said, "Of course he is. And he cherishes laughter."

I looked around a bit, but could not understand why the other things were there—only be puzzled at how anyone could arrange a computer and other oddments to make a room that felt unmistakably medieval. Or was it? "What time is it here? To you?"

My guide said, "Every time and no time. We do not measure time by numbers here; to the extent that time is 'measured', we 'measure' by what fills it—something qualitative and not quantitative. Your culture measures a place's niche in history by how many physical years have passed before it; we understand that well enough, but we reckon time, not by its place in the march of seconds, but by the content of its character. You may think of this place as medieval if you want; others view it as ancient, and not a small part is postmodern—more than the computer is contemporary."

I looked at my watch. Only five minutes had passed. I felt frustration and puzzlement, and wondered how long this could go on.

"When can we move on from here?"

"When you are ready. You aren't ready yet."

I looked at my watch. Not even ten seconds had passed. The second hand seemed to be moving very slowly.

I felt something moving in the back of my mind, but I tried to push it back. The second hand continued on its lazy journey, and then—I took off my watch and put it in my pocket.

My guide stood up and said, "Walk this way, please."

my guide stood up and said, "Walk this way, please."

He led me to a doorway, opening a door, and warning me not to step over the threshold. I looked, and saw why—there was a drop of about a foot, into a pool of water. The walls were blue, and there was sand at the far end. Two children—a little boy and a little girl—were making sand castles.

He led me through the mazelike passages to rooms I cannot describe. One room had mechanical devices in all stages of assembly and disassembly. Another was bare and clean. The kitchen had pepperoni and peppers hanging, and was filled with an orange glow that was more than torchlight. There was a deserted classroom filled with flickering blue light, and then we walked into a theatre.

The chamber was small, and this theatre had more than the usual slanted floor. The best way I could describe it is to say that it was a wall, at times vertical, with handholds and outcroppings. There were three women and two men on the stage, but not standing—or sitting, for that matter. They were climbing, shifting about as they talked.

I could not understand their language, but there was something about it that fascinated me. I was surprised to find myself listening to it. I was even more surprised to realize that, if I could not understand the words, I could no less grasp the story. It was a story of friendship, and there is something important in that words melted into song, and climbing into dance.

I watched to the end. The actors and actresses did not disappear backstage, but simply climbed down into the audience, and began talking with people. I could not tell if the conversation was part of the act, or if they were just seeing friends. I wondered if it really made any difference—and then realized, with a flash, that I had caught a glimpse into how this place worked.

When I wanted to go, the servant led me to a room filled with pipes. He cranked a wheel, and I heard gears turning, and began to see the jet black keys of an organ. He played a musical fragment; it sounded incomplete.

He said, "Play."

I closed my eyes and said, "I don't know how to play any instrument."

He repeated the fragment and said, "That doesn't matter. Play."

There followed a game of question and answer—he would

improvise a snatch of music, and I would follow. I would say that it was beautiful, but I couldn't really put it that way. It would be better to say that his music was mediocre, and mine didn't quite reach that standard.

We walked out into a cloister. I gasped. There was a sheltered pathway around a grassy court and a pool stirred by fish. It was illumined by moon and star, and the brilliance was dazzling.

We walked around, and I looked. In my mind's eye I could see white marble statues of saints praying—I wasn't sure, but I made up my mind to suggest that to the master. After a time we stopped walking on the grass, and entered another door.

Not too far into the hallway, he turned, set the oil lamp into a small alcove, and began to rise up the wall. Shortly before disappearing into the blackness above, he said, "Climb."

I learn a little, I think. I did not protest; I put my hands and feet on the wall, and felt nothing. I leaned against it, and felt something give way—something yielding to give a handhold. Then I started climbing. I fell a couple of times, but reached the shadows where he disappeared. He took me by the hand and began to lead me along a path.

I could feel a wall on either side, and then nothing, save his hand and my feet. Where was I? I said, "I can't see!"

A woman's voice said, "No one can see here. Eyes aren't needed." I felt an arm around my waist, and a gentle squeeze.

I felt that warmth, and said, "I came to this place because I wanted to see the master of this house, and I wanted to see him personally. Now—I am ready to leave without seeing him. I have seen enough, and I no longer want to trouble him."

I felt my guide's hand on my shoulder, and heard his voice as he said, "You have seen me personally, and you are not troubling me. You are here at my invitation. You will always be welcome here."

When I first entered the house, I would have been stunned. Now, it seemed the last puzzle piece in something I had been gathering since I started hiking.

The conversation was deep, and I cannot tell you what was said. I don't mean that I forgot it—I remember it clearly enough. I don't really mean that it would be a breach of confidence—it might be that

as well. What I mean is that there was something special in that room, and it would not make much sense to you even if I could explain it. If I were to say that we talked in a room without light, where you had to feel around to move about—it would be literally true, but beside the point. When I remember the room, I do not think about what wasn't there, but what was there. I was glad I took off my watch—but I cannot say why. The best thing I can say is that if you can figure out how a person could be aware of a succession of moments, and at the same time have time sense that is not entirely linear—or at very least not *just* linear—you have a glimpse of what I found in that room.

We talked long, and it was late into the next day when I got up from a perfectly ordinary guestroom, packed, and left. I put on my watch, returned to my business, and started working on the backlog of invoices and meetings that accumulated in my absence. I'm still pretty busy, but I have never left that room.

[Hayward's Unabridged Dictionary](#) is a thin volume for a dictionary, but then it works a little unlike the more standard dictionary one uses to look things up:

**Form**, *n.* A piece of paper used by administrations to deter people from using their services. It is the opinion of this lexicographer that the following form could be of the utmost assistance in helping bureaucracies more effectively serve those under their care.

**Form to Request Information in the Form of a Form**

**Expected time wasted on questions judged to be annoying, unnecessary, and/or personally offensive: \_\_\_ Hours, \_\_\_ Minutes, \_\_\_ Seconds.**

**Expected blood pressure increase while filling out form: \_\_\_ mmHg systolic, \_\_\_ mmHg diastolic.**

If further contemplation has led you to believe that some of the questions asked are not strictly necessary to provide the service that you offer upon completion of said form, please enclose revised prototype here.

Page 2 \* End of Section 2 of 3

### **Section 3: Essay Questions**

Please explain, in 500 words or less, your philosophy concerning the use of forms.

Please explain, in 200 words or less, why you designed this form as you did.

Please explain, in 300 words or less, why you believe that this form is necessary. If you are in a service oriented sector and desire to require the form of people you serve, please explain why you believe that requiring people to fill out forms constitutes a service to them.

When this form is completed, please return to the address provided. The Committee for Selecting Forms will carefully examine your case and delegate responsibility to an appropriate subcommittee.

Please allow approximately six to eight weeks for the appointed subcommittee to lose your file in a paper shuffle.

Page 3 \* End of Section 3 of 3

But many of the definitions are shorter: "**Christmas**, *n.* An annual holiday celebrating the coming of the chief Deity of Western civilization: Mammon."

[Yonder](#) is a shorter work, like the others can be mischievous and iconoclastic, and opens with a fictitious news article heralding the discovery of an inclusive language manuscript for a good chunk of the Greek New Testament. The culminating work is a Socratic dialogue, set in a science fiction thoughtscape that paints a terrifying silhouette and asks a terrifying question, "What if we really didn't have the things about a world of men and women and all the things that we chafe at?" Along the way to that work comes a moment of rest:

The day his daughter Abigail was born was the best day of Abraham's life. Like father, like daughter, they said in the village, and especially of them. He was an accomplished musician, and she breathed music.

He taught her a music that was simple, pure, powerful. It had only one voice; it needed only one voice. It moved slowly, unhurriedly, and had a force that was spellbinding. Abraham taught Abigail many songs, and as she grew, she began to make songs of her own. Abigail knew nothing of polyphony, nor of hurried technical complexity; her songs needed nothing of them. Her songs came from an unhurried time out of time, gentle as lapping waves, and mighty as an ocean.

One day a visitor came, a young man in a white suit. He said, "Before your father comes, I would like you to see what you have been missing." He took out a music player, and began to play.

Abby at first covered her ears; she was in turn stunned, shocked, and intrigued. The music had many voices, weaving in and out of each other quickly, intricately. She heard wheels within wheels within wheels within wheels of complexity. She began to try, began to think in polyphony — and the man said, "I will come to you later. It is time for your music with your father."

Every time in her life, sitting down at a keyboard with her father was the highlight of her day. Every day but this day. This day, she could only think about how simple and plain the music was, how lacking in complexity. Abraham stopped his song and looked at his daughter "Who have you been listening to Abigail?"

daughter. "Who have you been listening to, Abigail."

Something had been gnawing at Abby's heart; the music seemed bleak, grey. It was as if she had beheld the world in fair moonlight, and then a blast of eerie light assaulted her eyes — and now she could see nothing. She felt embarrassed by her music, ashamed to have dared to approach her father with anything so terribly unsophisticated. Crying, she gathered up her skirts and ran as if there were no tomorrow.

Tomorrow came, and the day after; it was a miserable day, after sleeping in a gutter. Abigail began to beg, and it was over a year before another beggar let her play on his keyboard. Abby learned to play in many voices; she was so successful that she forgot that she was missing something. She occupied herself so fully with intricate music that in another year she was asked to give concerts and performances. Her music was rich and full, and her heart was poor and empty.

Years passed, and Abigail gave *the* performance of her career. It was before a sold-out audience, and it was written about in the papers. She walked out after the performance and the reception, with moonlight falling over soft grass and fireflies dancing, and something happened.

Abby heard the wind blowing in the trees.

In the wind, Abigail heard music, and in the wind and the music Abigail heard all the things she had lost in her childhood. It was as if she had looked in an image and asked, "What is that wretched thing?" — and realized she was looking into a mirror. No, it was not quite that; it was as if in an instant her whole world was turned upside down, and her musical complexity she could not bear. She heard all over again the words, "Who have you been listening to?" — only, this time, she did not think them the words of a jealous monster, but words of concern, words of "Who has struck a blow against you?" She saw that she was blind and heard that she was deaf: that the hearing of complexity had not simply been an opening of her ears, but a wounding, a smiting, after which she could not know the concentrated presence a child had known, no matter how complex — or how simple — the music became. The sword cut deeper when she tried to sing songs from her childhood, at first could remember none, then could remember one — and it sounded empty

— and she knew that the song was not empty. It was her. She lay down and wailed.

Suddenly, she realized she was not alone. An old man was watching her. Abigail looked around in fright; there was nowhere to run to hide. "What do you want?" she said.

"There is music even in your wail."

"I loathe music."

There was a time of silence, a time that drew uncomfortably long, and Abigail asked, "What is your name?"

The man said, "Look into my eyes. You know my name."

Abigail stood, poised like a man balancing on the edge of a sword, a chasm to either side. She did not — Abigail shrieked with joy.

"*Daddy!*"

"It has been a long time since we've sat down at music, sweet daughter."

"You don't want to hear my music. I was ashamed of what we used to play, and I am now ashamed of it all."

"Oh, child! Yes, I do. *I will never be ashamed of you.* Will you come and walk with me? I have a keyboard."

As Abby's fingers began to dance, she first felt as if she were being weighed in the balance and found wanting. The self-consciousness she had finally managed to banish in her playing was now there — ugly, repulsive — and then she was through it. She made a horrible mistake, and then another, and then laughed, and Abraham laughed with her. Abby began to play and then sing, serious, inconsequential, silly, and delightful in the presence of her father. It was as if shackles fell from her wrists, her tongue loosed — she thought for a moment that she was like a little girl again, playing at her father's side, and then knew that it was better. What could she compare it to? She couldn't. She was at a simplicity beyond complexity, and her father called forth from her music that she could never have done without her trouble. The music seemed like dance, like laughter; it was under and around and through her, connecting her with her father, a moment out of time.

After they had both sung and laughed and cried, Abraham said, "Abby, will you come home with me? My house has never been the same without you."

There are some other passages that I would like to quote, but I'll stop with one more, from [The Steel Orb](#), which ends with a paired science fiction short work and a fantasy novella. Both of those works share in this paean's joy:

With what words  
shall I hymn the Lord of Heaven and Earth,  
the Creator of all things visible and invisible?  
Shall I indeed meditate  
on the beauty of his Creation?

As I pray to Thee, Lord,  
what words shall I use,  
and how shall I render Thee praise?

Shall I thank thee for the living tapestry,  
oak and maple and ivy and grass,  
that I see before me  
as I go to return to Thee at Church?

Shall I thank Thee for Zappy,  
and for her long life—  
eighteen years old and still catching mice?  
Shall I thank thee for her tiger stripes,  
the color of pepper?  
Shall I thank thee for her kindness,  
and the warmth of her purr?

Shall I thank Thee for a starry sapphire orb  
hung with a million million diamonds, where  
"The heavens declare the glory of God;  
and the firmament proclaims the work of his hands.  
Day to day utters speech,  
and night to night proclaims knowledge.  
There are no speeches or words,  
in which their voices are not heard.  
Their voice is gone out into all the earth,  
and their words to the end of the earth.  
In the sun he has set his tabernacle;  
and he comes forth as a bridegroom out of his chamber: he will exult  
as a giant to run his course."?

Shall I thank Thee for the river of time

Shall I thank Thee for the River of Time,  
now flowing quickly,  
now flowing slowly,  
now narrow,  
now deep,  
now flowing straight and clear,  
now swirling in eddies that dance?

Shall I thank Thee for the hymns and songs,  
the chant at Church, when we praise Thee in the head of Creation,  
the vanguard of Creation that has come from Thee in Thy splendor  
and to Thee returns in reverence?

Shall I thank thee for the Chalice:  
an image,  
an icon,  
a shadow of,  
a participation in,  
a re-embodiment of,  
the Holy Grail?

Shall I forget how the Holy Grail itself  
is but the shadow,  
the impact,  
the golden surface reflecting the light,  
secondary reflection to the primeval light,  
the wrapping paper that disintegrates next to the Gift it holds:  
that which is  
mystically and really  
the body and the blood of Christ:  
the family of saints  
for me to be united to,  
and the divine Life?

Shall I meditate  
on how I am fed  
by the divine generosity  
and the divine gift  
of the divine energies?

Shall I thank Thee for a stew I am making,  
or for a body nourished by food?

Shall I indeed muse that there is

nothing else I could be nourished by,  
for spaghetti and bread and beer  
are from a whole cosmos  
illuminated by the divine light,  
a candle next to the sun,  
a beeswax candle,  
where the sun's energy filters through plants  
and the work of bees  
and the work of men  
to deliver light and energy from the sun,  
and as candle to sun,  
so too is the bread of earth  
to the Bread that came from Heaven,  
the work of plants and men,  
the firstfruits of Earth  
returned to Heaven,  
that they may become  
the firstfruits of Heaven  
returned to earth?

Shall I muse on the royal "we,"  
where the kings and queens  
said not of themselves "I", but "we"  
while Christians are called to say "we"  
and learn that the "I" is to be transformed,  
made luminous,  
scintillating,  
when we move beyond "Me, me, me,"  
to learn to say, "we"?

And the royal priesthood is one in which we are called to be  
a royal priesthood,  
a chosen people,  
more than conquerors,  
a Church of God's eclecticism,  
made divine,  
a family of little Christs,  
sons to God and brothers to Christ,  
the ornament of the visible Creation,  
of rocks and trees and stars and seas

of rocks and trees and stars and seas,  
and the spiritual Creation as well:  
seraphim, cherubim, thrones  
dominions, principalities, authorities,  
powers, archangels, angels,  
rank on rank of angels,  
singing before the presence of God,  
and without whom no one can plumb the depths  
of the world that can be seen and touched.

For to which of the angels did God say,  
"You make my Creation complete," or  
"My whole Creation, visible and invisible,  
is encapsulated in you,  
summed up in your human race?"

To which of the angels  
did the divine Word say,  
"I am become what you are  
that you may become what I am?"

To which of the angels did the Light say,  
"Thou art my Son; today I have adopted Thee,"  
and then turn to say,  
"You are my sons; today I have adopted you;  
because I AM WHO I AM,  
you are who you are."?

So I am called to learn to say, "we",  
and when we learn to say we,  
that "we" means,  
a royal priesthood,  
a chosen people,  
more than conquerors,  
a Church of God's eclecticism,  
a family of little Christs,  
made divine,  
the ornament of Creation, visible and invisible,  
called to lead the whole Creation  
loved into being by God,  
to be in love  
that to God they may return.

And when we worship thus,  
it cannot be only us, for  
apples and alligators,  
boulders and bears,  
creeks and crystals,  
dolphins and dragonflies,  
eggplants and emeralds,  
fog and furballs,  
galaxies and grapes,  
horses and habaneros,  
ice and icicles,  
jacinth and jade,  
kangaroos and knots,  
lightning and light,  
meadows and mist,  
nebulas and neutrons,  
oaks and octupi,  
porcupines and petunias,  
quails and quarks,  
rocks and rivers,  
skies and seas,  
toads and trees,  
ukeleles and umber umbrellas,  
wine and weirs,  
xylophones and X-rays,  
yuccas and yaks,  
zebras and zebrawood,  
are all called to join us before Thy throne  
in the Divine Liturgy:

Praise ye the Lord.  
Praise ye the Lord from the heavens:  
praise him in the heights.  
Praise ye him, all his angels:  
praise ye him, all his hosts.  
Praise ye him, sun and moon:  
praise him, all ye stars of light.  
Praise him, ye heavens of heavens.

and ye waters that be above the heavens.  
Let them praise the name of the Lord:  
for he commanded, and they were created.  
He hath also stablished them for ever and ever:  
he hath made a decree which shall not pass.  
Praise the Lord from the earth, ye dragons, and all deeps:  
Fire, and hail; snow, and vapours;  
stormy wind fulfilling his word:  
Mountains, and all hills;  
fruitful trees, and all cedars:  
Beasts, and all cattle;  
creeping things, and flying fowl:  
Kings of the earth, and all people;  
princes, and all judges of the earth:  
Both young men, and maidens;  
old men, and children:  
Let them praise the name of the Lord:  
for his name alone is excellent;  
his glory is above the earth and heaven.  
He also exalteth the horn of his people,  
the praise of all his saints;  
even of the children of Israel,  
a people near unto him.  
Praise ye the Lord.

And my blessings are not just that, unlike the cab driver, I have not seen my friends shot and killed. Nor is it just that I have a job in a time when having a job shouldn't be taken for granted—working with kind co-workers, and a good boss, to boot. I've received my first major book review—and, I hope, not the last:

Down through the centuries, the Legend of King Arthur has been used as an icon for so many literary works in the western world. "[The Sign of the Grail](#)" is a collection of memorable literary works by CJS Hayward centering around the Holy Grail and what it means to orthodox religion, as well as those who follow those teachings. Tackling diverse subjects such as iconography and an

earthly paradise, he pulls no punches when dealing with many of the topics laid out through the legends. "[The Sign of the Grail](#)" is a unique, scholarly, and thorough examination of the Grail mythos, granting it a top recommendation for academia and the non-specialist general reader with an interest in these subjects. Also very highly recommended for personal, academic, and community library collections are CJS Hayward's other deftly written and original literary works, essays, and commentaries compilations and anthologies: "[Yonder](#)" (9780615202174, \$40.00); "[Firestorm 2034](#)" (9780615202167, \$40.00), "[A Cord of Seven Strands](#)" (9780615202174, \$40.00), "[The Steel Orb](#)" (9780615193618, \$40.00), "[The Christmas Tales](#)" (9780615193632, \$40.00), and "[Hayward's Unabridged Dictionary](#)" (9780615193625, \$40.00).

John Burroughs

Reviewer

[The Midwest Book Review]

Actually, to me, it is a very good day.

# **The Administrator Who Cried, "Important!"**

Once upon a time, there was a new employee, hired fresh out of college by a big company. The first day on the job, he attended a pep rally, filled out paperwork concerning taxes and insurance, and received a two page document that said at the top, "Sexual Harassment Policy: Important. Read Very Carefully!"

So our employee read the sexual harassment policy with utmost care, and signed at the bottom indicating that he had read it. The policy was a remedial course in common sense, although parts of it showed a decided lack of common sense. It was an insult to both his intelligence and his social maturity.

Our employee was slightly puzzled as to why he was expected to read such a document that carefully, but soon pushed doubts out of his mind. He trotted over to his new cubicle, sat down, and began to read the two inch thick manual on core essentials that every employee needs to know. He was still reading core essentials two hours later when his boss came by and said, "Could you take a break from that? I want to introduce you to your new co-workers, and show you around."

So our employee talked with his boss — a knowledgeable, competent, and understanding woman — and enjoyed meeting his co-workers, trying to learn their names. He didn't have very much other work yet, so he dutifully read everything that the administrators sent him — even the ones that didn't say "Important — please read" at the top. He read about ISO 9001 certification, continual changes and updates to company policy, new technologies that the company was adopting, employee discounts

new technologies that the company was adopting, employee discounts, customer success stories, and other oddments totalling to at least a quarter inch of paper each day, not counting e-mails.

His boss saw that he worked well, and began to assign more difficult tasks appropriate to his talent. He took on this new workload while continuing to read everything the administration told him to read, and worked longer and longer days.

One day, a veteran came and put a hand on his shoulder, saying, "Kid, just between the two of us, you don't have to read every piece of paper that says 'Important' at the top. None of us read all that."

And so our friend began to glance at the first pages of long memos, to see if they said anything helpful for him to know, and found that most of them did not. Some time after that, he realized that his boss or one of his co-workers would explicitly tell him if there was a memo that said something he needed to know. The employee found his workload reduced to slightly less than fifty hours per week. He was productive and happy.

One day, a memo came. It said at the top, "Important: Please Read." A little more than halfway through, on page twenty-seven, there was a description of a new law that had been passed, and how it required several jobs (including his own) to be done in a slightly different manner. Unfortunately, our friend's boss was in bed with a bad stomach flu, and so she wasn't able to tell him he needed to read the memo. So he continued doing his job as usual.

A year later, the company found itself the defendant in a forty million dollar lawsuit, and traced the negligence to the action of one single employee — our friend. He was fired, and made the central villain in the storm of bad publicity.

But he definitely was in the wrong, and deserved what was coming to him. The administration very clearly explained the liability and his responsibility, in a memo very clearly labelled "Important". And he didn't even *read* the memo. It's his fault, right?

No.

*Every communication that is sent to a person constitutes an implicit claim of, "This concerns you and is worth your attention." If experience tells other people that we lie again and again when we say this, then what right do we have to be believed when we really do have something important to say?*

I retold the story of the boy who cried wolf as the story of the

administrator who cried important, because administrators are among the worst offenders, along with lawyers, spammers, and perhaps people who pass along e-mail forwards. Among the stack of paper I was expected to sign when I moved in to my apartment was a statement that I had tested my smoke detector. The apartment staff was surprised that I wanted to test my smoke detector before signing my name to that statement. When an authority figure is surprised when a person reads a statement carefully and doesn't want to sign a claim that all involved know to be false, it's a bad sign.

There is communication that concerns the person it's directed to, but says too much — for example, most of the legal contracts I've seen. The tiny print used to print many of those contracts constitutes an implicit acknowledgment that the signer is not expected to read it: they don't even use the additional sheets of paper necessary to print text at a size that a person who only has 20/20 vision can easily read. There is also communication that is broadcast to many people who have no interest in it. To that communication, I would propose the following rule: *Do not, without exceptionally good reason, broadcast a communication that concerns only a minority of its recipients.* It's OK every now and then to announce that the blue Toyota with license plate ABC 123 has its lights on. It's not OK to have a regular announcement that broadcasts anything that is approved as having interest to some of the recipients.

My church, which I am in general very happy with, has succumbed to vice by adding a section to the worship liturgy called "Announcements", where someone reads a list of events and such just before the end of the service, and completely dispels the moment that has been filling the sanctuary up until the announcements start. They don't do this with other things — the offering is announced by music (usually good music) that contributes to the reverent atmosphere of the service. But when the service is drawing to a close, the worshipful atmosphere is disrupted by announcements which I at least almost never find useful. If the same list were printed on a sheet of paper, I could read it after the service, in less time, with greater comprehension, with zero disruption to the moment that every other part of the service tries so carefully to build — and I could skip over any announcements that begin "For Married Couples:" or "Attention Junior High and High Schoolers!" The only advantage I can see to the present practice, from the church leadership's perspective, is

that many people will not read the announcements at all if they have a choice about it — and maybe, just *maybe*, there's a lesson in that.

As well as pointing out examples of a rampant problem in communication, where an administrator cries "Important!" over many things that are not worth reading, and then wonders why people don't believe him when he cries "Important!" about something which *is* important, I would like to suggest an alternative for communities that have access to the internet. A web server could use a form to let people select areas of concern and interest, and announcements submitted would be categorized, optionally cleared with a moderator, and sent only to those people who are interested in them. Another desirable feature might let end receivers select how much announcement information they can receive in a day — providing a discernible incentive to the senders to minimize trivial communication. In a sense, this is what happens already — intercom litanies of announcements ignored by school students in a classroom, employees carrying memos straight from their mailboxes to the recycle bins — but in this case, administrators receive clear incentive and choice to conserve bandwidth and only send stuff that is genuinely important.

While I'm giving my Utopian dreams, I'd like to comment that at least some of this functionality is already supported by the infrastructure developed by UseNet. Probably there are refinements that can be implemented in a web interface — all announcements for one topic shown from a single web page, since they shouldn't be nearly as long as a normal UseNet post arguing some obscure detail in an ongoing discussion. Perhaps other and better can be done — I am suggesting "Here's something better than the status quo," not "Here's something so perfect that there's no room for improvement."

In one UseNet newsgroup, an exchange occurred that broadcasters of announcements would be well-advised to keep in mind. One person said, "I'm trying to decide whether to give the UseNet Bore of the Year Award to [name] or [name]. The winner will receive, as his prize, a copy of all of their postings, minutely inscribed, and rolled up inside a two foot poster tube."

Someone else posted a reply asking, "Length or diameter?"

*To those of you who broadcast to people whom you are able to address because of your position and not because they have chosen to*

*receive your broadcasts, I have the following to say: In each communication you send, you are deciding the basis by which people will decide if future communications are worth paying attention to, or just unwanted noise. If your noise deafens their ears, you have no right to complain that the few truly important things you have to tell them fall on deaf ears. **Only you can prevent spam!***

## **Abstract**

I explore artificial intelligence as failing in a way that is characteristic of a faulty anthropology. Artificial intelligence has had excellent funding, brilliant minds, and exponentially faster computers, which suggests that any failures present may not be due to lack of resources, but arise from an error that is manifest in anthropology and may even be cosmological. Maximus Confessor provides a genuinely different background to criticise artificial intelligence, a background which shares far fewer assumptions with the artificial intelligence movement than figures like John Searle. Throughout this dissertation, I will be looking at topics which seem to offer something interesting, even if cultural factors today often obscure their relevance. I discuss Maximus's use of the patristic distinction between 'reason' and spiritual 'intellect' as providing an interesting alternative to 'cognitive faculties.' My approach is meant to be distinctive both by reference to Greek Fathers and by studying artificial intelligence in light of the occult foundations of modern science, an important datum omitted in the broader scientific movement's self-presentation. The occult serves as a bridge easing the transition between Maximus

Scott serves as a bridge easing the transition between Maximus Confessor's worldview and that of artificial intelligence. The broader goal is to make three suggestions: first, that artificial intelligence provides an experimental test of scientific materialism's picture of the human mind; second, that the outcome of the experiment suggests we might reconsider scientific materialism's I-It relationship to the world; and third, that figures like Maximus Confessor, working within an I-Thou relationship, offer more wisdom to us today than is sometimes assumed. I do not attempt to compare Maximus Confessor's Orthodoxy with other religious traditions, however I do suggest that Orthodoxy has relevant insights into personhood which the artificial intelligence community still lacks.

## Introduction

Some decades ago, one could imagine a science fiction writer asking, 'What would happen if billions of dollars, dedicated laboratories with some of the world's most advanced equipment, indeed an important academic discipline with decades of work from some of the world's most brilliant minds—what if all of these were poured into an attempt to make an artificial mind based on an understanding of personhood that came out of a framework of false assumptions?' We could wince at the waste, or wonder that after all the failures the researchers still had faith in their project. And yet exactly this philosophical experiment has been carried out, in full, and has been expanded. This philosophical experiment is the artificial intelligence movement.

What relevance does AI have to theology? Artificial intelligence assumes a particular anthropology, and failures by artificial intelligence may reflect something of interest to theological anthropology. It appears that the artificial intelligence project has failed in a substantial and characteristic way, and furthermore that it has failed as if its assumptions were false—in a way that makes sense given some form of Christian theological anthropology. I will therefore be using the failure of artificial intelligence as a point of departure for the study of theological anthropology. Beyond a negative critique, I will be exploring a positive alternative. The structure of this dissertation will open with critiques, then trace historical development from an interesting alternative to the present problematic state, and then explore that older alternative. I will thus move in the opposite of the usual direction.

For the purposes of this dissertation, *artificial intelligence* (AI) denotes the endeavour to create computer software that will be humanly intelligent, and *cognitive science* the interdisciplinary field which seeks to understand the mind on computational terms so it can be re-

implemented on a computer. Artificial intelligence is more focused on programming, whilst cognitive science includes other disciplines such as philosophy of mind, cognitive psychology, and linguistics. *Strong AI* is the classical approach which has generated chess players and theorem provers, and tries to create a disembodied mind. Other areas of artificial intelligence include the *connectionist* school, which works with neural nets,[\[1\]](#) and *embodied AI*, which tries to take our mind's embodiment seriously. The picture on the cover[\[2\]](#) is from an embodied AI website and is interesting for reasons which I will discuss below under the heading of '[Artificial Intelligence](#).'

Fraser Watts (2002) and John Puddefoot (1996) offer similar and straightforward pictures of AI. I will depart from them in being less optimistic about the present state of AI, and more willing to find something lurking beneath appearances. I owe my brief remarks about AI and its eschatology, under the heading of '[Artificial Intelligence](#)' below, to a line of Watts' argument.[\[3\]](#)

Other critics[\[4\]](#) argue that artificial intelligence neglects the body as mere packaging for the mind, pointing out ways in which our intelligence is embodied. They share many of the basic assumptions of artificial intelligence but understand our minds as biologically emergent and therefore tied to the body.

There are two basic points I accept in their critiques:

First, they argue that our intelligence is an embodied intelligence, often with specific arguments that are worth attention.

Second, they often capture a quality, or flavour, of thought that beautifully illustrates what sort of thing human thought might be besides digital symbol manipulation on biological hardware.

There are two basic points where I will be departing from their line of argument:

First, they think outside the box, but may not go far enough. They are playing on the opposite team to cognitive science researchers, but they are playing the same game, by the same rules. The disagreement between proponents and critics is not whether mind may be explained in purely materialist terms, but only whether that assumption entails that minds can be re-implemented on computers.

Second, they see the mind's ties to the body, but not to the spirit, which means that they miss out on half of a spectrum of interesting

critiques. I will seek to explore what, in particular, some of the other half of the spectrum might look like. As their critiques explore what it might mean to say that the mind is embodied, the discussion of reason and intellect under the heading '[Intellect and Reason](#)' below may give some sense of what it might mean to say that the mind is spiritual. In particular, the conception of the intellects offers an interesting base characterisation of human thought that competes with cognitive faculties. Rather than saying that the critics offer false critiques, I suggest that they are too narrow and miss important arguments that are worth exploring.

I will explore failures of artificial intelligence in connection with the Greek Fathers. More specifically, I will look at the seventh century Maximus Confessor's *Mystagogia*. I will investigate the occult as a conduit between the (quasi-Patristic) medieval West and the West today. The use of Orthodox sources could be a particularly helpful light, and one that is not explored elsewhere. Artificial intelligence seems to fail along lines predictable to the patristic understanding of a spirit-soul-body unity, essentially connected with God and other creatures. The discussion becomes more interesting when one looks at the implications of the patristic distinction between 'reason' and the spiritual 'intellect.' I suggest that connections with the Orthodox doctrine of divinisation may make an interesting a direction for future enquiry. I will only make a two-way comparison between Orthodox theological anthropology and one particular quasi-theological anthropology. This dissertation is in particular not an attempt to compare Orthodoxy with other religious traditions.

One wag said that the best book on computer programming for the layperson was *Alice's Adventures in Wonderland*, but that's just because the best book on anything for the layperson was *Alice's Adventures in Wonderland*. One lesson learned by a beginning scholar is that many things that 'everybody knows' are mistaken or half-truths, as 'everybody knows' the truth about Galileo, the Crusades, the Spanish Inquisition, and other select historical topics which we learn about by rumour. There are some things we will have trouble understanding unless we can question what 'everybody knows.' This dissertation will be challenging certain things that 'everybody knows,' such as that we're making progress towards achieving artificial intelligence, that seventh century theology belongs in a separate mental compartment from AI, or that science is a

different kind of thing from magic. The result is bound to resemble a tour of Wonderland, not because I am pursuing strangeness for its own sake, but because my attempt to understand artificial intelligence has taken me to strange places. Renaissance and early modern magic is a place artificial intelligence has been, and patristic theology represents what we had to leave to get to artificial intelligence.

The artificial intelligence project as we know it has existed for perhaps half a century, but its roots reach much further back. This picture attests to something that has been a human desire for much longer than we've had digital computers. In exploring the roots of artificial intelligence, there may be reason to look at a topic that may seem strange to mention in connection with science: the Renaissance and early modern occult enterprise.

Why bring the occult into a discussion of artificial intelligence? It doesn't make sense if you accept science's own self-portrayal and look at the past through its eyes. Yet this shows bias and insensitivity to another culture's inner logic, almost a cultural imperialism—not between two cultures today but between the present and the past. A part of what I will be trying to do in this thesis is look at things that have genuine relevance to this question, but whose relevance is obscured by cultural factors today. Our sense of a deep divide between science and magic is more cultural prejudice than considered historical judgment. We judge by the concept of scientific progress, and treating prior cultures' endeavours as more or less successful attempts to establish a scientific enterprise properly measured by our terms.

We miss how the occult turn taken by some of Western culture in the Renaissance and early modern period established lines of development that remain foundational to science today. Many chasms exist between the mediaeval perspective and our own, and there is good reason to place the decisive break between the mediaeval way of life and the Renaissance/early modern occult development, not placing mediaeval times and magic together with an exceptionalism for our science. I suggest that our main differences with the occult project are disagreements as to means, not ends—and that distinguishes the post-mediaeval West from the mediaevals. If so, there is a kinship between the occult project and our own time: we provide a variant answer to the same question as the Renaissance magus, whilst patristic and mediaeval Christians were exploring another question altogether. The occult vision

Christians were exploring another question altogether. The occult vision has fragmented, with its dominion over the natural world becoming scientific technology, its vision for a better world becoming political ideology, and its spiritual practices becoming a private fantasy.

One way to look at historical data in a way that shows the kind of sensitivity I'm interested in, is explored by Mary Midgley in *Science as Salvation* (1992); she doesn't dwell on the occult as such, but she perceptively argues that science is far more continuous with religion than its self-understanding would suggest. Her approach pays a certain kind of attention to things which science leads us to ignore. She looks at ways science is doing far more than falsifying hypotheses, and in so doing observes some things which are important. I hope to develop a similar argument in a different direction, arguing that science is far more continuous with the occult than its self-understanding would suggest. This thesis is intended neither to be a correction nor a refinement of her position, but development of a parallel line of enquiry.

It is as if a great island, called Magic, began to drift away from the cultural mainland. It had plans for what the mainland should be converted into, but had no wish to be associated with the mainland. As time passed, the island fragmented into smaller islands, and on all of these new islands the features hardened and became more sharply defined. One of the islands is named Ideology. The one we are interested in is Science, which is not interchangeable with the original Magic, but is even less independent: in some ways Science differs from Magic by being more like Magic than Magic itself. Science is further from the mainland than Magic was, even if its influence on the mainland is if anything greater than what Magic once held. I am interested in a scientific endeavour, and in particular a basic relationship behind scientific enquiry, which are to a substantial degree continuous with a magical endeavour and a basic relationship behind magic. These are foundationally important, and even if it is not yet clear what they may mean, I will try to substantiate these as the thesis develops. I propose the idea of Magic breaking off from a societal mainland, and sharpening and hardening into Science, as more helpful than the idea of science and magic as opposites.

There is in fact historical precedent for such a phenomenon. I suggest that a parallel with Eucharistic doctrine might illuminate the interrelationship between Orthodoxy, Renaissance and early modern

magic, and science (including artificial intelligence). When Aquinas made the Christian-Aristotelian synthesis, he changed the doctrine of the Eucharist. The Eucharist had previously been understood on Orthodox terms that used a Platonic conception of bread and wine participating in the body and blood of Christ, so that bread remained bread whilst becoming the body of Christ. One substance had two natures. Aristotelian philosophy had little room for one substance which had two natures, so one thing cannot simultaneously be bread and the body of Christ. When Aquinas subsumed real presence doctrine under an Aristotelian framework, he managed a delicate balancing act, in which bread ceased to be bread when it became the body of Christ, and it was a miracle that the accidents of bread held together after the substance had changed. I suggest that when Zwingli expunged real presence doctrine completely, he was not abolishing the Aristotelian impulse, but carrying it to its proper end. In like fashion, the scientific movement is not a repudiation of the magical impulse, but a development of it according to its own inner logic. It expunges the supernatural as Zwingli expunged the real presence, because that is where one gravitates once the journey has begun. What Aquinas and the Renaissance magus had was composed of things that did not fit together. As I will explore below under the heading '[Renaissance and Early Modern Magic](#),' the Renaissance magus ceased relating to society as to one's mother and began treating it as raw material; this foundational change to a depersonalised relationship would later secularise the occult and transform it into science. The parallel between medieval Christianity/magic/science and Orthodoxy/Aquinas/Zwingli seems to be fertile: real presence doctrine can be placed under an Aristotelian framework, and a sense of the supernatural can be held by someone who is stepping out of a personal kind of relationship, but in both cases it doesn't sit well, and after two or so centuries people finished the job by subtracting the supernatural.

Without discussing the principles in Thomas Dixon's 1999 delineation of theology, anti-theology, and atheology that can be un-theological or quasi-theological, regarding when one is justified in claiming that theology is present, I adopt the following rule:

A claim is considered *quasi-theological* if it can conflict with theological claims.

Given this rule, patristic theology, Renaissance and early modern magic (hereafter 'magic' or 'the occult'), and artificial intelligence claims are all considered to be theological or quasi-theological.

I will not properly trace an historical development so much as show the distinctions between archetypal scientific, occult, and Orthodox worldviews as seen at different times, and briefly discuss their relationships with some historical remarks. Not only are there surprisingly persistent tendencies, but Lee repeats Weber's suggestion that there is real value to understand ideal types.<sup>[5]</sup>

I will be attempting to bring together pieces of a puzzle—pieces scattered across disciplines and across centuries, often hidden by today's cultural assumptions about what is and is not connected—to show their interconnections and the picture that emerges from their fit. I will be looking at features including intentionality,<sup>[6]</sup> teleology,<sup>[7]</sup> cognitive faculties,<sup>[8]</sup> the spiritual intellect,<sup>[9]</sup> cosmology, and a strange figure who wields a magic sword with which to slice through society's Gordian knots. Why? In a word, all of this connected. Cosmology is relevant if there is a cosmological error behind artificial intelligence. There are both an organic connection and a distinction between teleology and intentionality, and the shift from teleology to intentionality is an important shift; when one shifts from teleology to intentionality one becomes partly blind to what the artificial intelligence picture is missing. Someone brought up on cognitive faculties may have trouble answering, 'How else could it be?'; the patristic understanding of the spiritual intellect gives a very interesting answer, and offers a completely different way to understand thought. And the figure with the magic sword? I'll let this figure remain mysterious for the moment, but I'll hint that without that metaphorical magic sword we would never have a literal artificial intelligence project. I do not believe I am forging new connections among these things, so much as uncovering something that was already there, overlooked but worth investigating.

This is an attempt to connect some very diverse sources, even if the different sections are meant primarily as philosophy of religion. This brings problems of coherence and disciplinary consistency, but the greater risk is tied to the possibility of greater reward. It will take more work to show connections than in a more externally focused enquiry, but if I can give a believable case for those interconnections, this will *ipso*

*facto* be a more interesting enquiry.

All translations from French, German, Latin, and Greek are my own.

# Artificial Intelligence

Artificial intelligence is not just one scientific project among others. It is a cultural manifestation of a timeless dream. It does not represent the repudiation of the occult impulse, but letting that impulse work out according to its own inner logic. Artificial intelligence is connected with a transhumanist vision for the future<sup>[10]</sup> which tries to create a science-fiction-like future of an engineered society of superior beings.<sup>[11]</sup> This artificial intelligence vision for the future is similar to the occult visions for the future we will see below. Very few members of the artificial intelligence movement embrace the full vision—but I may suggest that its spectre is rarely absent, and that that spectre shows itself by a perennial sense of, 'We're making real breakthroughs today, and full AI is just around the corner.' Both those who embrace the fuller enthusiasm and those who are more modestly excited by current project have a hope that we are making progress towards creating something fundamentally new under the sun, of bequeathing humanity with something that has never before been available, machines that genuinely think. Indeed, this kind of hope is one of magic's most salient features. The exact content and features vary, but the sometimes heady excitement and the hope to bestow something powerful and new mark a significant point contact between the artificial intelligence and the magic that enshrouded science's birth.

There is something timeless and archetypal about the desire to create humans through artifice instead of procreation. Jewish legend tells of a rabbi who used the Kaballah to create a clay golem to defend a city against anti-semites in 1581.<sup>[12]</sup> *Frankenstein* has so marked the popular imagination that genetically modified foods are referred to as 'Frankenfoods,' and there are many (fictional) stories of scientists creating androids who rebel against and possibly destroy their creators.

Robots who have artificial bodies but think and act enough like humans never to cause culture shock are a staple of science fiction. [13] There is a timeless and archetypal desire to create humans by artifice rather than procreation. Indeed, this desire has more than a little occult resonance.

We should draw a distinction between what may be called 'pretentious AI' and 'un-pretentious AI.' The artificial intelligence project has managed technical feats that are sometimes staggering, and from a computer scientist's perspective, the state of computer science is richer and more mature than if there had been no artificial intelligence project. Without making any general claim that artificial intelligence achieves nothing or achieves nothing significant, I will explore a more specific and weaker claim that artificial intelligence does not and cannot duplicate human intelligence.

A paradigm example of un-pretentious AI is the United States Postal Service handwriting recognition system. It succeeds in reading the addresses on 85% of postal items, and the USPS annual report is justifiably proud of this achievement. [14] However, there is nothing mythic claimed for it: the USPS does not claim a major breakthrough in emulating human thought, nor does it give people the impression that artificial mail carriers are just around the corner. The handwriting recognition system is a tool—admittedly, quite an impressive tool—but it is nothing more than a tool, and no one pretends it is anything more than a tool.

For a paradigm example of pretentious AI, I will look at something different. The robot Cog represents equally impressive feats in artificial hand-eye coordination and motor control, but its creators claim something deeper, something archetypal and mythic:

The scholar places his hand on the robots' shoulder as if they had a longstanding friendship. At almost every semiotic level, this picture constitutes an implicit claim that the researcher has a deep friendship with what must be a deep being. The unfortunately blurred caption reads, '©2000 Peter Menzel / Robo sapiens.' On the Cog main website area, every picture with Cog and a person theatrically shows the person treating the robot as quite lifelike—giving the impression that the robot must be essentially human.

But how close is Cog to being human? Watts writes,

The weakness of Cog at present seems to be that it cannot actually do very much. Even its insect-like computer forebears do not seem to have had the intelligence of insects, and Cog is clearly nowhere near having human intelligence.[\[16\]](#)

The somewhat light-hearted frequently-asked-questions list acknowledges that the robot 'has no idea what it did two minutes ago,' answers 'Can Cog pass the Turing test?' by saying, 'No... but neither could an infant,' and interestingly answers 'Is Cog conscious?' by saying, 'We try to avoid using the c-word in our lab. For the record, no. Off the record, we have no idea what that question even means. And still, no.' The response to a very basic question is ambiguous, but it seems to joke that 'consciousness' is obscene language, and gives the impression that this is not an appropriate question to ask: a mature adult, when evaluating our AI, does not childishly frame the question in terms of consciousness. Apparently, we should accept the optimistic impression of Cog, whilst recognising that it's not fair to the robot to ask about features of human personhood that the robot can't exhibit. This smells of begging the question.

Un-pretentious AI makes an impressive technical achievement, but recognises and acknowledges that they've created a tool and not something virtually human. Pretentious AI can make equally impressive technical achievements, and it recognises that what it's created is not equivalent to human, but it does not acknowledge this. The answer to 'Is Cog conscious?' is a refusal to acknowledge something the researchers have to recognise: that Cog has no analogue to human consciousness. Is it a light-hearted way of making a serious claim of strong agnosticism about Cog's consciousness? It doesn't read much like a mature statement that 'We could never know if Cog were conscious.' The researcher in Figure 2 wrote an abstract on how to give robots a theory of other minds[\[17\]](#), which reads more like psychology than computer science.

There's something going on here that also goes on in the occult. In neo-paganism, practitioners find their magic to work, not exactly as an outsider would expect, by making incantations and hoping that something will happen that a skeptic would recognise as supernatural, but by doing what they can and then interpreting reality as if the magic had worked. They create an illusion and subconsciously embrace it. This

mechanism works well enough, in fact, that large segments of today's neo-paganism started as jokes and then became real, something their practitioners took quite seriously.<sup>[18]</sup> There's power in trying to place a magical incantation or a computer program (or, in programmer slang, 'incantation') to fill a transcendent hope: one finds ways that it appears to work, regardless of what an outsider's interpretation may be. This basic technique appears to be at work in magic as early as the Renaissance, and it appears to be exactly what's going on in pretentious AI. The basic factor of stepping into an illusion after you do what you can makes sense of the rhetoric quoted above and why Cog is portrayed not merely as a successful experiment in coordination but as Robo sapiens, the successful creation of a living golem. Of course we don't interpret it as magic because we assume that artificial and intelligence and magic are very different things, but the researchers' self-deception falls into a quite venerable magical tradition.

Computers seem quite logical. Are they really that far from human rationality? Computers are logical without being rational. Programming a computer is like explaining a task to someone who follows directions very well but has no judgment and no ability to recognise broader intentions in a request. It follows a list of instructions without any recognition or a sense of what is being attempted. The ability to understand a conversation, or recognise another person's intent—even with mistakes—or any of a number of things humans take for granted, belongs to rationality. A computer's behaviour is built up from logical rules that do certain precise manipulations of symbols without any sense of meaning whatsoever: it is logical without being rational. The discipline of usability is about how to write well-designed computer programs; these programs usually let the user forget that computers aren't rational. For instance, a user can undo something when the computer logically and literally follows an instruction, and the user rationally realises that that isn't really what was intended. But even the best of this design doesn't let the computer understand what one meant to say. One frustration people have with computers stems from the fact that there is a gist to what humans say, and other people pick up that gist. Computers do not have even the most rudimentary sense of gist, only the ability to logically follow instructions. This means that the experience of bugs and debugging in programming is extremely frustrating to those learning how to program; the computer's response to what seems a correct program goes beyond

the computer's response to what seems a correct program goes beyond nitpicking. This logicity without rationality is deceptive, for it presents something that looks very much like rationality at first glance, but produces unpleasant surprises when you treat it as rational. There's something interesting going on here. When we read rationality into a computer's logicity, we are in part creating the illusion of artificial intelligence. 'Don't anthropomorphise computers,' one tells novice programmers. 'They hate that.' A computer is logical enough that we tend to treat it as rational, and in fact if you want to believe that you've achieved artificial intelligence, you have an excellent basis to use in forming a magician's self-deception.

Artificial intelligence is a mythic attempt to create an artificial person, and it does so in a revealing way. Thought is assumed to be a private manipulation of mental representations, not something that works in terms of spirit. Embodied AI excluded, the body is assumed to be packaging, and the attempt is not just to duplicate the 'mind' in a complete sense, but our more computer-like rationality: this assumes a highly significant division of what is essential, what is packaging, and what comes along for free if you duplicate the essential bits. None of this is simply how humans have always thought, nor is it neutral. Maximus Confessor's assumptions are different enough from AI's that a comparison makes it easier to see some of AI's assumptions, and furthermore what sort of coherent picture could deny them. I will explore how exactly he does so below under the heading '[Orthodox Anthropology in Maximus Confessor's \*Mystagogia\*.](#)' More immediately, I wish to discuss a basic type of assumption shared by artificial intelligence and the occult.

## The Optimality Assumption

One commonality that much of magic and science share is that broad visions often include the assumption that what they don't understand must be simple, and be easy to modify or improve. Midgley discusses Bernal's exceedingly optimistic hope for society to transform itself into a simplistically conceived scientific Utopia (if perhaps lacking most of what we value in human society);[\[19\]](#) I will discuss later, under various headings, how society simply works better in Thomas More's and B.F. Skinner's Utopias if only it is re-engineered according to their simple models.[\[20\]](#) Aren't Utopian visions satires, not prescriptions? I would argue that the satire itself has a strong prescriptive element, even if it's not literal. The connection between Utopia and AI is that the same sort of thinking feeds into what, exactly, is needed to duplicate a human mind. For instance, let us examine a sample of dialogue which Turing imagined going on in a Turing test:

Q: Please write me a sonnet on the subject of the Forth Bridge.

A: Count me out on this one. I never could write poetry.

Q: Add 34957 to 70764.

A: (Pause about 30 seconds and then give as answer) 105621.

Q: Do you play chess?

A: Yes.

Q: I have K at my K1, and no other pieces. You have only K at K6 and R at R1. It is your move. What do you play?

A: (After a pause of 15 seconds) R-R8 mate.[\[21\]](#)

Turing seems to assume that if you duplicate his favoured tasks of arithmetic and chess, the task of understanding natural language comes along, more or less for free. The subsequent history of artificial intelligence has not been kind to this assumption. Setting aside the fact

intelligence has not been kind to this assumption. Setting aside the fact that most people do not strike up a conversation by strangely requesting the other person to solve a chess problem and add five-digit numbers, Turing is showing an occult way of thinking by assuming there's nothing really obscure, or deep, about the human person, and that the range of cognitive tasks needed to do AI is the range of tasks that immediately present themselves to him. This optimism may be damped by subsequent setbacks which the artificial intelligence movement has experienced, but it's still present. It's hard to see an artificial intelligence researcher saying, 'The obvious problem looks hard to solve, but there are probably hidden problems which are much harder,' let alone consider whether human thought might be non-computational.

Given the difficulties they acknowledge, artificial intelligence researchers seem to assume that the problem is as easy as possible to solve. As I will discuss later, this kind of assumption has profound occult resonance. I will call this assumption the optimality assumption: with allowances and caveats, the optimality assumption states that artificial intelligence is an optimally easy problem to solve. This doesn't mean an optimally easy problem to solve given the easiest possible world, but rather, taking into the difficulties and nuances recognised by the practitioner, the problem is then assumed to be optimally easy, and then it could be said that we live in the (believable) possible world where artificial intelligence would be easiest to implement. Anything that doesn't work like a computer is assumedly easy, or a matter of unnecessary packaging. There are variations on the theme of begging the question. One basic strategy of ensuring that computers can reach the bar of human intelligence is to lower the bar until it is already met. Another strategy is to try to duplicate human intelligence on computer-like tasks. Remember the Turing test which Turing imagined, which seemed to recognise only the cognitive tasks of writing a poem, doing arithmetic, and solving a chess problem: Turing apparently assumed that natural language understanding would come along for free by the time computers could do both arithmetic and chess. Now we have computer calculators and chess players that can beat humans, whilst natural language understanding tasks which are simple to humans represent an unscaled Everest to artificial intelligence.

We have a situation very much like the attempt to make a robot that can imitate human locomotion—if the attempt is tested by having a robot

race a human athlete on a racetrack ergonomically designed for robots. Chess is about as computer-like a human skill as one could find.

Turing's script for an imagined Turing test is one manifestation of a tendency to assume that the problem is optimally easy: the optimality assumption. Furthermore, Turing sees only three tasks of composing a sonnet, adding two numbers, and making a move in chess. But in fact this leaves out a task of almost unassailable difficulty for AI: understanding and appropriately acting on natural language requests. This is part of human rationality that cannot simply be assumed to come with a computer's logicity.

Four decades after Turing imagined the above dialogue, Kurt VanLehn describes a study of problem solving that used a standard story problem. [22] The ensuing discussion is telling. Two subjects' interpretations are treated as problems to be resolved, apparently chosen for their departure from how a human 'should' think about these things. One is a nine year old girl, Cathy: '...It is apparent from [her] protocol that Cathy solves this problem by imagining the physical situation and the actions taken in it, as opposed to, say, converting the puzzle to a directed graph then finding a traversal of the graph.' The purpose of the experiment was to understand how humans solve problems, but it was approached with a tunnel vision that gave a classic kind of computer science 'graph theory' problem, wrapped up in words, and treated any other interpretation of those words as an interesting abnormality. It seems that it is not the theory's duty to approach the subject matter, but the subject matter's duty to approach the theory—a signature trait of occult projects. Is this merely VanLehn's tunnel vision? He goes on to describe the state of cognitive science itself:

For instance, one can ask a subject to draw a pretty picture... [such] Problems whose understanding is not readily represented as a problem space are called *ill-defined*. Sketching pretty pictures is an example of an ill-defined problem... There have only been a few studies of ill-defined problem solving. [23]

Foerst summarises a tradition of feminist critique: [24] AI was started by men who chose a particular kind of abstract task as the hallmark of intelligence; women might value disembodied abstraction less and might choose something like social skills. The critique may be pushed one step

further than that: beyond any claim that AI researchers, when looking for a basis for computer intelligence, tacitly crystallised intelligence out of men's activities rather than women's, it seems that their minds were so steeped in mathematics and computers that they crystallised intelligence out of human performance more in computer-like activities than anything essentially human, even in a masculine way. Turing didn't talk about making artificial car mechanics or deer hunters any more than he had plans for artificial hostesses or childminders.

Harman's 1989 account of functionalism, for instance, provides a more polished-looking version of an optimality assumption: 'According to functionalism, it does not matter what mental states and processes are made of any more than it matters what a carburetor or heart or a chess king is made of.' (832). Another suggestion may be made, not as an axiom but as an answer to the question, 'How else could it be?' This other suggestion might be called *the tip of the iceberg conception*.

A 'tip of the iceberg' conception might reply, 'Suppose for the sake of argument that it doesn't matter what an iceberg is made of, so long as it sticks up above the surface and is hard enough to sink a ship. The task is then to make an artificial iceberg. One can hire engineers to construct a hard shell to function as a surrogate iceberg. What has been left out is that these properties of something observable from the surface rest on something that lies much, much deeper than the surface. (A mere scrape with an iceberg sunk the Titanic, not only because the iceberg was hard, but because it had an iceberg's monumental inertia behind that hardness.) One can't make a functional tip of the iceberg that way, because a functional tip of an iceberg requires a functional iceberg, and we have very little idea of how to duplicate those parts of an iceberg that aren't visible from a ship. You are merely assuming that one can try hard enough to duplicate what you can see from a ship, and if you duplicate those observables, everything else will follow.' This is not a fatal objection, but it is intended to suggest what the truth could be besides the repeated assumption that intelligence is as easy as possible to duplicate in a computer. Here again is the optimality assumption, and it is a specific example of a broader optimality assumption which will appear in occult sources discussed under the ['Renaissance and Early Modern Magic'](#) heading below. The 'tip of the iceberg' conception is notoriously absent in occult and artificial intelligence sources alike. In occult sources, the

endeavour is to create a magically sharp sword that will slice all of the Gordian knots of society's problems; in artificial intelligence the Gordian knots are not societal problems but obstacles to creating a thinking machine, and researchers may only be attempting to use razor blades to cut tangled shoelaces, but researchers are still trying to get as close to that magic sword as they believe possible.

## Just Around the Corner Since 1950

The artificial intelligence movement has a number of reasonably stable features, including an abiding sense of 'Today's discoveries are a real breakthrough; artificial minds are just around the corner.' This mood may even be older than digital computers; Dreyfus writes,

In the period between the invention of the telephone relay and its apotheosis in the digital computer, the brain, always understood in terms of the latest technological inventions, was understood as a large telephone switchboard, or more recently, as an electronic computer.[\[25\]](#)

The discoveries and the details of the claim may change, and experience has battered some of strong AI's optimism, but in pioneers and today's embodied AI advocates alike there is a similar mood: 'What we've developed now is effacing the boundary between machine and human.' This mood is quite stable. There is a striking similarity between the statements,

These emotions [discomfort and shock at something so human-like] might arise because in our interactions with Cog, little distinguishes us from the robot, and the differences between a machine and its human counterparts fade.[\[26\]](#)

and:

The reader must accept it as a fact that digital computers can be constructed, and indeed have been constructed, according to the

principles we have described, and that they can in fact mimic the actions of a human computer very closely.[\[27\]](#)

What is interesting here is that the second was made by Turing in 1950, and the first by Foerst in 1998. As regards Turing, no one now believes 1950 computers could perform any but the most menial of mathematicians' tasks, and some of Cog's weaknesses have been discussed above ("Cog... cannot actually very much. Even its insect-like forebears do not seem to have had the intelligence of insects..."). The more artificial intelligence changes, the more it seems to stay the same. The overall impression one receives is that for all the surface progress of the artificial intelligence, the underlying philosophy and spirit remain the same—and part of this underlying spirit is the conviction, 'We're making real breakthroughs now, and full artificial intelligence is just around the corner.' This self-deception is sustained in classically magical fashion. Artificial intelligence's self-presentation exudes novelty, a sense that today's breakthroughs are decisive—whilst its actual rate of change is much slower. The 'It's just around the corner.' rhetoric is a longstanding feature. For all the changes in processor power and greater consistency in a materialist doctrine of mind, there are salient features which seem to repeat in 1950's and today's cognitive science. In both, the strategy to ensure that computers could jump the bar of human intelligence is by lowering the bar until it had already been jumped.

## The Ghost in the Machine

It has been suggested in connection with Polanyi's understanding of tacit knowledge that behaviourists did not teach, 'There is no soul.' Rather, they draw students into a mode of enquiry where the possibility of a soul is never considered.

Modern psychology takes completely for granted that behavior and neural function are perfectly correlated, that one is completely caused by the other. There is no separate soul or life force to stick a finger into the brain now and then and make neural cells do what they would not otherwise. Actually, of course, this is a working assumption only....It is quite conceivable that someday the assumption will have to be rejected. But it is important also to see that we have not reached that day yet: the working assumption is a necessary one and there is no real evidence opposed to it. Our failure to solve a problem so far does not make it insoluble. One cannot logically be a determinist in physics and biology, and a mystic in psychology.[\[28\]](#)

This is a balder and more provocative way of stating what writers like Turing lead the reader to never think of questioning. The assumption is that the soul, if there is one, is by nature external and separate from the body, so that any interaction between the two is a violation of the body's usual way of functioning. Thus what is denied is a 'separate soul or life force to stick a finger into the brain now and then and make neural cells do what they would not do otherwise.' The Orthodox and others' doctrine of unified personhood is very different from an affirmation of a ghost in the machine. To affirm a ghost in the machine is to assume the soul's basic externality to the body: the basic inability of a soul to interact with a body creates the problem of the ghost in the machine. By the time

with a body creates the problem of the ghost in the machine. By the time one attempts to solve the problem of the ghost in the machine, one is already outside of an Orthodox doctrine of personhood in which spirit, soul, and body are united and the whole unit is not an atom.

The objective here is not mainly to criticise AI, but to see what can be learned: AI seems to fail in a way that is characteristic. It does not fail because of insufficient funding or lack of technical progress, but on another plane: it is built on an erroneous quasi-theological anthropology, and its failures may suggest something about being human. The main goal is to answer the question, 'How else could it be?' in a way that is missed by critics working in materialist confines.

What can we say in summary?

First, artificial intelligence work may be divided into un-pretentious and pretentious AI. Un-pretentious AI makes tools that no one presents as anything more than tools. Pretentious AI is presented as more human than is properly warranted.

Second, there are stable features to the artificial intelligence movement, including a claim of, 'We have something essentially human. With today's discoveries, full artificial intelligence is just around the corner.' The exact form of this assertion may change, but the basic claim does not.

Third, artificial intelligence research posits a multifarious 'optimality assumption,' namely that, given the caveats recognised by the researcher, artificial intelligence is an optimally easy assumption to solve. The human mind is assumed to be the sort of thing that is optimally easy to re-create on a computer.

Fourth, artificial intelligence comes from the same kind of thinking as the ghost in the machine problem.

There is more going on in the artificial intelligence project than an attempt to produce scientific results. The persistent rhetoric of 'It's just around the corner.' is not because artificial intelligence scientists have held that sober judgment since the project began, but because there's something else going on. For reasons that I hope will become clearer in the next section, this is beginning to look like an occult project—a secularised occult project, perhaps, but 'secularised occult' is not an empty term in that you take all of the occult away if you take away spellbooks. There is much more to the occult than crystal balls, and a

good deal of this 'much more' is at play even if artificial intelligence doesn't do things the *Skeptical Enquirer* would frown on.

## Occult Foundations of Modern Science

With acknowledgment of the relevance of the Reformation, the wake of Aristotelianism, and the *via moderna* of nominalism,[\[29\]](#) I will be looking at a surprising candidate for discussion on this topic: magic. Magic was a large part of what shaped modernity, a much larger factor than one would expect from modernity's own self-portrayal, and it has been neglected for reasons besides than the disinterested pursuit of truth. It is more attractive to our culture to say that our science exists in the wake of Renaissance learning or brave Reformers than to say that science has roots in it decries as superstition. For reasons that I will discuss below under the next heading, I suggest that what we now classify as the artificial intelligence movement is a further development of some of magic's major features.

There is a major qualitative shift between Newton's development of physics being considered by some to be a diversion from his alchemical and other occult endeavours, and 'spooky' topics today being taboo for scientific research. Yet it is still incomplete to enter a serious philosophical discussion of science without understanding the occult, as as it incomplete to enter a serious discussion of Christianity without understanding Judaism. Lewis points out that the popular understanding of modern science displacing the magic of the middle ages is at least misleading; there was very little magic in the middle ages, and then science and magic flourished at the same time, for the same reason, often in the same people: the reason science became stronger than magic is purely Darwinian: it worked better.[\[30\]](#) One may say that medieval religion is the matrix from which Renaissance magic departed, and early modern magic is the matrix from which science departed.

What is the relationship between the mediaeval West and natristic

Christianity? In this context, the practical difference is not yet a great one. The essential difference is that certain seeds have been sown—such as nominalism and the rediscovered Aristotelianism—which in the mediaeval West would grow into something significant, but had not in much of any practical sense affected the fabric of society. People still believed that the heavens told the glory of God; people lived a life oriented towards contemplation rather than consumption; monasteries and saints were assumed so strongly that they were present even—especially—as they retreated from society. Certain seeds had been sown in the mediaeval West, but they had not grown to any significant stature. For this discussion, I will treat mediaeval and patristic Christianity as more alike than different.

## Renaissance and Early Modern Magic

Magic in this context is much more than a means of casting spells or otherwise manipulating supernatural powers to obtain results. That practice is the token of an entire worldview and enterprise, something that defines life's meaning and what one ought to seek. To illustrate this, I will look at some details of work by a characteristic figure, Leibniz. Then I will look at the distinctive way the Renaissance magus related to the world and the legacy this relationship has today. Alongside this I will look at a shift from understanding this life as a contemplative apprenticeship to Heaven, to understanding this life as something for us to make more pleasurable.

Leibniz, a 17<sup>th</sup> century mathematician and scientist who co-discovered calculus, appears to have been more than conversant with the occult memory tradition,[\[31\]](#) and his understanding of calculus was not, as today, a tool used by engineers to calculate volumes. Rather, it was part of an entire Utopian vision, which could encompass all knowledge and all thoughts, an apparently transcendent tool that would obviate the need for philosophical disagreements:

If we had this [calculus], there would be no more reason for disputes between philosophers than between accountants. It would be enough for them to take their quills and say, 'Let us calculate!'

Leibniz's 1690 *Ars Combinatoria* contains some material that is immediately accessible to a modern mathematician. It also contains material that is less accessible. Much of the second chapter (9-48) discusses combinations of the letters U, P, J, S, A, and N; these letters are tied to concepts ranging from philosophy to theology, jurisprudence and

mathematics: another table links philosophical concepts with numbers (42-3). The apparent goal was to validly manipulate concepts through mechanical manipulations of words, but I was unable to readily tell what (mathematico-logical?) principle was supposed to make this work. (The principle is apparently unfamiliar to me.) This may reflect the influence of Ramon Lull, thirteenth century magician and doctor of the Catholic Church who adapted a baptised Kaballah which involved manipulating combinations of (Latin) letters. Leibniz makes repeated reference to Lull (28, 31, 34, 46), and specifically mentions his occult *ars magna* (28). Like Lull, Leibniz is interested in the occult, and seeks to pioneer some new tool that will obviate the need for this world's troubles. He was an important figure in the creation of science, and his notation is still used for calculus today. Leibniz is not trying to be just another member of society, or to contribute to society's good the way members have always contributed to society's good: he stands above it, and his intended contribution is to reorder the fabric of society according to his endowed vision. Leibniz provides a characteristic glimpse of how early modern magic has left a lasting imprint.

If the person one should be in Orthodoxy is the member of Church and society, the figure in magic is the magus, a singular character who stands outside of the fabric of society and seeks to transform it. What is the difference? The member of the faithful is an integrated part of society, and lives in submission and organic connection to it. The magus, by contrast, stands above society, superior to it, having a relation to society as one whose right and perhaps duty is to tear apart and reconstruct society along better lines. We have a difference between humility and pride, between relating to society as to one's mother and treating society as raw material for one to transform. The magus is cut off from the common herd by two closely related endowments: a magic sword to cut through society's Gordian knots, and a messianic fantasy.[\[32\]](#) In Leibniz's case the magic sword is an artificial language which will make philosophical disagreements simply obsolete. For the artificial intelligence movement, the magic sword is artificial intelligence itself. The exact character of the sword, knot, and fantasy may differ, but their presence does not.

The character of the Renaissance magus may be seen as as hinging on despair with the natural world. This mood seems to be woven into

Hermetic texts that were held in such esteem in the Renaissance and were connected at the opening of pre-eminent Renaissance neo-Platonist Pico della Mirandola's *Oration on the Dignity of Man*.<sup>[33]</sup> If there is good to be had, it is not met in the mundane world of the *hoi polloi*. It must be very different from their reality, something hidden that is only accessible to an elite. The sense in which this spells out an interest in the occult means far more than carrying around a rabbit's foot. The specific supernatural contact was valued because the occult was far hidden from appearances and the unwashed masses. (The Christian claim that one can simply pray to God and be heard is thus profoundly uninteresting. Supernatural as it may be, it is ordinary, humble, and accessible in a way that the magus is trying to push past.) This desire for what is hidden or very different from the ordinary means that the ideal future must be very different from the present. Therefore Thomas More, Renaissance author, canonised saint, and strong devotee of Mirandola's writing, himself writes *Utopia*. In this work, the philosophic sailor Raphael establishes his own reason as judge over the appropriateness of executing thieves,<sup>[34]</sup> and describes a Utopia where society simply works better: there seem to be no unpleasant surprises or unintended consequences.<sup>[35]</sup> There is little sense of a complex inner logic to society that needs to be respected, or any kind of authority to submit to. Indeed, Raphael abhors authority and responds to the suggestion that he attach himself to a king's court by saying, 'Happier! Is that to follow a path that my soul abhors?' This Utopian vision, even if it is from a canonised Roman saint, captures something deep of the occult currents that would later feed into the development of political ideology. The content of an occult vision for constructing a better tomorrow may vary, but it is a vision that seeks to tear up the world as we now know it and reconstructs it along different lines.

Magic and science alike relate to what they are interested in via an I-It rather than an I-Thou relationship. Relating to society as to one's mother is an I-Thou relationship; treating society as raw material is an I-It relationship. An I-Thou relationship is receptive to quality. It can gain wisdom and insight. It can connect out of the whole person. The particular kind of I-It relationship that undergirds science has a powerful and narrow tool that deals in what can be mathematically represented. The difference between those two is misunderstood if one stops after

saying, 'I-It can make technology available much better than I-Thou.' That is how things look through I-It eyes. But I-Thou allows a quality of relationship that does not exist with I-It. 'The fundamental word I-Thou can only be spoken with one's whole being. The fundamental word I-It can never be spoken with one's whole being.' I-Thou allows a quality-rich relationship that always has another layer of meaning. In the Romance languages there are two different words for knowledge: in French, *connaissance* and *savoir*. They both mean 'knowledge,' but in different ways: *savoir* is knowledge of fact (or know-how); one can *sait que* ('know that') something is true. *Connaissance* is the kind of knowledge of a person, a 'knowledge of' rather than a 'knowledge that' or 'knowledge how.' It can never be a complete knowledge, and one cannot *connait que* ('know-of that') something is true. It is personal in character. An I-It relationship is not just true of magic; as I will discuss below under the heading of '[Science, Psychology, and Behaviourism](#),' psychology seeks a baseline *savoir* of people where it might seek a *connaissance*, and its theories are meant to be abstracted from relationships with specific people. Like magic, the powers that are based on science are epiphenomenal to the relationship science is based on. Relating in an I-Thou rather than I-It fashion is not simply less like magic and science; it is richer, fuller, and more human.

In the patristic and medieval eras, the goal of living had been contemplation and the goal of moral instruction was to conform people to reality. Now there was a shift from conforming people to reality, towards conforming reality to people.<sup>[36]</sup> This set the stage, centuries later, for a major and resource-intensive effort to create an artificial mind, a goal that would not have fit well with a society oriented to contemplation. This is not to say that there is no faith today, nor that there was no technology in the middle ages, nor that there has been no shift between the early modern period and today. Rather, it is to say that a basic trajectory was established in magic that significantly shapes science today.

The difference between the Renaissance magus and the mediaeval member of the Church casts a significant shadow today. The scientist seems to live more in the shadow of the Renaissance magus than of the member of mediaeval society. This is not to say that scientists cannot be humble and moral, nor that they cannot hold wonder at what they study. But it is to say that there are a number of points of contact between the Renaissance magus's way of relating to the world and that of a scientist

renaissance magus's way of relating to the world and that of a scientist and those who live in science's shadow. Governments today consult social scientists before making policy decisions: the relationship seems to be how to best deal with material rather than a relationship as to one's mother. We have more than a hint of secularised magic in which substantial fragments of Renaissance and early modern magic have long outlived some magical practices.

Under the patristic and medieval conception, this life was an apprenticeship to the life in Heaven, the beginning of an eternal glory contemplating God. Magic retained a sense of supernatural reality and a larger world, but its goal was to improve this life, understood as largely self-contained and not as beginning of the next. That was the new chief end of humanity. That shift is a shift towards the secular, magical as its beginning may be. Magic contains the seeds of its own secularisation, in other words of its becoming scientific. The shift from contemplation of the next world to power in this world is why the occult was associated with all sorts of Utopian visions to transform the world, a legacy reflected in our political ideologies. One of the tools developed in that magical milieu was science: a tool that, for Darwinian reasons, was to eclipse all the rest. The real magic that has emerged is science.

## Science, Psychology, and Behaviourism

What is the niche science has carved out for itself? I'd like to look at an academic discipline that is working hard to be a science, psychology. I will more specifically look at behaviourism, as symptomatic within the history of psychology. Is it fair to look at behaviourism, which psychology itself rejected? It seems that behaviourism offers a valuable case study by demonstrating what is more subtly present elsewhere in psychology. Behaviourism makes some basic observations about reward and punishment and people repeating behaviours, and portrays this as a comprehensive psychological theory: behaviourism does not acknowledge beliefs, for instance. Nonetheless, I suggest that behaviourism is a conceivable development in modern psychology which would have been impossible in other settings. Behaviourism may be unusual in the extreme simplicity of its vision and its refusal to recognise internal states, but not in desiring a Newton who will make psychology a full-fledged science and let psychology know its material with the same kind of knowing as physics has for its material.

Newton and his kin provided a completely de-anthropomorphised account of natural phenomena, and behaviourism provided a de-anthropomorphised account of humans. In leading behaviourist B.F. Skinner's *Walden Two* (1948), we have a Utopian vision where every part of society seems to work better: artists raised under Skinner's conditioning produce work which is 'extraordinarily good,' the women are more beautiful,[\[37\]](#) and Skinner's alter ego expresses the hope of controlling the weather,[\[38\]](#) and compares himself with God.[\[39\]](#) Skinner resemble seems to resemble a Renaissance magus more than a mediaeval member: society is raw material for him to transform. Skinner

is, in a real sense, a Renaissance magus whose magic has become secularised. Quite a lot of the magus survives the secularisation of Skinner's magic.

Even without these more grandiose aspirations, psychology is symptomatic of something that is difficult to discern by looking at the hard sciences. Psychological experiments try to find ways in which the human person responds in terms comparable to a physics experiment—and by nature do not relate to their subjects as human agents. These experiments study one aspect of human personhood, good literature another, and literature offers a different kind of knowing from a psychological experiment. If we assume that psychology is the best way to understand people—and that the mind is a mechanism-driven thing—then the assumed burden of proof falls on anyone saying, 'But a human mind isn't the sort of thing you can duplicate on a computer.' The cultural place of science constitutes a powerful influence on how people conceive the question of artificial intelligence.

Behaviourism offers a very simple and very sharp magic sword to cut the Gordian knot of unscientific teleology, a knot that will be discussed under the heading of '[Intentionality and Teleology](#)' below. It removes suspicion of the reason being attached to a spiritual intellect by refusing to acknowledge reason. It removes the suspicion of emotions having a spiritual dimension by refusing to acknowledge emotions. He denies enough of the human person that even psychologists who share those goals would want to distance themselves from him. And yet Skinner does more than entertain messianic fantasies: *Walden Two* is a Utopia, and when Skinner's alter ego compares himself with God, God ends up second best.[\[40\]](#) I suggest that this is no a contradiction at all, or more properly it is a blatant contradiction as far as common sense is concerned, but as far as human human phenomena go, we have two sides of the same coin. The magic sword and the messianic fantasy belong to one and the same magus.

There is in fact an intermediate step between the full-fledged magus and the mortal herd. One can be a magician's assistant, clearing away debris and performing menial tasks to support the real magi. [\[41\]](#) The proportion of the Western population who are scientists is enormous compared to science's founding, and the vast majority of the increase is in magician's assistants. If one meets a scientist at a social gathering, the

science is in all probability not a full-fledged magus, but a magician's assistant, set midway between the magus and the commoner. The common scientist is below the magus in knowledge of science but well above most commoners. In place of a personal messianic fantasy is a more communal tendency to assume that the scientific enterprise is our best hope for the betterment of society. (Commoners may share this belief.) There is a significant difference between the magus and most assistants today. Nonetheless, the figure of the magus is alive today—secularised, in most cases, but alive and well. Paul Johnson's Augustinian account of *Intellectuals* includes such eminent twentieth century scientific figures as Bertrand Russell, Noam Chompsky, and Albert Einstein;[\[42\]](#) the figures one encounters in his pages are steeped in the relationship to society as to raw material instead as to one's mother, the magic sword, and the messianic fantasy.

## I-Thou and Humanness

I suggest that the most interesting critiques of artificial intelligence are not obtained by looking through I-It eyes in another direction, but in using other eyes to begin with, looking through I-Thou eyes. Let us consider Turing's 'Arguments from Various Disabilities'.[\[43\]](#) Perhaps the people who furnished Turing with these objections were speaking out of something deeper than they could explain:

Be kind, resourceful, beautiful, friendly, have initiative, have a sense of humour, tell right from wrong, make mistakes, fall in love, enjoy strawberries and cream, make some one fall in love with it, learn from experience, use words properly, be the subject of its own thought, have as much diversity of behaviour as a man, do something really new.

### **Be kind:**

Kindness is listed by Paul as the fruit of the Spirit (Gal. 5:22) in other words, an outflow of a person living in the Spirit. Disregarding the question of whether all kindness is the fruit of the Spirit, in humans kindness is not merely following rules, but the outflow of a concern for the other person. Even counterfeit kindness is a counterfeit from someone who knows the genuine article. It thus uses some faculty of humanity other than the reasoning ability, which classical AI tries to duplicate and which is assumed to be the one thing necessary to duplicate human cognition.

### **Be resourceful:**

The artificial intelligence assumption is that if something is non-deterministic, it is random, because deterministic and pseudo-random are the only options one can use in programming a computer. This leaves

out a third possibility, that by non-computational faculties someone may think, not merely 'outside the box,' in a random direction, but above it. The creative spark comes neither from continuing a systematic approach, nor simply picking something random ('because I can't get my computer to turn on, I'll pour coffee on it and see if that helps'), but something that we don't know how to give a computer.

**Be beautiful:**

Beauty is a spiritual quality that is not perceived by scientific enquiry and, given our time's interpretation of scientific enquiry, is in principle not recognised. Why not? If we push materialist assumptions to the extreme, it is almost a category error to look at a woman and say, 'She is beautiful.' What is really being said—if one is not making a category error—is, 'I have certain emotions when I look at her.' Even if there is not a connection between physical beauty and intelligence, there seems to be some peasant shrewdness involved. It is a genuine, if misapplied, appeal to look at something that has been overlooked.

**Be friendly:**

True as opposed to counterfeit friendliness is a manifestation of love, which has its home in the will, especially if the will is not understood as a quasi-muscular power of domination, but part of the spirit which lets us turn towards another in love.

Remarks could easily be multiplied. What is meant to come through all this is that science is not magic, but science works in magic's wake. Among relevant features may be mentioned relating as a magus would (in many ways distilling an I-It relationship further), and seeking power over the world in this life rather living an apprenticeship to the next.

## **Orthodox Anthropology in Maximus Confessor's *Mystagogia***

I will begin detailed enquiry in the Greek Fathers by considering an author who is foundational to Eastern Orthodoxy, the seventh century Greek Father Maximus Confessor. Out of the existing body of literature, I will focus on one work, his *Mystagogia*,[\[44\]](#) with some reference to the *Capita Gnosticae*. Maximus Confessor is a synthetic thinker, and the *Mystagogia* is an anthropological work; its discussion of Church mystagogy is dense in theological anthropology as the training for a medical doctor is dense in human biology.

Orthodox Christians have a different cosmology from the Protestant

Orthodox Christians have a different cosmology from the Protestant division of nature, sin, and grace. Nature is never un-graced, and the grace that restores from sin is the same grace that provides continued existence and that created nature in the first place. That is to say, grace flows from God's generosity, and is never alien to nature. The one God inhabits the whole creation: granted, in a more special and concentrated way in a person than in a rock, but the same God is really present in both.

Already, without having seriously engaged theological *anthropology*, we have differences with how AI looks at things. Not only are the answers different, but the questions themselves are posed in a different way. 'Cold matter,' such as is assumed by scientific materialism, doesn't exist, not because matter is denied in Berkeleyan fashion but because it is part of a spiritual cosmology and affirmed to be something more. It is mistaken to think of cold matter, just as it is mistaken to think of tepid fire. Even matter has spiritual attributes and is graced. Everything that exists, from God and the spiritual creation to the material creation, from seraphim to stone, is the sort of thing one connects to in an I-Thou relationship. An I-It relationship is out of place, and from this perspective magic and science look almost the same, different signposts in the process of establishing a progressively purer I-It relationship.

## Intellect and Reason

Maximus' anthropology is threefold: the person is divided into soul and body, and the soul itself is divided into a higher part, the intellect, and a lower part, the reason:[\[45\]](#)

[Pseudo-Dionysius] used to teach that the whole person is a synthesis of soul and body joined together, and furthermore the soul itself can be examined by reason. (The person is an image which reflects teaching about the Holy Church.) Thus he said that the soul had an intellectual and living faculty that were essentially united, and described the moving, intellectual, authoritative power—with the living part described according its will-less nature. And again, the whole mind deals with intelligible things, with the intelligible power being called intellect, whilst the sensible power is called reason.

This passage shows a one-word translation difficulty which is symptomatic of a difference between his theology and the quasi-theological assumptions of the artificial intelligence project. The word in question, which I have rendered as 'authoritative power,' is '*exousiastikws*,' with root word '*exousia*.' The root and its associated forms could be misconstrued today as having a double meaning of 'power' and 'authority,' with 'authority' as the basic sense. In both classical and patristic usage, it seems debatable whether '*exousia*' is tied to any concept of power divorced from authority. In particular this passage's '*exousiastikws*' is most immediately translated as power rather than any kind of authority that is separate from power. Yet Maximus Confessor's whole sense of power here is one that arises from a divine authorisation to know the truth. This sense of power is teleologically oriented and has intrinsic meaning. This is not to say that Maximus could only conceive of

power in terms of authority. He repeatedly uses '*dunamis*,' (*proem*.15-6, 26, 28, etc), a word for power without significant connotations of authority. However, he could conceive of power in terms of authority, and that is exactly what he does when describing the intellect's power.

What is the relationship between 'intellect'/'reason' and cognitive faculties? Which, if either, has cognitive faculties a computer can't duplicate? Here we run into another difficulty. It is hard to say that Maximus Confessor traded in cognitive faculties. For Maximus Confessor the core sense of 'cognitive faculties' is inadequate, as it is inadequate to define an eye as something that provides nerve impulses which the brain uses to generate other nerve impulses. What is missing from this picture? This definition does not provide any sense that the eye interacts with the external world, so that under normal circumstances its nerve impulses are sent because photons strike photoreceptors in an organ resembling a camera. Even this description hides most teleology and evaluative judgment. It does not say that an eye is an organ for perceiving the external world through an image reconstructed in the brain, and may be called 'good' if it sees clearly and 'bad' if it doesn't. This may be used as a point of departure to comment on Maximus Confessor and the conception of cognitive faculties.

Maximus Confessor does not, in an amoral or self-contained fashion, see faculties that operate on mental representations. He sees an intellect that is where one meets God, and where one encounters a Truth that is no more private than the world one sees with the eye is private.

Intellect and reason compete with today's cognitive faculties, but Maximus Confessor understands the intellect in particular as something fundamentally moral, spiritual, and connected to spiritual realities. His conception of morality is itself different from today's private choice of ethical code; morality had more public and more encompassing boundaries, and included such things as Jesus' admonition not to take the place of highest honour so as not to receive public humiliation (Luke 14:7-10): it embraced practical advice for social conduct, because the moral and spiritual were not separated from the practical. It is difficult to Maximus Confessor conceiving of practicality as hampered by morality. In Maximus Confessor's day what we separate into cognitive, moral, spiritual, and practical domains were woven into a seamless tapestry.

## Intellect, Principles, and Cosmology

Chapter twenty-three opens by emphasising that contemplation is more than looking at appearances (23.1-10), and discusses the Principles of things. The concept of a *Principle* is important to his cosmology. There is a foundational difference between the assumed cosmologies of artificial intelligence and Maximus Confessor. Maximus Confessor's cosmology is not the artificial intelligence cosmology with a spiritual dimension added, as a living organism is not a machine modified to use foodstuffs as fuel.

Why do I speak of the 'artificial intelligence cosmology'? Surely one can have a long debate about artificial intelligence without adding cosmology to the discussion. This is true, but it is true because cosmology has become invisible, part of the assumed backdrop of discussion. In America, one cultural assumption is that 'culture' and 'customs' are for faroff and exotic people, not for 'us'—'we' are just being human. It doesn't occur to most Americans to think of eating Turkey on Thanksgiving Day or removing one's hat inside a building as customs, because 'custom' is a concept that only applies to exotic people. I suggest that Maximus Confessor has an interesting cosmology, not because he's exotic, but because he's human.

Artificial intelligence proponents and (most) critics do not differ on cosmology, but because that is because it is an important assumption which is not questioned even by most people who deny the possibility of artificial intelligence. Searle may disagree with Fodor about what is implied by a materialist cosmology, but not whether one should accept materialism. I suggest that some artificial intelligence critics miss the most interesting critiques of artificial intelligence because they share that project's cosmology. If AI is based on a cosmological error, then no amount of fine-tuning within the system will rectify the error. We need to

consider cosmology if we are to have any hope of correcting an error that basic. (Bad metaphysics does not create good physics.) I will describe Maximus Confessor's cosmology in this section, not because he has cosmology and AI doesn't, but because his cosmology seems to suggest a correction to the artificial intelligence cosmology.

At the base of Maximus's cosmology is God. God holds the Principles in his heart, and they share something of his reality. Concrete beings (including us) are created through the Principles, and we share something of their reality and of God. The Principles are a more concrete realisation of God, and we are a more concrete realisation of the Principles. Thought (*nohsis*) means beholding God and the Principles (*logoi*) through the eye of the intellect. Thinking of a tree means connecting with something that is more tree-like than the tree itself.

It may be easier to see what the important Principles in Maximus Confessor's cosmology if we see how they are being dismantled today. Without saying that Church Fathers simply grafted in Platonism, I believe it safe to say that Plato resembled some of Church doctrine, and at any rate Plato's one finger pointing up to God offers a closer approximation to Christianity than Aristotle's fingers pointing down. I would suggest further that looking at Plato can suggest how Christianity differs from Aristotelianism's materialistic tendencies, tendencies that are still unfolding today. Edelman describes the assumptions accompanying Darwin's evolution as the 'death blow' to the essentialism, the doctrine that there are fixed kinds of things, as taught by Plato and other idealists. [46] Edelman seems not to appreciate why so many biologists assent to punctuated equilibrium. [47] However, if we assume that there is solid evidence establishing that all life gradually evolved from a common ancestor, then this remark is both apropos and perceptive.

When we look around, we see organisms that fit neatly into different classes: human, housefly, oak. Beginning philosophy students may find it quaint to hear of Plato's Ideas, and the Ideal horse that is copied in all physical horses, but we tend to assume Platonism at least in that horses are similar 'as if' there were an Ideal horse: we don't believe in the Ideal horse any more, but we still treat its shadow as if it were the Ideal horse's shadowy copy.

Darwin's theory of evolution suggests that all organisms are connected via slow, continuous change to a common ancestor and therefore to each

other. If this is true, there are dire implications for Platonism. It is as if we had pictures of wet clay pottery, and posited a sharp divide between discrete classes of plates, cups, and bowls. Then someone showed a movie of a potter deforming one and the same clay from one shape to another, so that the divisions are now shown to be arbitrary. There are no discrete classes of vessels, just one lump of clay being shaped into different things. Here we are pushing a picture to the other end of a spectrum, further away from Platonism. It is a push from tacitly assuming there is a shadow, to expunging the remnant of belief in the horse and its shadow.

But this doesn't mean we're perfect Platonists, or can effortlessly appreciate the Platonic mindset. There are things we have to understand before we can travel in the other direction. If anything, there is more work involved. We act as if the Ideas' shadows are real things, but we don't genuinely believe in the shadows *qua* shadows, let alone the Ideas. We've simply inherited the habit of treating shadows as a convenient fiction. But Maximus Confessor believed the Principles (Ideas) represented something fuller and deeper than concrete things.

This is foundational to why Maximus Confessor would not have understood thought as manipulating mental representations in the inescapable privacy of one's mind. Contemplation is not a matter of closing one's eyes and fantasising, but of opening one's eyes and beholding something deeper and more real than reality itself. The sensible reason can perceive the external physical world through the senses, but this takes a very different light from Kant's view.

Maximus Confessor offers a genuinely interesting suggestion that we know things not only because of our power-to-know, but because of their power-to-be-known, an approach that I will explore later under the heading '[Knowledge of the Immanent](#).' The world is not purely transcendent, but immanent. For Kant the mind is a box that is hermetically sealed on top but has a few frustratingly small holes on the bottom: the senses. Maximus Confessor doesn't view the senses very differently, but the top of the box is open.

This means that the intellect is most basically where one meets God. Its powerful ability to know truth is connected to this, and it connects with the Principles of things, as the senses connect with mere things. Is it fair to the senses to compare the intellect's connection with Principles with the senses' experience of physical things? The real question is not that. but whether it is fair to the intellect. and the answer is 'no.' The

Principles are deeper, richer, and fuller than the mere visible things, as a horse is richer than its shadow. The knowledge we have through the intellect's connection with the Principles is of a deeper and richer sort than what is merely inferred from the senses.

## **The Intelligible and the Sensible**

Maximus Confessor lists, and connects, several linked pairs, which I have incorporated into a schema below. The first column of this schema relates to the second column along lines just illustrated: the first member of each pair is transcendent and eminent to the second, but also immanent to it.

### **Head Body**

Heaven earth (3.1-6)  
holy of holies sanctuary (2.8-9)  
intelligible sensible (7.5-10)  
contemplative active (5.8-9)  
intellect reason (5.9-10)  
spiritual wisdom practical wisdom (5.13-15)  
knowledge virtue (5.58)  
unforgettable knowledge faith (5.58-60)  
truth goodness (5.58-9)  
archetype image (5.79-80)  
New Testament Old Testament (6.4-6)  
spiritual meaning of a text literal meaning of a text (6.14-5)  
bishop's seating on throne bishop's entrance into Church (8.5-6, 20-21)  
Christ's return in glory Christ's first coming, glory veiled (8.6-7, 18)  
Maximus Confessor's cosmology sees neither a disparate collection of unconnected things, nor an undistinguished monism that denies differences. Instead, he sees a unity that sees natures (1.16-17) in which God not only limits differences, as a circle limits its radii (1.62-67), but

transcends all differences. Things may be distinguished, but they are not divided. This is key to understanding both doctrine and method. He identifies the world with a person, and connects the Church with the image of God. Doctrine and method are alike synthetic, which suggests that passages about his cosmology and ecclesiology illuminate anthropology.

One recurring theme shows in his treatment of heaven and earth, the soul and the body, the intelligible (spiritual) and the sensible (material). The intelligible both transcends the sensible, and is immanent to it, present in it. The intelligible is what can be apprehended by the part of us that meets God; the sensible is what presents itself to the world of senses. (The senses are not our only connection with the world.) This is a different way of thinking about matter and spirit from the Cartesian model, which gives rise to the ghost in the machine problem. Maximus Confessor's understanding of spirit and matter does not make much room for this dilemma. Matter and spirit interpenetrate. This is true not just in us but in the cosmos, which is itself 'human': he considers '...the three people: the cosmos (let us say), the Holy Scriptures, and this is true with us' (7.40-1). The attempt to connect spirit and matter might have struck him like an attempt to forge a link between fire and heat, two things already linked.

## Knowledge of the Immanent

The word which I here render 'thought' is '*nohsis*', cognate to 'intellect' ('*nous*') which has been discussed as that which is inseparably the home of thought and of meeting God. We already have a hint of a conceptual cast in which thought will be understood in terms of connection and contemplation.

In contrast to understanding thought as a process within a mind, Maximus describes thought in terms of a relationship: a thought can exist because there is a power to think of in the one thinking, and a power to be thought of in what is thought of.[\[48\]](#) We could no more know an absolutely transcendent creature than we could know an absolutely transcendent Creator. Even imperfect thought exists because we are dealing with something that 'holds power to be apprehended by the intellect' (I.82). We say something is purple because its manifest purpleness meets our ability to perceive purple. What about the claim that purple is a mental experience arising from a certain wavelength of light striking our retinas? One answer that might be given is that those are the mechanisms by which purple is delivered, not the nature of what purple is.[\[49\]](#) The distinction is important.

We may ask, what about capacity for fantasy and errors? The first response I would suggest is cultural. The birth of modernity was a major shift, and its abstraction introduced new things into the Western mind, including much of what supports our concept of fantasy (in literature, etc.). The category of fantasy is a basic category to our mindset but not to the patristic or medieval mind. Therefore, instead of speculating how Maximus Confessor would have replied to these objections, we can point out that they aren't the sort of thing that he would ever think of, or perhaps even understand.

But in fact a more positive reply can be taken. It can be said of good

and evil that good is the only real substance. Evil is not its own substance, but a blemish in good substance. This parallels error. Error is not something fundamentally new, but a blurred or distorted form of truth. Fantasy does not represent another fundamentally independent, if hypothetical, reality; it is a funhouse mirror refracting this world. We do not have a representation that exists in one's mind alone, but a dual relationship that arises both from apprehending intellect and an immanent thing. The possibility of errors and speculation make for a longer explanation but need not make us discard this basic picture.

## Intentionality and Teleology

One of the basic differences in cosmology between Maximus Confessor and our own day relates to *intentionality*. As it is described in cognitive science's philosophy of mind, 'intentionality' refers to an 'aboutness' of human mental states, such as beliefs and emotions. The word 'tree' is about an object outside the mind, and even the word 'pegasus' evokes something that one could imagine existing outside of the mind, even if it does not. Intentionality does not exist in computer programs: a computer chess program manipulates symbols in an entirely self-enclosed system, so 'queen' cannot refer to any external person or carry the web of associations we assume. Intentionality presents a philosophical problem for artificial intelligence. Human mental states and symbol manipulation are about something that reach out to the external world, whilst computer symbol manipulation is purely internal. A computer may manipulate symbols that are meaningful to humans using it, but the computer has no more sense of what a webpage means than a physical book has a sense that its pages contain good or bad writing. Intentionality is a special feature of living minds, and does not exist outside of them. Something significant will be achieved if ever a computer program first embodies intentionality outside of a living mind.

Maximus Confessor would likely have had difficulty understanding this perspective as he would have had difficulty understanding the problem of the ghost in the machine: this perspective makes intentionality a special exception as the ghost in the machine made our minds' interaction with our bodies a special exception, and to him both 'exceptions' are in fact the crowning jewel of something which permeates the cosmos.

The theory of evolution is symptomatic of a difference between the post-Enlightenment West and the patristic era. This theory is on analytic

grounds not a true answer to the question, 'Why is there life as we know it?' because it does not address the question, 'Why is there life as we know it?' At best it is a true answer to the question, 'How is there life as we know it?' which people often fail to distinguish from the very different question, 'Why is there life as we know it?' The Enlightenment contributed to an effort to expunge all trace of teleology from causality, all trace of 'Why?' from 'How?' Of Aristotle's four causes, only the efficient cause[50] is familiar; a beginning philosophy student is liable to misconstrue Aristotle's final cause[51] as being an efficient cause whose effect curiously precedes the cause. The heavy teleological scent to final causation is liable to be missed at first by a student in the wake of reducing 'why' to 'how'; in Maximus Confessor, causation is not simply mechanical, but tells what purpose something serves, what it embodies, what meaning and relationships define it, and why it exists.

Strictly speaking, one should speak of 'scientific mechanisms' rather than 'scientific explanations.' Why? 'Scientific proof' is an oxymoron: science does not deal in positive proof any more than mathematics deals in experiment, so talk of 'scientific proof' ordinarily signals a speaker who has more faith in science than understanding of what science really does. 'Scientific explanation' is a less blatant contradiction in terms, but it reflects a misunderstanding, perhaps one that is more widespread, as it often present among people who would never speak of 'scientific proof.' Talk of 'scientific explanation' is not simply careless speech; there needs to be a widespread category error before there is any reason to write a book like Mary Midgley's *Science as Salvation* (1992). Science is an enterprise which provides mechanisms and has been given the cultural place of providing explanations. This discrepancy has the effect that people searching for explanations turn to scientific mechanisms, and may not be receptive when a genuine explanation is provided, because 'explanation' to them means 'something like what science gives.' This may not be the only factor, but it casts a long shadow. The burden of proof is born by anyone who would present a non-scientific explanation as being as real as a scientific explanation. An even heavier burden of proof falls on the person who would claim that a non-scientific explanation—not just as social construction, but a real claim about the external world—offers something that science does not.

The distinction between mechanism and explanation is also relevant

because the ways in which artificial intelligence has failed may reflect mechanisms made to do the work of explanations. In other words, the question of 'What is the nature of a human?' is answered by, 'We are able to discern these mental mechanisms in a human.' If this is true, the failure to duplicate a human mind in computers may be connected to researchers answering the wrong question in the first place. These are different, as the question, 'What literary devices can you find in *The Merchant of Venice*[\[52\]](#)?' is different from 'Why is *The Merchant of Venice* powerful drama?' The devices aren't irrelevant, but neither are they the whole picture.

Of the once great and beautiful land of teleology, a land once brimming in explanations, all has been conquered, all has been levelled, all has been razed and transformed by the power of I-It. All except two stubborn, embattled holdouts. The first holdout is intentionality: if it is a category error to project things in the human mind onto the outer world, nonetheless we recognise that intentionality exists in the mind—but about-ness of intentionality is far less than the about-ness once believed to fill the cosmos. The second and last holdout is evolution: if there is to be no mythic story of origins that gives shape and meaning to human existence, if there cannot be an answer to 'Why is there life as we know it?' because there is no reason at all for life, because housefly, horse, and human are alike the by-product of mindless forces that did not have us in mind, nonetheless there is still an emaciated spectre, an evolutionary mechanism that does just enough work to keep away a teleological approach to origins questions. The land of teleology has been razed, but there is a similarity between these two remnants, placeholders which are granted special permission to do what even the I-It approach recognises it cannot completely remove of teleology. That is the official picture, at least. Midgley is liable to pester us with counterexamples of a teleology that is far more persistent than the official picture gives credit for: she looks at evolution doing the work of a myth instead of a placeholder that keeps myths away, for instance.[\[53\]](#) Let's ignore her for the moment and stick with the official version. Then looking at both intentionality and evolution can be instructive in seeing what has happened to teleology, and appreciating what teleology was and could be. Now Midgley offers us reasons why it may not be productive to pretend we can excise teleology: the examples of teleology she discusses do not seem to be improved by

being driven underground and presented as non-teleological.

Maximus's picture, as well as being teleological, is moral and spiritual. As well as having intentions, we are living manifestations of a teleological, moral and spiritual Intention in God's heart. Maximus Confessor held a cosmology, and therefore an anthropology, that did not see the world in terms of disconnected and meaningless things. He exhibited a number of traits that the Enlightenment stripped out: in particular, a pervasive teleology in both cosmology and anthropology. He believed in a threefold anthropology of intellect/spirit, reason/soul, and body, all intimately tied together. What cognitive science accounts for through cognitive faculties, manipulating mental representations, were accounted for quite differently by an intellect that sees God and the Principles of beings, and a reason that works with the truths apprehended by intellect. The differences between the respective cosmologies and anthropologies are not the differences between two alternate answers to the same question, but answers to two different questions, differently conceived. They are alike in that they can collide because they are wrestling with the same thing: where they disagree, at least one of them must be wrong. They are different in that they are looking at the same aspect of personhood from two different cultures, and Maximus Confessor seems to have enough distance to provide a genuinely interesting critique.

## Conclusion

Maximus Confessor was a synthetic thinker, and I suggest that his writings, which are synthetic both in method and in doctrine, are valuable not only because he was brilliant but because synthetic enquiry can be itself valuable. I have pursued a synthetic enquiry, not out of an attempt to be like Maximus Confessor, but because I think an approach that is sensitive to connections could be productive here. I'm not the only critic who has the resources to interpret AI as floundering in a way that may be symptomatic of a cosmological error. It's not hard to see that many religious cosmologies offer inhospitable climates to machines that think: Foerst's reinterpretation of the image of God[\[54\]](#) seems part of an effort to avoid seeing exactly this point. The interesting task is understanding and conveying an interconnected web. So I have connected science with magic, for instance, because although the official version is that they're completely unrelated, there is a strong historic link between them, and cultural factors today obscure the difference, and for that matter obscure several other things that interest us.

This dissertation falls under the heading of boundary issues between religion and science, and some readers may perceive me to approach boundary issues in a slightly different fashion. That perception is correct. One of the main ways that boundary issues are framed seems to be for Christian theologians to show the compatibility of their timeless doctrines with that minority of scientific theories which have already been accepted by the scientific community and which have not yet been rejected by that same community. With the question of origins, there has been a lot of work done to show that Christianity is far more compatible with evolutionary theory than a literal reading of Genesis 1 would suggest. It seems to have only been recently that gadflies within the intelligent design movement have suggested both that the scientific case for

evolution is weaker than it has been made out to be, and there seems to be good reason to believe that Christianity and evolution are incompatible at a deep enough level that the literal details of Genesis 1 are almost superfluous. Nobody conceives the boundary issues to mean that theologians should demonstrate the compatibility of Christianity with that silent majority of scientific theories which have either been both accepted and discredited (like spontaneous generation) or not yet accepted (like the cognitive-theoretic model of the universe). The minority is different, but not as different as people often assume.

One of the questions which is debated is whether it is best to understand subject-matter from within or without. I am an M.Phil. student in theology with a master's and an adjunct professorship in the sciences. I have worked to understand the sciences from within, and from that base look and understand science from without as well as within. Someone who only sees science from without may lack appreciation of certain things that come with experience of science, whilst someone who only sees science from within may not be able to question enough of science's self-portrayal. This composite view may not be available to all, nor is it needed, but I believe it has helped me in another basic rôle from showing religion's compatibility with current science: namely, serving as a critical observer and raising important questions that science is itself unlikely to raise, sometimes turning a scientific assumption on its head. Theology may have other things to offer in its discussion with science than simply offering assent: instead of solely being the recipient of claims from science, it should be an agent which adds to the conversation.

Are there reasons why the position I propose is to be preferred? Science's interpretation of the matter is deeply entrenched, enough so that it seems strange to connect science with the occult. One response is that this perspective should at least be listened to, because it is challenging a now entrenched cultural force, and it may be a cue to how we could avoid some of our own blind spots. Even if it is wrong, it could be wrong in an interesting way. A more positive response would be to say that this is by my own admission far from a complete picture, but it makes sense of part of the historical record that is meaningless if one says that modern science just happened to be born whilst a magical movement waxed strong, and some of science's founders just happened to be magicians. A more robust picture would see the early modern era as an interlocking whole that encompassed a continuing Reformation

interlocking whole that encompassed a continuing reformation, Descartes, magic, nascent science, and the wake of the Renaissance polymath. They all interconnect, even if none is fully determined. Lack of time and space preclude me from more than mentioning what that broader picture might be. There is also another reason to question the validity of science's basic picture:

**Artificial intelligence doesn't work, at least not for a working copy of human intelligence.**

Billions of dollars have been expended in the pursuit of artificial intelligence, so it is difficult to say the artificial intelligence project has failed through lack of funding. The project has attracted many of the world's most brilliant minds, so it is difficult to say that the project has failed through lack of talent. Technology has improved a thousandfold or a millionfold since a giant like Turing thought computer technology was powerful enough for artificial intelligence, so it is difficult to say that today's computers are too underpowered for artificial intelligence. Computer science has matured considerably, so it's hard to say that artificial intelligence hasn't had a chance to mature. In 1950, one could have posited a number of reasons for the lack of success then, but subsequent experience has made many of these possibilities difficult to maintain. This leaves open the possibility that artificial intelligence has failed because the whole enterprise is based on a false assumption, perhaps an error so deep as to be cosmological.

The power of science-based technology is a side effect of learning something significant about the natural world, and both scientific knowledge and technology are impressive cultural achievements. Yet science is not a complete picture—and I do not mean simply that we can have our own private fantasies—and science does not capture the spiritual qualities of matter, let alone a human being. The question of whether science understands mechanical properties of physical things has been put to the test, and the outcome is a resounding yes. The question of whether science understands enough about humans to duplicate human thought is also being put to the test, and when the rubber meets the road, the answer to that question looks a lot like, 'No.' It's not definitive (it couldn't be), but the picture so far is that science is trying something that can't work. It can't work because of spiritual principles, as a perpetual motion machine can't work because of physical principles. It's not a matter of insufficient resources available so far, or

still needing to find the right approach. It doesn't seem to be the sort of thing which could work.

We miss something about the artificial intelligence project if we frame it as something that began after computer scientists saw that computers can manipulate symbols. People have been trying to make intelligent computers for half a century, but artificial intelligence is a phenomenon that has been centuries in the making. The fact that people saw the brain as a telephone switchboard, when that was the new technology, is more a symptom than a beginning. There's more than artificial intelligence's surface resemblance to alchemists' artificial person ('homunculus'). A repeated feature of the occult enterprise is that you do not have people giving to society in the ways that people have always given to society; you have exceptional figures trying to delve into unexplored recesses and forge some new creation, some new power—some new technology or method—to achieve something mythic that has simply not been achieved before. The magus is endowed with a magic sword to powerfully slice through his day's Gordian knots, and with a messianic fantasy. This is true of Leibniz's *Ars Combinatoria* and it is true of more than a little of artificial intelligence. To the reader who suggests, 'But magic doesn't really work!' I would point out that artificial intelligence also doesn't really work—although its researchers find it to work, like Renaissance magi and modern neo-pagans. The vast gap between magic and science that exists in our imagination is a cultural prejudice rather than a historical conclusion. Some puzzles which emerge from a non-historical picture of science—in particular, why a discipline with modest claims about falsifying hypotheses is held in such awe—seem to make a lot more sense if science is investigated as a historical phenomenon partly stemming from magic.

If there is one unexpected theme running through this enquiry, it is what has emerged about relationships. The question of whether one relates to society (or the natural world) as to one's mother or as to raw material, in I-Thou or I-It fashion, first crept in as a minor clarification. The more I have thought about it, the more significant it seems. The Renaissance magus distinguished himself from his medieval predecessors by converting I-Thou relationships into I-It. How is modern science different? To start with, it is much more consistent in pursuing I-It relationships. The fact that science gives mechanisms instead of explanations is connected: an explanation is an I-Thou thing whilst a

explanations is connected, an explanation is an I-Thou thing, whilst a bare mechanism is I-It: if you are going to relate to the world in I-It fashion, there is every reason to replace explanations with mechanisms. An I-Thou relationship understands in a holistic, teleological fashion: if you are going to push an I-It relationship far enough, the obvious approach is to try to expunge teleology as the Enlightenment tried. A great many things about magus and scientist alike hinge on the rejection of Orthodoxy's I-Thou relationship.

In Arthurian legend, the figure of Merlin is a figure who holds magical powers, not by spells and incantations, but by something deeper and fundamental. Merlin does not need spells and incantations because he relates to the natural world in a way that almost goes beyond I-Thou; he relates to nature as if it were human. I suggest that science provides a figure of an anti-Merlin who holds anti-magical powers, not by spells and incantations, but by something deeper and fundamental. Science does not need spells and incantations because it relates to the natural world and humans in a way that almost goes beyond I-It; it relates to even the human as if it were inanimate. In both cases, the power hinges on a relationship, and the power is epiphenomenal to that relationship.

If this is a problem, what all is to be done? Let me say what is not to be done. What is not to be done is to engineer a programme to enlist people in an I-Thou ideology. Why not? 'I-Thou ideology' is a contradiction in terms. The standard response of starting a political programme treats society as raw material to be transformed according to one's vision—and I am not just disputing the specific content of some visions, but saying that's the wrong way to start. Many of the obvious ways of 'making a difference' that present themselves to the modern mind work through an I-It relationship, calculating how to obtain a response from people, and are therefore tainted from the start. Does that mean that nothing is to be done? No; there are many things, from a walk of faith as transforming communion with God, to learning to relate to God, people, and the entire cosmos in I-Thou fashion, to using forms of persuasion that appeal to a whole person acting in freedom. But that is another thesis to explore.

## Epilogue, 2010

I look back at this piece six years later, and see both real strengths and things I wince at. This was one of my first major works after being chrismated Orthodox, and while I am enthusiastic for Orthodoxy there are misunderstandings. My focus on cosmology is just one step away from Western, and in particular scientific, roots, and such pressure to get cosmology right is not found in any good Orthodox theologian I know. That was one of several areas where I had a pretty Western way of trying to be Orthodox, and I do not blame people who raise eyebrows at my heavy use of existentialist distinction between I-Thou and I-It relationship. And the amount of time and energy spent discussing magic almost deterred me from posting it from my website; for that reason alone, I spent time debating whether the piece was fit for human consumption. And it is possibly theology in the academic sense, but not so much the Orthodox sense: lots of ideas, cleverly put together, with little invitation to worship.

But for all this, I am still posting it. The basic points it raises, and much of the terrain, are interesting. There may be fewer true believers among scientists who still chase an artificial intelligence pot o' gold, but it remain an element of the popular imagination and belief even as people's interests turn more and more to finding a magic sword that will slice through society's Gordian knots—which is to say that there may be something relevant in this thesis besides the artificial intelligence critique.

I am posting it because I believe it is interesting and adds something to the conversation. I am also posting it in the hope that it might serve as a sort of gateway drug to some of my more recent works, and provide a contrast: this is how I approached theology just after being received into Holy Orthodoxy, and other works show what I would present as theology

having had more time to steep in Orthodoxy, such as [The Arena](#).  
I pray that God will bless you.

[6] 'Intentionality' is a philosophy of mind term for the 'about-ness' of mental states.

[7] By 'teleology' I understand in a somewhat inclusive sense that branch of theology and philosophy that deals with goals, ends, and ultimate meanings.

[8] 'Cognitive faculty' is a philosophy of mind conception of a feature of the human mind that operates on mental representations to perform a specific function.

[9] The spiritual 'intellect' is a patristic concept that embraces thought, conceived on different terms from 'cognitive science,' and is inseparably the place where a person meets God. Augustine locates the image of God in the intellect (*In Euangelium Ioannis Tractatus*, III.4), and compares the intellect to Christ as illuminating both itself and everything else (*In Euangelium Ioannis Tractatus*, XLVII, 3).

[10] Watts 2002, 57-8. See the World Transhumanist Association website at <http://www.transhumanist.org> for further information on transhumanism.

[11] C.S. Lewis critiques this project in *The Abolition of Man* (1943) and *That Hideous Strength* (1965). He does not address the question of whether this is a possible goal, but argues that it is not a desirable goal: the glorious future it heralds is in fact a horror compared to the present it so disparages.

[44] References will be to the online Greek version at *Thesaurus Linguae Graecae*, [http://stephanus.tlg.uci.edu/inst/wsearch?wtitle=2892+049&uid=&GreekFont=Unicode&mode=c\\_search](http://stephanus.tlg.uci.edu/inst/wsearch?wtitle=2892+049&uid=&GreekFont=Unicode&mode=c_search), according to chapter and line. Unless otherwise specified, references in this section will be to the *Mystagogia*.

[45] 5.1-10. 'Intellect' in particular is used as a scholarly rendering of

the Greek '*nous*,' and is not equivalent to the layman's use of 'intellect,' particularly not as cognate to 'intelligence.' The 'reason' ('*logos*') is closer to today's use of the term, but not as close as you might think. This basic conceptualisation is common to other patristic and medieval authors, such as Augustine.

[46] 1992, 239.

[47] 'Punctuated equilibrium' is a variant on Darwin's theory of (gradual) evolution. It tries to retain an essentially Darwinian mechanism whilst acknowledging a fossil record and other evidence which indicate long periods of stability interrupted by the abrupt appearance and disappearance of life forms. It is called 'punk eek' by the irreverent.

[48] I.82. Material from the *Capita Gnosticae*, not available in *Thesaurus Linguae Graecae*, will be referenced by century and chapter number, i.e. I.82 abbreviates Century I, Chapter 82.

[49] See Lewis 2001, 522.

[50] What we usually mean by 'cause' today: something which mechanically brings about its effect, as time and favourable conditions cause an acorn to grow into an oak.

[51] The 'final cause' is the goal something is progressing towards: thus a mature oak is the final cause of the acorn that would one day grow into it.

[52] As seen on the Project Gutenberg archive at <http://www.gutenberg.net/etext97/1ws1810.txt> on 15 June 2004.

[53] 1992, 147-165.

# **Akathist to St. Philaret the Merciful**

## **Kontakion 1**

To thee, O camel who passed through the eye of the needle, we offer thanks and praise: for thou gavest of thy wealth to the poor, as an offering to Christ. Christ God received thy gift as a loan, repaying thee exorbitantly, in this transient life and in Heaven. Rejoice, O flowing fountain of Heaven's treasures! (*Repeated thrice.*)

## Oikos 1

Thou hadst earthly wealth yet knewest true treasure: thou madest use of thy possessions but trustedst them never, for in thee was the Kingdom of God and thy treasurehouse was Heaven. Wherefore thou hearest these praises which we offer to thee:

Rejoice, illustrious and wealthy noble who knew true wealth!  
Rejoice, O thou who were ever mindful of the poor!  
Rejoice, who knew thy deeds to the poor are deeds done to Christ!  
Rejoice, O thou who knew true wealth from false!  
Rejoice, O thou who knew that we can take nothing from the world!  
Rejoice, O thou who knew that the righteous would never be forsaken!  
Rejoice, O thou who gave ever more than was asked!  
Rejoice, O thou who withheld not thy last ounce of wheat!  
Rejoice, O thou who gave all six bushels to one who asked for a little!  
Rejoice, O thou whose friend gave thee forty bushels thereafter!  
Rejoice, O thou who trusted in the Lord with all his heart!  
Rejoice, O flowing fountain of Heaven's treasures!

## **Kontakion 2**

Thou knewest treasure enough to feed thy household for a hundred years without work: And thou wert true to thy name, Philaret or "Lover of Virtue", even when thine own wife saw not the horses on the mountain and chariots of fire which surround the true lover of virtue. But with eyes raised to fiery Heaven, we cry out with thee: Alleluia!

## Oikos 2

Thou invitedst thine own to join thy love of virtue, and thine own received not thine invitation. But thine invitation remaineth open, and we who receive thine invitation and hearken to the open door cry out to thee in praise:

Rejoice, O diadem of married life in the world!

Rejoice, O thou who knewest virtue as treasure!

Rejoice, O thou who fed a household out of the treasurehouse of thy virtue!

Rejoice, O thou who knew not the greed of Midas's curse!

Rejoice, O thou whose gifts would yet multiply and enrich the recipient!

Rejoice, O thou who was generous when he was rich!

Rejoice, O thou who was raided by marauders yet became no less generous!

Rejoice, O thou who trusted God when he had much and when he had little!

Rejoice, O thou who knewest that riches profit not in the day of wrath!

Rejoice, O thou whose virtue profited in easy times and hard times alike!

Rejoice, O flowing fountain of Heaven's treasures!

## **Kontakion 3**

Many a generous beggar will give his last penny, whilst few a rich man will give to thee from his hedge of protection. Yet we behold a wonder in thee, who was rich, illustrious, and of noble lineage, and esteemed these not. Thy hedge of protection was the Lord God, and virtue and treasure in Heaven, and thou wert generous unto thine uttermost farthing. To thee, a rich man more generous than a beggar, we cry: Alleluia!

## Oikos 3

Thou transcendedst the virtues of pagan philosophy: fortitude, justice, prudence, and temperance, the virtues of a well lived earthly life. But thou knewest the Christian, deiform virtues: faith, hope, and love, the virtues of a Heavenly life already present in an egg in life on earth.

Wherefore we cry out to thee:

Rejoice, O thou whose fortitude sought no protection from earthly treasures!

Rejoice, O thou whose justice transcended human reckoning!

Rejoice, O thou whose prudence was the Wisdom who is Christ!

Rejoice, O thou whose temperance sought from earthly things nothing in excess of what they could give!

Rejoice, O thou whose faith trusted that Christ would faithfully provide!

Rejoice, O thou whose hope in God was never disappointed!

Rejoice, O thou whose love refrained from sharing neither virtue nor earthly possessions!

Rejoice, O thou whose joy flowed in easy times and hard!

Rejoice, O thou whose peace flowed from the silence of Heaven!

Rejoice, O thou whose generosity was perfect!

Rejoice, O flowing fountain of Heaven's treasures!

## **Kontakion 4**

We will forever underestimate thy generosity if we merely count what thou gavest against what much or little property thou possessesdt, for thine open hand was a shadow and an icon of the vast wealth thou heldest in the generous treasure in Heaven, and this vast treasure thou laid hold to as Philaret, lover of virtue, which is to say lover of treasures in Heaven, eclipseth thy generosity with mere earthly property as the sun eclipseth the moon—nay, as the sun eclipseth a candle! Wherefore, with thee who hoarded true treasure, we cry: Alleluia!

## Oikos 4

Beseech the Lord God that we also might seek true treasure in Heaven, where neither moth nor rust corrodes and thieves do not break in and steal. Wherefore we cry out in wonder to thee:

Rejoice, O thou who drunk from the wellspring of Truth!  
Rejoice, O thou who were fed by the Tree of Life!  
Rejoice, O thou who knew silver from dross!  
Rejoice, O thou who never grasped at dross because thou clungst to the Treasure for whom every treasure is named!  
Rejoice, O thou who esteemed men of humble birth because thou questedst after the royal priesthood!  
Rejoice, O thou who grasped treasure next to which every earthly endowment is but dust and ashes!  
Rejoice, O thou who counted the poor and needy as more precious than gold!  
Rejoice, O thou who cast away shadows to behold the Sun of Righteousness!  
Rejoice, O thou who never forsook the Lord!  
Rejoice, O thou whom the Lord never abandoned!  
Rejoice, O thou who found that not one of His good promises has failed!  
Rejoice, O flowing fountain of Heaven's treasures!

## **Kontakion 5**

Ever seeking Christ, thou becamest thyself like Christ, the source and the summit of all virtue. Wishing to imitate thee as thou imitatedst Christ, we cry unto thee: Alleluia!

## Oikos 5

Every virtue is an icon of Christ, an icon not before us, but in us.  
Seeking after the virtues as we seek Christ, we cry out to thee:

Rejoice, O thou divine lover of virtue!

Rejoice, O thou who knew the Source of virtue!

Rejoice, O thou whose virtue was an imprint of Christ!

Rejoice, O thou who perfected the divine image with voluntary likeness!

Rejoice, O thou who teaches us virtue in the Christian walk!

Rejoice, O thou ever willing to share not only possessions but virtue!

Rejoice, O thou in whom Christ sat enthroned on virtue!

Rejoice, O thou who in virtue loved and served God!

Rejoice, O volume wherein the Word was inscribed in the ink of the virtues!

Rejoice, O thou who ever banishest passions!

Rejoice, O polished mirror refulgent with the uncreated Light!

Rejoice, O flowing fountain of Heaven's treasures!

## **Kontakion 6**

Eating from the Tree of Life, thou becamest thyself a tree of life, to the nourishment of many. Hungering for lifegiving food, we cry with thee:  
Alleluia!

## Oikos 6

Sown in good soil, thou baredst fruit thirty, sixty, a hundredfold.  
Wherefore we cry unto thee:

Rejoice, O thou who were food to the hungry!  
Rejoice, O thou who were wealth to the destitute!  
Rejoice, O thou who were a robe of boldness to the naked!  
Rejoice, O thou who gave abundantly out of thine abundance!  
Rejoice, O thou who gave abundantly out of lack and want!  
Rejoice, O thou who were God's abundance to thy neighbour!  
Rejoice, O thou who never merely gave money or property!  
Rejoice, O thou who always gave with a blessing!  
Rejoice, O thou who loved Christ in thy neighbour!  
Rejoice, O thou tree whose shade sheltered many!  
Rejoice, O thou river who irrigated vast lands!  
Rejoice, O flowing fountain of Heaven's treasures!

## **Kontakion 7**

Blessed art thou, O holy Father Philaret the Merciful! Merciful wert thou, and thou receivedst mercy, wherefore we cry with thee: Alleluia!

## Oikos 7

Feeding the hungry is greater work than raising the dead! Wherefore we ask of thee no miracle, O merciful Father Philaret, for thou shewedst the continual miracle of mercy, and we cry unto thee:

Rejoice, O thou who gave the very last thou hadst!  
Rejoice, O thou who received recompense from Christ thereafter!  
Rejoice, O thou who withheld nothing from him who asked of thee!  
Rejoice, O thou who wherewith withheld nothing from Christ!  
Rejoice, O thou who clung not to gold!  
Rejoice, O thou who clung to the Light next to which gold is as dust!  
Rejoice, O wise one who made blessings as abundant as dust!  
Rejoice, O thou who were ever full of mercy!  
Rejoice, O thou whose mercy was as a lamp!  
Rejoice, O thou who firmly beheld the invisible!  
Rejoice, O thou whose faith worked mercy through love!  
Rejoice, O flowing fountain of Heaven's treasures!

## **Kontakion 8**

Rejoice, thou who wilt stand before Christ's dread judgment throne numbered among those who hear: Come, ye blessed of my Father, inherit the Kingdom prepared for you from the foundation of the world: for I was an hungred, and ye gave me meat: I was thirsty, and ye gave me drink: I was a stranger, and ye took me in: naked, and ye clothed me: I was sick, and ye visited me: I was in prison, and ye came to me. And thou wilt cry with the blessed saints: Alleluia!

## Oikos 8

Knowing that no man can love God whom he cannot see except that he love his neighbor whom he has seen, thou wert ever merciful, wherefore we cry unto thee:

Rejoice, O thou who fed Christ when He was an hungred!  
Rejoice, O thou who gave Christ to drink when He was athirst!  
Rejoice, O thou who showed Christ hospitality when He came a stranger!  
Rejoice, O thou who clothed Christ when He was naked!  
Rejoice, O thou who visited Christ when He was sick!  
Rejoice, O thou who came to Christ when He was in prison!  
Rejoice, O thou who met the least of these and saw Christ!  
Rejoice, O thou who called every man thy brother!  
Rejoice, O thou who saw no man as outside of God's love!  
Rejoice, O thou perfect in mercy as thy Heavenly Father is perfect in mercy!  
Rejoice, O lamp ever scintillating with the Light of Heaven!  
Rejoice, O flowing fountain of Heaven's treasures!

## **Kontakion 9**

All the angels were amazed at the excellence of thy virtue, for thy name "Philaret" is not only "Lover of Virtue" but "Lover of Excellence", for in thee excellence, virtue, and power are one and the same. Wherefore thou joinest the angels in crying: Alleluia!

## Oikos 9

Even the most eloquent of orators cannot explain how thy virtue excelleth, for they cannot explain how in every circumstance thou soughtest out and lovedst virtue. But we marvel and cry out faithfully:

Rejoice, O rich man who cared for the poor!

Rejoice, O illustrious man who cared for men of no account!

Rejoice, O excellent in virtue in times of advantage!

Rejoice, O excellent in virtue in times of suffering as well!

Rejoice, O man who held great treasure and yet ever fixed his eyes upon true Treasure!

Rejoice, O thou who in every circumstance found an arena for excellent virtue!

Rejoice, O thou who were ever an excellent worshipper of God!

Rejoice, O thou who in the world escaped the Devil's snares!

Rejoice, O thou who unmasked hollow Mammon!

Rejoice, O thou who found harbor on the sea of life!

Rejoice, O thou who by loving virtue loved Christ!

Rejoice, O flowing fountain of Heaven's treasures!

## **Kontakion 10**

Thy life wast a living manuscript of the Sermon on the Mount, for even Solomon in his splendor had not raiment like unto thy faith. Beholding thy splendor we cry with thee: Alleluia!

## Oikos 10

Thou storedst up possessions wherewith not to worry: not fickle and corruptible treasure on earth, but constant and incorruptible treasure in Heaven. Wherefore we cry unto thee:

Rejoice, O thou who however rich wert poor in spirit!  
Rejoice, O thou who mourned thy neighbor's unhappiness!  
Rejoice, O thou meek before thy neighbor's suffering!  
Rejoice, O thou who hungered and thirsted for justice and all virtue!  
Rejoice, O thou mirror of mercy!  
Rejoice, O thou who remained pure in heart!  
Rejoice, O thou who made deepest peace!  
Rejoice, O living mirror of the Beatitudes!  
Rejoice, O thou soaring as the birds of the air!  
Rejoice, O thou who wert devoted to one Master, and despised all others!  
Rejoice, O living exposition of the Sermon on the Mount!  
Rejoice, O flowing fountain of Heaven's treasures!

## **Kontakion 11**

Thou wert as the widow who bereaved herself even of her last two farthings: not only gave she more than all the others, but she who gave up her creaturely life received the uncreated, immortal, and eternal life. Like her, thou wert a vessel empty enough to fill, wherefore we cry with thee: Alleluia!

## Oikos 11

Thou wert a second Job, steadfast whilst Satan tore off layer after layer of thy belongings to show that there was nothing inside. Wherefore, we cry to thee who ever persevered:

Rejoice, O thou worshiper of God in plenty and in need!  
Rejoice, O thou icon of perseverance and faith!  
Rejoice, O thou generous with thy coin and generous with thy virtue!  
Rejoice, O thou phoenix ever arisen from thy very ashes!  
Rejoice, O thou saint immobile in thy dispassion!  
Rejoice, O thou who in want showed the truth of thy generosity in easy times!  
Rejoice, O thou who ever blessed the name of the Lord!  
Rejoice, O thou who with many possessions loved them not!  
Rejoice, O thou who with few possessions loved them no more!  
Rejoice, O thou who remained stalwart whilst Satan tore away what was thine, to show there was nothing inside!  
Rejoice, O thou who were vindicated when God peeled off the nothing and showed there was everything inside!  
Rejoice, O thou who vindicated God as did Job!  
Rejoice, O flowing fountain of Heaven's treasures!

## **Kontakion 12**

Thou hadst no food in the house, when imperial emissaries came looking for a bride for the Emperor: thou rich in Heaven, in trust thou beganst preparations to honourably meet the imperial emissaries. And thy neighbours came and brought food, a fitting feast, and the imperial emissaries found thy granddaughter finest in virtue and modesty, choosing her for her excellence to become Empress. Wherefore we cry with thee: Alleluia!

## Oikos 12

When all this had come to pass, in thy virtue, in thine excellence, thou knewest what is real treasure. In thy virtue and humility, thou refusedst all imperial rank and office, saying that it sufficed thee to be known as grandfather to the Empress. Wherefore, amazed, we cry to thee:

Rejoice, O thou who knew true Treasure!

Rejoice, O thou who were lover of virtue and excellence!

Rejoice, O thou who were rich and cared for the poor!

Rejoice, O thou who lost almost all and still opened thy hand!

Rejoice, O thou who became grandfather to the Empress whilst remaining ever humble!

Rejoice, O thou who were illustrious and noble yet cherished those of low estate!

Rejoice, O thou who were razed nigh unto the earth, and ever remained excellent as a lover of virtue!

Rejoice, O thou who were raised nigh unto Heaven, and ever remained humble as a lover of virtue!

Rejoice, O thou who sought first the Kingdom of Heaven!

Rejoice, O thou who were given all other things as well!

Rejoice, O thou who even then fixed his virtuous gaze on Christ!

Rejoice, O flowing fountain of Heaven's treasures!

## **Kontakion 13**

O holy Father Philaret whose excellence was virtue and whose virtue was excellence, whose power was virtue and whose virtue was power, who was ever merciful and generous out of thine overflowing virtue, ever protected by the Kingdom of God, pray for us as we cry unto thee:  
Alleluia! Alleluia! Alleluia! (*Repeated thrice.*)

## Oikos 1

Thou hadst earthly wealth yet knewest true treasure: thou madest use of thy possessions but trustedst them never, for in thee was the Kingdom of God and thy treasurehouse was Heaven. Wherefore thou hearest these praises which we offer to thee:

Rejoice, illustrious and wealthy noble who knew true wealth!  
Rejoice, O thou who were ever mindful of the poor!  
Rejoice, who knew thy deeds to the poor are deeds done to Christ!  
Rejoice, O thou who knew true wealth from false!  
Rejoice, O thou who knew that we can take nothing from the world!  
Rejoice, O thou who knew that the righteous would never be forsaken!  
Rejoice, O thou who gave ever more than was asked!  
Rejoice, O thou who withheld not thy last ounce of wheat!  
Rejoice, O thou who gave all six bushels to one who asked for a little!  
Rejoice, O thou whose friend gave thee forty bushels thereafter!  
Rejoice, O thou who trusted in the Lord with all his heart!  
Rejoice, O flowing fountain of Heaven's treasures!

## **Kontakion 1**

To thee, O camel who passed through the eye of the needle, we offer thanks and praise: for thou gavest of thy wealth to the poor, as an offering to Christ. Christ God received thy gift as a loan, repaying thee exorbitantly, in this transient life and in Heaven. Rejoice, O flowing fountain of Heaven's treasures!

# **Alchemy: Fool's Gold in Today's World**

## Introduction: Alchemy and Questionable Moral Character

I would like to open with a disturbing passage from Mary Midgley's [Science as Salvation: A Modern Myth and Its Meaning](#). I might briefly mention that Midgley is no feminist; she is a conservative whose chief influences are Plato and Aristotle.

We come here to one more of the strange compensatory myths, dreams, or dramas that are my theme. The literature of early modern science is a mine of highly-coloured passages that describe Nature, by no means as a neutral object, but as a seductive but troublesome female, to be unrelentingly pursued, sought out, fought against, chased into her inmost sanctuaries, prevented from escaping, persistently courted, wooed, harried, vexed, tormented, unveiled, unrobed, and 'put to the question' (i.e. interrogated under torture), forced to confess 'all that lay in her most intimate recesses', her 'beautiful bosom' must be laid bare, she must be held down and finally 'penetrated', 'pierced', and 'vanquished' (words which constantly recur).

Now this odd talk does not come from a few exceptionally uninhibited writers. It has not been invented by modern feminists. It is the common, constant idiom of the age. Since historians began to notice it, they have been able to collect it up easily in handfuls for every discussion.

Or as I heard approvingly quoted many times by teachers at the liberal enough [Illinois Mathematics and Science Academy](#), "*We place Nature on*

*the rack* [i.e. a particularly nasty instrument of torture] *and compel her to bear witness.*=

Let's talk about Sir Isaac Newton for a moment. He was the founder of physics as we know it, and the co-founder of calculus. Also, he was a world-class academic bully. All his scientific endeavors were side projects next to his involvement in alchemy, and he has been called, "Not the first of the scientists, but the last of the magicians.= He also, late in life, acquired a position of authority, bypassed certain checks and balances, and saw it to it that dozens of men died a slow and painful death.

(Some of us might detect a note of envy in that any and all effort he made to produce gold were failures even for him. At the same time, the men he destroyed were "coiners= or forgers who made at times remarkably convincing imitations of officially minted **gold** coins.)

*Did I mention that messianic fantasies were standard issue for scientists then?*

In fact there weren't just messianic fantasies for scientists and alchemists. The original hope people saw in calculus was not, as today, a branch of mathematics that holds place X in the creation of new mathematicians and place Y in practical applications. It was rather hoped to be a tool where, as I quote, "there should be no more need for disputes among philosophers than among accountants,= because all differences of opinion could be resolved through straightforward use of calculus. The Utopian vision was a precursor to Herman Hesse's [Glass Bead Game](#), only Hesse seemed very skeptical about how well something like this occult pipe dream would really play out for society.

**My friends, the foundations of science smell bad, and alchemy with them.**

## Alchemy in the Limelight

Some time over ten years back, and much to my later chagrin, [I wanted to illustrate a point and deliberately chose alchemy, as a jarring image, to illustrate it.](#)

Later, I was one of the voices saying that alchemy was coming out of the closet. Here I would point out that semiotics defines a "sign= to be "anything that can be used to lie,= including not only words but posture, clothing, furniture, activities, etc. When I was working at the American Medical Association headquarters, there was a quilt hanging by the cafeteria, looking in every way quaint, domestic, and conservative... and explained **dozens** of alchemical symbols. (*Did the AMA forget it was founded to shut down homeopathy as an occult medicine?*)

Some years after that, I was saying simply that alchemy was *out*, no if's, and's, or but's. And now I have stopped making such statements because they are superfluous. I have been told by Christians that alchemy was the bedrock nascent science was founded on.

## Alchemy as a Strategy to Grow Whilst Dodging Spiritual Work

Why grind an axe against alchemy? The critique can be stated in six English words: "***Sorry, kid. You need elbow grease.***"=

I do not in any sense wish to say that all religions say the same thing; that is ultimately a degrading way to say that no world religion says anything significant. However, there appears to be a widespread sense that we need elbow grease. The Hindu concept of the Royal Science of God-Realization does not work without elbow grease; it is scarcely more nor less than a structure and plan for elbow grease. The Buddha may have simplified Hinduism to an astonishing degree, but his eightfold noble path calls for, among other things, various dimensions of elbow grease. Even the apparent exception of staunch Evangelicals who believe with Luther that we are sanctified by grace alone and through faith alone (and, though it is not relevant here, that the Bible alone has authority), also have an expectation that if you have healthy and living faith, you will produce elbow grease, and for that matter you will produce quite a lot of elbow grease. Evangelicals may categorically deny that elbow grease can save, but they set the bar pretty high as far as world religious traditions go for how much elbow grease a genuine member should be producing.

Alchemy offers a dangerously treacherous and seductive **shortcut**. Its marketing proposition is to offer a shortcut to spiritual transformation, a technique in lieu of inner work, but a that does not legitimately work. It certainly didn't work in Newton's case; if we return to the [Sermon on the Mount's](#) "by your fruits you shall know them,"= Sir Isaac Newton's moral character is the character of a false prophet on a capital scale.

There was one unenlightened book commenting about how ironic it

was that an alchemist was to be spiritually transformed somewhere beyond greed before being able to transmute metals to gold. And so, it said, one of the requisites to produce gold ironically being to have let go of desiring gold. I do not find irony, and I find a point of contact with Orthodox iconography. The idea of ridding oneself of greed before being ready to create gold recalls a (possibly G.K. Chesterton) comment I have failed to track down, that a particular desire was like a spiritualist's desire to see a nymph's breasts and not that of a run-of-the-mill lecher, and I fail to see irony in the expectation to transcend greed. I am not here concerned with whether that makes sense to desire, but in Newton's case *it did not work!*

**I do not condemn alchemy because it so completely failed to let Newton transmute lead to gold.**

**I *do* condemn alchemy because it so completely failed to let Newton transmute his own *heart* to gold.** (That is, incidentally, something that many, many non-chemists have done.)

There was an Oprah Winfrey-endorsed book *The Alchemist* which on the back had a quote from ?Bill Clinton? saying something like, "When I read it I felt like I was awake and the whole world was asleep.= Friends, you *do not* want to feel like that. [One of the usual signs you are coming to a spiritual breakthrough is that you are \*repenting\*.](#)

## Alchemy Is Deeper Than Hinduism? *Huh?*

In *The Alchemist*, a religious studies scholar studied all the world's religions, which he summarily dismissed in favor of alchemy. Sorry, *no*. There may be religions in the world that are shallower than alchemy; but alchemy is a consolation prize, particularly as compared to Orthodox Christianity and Hinduism. G.K. Chesterton didn't even *mention* alchemy when he said, "If you are considering world religions, you will save yourself a great deal of time by only considering Christianity and Hinduism, because Islam is just a Christian heresy, and Buddhism is just a Hindu heresy.=

I have heard Christian critiques of Hinduism, some of them sharp. One person at a theology faculty who was a Hindu before becoming an Orthodox Christian suggested that if I really want to understand Hinduism, I should focus less on a reconciliation between monotheism and polytheism and the striving for purity one encounters in modern commentary on the Bhagavad-Gita, and instead read [Kali's Child](#). I have in fact not read the title yet, but Kali is a demon-goddess who wears skulls on her necklace, and the special blessing she bestows is madness. The point the scholar was making is that you don't understand Hinduism until you understand the place of tantrism, which is trying to get ahead by something forbidden, *much like alchemy today*.

But for all this, Hinduism is still deeper than a whale can dive, and I am drawing a complete blank as to a reason to summarily dismiss even Hinduism in favor of alchemy. Possibly there are Hindus who also practice alchemy; Hinduism is cosmopolitan as far as religions go. And as far as Christianity, it only really occurs in *The Alchemist* as trappings to validate occult activity.

## **Even the Marketing Story Fails to Have Constructive Character Development**

But I find it noteworthy and interesting how character development occurs in a book meant to let people covet alchemy. For the protagonist, there is no really positive change in character development; the character development in the book is only debauchery. Apart from occult sin, the hero grows more and more caught up in himself in pride; what are presented as the blunders he makes along the way are when he loves and acts out of consideration for others and forgets devotion to the polestar of his monumental pride. In the end, which may modify classical alchemy, the student is as much an alchemist as the master, and ends just as much infested with pride. He cannot transmute lead to gold or live forever because those are not part of his path in alchemy; but he acquires massive gold even if he cannot create it, and his lack of moral character matches his master.

## Gnosticism, Alchemy's Undying Cousin

Philip Lee, in [Against the Protestant Gnostics](#), is a Protestant pastor who concludes, "We have met the enemy and he is us.= He suggests that historical study of Gnosticism is irrelevant because Gnosticism, as he reads it, is an ahistorical process that may keep recurring historically, but is not really historical. (I would loosely compare this point to why one does not study the history of the process of decomposition in untreated corpses.) He also says that Gnosticism is not fruitfully studied as a philosophy or system of ideas, because the process goes through ongoing changes of belief and over time later beliefs can and do contradict earlier beliefs. But while he knocks out two obvious scholar's tools with which to approach Gnosticism, he leaves something solid. He suggests that all Gnosticism hinges on a mood: **despair**. This means more specifically a despair that can only hope as framed by escape and escapism.

Christians who read the Bible may be deaf to how shocking it was to open the Bible with a chapter repeating, "And God saw what he had made, **and it was good**,= and after man was created, "**very good**.= To my knowledge, no other Ancient Near Eastern Creation story tells the like. Marduk tore the evil dragon Tiamat's body in two and made half into the sky and half into the earth. If that is so, our bodies are despicable. The same is true for an account of the world being produced, as best I recall, as a projection from vile sexual behavior.

Against these, Christianity tells us the world is the good Creation of a transcendent good God, and there is a very real sense that to be in communion with the Orthodox Church is to be in communion with not only God and choirs of angels and fellow Orthodox, but whales and rocks and stars and trees. Sin and its effects may be real enough: but however much we need repentance from sin. the goodness God bakes into

Creation runs deeper.

Gnosticism, including alchemy, seems enticing to a certain mindset, but it is a route for unhappy people to reach an even more unhappy position.

I might note that while there are differences in the phenomenon of Gnosticism, the evil character of the world we live in, and the consequent framing of salvation that amounts to some exotic escapism, is remarkably consistent across times and schools. As Yoda said, "Luminous beings are we, not this crude matter.=

It might be found that [repentance](#) for an alchemist may only to a certain measure be about spiritual practices I don't even want to know: it may be waking up to being placed in a world that is in and of itself good and finding that the need for escape is more apparent than real and becomes even less important as the healing balm of repentance soaks in.

Escapism wants something that's not part of the world, and anything you can acquire as real gives only an ephemeral satisfaction. Repentance from this passion in most cases won't help you acquire wants that you don't have. It may instead help you "acquire= and appreciate those that you actually *do*.

Let me close with a poem. It was written a few years ago, but if anything it is *more*, not *less*, relevant today.

## How Shall I Tell an Alchemist?

The cold matter of science“  
Exists not, O God, O Life,  
For Thou who art Life,  
How could Thy humblest creature,  
Be without life,  
Fail to be in some wise,  
The image of Life?  
Minerals themselves,  
Lead and silver and gold,  
The vast emptiness of space and vacuum,  
Teems more with Thy Life,  
Than science will see in man,  
Than hard and soft science,  
Will to see in man.

How shall I praise Thee,  
For making man a microcosm,  
A human being the summary,  
Of creation, spiritual and material,  
Created to be,  
A waterfall of divine grace,  
Flowing to all things spiritual and material,  
A waterfall of divine life,  
Deity flowing out to man,  
And out through man,  
To all that exists,  
And even nothingness itself?  
And if I speak.

To an alchemist who seeks true gold,  
May his eyes be opened,  
To body made a spirit,  
And spirit made a body,  
The gold on the face of an icon,  
Pure beyond twenty-four carats,  
Even if the icon be cheap,  
A cheap icon of paper faded?

How shall I speak to an alchemist,  
Whose eyes overlook a transformation,  
Next to which the transmutation,  
Of lead to gold,  
Is dust and ashes?  
How shall I speak to an alchemist,  
Of the holy consecration,  
Whereby humble bread and wine,  
Illumine as divine body and blood,  
Brighter than gold, the metal of light,  
The holy mystery the fulcrum,  
Not stopping in chalice gilt,  
But transforming men,  
To be the mystical body,  
The holy mystery the fulcrum of lives transmuted,  
Of a waterfall spilling out,  
The consecration of holy gifts,  
That men may be radiant,  
That men may be illumined,  
That men be made the mystical body,  
Course with divine Life,  
Tasting the Fountain of Immortality,  
The transformed elements the fulcrum,  
Of God taking a lever and a place to stand,  
To move the earth,  
To move the cosmos whole,  
Everything created,  
Spiritual and material,  
Returned to God,

Deified.

And how shall I tell an alchemist,  
That alchemy suffices not,  
For true transmutation of souls,  
To put away searches for gold in crevices and in secret,  
And see piles out in the open,  
In common faith that seems mundane,  
And out of the red earth that is humility,  
To know the Philosopher's Stone Who is Christ,  
And the true alchemy,  
Is found in the Holy Orthodox Church?  
How Shall I Tell an Alchemist?

**All I Ever Really  
Needed to Learn  
about Programming,  
I Learned From  
Java**

# All I really needed to learn about programming, I learned from Java

Write once, debug everywhere; Prefer compile time errors to run time errors; Gotos and pointers are like bad words – they can get you into a lot of trouble; Novice-friendliness and expert-friendliness are at a trade-off; An intentionally simple syntax is compatible with a complex collection of objects; Programming in a high level language is faster than programming in a lower level language; It takes longer to learn the high level ways of calling algorithms than the low level building blocks needed to implement them; Every once in a while, you will be surprised at what you have to implement yourself – a ready-made method to return a stacktrace as a string, or have a method find its caller's class; Use the most restrictive keywords you can – it's kindness in disguise; If you want to circumvent security, you can't cast to (char \*) and reconstruct private members; If you want to circumvent security, you very well may be able to serialize to a stream and reconstruct private members; Resurrect objects and die; There are some things that words cannot explain – for everything else, there are over 100 megs of documentation; Your program will see much more use if people can run it from their browsers; You can program your server to use any encryption algorithm allowed, but you can't stop your clients from storing their private keys on unsecured Windows boxes; Carefully designed languages can

reduce bugs, but debugging will always be a part of programming; No matter how carefully designed the language is, people will still write code that should be indented six feet downwards and covered with dirt; A good new language makes it unnecessary to use older ones, just as a good cordless screwdriver makes it unnecessary to use a hammer or a wrench; You can lead a programmer to objects, but you can't make him think; You can paint on a glass pane in your computer or at your house – but just because you are allowed to do it doesn't mean it's (usually) a good idea; Writing a DWIM compiler is AI-complete; No matter how fast computers get, there will always be a way to make them move like molasses;

# Amazing Providence

My church in Cambridge asked students to share as Holy Trinity Cambridge said farewell to us. I ended up sharing this more than once.

Even before I left Wheaton, I had a disturbing amount of trouble. An employer broke its word, jeopardising my ability to pay. I was working on student loans for *six months*. They fell into place one business day before I left. And when I left I was gravely ill.

I arrived at Cambridge without a place to stay, and when after weeks I found one, I was barely able to work because I was so wiped out that my hardest efforts weren't enough for me to consistently work more than two hours a day. I went through treatments that could have killed me.

My studies suffered. I did terribly at almost everything during the schoolyear. Usually the people supervising me didn't even give me a grade—just advice on what to do next.

To say all this and *stop* would be very deceptive. In the end, I was bewildered, not so much by the sufferings I had been allowed to experience, but the joy. How has God blessed me?

Community, for starters. I've been held in a blanket of prayer by Christians here, in England, in other countries, Catholic, Orthodox, Protestant, all praying for me. I'm honored. There were times when I knew I should not have the strength to walk at all, but I was walking lightly, joyfully, on strength given by God. The Dean family helped me look for a place to stay, and I don't think I can even *remember* all the practical help they gave—but more than this, they welcomed me into their hearts at the time I felt most isolated and lonely. Holy Trinity is a warm place; a woman named Mary invited me over for a lavish meal that I don't think she can often afford to eat as a ninety year old widow. I believe my roommate Yussif was the reason why God closed so many doors in places

to stay, and opened just one. He gave me this marvelous African shirt, and when I wear it I feel like I'm putting on regalia I have not earned. I've had visits: my father came out to visit me, and later my aunt, uncle, and two cousins spent a day in Cambridge. We went on a small boat in the river Cam, and one of the people in the tour company lent my cousin Katie his hat. The tour guide looked at her and said, "It's a good thing you have that hat to protect you from the fierce English sun." I fear that especially here I must leave out much more than I can say; the Shepherd's Council will be annoyed if I talk for three hours.

God's transcendence has become more and more real to me. I've relearned that the God who lives inside our hearts is majestic and glorious, beyond the farthest stars. When I've attended Orthodox vespers, I've met God's transcendence.

Providence has been powerful. At the end of the year, my friend Dirk said he could move my possessions that evening to Colchester for storage. I e-mailed Michelle in Colchester and scrambled to get ready. After I arrived, Michelle said I had the luck of the Irish: one day earlier or later, she would not have been home. Among other things. This sort of thing had happened again and again and again, and when she later e-mailed me about my luck, I answered, "Not luck. Providence."

I've had all sorts of pleasures, small and great. I've improvised on my college's chapel organ. I've been able to take pictures of Cambridge and incorporate them into [a game where you're running through a labyrinth, chasing a furball, looking at lovely Cambridge pictures, and answering icebreaker questions](#). (Don't worry. It's actually much stranger than it sounds.)

The academic environment is a real blessing. This may sound strange, but academic theology often destroys students' faith. My faith has become both stronger and deeper. The tutorial system has been excellent, and things fell into place at the end of the year. I was able to work on my thesis when I was too tired to lift my head, and the day I turned it in, I told my Bible study I was realizing how God was not constrained by my limitations. Cambridge grades are based exclusively on the final, and I received e-mail from my tutor Thursday. I passed *everything*.

I've been learning about the link between God's transcendent glory, on one hand, and his loving providence on the other. What is it? In the Sermon on the Mount, Jesus said, "Which of you, by worrying, can add a

single hour to his life?" Sickness is a good opportunity to realize that even a single hour is a gift from God. "Therefore I tell you, do not worry, asking, 'What will we eat?' or 'What will we drink?' or 'What will we wear?' For the pagans run after these things, and your heavenly Father knows that you need them. But seek *first* the kingdom of God, and his perfect righteousness, and all these things will be given to you as well."

It's not just that God doesn't need my help figuring out what's best for me. What I've learned is that what God, in his transcendence, in his mystery, in his glory, in his deeply hidden wisdom, ordains for me is much fuller, deeper, richer, more beautiful, more interesting, and more adventuresome than what I would choose for myself if (God forbid) I were in control...

The blessings continue after I've returned. My parents were given a sweetheart of a dog, named Jazz. Not ten minutes after I met her, Jazz climbed up on my lap and wanted to cuddle. Jazz is a seventy-five pound Laborador retriever and is a bit of a bull in a China shop. I trust that through her, God will give me furry companionship, aerobic exercise, and thicker arms. Please pray that I may rightly appreciate her.

Thank you *so much* for praying. It is said that Satan laughs at our plans, scoffs at our power, and trembles at our prayers. Please *persist in all of your prayers*, and if the Lord leads you, please let part of that include me.

# Amos and Andy: Meet Barack Obama!

**Amos:** Boy, those Republicans sure are dumb. So dumb, they try to stop change wherever they can!

**Andy:** You figured *that* out? When?

**Amos:** Well, Sarah Palin's an idiot, and ever since Dan Quayle... I guess I've always known. But there's more.

**Andy:** Any favorites?

**Amos:** Well, there's one point where Dan Quayle said he was going to brush up on his Latin before going to Latin America. I have a friend who's a Republican, and he said that maybe someone who had a law degree and would make 47 state visits to other countries might have said that with "a twinkle in his eye," expecting listeners to get the *joke*. Can you imagine rationalizing about the *stupid* Dan Quayle being *that* intelligent?

**Andy:** Do you have anything like that for Sarah Palin?

**Amos:** Not exactly...

But the photos really are outstandingly bad. You should see the expressions! And get this: my friend who is a Republican said that stills including video of speech will include stills that look silly, that Obama would have stills that were just as stupid-looking, and saying that Palin or Obama would have such stills was nothing more interesting than saying that either of them has a pulse. *Can you imagine?* What cheek!

**Andy:** Wow.

**Amos:** And Republicans have a serious prejudice about what it means to have a black president. And get this, if you want to wonder what they were smoking: my Republican friend sighed and said, "It is proof that the Rev. Dr. Martin Luther King's dream is truly dead. Those who support him judge by the color of his skin, and saying 'his critics' are *almost interchangeable* with 'those who judge him by the content of his character.'"

**Andy:** You mean they don't understand how backwards it is to rationalize that kind of *prejudice*?

And Republicans do worse than poison the well as far as race relations go. Much worse! Do they even *watch* "The Daily Show?"

**Amos:** Well, I asked my friend who is a Republican, and he sighed, said he had watched "The Daily Show" a few times, and said that he had also watched Rush Limbaugh a few times, and then he said, "Every conservative I know considered Rush Limbaugh to be an embarrassment—and I am waiting to meet a liberal who considers 'The Daily Show' to be anything other than a strong dose of clear thinking on what's happening in the news."

**Andy:** But the Rush Limbaugh show was full of such logical fallacies!

**Amos:** And don't get me started on an inconvenient truth! Having deniers is a luxury we cannot afford. Now of course climate deniers are in the same bag as Holocaust deniers. And the most insidious thing is that all the climatologists are in the pay of big oil, or sure *act* like it! It's not to a one, but most of the people who have a Ph.D. in climatology are trying to give a bit of prissy nuance and saying all sorts of things about the limits of their computer programs to model climate change. It's disgusting! And my Republican friend, when I had tried to explain all about global warming to him, only sighed and said, "I'm worried about global *cooling*, and not manmade—and not something we're able to do much about." What cheek! Doesn't he know that now is the time to act on global warming?

**Andy:** And I suppose your Republican friend has tried to deny that Obama has delivered change?

**Amos:** Puzzling enough, but no. He said, "Barack Obama has lived true to his word. *Change* he heralded, *change* he promised, *change* he delivered, and *change* he keeps on delivering."

**Andy** [*looks at watch*]: Uh, fancy that, a Republican being right about... Uh, I'd love to continue, but I have to go.

**Amos:** Why do you say that? Do you have to be somewhere in the next ten or fifteen minutes?

**Andy:** No, but I do in about three hours. Gotta go!

# The Angelic Letters

*My dearly beloved son Eukairos;*

I am writing to you concerning the inestimable responsibility and priceless charge who has been entrusted to you. You have been appointed guardian angel to one Mark.

Who is Mark, whose patron is St. Mark of Ephesus? A man. What then is man? Microcosm and mediator, the midpoint of Creation, and the fulcrum for its sanctification. Created in the image of God; created to be prophet, priest, and king. It is toxic for man to know too much of his beauty at once, but it is also toxic for man to know too much of his sin at once. For he is mired in sin and passion, and in prayer and deed offer what help you can for the snares all about him. Keep a watchful eye out for his physical situation, urge great persistence in the liturgical and the sacramental life of the Church that he gives such godly participation, and watch for his asceticism with every eye you have. Rightly, [when we understand what injures a man, nothing can injure the man who does not injure himself](#): but it is treacherously easy for a man to injure himself. Do watch over him and offer what help you can.

With Eternal Light and Love,

**Your Fellow-Servant and Angel**

---

*My dear son Eukairos;*

I would see it fitting to offer a word about medicating experience and medicating existence.

When one of the race of men medicates experience by means of wine, that is called drunkenness. When by means of the pleasures of the palate, that is called gluttony. When by means of other pleasures, it is called lust. When by means of possessions and getting things, it is called avarice. Escapism is an ancient vice and a root of all manner of evils: ancient Christians were warned strongly against attempting to escape this world by medicating experience.

Not that pleasure is the only way; medicating experience by mental gymnastics is called metaphysics in the occult sense, and medicating experience by means of technology is a serious danger.

Not all technologies, and perhaps not any technology, is automatically a problem to use. But when technologies become a drone they are a problem. Turning on a radio for traffic and weather news, and then turning it off, is not a drone. Listening to the radio at a particular time to devote your attention to a concert is not a drone. Turning on a radio in the background while you work is a drone; even *Zen and the Art of the Motorcycle Maintenance* discusses what is wrong with mechanics having the radio on in the background. And texting to get specific information or coordinate with someone is not a drone, but a stream of text messages that is always on is a drone. Technology has its uses, but when technology is a drone, noise in the background that prevents silence from getting too uncomfortable, then it is a spiritual problem, a tool to medicate experience. And there are some technologies, like video games, that *exist* to medicate experience.

(Of course, technologies are not the only drone; when Mark buckles down to prayer he discovers that his mind is a drone with a stream of thoughts that are a life's work to quiet.)

More could be said about technologies, but my point here is to point out one of the dangers Mark faces. Not the only one, by any means, but he has at his disposal some very powerful tools for doing things that are detrimental. It's not just a steady stream of X-rated spam that puts temptation at his fingertips. He has all the old ways to medicate experience, and quite a few powerful technologies that can help him medicate his experience as well. And for that he needs prayer.

medicate his experience as well. And for that he needs prayer.

But what is to be done? The *ways* of medicating experience may be in some measure than many saints have contended with; the *answer* is the same. Don't find another way to medicate experience, or escape the conditions God has placed you in, trying to escape to Paradise. Don't ask for an easier load, but tougher muscles. Instead of escaping the silence, engage it. *Prayerfully* engage it. If your dear Mark does this, after repenting and despairing of finding a way to escape and create Paradise, he will find that escape is not needed, and Paradise, like the absent-minded Professor's lost spectacles, were not in any of the strange places he looked but on his nose the whole time.

A man does not usually wean himself of drones in one fell swoop, but pray and draw your precious charge to cut back, to let go of another way of medicating experience even if it is very small, and to seek not a lighter load but a stronger back. If he weans himself of noise that medicates uncomfortable silence, he might find that silence is not what he fears.

Watch after Mark, and hold him in prayer.

Your Dearly Loving Elder,  
Your Fellow-Servant,

**But a Wind and a Flame of Fire**

---

*My dear, dear Eukairos;*

When fingers that are numb from icy cold come into a warm, warm house, it stings.

You say that the precious treasure entrusted to you prayed, in an uncomfortable silence, not for a lighter load but for a stronger back, and that he was fearful and almost despairing in his prayer. And you wonder why he looks down on himself for that. Do not deprive him of his treasure by showing him how much good he is done.

He has awakened a little, and I would have you do all in your power to show him the silence of Heaven, however little he can receive it yet. You know some theologians speak of a river of fire, where in one image among others, the Light of Heaven and the fire of Hell are the same thing: not because good and evil are one, but because God can only give himself, the uncreated Light, in love to his creatures, and those in Hell are twisted through the rejection of Christ so that the Light of Heaven is to them the fire of Hell. The silence of Heaven is something like this; silence is of Heaven and there is nothing to replace it, but to those not yet able to bear joy, the silence is an uncomfortable silence. It is a bit like the Light of Heaven as it is experienced by those who reject it.

Help Mark in any way you can to taste the silence of Heaven as joy. Help him to hear the silence that is echoed in the Church's chanting: when he seeks a stronger back to bear silence, strengthen his back, and help him to taste the silence not as bitter but sweet. Where noise and drones would anaesthetize his pain, pull him *through* his pain to health, wholeness, and joy.

The Physician is at work!

With Eternal Light and Love,

**Your Fellow-Servant and Angel**

---

*Dear blessed Eukairos;*

Your charge has had a fall. Do your best that this not be the last word: help him get up. Right now he believes the things of God are not for those like him.

The details of the fall I will not treat here, but suffice it to say that when someone begins to wake up, the devils are furious. They are often given permission to test the awakening man, and often he falls. And you know how the devils are: before a fall, they say that God is easy-going and forgiving, and after a fall, that God is inexorable. Do your best to aid a person being seduced with the lie that God is inexorable.

Mark believes himself unfit for the service of the Kingdom. Very well, and in fact he *is*, but it is the special delight of the King to work in and through men who have made themselves unfit for his service. Don't brush away a mite of his humility as one fallen, but show him what he cannot believe, that God wishes to work through him now as much as *ever* And that God wishes for him prayer, liturgy, sacrament..

And open his eyes now, a hint here, a moment of joy there: open them that eternity is now: eternal life is not something that begins after he dies, but that takes root now, and takes root even (or rather, *especially*) in those who repent. He considers himself unworthy of both Heaven and earth, and he *is*; therefore, in God's grace, give him both Heaven and earth. Open up earth as an icon, a window to Heaven, and draw him to share in the uncreated Light and Life.

Open up his repentance; it is a window to Heaven.

In Light and Life and Love,

**Your Brother Angel**

---

*My dear fellow-ministering angel;*

I would make a few remarks on those windows of Heaven called icons.

To Mark, depending on the sense of the word 'window', a 'window' is an opening in a wall with a glass divider, or alternately the 'window' is the glass divider separating inside from outside. But this is not the exact understanding when Orthodox say an icon is a window of Heaven; it is more like what he would understand by an open window, where wind blows, and inside and outside meet. (In most of human history, a window fitted with glass was the exception, not the rule.) If an icon is a window of Heaven, it is an opening to Heaven, or an opening between Heaven and earth.

Now Mark does not understand this, and while you may draw him to begin to sense this, that is not the point. In [The Way of the Pilgrim](#), a man speaks who was given the sacred Gospels in an old, hard-to-understand book, and was told by the priest, "Never mind if you do not understand what you are reading. The devils will understand it." Perhaps, to Mark, icons are still somewhat odd pictures with strange postures and proportions. You may, if you want, help him see that there *is* perspective in the icons, but instead of the usual perspective of people in their own world, it is reverse perspective whose vanishing point lies behind him because Mark is in the picture. But instead of focusing on correcting his understanding, and certainly correcting his understanding all at once, draw him to venerate and look at these openings of Heaven. Never mind if he does not fully grasp the icons he venerates. *The devils will understand.*

And that is true of a great many things in life; draw Mark to participate in faith and obedience. He expects to understand first and participate second, but he needs to come to a point of participating first and understanding second. Many things need to start on the outside and work inwards.

Serving Christ,  
Whose Incarnation Unfurls in Holy Icons,  
**Your Fellow**

---

*Dear cherished, luminous son;*

Your charge is reading a good many books. Most of them are good, but I urge you to spur him to higher things.

It is a seemingly natural expression of love to try to know as much about possible about Orthodoxy. But mature Orthodox usually spend less time trying to understand Orthodoxy through books. And this is *not* because they have learned everything there is to learn. (That would be impossible.) Rather, it is because they've found a deeper place to dig.

God does not want Mark to be educated and have an educated mind. He wants him to have an enlightened mind. The Orthodox man is not supposed to have good thoughts in prayer, but to have no thoughts. The Orthodox settled on the path have a clear mind that is enlightened in hesychastic silence. And it is better to sit in the silence of Heaven than read the Gospel as something to analyze.

Books have a place. Homilies have a place. But they are one shadow of the silence of Heaven. And there are more important things in the faith, such as fasting and almsgiving, repentance and confession, and prayer, the crowning jewel of all asceticism. Give Mark all of these gems.

With Deep Affection,

**Your Brother Angel**

---

*My dearly beloved, cherished fellow angel Eukairos;*

Your charge Mark has been robbed.

Your priceless charge Mark has been robbed, and I am concerned.

He is also concerned about a great many things: his fear now, which is understandable, and his concerns about where money may come from, and his loss of an expensive smartphone and a beautiful pocketwatch with sentimental as well as financial value to him, and his inconvenience while waiting on new credit cards.

There are more concerns where those came from, but I am concerned because he is concerned about the wrong things. He has well over a week's food in his fridge and he believes that God failed to provide. Mark does not understand that *everything that happens to a man is either a temptation God allowed for his strengthening, or a blessing from God*. I am concerned that after God has allowed this, among other reasons so Mark can get his priorities straight, he is doing everything but seeking in this an opportunity for spiritual growth to greater maturity.

If you were a human employee, this would be the time for you to be punching in *lots* of overtime. Never mind that he thinks unconsciously that you and God have both deserted him; your strengthening hand has been invisible to him. I do not condemn you for any of this, but this time has been appointed for him to have opportunities for growth and for you to be working with him, and the fact that he does not seek growth in this trial is only reason for you to work all the harder. That he is seeking to get things back the way they were, and suffering anger and fear, is only reason for you to exercise more diligent care. God is working with him now as much as ever, and I would advise you for now to work to the point of him seeking his spiritual good in this situation, however short he falls of right use of adversity for now.

Your name, "Eukairos," comes from "eu", meaning "good", and "kairos", an almost inexhaustible word which means, among other things, "appointed time" and "decisive moment." You and Mark are alike called to dance the great dance, and though Mark may not see it now, you are God's agent and son supporting him in a great and ordered dance where everything is arranged in God's providence. Right now Mark sees none of this, but as his guardian angel you are charged to work with him in the dance, a dance where God incorporates his being robbed and will incorporate his spiritual struggles and, yes, provide when Mark fails to

incorporate his spiritual struggles and, yes, provide when Mark fails to see that the righteous will never be forsaken.

A good goal would be for Mark to pray for those that robbed him, and through those prayers honestly desire their good, or come to that point. But a more immediate goal is his understanding of the struggle he faces. Right now he sees his struggle in terms of money, inconveniences, and the like. Raise his eyes higher so he can see that it is a spiritual struggle, that God's providence is not overruled by this tribulation, and that if he seeks first the Kingdom of God, God himself knows Mark's material needs and will show deepest care for him.

Your Fellow-Servant in Prayer,

**But an Angel Who Cannot Struggle Mark's Struggle on his Behalf**

---

*My dear, esteemed son and fellow-angel Eukairos;*

That was a deft move on your part, and I thank you for what you have helped foster in Mark's thoughts.

Mark began to console himself with the deep pit of porn, that poison that is so easily found in his time and place. And he began to pray, on his priest's advice, "Holy Father John, pray to God for me," and "Holy Mother Mary, pray to God for me," Saint John the Much-Suffering and Saint Mary of Egypt being saints to remember when fighting that poison. And you helped him for a moment to see how he was turned in on himself and away from others, and he prayed for help caring about others.

At 10:30 PM that night on the dot, one of his friends was walking in the dark, in torrential rains, and fell in the street, and a car ran over his legs. This friend was someone with tremendous love for others, the kind of person you cannot help but appreciate, and now that he had two broken legs, the flow of love reversed. And Mark unwittingly found himself in an excellent situation to care about something other than himself. He quite forgot about his money worries; and he barely noticed a windfall from an unexpected source. He kept company and ran errands for his friend.

What was once only a smouldering ember is now a fire burning brightly. Work as you can to billow it into a blaze.

With an Eternal Love,

**Your Respectful Brother Angel**

---

*My dear, scintillating son Eukairos;*

I would recall to you the chief end of mankind. "To glorify God and enjoy him forever" is not a bad answer; the chief end of mankind is to contemplate God. No matter what you do, Mark will never reach the strictest sense of contemplation such as monastic saints enjoy in their prayer, but that is neither here nor there. He can have a life ordered to contemplation even if he will never reach the spiritual quiet from which strict contemplation is rightly approached. He may never reach beyond the struggle of asceticism, but his purpose, on earth as well as in Heaven, is to contemplate God, and to be deified. The point of human life is to become by grace what Christ is by nature.

Mark is right in one way and wrong in another to realize that he has only seen the beginning of deification. He *has* started, and only started, the chief end of human life, and he is right to pray, go to confession, and see himself as a beginner. But what he is *wrong* about is imagining that the proof of his fledgling status is that his wishes are not fulfilled in the circumstances of his life: his unconscious and unstated assumption is that if he had real faith like saints who worked miracles, his wishes would be fulfilled and his life would be easier. Those saints had *less* wishes fulfilled, not more, and much harder lives than him.

(And this is beside the point that Mark is not called to perform miracles; he is called to something greater, the **most excellent way: love**.)

Mark imagines you, as his guardian angel, to be sent by God to see that at least some of his wishes happen, but the truth is closer to saying that you are sent by God to see that some of his wishes *do not* happen so that in the cutting off of self-will he may grow in ways that would be impossible if he always had his wishes. There is a French saying, «*On trouve souvent sa destinée par les chemins que l'on prend pour l'éviter.*»: "One often finds his destiny on the paths one takes to avoid it." Destiny is not an especially Christian idea, but there is a grain of truth here: *Men often find God's providence in the situations they hoped his providence would keep them out of.*

This cutting off of self-will is part of the self-transcendence that makes deification; it is foundational to monks and the office of spiritual father, but it is not a "monks-only" treasure. Not by half. God answers "No" to prayers to say "Yes" to something greater. But the "Yes" only comes

*through* the "No."

As Mark has heard, "We pray because we want God to change our circumstances. God wants to use our circumstances to change us."

Mark has had losses, and he will have more to come, but what he does not understand is that the path of God's sanctification is precisely through the loss of what Mark thinks he needs. God is at work allowing Mark to be robbed. God is at work allowing Mark to use "his" "free" time to serve his friend. And God is at work in the latest challenge you wrote to me about.

Mark has lost his car. A drunk and uninsured driver slammed into it when it was parked; the driver was saved by his airbag, but Mark's car was destroyed, and Mark has no resources to get another car, not even a beater for now. And Mark imagines this as something that pushes him outside of the Lord's providence, not understanding that it is by God's good will that he is now being transported by friendship and generosity, that he is less independent now.

Right now Mark is not ready either to thank God for his circumstances or to forgive the driver. But do open his eyes to the good of friendship and generosity that now transports him. Even if he sees the loss of his car as an example of God failing to provide for him, help him to see the good of his being transported by the love and generosity of his friends. Help him to see God's providence in circumstances he would not choose.

Your Fellow-Servant in the Service of Man,

**A Brother Angel**

---

*My dear son Eukairos;*

Your precious charge, in perfectly good faith, believes strongly in [bringing into captivity every thought to the obedience of Christ](#). His devotion in trying to bring [into captivity every thought to the obedience of Christ](#) is really quite impressive, but he is fundamentally confused about what that means, and he is not the only one.

Mark would never say that you can reason your way into Heaven, but he is trying to straighten out his worldview, and he thinks that straightening out one's ideas is what this verse is talking about. And he holds an assumption that if you're reasoning things out, or trying to reason things out, you're probably on the right path.

Trying to reason things out does not really help as much as one might think. Arius, the father of all heretics, was one of many to try to reason things out; people who devise heresies often try harder to reason things out than the Orthodox. And Mark has inherited a greatly overstated emphasis on how important or helpful logical reasoning is.

Mark would be surprised to hear this; his natural question might be, "If [bringing into captivity every thought to the obedience of Christ](#) is not what you do when you straighten out your worldview, then what on earth is?"

A little bit more of the text discusses unseen warfare and inner purity: [\(For the weapons of our warfare are not carnal, but mighty through God to the pulling down of strong holds;\)](#) Casting down imaginations, and every high thing that exalteth itself against the knowledge of God, and [bringing into captivity every thought to the obedience of Christ; and having in a readiness to revenge all disobedience, when your obedience is fulfilled.](#)

Men's thoughts are not just abstract reasoning; they are all sorts of things, some entangled with sinful desire, that are around all the time to a mind that has not learned hesychastic silence. Thoughts that need to be taken captive include thoughts of money entangled with greed, thoughts of imagined success entangled with pride, thoughts of wrongs suffered entangled with anger, thoughts of food compounded with gluttony, thoughts of desired persons compounded with lust, thoughts of imagined future difficulties entangled with worry and doubt about the Lord's good providence. Such thoughts as these need to be addressed, and not by tinkering with one's worldview; these thoughts remain a battleground in

linking with one's worldview. These thoughts remain a battleground in spiritual warfare even if one's worldview condemns greed, pride, anger, gluttony, lust, worry, and doubt.

Work with Mark. Guide him and strengthen him in the unseen warfare that includes learning to cut off such thoughts as soon as possible: a fire that is spreading through a house is hard to put out, and what Mark needs to learn is to notice the smoke that goes before fire and extinguish the smouldering that is beginning and not waiting for leaping flames to make doomed efforts to fight it. Help him to see that his thoughts are not only abstract ideas, and help him to be watchful, aware of his inner state. Unseen warfare in thoughts is of inestimable importance, and do what you can to help him see a smouldering smoke when it has not become a raging fire, and to be watchful.

Do what you can to draw him to repeat the [Jesus Prayer](#), to let it grow to a rhythm in him. If the question is, "What should I start thinking when I catch myself?", the answer is, "[The Jesus prayer](#)."

Keep working with Mark, and offer what support you can. And keep him in your prayers.

With Deepest Affection,

**Another Member of the Angel Choirs**

---

*Dear fellow-warrior, defender, and son Eukairos;*

I wish to write to you concerning devils.

Mark has the wrong picture with a scientific worldview in which temptations are more or less random events that occur as a side effect of how the world works. Temptations are intelligently coordinated attacks by devils. They are part of unseen warfare such as Mark faces, part of an evil attack, but none the less on a leash. No man could be saved if the devils could give trials and temptations as much as they wished, but the devils are allowed to bring trials and temptations as much as God allows for the strengthening, and the discipleship, of his servants.

Some street drugs are gateway drugs, and some temptations are temptations to gateway sins. Gluttony, greed, and vanity are among the "gateway sins", although it is the nature of a sin to give way to other sins as well. Gluttony, for instance, opens the door to lust, and it is harder by far to fight lust for a man whose belly is stuffed overfull. (A man who would fare better fighting against lust would do well to eat less and fast more.) In sin, and also in virtue, he who is faithful in little is faithful in much, and he who is unfaithful in little is also unfaithful in much. You do not need to give Mark what he expects now, help in some great, heroic act of virtue. He needs your help in little, humble, everyday virtues, obedience when obedience doesn't seem worth the bother.

The liturgy speaks of "the feeble audacity of the demons", and Mark needs to know that that is true, and true specifically in his case. What trials God allows are up to God, and the demons are an instrument in the hand of a God who would use even the devils' rebellion to strengthen his sons. The only way Mark can fall into the demons' hands is by yielding to temptation: **nothing can injure the man who does not injure himself**. The trials Mark faces are intended for his glory, and more basically for God's glory in him—but God chooses glory for himself that glorifies his saints. Doubtless this will conflict with Mark's plans and perceptions of what he needs, but God knows better, and *loves* Mark better than to give Mark everything he thinks he needs.

Do your best to strengthen Mark, especially as regards forgiveness to those who have wronged him and in the whole science of unseen warfare. Where he cannot see himself that events are led by an invisible hand, help him to at least have faith, a faith that may someday be able to discern.

And do help him to see that he is in the hands of God, that the words

And do help him to see that he is in the hands of God, that the words in the Sermon on the Mount about providence are not for the inhabitants of another, perfect world, but intended for him personally as well as others. He has rough things he will have to deal with; help him to trust that he receives providence at the hands of a merciful God who is ever working all things to good for his children.

With Love as Your Fellow-Warrior and Mark's,  
**Your Fellow-Warrior in the War Unseen**

---

*My dear, watchful son Eukairos;*

Mark has lost his job, and though he has food before him and a roof over his head, he thinks God's providence has run short.

Yet in all of this, he is showing a sign of growth: even though he does not believe God has provided, there is a deep peace, interrupted at times by worry, and his practice of the virtues allows such peace to enter even though he assumes that God can only provide through paychecks.

Work on him in this peace. Work on him in the joy of friendship. Even if he does not realize that he has food for today and clothing for today, and that this is the providence he is set to ask for, help him to enjoy what he has, and give thanks to God for everything he has been given.

And hold him in your prayers.

As One Who Possesses Nothing,

**One Who Receives All He Needs From God**

---

*My prayerful, prayerful Eukairos;*

Prayer is what Mark needs now more than ever.

Prayer is the silent life of angels, and it is a feast men are bidden to join. At the beginning it is words; in the middle it is desire; at the end it is silence and love. For men it is the outflow of sacrament, and its full depths are in the sacraments. There are said to be seven sacraments, but what men of Mark's day do not grasp is that seven is the number of perfection, and it would do as well to say that there are ten thousand sacraments, all bearing God's grace.

Help Mark to pray. Pray to forgive others, pray for the well-being of others, pray by being in silence before God. Help him to pray when he is attacked by passion; help him to pray when he is tempted and when he confesses in his heart that he has sinned: *O Lord, forgive me for doing this and help me to do better next time, for the glory of thy holy name and for the salvation of my soul.*

Work with Mark so that his life is a prayer, not only with the act-prayer of receiving a sacrament, but so that looking at his neighbor with chaste eyes he may pray out of the Lord's love. Work with Mark so that ordinary activity and work are not an interruption to a life of prayer, but simply a part of it. And where there is noise, help him to be straightened out in silence through his prayer.

And if this is a journey of a thousand miles that Mark will never reach on earth, bid him to take a step, and then a step more. For a man to take one step into this journey is still something: the Thief crucified with Christ could only take on step, and he took that one step, and now stands before God in Paradise.

Ever draw Mark into deeper prayer.

With You Before God's Heart that Hears Prayers,

**A Praying Angel**

---

*My dearly beloved, cherished, esteemed son; My holy angel who sees the face of Christ God; My dear chorister who sings before the eternal throne of God; My angel divine; My fellow-minister;*

Your charge has passed through his apprenticeship successfully.

He went to church, and several gunmen entered. One of them pointed a gun at a visitor, and Mark stepped in front of her. He was ordered to move, and he stood firm. He wasn't thinking of being heroic; he wasn't even thinking of showing due respect to a woman. He only thought vaguely of appropriate treatment of a visitor and fear never deterred him from this vague sense of appropriate care for a visitor.

And so death claimed him to its defeat. **O Death, where is your sting? O grave, where is your victory?** Death claimed claimed saintly Mark to its defeat.

Mark is no longer your charge.

It is my solemn, profound, and grave pleasure to now introduce you to Mark, no longer as the charge under your care, but as a fellow-chorister with angels who will eternally stand with you before the throne of God in Heaven.

Go in peace.

Your Fellow-Minister,

**מיכאל • MIXAHA • MICHAEL • Who Is Like God?**

# Animals

Can you pull out Leviathan with a hook,  
or press his tongue down with a cord?  
Can you put a rope in his nose,  
or pierce his jaw with a hook?  
Will he make many supplications to you?  
Will he speak soft words to you?  
Will he make a covenant with you?  
Will he be your servant forever?  
Will you play with him as with a bird?  
Or will you put him on a rope for your maidens?  
Will traders bargain for him?  
Shall he be divided among the merchants?  
Can you fill his skin with harpoons,  
or his head with fishing spears?  
Lay hands on him;  
Think of the battle; you will not do it again!  
Behold, the hope of a man is disappointed;  
he is laid low even at the sight of him.  
No one is so fierce as to dare to stir him up.  
Who then is he who can stand before him?  
Who can confront him and be safe?  
Under the whole Heavens, who?  
I will not keep silence concerning his limbs,  
or his mighty strength, or his powerful frame.  
Who can strip off his outer garment?  
Who can penetrate his double coat of mail?  
Who can open the doors of his face?  
Round about his teeth is terror

ROUND ABOUT HIS TEETH IS TERROR.

His back is made of rows of shields,  
shut up as tightly as with a seal.

One is so near to another  
that no air can pass between them.

They are joined to one another;  
they clasp each other and cannot be separated.

His sneezings flash forth light;  
and his eyes are like the eyelids of the dawn.

Out of his mouth go flaming torches;  
sparks of fire leap forth.

Out of his nostrils comes forth smoke,  
as from a boiling pot and burning rushes.

In his neck abides strength,  
and terror dances before him.

The folds of his flesh cleave together,  
firmly cast upon him and immovable.

His heart is as hard as a stone,  
as hard as the lower millstone.

When he raises himself up, the gods are afraid;  
at the crashing they are beside themselves.

Though the sword reaches him, it does not avail;  
nor spear, nor dart, nor javelin.

He counts iron as straw,  
and bronze as rotted wood.

The arrow cannot make him flee;  
for him slingstones are turned to rubble.

Clubs are counted as stubble;  
he laughs at the rattle of javelins.

His underparts are like sharp potsherds;  
he spreads himself like a threshing sledge on the mire.

He makes the deep boil like a pot;  
he makes the sea like a pot of ointment.

Behind him he leaves a shining wake;  
one would think the deep to be hoary.

Upon earth there is not his equal,  
a creature without fear.

He beholds everything that is high;

he is king over all of the sons of pride. (Job 41)

Behold Behemoth, which I made with you;  
he eats grass as an ox.

Look now; his strength is in his loins,  
and his power is in the muscles of his belly.

He swings his tail like a cedar;  
the sinews of his thighs are knit together.

His bones are like rods of bronze;  
his limbs are like bars of iron.

He is the chief of the works of God;  
his maker can approach him with the sword.

Surely the mountains bring forth food to him,  
where all of the beasts of the field play.

He lies under the lotus trees;  
the willows of the brook surround him.

Behold, he drinks up a river and is not frightened;  
he is confident though the Jordan rushes into his mouth.

Can a man take him with hooks,  
or pierce his nose with a snare? (Job 40:15-24)

These words, lightly altered from the Revised Standard Version, culminate a divine answer to Job out of the whirlwind: where was Job when God laid the foundation of earth? The divine voice turns to the foundations of the earth and the bounds of the sea, light and darkness, rain and hail, the stars, and the lion, mountain goat, wild ox and ass, ostrich, horse, and the hawk. The text is powerful even if translators demurely use "tail" for what the Behemoth swings like a cedar.

On a more pedestrian level, I was reticent when some friends had told me that they were going to be catsitting in their apartment and invited me over. (They know I love cats and other animals.) What I thought to explain later was that I proportionately outweigh a housecat by about as much as a mammoth outweighs me (perhaps "rhinoceros" would have been more appropriately modest than "mammoth"), and I try to let animals choose the pace at which they decide I'm not a threat. (And the cat has no way of knowing I don't eat cats.) As far as the environment to meet goes, I didn't bring up "You never get a second chance to make a first impression," but humans are more forgiving than animals. Although I didn't mention that I did mention the difference between someone

I don't mention that, I did mention the difference between someone approaching you in a mailroom and someone following you in a less safe place. All of which was to explain why I love animals but would be cautious about approaching a cat in those circumstances and would play any visit by ear. (I later explained how even if the cat is not sociable and spends most of its visit hiding, they can still experience significant success by returning the cat to his owner unharmed with any unpleasantness quickly forgotten in the arms of his owner.)

As I write, I spent a lovely afternoon with those friends, and tried to serve as a tour guide. What I realized as I was speaking to them was that I was mixing the scientific with what was not scientific, not exactly by saying things some scientists would disapprove like why eyeless cave fish suggest a reason natural selection might work *against* the formation of complex internal and external organs, but by something else altogether.

What is this something else? It is the point of this essay to try and uncover that.

I wrote in [Meat](#) why I eat lots of beef but am wary of suffering caused by cruel farming, and for that reason don't eat veal and go light on pork: I believe it is legitimate to kill animals for food but not moral to raise them under lifelong cruelty to make meat cheap. (Jesus was very poor by American standards and rarely had the luxury of eating meat.) While I hope you will bookmark [Meat](#) and consider trying to eat lower on the animal cruelty scale, my reason for bringing this up is different. The reason I wrote [Meat](#) has to do with something older in my life than my presently being delighted to find beef sausage and beef bacon, and trying not to eat much more meat than I need. And I am really trying hard not to repeat what I wrote before.

Thomas Aquinas is reported to have said that the one who does not murder because "Do not murder" is so deep in his bones that he needs no law to tell him not to murder, is greater than the theologian who can derive that law from first principles. What I want to talk about is simultaneously "deep in the bones" knowledge and something I would like to discover, and it is paradoxically something I want to discover because it is deep in my bones. And it is connected in my minds less to meat than when one of my friends, having come with a large dog who was extremely skittish around men, had a mix of both women and men over to help her move into her apartment, and asked me and not any of the women to take care of a dog she acknowledged was afraid of men. (I don't

know why she did this; I don't think she thought about my being a man.) At the beginning of half an hour, the dog was manifestly not happy at being at the other end of a leash with me; at the end of the half hour the dog had his head in my lap and was wagging his tail to meet the other men as well as women.

Part of this was knowledge in the pure Enlightenment sense about stretching an animal's comfort zone without pushing it into panic—a large part, in fact. But another part is that while I don't believe that animals are people, I try to understand animals and relate to them the same way I understand and relate to people. Maybe I can't discuss philosophy with a rabbit, and maybe a little bit of knowledge science-wise helps about minimizing intimidation to a creature whose main emotion is fear.

But that's not all.

After I ended the phone conversation where I explained why I was wary of terrifying what might be an already afraid cat, I realized something. I had just completed a paper for a feminist theology class which criticized historical scholarship that looked at giants of the past as behaving strangely and inexplicably, and I tried to explain why their behavior was neither strange nor inexplicable. I suggested that historical sources need to be understood as human and said that if you don't understand why someone would write what you're reading, that's probably a sign there's something you don't understand. Most of the length of my paper went into trying to help the reader see where the sources were coming from and see why their words were human, and neither strange nor inexplicable. What I realized after the phone conversation was that I had given the exact same kind of argument for why I was hesitant to introduce myself to the cat: I later called and suggested that the cat spend his first fifteen minutes in the new apartment with his owner petting him. I never said that the cat was human, and unlike some cat owners I would never say that the cat was equal to a human, but even if I will never meet that cat, *my approach to dealing with the cat meet him is not cut off from my approach to dealing with people*. And in that regard I'm not anywhere near a perfect Merlin (incidentally, a merlin is a kind of hawk, the last majestic creature we encounter before the proud Behemoth and Leviathan, and it does not seem strange to me that a lot of Druids have hawk in their name, nor do I

think the name grandiose), but Merlin appears in characters' speculation in C.S. Lewis's [That Hideous Strength](#) as someone who achieves certain effects, not by external spells, but by who he is and how he relates to nature. That has an existentialist ring I'd like to exorcise, but if I can get by with saying that I feel no need to meditate in front of a tree and repeat a mantra of "I see the tree. The tree sees me," nor do I spend much of any time trying to "Get in touch with nature..." then after those clarifications I think I can explain why something of Lewis's portrayal of Merlin resonates. (And I don't think it's the most terribly helpful approach to talk about later "accretions" and try to understand Arthurian legend through archaeological reconstruction of 6th century Britain; that's almost as bad as asking astronomy to be more authentic by only using the kind of telescopes Galileo could use.) It is not the scientific knowledge I can recite that enables me to relate to animals well, but by what is in my bones: a matter of who I am even before woolgathering about "Who am I?"

This has little to do with owning pets; I do not know that I would have a pet whether or not my apartment would allow them, and have not gone trotting out for a cat fix even though one is available next door. It's not a matter of having moral compunctions about meat, although it fed into my acquiring such compunctions a few years ago. It's not about houseplants either; my apartment allows houseplants but I have not gone to the trouble of buying one. Nor is it a matter of learning biology; physics, math, and computer science were pivotally important to me, but not only was learning biology never a priority for my leisure time, but I am rather distressed that when people want to understand nature they inevitably grab for a popular book on biology. When people try to understand other people, do they ask for CT scan of the other person's brain? Or do they recognize that there is something besides biological and medical theories that can lend insight into people and other creatures?

The fact that we do not try to relate to people primarily through medicine suggests a way we might relate to other animals besides science: trying to relate to nature by understanding science is asking an I-It tree to bear I-Thou fruit. (If you are unfamiliar with Martin Buber's [I and Thou](#), it would also be comparable to asking a stone to lay an egg.)

I'm not going to be graphic, but I would like to talk about dissection. Different people respond differently to different circumstances, and I know that my experience with gradeschool dissection is not universal. I

know that my experience with gradeschool dissection is not universal. I also know that dissection is not a big deal for some people, as I know that the hunters I know are among the kindest people I've met. Still I wish to make some remarks.

The first thing is that there is an emotional reaction you people need to suppress. Perhaps some adults almost reminisce about that part of their education as greatly dreaded but almost disappointing in its lack of psychological trauma. And I may be somewhat sensitive. But there's something going on in that experience, stronger for some people and weaker in others. It's one learning experience among others and what is learned is significant.

But is it really one learning experience among others?

Again without being graphic, dissection could have been used as a bigger example in C.S. Lewis's [The Abolition of Man](#), a book I strongly recommend. It finds a red flag in the dissection room, if mentioned only briefly—a red flag that something of our humanity is being lost.

To be slightly more graphic, one subtle cue was that in my biology classroom, there were plenty of gloves to begin with, then as the dissections progressed, only one glove per person, then no gloves at all—at a school for the financially gifted. And, to note something less subtle, the animals were arranged in a very specific order. You could call the progression, if you wanted to, the simplest and least technical to properly dissect, up to a last analysis which called for distinctly more technical skill. Someone more suspicious might point out how surprisingly the list of animals coincides with what a psychologist would choose in order to desensitize appropriately sensitive children. I really don't think I'm being too emotional by calling this order a progression from what you'd want to step on to what some people would want to cuddle. I don't remember the Latin names I memorized to make sense of what I was looking at. What it did to my manhood, or if you prefer humanity, is lasting, or at least remembered. Perhaps my sensibilities might have needed to be coarsened, but it is with no great pride that I remember forcing myself in bravado to dissect without gloves even when everybody else was wearing them. Perhaps I crossed that line so early because there were other lines that had already been crossed in me. And perhaps I am not simply being delicate, but voicing a process that happened for other people too.

If the question is, "What do we need in dealing with animals?", one answer might be, "What dissection makes children kill." I'm not talking

about the animals, mind you; with the exception of one earthworm, I never killed a specimen. Perhaps the memories would be more noxious if I had, but all my specimens were pre-killed and I was not asked to do that. But even with pre-killed specimens I was, in melodramatic terms, ordered to kill something of my humanity. I do not mean specifically that I experienced unpleasant emotions; I've had a rougher time with many things I can remember with no regrets. What I mean is that any emotions were a red flag that something of an appropriate way of relating to animals was being cut up with every unwanted touch of the scalpel. It's not just animals that are dismantled in the experience.

When I wrote my second novel, I wrote to convey medieval culture (perhaps [Firestorm 2034](#) would have been better if I focused more on, say, telling a story), and one thing I realized was that I would have an easier time conveying medieval culture if I showed its contact, in a sense its dismantling, with a science fiction setting, although I could have used the present day: I tried not to stray too far from the present day U.S. There is something that is exposed in contact with something very different. It applies in a story about a medieval wreaking havoc in a science fiction near future. It also applies in the dissection room. Harmony with nature, or animals, may not be seen in meditating in a forest. Or at least not as clearly as when we are fighting harmony with animals as we go along with an educator's requests to [graphic description deleted].

Let me return to the account from which I took words about a Leviathan and a Behemoth whose tail swings like a cedar. This seemingly mythological account—if you do not know how Hebrew poetry operates, or that a related languages calls the hippopotamus *pehemoth* instead of using the Greek for "river horse" as we do—is better understood if you know what leads up to it. A stricken Job, slandered before God as only serving God as a mercenary, cries out to him in anguish and is met by comforters who tell him he is being punished justly. The drama is more complex than that, but God save me from such comforters in my hour of need. The only thing he did not rebuke the comforters for was sitting with Job in silence for a week because they saw his anguish was so great.

Job said, "But I would speak to the Almighty, and I desire to argue my case with God." (Job 13:3) And, after heated long-winded dialogue, we read (Job 38-39, RSV):

Then the Lord answered Job out of the whirlwind:  
"Who is this that darkens counsel by words without knowledge?  
Gird up your loins like a man,  
I will question you, and you shall declare to me.  
Where were you when I laid the foundation of the earth?  
Tell me, if you have understanding.  
Who determined its measurements—surely you know!  
Or who stretched the line upon it?  
On what were its bases sunk,  
or who laid its cornerstone,  
when the morning stars sang together,  
and all the sons of God shouted for joy?  
Or who shut in the sea with doors,  
when it burst forth from the womb;  
when I made clouds its garment,  
and thick darkness its swaddling band,  
and prescribed bounds for it,  
and set bars and doors,  
and said, 'Thus far shall you come, and no farther,  
and here shall your proud waves be stayed'?  
Have you commanded the morning since your days began,  
and caused the dawn to know its place,  
that it might take hold of the skirts of the earth,  
and the wicked be shaken out of it?  
It is changed like clay under the seal,  
and it is dyed like a garment.  
From the wicked their light is withheld,  
and their uplifted arm is broken.  
Have you entered into the springs of the sea,  
or walked in the recesses of the deep?  
Have the gates of death been revealed to you,  
or have you seen the gates of deep darkness?  
Have you comprehended the expanse of the earth?  
Declare, if you know all this.  
Where is the way to the dwelling of light,  
and where is the place of darkness,  
that you may take it to its territory  
and that you may discern the paths to its home?"

and that you may discern the paths to its home:

You know, for you were born then,  
and the number of your days is great!

Have you entered the storehouses of the snow,  
or have you seen the storehouses of the hail,  
which I have reserved for the time of trouble,  
for the day of battle and war?

What is the way to the place where the light is distributed,  
or where the east wind is scattered upon the earth?

Who has cleft a channel for the torrents of rain,  
and a way for the thunderbolt,  
to bring rain on a land where no man is,  
on the desert in which there is no man;  
to satisfy the waste and desolate land,  
and to make the ground put forth grass?

Has the rain a father,  
or who has begotten the drops of dew?  
From whose womb did the ice come forth,  
and who has given birth to the hoarfrost of heaven?  
The waters become hard like stone,  
and the face of the deep is frozen.

Can you bind the chains of the Plei'ades,  
or loose the cords of Orion?

Can you lead forth the Maz'zaroth in their season,  
or can you guide the Bear with its children?

Do you know the ordinances of the heavens?

Can you establish their rule on the earth?

Can you lift up your voice to the clouds,  
that a flood of waters may cover you?

Can you send forth lightnings, that they may go  
and say to you, `Here we are'?

Who has put wisdom in the clouds,  
or given understanding to the mists?

Who can number the clouds by wisdom?

Or who can tilt the waterskins of the heavens,  
when the dust runs into a mass  
and the clods cleave fast together?

Can you hunt the prey for the lion,

or satisfy the appetite of the young lions,  
when they crouch in their dens,  
or lie in wait in their covert?  
Who provides for the raven its prey,  
when its young ones cry to God,  
and wander about for lack of food?  
Do you know when the mountain goats bring forth?  
Do you observe the calving of the hinds?  
Can you number the months that they fulfil,  
and do you know the time when they bring forth,  
when they crouch, bring forth their offspring,  
and are delivered of their young?  
Their young ones become strong, they grow up in the open;  
they go forth, and do not return to them.  
Who has let the wild ass go free?  
Who has loosed the bonds of the swift ass,  
to whom I have given the steppe for his home,  
and the salt land for his dwelling place?  
He scorns the tumult of the city;  
he hears not the shouts of the driver.  
He ranges the mountains as his pasture,  
and he searches after every green thing.  
Is the wild ox willing to serve you?  
Will he spend the night at your crib?  
Can you bind him in the furrow with ropes,  
or will he harrow the valleys after you?  
Will you depend on him because his strength is great,  
and will you leave to him your labor?  
Do you have faith in him that he will return,  
and bring your grain to your threshing floor?  
The wings of the ostrich wave proudly;  
but are they the pinions and plumage of love?  
For she leaves her eggs to the earth,  
and lets them be warmed on the ground,  
forgetting that a foot may crush them,  
and that the wild beast may trample them.  
She deals cruelly with her young, as if they were not hers;  
though her labor be in vain, yet she has no fear.

though her labor be in vain, yet she has no fear,  
because God has made her forget wisdom,  
and given her no share in understanding.  
When she rouses herself to flee,  
she laughs at the horse and his rider.  
Do you give the horse his might?  
Do you clothe his neck with strength?  
Do you make him leap like the locust?  
His majestic snorting is terrible.  
He paws in the valley, and exults in his strength;  
he goes out to meet the weapons.  
He laughs at fear, and is not dismayed;  
he does not turn back from the sword.  
Upon him rattle the quiver,  
the flashing spear and the javelin.  
With fierceness and rage he swallows the ground;  
he cannot stand still at the sound of the trumpet.  
When the trumpet sounds, he says `Aha!'  
He smells the battle from afar,  
the thunder of the captains, and the shouting.  
Is it by your wisdom that the hawk soars,  
and spreads his wings toward the south?  
Is it at your command that the eagle mounts up  
and makes his nest on high?  
On the rock he dwells and makes his home  
in the fastness of the rocky crag.  
Thence he spies out the prey; his eyes behold it afar off.  
[closing gruesome image deleted]

Then Job says some very humble and humbled words. Then the Lord gives his *coup de grace*, a demand to show strength like God that culminates with words about the Leviathan and Behemoth. Job answers "... Therefore I have uttered what I did not understand, things too wonderful for me, which I did not know... *I had heard of thee by hearing of the ear, but now my eye sees thee.*" (Job 42:3,5, RSV)

Did God blast Job like a soup cracker?

Absolutely, but if that is all you have to say about the text, you've missed the text.

There's something about Job's "comforters" defending a sanitized religion too brittle to come to terms with un-sanitized experience and un-sanitized humanity; Job cares enough about God to show his anger, and though he is never given the chance to plead his case before God, he meets God: he is not given what he *asks for*, but what he *needs*.

There's a lot of good theology about God giving us what we *need*, but without exploring that in detail, I would point out that the Almighty shows himself Almighty through his Creation, quite often through animals. There may be reference to rank on rank of angels named as all the sons of God shouting for joy (Job 38:7), but man is curiously absent from the list of majestic works; the closest reference to human splendor is "When [Leviathan] raises himself up the gods are afraid; at the crashing they are beside themselves" (Job 41:25). The RSV thoughtfully replaces "gods" with "mighty" in the text, relegating "gods" to a footnote—perhaps out of concern for readers who might be disturbed by the Old and New Testament practice of occasionally referring to humans as gods, here in order to emphasize that even the mightiest or warriors are terrified by the Leviathan.

This is some of the Old Testament poetry at its finest, written by the Shakespeare of the Old Testament, and as Hebrew poetry it lays heavy emphasis on one the most terrifying creature the author knew of, the crocodile, a terrifying enough beast that Crocodile Dundee demonstrates his manhood to the audience by killing a crocodile—and the film successfully competes head-to-head against fantasy movies that leave nothing to the imagination for a viewer who wants to see a fire-breathing dragon.

Let me move on to a subtle point made in Macintyre's [Dependent Rational Animals: Why Human Beings Need the Virtues](#). While the main emphasis of the work is that dependence is neither alien to being human nor something that makes us somehow less than human, he alludes to the classical definition of man as "rational mortal animal" and makes a subtle point.

Up until a few centuries ago the term "animal" could be used in a sense that either included or excluded humans. While both senses coexisted, there was not a sense that calling a person an animal was degrading any more than it was degrading to mention that we have bodies. Now calling someone an animal is either a way of declaring that they are beneath the bounds of humanity, or a dubious compliment to a

they are beneath the bounds of humanity, or a dubious compliment to a man for boorish qualities, or else an evolutionary biologist's way of insisting that we are simply one animal species among others, in neo-Darwinist fashion enjoying no special privilege. But Aristotle meant none of these when he recognized we are animals.

To be human is to be both spirit and beast, and not only is there not shame in that we have bodies that need food and drink like other animals, but there is also not shame in a great many other things: We perceive the world and think through our bodies, which is to say as animals. We communicate to other people through our bodies, which is to say as animals. Were we not animals the Eucharist would be impossible for Christians to receive. We are also spirit, and our spirit is a much graver matter than our status as animals, including in Holy Communion; our spirit is to be our center of gravity, and our resurrection body is to be transformed to be spiritual. But the ultimate Christian hope of bodily resurrection at the Lord's return is a hope that as spiritual animals we will be transfigured and stand before God as the crowning jewel of bodily creation. The meaning of our animal nature will be changed and profoundly transformed, but *never* destroyed. Nor should we hope to be released from being animals. To approach Christianity in the hope that it will save us from our animal natures—being animals—is the same kind of mistake as a child who understandably hopes that growing up means being in complete control of one's surroundings. Adulthood and Christianity both bring many benefits, but that is not the kind of benefit Christianity provides (or adulthood).

If that is the case, then perhaps there is nothing terribly provocative about my trying to understand other animals the way I understand other people. Granted, the understanding cannot run as deep because no other animal besides man is as deep as man and some would have it that man is the ornament of both visible *and spiritual* creation, Christ having become man and honored animal man in an honor shared by no angel. The old theology as man as microcosm, shared perhaps with non-Christian sources, sees us as the encapsulation of the entire created order. Does this mean that there are miniature stars in our kidneys? It is somewhat beside the point to underscore that every carbon nucleus in your body is a relic of a star. A more apropos response would be that to be human is to be both spirit and matter, to share life with the plants and the motion of animals, and that it is impossible to be this microcosm without being an

animal. God has honored the angels with a spiritual and non-bodily creation, but that is not the only honor to be had.

In my homily [Two Decisive Moments](#), I said,

In the name of the Father, and of the Son, and of the Holy Ghost.  
Amen.

There is a classic Monty Python "game show": the moderator asks one of the contestants the second question: "In what year did Coventry City last win the English Cup?" The contestant looks at him with a blank stare, and then he opens the question up to the other contestants: "Anyone? In what year did Coventry City last win the English Cup?" And there is dead silence, until the moderator says, "Now, I'm not surprised that none of you got that. It is in fact a trick question. Coventry City has *never* won the English Cup."

I'd like to dig into another trick question: "When was the world created: 13.7 billion years ago, or about six thousand years ago?" The answer in fact is "Neither," but it takes some explaining to get to the point of realizing that the world was created 3:00 PM, March 25, 28 AD.

Adam fell and dragged down the whole realm of nature. God had and has every authority to repudiate Adam, to destroy him, but in fact God did something different. He called Noah, Abraham, Moses, and Elijah, and in the fullness of time he didn't just call a prophet; he sent his Son to become a prophet and more.

It's possible to say something that means more than you realize. Caiaphas, the high priest, did this when he said, "It is better that one man be killed than that the whole nation perish." (John 11:50) This also happened when Pilate sent Christ out, flogged, clothed in a purple robe, and said, "*Behold the man!*"

What does this mean? It means more than Pilate could have possibly dreamed of, and "Adam" means "man": *Behold the man! Behold Adam, but not the Adam who sinned against God and dragged down the Creation in his rebellion, but the second Adam, the new Adam, the last Adam, who obeyed God and exalted the whole Creation in his rising. Behold the man, Adam as he was meant to be. Behold the New Adam who is even now transforming the Old Adam's failure into glory!*

*Behold the man! Behold the first-born of the dead. Behold, as in the icon of the Resurrection, the man who descends to reach Adam and Eve and raise them up in his ascent. Behold the man who will enter the realm of the dead and forever crush death's power to keep people down.*

*Behold the man and behold the firstborn of many brothers! You may know the great chapter on faith, chapter 11 of the book of Hebrews, and it is with good reason one of the most-loved chapters in the Bible, but it is not the only thing in Hebrews. The book of Hebrews looks at things people were caught up in, from the glory of angels to sacrifices and the Mosaic Law, and underscores how much more the Son excels above them. A little before the passage we read above, we see, "To which of the angels did he ever say, 'You are my son; today I have begotten you'?" (Hebrews 1:5) And yet in John's prologue we read, "To those who received him and believed in his name, he gave the authority to become the children of God." (John 1:9) We also read today, "To which of the angels did he ever say, 'Sit at my right hand until I have made your enemies a footstool under your feet?'" (Hebrews 1:13) And yet Paul encourages us: "The God of peace will shortly crush Satan under your feet," (Romans 16:20) and elsewhere asks bickering Christians, "Do you not know that we will judge angels?" (I Corinthians 6:3) *Behold the man! Behold the firstborn of many brothers, the Son of God who became a man so that men might become the Sons of God. Behold the One who became what we are that we might by grace become what he is. Behold the supreme exemplar of what it means to be Christian.**

*Behold the man and behold the first-born of all Creation, through whom and by whom all things were made! Behold the Uncreated Son of God who has entered the Creation and forever transformed what it means to be a creature! Behold the Saviour of the whole Creation, the Victor who will return to Heaven bearing as trophies not merely his transfigured saints but the whole Creation! Behold the One by whom and through whom all things were created! Behold the man!*

Pontius Pilate spoke words that were deeper than he could have **possibly** imagined. And Christ continued walking the fateful journey before him, continued walking to the place of the Skull,

Golgotha, and finally struggled to breathe, his arms stretched out as far as love would go, and barely gasped out, "It is finished."

Then and there, the entire work of Creation, which we read about from Genesis onwards, was *complete*. There and no other place the world was created, at 3:00 PM, March 25, 28 AD. *Then* the world was created.

To the Orthodox, at least in better moments, Christ is not just our perfect image of what it means to be God. He is also the definition of what it means to be Christian and what it ultimately means to be man.

Can we understand this and deny that Christ is an animal?

# Apprentice gods

1. This life is an apprenticeship. You do not understand its purpose until you understand that we are created to be apprentice gods.
2. It is said, a man knows the meaning of life when he plants a tree knowing he will never live to sit in its shade. Truer is to say that a man knows the meaning of life when he plants a tree not seeing how he will ever *this side of Heaven* sit in its shade.
3. You do not understand life in the womb until you understand what is after the womb. For some actions in the womb bear fruit in the womb, but suckling and kicking are made to strengthen muscles for nursing and walking, and nursing a preparation for the solid food of men.
4. [You shall surely die](#): such Adam and Eve were warned, such Adam and Eve were cursed, and such the saints are blessed. For death itself is made an entryway for life. But we can only repent in this life: after this life our eternal choice of Life or Death is sealed.
5. Do not despise moral, that is to say eternal, victories. Have you labored to do something great, only to find it all undone? Take courage. God is working with you to wreak triumph. From his eternal providence he is working, if you will be his co-worker, in synergy, to make with you something greater than you could possibly imagine, a treasure in Heaven which you never could imagine to be able to covet.
6. The purpose of life may be called as an apprenticeship to become divine. The divine became man that man might become divine. The Scriptures oft speak of the sons of God, and of men's participation in the nature divine. This divinisation begins on earth and reaches its full stature, when the Church triumphant and whole becomes the

Church of saints who have become what in God they were trying to become. And we are summoned to that door.

7. Were sportsmanship to be found only in a foreign culture, we would find it exotic. Play your best, seek to win a well-played game, but have dispassion enough to be graceful in winning and losing alike. But one of its hidden gems is that most often a team that has to win will be defeated by a team that only tries to give it their best.
8. But sportsmanship is not just for sports. Hard times are encroaching and are already here: but we are summoned, not to win, but to play our best. Hence St. Paul, at the end of a life of as much earthly triumph as any saints, spoke as a true sportsman: he said not, "I have triumphed," but that he had been faithful: [I have fought a good fight, I have finished my \[race\]course, I have kept the faith.](#) This from a saint who enjoyed greater earthly accomplishments than his very Lord.
9. It is said that there are three ranks among the disciples: slaves who obey God out of fear, hirelings who obey God out of the desire for reward, and sons who obey God out of love. It has also been said that we owe more to Hell than to Heaven, for more people come to the truth from fear of Hell than the desire for the rewards in Heaven. But if you want a way out of Hell, seek to desire the incomparably greater reward in Heaven; if you seek reward in Heaven, come to obey God out of love, for love of God transcends even rewards in Heaven.
10. It is said, Doth thou love life? Then do not waste time, for time is the stuff life's made of. It might be said, Seekest thou to love? Then do not shun asceticism and discipleship, for they are the stuff love is made of. Or they are a refining fire that purges all that is not silver and gold. Our deifying apprenticeship takes place through asceticism and being disciples.
11. Two thoughts are to be banished: *I am a saint*, and *I shall be damned*. Instead think these two thoughts: *I am a great sinner*, and *God is merciful*. [Because strait is the gate, and narrow is the way, which leadeth unto life, and few there be that find it.](#) You have not met Christ's dread judgment throne yet: seek each day to pursue more righteousness.
12. The sum of our status as apprentice gods is this: Love men as made in the image of God, and work in time as the womb of eternity. Fulfill

your apprenticeship with discipleship as best you are able. And follow God's lead in the great Dance, cooperating in synergy with his will. And know that [lo, I am with you alway, even unto the end of the world. Amen.](#)

**Apps and Mobile  
Websites for the  
Orthodox Christian  
Smartphone and  
Tablet: Best iPhone,  
iPad, Droid,  
Samsung, Android,  
Kindle, and  
Blackberry Mobile  
Websites and Apps**

**Apps that are directly useful  
for ascesis**

**There are not many apps formally labeled as Orthodox  
Christian, but there are some apps and mobile websites that can be**

used in the pursuit of the spiritual discipline of asceticism. Among these apps are:

[Ancient Faith Radio](#) ([iPhone and iPad](#), [Droid, Samsung, and Android](#), [Blackberry](#))

The value of this app goes more or less without saying, but there is one caveat.

I visited a monastery whose rules included not playing recorded music, and I saw outside the nave an old man, with headphones on, listening to Byzantine chant, moving to its beat and off in his own world.

It struck me, if anything, as an act beneath the dignity of an old man. [Being off in your own world is not good for anyone](#), but there are some things tolerated in youth that are just sad in a mature adult. And as best I can surmise the rule was not a rule against certain types of prohibited music (though acid rock would be a worse violation), but using technology to be off in your own world in the first place. And it is because of this that I rarely listen to recorded liturgical music: it is easily available, but there is something about it that is simply wrong. (And this is not just a matter of how digital music sounds to someone with perfect pitch.)

I know of nothing better in terms of Orthodox Internet radio than Ancient Faith Radio, and really have very little if anything to say how Ancient Faith Radio could better do the job of a radio station (or, as the case may be, two stations providing access to lectures, sacred liturgical chant, and access to past broadcasts). But I have some reservations about why Orthodox need to be doing the job of a radio station—as, for that matter, I have a cautious view of my own website. The ironically titled [The Luddite's Guide to Technology](#) lays out the attitude where a radio station with crisply rendered sacred song available on one's iPhone or Android should be used that much. [cjshayward.com/psalms/?mode=mobile](http://cjshayward.com/psalms/?mode=mobile) (bookmark for iPhone, iPad, Droid, Samsung, Android, Kindle, and Blackberry; tablet users may prefer [cjshayward.com/psalms/](http://cjshayward.com/psalms/))

The Psalter is the greatest prayerbook of the Orthodox Church. This page selects a Psalm at random, until you click a link and it provides another Psalm at random. They seem to be helpful, chiefly because the Psalter is helpful

because the printer is helpful.

[CJSHayward.mobi](http://CJSHayward.mobi) (bookmark for iPhone, iPad, Droid, Samsung, Android, Kindle, and Blackberry; tablet users may prefer [cjshayward.com](http://cjshayward.com))

I hate to hawk my own wares, but I've put quite a lot into the two sites linked above, and perhaps reading them may be of some use.

[cjshayward.com/clock/phone.cgi](http://cjshayward.com/clock/phone.cgi) (bookmark for iPhone, iPad, Droid, Samsung, Android, Kindle, and Blackberry, both phone and tablets)

This is a jumping point to your local liturgical day's readings from Scripture, saints' lives, and troparia/kontakia. It is intended to follow your local liturgical day, from sunset to sunset, which is why it asks what city you are nearest to. It offers a choice of Old Calendar or New Calendar, although the Old Calendar has room to improve in terms of dates relative to Pascha. It is a jumping off point to the real OCA trove of readings, saint's lives, and troparia; much more than the lion's share of the value is in the OCA feasts and saints to which this provides a jumping off point.

Evernote ([iPhone and iPad](#), [Droid, Samsung, and Android](#), [Blackberry](#), and desktop computers)

Evernote (iPhone and iPad users may consider [Instapaper](#)) offers the possibility of a library of texts to pray. Of course it can be many other things besides a library of prayers, but you can store morning and evening prayers, preparation for Communion, [and a wealth of Akathists](#). There is much more that they can be used for, but I've found it well worth my time to type up liturgical prayers and have the text available for prayer later.

Your smartphone's built-in note-taking application, or [Momento for iPhone or iPad](#) (with many [diary applications for Droid, Samsung, and Android](#), and perhaps other offerings for other devices.

Some monks in the ancient world kept a notebook, and something to write with, by their belts. They would stop at intervals to write down their thoughts: not brilliant ideas to think about, but take moral stock of where they were and how they were doing.

Such a practice was not mandatory in the ancient world and to my knowledge no one requires it now. However, since I started doing it, I have besides some very stupid struggles come to a higher level of awareness, of nipsis, of how much goes on in my head and heart that is simply silly.

If you do this, it would be better to have an application that stores your information locally in your smartphone instead of uploading it to the cloud where others may more easily find it. That is why I don't recommend Evernote for this purpose; it is a very attractive app in many ways, but not as strong on privacy as your smartphone's built-in note taker or a diary app.

[The Kindle app for iPhone, iPod Touch, Droid, Samsung, Android, and Blackberry](#) (not to mention PC's)

I wouldn't want to denigrate paperback books, but you can buy some of the greatest classics on Kindle: the [Orthodox Study Bible](#) (an edition I discussed in [my Orthodox Bookshelf](#)), the [Philokalia](#), and [My Orthodox Prayer Book](#). Plenty of lesser works are available too: see my own Kindle offerings at [cjshayward.com](#).

The icon library at [IconLibrary.mobi](#).

While preparing to write this, there was one thing I looked for but couldn't find: an icon library, or at least an icon library that features Christ, the Theotokos, and the saints and angels instead of just featuring angels. So I created [IconLibrary.mobi](#). It's better than nothing.

## **Apps that are generally useful**

G.K. Chesterton said, "There is more simplicity in the man who eats caviar on impulse than the man who eats granola on principle." And there is more Orthodoxy in just using an iPhone as a tool for being human than going to the app store and looking for apps endorsed as religious.

Do a Google search for [best iPhone apps](#), for instance, and you will find a wealth of app recommendations. And many of these can work as a support for an Orthodox life of asceticism: Orthodoxy did not invent the pot, the belt, or the hammer, and yet all of these can have a place. Not, perhaps, the same place as a book of prayers, but a legitimate place. Secular tools and activities are holy when they are used by a life out of asceticism. And there are some excellent apps; among them I would name **PocketMoney**, a personal finance tool; **mSecure**, a password manager; **Things**, a to-do list; **GPS MotionX Drive**, a navigation tool; **Flashlight**, which lets you use the LED as a flashlight; and the main **Google** app, a search app optimized for the web by the company that defined search. All of these have their place.

But there are many apps on those lists that are unhelpful. Games and entertainment apps are meant to kill time, which is to say that they are meant to provide a convenient alternative to the spiritual discipline that told monks, "Your cell [room] will teach you everything you need to know." And I suggest asking, in considering an app, "Does this support asceticism?" A to-do list helps with nuts and bolts of a disciplined life. An app to show a stream of new and different restaurants feeds gluttony. It is fine for Orthodox Christians to use apps that are not branded as Orthodox or ascetical, but the question "Does this support ascetical living?" (which is in no way a smartphone-centric question, but a basic question of Orthodox life, to be settled with one's priest or spiritual father perhaps), applies here.

## **A closing note: When do you call 9-1-1 (or 9-9-9)?**

There is a good case to be made that the most important number for you to be able to call on any phone is 9-1-1. However, this does not mean that your first stop in dealing with boredom is to call 9-1-1 to just chat with someone. It may be the most important number for you to be able to call—and the only number that may save your life—but using 9-1-1 rightly means using it rarely.

I would not speak with quite equal force about smartphones, but I would say that if you really want to know how to use your smartphone in a way that supports Orthodox spiritual discipline, the biggest answer is not to use one more app or one more mobile website. It is to use your phone less, to visit people face to face instead of talking and texting, and to use apps a little more like you use 9-1-1: to get a specific task accomplished.

And this is without looking at the problem of an intravenous drip of noise. The iPhone and Android's marketing proposition is to deliver noise as an anaesthetic to boredom. And Orthodox use of the iPhone is not to deliver noise: all of us, with or without iPhones or Android devices, are to cultivate the asceticism of silence, and not make ourselves dependent on noise. And it is all too easy with these smartphones; they are designed so that it is too easy.

The Fathers did not say "You cannot kill time without injuring eternity," but on this point they could have. Killing time is the opposite of the asceticism of being present, of being attentive of the here and now that God has given us, and not the here and now that we wish to be in or the here and now we hope to get to. Contentment and gratitude are for here now, not what we imagine as better conditions. We are well advised to live astemiously, and that is where the best use of iPhone and Android

...the technology, and that is where the best use of these devices  
smartphones and tablets comes from.

**Smartphones have many legitimate uses, but don't look to them for, in modern terms, a mood management tool.**

# Archdruid of Canterbury Visits Orthodox Patriarch

The Archdruid of Canterbury appeared as head of a delegation to His All Holiness THOMAS, Patriarch of Xanadu.

The Archdruid bore solemn greetings and ecumenical best wishes. He presented gifts, including an oak and holly icon, portraying St. Francis of Assisi as the pioneer of "I-Thou" existentialism. The icon was "not made by hands" ("all done by paw," in the memorable words of Paddington Bear).

The Druidic leader spoke of the Orthodox Church with the most solemn reverence. "The Orthodox Church is not only Oriental and exotic, but has the most hauntingly beautiful liturgy achieves what we are trying to engineer in our liturgical reform, and the Orthodox Church would make the perfect partner for the most dynamic and progressive forces that keep the C of E a living spiritual power in this world. St. Alban and St. Sergius *are* Anglican saints, but they are first and foremost Orthodox saints, and are only Anglican saints because they are Orthodox saints. I have personally blended the most excellent traditions of Druidic Bard and occupant of the See of Canterbury. We would be most deeply honoured if the existing profound (if invisible) bond uniting Orthodox, Anglican, and Druid were made explicit."

After the Druid spoke for an hour, he paused in thought a moment, turned to His All Holiness THOMAS and said, "But I fear I have done too much talking, while you have said nothing. Isn't there anything you'd like to say? Don't you have questions we could speak to?"

The Patriarch coughed, sat in silence for a moment, and began to

The Patriarch coughed, sat in silence for a moment, and began to squirm. "Have you considered pursuing ecumenical relations with the African majority in your own communion? I've dealt with some of them and they're really quite solid people, with good heads on their shoulders." The Archdruid made no reply.

# The Arena

1. We stand in an arena, the great coliseum. For it is the apostles who were sent forth last, as if men condemned to die, made a spectacle unto the world, to angels and men.
2. St. Job was made like unto a champion waging war against Satan, on God's behalf. He lost everything and remained God-fearing, standing as the saint who vindicated God.
3. [But all the saints vindicate God.](#)
4. We are told as we read the trials in [the Book of Job](#) that Satan stands slandering God's saints day and night and said God had no saint worthy of temptation. And the Lord God Almighty allowed Satan to tempt St. Job.
5. We are told this, but in the end of the Scripture, even when St. Job's losses are repaid double, St. Job never hears. He never knows that he stands in the cosmic coliseum, as a champion on God's behalf. Never on earth does St. Job know the reason for the catastrophes that befell him.
6. St. Job, buffeted and bewildered, could see no rhyme or reason in what befell him. Yet even the plagues of Satan were woven into the plans of the Lord God who never once stopped working all things to good for this saint, and to the saint who remained faithful, the plagues of Satan are woven into the diadem of royal priesthood crowning God's saints.
7. Everything that comes to us is either a blessing from God or a temptation which God has allowed for our strengthening. The plagues by which Satan visited St. Job are the very means themselves by which God glorified his faithful saint.
8. Do not look for God in some other set of circumstances. Look for him

in the very circumstances you are in. If you look at some of your circumstances and say, "God could not have allowed that!", you are not rightly accepting the Lord's work in the circumstances he has chosen to work his glory.

9. You are in the arena; God has given you weapons and armor by which to fight. A poor warrior indeed blames the weapons God has armed him with.
10. Fight therefore, before angels and men. The circumstances of your life are not inadequate, whether through God lacking authority, or wisdom, or love. The very sword blows of Satan glancing off shield and armor are ordained in God's good providence to burnish tarnishment and banish rust.
11. The Almighty laughs Satan to scorn. St. Job, faithful when he was stricken, unmasked the feeble audacity of the demons.
12. God gives ordinary providence for easy times, and extraordinary providence for hard times.
13. If times turn hard for men, and much harder for God's servants, know that this is ordained by God. Do not suppose God's providence came when you were young but not now.
14. What in your life do you wish were gone so you could be where you should be? When you look for God to train you in those very circumstances, that is the beginning of victory. That is already a victory won.
15. Look in every circumstance for the Lord to train you. The dressing of wounds after struggle is part of training, and so is live combat.
16. The feeble audacity of the demons gives every appearance of power, but the appearance deceives.
17. Nothing but your sins can wound you so that you are down. And even our sins are taken into the work of the Almighty if we repent.
18. When some trial comes to you, and you thank God, that is itself a victory.
19. Look for God's work here and now. If you will not let God work with you here and now, God will not fulfill all of your daydreams and then begin working with you; he will ask you to let him train you in the here and now.
20. Do you find yourself in a painfully rough situation? Then what can you do to lighten others' burdens? Instead of asking, "Why me?", ask,

"Why not me?"

21. An abbot asked a suffering monk if he wanted the abbot to pray that his suffering be taken away. The disciple said, "No," and his master said, "You will outstrip me."
22. It is not a contradiction to say that both God has designs for us, and we are under the pressure of trials. Diamonds are only made through pressure.
23. No disciple is greater than his master. Should we expect to be above sufferings when the Son of God was made perfect through suffering?
24. Anger is a spiritual disease. We choose the path of illness all the more easily when we do not recognize that God seeks to train us in the situation we are in, not the situation we wish we were in.
25. It is easier not to be angry when we recognize that God knows what he is doing in the situations he allows us to be in. The situation may be temptation and trial, but was God impotent, unwise, or unloving in how he handled St. Job?
26. We do not live in the best of all possible worlds by any means. We live instead in a world governed by the best of all possible Gods. And that is the greater blessing.
27. Some very holy men no longer struggle spiritually because spiritual struggle has worked out completely. But for the rest of us, struggle is a normal state. It is a problem for you or I to pass Lent without struggle. If we struggle and stumble and fall, that is good news. All the better if we cannot see how the thrusts and blows of the enemy's sword burnish away a little rust, one imperceptible speck at a time.
28. Do you ask, "Did it have to hurt *that* much?" When I have asked that question, I have not found a better answer than, "I do not understand," and furthermore, "Do I understand better than God?"
29. We seek happiness on terms that make success and happiness utterly impossible. God destroys our plans so that we might have the true happiness that is blessedness.
30. Have a good struggle.
31. There is no road to blessedness but the royal road of affliction that befits God's sons. Consider it pure joy when you fall into different trials and temptations. If you have trouble seeing why, read [the Book of James](#).
32. Treasures on earth fail. Treasures in Heaven are more practical.

33. Rejoice and dance for joy when men slander you and revile you and curse you for what good you do. This is a sign you are on the royal road; this is how the world heralds prophets and sons of God. This earthly dishonor is the seal of Heavenly honor.
34. If you have hard memories, they too are a part of the arena. Forgive and learn to thank God for painful memories.
35. Remember that you will die, and live in preparation for that moment. There is much more life in mindfully dying each day than in heedlessly banishing from your mind the reality. Live as men condemned to die, made a spectacle before men and angels.
36. Live your life out of prayer.
37. It takes a lifetime of faith to trust that God always answers prayers: he answers either "Yes, here is what you asked," or "No, here is something better." And to do so honestly can come from the struggle of praying your heart out and wondering why God seemed to give no answer and make no improvements to your and others' pain.
38. In the Bible, David slew Goliath. In our lives, David *sometimes* prevails against Goliath, but often not. Which is from God? Both.
39. Struggling for the greater good is a process of at once trying to master, and to get oneself out of the way. Struggle hard enough to cooperate with God when he rips apart your ways of struggling to reach the good.
40. Hurting? What can you do to help others?

**Athanasius: *On  
Creative Fidelity***

## Translator's Introduction

In an era of political correctness, it is always refreshing to discover a new manuscript from Athanasius, a saint a bit like gentle Jesus, meek and mild, who told the community's most respected members that they crossed land and sea to gain one single convert only to make this convert twice as much a child of Hell as they were themselves ([Matt 23:15](#)). In an era of political correctness, Athanasius can be a breath of fresh air.

In this hitherto undiscovered and unknown work, Athanasius addresses a certain (somewhat strange and difficult to understand) era's idiosyncrasy in its adulation of what is termed "creative fidelity." His own era seems to be saying something to ours.

## **Athanasius: *On Creative Fidelity***

What is this madness I hear about "*creative fidelity*"? For it is actually reported to me that whenever one of you talks about being faithful to tradition, his first act is to parrot mad words about how "Being Orthodox has never been a matter of mindless parrot-like repetition of the past, but always a matter of creative fidelity."? *What madness is this?*

Is creative fidelity the fundamental truth about how to be an Orthodox Christian? Then why do we only hear about this at a time when people love innovation, when the madness of too many innovators to mention poisons the air as effectively as the heretic, the Antichrist, Arius? How is it that the Fathers, who are also alledged to participate in this diabolical "*creative fidelity*", did not understand what they were doing, but instead insisted in one and the same faith shared by the Church since its beginning? Is this because you understand the Fathers better than the Fathers themselves?

Is the report of blasphemy also true, that to conform to people's itching ears ([II Tim 4:3](#)) you shy back from the divine oracle, "But I want you to understand that the head of every man is Christ, the head of a woman is her husband, and the head of Christ is God." ([I Cor 11:3](#))? There is something the Apostle so much wants you to understand, and perhaps if you understood it better you would not go so far astray as to seek the living among the dead ([Luke 24:5](#)) in your quest for creative fidelity.

How is it that you seek the living among the dead ([Luke 24:5](#))? Christ is the head of the Church ([Eph 5:23](#)), of every man ([I Cor 11:3](#)), of every authority ([Col 2:10](#)), of all things ([Eph 1:22](#)), and God is the head of Christ ([I Cor 11:3](#)). Christ is the one head, and because of him there are many heads. The sanctuary is the head of the nave: the place where

sacred priests minister meets its glory and manifest interpretation (for as the divine Disciple tells us, the Son has interpreted the Father ([John 1:18](#)) to the world) in the nave where the brethren worship. The archetype is the head of the image, the saint the head of his icon, and indeed Heaven is the head of earth. And it is the head whose glory is manifest in the body.

If both incorruptible and unchangeable Heaven is the head of corruptible and changeable earth and yet earth manifests Heaven, what does this say about this strange thing you laud called "creative fidelity"? Does it not say something most disturbing? Does the one and the same faith, alive from the days of the apostles, belong to the corruptible or the incorruptible? Is it not unchangeable?

What then of those adaptations you make—even if some are good and some are even necessary? Do they not belong to the realm of the changeable and the realm of the corruptible?

*Which then is to be head?* Is the corruptible and changeable to be the head of the incorruptible that suffers no change? Or rather is not the heavenly incorruptible faith to be made manifest and interpreted in the world of change? Such creative fidelity as there may be cannot be the head, and when it usurps the place of the head, you make Heaven conform to earth. Such a people as yours is very good at making Heaven conform to earth!

Listen to me. When you prepare for the sacred Pascha, how many fasts are there? One of you fasts most strictly; another is too weak to fast; another has an observance somewhere between these poles, so that there are several ways of observing the fast.

Are there therefore many fasts? Are there many Lords ([I Cor 8:5](#)) honored when you fast? Or is it not one and the same fast which one observes according to the strictest letter, another with more accommodation, and each to the glory of God? Now which is the head, the variation in fasting, or the fast itself? Are the differences in observance the spiritual truth about the fast, or the one fast to the glory of the One Lord? Or do you think that because the fast may be relaxed in its observance, the most important truth is how many ways it may legitimately be observed?

So then, as the Church's fast is the head of the brethren's fast, be it strict or not strict, and it is one fast in the whole Church, so also there is one faith from the days of the Apostles. This I say not because I cannot

one faith from the days of the Apostles. This I say not because I cannot notice the differences between the Fathers, but because these differences are not the head. The one faith is the head of various observances and the one faith perfectly delivered is the head even of creative fidelity, which has always appeared when people pursue the one faith and which has no need of our exhortations. Have the Fathers shown creative fidelity when they sought to preserve the one faith? If you say so, what does that say about your exhortation to creative fidelity? Is it needed? Do you also exhort people to wrong others so that the flower of forgiveness may show forth? Or is there not enough opportunity for the flower of forgiveness without seeking it out? Show creative fidelity when you must, but must you seek it out? Must you make it the head? Must you make the Fathers wrong when they lay a foundation, not of each day's idiosyncracies in being faithful, but in the one faith that like Heaven cannot suffer change and like Heaven is what should be made manifest in earth?

Why do you seek the living among the dead ([Luke 24:5](#))? Our confession has a great High Priest ([Heb 3:1](#)) who has passed through the Heavens ([Heb 4:14](#)) to that Temple and Tradition, that Sanctuary, of which every changeable earthen tradition is merely a shadow and a copy ([Heb 8:5](#)) and which the saints of the ages are ever more fully drawn to participate! Therefore, since we are surrounded by such a great cloud of witnesses and the Great Witness himself, let us also lay aside every weight, and change, and sin which so easily entangles, and run with perseverance the race that is set before us ([Heb 12:1](#)), changing that we may leave change behind!

Remember that you are not walking, as you say, the Orthodox System of Concepts, but the Orthodox Way. Remember that feeding the hungry ([Matthew 25:35](#)); is greater than raising the dead. Never let the lamp of your prayers go out ([I Thess 5:17](#)). Like the Father, be a father to the fatherless ([Ps 68:5](#); [Isa 1:17](#)). All the brethren salute you ([Rom 16:16](#); [II Cor 13:13](#)). Greet one another with a holy kiss ([Rom 16:16](#); [I Cor 16:20](#); [II Cor 13:2](#); [I Thess 5:26](#); [I Pet 5:11](#)).

# Author's Corner

Today I am writing not specifically because of Patriot Day, but because of another moment. Yesterday, after having written [Within the Steel Orb](#), I wrote a brief letter and went to send a copy to Madeleine l'Engle, but then I learned the news: she had passed away earlier that day.

I believe it is fitting that during her last days I should be finishing and sharing [Within the Steel Orb](#) a work that owes much to her. I owed as much a debt to her as to any living author, and she is the only one of my favorite authors whose lifespan overlapped my own. The news of her death stung.

May her memory be eternal.

But that is not the whole story. I am starting up an excellent job soon, and I look forward to getting to know the people better. The job has God's fingerprints all over it. As I am moving forward, it is in the [kairos moments](#) that Madeleine l'Engle wrote of... and other good things as well.

There is a fresh page ahead of me in my life, and I look forward to reading it. Onward ho!

## Sunday 6 February 2005, Anno Domini

I like a moment in [For Better or For Worse](#) which goes roughly as follows:

[In heavy sleet, the father of the family hails a cab.]

**Father:** What a miserable day!

**Cab driver:** Actually, to me it is a very good day.

**Father:** What do you mean?

**Cab driver:** I am from Sudan. I have seen my friends shot and killed. I have a wife whom I have not seen in two years, and a son whom I have never seen. But each day brings a little money and leaves me that much closer to bringing my wife and child to America.

[The father looks thoughtful as he pays the cab driver.]

[In the next frame, he steps into his house.]

**Mother:** What a miserable day!

**Father** [*placing an arm around his wife and their little girl*]:  
Actually, to me it is a very good day.

Learning to be Orthodox has been humbling, and there have been some difficult things. However, I have many positives to look on. A few of them are:

- I completed my master's in theology at [Cambridge](#).
- I've been invited to train for a teaching job; if all goes well, I'll be able to get some good experience teaching.
- I've been accepted for a doctoral theology program at the [Graduate Theological Union](#) this fall, and may have other options as well.
- I've had the opportunity to face some of my faults and get a better

understanding of what it means to be Orthodox.

- I've had the opportunity to make a number of small improvements to my website so it's more polished as a website.

I have many reasons for joy.

## **29 November 2003, Anno Domini**

Against daunting obstacles, God has placed me back at Cambridge, in England, to study for an M.Phil. in theology. I am doing research on the holy kiss; the New Testament tells Christians several times, "Greet one another with a holy kiss," something that is very interesting theologically. It connects with love, respect, all of us being made in the image of God, the Holy Spirit, the Church as a family, and other things that are quite deep. I'm hoping to present a paper on it at a conference in February, for the Society of St. Sergius and St. Alban.

I am also hoping to be received into the Orthodox Church on either Christmas (25 December) or Epiphany (6 January). There are a lot of things about it that feel very much like home. The awe and sense of God's transcendence, incense and music, a living preservation of ancient ways of thought, practicing the holy kiss, and a fulness of Biblical interpretation and doctrine that my Evangelical upbringing helps me appreciate: all of these things draw me, but the primary reason is that it is true Church. One thing that bothered me as a Protestant is that the fragmented Church I was in seemed not to show the fullness of what the New Testament said that Church was. Orthodoxy has what was missing.

## 6 October 2003, Anno Domini

Since I last wrote, there have been continuing extraordinary difficulties and extraordinary providence. Last year, due to health trouble, Cambridge told me that regardless of performance I'd be allowed back. Now it doesn't look like they'll keep their word, even though I passed everything. I am also preparing for a job interview tomorrow, which would use data mining to try to understand what Christians believe and why certain problems exist in the Church.

This summer, I've rested and designed a search engine, [The Data Mine](#). It's still at an early phase, but I designed it to let me search a theology classics collection, and it looks helpful in letting me do that. I'm feeling rather depressed that Cambridge looks like it's not going to happen.

It has been written that God works with us in a very particular way when we reach the point where things begin to unravel. Even though I have quite a lot to be thankful for—much more than my diploma from Cambridge—I'm reaching that point now.

## **12 October 2002, Anno Domini**

I had been delaying writing because I was waiting for just one more thing to sort out before making my next post, then another, then another. I intended to write, "I am in Cambridge, studying theology, and everything is sorted out." Now I don't know when, or if, I can say that, but God is with me.

Before leaving for the University of Cambridge in England, I had been having medical problems, and one delay after another before my student loan was in place. After about eight months' work on getting funding, my student loan was in place one business day before I left. God resolved another major paperwork issue, but I'm still waiting to see how the health problems sort out. After I arrived on the second of October, my college did not have a place for me to sleep, and there was one day where I didn't know where I would spend the night. I still don't know where I'll sleep after tomorrow night.

To say that much is true so far as it goes, but misleading. I have seen both extraordinary difficulty and extraordinary providence. I am feeling stressed now, but there have been times when I felt exhilarated. Friends, one of whom I had not met before coming to Cambridge, had shown extraordinary hospitality. I was delighted to have a bicycle to run errands. I have had, throughout this time, a sense that I didn't know how God intended to provide, but that he would. I've been thinking about Jesus's words in the Sermon on the Mount: "Therefore I tell you, do not worry about your life, what you will eat or drink; or about your body, what you will wear. Is not life more important than food, and the body more important than clothes?" (Matt. 6:25-26, NIV) I have been in a delightful place, and God has been more real to me than he has been in a long time.

I'm hoping to use the year wisely: my schedule is relatively light, and I

hope to publish articles and make contacts. If you'd like to pray for me,  
pray when you put your shoes on that God would bless this year of study.

## **March 16, 2002 Anno Domini**

Since I last wrote, I have begun teaching at DeVry. I have also been accepted by the faculty of divinity at Cambridge, to begin studying in the fall. I am quite happy about both. DeVry has given more than one nice surprise, and Cambridge—enough said. Other good things have also been happening. I've made relatively few website creations lately; I've been working hard and now applying creative energy to teaching. I'm working on getting financing squared away, and I am working to clear away one snag. The train ride to the DeVry campus where I teach (in Chicago) has a very nice view, and I want to cherish this time. It is for me, a time for prayer and much thanksgiving.

If you pray, please pray when you brush your teeth that I would:

- Be led to the right college within Cambridge.
- Be led to the right advisor.
- Connect with the right funding.

## January 6, 2002 Anno Domini

For a long time, I've sought to cultivate silence and the discipline of a savoring pace. This winter finds me busier. I've learned something about consistent prayer; I am preparing a talk for my church's youth group and hope to later post it. I ask God each night to bless all of you who visit Jonathan's Corner; that and other prayers create a quiet amidst haste.

What looms large now?

- I am preparing to return to school for a doctorate in theology, and be able to teach as a professor. I'd love to go to Oxford.
- I submitted part of [Firestorm 2034](#) to an editor interested in science fiction that grapples with both science and religion.
- I'm trying to understand what I hope will become my third novel. The world is fascinating and is more challenging for me to write about than the others. It's like a hoard of gold, hidden in a labyrinth: you can only share it after a lot of searching. I'm trying to keep this from falling to the wayside.

There are other things going on: commitments to keep, and day-to-day errands both ordinary and spectacular. I'd ask fellow Christians to pray for my success in these endeavors, school in particular. (Pray for me when you brush your teeth!)

**An Author's Musing  
Memoirs About his  
Work**  
*Reflections, Retractions, and  
Retracings*

**Taking a second look at some  
of what I wrote**

***Dear Reader,***

Years back, when I was a math grad student, I wrote a short essay entitled, [Why study mathematics?](#) The basic thought was connected with the general education math class I was taking, and it is not really an article for why to specialize in mathematics through intensive study, but why a more basic knowledge of math can be a valuable part of liberal arts education. Much like how I taught my class, I did not speak favorably of memorizing formulas—pejoratively called "mindless symbol manipulation" by mathematicians—but spoke of the beauty of the abstractions, the joy of puzzles and problem solving, and even spoke of mathematics as a form of weight lifting for the mind: if you can do math, I said, you can do almost anything. I was sincere in these words, and I believe my obscure little piece captures something that a lot of math students and faculty sensed even if they did not explain their assumption.

Since then, there are some things I would say differently. Not exactly that I was incorrect in what I said, but I worked hard to climb a ladder that was leaning against the wrong building.

One famous author in software development, who wrote a big book about "software engineering", had said, "What gets measured gets improved," and began to express second thoughts about his gung-ho enthusiasm for measurement. He didn't exactly *take back* his words of, "What gets measured gets improved," but he said that the most important things to understand are rarely things that are easy or obvious to measure: the mantra "What gets measured gets improved," is a mantra to ruthlessly optimize things that often are less important than you might think. His second thoughts went further: the words "software" and "engineering" have been joined at the hip, but however hard software developers have tried to claim to be engineers, what they do is very different from engineering: it's an apples and oranges comparison.

I would pretty well stand by the statement that if you can deal with the abstraction in math, you can deal with the abstraction in anything: whether chemistry, analytic philosophy, engineering, or sales, there isn't much out there that will call for more abstract thinking than you learn in math. But to pick sales, for instance, not many people fail in sales because they can't handle the deep abstraction. Sales calls for social graces, the ability to handle rejection, and real persistence, and while you may really and truly learn persistence in math, I sincerely doubt that mathematical training is a sort of industrial strength preparation for social graces and dealing with rejection. And even in engineering, social graces matter more than you might think; it's been said that being good at math gets you in the door, but social influence and effectiveness are what make a *real* superstar. I would still stand by a statement that if you can handle the abstraction in math, you can probably handle the abstraction in anything else. But I'm somewhat more wary of implying that if you have a mathematical mind, you just have an advantage for everything life may throw at you. **That's simply not true.**

There are some things I have written that I would like to take back, at least in part, but even where my works are flawed I don't believe mass deletions are the best response. I would rather write what might be called "Retractions and retracings" and leave them available with the original works. [Why study Mathematics?](#), whatever its flaws, gives a real glimpse

into the beauty that draws mathematicians to mathematics. I may be concerned with flaws here, but they are not the whole truth. However, there are some things I would like to comment on, some flaws to point out. In many cases, I don't believe that what I said is mainly wrong, but I believe it is possible to raise one's eyes higher.

## HOW to HUG

Mathematics may be seen as a skill, but it can also be how a person is oriented: jokes may offer a caricature, but a caricature of something that's *there*. One joke tells of a mathematician who finds something at a bookstore, is delighted to walk home with a thick volume entitled *HOW to HUG*, and then, at home, is dismayed to learn he purchased volume 11 of an encyclopædia. And I mention this as a then-mathematician who wrote [A Treatise on Touch](#), which may be seen as interesting, may be seen as deep, and may have something in common with the mathematician purchasing a book so he could know how to hug.

Part of what I have been working on is how, very slowly, to become more human. This struggle is reflected in [Yonder](#), which is at its most literal a struggle of philosophers to reach what is human. There is an outer story of disembodied minds set in a dark science fiction world, who are the philosophers, and there is a story within a story, an inner story, of the tragic beauty of human life. When I showed it to a science fiction guru, he suggested that I cut the philosophical dialogues down by quite a bit. The suggestion had a lot of sense, and quite possibly a traditional publisher would want to greatly abbreviate the sections that he suggested I curtail. But I did not follow his advice, and I don't think this was just author stubbornness. When literature builds up to a success, usually the path to success is filled with struggles and littered with failures. This is true of good heroic literature, and for that matter a lot of terrible heroic literature as well. (Just watch a bad adventure movie sometime.) [Yonder](#) is a story that is replete with struggles and failures, only the failures of the disembodied minds have nothing to do with physical journeys or combat. They begin stuck in philosophy, mere philosophy, and their clumsy efforts to break out provide the failures, and therefore to greatly abridge the philosophical discussion would be to strip away the struggle and

failure by which they reach success: a vision of the grandeur of being human. Like much good and bad literature, the broad sweep was inspired by [The Divine Comedy](#), opening with a vision of Hell and building up to a view of our painful life as a taste of Heaven, and you don't tell [The Divine Comedy](#) faithfully if you replace the [Inferno](#) with a brief summary stating that there are some gruesome images and a few politically incorrect ideas about sin. The dark science fiction world and its mere philosophy provides the vision of Hell that prepares the reader to see the humanness of Heaven and the Heaven of humanness. The inner story can be told by itself; it is for that matter told independently in [A Wonderful Life](#). But there is something in [Yonder](#), as it paints the stark, dark, disturbing silhouette of the radiant, luminous splendor and beauty of human life.

While I was a math undergrad, I read and was deeply influenced by the *Tao Te Ching*; something of its influence may be seen in [The Way of the Way](#). That work has its flaws, and I may have drunk too deeply of Taoism, but there was a seed planted that I would later recognize in fuller forms in the Orthodox Way. I had in full my goals of studying and thinking, but I realized by the way that there was some value to be had in stillness. Later I would come to be taught that stillness is not an ornament to put on top of a tree; it is the soil from which the tree of life grows.

After I completed my studies in math, and having trouble connecting with the business world, I took stock, and decided that the most important knowledge of all was theology. I had earlier planned to follow the established route of being a mathematician until I was no longer any good for mathematics and then turning out second rate theology. My plans shifted and I wanted to put my goal up front and, I told my pastor, "I want to think about theology in community." (If you are wincing at this, good.) So, in this spirit, I applied to several schools and began the study of academic theology. If you are an astute reader, I will forgive you if you ask, "But isn't this still a mathematician looking for a book on how to hug?" The goal I had, to teach at a university or even better train Orthodox priests at a seminary, was a laudable enough goal, and perhaps God will bless me with that in the future. Perhaps he wants the same thing, but perhaps God first wants to free me from the chain of being too much like a mathematician wanting to learn how to hug by reading a book.

During my time studying theology at Cambridge, I was received into

During my time studying theology at Cambridge, I was received into the Orthodox Church. I am grateful to God for both a spiritual father whose lenience offered a corrective to my legalistic tendencies, and for a godfather who was fond of reading Orthodox loose cannons and who helped me see a great many things that were invisible to me at the time. For instance, I asked him for help on some aspect of getting my worldview worked out correctly, and I was caught off guard when he explained, "You aren't being invited to work out the Orthodox worldview. You're being invited to worship in the right glory of Orthodoxy, and you are being invited to walk the Orthodox way." In that sense Orthodoxy is not really a system of ideas to work out correctly that, say, a martial art: there may be good books connected to martial arts, but you learn a martial art by practicing it, and you learn Orthodoxy by practicing it. And in that response, my godfather helped me take one step further away from being a mathematician trying to find a book that will teach him how to hug. (He also gave me repeated corrections when I persisted in the project of trying to improve Orthodox practices by historical reconstruction. And eventually he got through to me on that point.)

Becoming Orthodox for me has been a matter of becoming really and truly human, or at least beginning to. There is a saying that has rumbled down through the ages in different forms: in the second century, St. Irenaeus wrote, *"For it was for this end that the Word of God was made man, and He who was the Son of God became the Son of man, that man, having been taken into the Word, and receiving the adoption, might become the son of God."* I have not read this in much earlier sources, but I have read many later phrasings: *"God and the Son of God became Man and the Son of Man that man and the sons of man might become gods and the sons of God."* *"The divine became human that the human might become divine."* *"The Son of God became a man that men might become the sons of God."* And one real variation on this has been quoted, *"Christ did not just become man so that I might become divine. **He also became man that I might become a man.**"*

If Christ became man that I might become human, this is manifest in a million ways in the Orthodox Church. Let me give one way. When I was preparing to be received into the Orthodox Church, I asked my godfather some question about how to best straighten out my worldview. He told me that the Western project of worldview construction was not part of the Orthodox Way: I had been invited to walk the Orthodox Way but not

work out the Orthodox worldview. If there is in fact an Orthodox worldview, it does not come from worldvish endeavors: it arises out of the practices and life of the Orthodox Church, much in line with, "*Seek ye first the Kingdom of God, and his perfect righteousness, and all these things shall be added unto you.*" Not just corrections, but being caught off-guard by effectively being told, "Here are some of many rules; there is no need for you to know all of them. They are important, and you need to strive for strict excellence, but you are not treating them in the right spirit if you hold them rigidly and legalistically. (Work out with your priest how you will best bend them.)" The Orthodox Church's nature as essentially an oral tradition has helped cure me of silly things like meticulously studying ancient texts to put my mind to an antiquarian reconstruction and answer the question, "How should we live?" (The Orthodox Church is ancient, but it is not really infected with antiquarian reconstruction efforts.) The rhythm of the liturgy and its appointed seasons, the spiritual housecleaning involved with preparing for confession, the profoundly important community of the faithful: all of these are part of how it works out in the Orthodox Church that God became man not only so that I might become divine, but also so that I might become more truly man.

Part of this becoming human on my part also has to do with silence, or as Orthodox call it, hesychasm. Part of the disorder of life as we know it is that our minds are scattered about: worrying about this, remembering that pain, and in general not gathered into the heart. Mathematical training is a training in drawing the mind out of the heart and into abstract thinking. The word "abstract" itself comes from the Latin *abstrahere*, meaning to pull back (from concrete things), and if you train yourself in the habit of abstraction you pull yourself back from silence and from what is good about the *Tao Te Ching*.

In [Silence: Organic Food for the Soul](#), I all but closed with the words, "Be in your mind a garden locked and a fountain sealed," which speaks about having a mind that is gathered together and is in the fullest sense mind: which is not when abstract thinking is its bread and butter. Perhaps some of the saints' wisdom is abstract, but it does not come from building an edifice of abstractions.

The terms *intellect* and *mind* mean something very different in Orthodox classics than they do in today's English. The difference is as great as the difference between using *web* to mean a physical object

woven out of spider's silk and *web* to mean interconnected documents and media available over the internet. Today you might say, "The intellect is what an IQ test measures." An Orthodox saint who had been asked might have said, "The intellect is where you meet God." The mind is an altar, and its proper thought flows out of its being an altar: in [Within the Steel Orb](#), a visitor from our world steps into a trap:

"And your computer science is pretty advanced, right? Much more advanced than ours?"

"We know things that the trajectory of computer science in your world will never reach because it is not pointed in the right direction." Oinos tapped the wall and arcs of pale blue light spun out.

"Then you should be well beyond the point of making artificial intelligence."

"Why on a million, million worlds should we ever be able to do that? Or even think that is something we *could* accomplish?"

"Well, if I can be obvious, the brain is a computer, and the mind is its software."

"Is it?"

"What else could the mind be?"

"What else could the mind be? What about an altar at which to worship? A workshop? A bridge between Heaven and earth, a meeting place where eternity meets time? A treasury in which to gather riches? A spark of divine fire? A line in a strong grid? A river, ever flowing, ever full? A tree reaching to Heaven while its roots grasp the earth? A mountain made immovable for the greatest storm? A home in which to live and a ship by which to sail? A constellation of stars? A temple that sanctifies the earth? A force to draw things in? A captain directing a starship or a voyager who can travel without? A diamond forged over aeons from of old? A perpetual motion machine that is simply impossible but functions anyway? A faithful manuscript by which an ancient book passes on? A showcase of holy icons? A mirror, clear or clouded? A wind which can never be pinned down? A haunting moment? A home with which to welcome others, and a mouth with which to kiss? A strand of a web? An acrobat balancing for his whole life long on a slender crystalline prism between two chasms? A protecting veil and a concealing mist? An eye to glimpse the uncreated Light as the world

concealing mist. An eye to glimpse the uncreated Light as the world moves on its way? A rift yawning into the depths of the earth? A kairometer, both primeval and young? A—"

"All right, all right! I get the idea, and that's some pretty lovely poetry. (What's a kairometer?) These are all very beautiful metaphors for the mind, but I am interested in what the mind is literally."

"Then it might interest you to hear that your world's computer is also a metaphor for the mind. A good and poetic metaphor, perhaps, but a metaphor, and one that is better to balance with other complementary metaphors. It is the habit of some in your world to understand the human mind through the metaphor of the latest technology for you to be infatuated with. Today, the mind is a computer, or something like that. Before you had the computer, 'You're just wired that way' because the brain or the mind or whatever is a wired-up telephone exchange, the telephone exchange being your previous object of technological infatuation, before the computer. Admittedly, 'the mind is a computer' is an attractive metaphor. But there is some fundamental confusion in taking *that* metaphor literally and assuming that, since the mind is a computer, all you have to do is make some more progress with technology and research and you can give a computer an intelligent mind."

That litany of metaphors summarizes much of my second master's thesis. Which is not really the point; but my point here is that on an Orthodox understanding, intellect is *not* something you measure by an IQ test and a mind is *not* the spitting image of a computer. The mind, rightly understood, finds its home in prayer and simple silence. The intellect is where one meets God, and its knowing flows out of its contact with God and with spiritual reality. And, in the metaphors of the [Song of Songs](#), the mind as it is meant to be is "a garden locked, a fountain sealed", not spilled out promiscuously into worry, or grudges, or plans for the future that never satisfy. And this gathering together of the mind, this prayer of the mind in the heart, is one that was not proposed to me by my mathematical training.

Now I should mention that I have a lot to be grateful for as far as math goes. There are a lot of people who gave of themselves in my training; there are a lot of people who gave of themselves in the various math

contests I was involved in. And, not to put too fine a point on it, I have a computer job now which is a blessing from God and in which I build on a strong mathematical foundation. It would be silly for me to say, "I am not grateful for this" as God has provided me many blessings through math. But I need to place things like "I have a lot of math awards" alongside what a monk said to a maid and to me: she was fortunate in the job she had, as manual labor that allowed her mind to pray as she was working in inner stillness, while I as a computer person was less fortunate because my job basically required me to be doing things with my mind that don't invite mental stillness. My job may be a profound blessing and something not to take for granted. But he was pointing out that the best jobs for spiritual growth may not be the ones higher on the pecking order.

## A streak of escapism

There is a streak of escapism in much of my work. If you read [Within the Steel Orb](#), I believe you will find insight expressed with wonder, and I would not take back any of that. But the wisdom, which is wisdom from here and now, is expressed as the alien wisdom of an alien world that panders to a certain escapism. Wisdom and wonder can be expressed without escapism; [Hymn to the Creator of Heaven and Earth](#) and [Doxology](#) both express wisdom and wonder in a way that does not need to escape from a disdained here and now. But there is a thread of escapism in much of my work, even as I have sought to reject it.

During or shortly after I was in high school, I wrote a note in an online forum arguing that *Terminator 2* had shot itself in the foot. The movie had a scene with two little boys angrily playing with toy guns and the voiceover complained about how tragic this was, and at the end the message was made even more explicit: "If a machine, a terminator, can learn the value of human life, maybe we can too." But the movie was an action-adventure movie, meaning a movie whose attraction was built on glorified violence with guns blazing. In terms of a movie that would speak out against violence, contrast it with a movie idea I had, for a movie that would rush along at an action-adventure clip for the first few minutes and then slow down like a European art film; from [Lesser Icons: Reflections on Faith, Icons, and Art](#):

What I did do was to outline a film idea for a film that would start out indistinguishably from an action-adventure movie. It would have one of the hero's friends held captive by some cardboard-cutout villains. There is a big operation to sneak in and deftly rescue him, and when that fails, all Hell breaks loose and there is a terrific action-adventure style firefight. There is a dramatic buildup to the

hero getting in the helicopter, and as they are leaving, one of the villain's henchmen comes running with a shotgun. Before he can aim, the hero blasts away his knee with a hollow-nosed .45.

The camera surprisingly does not follow the helicopter in its rush to glory, but instead focuses on the henchman for five or ten excruciating minutes as he curses and writhes in agony. Then the film slows down to explore what that one single gunshot means to the henchman for the remaining forty years of his life, as he nursed a spiritual wound of lust for vengeance that was infinitely more tragic than his devastating physical wound.

By contrast, it may be clearer what might be called shooting yourself in the foot in the *Terminator 2* syndrome, and as far as escapism goes, I have a couple of pieces that shoot themselves in the foot with something like a *Terminator 2* syndrome. In [The Voyage](#), the miserable young Jason is an escapist and, when he meets an old man, asks the old man's help in an escape he doesn't believe is possible. The old man deftly opens Jason's eyes to the beauty of this world, the beauty of the here and now, that are simply invisible to him. I stand by everything I wrote in that regard. But the closing line, when thanks to the old man Jason triumphs over escapism, is, "And Jason entered another world." Which is to say that the story shot itself in the foot, like *Terminator 2*.

There may be a paradoxical link between escapism and self-absorption. Self-absorption is like being locked in your room and sensing that it is constricting, and so you wish that you could be teleported up to a spaceship and explore the final frontier, or maybe wish for a portal to open up that would take you to the Middle Ages or some fantasy world. And maybe you can get a bit of solace by decorating your room like someplace else and imagining that your room is that other place, and maybe you can pretend and do mind games, but they don't really satisfy. What you miss is what you really need: to unlock the door, walk out, visit a friend, go shopping, and do some volunteering. It may not be what you could arrange if you were controlling everything, but that's almost exactly the *point*. It may not what you want, but it is what you need, and it satisfies in a way that a quest to become a knight, at least in your imagination, cannot. And my own concerns to escape self-absorption and escapism play out in my writing: [The Spectacles](#) is more successful than

[The Voyage](#) in telling of an escape from the Hell of self-absorption and escapism; I've been told it's my best short story. But it still has the imprint of self-absorption even as it tells of someone finding way out of self-absorbed escapism. And something of that imprint affects my writing: there are some good things about my fiction, but I have been told that my characters are too similar and are only superficially different. I do not think I will ever receive the kind of compliment given to Charles Dickens, that he envisions a complete universe of different characters. People may say that my satire like [Hayward's Unabridged Dictionary](#) shows a brilliant wit and is bitingly funny, but you can be pretty full of yourself and still write good satire. By contrast, it takes humble empathy to make a universe of characters worthy of Dickens.

## **A door slammed shut:**

### *God's severe mercy*

I earned a master's in theology, and entered into a doctoral program. I thought for a long while about how to say something appropriate about that program, and I think the best I can do is this:

I've been through chemotherapy, and that was an experience: overall, it was not as bad as I feared, and I enjoyed life when I was going through chemotherapy. I still cherish [The Spectacles](#), the first piece written after a long dry spell because I was drained by illness. I'm not sure it is a nice thing to have powerful cytotoxins injected into your body, and the rough spots included the worst hour of (purely physical) pain in my life, but on the whole, a lot of progress has been made in making chemotherapy not as bad as it used to be, and I had good people to care for me.

And then there are experiences that, to put it politely, put chemotherapy into perspective. My entering this doctoral program and trying to please the people there was one of those experiences into perspective: during that time, I contacted a dean and wrote, "I found chemotherapy easier than dealing with [*a professor I believed was harassing me*]," and received no response beyond a secretary's brush-off. After this ordeal, my grades were just below the cutoff to continue, and that school is not in any way going to give me nice letters of reference to let me finish up somewhere else. I suppose I could answer spam emails and get a diploma mill Ph.D., but I don't see how I am in a position to get the Ph.D. that I wanted badly enough to endure these ordeals.

And if I ask where God was in all this, the answer is probably, "*I was with you, teaching you all the time.*" When I was in middle school, I ranked 7th in the nation in the 1989 MathCounts competition, and I found it obvious then that this was because God wanted me to be a mathematician. For that matter, I didn't go through the usual undergraduate panic about "What will I major in?" Now I find it obvious that God had something else in mind, something greater: discipleship, or sonship, which may pass through being a mathematician, or may not. Not

straying too far from this, I wanted a Ph.D., and I thought that this would be the best way to honor him with my abilities. Again I was thinking too narrowly; I was still too much of the mathematician looking for a book to teach him how to hug; again the answer seemed to be, "*That's not the issue. Aim higher and be my servant.*" As it turns out, I have four years' graduate work in theology; that has some use in my writings, and even if it didn't, the issue is not whether I am a good enough achiever, but whether I am faithful.

During this time I read quite a lot of medieval versions of the legends of King Arthur. There were a couple of things that drew me to them, both of them rather sad. The first was pride, both pride at thinking I was going to be an Arthurian author, and pride at sometimes reading medieval legends in the original.

But the second reason I kept reading them was that compared to what I was covering in theology class, reading the legends almost seemed like I was actually studying *theology*. (At least by comparison.) Whether a course in theological foundations that assumed, "We need to work from the common ground that is shared by all the world's religious traditions, and that universal common ground is Western analytic philosophy," or reading that theologians are scientists and they are every bit as much scientists as people in the so-called "hard sciences" like physics, or a course in "philosophy and contemporary theology" that was largely about queer matters and such topics as ambiguous genitalia, the whole experience was like "Monty Python teaches Christian theology." And it would be a funny, if tasteless joke, but it was really something much more tragic than a Monty Python riff on theology. And in all this the Arthurian legends, which are really quite pale if they are held next to the grandeur of Christian theology, none the less seemed to give respite for me to study.

In the light of all this, there are three basic things that I wrote. The first is the Arthurian book I wanted to write out of all the medieval books I was reading:

- [The Sign of the Grail](#)

The second thing is a group of pieces that were written largely as rebuttals to things I ran into there. (The university was a "Catholic" university, so they were generous to us Orthodox and treated us like

liberal Catholics.) I've had enough contact with Catholics outside that university; those pieces are not written just in response to being at a "Catholic" university.

- [Dissent: Lessons From Being an Orthodox Theology Student at a Catholic University](#)
- [An Open Letter to Catholics on Orthodoxy and Ecumenism](#)
- [Religion and Science Is Not Just Intelligent Design vs. Evolution](#)

I believe there is some merit in these pieces, but not that much: if they say something that needs to be said, they are limited to winning an argument. Theology can win an argument and some of the best theology is meant to win an argument, but the purpose of real theological writing is to draw people into the presence of God. These pieces may say something valuable, but they do not really do the job of theology: *beckon the reader to worship before the throne of God.*

But that leaves the third group of pieces written in the wake of that un-theological theology program, and that is precisely pieces which are written to draw the reader to bask in the glory of God. The ones I would pick as best are:

- [Doxology](#)
- [God the Spiritual Father](#)
- [Lesser Icons: Reflections on Faith, Icons, and Art](#)
- [Silence: Organic Food for the Soul](#)
- [Technonomicon: Technology, Nature, Asceticism](#)

## So where does this leave me now?

I think I've made real progress but I still have a lot in common with that mathematician who bought a book so he could learn how to hug. Be that as it may, I have a lot to be thankful for.

I had my heart set on completing my program, but in 2005 I started a Ph.D. program that was estimated to take eight years to complete. And since then, the economy tanked. And in this, a gracious and merciful God didn't give me what I *wanted*, but what I *needed*. Actually, more than that. In the aftermath of the program, I took some anthropology and linguistics coursework which on the one hand confirmed that I was already good at learning languages (the woman who scored the MLAT for me said, "I've scored this test for thirty years and I've never seen a score this high,") and on the other hand, paradoxically provided good remedial understanding of things I just didn't *get* about my own culture. And there's something I'd like to point out about that. God provided academic coursework to teach me some things that most people just pick up as they grow, and perhaps studying academic theology was what God provided to help me get on to something that is at once more basic, greater, and more human: entering the Orthodox Church, and entering real, human theology.

But back to after the anthropology courses. Then the economy took a turn for the worse, and I found a good job. Then the economy got worse than that, and my job ended, and I had my fast job hunt yet and found an even better than that. There's no way I'm entitled to this; it is God's gracious providence at work. These are blessings covered in the divine fingerprints.

I still have failings to face: rather spectacular failings which I'd rather not detail. And it God's grace that I am still learning of my clumsiness

and my sin, and realize I really need to face ways I don't measure up. But that is really not the issue.

Does God work with flawed people?

Who else does he have to work with?

He has glorious, majestic, awesome, terrifying holy angels. But there is another glory when God works in and through flawed people.

Even the sort of mathematician who would read a book on how to hug ([or maybe write one](#)). The worst of our flaws is like an ember thrown into the ocean of God's transforming power.

And the same God wills to work in you, whatever your flaws may be.

*Much love,*

Christos Jonathan Seth Hayward

# *Belabored Inclusive Language and Naturally Inclusive Language*

## **A long-lost letter to the editor**

There was a letter to the editor I wrote long ago and have tried and failed to find. It did not seem to come up in a search on the magazine that printed it; but I do not fault the magazine or its website because I also could not find it in my Gmail archives. My Gmail account is over a decade old, but the core conversation was a couple of years before I opened my Gmail account.

What I essentially said was as follows:

**The common terminology of "inclusive language" and "exclusive language" is loaded language and harsh, exclusive language... It would be better to speak of "belabored inclusive language" and "naturally inclusive language."**

## Confidence and timidity

When I was on one consulting gig at a prestigious client, political correctness in language was present but not enforced. What I mean by that is this: *I heard both the old style and the new style of language*. I never heard someone get even a little upset at someone using "he" in an inclusive way, but there was a good chunk of my colleagues who used *naturally inclusive language* (N.B. including some immigrants), and a good chunk of my colleagues who used *belabored inclusive language*).

When people spoke in *naturally inclusive language*, without exception it was bold, confident, assured. And they did not seem to be thinking about being confident; they seemed to be quite undistracted in making whatever point they wanted to make.

When men at very least spoke (I don't clearly remember a woman speaking in anything but *naturally inclusive language*, although that was probably included), there was a timidity and a bad kind of self-consciousness. Even a divided attention. A man saying "they" for a single person of unspecified sex always had a question on his face of "Is this unsexist enough?" Even men who were current with the *belabored inclusive language* of political correctness as it existed then had a perennial distracted question on their faces of, "Have I done enough?" with significant doubt as to any definite and positive answer.

This kind of divided mind is not especially good for business communication, or non-business communication for that matter.

## **Feminists don't even use inclusive language**

Feminism is a bazaar not a cathedral, and one can find a mainstream feminist classic saying that "all the central terms [in feminism] are up for grabs" (and, presumably, one could also find numerous disagreements to those words). Even the term "feminism" may appear dated when this work is new; as of classes a decade ago feminism was working on a far-reaching rebranding as "gender studies", and I tolerate both that this work's treatment of feminism will likely appear dated in five or ten years, and for that matter might have appeared dated to feminist readers ten years ago. However, as no form of feminism that has emerged that I am aware of has yet been stable, I am not particularly interested in endlessly updating a minor work to keep up with fashions.

**My point is this. I have read feminists at length. I have spoken with people and met its live form. I have taken a graduate course in feminist theology. And I have yet to read a feminist author use inclusive language. Ever.**

How?

*What do I mean by that?*

**The essential feminist bailiwick, the area of primary feminist concern, is members of the human species and the human race, *Homo sapiens*, who are female, for the entirety of life, from whenever life is considered to begin, to whenever life is considered to end.**

**And the universal feminist-used term for a member of this bailiwick is not "human female" or "female human." It is "woman."**

*Do you see something odd?*

Without imposing nearly so great a reform program to create a politically correct English, we have a mainstream English term that begins and ends neatly where the bailiwick begins and ends, and a pronoun that works perfectly: "she." This amounts to a much smaller shift in language than migrating from "man-hours" to "work-hours", "waiter" or "waitress" to "server" and "waitstaff", and selling "five-seat licenses," a term which engenders considerable confusion about what part of the body most makes us human. By contrast, even cattle have historically been given enough dignity to be counted by the head. "Head" may be taken to have an undesired second meaning now, but couldn't we at least be counted by the *spine*?

But every single feminist author I've read is content to refer to the entire bailiwick as "women."

**"Woman," age-wise, is not inclusive language. It refers to adults alone, according to the shallow view of communication, and if "man" excludes "woman", "woman" excludes "female children."**

It happens that feminist authors, at least for a present discussion, will talk about human females who are seniors and cope with issues about aging, or girls in math classes (classes which seem to always being given an 'F'). And if a feminist author is writing about minors *alone*, she may refer to the human females in question as "girls." **But I have yet to read a feminist source of any decade use any other term at all for any member of the whole bailiwick. The sense is that when you write "woman," female minors are spoken for.** There is no felt need to specify "women and girls" (or, to perhaps pursue a familiar logic, "girls and women") when the group of females in question is mixed and includes minors. Nor, as far as principles and general approach, is there any concept that a good solution for adult women might be misguided if applied to minors. There might be storms of protest at some strain of literature that says, "A man should watch his step carefully all the days of his life," and the required, and almost hysterical, allegation placed that the author in question had not conceived of any advice that considers women, and this hysterical enough allegation may be accompanied by ostensible clarification that the text should only be quoted as "A man [*Sic*] should watch his [*Sic*] step carefully all the days of his [*Sic*] life." But there is no uproar, there is not a whisper of dissent,

when discussions of "women" are taken to obviously fully include girls unless excluded by context such as discussion of distinctively senior needs.

*If you look at feminist use of the term "woman", with blindingly obvious concern for all human females, you have a remarkably good working model for how a good, naturally inclusive language might function.*

# The Best Things in Life Are Free

1. The best things in life are free.
2. The best things in life are free. But what does this mean?
3. The best things in life are free. But we do not understand the truth of these words if we think they are filled out by hugs and friendship, or even love: [If a man offered for love all the wealth of his house, it would be utterly scorned.](#)
4. A better lens comes from the condemnation of the Pharisees: [Woe to you, scribes and Pharisees, hypocrites! for you cleanse the outside of the cup and of the plate, but inside they are full of extortion and rapacity. You blind Pharisee! first cleanse the inside of the cup and of the plate, that the outside also may be clean.](#)
5. It appears in Orthodoxy that the outside of the chalice is all feasts and beautiful liturgies, even during Lent: but on the inside is all repentance, deprivation and hardship, and being blindsided by rebukes. All of this falls under "The best things in life are free," the one as much as the other.
6. Well enough it may be said that sin is the forerunner of sorrow: [The wages of sin is death](#), and that death's sorrow begins here and now. Sin ultimately kills pleasure: [It takes humility to enjoy even pride. It takes sobriety to enjoy even drunkenness. It takes chastity to enjoy even lust.](#)
7. But this is not all. The outside of the cup is beautiful and its beauty is true and real. But the real treasure is inside. Repentance is a spiritual awakening; it terrifies because it seems that when we repent we will lose a shining part of ourselves forever, but when we repent we

suddenly realize, "*I was holding on to a piece of Hell!*" and are free to flee the stench. What feast compares to the grandeur of real repentance?

8. The Great High Priest said, *I am the true vine, and my Father is the vinedresser. Every branch of mine that bears no fruit, he takes away, and every branch that does bear fruit he prunes, that it may bear more fruit.* The best things in life are free, and this pruning is a very big free gift.
9. It is when we are cleansed inside the cup that the outside is clean. Let Christ cleanse us inside the cup, and then inside and outside will both bear proper fruit.
10. The things in life that are free are persecutions, and we have on the highest authority: *Blessed are you when men revile you and persecute you and utter all kinds of evil against you falsely on my account. Rejoice and be glad, for your reward is great in heaven, for so men persecuted the prophets who were before you.*
11. St. Paul goes so far to say, *But we see Jesus, who for a little while was made lower than the angels, crowned with glory and honor because of the suffering of death, so that by the grace of God he might taste death for every one. For it was fitting that he, for whom and by whom all things exist, in bringing many sons to glory, should make the pioneer of their salvation perfect through suffering.*
12. We may approach the outside of the chalice first, but it is a loss to stop there. We need the joyful sorrow of compunction and all that is within the chalice, and then what is on the outside of the chalice will be clean, and what is more, will reach its proper stature.
13. Every day take a little less, and pare down a little more. The Fathers do warn, "Do not engage in warfare beyond your strength," and the praxis is to crawl before we try to walk. But *The Way of the Ascetic* pares down, little by little, in humor, in luxury, in eating for a purpose other than nourishment, and aims to have none of it left.
14. *By faith Moses, when he was grown up, refused to be called the son of Pharaoh's daughter, choosing rather to share ill-treatment with the people of God than to enjoy the fleeting pleasures of sin.* And by faith we wean ourselves even from a life centered on innocent pleasures, knowing that they do not hold a candle to the spiritual pleasure that is inside the chalice.

15. The cutting of of one's own will is free. And it is the experience of monasticism that this is one of the best things in life: a monk's will is cut off, not for the primary benefit of his brother monks, but for his own benefit. And the voluntary and involuntary cutting off of one's will extends far outside the monastery. It is one of the best things in life, whether we accept it as a blessing or resent it because we do not wish to grow up in the spiritual life.
16. Do you wish that this chalice be taken from you? Christ prayed the same, but he also prayed, "**Nevertheless, not my will, but thine be done.**" For some prayers are impossible.
17. There are two answers to prayer: "Yes," and "No, please ask for something better." St. James writes, **You ask and do not receive, because you ask wrongly, to spend it on your passions.** Passions are sinful habits that warp us, and when we ask for something to satisfy our passions, God only ever says "No" because he wants better for us.
18. Those things that are obviously good are nothing compared to the terrible goods: *the gilded artwork outside the chalice is beautiful enough, but it is nothing next to what is inside the chalice.*
19. **The Maximum Christ wishes the maximum for our lives, and that comes through repentance and the royal road of affliction.**
20. **Rejoice and dance for joy when men slander you and revile you and curse you for Christ's sake. This is a sign you are on the royal road; this is now the world heralds prophets and sons of God. This earthly dishonor is the seal of Heavenly honor.**
21. **No one can harm the man who does not injure himself. Nor can any circumstance.** So therefore let us not be governed by circumstances, or think the less of our God when he allows us rougher circumstances.
22. **We do not live in the best of all possible worlds, but there is another shoe to drop. We live in a world governed by the best of all possible Gods, and that is a greater good.**
23. Perhaps we are entering a time of struggle. (*Entering?*) Perhaps we are seeing the end of exceptionally prosperous and easy days we have no right reason to expect. The same truths apply. The same God who reigns in easy times, reigns in hard times.
24. **"Give us this day our daily bread:"** it is normal not to know where your next meal is from.

25. The arm of the Lord is more visible, not less, in hard times. God's providence is stronger when you know you need it.
26. The chalice offered us indeed looks easy on the outside but is full of pain within. But the sufferings are part of the treasure. And the best things in life reach deeper than the golden ornaments that belong on the outside, but extend to the joyful sadnesses within. Those who shed at least some entertainment and seek repentance and compunction for their sins find repentance an awakening and compunction to be joyful and cleansing. And that is not all. Everything inside the cup runs deep. And everything inside the cup is free.
27. The divine sovereignty is never purchased at the expense of human freedom. Human freedom is limited, but this is not where divine sovereignty comes from. The divine sovereignty has the last word after every creaturely choice has been made, and the divine sovereignty shapes joy after every draught of the inexhaustible cup.
28. The joy of the best things in life is not purchased at the expense of the chalice of suffering. Suffering is limited, but this is not something the divine sovereignty is purchased from. The divine sovereignty has the last word after every creaturely suffering has been entered, and the divine sovereignty leaves people in a better place than had they not met their sufferings.
29. The divine life is now. The divine energies are now. Not later, once some difficulties are resolved, but now.
30. In ancient times the holiday of the Crucifixion and the Resurrection were celebrated together; even now there is not a separation between them, and we speak of a three-day Pascha. There is no real separation between bearing a cross and being crowned with a crown, even if it takes time to gain the eyes of faith to see such things.
31. Orthodox are iconodules, but God is both iconodule and iconoclast: he takes things in our life and makes them icons of himself, and he also keeps on destroying and removing things to make us more free to breathe. Heaven and Hell are both inside us, and God seeks to inhabit Heaven inside of us and uproot Hell.
32. God the Father is the maker of all things visible and invisible. God is spirit, and even among created things the first excellence belongs to the invisible. Who can buy or sell invisible things? This is one reason

- the best things in life are free.
33. In the Incarnation, Heaven kissed earth and the visible now has a share in the excellence of the invisible. But still **if a man offered for love all the wealth of his house, it would be utterly scorned**: the sale of relics is forbidden.
  34. Do you believe the best things in life are free? Excellent, but **the demons believe—and shudder**. Do you *live* as if the best things in life are free?
  35. **It is more blessed to give than receive**. What do you have to give?
  36. If you covet something and you gain it, it will bring misery once the pleasure melts away, and the greater the covetousness, the greater the misery. Covetousness is the inverse of what is inside the cup.
  37. We want to have things our way. But the Lord has other plans. And what we will find if we yield is that he has other plans for us that are not what we would have chosen, but are far better. This is at once an easy and a hard thing to do.
  38. In the Bible a chalice is both a cup of suffering to drink and a cup which fills with excellent joy. The suffering is as bad as we fear—no, worse— but if we drink of it we will be drinking of the very best things in life. The divine life in the chalice immeasurably eclipses the gilt ornament outside of it. Rememberance of death, compunction, and repentance dig deeper than the music of liturgy.
  39. The best things in life are not just an ornament for when our material needs are well taken care of. It is true ten times more that they are lifeblood in hard times and harder times. And the chalice is inexhaustible.
  40. The best things in life are free.

# **Blessed Are the Peacemakers: Real Peace Through Real Strength**

In chapel, a speaker spoke of a person who was asked "Do you know how to play golf?" and answered "Yes, I learned yesterday." He then went on to speak of one of the simplest of Jesus's lessons, and how to truly learn that lesson is the work of a lifetime. If I were to be asked if I understand what I am talking about, the best and most honest answer I could give would be "No, but I am beginning to." For all of my life, I have been shown and have seen that there is something horrible that occurs when a human life without Christ is extinguished, and believed that, if destruction is something God wishes humans to avoid, then he would not place them in situations where it is unavoidable. It is not God's nature to say "this is to be avoided" and then be unfaithful and not provide a way out: sin is to be avoided and minimized. God always provides a way out. When I sin, it is not because God allowed me to come to a situation where there is no way to act without sin, or even because there was a way out that was beyond my strength, but because I choose to disregard what God in his love and wisdom has provided, and bring pain and destruction to myself and to God. And so I have spent time questioning and studying, and in the past couple of years have stumbled across something that astounds me. At first I saw one means that can work when diplomacy fails, and does not say to any other human being "You are expendable. I will permit you to die." And then, looking deeper, I have seen that it is not only another way to avoid violence, but that it is the imitation of Christ

only another way to avoid violence, but that it is the imitation of Christ, and a new understanding of what it means to imitate Christ, to suffer for him, to conquer in his name. From time to time, God has given me affirmations of what I am doing - showing me other Christians who before me have seen what I have discovered, bringing a new light to the darkness that is in causing suffering to another. I have no delusions of being a master of that of which I speak - while I learn, while I progress, I do not see how I will ever be other than a novice before I am in Heaven and no longer see darkly and through a glass - but, at the same time, God has shown me something that is awesome in the true meaning of the word, and it is something that I cannot keep to myself.

The most dangerous assumption is the one that is not realized as such. An assumption that is realized can be strengthened and improved in detail if it is true, and rejected if it is false. The one that is unstated offers the danger of not showing its full glory if it is true, and not offering itself for rejection if it is false. There is an often unrealized assumption that there are ultimately some situations where violence is the only way out (IE where God can't or won't use any other means), and furthermore that the choice is between violence and inaction (no other alternatives). Stating that it is an assumption neither proves nor disproves it, but does bring it to light - to consider and judge as an assumption.

The idea that the use of physical force is an evil is a presupposition that is carried throughout this work. All agree violence is preferably to be avoided, not a desirable state, and its means, deception and destruction, bear the mark of darkness rather than the mark of light.

I know fully that the sixth commandment, translated as "Thou shalt not kill." in King James, used language that would better be translated "You shall not murder.", a command that left open the possibility of killing in many cases. This does not mean that that moral avenue is still open. The ninth commandment, "Thou shalt not bear false witness against thy neighbor" was written in language that specifically spoke of lying in court. This does not mean that a court of law is the only place that a Christian is not permitted to lie. There are many things that were made complete when Christ came, one of which was shifting from inwardly attempting to maintain purity to outwardly evangelizing. In the Old Testament, the prophet had a role calling back the lost sheep of Israel, but to the Gentiles there was no real sense of the Great Commission. Christ's coming changed that, so that one of the primary responsibilities

given to Christians is to win souls. It is with knowledge of this that Paul spoke of becoming a servant to all, ending with "I have become all things to all men so that by all possible means I might save some." (I Cor 9:22)

Each person in this world is either ready to die or not ready to die. A person who is ready to die will not be serving someone who needs to be stopped. I know that there are many soldiers who would rather not fight, who would rather die than kill, and who bear no hatred towards their enemies. At the same, if you would kill, I have this question for you: Can you consider it to be the best possible form of evangelism to look an enemy soldier in the eyes, say "Jesus loves you. He died so that you may be forgiven of your sins and go to Heaven. I love you." and then, pulling a trigger, send that soldier to Hell?

The early Christian church (before Constantine's vision) had a strong aversion to the shedding of blood, as reflected by people such as Athenagorus, who said in 180 AD "We [Christians] cannot endure even to see a man put to death, though justly." When the Emperor attempted to create a Christian state, a part of the compromise that was introduced was the concept of just war theory: killing is undesirable and an evil under all circumstances, but there are some circumstances when it is not the greatest evil, and inaction and the damage it will cause is a greater evil. This thought is at the center of misunderstanding of pacifism: that a pacifist sits back and does nothing, that pacifism is passivism. I will attempt here to outline the difference between pacifism and passivism. If I succeed, it is only by God's grace.

If Shadrach, Meshach, and Abednego had prescribed to the idea that it would be possible to know in advance what is the greater evil and what is the lesser evil, and to choose between, then certainly the lesser of the two evils would have been to bow down once and continue with their many other ministries. The story, however, glorifies their refusal to commit even the smallest evil, and reflects God's disregard for what is and isn't humanly possible. "Not by might, nor by power, but by my Spirit.", says the Lord. Zech. 4:6

The new law is to love your enemy as yourself, and to forgive the one who injures you seven times seventy, as per Matthew 18:22.

Oftentimes people ask me "Well, God commanded not only defensive wars and even conquest but genocide in the Old Testament; what about those?" Please be assured that, were I to be born before Christ came, I would believe that violence is sometimes allowed. If I were to be born

would believe that violence is sometimes allowed. If I were to be born before Christ came, I would probably be an active member of the military, because that is what God commanded of many people and something that my gifts would be suited for. Jesus, however, said "You have heard that it was said: 'Love your neighbor and hate your enemy.' But I tell you: Love your enemies, bless those who curse you, do good to those who hate you, and pray for those who persecute you... Be perfect, therefore, as your heavenly father is perfect." (Matt. 5:43,44,48) Before this command, it would have been not only acceptable but a moral duty to strike at some enemies, just as it was not only acceptable but a moral duty to repay life for life, eye for eye, tooth for tooth, hand for hand, foot for foot, burning for burning, wound for wound, stripe for stripe (Ex. 21:23-25). With Christ, however, things were completely changed: "You have heard that it was said: 'Eye for eye and tooth for tooth.' But I tell you, do not resist an evil person. If someone strikes you on the right cheek, turn to him the other also." (Matt. 5:38-39) Any action taken in a war must be reconcilable with complete and absolute love for the enemies attacked: loving ("Love does no harm to its neighbor", Rom 13:10), doing good towards, praying for, blessing.

If you wish to become a warrior, then you will study and try to learn tactics and strategy. An attack that is lacking in planning will fall to a defense that is strategic, even if the attackers have better soldiers and better weapons.

If you wish to use the means of peace (whether or not you believe that they are always sufficient), then just as a warrior must study, you must study the concepts and principles of the means of peacemaking. You must study the tactics and strategy of making peace before even considering to declare it an insufficient tool for a situation where violence is necessary.

Once the men of a village came, running, and told Gandhi that they had run away while the police were raping and pillaging. When they told him that this was because of his instruction to be nonviolent, he hung his head in shame. He would not have been angry with them if they had defended their families by the power of a sword. He would have approved had they stood in harm's way, calling all injury to themselves without seeking to strike or to harm, to the point of death. But to run away like that and passively leave those who could not run was an act of great and terrible cowardice, the darkest possible answer to the problem. Gandhi - because the Hindu religion sees grey and dark\_er\_ and light\_er\_ courses

of action (every action falling onto a spectrum) believed that violence was necessary in many situations, in any event infinitely superior to cowardice. I do not believe that God presents a situation that does not have some way out that is free of sin and evil, and so I believe that violence is completely unnecessary to the Christian. The point of this example still stands, however - that cowardice is diametrically opposed to peacemaking.

Random violence for its own sake is not farther from a just war than sitting back and doing nothing is from pacifism. Cowardice is the direct opposite of peacemaking, and a coward CANNOT learn to be a peacemaker without first learning bravery.

Long before one person ever strikes another in a corporeal manner, peace has been breached. The first principle of peace is something that lies much stronger and much deeper than the absence of physical conflict. The Hebrew word "shalom" has come to have the meaning that peace should have - if you have not encountered the word shalom, take "harmony" or "accord" to be a rough English equivalent. When there is truly peace between two people, they love each other to the point of being ready to forfeit wealth, honor, and life. Such peace leaves no room for prejudice and misunderstanding, which scatter as cockroaches scatter at the appearance of light. To establish peace, you do not merely ensure a lack of physical violence (particularly not through intimidation at your own superior capability for violence - "peace through strength" destroys what it wishes to establish), but rather work to remove all traces of hatred and injustice. Peace is not an absence, but the presence of love.

"The greatest of these is love." I Cor 13:13 Establish love and there will be peace.

Just as a warrior must be ready to sacrifice the life of another by killing, so also, to live by peace you must be ready to sacrifice yourself by dying. This is the heart of the difference between passivism and pacifism. A passivist sits back and does nothing. A pacifist goes out on the battlefield, ready to die. To go out into a battle to kill, with the knowledge that you may die, requires great courage. To go out into a battle, not to kill, but to die, requires greater courage still.

It is obvious that there is a certain power which, in order to harness, it is necessary to take up arms and be ready to kill if need be. What is not so obvious is that there is another power for which it is necessary to put down arms and be ready to die if need be.

down arms and be ready to die if need be.

It is easy to return love to one who loves. It is not easy to give love to one who hates. And yet to do this impossible task is possible by the grace of God: "I can do everything in Christ who gives me strength." Phil. 4:13

Christ did not conquer us by threats of fire and brimstone. His message was not centered around "If you do not follow me, you will go to Hell." (although that is true) He did not torture us until we said "Ok, Ok, I believe." (although he has the power, the authority, and the right to do so) He rather said "Look how much I love you. Look at what I did for you. Look at what I want to do for you." He loved us who were his mortal enemies, and conquered us from the inside out: not by force, not by threat, but by love that knew no bounds. When we evangelize - conquering those who are God's mortal enemies - we do not threaten with Hell or use torture. We show our love, and by the power of the Holy Spirit conquer from the inside out, making an ally of an enemy and bringing blessing where God wills. This nature, this love, this manner of conquering is the heart of peacemaking.

In the midst of a world where darkness has its dominion, the powers of light are not overcome. This is not because the power of Satan is weak, but because the power of God is stronger. If you master an enemy by violence, your victory is temporary. If you master an enemy by love, your victory is eternal.

In the study of war and peace, look not only at troubled individuals and nations in the time of war, but also when there is peace - and know, as much as what went wrong when there were battles, what went right when there was love. Formal elaboration of some principles of peacemaking are rare, but its practice is more common than you might think. When you use your body to shield another person from injury, when you place yourself in the path of harm - take the example of the king of Denmark shielding Jews from Hitler - that is peacemaking.

Brother Andrew, while speaking at a chapel here, recounted an excellent example of peacemaking. He was talking with the leader of a terrorist liberation front who was holding hostages. He reasoned with the leader for a while, talking about how he could not rest if a single brother or sister of his in Christ was in captivity, but did not succeed. Diplomacy failed, as it sometimes will. He did not break into a fistfight, or try to grab one of the guns in the room. What he did do was to ask, "Will you take me in his place? Will you let him go free, and chain me to the central

radiator?" The leader was astonished, not believing at first that he actually realized (let alone meant) what he said, and then that Andrew's house was in order, and that he really was ready to be a hostage. That is acting in Christ's love.

Love is not weakened or limited by hostility of the ones loved. It would be hollow and worthless if it were only an effective means of dealing with people who love you and take you seriously. Christ came down and died, died not for perfect people who were worthy of salvation (such people would need no such thing), but for people who were walking in the darkness and hated the light. His manifest power is revealed in the ones who have been conquered and transformed by its strength, and so Billy Graham, Jeffrey Dahmer, and myself who were all repulsive in his sight and fully worthy of Hell have come to be forgiven and made anew. We were God's enemies, conquered not by a show of force on God's part (which would have been easy - God could kill me as easily as I lift a finger), but by costly love. He came down in human form and, when he had shown his love in all other ways, showed his love by dying. And, as God conquered us who were his enemies by the power of his love, and made us to be his reconciled sons and daughters, so we must conquer those who are our enemies by the power of his love manifest in us, and make them to be our reconciled brothers and sisters.

Jesus said "If someone strikes you on the right cheek, turn to him the other also." (Matt. 5:39) This is not a command to act as if you have no rights and passively let yourself be regarded as subhuman, but rather an insistence on the fact that you do have rights. In the society of that time, a slap on the cheek was not intended as a physical injury but rather as an insult, putting an inferior back in his or her place. The strength of that insult depended greatly upon which hand dealt it: as the left hand was seen as unclean, a slap with the left hand was the insult far greater than one dealt with the right hand. This was reflected in the legal penalties for an inappropriate slap: the penalty for slapping a peer with your left hand was a fine one hundred times the penalty for slapping a peer with your right hand; the penalty for slapping a better with your right hand was a fine while the penalty for slapping a better with your left hand was death. The people Jesus was speaking to most directly were, by and large, slaves and the downtrodden. A slap on the right cheek was dealt with the left hand. To turn the other cheek would leave the master with two options. The first would be to slap the slave again, but this time with the right

The first would be to slap the slave again, but this time with the right hand (therefore declaring the slave a peer). The second would be not to slap the slave again (therefore effectively rescinding the first slap). Now, such impudence and sauciness would often tend to bring punishment, but it none the less says "Hey, I'm a human. I have rights. You can't treat me like this." It is not an action without suffering for oneself, nor does it inflict suffering on the "enemy": but it does say and do something in a powerful way.

If you are to be a peacemaker, you must act against any evil - no matter how small it may appear (by human measure - there is no small evil by God's measure) - whenever you see it. Even if it is not a breach of peace in the military sense, it is a breach of shalom, and should be stopped as soon as possible, so that it does not grow and multiply. If this is done, it will be rare if ever that violent intervention is even a question.

The power of violence is in what it can compel of the body. The power of peacemaking is what it can compel of the soul. If someone commands you to do what is morally repugnant to you, and you use the force of arms to stop that person, then you will probably slay some, and you will certainly make enmity. If instead you use the force of peacemaking - by noncompliance, being disobedient and taking whatever the consequences must be, and by choosing your own suffering over the convenience of obedience - you will not see results as quickly, but your actions will command respect rather than enmity.

If you are to gain the power to successfully intervene with violence, then you must devote resources to equipment and time to training. Time and money thus spent are not spent on humanitarian ends. This is not to say that military technology and research does not have civilian spinoffs, or to say that the precision and discipline within military bodies is not something that can be very useful. Both of these benefits do exist, and are worth taking note (and advantage) of. At the same time, it is necessary to think: Is this really the most powerful and best way to spend this money? Love and active peacemaking are not limited to the well financed. Its power does not come from the investment of scarce monetary resources, but rather through the Holy Spirit, which is anything but a scarce resource. Money is freed to other ends.

Everyone in this discussion agrees that it is better to voluntarily suffer than to inflict suffering on others.

Diplomacy is a powerful thing. It becomes even more powerful if you

study the positions of all parties involved, study both their stated desires and what is unstated: their culture, their experience, the motivation behind stating the desires and intentions that they state. Oftentimes goals that appear diametrically opposed will, when examined at the root, reveal a mutually beneficial way of resolution. The power of diplomacy is not, however, absolute, and it depends to an extent on the goodwill of both parties. It is then that either one side must turn back, or that the desires be accomplished at the price of suffering. The usual method of waging wars uses physical force to conquer. The method of peacemaking - to stand in the way of the evil being done against you, and not dodge or resist the blows aimed at you - uses spiritual force which opens a hardened heart.

Love is not the exclusive domain or power of one group. Any individual can bring surprise by an act of love. The power of love, when applied to all ways so that there are no charges of incompleteness or hypocrisy, is overwhelming.

Love wishes nothing that it would not accord to another. Greed, the placement of self at the center of the universe, is diametrically opposed to love.

Christ's resistance and even revulsion at our evil did not cause him to force that evil from us. He rather showed us the better way, and left us to choose between the paths of light and those of darkness. So it is with love that makes peace: it is not forced upon those who believe violence to be the greatest interventive power.

Proclaim Christ at all times, and use words if need be.

Morally, there is not a difference between directly and indirectly causing an action. The one who commissions an assassination is no less guilty than the one who murders in person. Be sure that the actions you support are as pure as the actions you would take in person.

Just as Jesus said not to murder either in body (by breaking the sixth commandment) or in mind (by harboring hatred), peacemaking and love must penetrate both the actions of the body and the actions of the mind completely.

If you oppose someone with peacemaking, you will call to yourself the love and respect of others. Your power is not dependent on the extent of your military might (which is dependent on the extent to which you sacrifice humanitarian ends), but only on the extent to which you love and to which the Holy Spirit has power. In other words, if it fails, it is

and to which the Holy Spirit has power. In other words, if it fails, it is because God sees more good in that momentary failure than its success.

Peacemaking is more the opposite of inaction than it is of violence. Violence consists of seeing an evil and trying to act to rectify it; the means are imperfect. Cowardice and inaction make no hint of an effort to rectify the situation, and in my view are more reproachable than well meant violence. I have no respect for cowards - including those who dodge military conscription because they are afraid to die or be maimed in battle - but do hold respect for soldiers who have the courage and the desire to rectify which is the heart of peacemaking.

The power of love to conquer a hostile person without harm is a mystery; I would be a great liar if I said that I have always treated others in love. I will say that, when I have acted in a manner that says "You are expendable", there is a seed of evil and poison, however small, that starts to grow. When I have acted in a manner that does not see the least (by the world's measure) as expendable, God's love acting in me has shown power that is beyond my comprehension.

At the heart of violent intervention is a presupposition that you know the hearts of your enemies and that you can predict what can happen, so that the slaughter you cause will be lesser than the slaughter you prevent, and that if you instead intervene with your own blood without physically incapacitating your enemy, God will not work through and bless your actions as much as if you had compromised. When this assumption comes to mind, I believe that God has answered it when he said "Satan is a liar and the father of all lies." John 8:44, and that that he can and will do "immeasurably more than we all ask or imagine." (Ephesians 3:20) I am personally offended by the idea that it is necessary to take evil in order to prevent evil, because it carries the implication that God is either a hypocrite (by telling us never to do evil, and having the power to keep us from a choice between acts of evil, but choosing not to) or incompetent (telling us never to do evil, but lacking the power to make this possible). At the heart of peacemaking is faith, faith that without committing any undesirable evil it is possible to conquer the darkness. I have taken too many leaps of faith and landed on solid ground too many times to think that God is unable or even unwilling to grant power to those that will not compromise.

It is said that it is more blessed to give than to receive. Whether or not you agree with that - I find a great blessing in both - it is evident that one

of the marks of love is that it benefits the one who loves and the one who is loved. Violence does not "do no harm to its neighbor" (I Cor 13:10), but very regretfully does what it hopes to be a minimum of harm to its neighbor. The power of love and peacemaking is such that it brings blessings upon the one who uses it to oppose evil, and the person whose evil is opposed.

Civil disobedience must be loving and sincere in all regards. To hatefully scream while restraining your fists is not enough: you must act in complete love and not harm in the least the person who you are resisting.

When you take an action, always look at why you act.

Love that is ready to die leaves no room to be cowardly.

"Do not be overcome by evil, but overcome evil with good." Romans 12:21

I hope that, if God offers me the honor of becoming a martyr, I would have the courage to accept the honor. As Paul said in Phillipians 1:21, "To live is Christ; to die is gain."

All Scriptural quotations (except for quotations from the ten commandments) NIV.

**Book Review: A New  
Face on an Old  
Ecumenism (*The  
Orthodox Dilemma  
Second Edition :*  
*Personal Reflections  
on Global Pan-  
Orthodox Christian  
Conciliar Unity*)**

I write with some sadness as provided a courtesy review copy, and as having my consent to include a quote. (Normally, when another author asks my permission to include a quote, I don't judge on basis of concluding agreement or disagreement; I am thankful for the publicity, and in particular thankful for the other author's good manners, especially in a case like this where the quote in question falls well within limits of fair use.)

I wanted to read the book through, since beside the author's generosity, I'd want to be very sure before questioning a book that gets consistent five star reviews, but at least in the first quarter or so of the text I have yet to find any intimation that there is any legitimate anathema, or legitimate barrier to intercommunion, between the

anathema, or legitimate barrier to intercommunion, between the Orthodox Churches as presented for the sake of the text: Eastern Orthodox, Oriental Orthodox, Old Believer, various autonomous churches, and so on. And no distinction is made between the Russian Orthodox Church and the Russian Orthodox Autonomous church, besides a basic position that only confusion and perhaps past sins or historical accident that stops the Russian Orthodox Church from recognizing the Russian Orthodox Autonomous church as equal jurisdictions that should be in full communion without any of the Orthodox Church's proper reconciliation of heretics and schismatics.

The author mentions a number of unfortunate experiences; I've had some unfortunate experiences, too. I, to, have been educated at a Roman Catholic university, or at least an academic environment that continued to draw inspiration from its Jesuit heritage. And there at least seems to be one difference between East and West; I had one Professor in formal communion with Rome say that she believed in Tradition, but she explicitly placed Arius alongside St. Athanasius as equal and proper representatives of Tradition. While the Roman communion has its own fractured communities of traditionalists, the live threat in Rome is their Left Coast which involves churches of Jesus, Buddha, and Socrates, and at times can be difficult to distinguish from New Age; it is my experience that when Romans wax eloquent about "the spirit of Vatican II" it is provocative to say "The spirit of Vatican II is in the letter" (Avery Cardinal Dulles, class session), and the best thing to do is run for the hills.

With Orthodoxy it is different. Orthodoxy does have a left, and [it has confused Orthodox Christians into believing that contraception is fine as long as you follow a few ground rules](#). However, the real concern in Orthodoxy is the Orthodox Right Coast, which has [Fr. Seraphim \(Rose\)'s quite astonishing following](#) (check out the one-star reviews!), which are unlike anything else I've received as an author. (When someone speaks of "Blessed Seraphim Rose" I've had real trouble telling whether the other person is a member of the canonical Orthodox Church.) To clarify regarding Mr. Alexander's treatment of the matter, I do not lump all the communities he mentions as being under the Right Coast, but only some of them. I have no reason to believe, and this book gives me no reason to believe, that non-Ephesians and non-Chalcedonians are particularly given to legalism, nor Right Coast passions that despise oikonomia and

mercy, nor regard themselves as much too Orthodox to be in communion with the canonical Church. The Orthodox Church's table is piled high, and there has always been room at the table: for True and Autonomous "Orthodox", for Old Believers (some of whom are already in), for Oriental Orthodox, for Western Christians and for people not Christian even in pretension: there is room for all those who will be reconciled, individually or in groups, as schismatics or as heretics, if only they will be received as full members of the Orthodox Church only, and on the Church's terms.

With all that stated, let me begin with what I thought would be my point of departure.

---

There is a Utopia on earth, I have been there or at least within walking distance of this Utopia, and come to think of it, seeing Utopia wasn't a memorable experience at all.

If you wish to pull up Google Maps, and search for "Utopia, IL", you will find Utopia pinpointed in a Chicago suburb (Oakbrook Terrace), and Google helpfully shows an uninspired picture of the Jiffy Lube at Utopia. I haven't had the time to research the matter, but there are on present-day U.S. soil the graveyards of a number of attempts of a Nordic country (if memory corrects me, Sweden), to colonize North America and resurrect timeless, ancient Nordic values. There were some things that were remarkably consistent across attempts. There was the reconstruction effort, and there was the daunting endeavor of actually going to New World soil and making a live colony. However, the actual timeless values the whole enterprise hinged on were highly inconsistent. Varying somewhat by the decade, the overall impression of scholarship that may not have reached beyond a Wikipedia article is that these timeless, pristine values were something like an ink blot test in a proverbial Freudian counseling session (note that I have no idea if inkblot tests are practiced any more). The point of asking a patient what was seen in quintessentially ambiguous "pictures" was understood as informing the psychologist of nothing about the "pictures" and everything about the patient. I had not heard of these Utopian movements, nor known that the house I grew up in was such a short drive from Utopia (if in fact this Utopia was of Nordic origin), when I wrote ["Exotic Golden Ages and Restoring Harmony With Nature: Anatomy of a Passion"](#) in ["The Best of Jonathan's Corner"](#), but it would have fit naturally enough. The key downwind effect of the inkblot attempt that, in an attempt to reconstruct past glory, the effect is to sever ties to the recent past and the further-back past as well.

A second case in point, studied in ["Exotic Golden Ages and Restoring Harmony With Nature: Anatomy of a Passion"](#) in ["The Best of Jonathan's Corner"](#), has to do with the plain meaning of Scripture in the Protestant Reformation. Now Protestants never invented the idea that Scripture is foundational to the point of being bedrock. Whether in Luther's Sola Scripture, or Roman discussions of Scripture and Tradition, or Vladyka KALLISTOS writing that Scripture is not separate from Tradition but the

greatest thing in Tradition (I don't know exactly where non-Ephesians or non-Chalcedonians stand but I would be astonished to find either tradition holding Scripture to be anything less than cardinaly important), you can't escape a sense that the Bible is important, except for the lukewarm and the Left Coasts. However, if it is not decisively interpret by a Tradition (whether non-Left-Coast Rome, Eastern Orthodoxy, Oriental Orthodoxy, or for that matter Orthodoxy's Right Coast), seeing for yourself the plain sense of Scripture is the bedrock to there being myriads of Protestant denominations. Even in the Reformation's better moments, people who were devoted to Christianity as guided by the plain sense of Scripture found time and time again that they could not stay under the same doctrinal house. As a Protestant then (now chrismated Orthodox and received under the rubric of receiving a reconciled heretic, a route I endorse for others as well), my Political Science professor at Calvin, who was Protestant enough, said that "Every man his own Pope" doesn't work. The Bible may invaluable and it may have layers more to it than the Reformation would have liked, and if I may delicately say so, the Orthodox Church keeps a great more of even the 66 book Protestant canon than the "plain sense" Reformation exegetes will acknowledge in Scripture. But the plain sense of Scripture, denuded of protecting Tradition, is halfway to being an inkblot.

The proof of this, if anything, is in Reformation ecclesiology and the Invisible Church, a doctrine I found myself totally unable to derive from the Bible when I was Protestant (and remain unable as Orthodox to do the same). The Invisible Church is essentially a doctrine that once the Reformation logic's practical effects work out and there are innumerable schisms ("denomination" being a neutral-sounding euphemism for something the Reformers themselves knew was entirely abhorrent), God placed some sort of invisible duct tape across true Christians regardless of fracture, and that duct-taped, invisible retcon was in fact what had been hitherto understood by the visible Church, an understanding shared by Romans, Eastern Orthodox, and Oriental Orthodox, and for that matter by the first Reformers until the claim of "My little fragment is the true Church" claimed by dozens of voices could no longer really be taken seriously.

That set the scene for ecumenism as we now know it. I know relatively little of the history of ecumenism, and I have read one scholarly work suggesting that Protestant missionaries in other lands than their own

suggesting that Protestant missionaries in other lands than their own interacted with each other and realized they were separated without clearly understanding why, but in any case that was the reality that defined a great deal of the contours of the category we now know of ecumenism. Originally, ecumenism did not address Romans, let alone Eastern or Oriental Orthodox; the metaphor of a virtual supercomputer composed of numerous coordinated individual personal computers is obviously of more recent vintage than ecumenism itself, but it is faithful to the nature of ecumenism. It is an alternative to saying, "Being in schism like this is sin," and bespeaks an ecclesiology that does not condemn the Reformation collection of schisms, or tries to transcend them while keeping them in place. (Note that this explanation leaves out a good deal.) It also might be pointed out, less delicately, that this doctrine is a Tradition which has priority over Scripture and simply trumps its plain sense on at least one point. Perhaps it is not the most interesting such Tradition: but it is one.

I grew up Protestant, and ecumenism was to me like mother's milk. It was, for that matter, ecumenism that helped lead me to the Orthodox Church (and yes, the Lord does work in mysterious ways). It was bedrock to me that if you cared about Christian unity, ecumenism was the clay you should be shaping. And I encountered the claim, strange to me as it seemed, that Rome was not one more denomination and her claim was in fact something more to being one more division lumped into the duct tape.

But what was stranger was what I encountered as Roman ecumenism years later, having repented of my ecumenism as my priest and sponsor slowly worked with stubborn me over time. At first I assumed that Roman ecumenism was simply Rome saying, "You're right; I agree" to Protestant ecumenism. But that was not in fact the case. Roman ecumenism really and truly is an ecumenism and an incorporation deriving from Protestant ecclesiology. But it is adapted, if disturbingly superficially. I haven't heard the term "Invisible Church" in Roman usage, but the basic idea is there are several more-or-less equivalent communions ("particular Churches", a phrase which seems to change meaning with each Pope, but basically conveying true Church status while being wounded by failure to participate in Roman communions), so that the "Invisible Church" (or whatever they call or refrain from calling it) is not out of Baptists, Mennonites, or Lutherans, but is out of "historic

Churches”, meaning not only Rome but Eastern Orthodox, non-Chalcedonians, non-Ephesians, and any other continuing ancient community I’ve missed. These have more or less de facto the status of individual Protestant denominations under the original Protestant ecclesiology, and I remember the flame I got when a Roman priest made an ecumenical overture that he claimed to be “sensitive to Orthodox concerns” (with zero recognition that ecumenism is a sensitive concern to some Orthodox; he used pretty strong language and implied that he was closer to the heart of Orthodoxy than I was). [“An Open Letter to Catholics on Orthodoxy and Ecumenism”](#) in [“The Best of Jonathan’s Corner”](#) had been my reply. Roman ecumenism may have Protestantism somewhere in its sights, but the basic framing is that historic Churches are insiders who should restore communion without reconciliation, on the terms Protestant ecumenism would have it, while inclusion of Protestants may be desirable but they are outsiders to the family of historic Churches.

(I might comment briefly that I do not think it is right to regard Oriental Orthodox communions as being like Protestant denominations. There are a small number of primary non-Eastern Orthodox communions, and in fact some of them like Novatians are treated with some sympathy in canon law. After the original break over a millennium ago, I am not aware of further fractures within the communities then established or having most adherents belong to a splinter. However, I do not accord this status to the Orthodox Right Coast or various groups that want to call themselves Orthodox without submitting to canonical communion.)

Having looked at the original ecumenism as invented by Protestants, and its alien transplantation into Rome, I would now like to look at this book’s transplantation of ecumenism into Oriental Orthodoxy and proposed to Eastern Orthodox to make our own as well. The book’s basic proposition is essentially that all the communities claiming to be Orthodox should restore intercommunion without, as understood by Rome’s historic Churches, a full and proper reconciliation. (And on the “There’s room at the table” theme, I might remind you that the Evangelical Orthodox Church was received into the Orthodox Church as reconciled to become canonical. And I’d love to see other groups join them as well.) The only ecclesiastical body with “Orthodox” in its name that I am aware of that Mr. Alexander does not seek to include in

Orthodox intercommunion is the Orthodox Presbyterian Church, which was formed after one Presbyterian denomination (Politically Correct, USA?) knowingly ordained a candidate who did not believe that Jesus was the Son of God, and my uncle and other pastors split off so they could still be named Presbyterian while considering the deity of Christ to remain absolutely beyond question.. (I answered an Orthodox Presbyterian DMin graduate from an Orthodox seminary in [“An Orthodox Looks at a Calvinist Looking at Orthodoxy”](#), in [“The Best of Jonathan’s Corner”](#).) The Orthodox Presbyterian claim is to be able to say the Creed without crossing one’s fingers (or at least not translating anything except for the line about the Church), not any sort of claim to be of Eastern provenance. But Mr. Alexander does want to include others who call themselves Orthodox and put Orthodox in their name but do not seek to submit to Orthodox communion, including the (Anglican-based) African Orthodox Church as much as the Russian Orthodox Church or the Russian Orthodox Autonomous church.

The Eastern Orthodox Church can and in every sense should show welcome and hospitality to visitors of any confession and no confession at all, and baptize / chrismate and include in full communion those who (like my respected second advisor at Cambridge) are Copts and want to become members of the Eastern Orthodox Church. However, there is a wide consensus among many Orthodox I respect, not only that good fences make good neighbors, but that ecumenism, of which Mr. Alexander offers a new permutation, is the ecclesiological heresy of our age.

I’m not sure if Mr. Alexander dealt with the Orthodox Right Coast; even his hardships suggest innocence as to how the Right Coast can and often does treat outsiders to it. But I remember years back, when I was trying to get some basic bearings, asked a sharp friend why people who separate themselves from the Orthodox Church in schism develop legalistic passion. He gently suggested I had the order reversed: first comes the passion, then comes the separation. In terms of how passion goes, there are limited options for how the Right Coast can act in anger against the canonical Church and still preserve the self-illusion of being purer. None of the Left Coast axes appear adequate; you can attack the Orthodox Church for not having women priests, but that doesn’t cut it. The same goes for advocating for sexual libertinism. You can wield either Left Coast axe but it won’t give you the illusion of being super-Orthodox

Left Coast axe but it won't give you the illusion of being super-Orthodox.

Pretty much your only live option with the hand Orthodoxy has dealt you is to be super-Orthodox by indicting the Orthodox Church is indicting the Church for overly lax observation of canons. Now ancient canons are all there for a reason, but proper application of canons employs both *akgravia* (the principle of strict excellence) and *oikonomia* (the principle of love). Any good bishop, or possibly priest, will govern out of understanding canon law as a whole and trying to strike the right balance between the two principles. As a consequence, any good priest or bishop will show a great deal of laxity in at least some part of the overall picture of applying ancient canons. All the canons are there for a reason, and there are consequences when a canon is too loosely interpreted. And the one option to appear super-Orthodox, at least to yourself, is to blast the Church for overly lax observation of canon X in situation Y. That defines the contour for your sins.

My suspicion, strange as it may sound, is that the Russian Orthodox Autonomous church would bristle much more at instant and artificial intercommunion with the Russian Orthodox Church than the Russian Orthodox Church would.

One parish friend made a comment that he would like to have an anathema service, a particular service in which propositions the Orthodox Church has anathematized are in fact answered with one word: "Anathema!" I do not mean to state that no anathema or broken communion could ever arise from misunderstanding or, more pointedly, sin. For me to make that claim across all Church history would be quite a claim and it would be in excess of my authority as nothing more than a layman. However, the opposite error of assuming that every anathema or breach in communion should simply be stepped over is equally and stunning of an assertion. In the part I read before I really gave up, I did not see a single analysis reaching a responsible conclusion that even one single anathema or breach in communion may safely be brushed aside. The argument, such as it went, was not to go over any of the fences in detail, but make brief assertions out of a presupposition that anathemas and closed communion (at least between what Rome calls "historic Churches") are insubstantial, not really speaking to us today, and resulting from confusion or sin rather than anything binding.

The author has put his heart in this, a point which is evident on almost every page. His sincerity is not up for grabs, nor his goodwill, and I wince

at the pain he will have reading this. None the less, I say that ecumenism is the Left Coast ecclesiological heresy of our age, I have seen two and now three basic permutations, and its chief audience among canonical Orthodox should be those concerned with Orthodoxy and heterodoxy.

With Much Regret,

[C.J.S. Hayward](#)

# Can You Smoke Without Inhaling?

## Martial Arts and the Orthodox Christian

I have met this kind of slippery words in Orthodoxy, and I did not like it then either. I remember one subdeacon proudly explaining that he had dealt with Evangelicals, gently defusing doubt about venerating the Mother of God by saying, "*You wouldn't be disrespectful to your mother, would you?*"

The late medieval veneration of the Mother of God was called 'idolatry' by the

Reformers not only because the Reformers unwittingly took up the late Western medieval obsessive fixation on idolatry, but also because the Mother of God occupies a position that most of Protestant Christianity doesn't have a conceptual cubbyhole for except for as a rival to God. If Protestants speak of Mariolatry, the assessment might be flawed, but the real flaw is often unconscious and unwitting. There is room in Orthodoxy for a Mother of God who does not take away from the incomparable Oneness of God, but there is not such a place among the more traditional Protestants: the only cubbyhole she may be put in is as a rival to God.

I do not like it when objections are

made to vanish in a puff of sophistry, even when the party performing the disappearing act is on my side.

## A provoking article about yoga in Georgia

There was an article which discussed the Orthodox Church and yoga in Georgia. It made no mention of martial arts, but it left me thinking about how its substance would meet martial arts.

Probably the most striking part of the discussion of the Orthodox Church in Georgia giving a cautious, skeptical eye to yoga, and one of yoga's advocates said, "With time, as practitioners realized that "[b]y chanting one 'Om,' they're not going to change their religion," the objections vanished." This answer reminds me of how Charles Babbage was asked by members of the Parliament if his analytical engine could arrive at the correct answer even if it were given incorrect data to work with. He said, "I cannot rightly apprehend what confusion of ideas would lead to such a question." And I cannot rightly apprehend what confusion of ideas would lead an Orthodox to accept that reply.

The term 'yoga' is from the Sanskrit and means a spiritual path, and in that sense with unadorned simplicity an Orthodox Christian may claim to be a devotee of the Christian yoga, much as for that matter an Orthodox Christian speaking with a follower of the Budo (Warrior's Way) may with unadorned simplicity claim to be following Christian Do. Something close to this insight is at the heart of [Christ the Eternal Tao](#). The question of whether chanting one 'Om,' or rather, 'Aum,' as the "Sacred Syllable" is more properly called, will change your religion is neither here nor there. Saying the Jesus Prayer once *not* make one Orthodox, but this exact point is neither here nor there. Meditation in yoga does not stop with one 'Om' any more than Orthodox hesychasm stops with saying the Jesus Prayer once. On this point I would bring in that the Jesus Prayer is so important in Orthodoxy that in nineteenth century Russia there was genuine,

heartfelt resistance to teaching the Jesus Prayer to laity on the concern that access to something so great without the protecting buttress of monastic living would lead them into pride to the point of spiritual illusion. At the risk of claiming insider status in Hinduism or treating Hinduism as a copy of Orthodoxy, I might suggest that the place of the "Sacred Syllable" in Hinduism is something like the place of the Jesus Prayer in Orthodoxy, alike foundational to the depths of their spiritual treasures, alike the metronome of silence to its practitioners. The concern that the yoga that is drawn from Hinduism constitutes a spiritual path inconsistent with Orthodoxy is anything but kneejerk conservatism, especially if chanting 'Aum' once is the Hindu equivalent of taking the Eucharist once (a point on which I am very unsure). But it represents some fundamental confusion of ideas to speak of "the neutral syllable 'Om,'" as one workbook endorsed a popularization of yoga in the interest of treating depression and bipolar disorder.

Thus far I have focused on the analogies and similarities of hesychasm to the meditation that is found in Hinduism and Buddhism and is part of internal martial arts. It may be described as "divorced from" its religious roots (the founding grandmaster of Kuk Sool Won), but it is a common practice in internal martial arts (I never reached a high enough rank in Aiki Ninjutsu to be expected to join them in meditation), and it may not so easily be separated from its roots as it is presented. Part of the article I read on Georgia and yoga talked about meditation as affecting mind and body and in certain contexts produces a state of extreme suggestibility, quite far from the pattern in the saint's lives where the Lord, the Theotokos, or a saint tells someone something, and ends up doing so at least two or three times because the devout Orthodox is simply more afraid of being deceived than of failing to jump at a command they consider themselves unworthy of. The state of extreme suggestibility produced by meditation opens the door to demonic "insights", and one of the questions raised was, "Do you want to train in a discipline where the leaders are likely under demonic influence, in postures intended to be part of a spiritual path where you, too, will be invited to the place of suggestibility where you will be open to demonic influence?" The entire discipline points to the demonic; why think we can handle it safely? St. Paul writes, "[You cannot drink the cup of the Lord and the cup of demons. You cannot partake of the table of the Lord and the table of](#)

demons. Shall we provoke the Lord to jealousy? Are we stronger than he?" It might be begging the question to assume immediately that yoga is one of the cups referred to in this passage, but it is also precariously close to begging the question to assume that the passage is simply irrelevant to whether it is wise for Orthodox Christians to practice.

## Have I been able to smoke without inhaling?

Before talking about martial arts, which I will get to after laying some preliminaries, I would like to talk about an area where I did my best to "smoke without inhaling." I had come to believe that how Dungeons and Dragons and fantasy literature portray magic is not acceptable: perhaps it would be appropriate to portray a character's occult engagement as a serious sin that opens a door to the demons who hate us, but as it was argued to me, it's merely a depiction of a world with alternate physical laws, and when I took that up seriously and asked, "Do you know to what tolerances the constants of the physical world are tuned? If I were to have aim that good, I could hit something much smaller than a proton at the furthest reaches of the universe. Having alternate physical laws that would support ordinary life as we know it and in addition pack in magic is a very tall order. Would you also read fantasy of a world where adultery was harmless due to alternate laws?"

This last polemic may be beside the point here, but what is more to the point is that a friend, not to say very experienced author, responded to a mailing list post suggesting that marketing-wise the first three books an author publishes establish the author's "brand", and suggested that my brand might be non-magical fantasy. And while I would not wish for that brand now, this was a carefully considered suggestion from someone who had read my work at length, and it makes sense. The list of works that could be called nonmagical fantasy, some written after he made the suggestion, include the short stories [The Spectacles](#), [Within the Steel Orb](#), and the novellas, [The Steel Orb](#), [Firestorm 2034](#), and [The Sign of the Grail](#). And there is a reason I have not displayed any of the novellas on [my Amazon author page](#); [The Sign of the Grail](#) in particular was a work

where I realized that my greatest successes (and in a work where I made some bad decisions that jeopardized the work) let me realize that what I was attempting was impossible. I would describe it as, "I succeeded, and in succeeding realized that what I was attempting was impossible."

Some time later, a priest or monk was speaking me and warned about the perennial temptation to escape the here and now. This temptation is hard to pin down; it can take place physically, or mentally by imagination, or by street drugs, or... When this was pointed out, after initially resisting it, I realized that a great many things I did lacked the joy of gratefully accepting the here and now: they provide escape, and one good friend praised [Within the Steel Orb](#) precisely as a way to escape that he couldn't put down.

I would have said then that I smoked, but didn't inhale. I would now say that I inhaled more than I thought, and taking a "smoke, but do not inhale" attitude to sin is a losing proposition. Besides the works listed I made a role-playing game, [The Minstrel's Song](#), which is free of magic but still delivers the escape of fantasy. If you will, it offers a more dilute, less forceful delivery of poison than Dungeons and Dragons, Shadowrun, or many more of the plethora of role playing games out today, and perhaps God may use it to wean people off of that kind of recreation. I may have had a clear conscience when I wrote it, but remember Christ's words, [I am the true vine, and my Father is the vinedresser. Every branch of mine that bears no fruit, he takes away, and every branch that does bear fruit he prunes, that it may bear more fruit](#), and this is one of the things God has pruned from me.

Proverbs asks, [Can a man carry fire in his bosom and his clothes not be burned?](#) This is God speaking, and the whole topic of fantasy, especially non-magical, represents an area where I tried to "smoke, but do not inhale," and it is evident to me that I did inhale a good deal more than was good for me, and a great deal more than I realized. I had, and probably do still have, feet partly of iron and partly of clay.

## **Martial arts without inhaling?**

When I touched base with my spiritual father years back about martial arts, he permitted it up to a point; I know that spiritual prescriptions are not to be copied from one patient to another, but he allowed me to study martial arts that were really just techniques, but not martial arts that were more of a philosophy. I had previously had about a year's combined study between Kuk Sool Won and Karate; I thought that I would study another martial art without inhaling, and simply try to dodge certain aspects in studying Aiki Ninjutsu. (I tried to follow the spirit and intent of my spiritual father's words, but perhaps I should have tried to ask him once I became aware of the neuro-linguistic programming and success plans.) What I really wanted was the stealth training, but God closed the door to the weekend training that would cover stealth.

After having gotten a certain point in, I emailed the instructor saying that I was coming to appreciate that Aiki Ninjutsu represents a complete spiritual tradition and does not mesh well with Christianity. I mentioned as an example the student's Creed, which begins, not with the magnificence of "I believe in one God...", but "I believe in myself. I am confident. I can accomplish my goals." I said that believing in oneself represented a fundamental spiritual failing in Christianity. Had he asked questions or tried to understand me in dialogue beyond my first words, I would have referred to him to Chesterton in [Orthodoxy, Chapter 2](#):

THOROUGHLY worldly people never understand even the world; they rely altogether on a few cynical maxims which are not true. Once I remember walking with a prosperous publisher, who made a remark which I had often heard before; it is, indeed, almost a motto of the modern world. Yet I had heard it once too often, and I saw

suddenly that there was nothing in it. The publisher said of somebody, "That man will get on; he believes in himself." And I remember that as I lifted my head to listen, my eye caught an omnibus on which was written [the asylum] "Hanwell." I said to him, "Shall I tell you where the men are who believe most in themselves? For I can tell you. I know of men who believe in themselves more colossally than Napoleon or Caesar. I know where flames the fixed star of certainty and success. I can guide you to the thrones of the Super-men. The men who really believe in themselves are all in lunatic asylums." He said mildly that there were a good many men after all who believed in themselves and who were not in lunatic asylums. "Yes, there are," I retorted, "and you of all men ought to know them. That drunken poet from whom you would not take a dreary tragedy, he believed in himself. That elderly minister with an epic from whom you were hiding in a back room, he believed in himself. If you consulted your business experience instead of your ugly individualistic philosophy, you would know that believing in himself is one of the commonest signs of a rotter. Actors who can't act believe in themselves; and debtors who won't pay. It would be much truer to say that a man will certainly fail, because he believes in himself. Complete self-confidence is not merely a sin; complete self-confidence is a weakness. Believing utterly in one's self is a hysterical and superstitious belief like believing in Joanna Southcote: the man who has it has 'Hanwell' written on his face as plain as it is written on that omnibus." And to all this my friend the publisher made this very deep and effective reply, "Well, if a man is not to believe in himself, in what is he to believe?" After a long pause I replied, "I will go home and write a book in answer to that question." This is the book that I have written in answer to it.

I said that if he were to want to know more, I would have referred him to this passage. (The Fathers do not rebut the phrase "believing in yourself", because it was coined and popularized after your time. When it was called "pride" or similar names, it was ripped to shreds.) Perhaps some of the more recent writing from Mount Athos may address "believing in yourself," but I am limited in my grasp of what is current on Mount Athos.)

He responded with an authoritative statement that his art was appropriate for people of all religions or no religion, including Christian, and gave a recipe for success that began with believing in oneself. It was an Activist recipe, not a Saint's, as I lay out two ultimate orientations in [Farewell to Gandhi: The Saint and the Activist](#), not a saint's; I did not expect him to take the role of the saint, but he seemed to only see the Activist approach as a live option. Now the Saint and the Activist do not represent mutually exhaustive options; I would expect Japan's history to hold at least one other model besides them; and the martial art was presented as drawing on centuries or millenia of Japanese history, but it seemed to incorporate neuro-linguistic programming.

And on this point I will notice a difference between the martial art I was taught and prior martial arts: Kuk Sool Won and Karate both spoke, relatively frequently, of emphasizing "harmony between opponents." In Aiki Ninjutsu, the code of ethics includes dealing with others in a "harmonious" way, but I never heard advocacy of humble harmony between opponents: by contrast, one of the more advanced lessons covered with beginners is "become the center:" you dictate what is going on. The art may have been combined with Aikido, which is perhaps the most harmonious-with-opponents of martial arts, but as it was combined and presented, I never heard on the mat someone speaking of harmony with one's opponents, and I heard and saw practice at becoming the center. The teacher seemed to be trying to "win through becoming the center" rather than "win through harmony with one's opponent."

For my next point, I need to say a couple of words about the ki that is central to internal martial arts. "Ki", translated "spirit" and "energy" in the Aikido poster hanging in the dojo, is a foundational concept in so-called "internal" martial arts and appears to me to be a large part of the inspiration for the Force as dramatized in Star Wars. The two are not interchangeable (for instance, I have never heard a martial artist discuss a light side and a dark side to ki or try to levitate something), but I'm not sure of any other concept readily accessible to the Western mind that translates "ki" (the Greek "pneuma" has been suggested by a Tae Kwon Do leader, but it is an approximation while "ki", "chi", and "qi" in Asian languages do translate each other or rather refer the user to the same concept). Interacting with ki is at the heart of internal martial arts.

Perhaps the most basic interaction with ki

Perhaps I should

that I have seen in martial arts was to "ki out", as it was called in Kuk Sool Won and maybe Karate, or "kiaï" in Aiki Ninjutsu, sometimes translated "spirit yell." Aiki Ninjutsu, unlike the other two arts as I was exposed to them, also has a system of four vowels, wrapped with consonants into English words in most English-speaking areas, which are used in different contexts; I am not sure about this but I believe they are connected to the elements of earth, air, fire, and water as they play out. And I emailed the instructor asking if it would make sense to train given that I was not comfortable with this spiritual practice. He gave me another "become the center" answer that spoke of my confusion of terminology, and I wrongly assumed that because it was called a "spirit yell", it was a spiritual practice. But in my earlier practices totalling to about a year, I kied out and was never comfortable with it; *it felt wrong*. This time through, I watched a video where his beautiful wife, also a black belt and instructor, kiaied while cutting with the sword. What I saw in this was spiritual ugliness, as watching something unclean.

Besides telling me I was confused about terminology of the "spirit yell" and called it a spiritual practice out of confusion, he said that I was spending too much time trying to see how my religion would "fit into things," gave a sharp quote about narrow-mindedness, and said it would make sense to "discontinue training."

The other two times I was involved in martial arts, I did not try to avoid inhaling, and these were some of the driest times

make this point hesitantly, because when a Protestant tells an Orthodox who represents the living Tradition, "I understand your Tradition better than you because of my book learning," it normally signals a profound confusion that can get better only if the Protestant gets rid of the book and actually openly meets the Holy Tradition as it appears before him. That is one of the reasons I was very slow to disclose [Orthodoxy, Contraception, and Spin Doctoring: A Look at an Influential but Disturbing Article](#), because my book learning contradicted the plain and unanimous teaching by priest and laity that Orthodoxy allows contraception if you'll follow a few basic rules. I am still concerned that I published it too

spiritually that I knew. This time, I signed a contract saying, in essence, "It is your choice what things you will participate in on an entirely voluntary basis; if you choose not to do certain things, it is our choice whether or not to withhold [advances in] rank." Now I had expected to make progress slowly; martial arts' first training is training me on my weakest point and while I believe I might advance quickly at higher levels where I would be in a better position to use my strengths, I expected slow progress. If I wanted to be trained differently, I could at my option pay for private lessons, but I was trying to just get through the basics without asking for exceptions to how the training usually works. I had not expected that the Sensei would like my asking about practicing without the spirit yell as a spiritual practice, but I was not expecting him to say that that was reason to discontinue practice.

Now if you will ask if I was angry with him, I would say "no", and I don't want to hear about him being hypocritical in his words about my narrow-mindedness. It seemed, if anything, like God acting through him to say "You have had enough" and take away a bottle of wine.

There were other times I quietly opted out and got away with it: on entering or leaving a class session, we were supposed to clap twice to get rid of bad energy and then clap once to acquire good energy. But I had been told repeatedly that I needed to yell a vowel on striking a target, and my opting out was noticed and given corrections during the last session.

quickly.

With that stated, books like *Essence of Ninjutsu* by the grandmaster attribute a profound and occult spiritual significance to kiaiing. I do not remember if it was in this book, but I remember reading the grandmaster forbidding people to take pictures of him during lectures, and when people tried to take pictures, he kiai-ed—and the pictures did not turn out. The one exception was a photographer who kiai-ed as he took pictures, and this was treated by the grandmaster as a "sometimes, you gotta break the rules" exception. Two of his pictures were included in that book; one featured a blur which was claimed to be a grandmaster from prior centuries advising him as a familiar spirit. It was also presented that a

sufficient kiai can without any physical blocking stop an attacker. Et cetera.

The point may be raised that there is something very natural about tensing your muscles and maybe grunting in physical exertion. I would respond with the following analogy: There are natural hormonal levels in people's bodies, which drop off with age. Then there is traditional medical use of steroids, including my use of steroids after radiotherapy knocked out my thyroid function. Then there is the greyish area of general "hormone replacement therapy" as handled by anti-aging, which takes as axiomatic that a 62 year old man should have identical hormones coursing through his blood as a 26 year old man; this is an obstacle to

genuine maturity in the aged. Then there is traditional use of steroids which doses up to ten thousand times the doses used in traditional medicine, which falls into the category of "Somewhere back there, way back there, we crossed a line." It is natural, up to a point, to tense one's muscles and grunt or yell when doing physical exertion, *and with a clean conscience I always breathed out when I was striking*. But the further along the spectrum you go, the more you have crossed a line, and if you are working to a kiai that will do things a skeptic would not believe, you've crossed a line.

## Before I began practice

I had practiced two other martial arts, Kuk Sool Won and Karate as mentioned, and did not attempt to "smoke without inhaling." Both of those I did with an unclean conscience, and there was an incredible growing dryness in my spiritual life. This time I tried to avoid inhaling, and in large measure the question on my conscious was, "You deal in two forms of power that do not basically edify. Do you wish to deal in one more?" I have, for now at least, a regular paycheck coming in, and the Gospel is remarkably cool to the usefulness of money, especially when it is not used for alms for the poor. I work with computers, and I am rather skeptical about whether they are as good for the whole person as they might seem. (See the collection: [The Luddite's Guide to Techonology, \\$24.99 paperback, \\$2.99 Kindle](#) for more details.) The moral of these things is not that the forms of power are utterly unlawful, but that they are less valuable than they seem, they require us to take command of them if we are to use them rightly, and most of the time they could use debunking. And in fact I did try to debunk them in the discussion of the [Sermon on the Mount](#) in [Farewell to Gandhi: The Saint and the Activist](#). I spoke of being "naked as Adam", and at the risk of belaboring a metaphor underscored that what is forbidden here is not literal clothing but metaphorical armor. Now martial practice can be consistent with being "without metaphorical armor;" one martial artist made a parody ad for martial arts touting such things as, "Get beat up by people twice your age and half your size!" The further people get into martial arts, the more aware they are of their vulnerability, and it's pure snake oil when someone advertises some super elite program that will make you the world's greatest martial artist in two months. So I would be cautious of saying that no one in any martial art can be living the [Sermon on the Mount](#), but I believe the teacher did me a kindness by virtually expelling

me from the art, and I am in no rush to find another. Instead of trying more efforts to acquire dubiously helpful forms of power, I could turn my attention to areas where I could better use what computers I have. The [Philokalia](#) tells of people who were mired in clay and calling out to others not to become mired, found their salvation. Perhaps that describes [The Luddite's Guide to Technology](#), because while I may have some of the detachment that is argued, I am a great deal more enmeshed with technology than with some other things. I would not say that I am strong enough to successfully "smoke without inhaling" when dealing with technology.

## Conclusion

When I first visited the dojo, I saw a "red" belt student wearing a black T-shirt with tattered letters, saying on one side,

The God of the Old Testament is arguably the most unpleasant character in all fiction: jealous and proud of it; a petty, unjust, unforgiving control-freak; a vindictive, bloodthirsty ethnic cleanser; a misogynistic, homophobic, racist, infanticidal, genocidal, filicidal, pestilential, megalomaniacal, sadomasochistic, capriciously malevolent bully.

â€“ Richard Dawkins, *The God Delusion*

I wasn't able to look up what the other side said, but I remember it was a quote from the same book. And I said mentally, "I know what kind of people I'm dealing with." Maybe I should have been afraid, confronted him, or something else; I have never seen such socially acceptable hate speech. But part of my reaction was, "Ok; I've been warned; this will be like my time studying theology at [Fordham](#)."

The instructor spoke of my terminological confusion in referencing the term "spirit yell", and in fairness that was not the primary term and was not elaborated at length. The primary term, however, was "kiai", and the philologist in me believes that the root of "kiai" (Aiki Ninjutsu) was ki. Certainly the term "ki out" (Kuk Sool Won) refers to ki. In the groundwork book that is given to newcomers, my instructor is identified as a third dan in Toshindo and also having rank in Aiki Ninjutsu. "Toshindo" is an alternate way of reading the characters to "ninpo", which is ninjutsu considered in its spiritual aspect. In my opinion, he shouldn't have been surprised when I said that Aiki Ninjutsu looked like a complete spiritual system to me. But however much he may have

contradicted my identification of kiai as spiritually significant, either it was a *sine qua non* of my continued participation, or my not asking this kind of question about how it fit with my faith was such, or both. And though this was passing, the book identified which of the four elements one was most closely connected to, by astrological sign. In retrospect, I marched past too many red flags; the onus for my remaining under such conditions is primarily on me.

As a child I read of ninja who had stealth, and their stealth technique was called ninjutsu. Something of that captivated my (among many) people's imagination; etymologically, 'ninjutsu' meant the technique of becoming invisible, an invisibility I assumed was metaphorical for physically skilled stealth, sixteenth century ninja suits, and the like. On my conscience's prompting, I did not do what I very much wanted to do in going to the training weekend in a wooded area where stealth is best taught. Instead I went through a crunch at work where it would have been political suicide to be unavailable at work, although I did not expect this when I did not sign up for the training. And my imagination was enough captivated that I decided not to heed some strong red flags. The guilt for this is my own, not any of theirs.

My endeavor would have been perhaps using people had I consciously embarked on it as a philosophical experiment. Martial arts are often considered to be deeply occult (I doubt the clapping of hands was the only action with an occult intent), and while I would have to limit what I say to exclude Western arts such as fencing or boxing, and arguably some Eastern arts as well such as Brazilian Jiu-jitsu, which one Christian practitioner told me had none of the philosophical element. Certain things still appeal to me more; I would much rather pin an opponent by skill than pummel another person to the point of not being able to get up for ten seconds. To me the combat training was a secondary goal to training in stealth. But even then the lesson I would draw from this is less about martial arts, than trying to smoke without inhaling. While I ignored red flags and the sharp warnings of my conscience, I kept my conscience clean once I was in training, and peer pressure took a back seat to trying to keep my conscience clean. And perhaps I was succeeding enough at smoking without inhaling that the teacher ended my training. But the overall lesson I draw from this is that it is foolish to think, "I can smoke without inhaling." Perhaps at Fordham the position was one where I had to try to smoke without inhaling, and did so at the Lord's bidding. Never

to try to smoke without inhaling—and did so at the LORD'S bidding. Never mind situations like that; they do happen. But it was a severe breach of wisdom for me to take on a situation where I would have to smoke without inhaling. Practicing the techniques put violence before my imagination and stained the purity of my soul. That was consistent. I do not wish to dictate to soldiers who bear the cross of St. George what they must do—but I was not a soldier following orders either.

Whether with regards to fantasy or martial arts or entirely unrelated circles of temptation, it is an error to try to smoke without inhaling. [Can a man carry fire in his bosom and his clothes not be burned?](#)

# The Case For Uncreative Web Design

When the Master governs, people are hardly aware that he exists.  
Next best is a leader who is loved.  
Next, one who is feared.  
The worst is one who is despised.

Lao Tze, *Tao Te Ching*, tr. Stephen Mitchell

In looking at various award review sites, I have seen people equating creative web design with good web design. This is not simply in acknowledgement that creativity is one of the gifts of the human mind and an indispensable part of the great triumphs of human culture. It goes further to take the perspective that "good web design" means design that impresses the viewer with its creativity. This perspective, which is almost never questioned among awards reviewers, is one which is eminently worthy of question.

Good acting does not leave people impressed with how good the acting is. The very best acting leads people to be so involved with the drama and tension that they forget they are watching actors at all. Not all acting reaches that standard — which is a very high standard — but acting has the quality that, at its best, it is *transparent*: people see through the acting to the important thing, the story.

What are the basic responses to my [A Dream of Light](#)? In order from best to worst:

- Best: The reader is moved by the images and stimulated by the ideas, and leaves the reading a wiser person. Perhaps this involves being impressed by the thoughts, but the reader who is impressed is impressed as a side effect of the literature's power. The reader leaves the reading thinking about the writing's subject-matter.
- Second best: The reader's primary response is to think about how smart I am, or how eccentric, or something of that sort. The writing has not completely succeeded. The reader leaves the reading thinking about me.
- Worst: The reader reads it and walks away thinking about the page's design, even how clean and uncluttered it is. The reader leaves the reading thinking about the web design.

If a reader walks away from that piece of literature thinking about my web design, the design is a failure. The design is as bad as a photograph where the scene is blocked by the photographer's thumb.

It is sometimes easy for webmasters to forget that readers spend most of their time viewing other pages — not figuring out mine. I intentionally employ a standard web design in nearly all of my pages: navigation bar to the left, and a body to the right with dark text on a light background, different colors for *visited* and *unvisited* links (with *visited* links looking washed-out compared to *unvisited* links), no frames, judicious use of *emphasized text*, a header at the top, and navigation links at the bottom. I do not use any technology just because it's there—[one page](#) uses Java, and has content that would be almost meaningless if the applet were not there. The design on my home page is not creative, because it is intended *not* to be creative. I copied best practices from other sites and from friends' suggestions, in order to make a design that gets out of the way so readers can see the content.

To adapt a classic proverb: *Don't bother to impress people with creative design when you can impress people with creative content.* My web design is not evidence of any great creativity, but many readers have found the content in [what I've written](#) to show considerable creativity. I employ a very standardized web design for the same reason that I use standard spellings and grammar when I write: I want people to be able to see through them to whatever it is I'm writing about. Yf spelynge caulze uttinshun too ihtselv, itt yss mahch herdyr too thynque about whutt iz

beeynge sayde. If, on the other hand, people employ standard spellings, readers can ignore the spelling and focus on the point the writer is trying to make. The spelling is *transparent*. Spelling is not where you want to demonstrate your creativity. And neither, usually, is web design.

Now, does that mean there is no place for creativity in design? No! In [I learned it all from Jesus](#), I had each sentence a different color from the one before, and none of it black — which I regard as a legitimate artistic liberty. [The Quintessential Web Page](#) is aiming at a quite different effect (humorous rather than artistic), and it does other things that are not ordinarily appropriate. In this page, I use the content to draw attention to the design — also not normally appropriate. These things are not a special privilege for me; I just mention my pages because they're the ones I know best. There's some really beautiful Flash art on the web. One human-computer interaction expert has created a usability resource that is [one of the ugliest pages I have ever seen](#), and does almost every major no-no on the list. This is as it should be — he is making a point by demonstrating features of bad web design. In that regard, making a page that is singularly annoying makes the point far more forcefully than an exemplar of good web practices that says "Be careful that you don't have text that's indistinguishable from your background." It is perfectly acceptable to stray from general rules *if* you have strong and specific reason to violate them. [I learned it all from Jesus](#), in my opinion, is a unique and valuable addition to my web page — but if I made every page look like that, my PageRank would drop through the floor.

Picasso said, "Good artists copy. Great artists steal." Great artists never believe they have to invent everything from scratch to make good art — instead, they draw on the best that has been done before, and use their own creativity to *build on top of what others have already accomplished*. In web design, this means making a site that is usable to viewers who have learned how to use other sites.

A careful reader will notice one element of design on this site that is not standard, but should be. Designers for major sites, who often have excellent vision, will put navigation links on the page, but make them as small as they can be and not be completely illegible. This is a truly bad idea, and I don't understand why it is so common. (Maybe web designers forget that some of us only have 20/20 vision?) The navigation links are some of the most important links on most web pages, and I wish to say, "Yes! I consider these links

important for you to be able to read and use, and I will proudly let you read them at whatever your preferred text size is, *not* the smallest size I can read!"

I will consider this to be a successful design feature if you weren't aware of it until I pointed it out.

# In Celebration of Tribbles

Years back, one friend, Cynthia, explained why she will never own a furry pet. An editor, her work often allows her to be in her apartment building during business hours, and when she walks through the halls, she hears so many whimperings, whinings, barks, and the like, every one of them saying, "*Will you come in and be with me?*"

That conversation made an impression on me. I am an animal lover. I grew up with a dog about the house, kept kind and gentle card of a lab even when her barking cut into my sleep, and when I am visiting my brother Joe's house, I love to see his cats. And I would love to have a furry cubicle pet. But the options there are somewhat limited, and not only because bosses sometimes have to say "No" to eccentric behavior. Though there have been workplaces where employees were welcome to bring well-behaved dogs, (see, for a rare example, [Dreaming in Code](#)), bringing a pet to work beyond a fish *appropriately* would include either transporting the pet with you or leaving your pet unattended for sixty or so hours straight each weekend, keeping the animal in an enclosed space without freedom to wander or explore, and so on. Now hamsters are solitary creatures and for what I know now, it might be possible to keep a hamster cage in a cubicle, leaving only problems like pet dander irritating other employees' allergies. But on the whole, the question of how to keep an office pet without cruelty is a difficult question.

And, up to a point at least, for a single person to keep a pet at home is dodgy. **Families and people who work out of their homes are a separate case**, and two or more cats may be able to keep each other company, but if you have a fulltime job or serve as a consultant, the

question of how to keep a pet without cruelty may be a bit of a challenge.

Some common and respected practices are in fact cruel. My brother has taken in rescue cats which were already declawed, but he and my sister-in-law have never declawed a cat they owned. The common statement is that even front declawing a kitten is like cutting a baby's fingers off at the knuckles. My brother added that declawed cats are not, in fact, safer for owners to deal with: for a cat with front claws, the first line of defense is a swipe with claws which is only an abrasion, while for a declawed cat the first line of defense is a *bite*, which is a puncture wound. Not only is that a more serious wound, but the puncture wound exposes you to whatever bacteria live in the cat's mouth, and mouths tend to have lots of infectious bacteria. Strange as it may sound, if you have a cat, you *want* the cat to be able to swipe its claws at you if it's cornered, angry, or afraid. *It's better than a declawed cat's bite.*

I have swing-mounted horses, and I would happily do so now if the opportunity offered to me. To swing-mount a horse, you crouch down, get a good grip of the horse's mane with both hands, and leap up, pulling yourself up by the mane, and ideally land squarely on the horse's back, *and this is not cruel*. Different species have different thresholds of pain, and a lot of animals are tougher than us; the average horse's threshold of pain is seven times higher than the average human. This means, for instance, that you can grab a good bit of a horse's mane in your hand and pull as hard as you can, and not only will it not injure the horse, it won't cause pain or even really annoyance for the horse. Now horses can be skittish around people and may not be used to you, but if a horse is comfortable with your presence, yanking on its mane doesn't mean anything.

And different thresholds of pain apply to dogs, too. The dog I had growing up would leap and dance for joy when she saw a family member starting to reach for her leash, because she knew that meant she would go for a walk outside. Years later, a dog a few months old would leap and dance for joy when he saw me reaching for a specific pair of workgloves, because he knew that meant he could bite me significantly harder when we were playing. He had a very high threshold of pain, unusual for even a dog, and he expected me to have the same high threshold of pain, and so things felt more natural and pleasant for him when I wore gloves and allowed him to bite me harder. And there's no way those Thin gloves

would have protected me if he were really trying to hurt me; if he had been trying to do *damage*, he could have easily sliced through my gloves and cut me to the bone. *He was pulling his punches with me, even when I was wearing gloves and I allowed him to bite me much harder.* (It really was just horseplay.) Seeing as he didn't draw blood on me, chances are pretty good it was just friendly horseplay to him. (Although dogs do not eat a meat-only diet, both cats and dogs are predators with *powerful* jaws, and both are well strong enough to cut to the bone.) And really, from my perspective those interactions with the puppy were pleasant play, and from his perspective they were nice, friendly horseplay. I have felt no inclination to bite any of my pets, but if I had started nipping at him with equal force, his enjoyment would probably have been so much the better. Nothing says love like a playful nip and ten or twenty slobbery kisses.

That is part of why I am puzzled when I occasionally hear of a man who was training dogs, and as something the dogs would relate to, bit the dogs for discipline, and he was rightly arrested for cruelty to animals. Part of my response was, "Um... *why?* Was he biting the dogs too hard? Did he draw blood? Did he misunderstand some detail of how an adult dog would use biting to discipline a younger dog? Did the police enforcing the anti-cruelty laws for animals have any idea of what normal social interaction between dogs looks like?" I thought of wearing gloves with that one puppy because I found his playful nips more painful than I wanted, but I can say in general of cats and dogs, that if it nips or bites you and it doesn't draw blood, it almost certainly wasn't trying to hurt you. Even if, perhaps, we need to draw lines and *train* dogs that they need to restrain their natural playfulness when horsing around with people, which most dogs purchased as pets can do well enough.

From a dog's perspective, your hands are your paws, and if you are touching a dog with your paws, that means you want to play. Slapping a dog with your hand to discipline it (as opposed to, for example, pulling a chain attached to its collar, or hitting it over the snout with a rolled-up newspaper) comes across to a dog as an extremely confusing mixed message.

But more broadly than cats and claws, the question of how a single

working person can responsibly own a furry pet without cruelty is difficult (I do not say necessarily *impossible*: but at least difficult). And I've explored a few things, starting when I was in grad school in 2007.

For reasons I don't completely understand, people have made electronic *pets* that you wouldn't want to pet; there is a whole line of artificial cats, dogs, etc. that are usually not furry and do not look like something you'd want to pet. Just search for something like [robot pet](#) and look at the pictures.

But by accident, that's not the whole picture. I managed to get a Furby 2.0, and it seemed to be very well-done for its target audience of children, but have unnerving "uncanny valley"-like effects on me as an adult. I got my money's worth out of the purchase; I gave it to a friend's two-year-old where it became an almost instant hit and may have become his favorite toy. (Before letting it go, I quite deliberately gave it a fresh set of batteries, and showed both his parents where the "Off" switch was.)

Cue *Star Trek*. I am not the world's biggest *Star Trek* fan personally speaking; there was one conversation when cell phones had recently become a common thing to have, and a friend was gushing about *Star Trek*, and said, "And cell phones! What would our society be like today if there were no *Star Trek*?" (My response: "*We would have had much better science fiction?*") But *Star Trek* has many devoted fans, enough that when conditions would support it, it was economically viable to sell live, robotic, spayed-and-neutered Tribbles.

There is [a large variety of Tribble merchandise](#); I have had medium and small Tribbles, and the small ones have been much less interactive. But for a cubicle pet and for people like me who would like to own something furry but aren't in a position to take on a live pet responsibly and without cruelty in solitary confinement or whatnot, a Tribble may be the nicest thing out there.

# Christian Koans

A master observed that a novice was involved in many kinds of service and all kinds of good works. The master asked the novice, "Why do you do so many good works?"

"Because I am trying to make myself acceptable to God," the novice said.

The master set a tile before the novice, and began to polish it.

"What are you doing?", the novice asked.

"I am polishing this tile, to make it into a mirror."

"You can't make a tile into a mirror by polishing it!", the novice protested.

"And neither can you make yourself acceptable to God by good works," the master answered.

---

A scholar wrote an article saying, "The Bible shows evidence of post editing and was heavily influenced by the political climate of the day. Its interpretation depends highly on one's perspective."

A believer read the article, and said, "This article shows evidence of post editing and was heavily influenced by the political climate of the day. Its interpretation depends highly on one's perspective."

---

A man came to a believer and said, "You say that you know God exists. Prove it to me."

The believer said, "Do you have any matches?"

"Yes."

The believer took a napkin, and soaked it in water. "You say that you have matches. Set this napkin on fire."

---

Someone said to a believer, "If God performed a miracle in front of me, I would believe."

The believer held up a blade of grass.

---

A novice closed his eyes, folded his hands, and began to say, "Our Father, who art in Heaven..."

A master said, "What are you doing?"

"I am assuming the right posture and saying the right words to pray."

"You can't pray by assuming a posture and saying a specific set of words."

"Then how do you pray?"

The master closed his eyes, folded his hands, and began, "Our Father, who art in Heaven..."

---

A master saw a novice gulping from a bottle of wine. "What are you doing?", the master said.

"I had a really rough day. I need a drink."

The master threw the wine against a wall. "Never drink wine because you need to."

"Do you drink wine?", the novice asked.

"Yes."

"Why?"

"Because I do not need to."

---

A Catholic and a Protestant were having a debate about faith and works, versus faith which works. Someone looked on, and said, "Everything is subject to debate. There is no core of universal Christian faith."

A believer punched him between the eyes.

"What did you do that for?", he asked.

"My fist looked different to your two eyes. Therefore, I did not hit you."

---

A novice said to a master, "I want to be a great man. What is the first thing I should do?"

The master answered, "Forget about being a great man."

---

A novice asked a master, "How am I to resist temptation? My strongest efforts of willpower are not enough."

The master asked the novice, "How am I to put out that fire? All the gasoline I own is not enough."

---

A novice said to a master, "Which do you value more: the truth, or the ancient Christian way?"

The master grabbed the novice's nose.

"Your response makes no sense," said the novice.

"And neither does your question," answered the master.

---

A novice said to a master, "I want to be totally devoted to God. Tell me how I should talk, how I should dress, how I should act."

The master said to the novice, "I want to be spontaneous. Tell me how I should plan my day."

---

A novice said to a master, "I am humble."  
The master said, "No, you are not humble."  
Another novice said, "I am not humble."  
The master said, "That's right; you are not humble."

---

A novice handed a master a check, saying, "Here is some money, so that you will be happy."

The master put the check into the fire: "I wish the fire to be happy as well."

---

A computer professional said to a master, "I'm tired of wasting my time doing little things for God. I want to do something big and important."

The master said, "Tell me how to use a computer."

The professional said, "Well, first you turn it on, then y-"

The master interrupted him. "Don't waste my time talking about turning it on. I only want to know the important stuff."

---

A novice said to a master, "Where should I go to meet with God?"  
The master said, "The radiator vent you are standing on."

---

A novice said to a master, "Tell me how to find deep, hidden secrets. I want to know beyond what is given to ordinary people to know."

The master said, "There are piles of diamonds out in the open. Why do you go lurking in caves, chasing after fool's gold?"

---

A novice said to a master, "I am sick and tired of the immorality that is all around us. There is fornication everywhere, drunkenness and drugs in the inner city, relativism in people's minds, and do you know where the worst of it is?"

The master said, "Inside your heart."

---

A man went to a cathedral where he had heard many miracles had occurred, visions of Heaven. "I have come all the way from America, to find God," he told one of the believers.

"Aah. God has gone all the way to America, to find you."

---

A novice once said to a master who was maimed, "Do you ever ask, 'Why me?'"

The master said, "Yes, frequently. I ask God every day why he has given me so many blessings."

---

A master was working at a soup kitchen, serving food, talking with the guests, listening to their stories.

"What are you doing?", a novice asked.

"I am praying and telling God how much I love him."

Later, after everyone had left, the master folded his hands, and said, "God, you are so awesome. Thank you for making me your child. I love you. Thank you for..."

The novice asked, "What are you doing?"

The master said, "I am loving God's precious children."

---

Someone said to a master, "What about the people who have never heard of Christ? Are they all automatically damned to Hell? Tell me; I have heard that you have studied this question."

The master said, "What you need to be saved is for you to believe in Christ, and you have heard of him."

---

A feminist theologian said to a master, "I think it is important that we keep an open mind and avoid confining God to traditional categories of gender."

The master said, "Of course. Why let God reveal himself as masculine when you can confine him to your canons of political correctness?"

---

A novice said to a master, "My master, teach me!"

The master said, "How can I teach you? I am a novice, and you are a master."

---

A novice and a master were walking together. The master said, "Oh, how it distresses God to see all the heresies and schisms in the Church."

The novice said, "How do you know what God feels? You're not God."

The master said, "How do you know whether or not I know what God feels? You're not me."

---

A novice said to a master, "I wish that Christ were still around, that we could love him."

The master picked up a little girl, and gave her a kiss.

---

One person said, "The Christian message is narrow-minded of different belief systems."

Another said, "No, it is Christian missionaries and evangelists who are narrow-minded and intolerant of any different belief system."

A master said, "Neither of you are right. It is you who are narrow-minded and intolerant of any really different belief system."

---

A novice said to a master, "I want to serve God. What denomination should I join?"

The master said, "I want to be healthy. What part of my body should I cut off?"

---

Someone said to a master, "God is love, so he can't condemn homosexual practice."

The master said, "Doctors want people to be healthy, so they can't call cancer 'sickness'."

---

A novice said to a master, "Take me to your highest priest."

The master introduced him to each believer present, saying, "This is the highest priest. You will not find a more sacred priest."

---

A novice asked a master, "Do you believe that some days are especially holy, or that all days are equally holy?"

The master said, "Yes."

---

A novice asked a master, "How should I empty my mind of lust?"  
The master said, "Fill it with Christ."

---

A physicist said to a master, "I believe my own private religion, which I design to suit me, provide me with meaning, and make me happy. What better suited religion can you possibly claim to have?"

The master began to write on a sheet of paper, "Gravity shall pull things together except on Tuesdays and Thursdays, when gravity shall have no effects whatsoever. Objects at rest tend to begin to move; objects in motion tend to ..."

"What on earth are you writing?", the novice said,

"I believe my own private physics, which I design to suit me, provide me with meaning, and make me happy. What better suited physics can you possibly claim to have?"

---

A wealthy novice came to a master, and said, "Teach me!"

The master said, "Scrub out all the wastebaskets."

The novice scrubbed out the wastebaskets and returned. The master did not give a word of thanks, so much as a smile. "Now weed the garden."

The novice weeded the garden and returned. The master did not give a word of thanks, so much as a smile. "Now give us your car."

The novice gave him his car, and then said in frustration, "Why haven't you shown so much as a hint of gratitude? I have done menial service and given you my own car. Isn't that a lot?"

The master said, "Yes, it is a lot, but we need neither your service nor your car. You came to us proud and accustomed to luxury. We gave you an opportunity to taste humble service. We gave you an opportunity to let go of a cherished possession. It is you who should be grateful."

---

Someone said to a master, "Come to our forum. We talk and debate, and express our values and opinions. There is complete freedom, and anybody can believe anything he likes."

The master said, "Do you masturbate?"

A shocked voice said, "What?"

The master calmly clarified, "Do you do with your genitals what you boast of doing with your mind?"

---

Someone said to a master, "I want to believe in God. Persuade me, so that I can believe."

The master said, "I want you to be filled, but I can never eat enough to satisfy your hunger."

---

A philosopher said to a master, "Our judgements can err. I try to doubt things and disbelieve what cannot be proven, so that I will not hold false beliefs."

The master closed his eyes.

"What are you doing?", the philosopher asked.

"When I walk, I sometimes bump into things," the master explained.  
"I am closing my eyes so that the room will be empty."

---

A novice came to a master, talking about the many evil things that stained Church history. After he had finished, the master said, "May I pour you a Coke?"

"Sure."

The master returned with a glass full of icewater, and a two liter bottle of soda. He opened the bottle, poured until the glass was full to the brim - and then kept on pouring. The liquid flowed over the edges of the glass, pouring all over the gable, and spilled onto the floor.

"Stop!", the novice protested. "What are you doing?"

"This glass cannot have any more soda poured into it until it is first emptied. And neither can you grasp the truth until you let go of thinking of the Church as you do now."

---

A CEO sent a business card to a master, listing his name and title. The master sent a novice, saying, "Send him away. I have no time to waste with such a person!"

The visitor then scratched out his title and degrees, sending the card back with only his name.

"Aah, send him in!", the master said. "I have been longing to meet that fellow."

---

A visiting liberal theologian was talking with a master and said, "We have found a way of interpreting the whole Bible that is in accordance with our progressive and liberated beliefs."

At that moment, the power went out, and the room was plunged into darkness.

"Just a minute," the master said, and returned with a candle and some matches. He lit the candle, and they talked for a while longer.

After a time, the theologian wanted to get off to bed, and the master said, "Here, take this candle; it will light your way so that you will not stumble."

As the visitor received the candle, the master blew it out.

---

A visiting novice said to a master, "I have been taught to carefully live by rules and not do anything that might cause me trouble, in order that I not do wrong."

The master took a heavy stone, and dropped it on a small crystalline statuette, crushing it to dust. "I have protected that statue with a great stone, so that nothing can harm it."

---

A novice asked a master, "Have you made much progress over what the Church used to believe in ancient times?"

The master said, "None of us considers himself wise enough to do better than what God has declared to be true. Do you?"

---

A novice asked a master, "Are you Catholic or Protestant?"

The master said, "Yes. No. Both."

The novice said, "Please. It will help me better understand where you are coming from."

The master said, "Is the elephant in your closet eating peanut butter? Answer me now, yes or no."

"If I say either 'yes' or 'no'," the novice protested, "I will deceive you and set back your understanding greatly."

"And if I say either 'Catholic' or 'Protestant'," the master answered, "I also will deceive you and set your understanding back greatly. I am a Christian. If you think anything more, you will know less."

---

A novice told a master, "I am going to seminary."

"Why?", the master asked.

"To become well-versed in Scripture and Christian doctrine."

The master began to walk out of the room.

"Where are you going?", the novice asked.

"I am going to the garage," the master answered.

"Why?", the novice asked.

"To become a car."

---

Someone challenged a master, saying, "The Bible and Christian tradition say, first, that God the Creator is all powerful, second, that God the Creator is all good, third, that God the Creator is all wise, and fourth, that there is evil in God's creation now.

"These contradict each other, so one of them must be false. Which one do you deny?"

The master said, "I deny the one that says that your mind has the power, the wisdom, and the authority to put God in a box and say, 'These contradict each other, so one of them must be false. You're wrong, God.'"

---

"And in conclusion," the speaker said, "truly understanding the overall teaching of Scripture requires that one disregard problematic passages such as the 'Do not resist evil.' in the Sermon on the Mount that was brought up earlier."

"I agree completely," the master said, "To get a good view of the forest, it is essential to chop down all the trees that keep obstructing your view."

---

Someone told a master, "I memorize the Scriptures so that I will be able to answer anyone who comes to me, with the very words of God."

The master said, "Let me tell you about that painting on the wall," and described in perfect detail every hue, every brush stroke.

"Very well," the visitor said, "but what is the painting a picture of?"

"Very well," the master said, "but what is the Bible about?"

---

A novice asked a master, "Can't God let even one of the damned enter into Heaven?"

The master said, "By the time the damned will enter Hell, they will be so steeped in evil that even Heaven would be Hell to them."

---

A novice said to a master, "How can I reach up to God?"  
The master said, "Let God reach down to you."

---

A Star Trek fan told a master, "Christianity is like the Borg, sucking in every nation and race it can, making them like itself. I, for one, refuse to be assimilated."

The master hung his head. "It is so sad."

"What is so sad? That Christianity wants to assimilate me? That I refuse to be assimilated?"

"That the Borg has already assimilated you, and you believe it to be perfection."

# **The Christmas Tales**

## Prologue

Another gale of laughter shook the table. "But it always seems like this," Father Bill said. "The time for fasting has passed, and now we are ready to feast. People melt away from the parish hall to enjoy Christmas together, and there is finally one table. Outside, the snow is falling... falling... wow. That's some heavy snowfall."

Adam looked around. "Hmm... That car in the street is having trouble... Ok, it's moving again. I wouldn't want to be driving home in this snow."

Mary smiled. "Why don't we go around the circle, and each tell a story, or share something, or... something? I think we're going to be here for a while."

And so the stories began.

## **Innocent's Tale: The Apostle**

Innocent said, "I was visiting with my nephew Jason, and he asked me, 'Why are you called Innocent now, or Uncle Innocent, or whatever?' I told him that I was named after one of the patron saints of America, called Apostle to America.

"He said, 'Patron saint of America? I bet he wasn't even an American! And I bet you're going to tell me his boring life!'

"I smiled, and said, 'Sit down, kid. I'm going to bore you to tears.'" And this is how he tried to bore Jason to tears.

---

Where should I start? He was born just before 1800 into the family of a poor sexton. Stop laughing, Jason, that means a church's janitor. The saint was reading the Bible in church at the age of six—the age he was orphaned at. He went to seminary, and aside from being the top pupil in everything from theology and rhetoric to languages, he was popular with the other seminarians because he invented a pocket sundial, and everybody wanted one. This wasn't our time, you couldn't buy a digital watch, and... I think that was cool. He loved to build things with his hands—later on, he built a church with his own hands, and he built a clock in the town hall of—I forget where, but it's in Alaska, and it's still working today. He would also teach people woodworking. So he was a tinkerer and an inventor. Among other things. Among many other things. At school, he learned, and learned, and learned—Slavonic, Latin, Greek, for instance, if you wanted to look at languages. At least that's what he learned at school. That doesn't count the dozen or two languages he learned when he got out into the world and started to travel—his version of courtesy seemed to include learning people's languages when he traveled to their countries.

He was a bit of a Renaissance man. But he did more than languages. His biggest gifts were his humility, patience, and love for all people, but if we forget those, he had a spine of solid steel. He became a deacon and then a priest, and his wife broke down in tears when the bishop asked for someone to go to the terrifying and icy land of Alaska and he was the one volunteer for it. This man, who was not afraid of Siberia, was not afraid of Alaska either, and later on, when he became a bishop, he thought it was a bishop's duty to visit all the parishes he was responsible for, and so would travel to all the parishes, by reindeer, by kayak, by dogsled. This wasn't just cool that he could travel different ways. He would carry his little boat... and kayak up rivers of icewater... when he was 60. Yes, 60. This super hero was real.

He traveled a lot, and met peoples, and understood their languages and cultures. Back when Western missionaries were teaching Africans that they had to become European to be Christian, he came to people, learned their languages, and tried to model Christ's incarnation by taking the flesh of their culture. There were some things he changed—he stopped child sacrifice—but, well, let me think. He did teach woodworking, and he gave the Aleuts a written language. But he never

woodworking, and he gave the Aleuts a written language. But he never tried to make the people into copies of himself. And he was a very effective evangelist. He learned the dialects and languages of Aleutians, Koloshes, Kurils, Inuit, Kenai, Churgaches, Kamchadals, Oliutores, Negidates, Samogirs, Golds, Gulyaks, Koryaks, Tungus, Chukcha, Yakutians, and Kitians. And he wrote grammars for some of their languages, and his ethnographic, geographic, and linguistic works got him elected an honorary member of the Russian Geographical Society and Moscow Royal University.

What does this have to do with America? Jason, our country is bigger than just white people. Now we think of "bigger than white people" as recognizing how fortunate we are to have blacks, Asians, and Hispanics. But a lot of people in Alaska aren't white. The first nations didn't get exterminated. Saint Innocent is a large part of why the original Americans are to this day known to be over a third Orthodox. And Saint Innocent was elected Bishop of China—sorry, I forgot about that—and he also wanted a diocese for America, and wanted everything to be in English. He created written service books and translated part of the Bible for the Aleuts, and he had a sort of vision for an American Orthodox Church. If you don't believe me that he has something to do with America, and you don't count his extensive work in Alaska and beyond, you can at least take the U.S. Government's word for it when they made him an honorary U.S. Citizen. What's so special about that? Well, let me list all the other people in our nation's history who've been granted that honor. There's Winston Churchill, and the Marquis de LaFayette, and... as far as I know, that's it. Jason, you know about the Congressional Medal of Honor? Being made an honorary citizen is much rarer than that!

After all these things, he was made Patriarch of Moscow—one of the top five bishops of the world, with huge responsibility. And after all he had done, and with the new responsibility that had been given to him... He was basically the Orthodox President of the United States, and he still kept an open door. Anyone, just anyone, could come and talk with him. And whoever it was, whatever the need was, he always did something so that the person walked out... taken care of. Now it's not just amazing that there was one person who could do all of these things. It's amazing that there was one person who could do *any* of these things.

Is your Mom here already? I haven't talked about the humanitarian work he did, how when he came to power he worked hard to see that the

poor and needy were cared for. I haven't talked about what it was like for Russians to be at the Alaskan frontier—they called it, not West, but the utter East. And it attracted some pretty weird customers. I haven't talked about the other saints he was working with—Saint Herman, for instance, who defended people against Russian frontiersmen who would kill them, and baked biscuits for children, and wore chains and dug a cave for himself with his hands, and... um... thanks for listening.

Just remember, this is one of the saints who brought Orthodoxy to America.

## **Adam's Tale: The Pilgrimage**

John said, "Adam, I haven't heard you tell me about your summer vacation. You know, when you went to pick up the icons that our parish commissioned from St. Herman's Monastery in Alaska. How was it?"

This is Adam's story.

---

I probably already told you what happened this summer. It turned out to be somewhat exciting. I was going to drive from our parish, take my old car to my sister in L.A., and fly to the holy land of Alaska and buy icons from St. Herman's Monastery.

I debated whether I needed to ask Father for a traveler's blessing. When I went up and asked him how to best profit from a journey that looked too quiet, he said, "You do not know until tomorrow what tomorrow will bring."

A day into the journey, I was passing through Chicago, intending to take a direct route through the south side of Chicago. I felt the voice of the Spirit saying, *North side.*

My stomach got tighter as I drove through the South Side, and got tighter until I was sitting at a red light, alone. The voice said quite urgently, *Burn rubber.*

I waited for a green light. Just a second before, six youths with guns surrounded the car. "Out of the car! *Now!*"

I almost wet my pants. The voice moved gently in my heart and said, *Open the window and talk about Monty Python.*

"What?" I thought.

*Open the window and talk about Monty Python.*

I opened the window and started half-babbling. "Do you watch Monty Python? It's a TV show, has some nudity, you should like it, and has a sketch about the man with a tape recorder up his nose. There's a self-defense series where this man is teaching people how to defend themselves against various types of fruit—what do you do if someone attacks you with a passion fruit or a banana, for instance?"

*Talk about the orange on the dashboard.*

"For instance, what would you do if I attacked you with this orange?"

"Out!" the youth bellowed.

*Tell him you have GPS alarms and security cameras.*

I grumbled in my heart: that's not true, and it'll just make him madder.

*Tell him you have GPS alarms and security cameras. And that he's on candid camera.*

"Did you know this car has a GPS alarm and security cameras hidden all over the place? Smile! You're on candid camera."

He grabbed my coat and put his gun to my head. "You can't lie worth beep! Shut your blankety-blank hole and get out *now!*"

I blinked, and listened to the still, small voice. "Did you know that my cousin works for the FBI? You can leave fingerprints on leather, like my jacket, if your glove slips the teensiest, weensiest bit—in fact, you've done so already. If you shoot me, you'll have your fingerprints on a murder victim's clothing, and in addition to having the Chicago Police Department after you, you'll have a powerful FBI agent who hates your guts. Smile! You're on candid camera."

He looked down and saw that his glove had slipped when he grabbed my coat. He could see I was telling the truth.

Five seconds later, there wasn't another soul in the place.

I pulled through the rest of Chicago uneventfully, drove into a super market parking lot, and sat down shaking for an hour.

From that point on it was a struggle. I was jumpy, like when you've drunk too much coffee. I jumped at every intersection, and prayed, "Lord, keep this car safe." And it seemed odd. There seemed to be more people cutting me off, and driving as if they wanted an accident with me. Maybe that was my jumpy nerves, but this time I didn't even notice the scenery changing. Finally, I came in sight of my sister's suburbs, and prepared to get off. I relaxed, and told myself, "You've done it. You've arrived safely."

A car cut me off and slammed on the brakes. I swerved to the right, barely missing it, but scraping off paint when I ran into the shoulder's guardrail.

I turned my head to see what on earth that person was doing. And slammed into an abandoned Honda Accord in front of me.

I was doing about 77 miles per hour when this started, and I totaled both cars. Thank God for airbags; I was completely unscathed. My cell phone still worked; I called the state troopers, and then told my sister what had happened. It seemed forever before the troopers came and filled out a report; I eventually called for a cab.

I arrived at my sister Abigail's house, obviously looking like a wreck; we talked a bit, and she went up to bed. I could hear her snoring, and I wanted to read a bit before going down. I opened her Bible, when I realized something unpleasant. The basement door was open—I couldn't see down the steps.

Her cat was at the top of the stairs, his back arched, every hair raised, hissing. I very slowly closed the Bible and

missing. I very slowly closed the Bible and—

*Open the Bible.*

I got up.

*Sit down.*

I stood all the way up.

*Sit down.*

I sat down, and a kind of spiritual seeing came as I followed.

*Open the Bible to the concordance and look up 'Emmanuel'.*

I was trying hard not to get up and dial 9-1-1. That was nearly the only thought in my head, but I saw the references to Emmanuel. I immediately began flipping to the passage in Matthew, where Christmas tale has the prophecy of the virgin bearing a son, and... *Not Matthew, but Isaiah.* It was about all I could do not to get up immediately and dial 9-1-1. But I looked, and read... That's the passage where the king of Israel is trembling before the kings of two neighboring powers, and God tells him that if he does not stand firm in his faith, he will not stand at all, and then

—

Therefore, the Lord himself will give you a sign. Behold, the virgin shall conceive and bear a son... and before he knows how to refuse the evil and choose the good, the land of those two kings you dread will be desolate ruins.

I thanked the Lord for that reading, and got up, and sat down when my stomach got tighter, and finally made the decision to wait as long as the Spirit said, or not call 9-1-1 at all.

*Call 9-1-1.*

I raced over to the phone as quickly as I thought I could move quietly.

The operator exuded an air of calm and competency, and began telling me what the police were doing. "There are several police officers nearby. [pause] They're coming onto your property. They see you've left the back door open, so they're coming through your back door—"

She didn't pause, but I saw four police officers moving very quickly and very quietly. All of them were wearing bulletproof vests. Three of them were big, burly men, with their guns drawn. One of them was a sweet-looking petite policewoman with both hands on a massive shotgun. These police were not messing around.

"They're going through the house. They're going down the basement —"

"Police! *Freeze!*" a voice barked.

Then I heard laughter.

How dare the police laugh in a situation like this? Did they not fear intruders?

One of the police officers came up, trying hard to maintain his composure.

He wasn't succeeding.

My sister Abigail came down with a classic bedhead. "What's going on?"

I heard a voice say, "Come on. Up the stairs you go." The last police officer was dragging a large golden retriever, which had its snout in a leftover ravioli can and a food wrapper stuck to one of its paws, and looked none too dignified.

The first officer managed to compose himself. "I'm sorry. Your back door was left open, and someone's dog was downstairs rummaging through your trash. This gentleman was concerned that it might have been an intruder."

Abigail glared at the dog. "Jazzy! Bad dog!"

The dog dropped the can, put its tail between its legs, and backed up, whimpering.

The officer looked at her. "You know the dog?"

"Yes, Officer," she said. "We can check her tags to be sure, but I think she belongs to a friend who is absolutely sick worrying about where the dog is. Is the number on the tags 723-5467? I'll call her in a minute, and don't worry, I can handle this lovable rascal. Can I get you anything to drink? I've got soy milk, apricot nectar, Coca-Cola, Perrier, Sobe, Red Bull, and probably some other energy drinks in the fridge."

The officer now seemed to be having less difficulty composing himself. He looked at the dog's tag, and said, "Thank you; that won't be necessary." He turned to me. "You did all the right things calling. If there's something like this, you have every reason to dial 9-1-1. Thank you for calling us. Is there anything else we can do for you?"

"No; thank you, officers. It was very reassuring to have you come." As the officers prepared to leave, Abigail looked at me and said, "Don't worry about the car; it was still on insurance. I prepared a sleeping bag for you on the couch, and there's Indian take-out in the fridge. Can you get to bed?"

I said, "It'll probably take me a while. This has been an eventful day, and my heart is still thumping. Besides, I just saw you with your bedhead

and my heart is still thumping. Besides, I just saw you with your beanie, and I'll need extra time to recover from that."

She threw a cushion at me.

When I finally did get to sleep, the words I had read kept running through my mind.

*Get up*, the voice said. "I'm waiting for my watch alarm," I grumbled, or something like that, only much muddier. I wanted to sleep in. Then I looked at my watch.

When I saw the time, I was very suddenly awake. I threw my suitcase together, and shouted Abigail awake. In less than ten minutes we were on the road.

I waited for the fear to begin. And waited and waited. We hit every green light except two—only two red lights on the way to the airport, and on the way to the airport everything went smoothly. This was the fastest time I'd gotten through airport security in my life—at least since 9-11, and I got on to the airplane, and slept all the way. A stewardess had to shake me awake after we landed.

What can I say about Alaska? There's so much that you miss about it if you think of it as another U.S. state. It belongs to its own country, almost its own world.

When I arrived, it was the time of the midnight sun, a time of unending light. It was rugged, and nobody seemed... This is a tough land, with tough people. And it's a holy land, the land where saints struggled and first brought Orthodoxy to this continent. The first holy land was one where people struggled in searing heat. This holy land was one where people met unending light, unending darkness, warm summers and bitter winters, Heaven and Hell. Its chapels are like Russia still survived, like Russia wasn't desecrated in 1917. There are poor and simple wooden chapels...

The best way I can describe it is to say that a veil has been lifted. We live in the shadow of the West, and we see with Western eyes. It's so easy to believe that there is no spirit, that dead matter is all there is.

Pentecostals today have exhortations to believe that Jesus still heals today; the people who asked for healing in the New Testament did not believe that Jesus was the Son of God; they just had the windows of their souls open enough to ask him for healing and believe it could happen. The West has closed our souls to believe that there is nothing a skeptic could deny, there is no chink for wind to blow. And that's not how it is

where I went. The veil was lifted; there were chinks for the wind, the Spirit to blow. When I walked into the wooden chapels and churches, they looked poor and crude and nothing like our perfectly machined churches with perfectly smooth, airtight walls, and the saints were there. I wasn't looking at the icons; I was looking *through* them, to see Heaven. And I had a feeling that the saints were looking through the icons to see me.

The monks at the monastery received me as if I were a saint; it was one of the most humbling welcomes I've received. I hope someday that I'll treat others as well as they treated me.

Before I left, I prayed before St. Herman's remains, and I could almost reach out and touch him, he was so present. There were hardships on Alaska, hard beds and few luxuries and no Internet connection, but I don't remember that. It was—

And then... I don't know what to say. I didn't want to leave. I prayed. *You are needed back home. You cannot stop time.* I left, with reverence.

It was back when I was sitting in my mass-produced office, when I realized that my heart had not left Alaska. It wasn't just that I wished I was back there. There was something deeper. When I prayed before the icons I had brought back for our parish, I could feel the saints watching me and praying for me. Then other icons seemed to be more... alive as windows of Heaven. I left to Alaska and found that veil over the reality of spirit had been pulled aside. I left Alaska and believed that only in Alaska could that veil be pulled aside—that outside of Alaska, everything worked as a skeptic would predict. And I found to my surprise that I have never left Alaska. Temptations no longer seem to just happen. Neither do icons just seem boards with paint. It's like I don't see in black and white while straining to see color any more; I see color, or at least a little bit more in color. And it can be terrifying at times; visible demonic activity is more terrifying than things that is masked as just an unfortunate coincidence, whether it is a temptation or things going wrong, but...

I think that God sent me to Alaska so I could do a better job of serving him here.

## Mary's Tale: Mary's Treasures

John finally spoke. "What's that you're humming, Mary? A penny for your thoughts."

Mary continued humming for a moment, and then sung, in a far-off, dreamy, sing-song voice,

Raindrops on roses,  
And whiskers on kittens,  
Bright copper kettles,  
And warm woolen mittens,  
Brown paper packages,  
Tied up with strings...

"I was just thinking about what I have to be thankful for, about a few of my favorite things."

Her husband Adam held out his hand. "What are they?"  
She slipped her hand into his. "Well..."

---

I am thankful for my husband Adam, the love of my life. He is a servant to God, the best husband in the world to me, and the best father in the world to our daughter Barbara.

I am thankful for my mother. She is practical and wise. She is also beautiful. If you think I am pretty, you have seen nothing of the loveliness etched into her face, the treasure map of wrinkles around her kind, loving eyes. She taught me... I don't know how to tell you all the things she taught me. And I am fortunate to have my mother and her mother alive.

My grandmother... When I close my eyes, I can still smell her perfume. I can walk through her garden and see the ivy climbing on the trees, the wild flowers roosting. She thinks her garden has lost what she used to give it. I only see... I don't know how to describe it.

I am thankful for my father. He was a gruff man with a heart of gold. I still remember how every Christmas, as long as he was alive, he gave me a present carved out of wood.

I am thankful for my daughter Barbara, the other love of my life. I remember how, it was only this year, she asked for some money to go shopping at school, where they have a little market where you can spend \$2.00 for a bottle of perfume that smells... to put it delicately, it hints at a gas station. I gruffly said that there were better ways to spend money, and that if she really needed something, she had her allowance. That day I was cleaning her room, and saw her piggy bank empty. She came back after lunch and said, "I have a present for you." I looked, and saw a bottle of perfume. That bottle is on the shelf for my best perfumes, because it's too precious for me to wear when she doesn't ask me to.

I am thankful for the flowers I can grow in my garden. Right now it looks nothing like my grandmother's garden. I still hope I'll learn to make a garden beautiful without neat little rows, but for now I work hard to see the flowers in neat little rows.

I am thankful for God, and for *metanoia*, repentance. There was something I was struggling with yesterday, a cutting word I spoke, and I was terrified of letting it go, then when I did... it was... Repenting is the most terrifying experience before and the most healing after. Before you're terrified of what will happen if you let go of something you can't do without, then you hold on to it and struggle and finally let go, and when you let go you realize you were holding onto a piece of Hell. I am thankful

for a God who wants me to let go of Hell.

I'm thankful for wine. That one doesn't need explaining.

I'm thankful for babies. It's so nice to hold my friends' babies in my arms.

I'm thankful for—if you go to the [Orthodox Church in America](http://oca.org) website at [oca.org](http://oca.org) and click on [Feasts and Saints of the Church](#) followed by [Lives of the Saints](#), there are the lives of many saints. There's a whole world to explore, and it's fascinating to see all the women to look up to. I'm not saying I could measure up to any of them, but... it's something to read, even if I couldn't be like any of them.

I'm thankful for Beethoven's moonlight sonata. Every time I hear it, it's like a soft blue fog comes rolling in, and I'm in a stone hut in the woods lit by candlelight, and I can see the softness all around me. I can feel the fur of the slippers around my feet as I dance in the woods, and I can feel the arms of the one I love wrapped around me.

I'm thankful for all of my husband's little kindnesses.

I'm thankful I didn't run out of any office supplies this week.

I'm thankful our car hasn't broken down this month. We've gotten more mileage out of it than we should have. but we can't afford a new one.

I'm thankful that all of the people in my family, near and far, are in really good health.

I'm thankful that Adam screws the cap onto the toothpaste and always leaves the toilet seat down.

I'm thankful that April Fool's Day only comes once a year. Believe me, in this family, once a year is plenty!

I'm glad that the Orthodox Church is alive and growing.

I'm thankful for all the dirty laundry I have to do. We have dirty laundry because we have enough clothes, and we have dirty dishes because we have food.

I'm glad that Barbara has helped me make bread and cookies ever since she was big enough to stand and drool into the mixing bowl.

I'm profoundly grateful my husband doesn't make me read the books he likes.

I'm glad Adam always remembers to bring a half-gallon of milk home when I ask him, even if he's had a busy day.

I'm glad that when Adam comes home, he asks me to tell him everything that happened in my day, so that I can help him concentrate

everything that happened in my day, so that I can help him concentrate on what he's thinking about.

I'm thankful that Adam doesn't criticize me when I know I'm wrong, and never humiliates me.

I'm glad that Adam doesn't stick his thumb in my eye like he did when we were dating, and sometimes he doesn't even step on my foot when we dance together... and *sometimes* he doesn't even—*Ow!* Ok, ok! I won't tell that one!

Let's see. This is getting to be all about Adam. I really appreciate having confession, where you let go of sin and it is obliterated. I appreciate how the worship at church flows like a creek, now quick, now slow, now turning around in eddies. I appreciate that our parish is more than a social hub, but it's a place I can connect with people. And I appreciate... let me take a breath...

---

Mary dimpled. "And..." She squeezed Adam's hand. "There's one more thing. Thank you for praying and keeping us in your prayers for well over a year. We're expecting another child." She blushed and looked down.

And Mary pondered all these treasures in her heart.

## **Paul's Tale: Another Kind of Mind**

Paul leaned forward and began to tell...

---

When I was younger, I had the nickname of "The Razor." It seemed like my mind would cut into anything I applied it to. When my friends saw the movie *Dungeons & Dragons*, they were appalled when they asked me for my usual incendiary review and I said, "As far as historical fiction goes, it's better than average." It wasn't just the line where a dwarf told an elf he needed to get a woman who weighed two hundred and fifty pounds and had a beard he could hang on to—that single line gave an encounter with another culture that is awfully rare in a classic like *The Witch of Blackbird Pond*. I had liked the beginning impassioned "How dare you fail to see that everybody's equal?" Miss America-style "I get my opinions from *Newsweek*" speech about the evils of having a few elite magi rule. That was mercifully hitting you on the head with something that's insidious in most historical fiction—namely, that the characters are turn-of-the-millennium secular people in armor, conceived without any empathy for the cultures they're supposed to represent. It had the courtesy not to convince you that that's how medievals thought. Plus the movie delivered magic, and impressive sights, and people who enjoyed the benefits of modern medicine and diet, a completely inappropriate abundance of wealth, and everything else we expect in historical fiction. The movie is clumsily done, and its connection to the medieval way of life is tenuous, but it has a pulse. It delivers an encounter that most viewers weren't expecting. Namely, it provides an encounter how D&D is played—despite what some critics say, it's not a botched version of "Hollywood does fantasy", but a good rendering, even a nostalgic rendering, of a rather uninspired D&D session. And at least for that reason, it has a pulse where most historical fiction doesn't. As far as a seed for discussion goes, I said I'd rather start with *Dungeons & Dragons* than with most of the historical fiction I know of.

I was known for using the term 'assassin's guild' to refer to any organization that derived profit from causing people's deaths. This meant not only a cigarette manufacturer like Phillip Morris, or Planned Parenthood, but included more respected organizations like Coca-Cola, which murdered South American unionizers, or department stores, where human blood was the price paid to offer items so cheap. I'm sure you've seen the email forward about what happened when a young man asked Nike to sell him a pair of shoes with the word "sweatshop" on the side. There are disturbingly many things like that that happen, and I was

side. There are disturbingly many things like that that happen, and I was acute at picking them out.

So D&D and the assassin's guild represent two of the things I could observe, and I observed a great deal of them. Wherever I placed the cynic's razor, it would slice. I was adept at cutting. No one could really stand against me.

I still remember a conversation with one friend, Abigail. She said to me, "I don't doubt that everything that you see is there." Abigail paused, and said, "But is it good for you to look at all that?" I remembered then that I gave her a thousand reasons why her question was missing the point, and the only response she made: "Have you ever tried looking for good?"

I had no response to that, and I realized that the back edge of the razor was dull when I tried to look for good. I looked and I saw evil, but it was years of work before I could perceive the good I never looked for. Earlier I thought that politeness was in very large measure a socially acceptable place to deceive; now I saw that ordinary politeness, such as I used to scorn, had more layers consideration and kindness that I would have ever guessed.

Some years later, I met with an Orthodox priest, and we began to talk. It was Fr. Michael; you know him, and how he welcomes you. After some time, I said, "You don't know how much better it is now that I am using my intellect to perceive good." He looked at me and said, "What would you say if I told you that you don't even know what your intellect is?"

I looked at him. "Um... I have no place to put that suggestion. What do you mean?"

He closed his eyes in thought. "You're a bookish fellow. Have you read Descartes, or the Enlightenment's enthronement of reason, or even the popularizations of science that good scientists wince at?"

I said, "A little."

He said, "I think you mean yes."

I tried not to smile.

He continued, "Read Plato for something that's a little saner. Then read John Chrysostom and Maximus Confessor. Try on the difference between what they say about the mind."

I said, "I'm sure I'll find interesting nuances on the concept of mind."

Before leaving, he said, "So long as you've found only nuances on a concept of mind, you have missed the point."

That remark had my curiosity, if nothing else, and so I began to read. I began trying to understand what the different nuances were on the concept of mind, and... It was a bit like trying to mine out the subtle nuances between the word 'Turkey' when it means a country and 'turkey' when it meant a bird.

When someone like John Chrysostom or Maximus Confessor talks about the "intellect," you're setting yourself up not to understand if you read it as "what IQ is supposed to measure." Intellect *does* mean mind, but in order to understand what that means, you have to let go of several things you don't even know you assume about the mind.

If you look at the vortex surrounding Kant, you think that there's a real outer world, and then we each have the private fantasies of our own minds. And the exact relation between the fixed outer world and the inner fantasy varies; modernism focuses on the real outer world and postmodernism on the private inner fantasy, but they both assume that when you say "inner" you must mean "private."

But what Maximus Confessor, for instance, believed, was that the inner world was an inner world of spiritual realities—one could almost say, "not your inner world, not my inner world, but *the* inner world." Certainly it would seem strange to say that my inner world is my most private possession, in a sense even stranger than saying, "My outer world is my most private possession." And if you can sever the link between "inner" and "private," you have the first chink between what the intellect could be besides another nuance on reason.

Out of several ways that one could define the intellect, one that cuts fairly close to the heart of it is, "Where one meets God." The intellect is first and foremost the spiritual point of contact, where one meets God, and that flows into meeting spiritual realities. Thought is a matter of meeting these shared realities, not doing something in your mind's private space. The intellect is mind, but most of us will have an easier time understanding it if we start from the spirit than if we start at our understanding of mind.

The understanding of knowledge is very different if you have a concept of the intellect versus having a concept of the reason. The intellect's knowing is tied to the body and tied to experience. It has limitations the reason doesn't have: with reason you can pick anything up that you have the cleverness for, without needing to have any particular

character or experience. If you're sharp, you can pick up a book and have the reason's knowledge. But the intellect knows by sharing in something, knows by drinking. Someone suggested, "The difference between reason and intellect, as far as knowledge goes, is the difference between knowing about your wife and knowing your wife." The reason knows *about* the things it knows; the intellect knows *of* things, by tasting, by meeting, by experiencing, by sharing, by loving.

And here I am comparing the intellect and the reason on reason's grounds, which is the way to compare them as two distinct concepts but not to meet them with the deepest part of your being. We know Christ when we drink his body and blood. Something of the intellect's knowing is why words for "know" are the main words for sexual union in the Bible: "Now Adam knew Eve his wife", and things like that. While the reason puts things together, by reasoning from one thing to another, the intellect *sees*, and knows as the angels know, or as God knows.

And when I asked him, "When can I learn more of this?" Fr. Michael said, "Not from any book, at least not for now. Come, join our services, and they will show you what books cannot." I was startled by the suggestion, but Orthodox worship, and the Orthodox Way, gave me something that Maximus Confessor's confusing pages could not. The concept of the intellect does not appear as a bare and obscure theory in Orthodoxy any more than the concept of eating; people who have never heard of the 'intellect', under any of its names, are drawn to know the good by it. It's like a hiker who sees beauty on a hike, strives to keep going, and might have no idea she's getting exercise.

The lesson I'm now learning could be narrowly stated as "Theology is not philosophy whose subject-matter is God." I pretended to listen politely when I heard that, but philosophy is reason-knowing and theology is intellect-knowing. It's unfortunate that we use the same word, "know," for both. Christ said, "Seek first the Kingdom of Heaven, and all these things shall be added to you." Originally he was talking about food and drink, but I've come to taste that "all these things" means far more. I sought a knowledge of the good, and so I was trying to think it out. Since I've begun to walk the Orthodox Way, as how God wants me to seek the Kingdom of Heaven, I've tasted good in ways I would never have imagined. When I first spoke with Fr. Michael, I was hoping he would give me more ideas I could grasp with my reason. Instead he gave me an invitation to step into a whole world of wonder I didn't know was open to

invitation to step into a whole world of wonder I didn't know was open to me, and to enter not with my reason alone but with my whole life.

When we worship, we use incense. I am still only beginning to appreciate that, but there is prayer and incense ascending before God's throne, and when we worship, it is a beginning of Heaven. When the priest swings the censer before each person, he recognizes the image of Christ in him. When we kiss icons, whether made of wood or flesh, our display of love and reverence reaches God. Our prayer is a participation in the life of the community, in the life of Heaven itself. We are given bread and wine, which are the body and blood of Christ, and we drink nothing less than the divine life from the fountain of immortality. Christ became what we are that we might become what he is. The Son of God became a Man and the Son of Man that men might become gods and the sons of God. And we live in a world that comprehends the visible and invisible, a world where spirit, soul, and matter interpenetrate, where we are created as men and women, where eternity breathes through time, and where every evil will be defeated and every good will be glorified.

And there is much more to say than that, but I can't put it in words.

## John's Tale: The Holy Grail

Mary looked at John and said, "Have you read *The da Vinci Code*?" She paused, and said, "What did you think of it?"

John drew a deep breath.

Mary winced.

John said, "The Christians I know who have read *The da Vinci Code* have complained about what it presents as history. And most of the history is... well, only a couple of notches higher than those historians who claim the Holocaust didn't happen. I personally find picking apart *The da Vinci Code*'s historical inaccuracies to be distasteful, like picking apart a child's toy. Furthermore, I think those responses are beside the point."

Mary said, "So you think the history is sound?"

John said, "I think that a lot of people who think they're convinced by the history in *The da Vinci Code* have been hoodwinked into thinking it's the history that persuaded them. *The da Vinci Code*'s author, Dan Brown, is a master storyteller and showman. *The da Vinci Code* isn't a compelling book because someone stuck history lectures in a bestseller. *The da Vinci Code* is a compelling book because it sells wonder. Dan Brown is the kind of salesman who could sell shoes to a snake, and he writes a story where Jesus is an ordinary (if very good) man, is somehow more amazing of a claim that Jesus is the person where everything that was divine met everything that was human.

"*The da Vinci Code* boils down to a single word, and that word is 'wonder.' Dan Brown, as the kind of person who can sell shoes to a snake, leaves the reader with the distinct impression that the ideas he is pushing are more exotic, alluring, and exciting than the Christianity which somehow can't help coming across as a blob of dullness."

Mary said, "But don't you find it an exciting book? Something which

can add a bit of spice to our lives?"

John said, "It is an excellent story—it gripped me more than any other recent bestseller I've read. It is captivating and well-written. It has a lot of excellent puzzles. And its claim is to add spice to our lives. That's certainly what one would expect. But let's look at what it dismisses as ho-hum. Let's look at the Christianity that's supposed to be boring and need a jolt of life from Brown."

Mary said, "I certainly found what Brown said about Mary Magdalene to be an eye-opener. Certainly better than..."

John said, "If I found the relics of Mary Magdalene, I would fall before them in veneration. Mary Magdalene was equal to the twelve apostles—and this isn't just my private opinion. The Orthodox Church has officially declared her to be equal to the twelve apostles. Matthew, Mark, and Luke all list her first among women who followed Christ to the cross, and John lists her as the one who first saw the secret of the resurrection. She has her own feast day, July 22, and it's a big enough feast that we celebrate the Eucharist that day. Tradition credits her with miracles and bold missionary journeys. The story is told of her appearing before the Roman Emperor proclaiming the resurrection, and the Emperor said, 'That's impossible. For a man to rise from the dead is as impossible as for an egg to turn red!' Mary Magdalene picked up an egg, and everyone could see it turn red. That's why we still give each other eggs dyed red when we celebrate the Lord's resurrection. There are some ancient Christian writings that call Mary Magdalene the Apostle to the Apostles, because it was she herself who told the Apostles the mystery of the resurrection."

Mary said, "Wow." She closed her eyes to take it in, and then said, "Then why did the Catholic Church mount such a smear campaign against her?"

John said, "I said I didn't want to scrutinize *The da Vinci Code's* revision of history, but I will say that Brown distorts things, quite intentionally as far as I know. And he counts on you, the reader, to make a basic error. Brown is working hard to attack Catholicism—or at least any form of Catholicism that says something interesting to the modern world. *Therefore* (we are supposed to assume) Catholicism is duty-bound to resist whatever Brown is arguing for. Catholicism isn't an attempt to keep its own faith alive. It's just a reaction against Brown.

"Putting it that way makes Brown sound awfully egotistical. I don't think Brown has reasoned it that consistently, or that he thought we

DAN BROWN HAS REASONED IT THAT CONSISTENTLY, OR THAT HE THOUGHT WE might reason it that consistently, but Brown does come awfully close in thinking that if he's pushing something, Rome opposes it. He extols Mary Magdalene, so Rome must be about tearing her down. He glorifies a mysterious place for the feminine, so Rome must be even more misogynistic than the stereotype would have it. I hate to speak for our neighbors at the Catholic parish down the street, but—"

Mary interrupted. "But don't you find something romantic, at least, to think that Mary held the royal seed in her womb?"

John said, "The symbol of the chalice... the womb as a cup... I do find it romantic to say that Mary held the royal seed in her womb. And it's truer than you think. I believe that Mary was the urn that held the bread from Heaven, that she was the volume in which the Word of Life was inscribed, that her womb is more spacious than the Heavens. Only it's a different Mary than you think. I'm not sure how much you know about angels, but there are different ranks, and the highest ranks were created to gaze on the glory of God. The highest two ranks are the cherubim and seraphim, and the cherubim hold all manner of wisdom and insight, while the seraphim burn with the all-consuming fire of holiness. There is no angel holier than these. It is of this different Mary that we sing,

More honorable than the cherubim,  
And more glorious beyond compare than the seraphim,  
In virginity you bore God the Word;  
True Mother of God, we magnify you.

"Her womb, we are told, is more spacious than the Heavens because it contained uncontainable God. It is the chalice which held something which is larger than the universe, and that is why it is more spacious than the Heavens.

"I reread *The da Vinci Code*, and I don't remember if there was even a passing reference to the other Mary. This seems a little strange. If you're interested in a womb that held something precious, if you're interested in a woman who can be highly exalted, she would seem an obvious choice. I don't think *The da Vinci Code* even raises her as an alternative to refute.

"Not even Dan Brown, however, can get away with saying that the Catholic Church ran a smear campaign against Our Lady. He may be able to sell shoes to snakes, but thanks in part to the Reformation's concern that the Catholic Church was in fact worshipping Mary as God, that's

that the Catholic Church was in fact worshipping Mary as God, that's almost as tough a sell as stating that the Catholic Church doesn't believe in God. We Orthodox give Mary a place higher than any angel, and it's understandable for Protestants to say that must mean we give her God's place—Protestants don't have any place that high for a creature. The Catholic Church, like the Orthodox Church, has a cornucopia of saints, a glorious and resplendent plethora, a dazzling rainbow, and it's possible not to know about the glory of Mary Magdalene. So Brown can sell the idea that the Catholic Church slandered one of her most glorious saints, and... um... quietly hope he's distracted the reader from the one woman whom no one can accuse the Catholic Church of slandering."

Mary looked at him. "There still seemed to be... There is a wonder that would be taken away by saying that Mary Magdalene was not the chalice that held the blood."

John said, "What if I told you that that was a smokescreen, meant to distract you from the fact that wonder was being taken away?"

"Look at it. *The da Vinci Code* has a bit of a buildup before it comes to the 'revelation' that the Grail is Mary Magdalene."

Mary said, "I was curious."

John said, "As was I. I was wishing he would get out and say it instead of just building up and building up. There is a book I was reading—I won't give the author, because I don't want to advertise something that's spiritually toxic—"

Mary smiled. "You seem to be doing that already."

John groaned. "Shut up. I don't think any of you haven't had ads for *The da Vinci Code* rammed down your throat, nor do I think any of you are going to run and buy it to learn about pure and pristine Gnos— er... Christianity. So just shut up."

Mary stuck out her tongue.

John poked her, and said, "Thank you for squeaking with me."

"Anyway, this book pointed out that the Holy Grail is not a solid thing. It is a shadow. It's like the Cross: the Cross is significant, not just because it was an instrument of vile torture, but because it was taken up by the Storm who turned Hell itself upside-down. Literature has plenty of magic potions and cauldrons of plenty, but all of these pale in comparison with the Holy Grail. That is because the Holy Grail exists in the shadow of an even deeper mystery, a mystery that reversed an ancient curse. Untold ages ago, a serpent lied and said, 'Take, eat. You will not die.' Then the

woman's offspring who would crush the serpent's head said, 'Take, eat. You will live.' And he was telling the truth, and he offered a life richer and deeper than anyone could imagine.

"And so there is a mystery, not only that those in an ancient time could eat the bread and body that is the bread from Heaven and drink the wine and blood that is the divine life, but that this mystery is repeated every time we celebrate it. We are blinded to the miracle of life because it is common; we are blinded to this sign because it is not a secret. And it is a great enough miracle that the chalice that held Christ's blood is not one item among others; it is the Holy Grail.

"In the ancient world, the idea that God could take on a body was a tough pill to swallow. It still is; that God should take on our flesh boggles the mind. And there were a lot of people who tried to soften the blow. And one of the things they had to neutralize, in their barren spirituality, was the belief that Christ could give his flesh and blood. The legend of the Holy Grail is a testimony to the victory over that belief, the victory of God becoming human that we might become like him and that he might transform all of our humanity. It says that the cup of Christ, the cup which held Christ's blood, is a treasure because Christ's blood is a treasure, and the image is powerful enough that... We talk about 'Holy Grail's, as in 'A theory that will do this is the Holy Grail of physics.' That's how powerful it is.

"I would say that there were people in the ancient world who didn't get it. In a real sense, Dan Brown picks up where they left off. And part of what he needs to do is make Mary Magdalene, or some substitute, the Holy Grail, because we can't actually have a cup that is the Holy Grail, because we can't actually have a Table where Christ's body and blood are given to all his brothers and sisters.

"And that is the meaning of Mary Magdalene as the Holy Grail. She is a beautiful diversion so we won't see what is being taken away. She is a decoy, meant to keep our eyes from seeing that any place for the Eucharist is vanishing. And I'm sure Mary Magdalene is rolling over in her reliquary about this.

"But in fact the Eucharist is not vanishing. It's here, and every time I receive it, I reverently kiss a chalice that is an image of the Holy Grail. What Dan Brown builds up to, as an exciting revelation, is that Jesus left behind his royal bloodline. This bloodline is alive today, and we see something special when Sophie wraps her arms around the brother she

something special when Sophie wraps her arms around the brother she thought was dead. And that is truer than Dan Brown would ever have you guess.

"Jesus did leave behind his blood; we receive it every time we receive the Eucharist. And it courses through our veins. You've heard the saying, 'You are what you eat.' You do not become steak by eating steak, but you do become what Jesus is by eating his flesh. Augustine said, 'See what you believe. Become what you behold.' That's part of the mystery. In part through the Eucharist, we carry Christ's blood. It courses through our veins. And it's not dilute beyond measure, as Dan Brown's picture would have it. We are brothers and sisters to Christ and therefore to one another. There is an embrace of shared blood at the end of *The da Vinci Code*, and there is an embrace, between brothers and sisters who share something much deeper than physical blood, every time we share the holy kiss, or holy hug or whatever. Is the truth as wild as what Dan Brown says? It's actually much wilder."

Mary said, "I can't help feeling that *The da Vinci Code* captures something that... their talk of knights and castles, a Priory that has guarded a secret for generations, a pagan era before the testosterone poisoning we now call Christianity..."

John smiled. "Yes. It had that effect on me too. These things speak of something more. When I was younger, one of my friends pointed out to me that when I said 'medieval', I was referring to something more than the Middle Ages. It was a more-than-literal symbol, something that resonated with the light behind the Middle Ages. And the same is happening with the golden age Brown evokes. All of us have a sense that there is an original good which was lost, or at least damaged, and the yearning Brown speaks to is a real yearning for a legitimate good. But as to the specific golden age... Wicca makes some very specific claims about being the Old Religion that Wiccans resume after the interruption of monotheism. Or at least it made them, and scholars devastated those claims. There are a few Wiccans who continue to insist that they represent the Old Religion instead of a modern Spiritualist's concoction. But most acknowledge that the account isn't literally true: they hold the idea of an 'Old Religion' as an inspiring tale, and use the pejorative term 'Wiccan Fundamentalists' for people who literally believe that Wicca is the Old Religion.

"And so we can yearn for a Golden Age when people believed the spirit

of our own age... um... how can I explain this. People who yearn for an old age when men and women were in balance have done little research into the past. People who think the New Testament was reactionary have no idea of a historical setting that makes the New Testament look like it was written by flaming liberals. Someone who truly appreciated the misogyny in ancient paganism would understand that rape could not only be seen as permissible; quite often it was simply seen as a man's prerogative. Trying to resurrect ancient paganism because Christian views on women bother you is like saying that your stomach is ill-treated by your parents' mashed potatoes so you're going to switch to eating sticks and gravel.

"But I'm getting into something I didn't want to get into...

"There is something from beyond this world, something transcendent, that is shining through Brown's writing. The Priory is haunting. The sacred feminine is haunting. There is something shining through. There is also something shining through in Orthodoxy. And that something is something that has shone through from the earliest times.

"In *The da Vinci Code*, knighthood is a relic of what it used to be. Or at least the knight they visit is a relic, more of a tip of the hat to ages past than a breathing tradition. The Knights Templar at least represent something alive and kicking. They're a society that continues alive today and is at once medieval and modern. They bear the glory of the past, but they bear it today. In that sense they're a glimmer of what the Church is—a society alike ancient and modern, but I'm getting ahead of myself.

"What I meant to be saying is that knighthood is more a tip of the hat than something alive. I've read the Grail legends in their medieval forms, and I've met knights and ladies in those pages. It takes some time to appreciate the medieval tradition—there is every reason for a modern reader to say that the texts are long and tedious, and I can't quickly explain why that understandable reaction is missing something. The knights and ladies there aren't a tip of the hat; they're men and women and they kick and breathe. And they represent something that the medieval authors would never have realized because they had never been challenged. They represent the glory of what it means to be a man, and the glory of what it means to be a woman. We speak of the New Eve, Mary, as 'the most blessed and glorious Lady;' we are called to be a royal priesthood, and when we receive the Eucharist we are called 'the servant of God Adam' or 'the handmaiden of God Eve'—which is also meant to be humble, but inescapably means the Knights and Ladies coming before the

numbie, but inescapably means the Knights and Ladies serving before the King of Kings.

"The Orthodox Church knows a great deal about how to be a knight and how to be a lady. It can be smeared, but it has a positive and distinctive place for both men and women. It may be a place that looks bad when we see it through prejudices we don't realize, but there is a real place for it."

"I know a lot of people who think it's not gender-balanced," Mary said.

John said, "What would they hold as being gender balanced?"

"I'm not sure any churches would be considered gender-balanced."

John said, "All right, which churches come closest?"

Mary said, "Well, the most liberal ones, of course."

John said, "That doesn't mesh with the figures. Men feel out of place in a lot of churches. With Evangelicalism and Catholicism, men aren't that much of a minority, about 45%. Go to the more liberal churches, and you'll find a ratio of about two to one, up to about seven to one. Come to an Orthodox parish, on the other hand, and find men voluntarily attending services that aren't considered mandatory—and the closest to a 50-50 balance in America."

Mary said, "But why? I thought the liberal churches had..."

John interrupted. "What are you assuming?"

Mary answered, "Nothing. Liberal churches have had the most opportunity for women to draw things into a balance."

John continued questioning. "What starting point are you assuming?"

Mary said, "Nothing. Just that things need to be balanced by women... um... just that men have defined the starting point..."

"And?" John said.

Mary continued: "And... um... that women haven't contributed anything significant to the starting point."

John paused. "Rather a dismal view of almost two millennia of contributions by women, don't you think?"

Mary opened her mouth, and closed it. "I need some time to think."

John said, "It took me almost four years to figure it out; I won't fault you if you're wise enough to take some time to ponder it. And I might also mention that the image of being knights and ladies is meant to help understand what it means to be man and woman—*Vive la glorieuse difference!*—and the many-layered mystery of masculinity and

femininity, but an image nonetheless. All statements possess some truth, and all statements fall immeasurably short of the truth."

Mary said, "Huh? Are all statements equally true?"

John said, "No. Not all statements are equally true; some come closer to the truth than others. No picture is perfect, but there is such a thing as a more or less complete image. And what I have said about knights and ladies, and many things that could be said about the Church as a society guarding a powerful truth, point to something beyond them. They are great and the truth is greater. There is something in the Priory and the Knights Templar that is poisoned, that infects people with a sweetly-coated pride that ends in a misery that can't enjoy other people because it can't appreciate them, or indeed respect anybody who's not part of the self-same inner ring. That 'inner ring' is in the beginning as sweet as honey and in the end as bitter as gall and as sharp as a double-edged sword, so that struggling to achieve rank in the Priory is a difficult struggle with a bitter end. And in that sense the Priory is an image of the Church... it is a fellowship which has guarded an ancient truth, a truth that must not die, and has preserved it across the ages. But instead of being an inner ring achieved by pride, the Church beckons us to humility. This humility is unlike pride: it is unattractive to begin with, but when we bow we are taller and we find the secret of enjoying the whole universe."

"What is this secret?" Mary asked.

John closed his eyes for a moment and said, "You can only enjoy what you appreciate, and you can only appreciate what you approach in humility. This is part of a larger truth. It takes sobriety to enjoy even drunkenness. If you want to see the one person who cannot enjoy drunkenness, look at an alcoholic. Virtue is the doorway to enjoying everything, even vice.

"There is a treacherous poison beckoning in 'the inner ring', of a secret that is hidden from outsiders one looks down on. The inner ring is a door to Hell."

"You believe that Knights Templar will go to Hell?" Mary said.

John looked at her. "I believe that Knights Templar, and people in a thousand other inner rings, are in Hell already. I don't know how Christ will judge them, but... In the end, some have remarked, there are only two kinds of people: those who tell God, 'Thy will be done,' and those to whom God finally says, '*Thy* will be done.' The gates of Hell are sealed,

bolted, and barred from the *inside*, by men who have decided: 'I would rather reign in Hell than serve in Heaven!' In one sense, Hell will never blast its full fury until the Judge returns. In another sense, Hell begins on earth, and the inner ring is one of its gates."

Mary said, "Wow."

John said, "And there is a final irony. What we are led to expect is that there is a great Western illusion. And Brown is going to help us see past it."

Mary said, "And the truth?"

John said, "There is a great Western illusion, and Brown is keeping us from seeing past it."

"There's a rather uncanny coincidence between Brown's version of original, pristine paganism and the fashion feminism happens to take in our day. Our version of feminism is unusual, both in terms of history and in terms of cultures today. It's part of the West that the Third World has difficulty understanding. And yet the real tradition, call it restored paganism or original Christianity or the Old Religion or what have you, turns out to coincide with all the idiosyncracies of our version of feminism. It's kind of like saying that some 1970's archaeologists exhumed an authentic pagan burial site, and it was so remarkably preserved that they could tell the corpses were all wearing bell-bottoms, which was the norm in the ancient world. If we made a statement like that about clothing, we'd need to back it up. And yet Brown does the same sort of thing in the realm of ideas, and it comes across as pointing out the obvious; most people wouldn't think to question him. And this is without reading classical pagan texts about how marriage might lead a man to suicide because of feminine wrangling, and how any man who couldn't deny his wife anything he chose was the lowest of slaves. Brown is a master of showmanship, at helping you see what he wants you to see and not see what he doesn't want you to see.

"If we decline Brown's assistance in seeing past illusions, it turns out that there's another illusion he doesn't help us see past. And, ironically, it is precisely related to symbol.

"Something profound happened in the Middle Ages, or started happening, that is still unfolding today. It is the disenchantment of the entire universe. There are several ways one could describe it. Up until a certain point, everyone took it for granted that horses, people, and colors were all things that weren't originally created in our minds. Wait, that

were all things that weren't originally created in our minds... wait, that was confusing. It's easier to speak of the opposite. The opposite, which began to pick up steam almost a thousand years ago, was that we think up categories like horses and colors, but they don't exist before we think of them. As it would develop, that was a departure from what most people believed. And a seed was planted that would take deeper and deeper root.

"That's the philosophy way of putting it. The symbol's way of putting it is that the departure, the new thinking, drove a wedge between a symbol and what that symbol represented. If you represented something, the symbol was connected to what it represented. That's why, in *The Lord of the Rings*, the hobbits mention Sauron and Gandalf makes a tense remark of, 'Don't mention that name here!'

"Why is this? The name of Sauron was a symbol of Sauron which bore in an invisible way Sauron's presence. When Gandalf told the Hobbits not to mention that name, he was telling them not to bring Sauron's presence."

Mary said, "That sounds rather far-fetched."

John answered, "Would you care to guess why, when you say a friend's name and she stops by, you always say, 'Speak of the Devil!'"

Mary shifted her position slightly.

John continued. "Those two things are for the same reason. Tolkien was a medievalist who commanded both an excellent understanding of the medieval world, and was steeped in paganism's best heroic literature. He always put me to sleep, but aside from that, he understood the medieval as most modern fantasy authors do not. And when Gandalf commands the hobbits not to speak the name of Sauron, there is a dying glimmer of something that was killed when the West embraced the new way of life."

"The name of something is a symbol that is connected to the reality. Or at least, a lot of people have believed that, even if it seems strange to us. If you read the Hebrew Prophets, you'll find that 'the name of the Lord' is a synonym for 'the Lord' at times, and people write 'the Lord' instead of saying the Lord's actual name: 'the Lord' is a title, like 'the King' or 'the President', not a name like 'Jacob.' People were at first cautious of saying the Lord's name in the wrong way, and by the New Testament most Jews stopped saying the Lord's name at all. This is because people believed a symbol was connected to the reality, and a failure to show proper reverence to the Lord's name was in fact a failure

to show proper reverence to the Lord.

"When the Bible says that we are created in the image of God, this is not just a statement that we resemble God in certain ways. It is a statement that God's actual presence operates in each person, and what you do to other people, you cannot help doing to God. This understanding, too obvious to need saying to the earliest readers, is behind everything from Proverbs' statement that he who oppresses the poor shows contempt for their Maker, to the chilling end of the parable in Matthew 25:

"When the King returns in glory... he will say to those at his left hand, 'Depart from me, you who are damned, into the eternal fire prepared for the Devil and his angels. For I was hungry and you gave me no food, thirsty and you gave me nothing to drink, a stranger and you did not welcome me, lacking clothes and you did not clothe me, sick and in prison and you did not visit me.' Then they also will answer, 'Lord, when did we see you hungry or thirsty or a stranger or sick or in prison and did not care for you?' Then he will answer them, 'I solemnly tell you, insofar as you did not do it for the least of these brothers of mine, you did not do it for me.'"

Mary thought, and asked, "Do you think that bread and wine are symbols of Christ's body and blood?"

John said, "Yes. I believe they are symbols in the fullest possible sense: bread and wine represent the body and blood of Christ, and *are* the body and blood of Christ. Blood itself is a symbol: the Hebrew Old Testament word for 'blood' means 'life', and throughout the Bible whenever a person says 'shedding blood,' he says, 'taking life.' Not only is wine a symbol of Christ's blood, Christ's blood is a symbol of the uncreated, divine life, and when we drink Christ's blood, we receive the uncreated life that God himself lives. This is the life of which Jesus said, 'Unless you eat the flesh and drink the blood of the Son of Man, you have no life in you.' So the wine, like the bread, is a symbol with multiple layers, Christ's body and blood themselves being symbols, and it is for the sons of God to share in the divine life: to share in the divine life is to be divinized.

"Are these miracles? The question is actually quite deceptive. If by 'miracle' you mean something out of place in the natural order, a special

exception to how things are meant to work, then the answer is 'No.'

"The obvious way to try to incorporate these is as exceptions to how a dismembered world works: things are not basically connected, without symbolic resonance, with the special exceptions of the Eucharist and so on. But these are not exceptions. They are the crowning jewel of what orders creation.

"Things are connected; that is why when the Orthodox read the Bible, they see one tree in the original garden with its momentous fruit, and another tree that bore the Son of God as its fruit, and a final tree at the heart of the final Paradise, bearing fruit each season, whose leaves are for the healing of the nations. This kind of resonance is almost as basic as the text's literal meaning itself. Everything is connected in a way the West has lost—and by 'lost', I do not simply mean 'does not have.' People grasp on an intuitive level that symbols have mystic power, or at least should, and so we read about the Knights Templar with their exotic equal-armed crosses, flared at the ends, in red on white. Yes, I know, pretend you don't know there's the same kind of equal-armed cross, flared at the ends, on the backs of our priests and acolytes. The point we're supposed to get is that we need to go to occult symbolism and magic if we are to recover that sense of symbol we sense we have lost, and fill the void.

"But the Orthodox Church is not a way to fill the void after real symbols have been destroyed. Orthodoxy does not need a Harvard 'ymbologist' as a main character because it does not need to go to an exotic expert to recover the world of symbol. Orthodoxy in a very real sense has something better than a remedy for a wound it never received.

"To the Orthodox Church, symbols are far more than a code-book, they are the strands of an interconnected web. To the Church, symbols are not disparate escape routes drilled out of prison, but the wind that blows through a whole world that is open to explore."

Mary pondered. "So we have a very deaf man who has said, 'None of us can hear well, so come buy my hearing aid,' and Orthodox Church as a woman who has never had hearing trouble and asks, 'Why? What would I need one for?'

"And is there something deeper than symbol, even?"

John closed his eyes. "To answer that question, I'm having trouble doing better than paraphrasing Pseudo-Dionysius, and I *wish* we had his *Symbolic Theology*. I presume this means something specific. I assume it

means that everything, even the highest and holiest things that the eye, the heart... I mean mind... I mean intellect, the intellect which perceives those realities beyond the eye... I mean that everything they can perceive is merely the rationale that presupposes everything below the Transcendent One.'

"Yes, there is One who is deeper than all created symbols."

## **Basil's Tale: The Desert Fathers**

Father Basil said, "When I read the introduction to Helen Waddell's [The Desert Fathers](#), I wasn't disappointed yet. At least, that's where I first met these people; Waddell gives one translation of an ancient collection, and if you search on the Web for *The Sayings of the Desert Fathers*, you can find them easily enough.

"The introduction led me to expect important historical documents in the life of the Church—you know, the sort of first try that's good for you because it's dull and uninteresting, kind of like driving a buggy so you can appreciate what a privilege it is to ride a car. Or like spending a year wasting time on your PC, reinstalling Windows and trying to recover after viruses wreak havoc on your computer, so that when you finally upgrade to a Mac, you appreciate it. Then I actually began to *read* the Desert Fathers, and..."

John asked, "Can you remember any of them? There's..."

Father said, "Yes, certainly."

---

An old monk planted a piece of dry wood next to a monk's cell in the desert, and told the young monk to water it each day until... So the young monk began the heavy toil of carrying water to water the piece of wood for year after year. After three years, the wood sprouted leaves, and then branches. When it finally bore fruit, the old monk plucked the fruit and said, "Taste the fruit of obedience!"

Three old men came to an old monk, and the last old man had an evil reputation. And the first man told the monk, "Make me a fishing net," but he refused. Then the second man said, "Make me a fishing net, so we will have a keepsake from you," but he refused. Then the third man said, "Make me a fishing net, so I may have a blessing from your hands," and the monk immediately said, "Yes." After he made the net, the first two asked him, "Why did you make him a net and not us?" And he said, "You were not hurt, but if I had said no to him, he would thought I was rejecting him because of his evil reputation. So I made a net to take away his sadness."

A monk fell into evil struggles in one monastery, and the monks cast him out. So he came to an old monk, who received him, and sent him back after some time. But the monks as the monastery wouldn't receive him. Then he sent a message, saying, "A ship was wrecked, and lost all of its cargo, and at last the captain took the empty ship to land. Do you wish to sink on land the ship that was saved from the sea?" Then they received him.

An old monk said, "He who finds solitude and quiet will avoid hearing troublesome things, saying things that he will regret, and seeing temptations. But he will not escape the turmoil of his own heart."

There was a young monk who struggled with lust and spoke to an older monk in desperation. The old monk tore into him, scathing him and saying he was vile and unworthy, and the young monk fled in despair. The young monk met another old monk who said, "My son, what is it?" and waited until the young monk told everything. Then the old monk prayed that the other monk, who had cruelly turned on the young monk, would be tempted. And he ran out of his cell, and the second old monk said, "You have judged cruelly, and you yourself are tempted, and what do you do? At least now you are worthy of the Devil's attention." And the monk repented, and prayed, and asked for a softer tongue.

Once a rich official became a monk, and the priest, knowing he had

Once a rich official became a monk, and the priest, knowing he had been delicately raised, sent him such nice gifts as the monastery had been given. As the years passed, he grew in contemplation and in prophetic spirit. Then a young monk came to him, hoping to see his severe ascetic discipline. And he was shocked at his bed, and his shoes, and his clothes. For he was not used to seeing other monks in luxury. The host cooked vegetables, and in the morning the monk went away scandalized. Then his host sent for him, and said, "What city are you from?" "I have never lived in a city." "Before you were a monk, what did you do?" "I cared for animals." "Where did you sleep?" "Under the stars." "What did you eat, and what did you drink?" "I ate bread and had no wine." "Could you take baths?" "No, but I could wash myself in the river." Then the host said, "You toiled before becoming a monk; I was a wealthy official. I have a nicer bed than most monks now. I used to have beds covered with gold; now I have this much cruder bed. I used to have costly food; now I have herbs and a small cup of wine. I used to have many servants; now I have one monk who serves me out of the goodness of his heart. My clothing was once costly beyond price; now you see they are common fare. I used to have minstrels before me; now I sing psalms. I offer to God what poor and feeble service I can. Father, please do not be scandalized at my weakness." Then his guest said, "Forgive me, for I have come from heavy toil into the ease of the monastic life, and you have come from richness into heavy toil. Forgive me for judging you." And he left greatly edified, and would often come back to hear his friend's Spirit-filled words.

A monk came to see a hermit, and when he was leaving, said, "Forgive me, brother, for making you break your monastic rule of solitude." The hermit said, "My monastic rule is to welcome you hospitably and send you away in peace."

Once a group of monks came to an old monk, and another old monk was with them. The host began to ask people, beginning with the youngest, what this or that word in Scripture meant, and each tried to answer well. Then he asked the other old monk, and the other monk said, "I do not know." Then the host said, "Only he has found the road—the one who says, 'I do not know.'"

One old monk went to see another old monk and said to him, "Father, as far as I can I say my handful of prayers, I fast a little, I pray and meditate, I live in peace and as far as I can I purify my thoughts. What else can I do?" Then the old man stood up and stretched his hands

towards Heaven. His fingers blazed as ten lamps of fire and he said, "If you desire it, you can become a fire."

A brother asked an old monk, "What is a good thing to do, that I may do it and live?" The old monk said, "God alone knows what is good. Yet I have heard that someone questioned a great monk, and asked, 'What good work shall I do?' And he answered, 'There is no single good work. The Bible says that Abraham was hospitable, and God was with him. And Elijah loved quiet, and God was with him. And David was humble, and God was with him. Therefore, find the desire God has placed in your heart, and do that, and guard your heart.'"

## Macrina's Tale: The Communion Prayer

Mary looked at Macrina. "And I can see you've got something in your purse."

Macrina smiled. "Here. I was just thinking what a blessing it is to have a prayer book. It is a powerful thing to raise your voice with a host of saints, and this version, the Fellowship of St. Alban and St. Sergius's [Manual of Eastern Orthodox Prayers](#), is my favorite." She flipped a few pages. "This prayer, and especially this version, has held a special place in my heart.

"And... I'm not sure how to put it. Westerners misunderstand us as being the past, but we are living *now*. But in the West, living *now* is about running from the past, trying to live in the future, and repeating the mistakes of the past. Ouch, that came out a lot harsher than I meant. Let me try again... in the East, living now leaves you free to enjoy the glory of the past. You can learn to use a computer today and still remember how to read books like you were taught as a child. And you are free to keep treasures like this prayer, from St. Simeon the New Theologian ("New" means he died in the 11th century):

---

From lips besmirched and heart impure,  
From unclean tongue and soul sin-stained,  
Receive my pleading, O my Christ,  
Nor overlook my words, my way  
Of speech, nor cry importunate:  
Grant me with boldness to say all  
That I have longed for, O my Christ,  
But rather do thou teach me all  
That it behoveth me to do and say.  
More than the harlot have I sinned,  
Who, learning where thou didst abide,  
Brought myrrh, and boldly came therewith  
And didst anoint thy feet, my Christ,  
My Christ, my Master, and my God:  
And as thou didst not cast her forth  
Who came in eagerness of heart,  
Abhor me not, O Word of God,  
But yield, I pray, thy feet to me,  
To my embrace, and to my kiss,  
And with the torrent of my tears,  
As with an ointment of great price,  
Let me with boldness them anoint.  
In mine own tears me purify,  
And cleanse me with them, Word of God,  
Remit my errors, pardon grant.  
Thou knowest my multitude of sins,  
Thou knowest, too, the wounds I bear;  
Thou seest the bruises of my soul;  
But yet thou knowest my faith, thou seest  
My eager heart, and hear'st my sighs.  
From thee, my God, Creator mine,  
And my Redeemer, not one tear  
Is hid, nor e'en the part of one.  
Thine eyes mine imperfection know,  
For in thy book enrolled ar found  
What things are yet unfashioned.

Behold my lowliness, behold  
My weariness, how great it is:  
And then, O God of all the world,  
Grant me release from all my sins,  
That with clean heart and conscience filled  
With holy fear and contrite soul  
I may partake of thy most pure,  
Thine holy spotless Mysteries.  
Life and divinity hath each  
Who eateth and who drinketh thee  
Thereby in singleness of heart;  
For thou hast said, O Master mine,  
Each one that eateth of my Flesh,  
And drinketh likewise of my Blood—  
He doth indeed abide in me,  
And I in him likewise am found.  
Now wholly true this saying is  
Of Christ, my Master and my God.  
For he who shareth in these graces  
Divine and deifying is  
No wise alone, but is with thee,  
O Christ, thou triply-radiant Light,  
Who the whole world enlightenest.  
Therefore, that I may ne'er abide,  
Giver of Life, alone, apart  
From thee, my breath, my life, my joy,  
And the salvation of the world—  
For this, thou seest, have I drawn nigh  
To thee with tears and contrite soul;  
My errors' ransom to receive  
I seek, and uncondemned to share  
In thy life-giving Mysteries  
Immaculate; that thou mayst dwell  
With me, as thou hast promised,  
Who am in triple wretchedness;  
Lest the Deceiver, finding me  
Removed from thy grace by guile  
May seize me, and seducing lead

may seize me, and seducing lead  
Astray from thy life-giving words.  
Wherefore I fall before thy face,  
And fervently I cry to thee,  
As thou receiv'dst the Prodigal  
And Harlot, when she came to thee,  
So now my harlot self receive  
And very Prodigal, who now  
Cometh with contrite soul to thee.  
I know, O Savior, none beside  
Hath sinned against thee like as I,  
Nor done the deeds which I have dared.  
But yet again, I know this well,  
That not the greatness of my sins,  
Nor my transgressions' multitude,  
Exceeds my God's forbearance great,  
Nor his high love toward all men.  
But those who fervently repent  
Thou with the oil of lovingness  
Dost cleanse, and causest them to shine,  
And makest sharers of thy light,  
And bounteously dost grant to be  
Partakers of thy Divinity;  
And though to angels and to minds  
Of men alike 'tis a strange thing,  
Thou dost converse with them ofttimes—  
These thoughts do make me bold, these thoughts  
Do give me pinions, O my Christ;  
And thus confiding in thy rich  
Good deeds toward us, I partake—  
Rejoicing, trembling too, at once—  
Who am but grass, of fire: and lo!  
—A wonder strange!—I am refreshed  
With dew, beyond all speech to tell;  
E'en as in olden time the Bush  
Burning with fire was unconsumed.  
Therefore, thankful in mind and heart,  
Thankful, indeed, in every limb,

With all my body, all my soul,  
I worship thee, yea, magnify,  
And glorify thee, O my God,  
Both now and to all ages blest.

## **Barbara's Tale: The Fairy Prince**

Adam looked at his daughter and said, "Barbara, what do you have to share? I can hear you thinking."

Barbara looked at her father and said, "You know what I'm thinking, Daddy. I'm thinking about the story you made for me, the story about the fairy prince."

"Why don't you tell it, Sweetie? You know it as well as I do."

The child paused a moment, and said, "You tell it, Daddy."

Here is the tale of the fairy prince.

---

Long ago and far away, the world was full of wonder. There were fairies in the flowers. People never knew a rift between the ordinary and the magical.

But that was not to last forever. The hearts of men are dark in many ways, and they soon raised their axe against the fairies and all that they stood for. The axe found a way to kill the dryad in a tree but leave the tree still standing—if indeed it was really a tree that was still standing. Thus began the disenchantment of the entire universe.

Some time in, people realized their mistake. They tried to open their hearts to wonder, and bring the fairies back. They tried to raise the axe against disenchantment—but the axe they were wielding was cursed. You might as well use a sword to bring a dead man to life.

But this story is not about long ago and far away. It is about something that is recent and very near. Strange doings began when the son of the Fairy Queen looked on a world that was dying, where even song and dance and wine were mere spectres of what they had been. And so he disguised himself as a fool, and began to travel in the world of men.

The seeming fool came upon a group of men who were teasing a young woman: not the mirthful, merry teasing of friends, but a teasing of dark and bitter glee. He heard one say, "You are so ugly, you couldn't pay a man enough to kiss you!" She ran away, weeping.

The prince stood before her and said, "Stop." And she looked at him, startled.

He said, "Look at me."

She looked into his eyes, and began to wonder. Her tears stopped.

He said, "Come here."

She stood, and then began walking.

He said, "Would you like a kiss?"

Tears filled her eyes again.

He gave her his kiss.

She ran away, tears falling like hail from her eyes. Something had happened. Some people said they couldn't see a single feature in her face that had changed. Others said that she was radiant. Others still said that whatever she had was better than gorgeous.

The prince went along his way, and he came to a very serious philosopher, and talked with him, and talked, and talked. The man said, "Don't you see? You are cornered. What you are saying is not possible. Do

"Don't you see? You are cornered. What you are saying is not possible. Do you have any response?"

The prince said, "I do, but it comes not in words, but in an embrace. But you wouldn't be interested in that, would you?"

For some reason, the man trusted him, and something changed for him too. He still read his books. But he would also dance with children. He would go into the forest, and he did not talk to the animals because he was listening to what the animals had to say.

The prince came upon a businessman, a man of the world with a nice car and a nice house, and after the fairy prince's kiss the man sold everything and gave it away to the poor. He ate very little, eating the poorest fare he could find, and spent much time in silence, speaking little. One of his old friends said, "You have forsaken your treasures!"

He looked at his friend and said, "Forsaken my treasures? My dearest friend, you do not know the beginning of treasure."

"You used to have much more than the beginning of treasure."

"Perhaps, but now I have the greatest treasure of all."

Sometimes the prince moved deftly. He spoke with a woman in the park, a pain-seared woman who decided to celebrate her fiftieth wedding anniversary—or what would have been the fiftieth anniversary of a long and blissful marriage, if her husband were still alive. She was poor, and had only one bottle of champagne which she had been saving for many years. She had many friends; she was a gracious woman. She invited the fairy prince, and it was only much later that her friends began to wonder that that the one small bottle of champagne had poured so amply for each of them.

The prince did many things, but not everybody liked it. Some people almost saw the prince in the fool. Others saw nothing but a fool. One time he went into a busy shopping mall, and made a crude altar, so people could offer their wares before the Almighty Dollar. When he was asked why, he simply said, "So people can understand the true meaning of Christmas. Some people are still confused and think it's a religious holiday." That was not well received.

Not long after, the woman whom he met in the park slept the sleep of angels, and he spoke at her funeral. People cried more than they cried at any other funeral. And their sides hurt. All of this was because they were laughing so hard, and the funny thing was that almost nobody could remember much afterwards. A great many people took offense at this

fool. There was only one person who could begin to explain it. A very respected man looked down at a child and said, "Do you really think it is right to laugh so much after what happened to her?" And then, for just a moment, the child said, "He understood that. But if we really understood, laughter wouldn't be enough."

There were other things that he did that offended people, and those he offended sought to drive him away. And he returned to his home, the palace of the Fairy Queen.

But he had not really left. The fairy prince's kiss was no ordinary kiss. It was a magic kiss. When he kissed you, he gave his spirit, his magic, his fairy blood. And the world looks very different when there is fairy blood coursing through your veins. You share the fairy prince's kiss, and you can pass it on. And that pebble left behind an ever-expanding wave: we have magic, and wonder, and something deeper than either magic or wonder.

And that is how universe was re-enchanted.

---

Adam looked down at his daughter and said, "There, Sweetie. Have I told the story the way you like it?"

The child said, "Yes, Daddy, you have," climbed into her father's lap, and held up her mouth for a kiss.

## Epilogue

No one spoke after that.

Finally, after a time, Barbara said, "Can we go outside, Daddy? I bet the snow's real good now."

Father Basil said, "Why don't we all go out? Just a minute while I get my gloves. This is snowball making snow."

Five minutes later, people stepped out on the virgin snow. Macrina said, "This is wonderful. It's like a fairy wonderland."

Paul said, "No. It's much more wonderful than that."

Then the snowballs flew, until Adam said, "See if you can hit that snowplough!"

And then it was time to go home.

May 6, 1998

## Abstract

A generalization of metric spaces is examined, in which we are able to determine which of two pairs of points is closer (or if both are equally close), but not initially know how to assign a number to a distance. After the spaces are defined in general, we look at some more specific closeness spaces, and establish the the existence of a metric, which we are able to determine, under certain broad circumstances.

After looking at the closeness spaces, more specific attention is devoted to the closenesses themselves. We begin to define arithmetic operations over closeness spaces, and (given certain restrictions on the space) then complete addition and subtraction to develop a totally ordered group in which the closenesses are embedded. We prove that it is indeed a totally ordered field, and look at some examples. Directions are suggested for future research.

*[Side note when entering this dissertation two decades later: this research includes a way to rigorously define and use infinitesimals. Infinitesimals were long seen as something you wanted to have but could not rigorously define; epsilon-delta proofs in relation to derivatives in calculus represent a masterstroke of how to do an infinitesimal's job using only standard real numbers for epsilons and deltas. Infinitesimals were spoken of as a ghost to be exorcized, and the entire point epsilon-delta proofs were a way to circumvent obvious use of infinitesimals in a mathematically rigorous way. At the time this thesis was written there appear to have been rigorous treatment of infinitesimals; however, so far as one could tell this approach to providing this kind of squeaky-clean rigorous handling of infinitesimals was new when the thesis was written.]*

## Introduction

Intuitively, a closeness space is like a metric space, with balls, symmetry, positive definiteness, and a triangle inequality, boundaries, an induced topology, and other familiar attributes of a metric space. However, it is a space for which we do not specifically know a metric: it is possible that we simply do not know a metric or none is given, or that no metric may exist. The latter holds in certain cases where the real numbers are too coarse of an ordered field to describe the space's distances: such a thing is possible, for instance, when there are infinitesimal and infinite distances. A closeness space might not be thought of so much as a generalization of a metric space (at least in the sense that a metric space is a generalization of  $\hat{\mathbb{R}}^n$ ), but rather as a metric space with a generalization of real-valued distances. It is a metric space which may potentially have nonstandard real numbers (broadly defined) as its distances, rather than necessarily having real numbers under the standard model as its distances.]

In this sense, what is of interest is not only the spaces themselves, but their distances: what kind of group embeds them (we will look at a field which embeds an arithmetic closure of these distances). We will study the topological spaces, but our interest is not only in the spaces, but in the ordered groups and then fields which embed the closenesses. Throughout this thesis, the aim is both to establish certain elementary properties "laying a groundwork" and also to suggest directions for future research.

It is remarked that the approach is not to start with a field and then see for what kind of spaces it can function like a metric; the approach is rather to start with a space and see what kind of field acts as an arithmetic closure to its closenesses, given a certain construction.

# Chapter 1: Notation, Definitions and Terminology

## Notation 1:1:

In this document, a lowercase, indexed variable name is generally understood to be an element of the set designated by the corresponding uppercase letter, provided that the letter is 's' or occurs after 's' in the alphabet. For example:

$$s_i \hat{\in} S$$

Furthermore, we associate in the same way  $\hat{I}_\pm$  with indexing set  $J$ , and  $\hat{I}^2$  with  $K$ . These indexing sets are understood to have no last element.

There will be plainly marked exceptions to this rule.

## Definition 1:2:

A *closeness space*  $C$  is a set  $S$ , together with a function

$$\mathcal{A}': S \hat{\times} S \hat{\times} S \hat{\times} S \hat{\times} \{ '<', '=', '>' \}$$

such that the following conditions hold:

### Definition 1.2.1:

$f$  is defined for each quadruplet of points in  $S$ .

( $S$  is said to be a *space*, and its elements are referred to as its *points*, as elsewhere in topology. The function  $f$  is said to be a *closeness*.)

Intuitively, this condition and those following guarantee that  $\mathcal{A}'$  is comparing the distance between the first two points, and the distance between the last two points to see which one is greater. This condition, and the next four, are simply conditions which guarantee that  $\mathcal{A}'$  is well-

behaved as a function on a pair of pairs of points, only depends on which pair of pairs of points is given, and defines a total ordering up to equivalence classes.

For every six points  $s_1, s_2, s_3, s_4, s_5$ , and  $s_6$  (possibly non-distinct), we have the following conditions hold:

**Condition 1.2.2:**

$$\begin{aligned} \mathcal{A}'(s_1, s_2, s_3, s_4) &= \mathcal{A}'(s_2, s_1, s_3, s_4) \\ \mathcal{A}'(s_1, s_2, s_3, s_4) &= \mathcal{A}'(s_3, s_4, s_1, s_2) \end{aligned}$$

$\mathcal{A}'$  is not affected by swapping the elements in one pair, or by swapping the pairs. This is the closeness space's version of a metric space requiring symmetry.

**Condition 1.2.3:**

If  $\mathcal{A}'(s_1, s_2, s_3, s_4) = '<'$ , then  $\mathcal{A}'(s_3, s_4, s_1, s_2) = '>'$ .  
 If  $\mathcal{A}'(s_1, s_2, s_3, s_4) = '='$ , then  $\mathcal{A}'(s_3, s_4, s_1, s_2) = '='$ .  
 If  $\mathcal{A}'(s_1, s_2, s_3, s_4) = '>'$ , then  $\mathcal{A}'(s_3, s_4, s_1, s_2) = '<'$ .

**Condition 1.2.4:**

If  $\mathcal{A}'(s_1, s_2, s_3, s_4) = '<'$  and  $\mathcal{A}'(s_3, s_4, s_5, s_6) = '<'$ , then  $\mathcal{A}'(s_1, s_2, s_5, s_6) = '<'$ .

**Condition 1.2.5:**

We have  
 $\mathcal{A}'(s_1, s_2, s_1, s_2) = '='$

**Condition 1.2.6:**

If  $s_2$  and  $s_3$  are distinct, then we have

$$\mathcal{A}'(s_1, s_1, s_2, s_3) = '<'$$

Every point is closer to itself than the distance between any pair of distinct points; this is the closeness space's version of the positive

definiteness of a metric space.

### Condition 1.2.7:

We have

$$\mathcal{A}'(s_1, s_1, s_2, s_2) = '='$$

In other words, there is only one zero. It may be mathematically interesting to remove this restriction, but we will not investigate that possibility.

### Condition 1.2.8:

If  $\mathcal{A}'(s_1, s_3, s_1, s_2) = '<'$  then for every set  $T \hat{=} S$ ,  $S$  containing points arbitrarily close to  $s_3$  (in a sense to be defined below), there exists  $t_1 \hat{=} s_3$ , such that, for every point  $s_4$ , if  $\mathcal{A}'(s_3, s_4, s_1, s_2) = '<'$ .

(What this is getting at, is that if you have a boundary point  $s_2$  to a ball (boundary being outside the ball as with metric spaces), then every point closer to the center than the boundary point has a neighborhood entirely contained inside the ball (closer to the center than the boundary point). This means that a ball with a boundary point has a unique radius: there cannot be a second boundary point further than the center than the first boundary point, because then the first boundary point would be inside the ball; there also cannot be a secondary point closer to the center than the first boundary point, because this axiom says that every closer point has a neighborhood.)

### Condition 1.2.9:

A set  $T \hat{=} S$  is said to hold points *arbitrarily close* to point  $s_3$  (in a sense to be defined below), there exists  $t_1 \hat{=} s_3$ , such that if  $\mathcal{A}'(s_2, t_1, s_2, s_4) = '<'$ , then  $\mathcal{A}'(s_1, s_4, s_1, s_2) = '>'$ .

(Here, we say that if you have a boundary point  $s_2$  to a ball, then every point further from the center than the boundary point has a neighborhood disjoint from the ball. Note that these two conditions may be vacuously satisfied by finite or other discrete metric / closeness spaces,

with which we are not very much concerned.)

These two stipulations together constitute the closeness space's version of the triangle inequality in a metric space. The slight awkwardness of this definition is necessary to permit discrete metric spaces. This awkwardness will recur in other places where we are defining concepts on a very low level without using familiar tools (because we are developing a more general form of such tools), but it should pass.

### **Definition 1.3:**

A set  $T \hat{\in} S$  is said to contain points *arbitrarily close* to point  $s_1$  if the following conditions hold:

#### **Condition 1.3.1:**

$T$  is nonempty and contains at least one point distinct from  $s_1$ .

#### **Condition 1.3.2:**

For every distinct pair of points  $s_2$  and  $s_3$ , there exists  $T_1$  distinct from  $s_1$  so that  $\mathcal{A}'(s_1, t_1, s_2, s_3) = '<'$ .

(In other words, for every closeness in the space, there is a point in  $T$  that is closer to  $s_1$ .)

### **Additional terminology 1.4:**

#### **Term 1.4.1:**

Point  $s_1$  is said to be *closer to  $s_2$  than  $s_3$  is* (close to  $s_2$ ) when  $\mathcal{A}'(s_2, t_1, s_2, s_4) = '<'$ .

#### **Term 1.4.2:**

Points  $s_1$  and  $r$  are said to be *equidistant from  $s_2$*  when  $\mathcal{A}'(s_1, s_2, r, s_2) = '='$ .

**Term 1.4.3:**

Point  $s_1$  is said to be *father from*  $s_2$  than  $r$  is when  $\mathcal{A}'(s_1, s_2, r, s_2) = '>'$ .

**Term 1.4.4:**

A pair of points is referred to as a *distance*.

**Term 1.4.5:**

The pair  $(s_1, s_2)$  is said to be the *distance from*  $s_1$  to  $s_2$ .

**Condition 1.4.6:**

If distance  $d_1$  is the pair  $(s_1, s_2)$  and distance  $d_2$  is the pair  $(s_3, s_4)$ , then the following three conditions hold:

**Condition 1.4.6.1:**

If  $\mathcal{A}'(s_1, s_2, s_3, s_4) = '<'$ , then  $d_1$  is said to be *less than*  $d_2$ , written  $d_1 < d_2$ .

**Condition 1.4.6.2:**

If  $\mathcal{A}'(s_1, s_2, s_3, s_4) = '='$ , then  $d_1$  is said to be *equal to*  $d_2$ , written  $d_1 = d_2$ .

**Condition 1.4.6.3:**

If  $\mathcal{A}'(s_1, s_2, s_3, s_4) = '>'$ , then  $d_1$  is said to be *greater than*  $d_2$ , written  $d_1 > d_2$ .

**Remark 1:5:**

Equality induces a partition of equivalence on distance. We will abuse notation slightly by referring to a distance, its equivalence class, and

relation simply by referring to a distance, its equivalence class, and elements of its equivalence class interchangeably. Context should make clear which of these is meant; if context is not sufficient to clarify, then we will be more explicit as to which of these is intended.

### **Definition 1.6:**

A *ball about point  $s_1$*  is a set of points such that the following two conditions hold:

#### **Condition 1.6.1:**

Every point in the ball is closer to  $s_1$  than is every point not in the ball.

#### **Condition 1.6.2:**

There does not exist point  $s_2$  in the ball such that the following conditions hold:

##### **Condition 1.6.2.1:**

No point in the ball is further from  $s_1$  than  $s_2$  is.

##### **Condition 1.6.2.2:**

$S$  contains points arbitrarily close to  $s_2$ , which are not contained in  $B$ .

This latter condition guarantees that  $B$  does not contain its boundary, if it does have a nonempty boundary.

As the remainder of the definition and terminology, we have:

#### **Condition 1.6.3:**

If distance  $d = (s_1, r)$ ,  $r$  is not contained in  $B$ , and  $B$  contains points arbitrarily close to  $r$ , then ball  $B$  is said to of *radius  $d$* , or to be the *ball of radius  $d$  centered at  $p$* , and its boundary is said to be the *circle of radius  $d$  centered at  $p$* .

(By the remarks following the triangle inequality, there is at most one

equivalence class of distances which satisfy this property. Note that a ball might or might not necessarily have a radius.)

## **Definition 1.7:**

A set  $T$  is said to have points *arbitrarily close to* point  $s_1$  if  $T$  contains at least one point  $t_1 \hat{\neq} s_1$ , and for every  $t_2 \hat{\neq} s_1$ , there exists  $t_3$  which is closer to  $s_1$  than is  $t_2$ .

## **Definition 1.8:**

The *boundary* of a set  $T$  is the set  $U$  of points  $u$  such that both  $T$  contains points arbitrarily close to  $u$ , and  $\hat{S} - T$  contain points arbitrarily close to  $u$ .

## **Definition of values, having different levels, 1.9:**

We are using the term *value* to refer to mathematical objects which we will use in the construction of the field we are working on. Each value has a level; values of higher levels are determined in terms of values of lower level. The highest level of value will be an element of a field. I will define some (not all) levels of values here. If we use the term without specifying its level, it should be understood to be the last level specified, usually the highest level so far defined, if there is ambiguity. In some cases we will leave an ambiguity when what we are saying applies both to a member of an equivalence class, and its class.

### **Definition 1.9.1:**

A *level 0 value* is defined to be a distance (strictly defined as a pair of points).

### **Definition 1.9.2:**

A *level 1 value* is defined to be an equivalence class of level 0 values under the partition induced by equality. Level 1 values are ordered, in the same way that their members are ordered.

The remaining levels of values will be defined after I have begun to build up the the machinery necessary to explain and use them.

### **Definition 1.10:**

A *level 0 zero* is defined to be a distance  $(s_1, s_1)$ .

**Definition 1.11:**

A *level 1 zero* is defined to be the equivalence class of level 0 zeroes. Zeroes will be defined for all levels greater than or equal to level  $a$ .

**Definition 1.12:**

A level  $n$  value is defined to be *positive* if it is greater than the level  $n$  zero.

**Definition 1.13:**

A *level  $n$  sequence* is defined to be a level  $n$  sequence  $\{\hat{a}^\alpha\}_{\alpha \in J}$ , with  $J$  a totally ordered indexing set.

A *level  $n$  epsilon* is defined to be a level  $n$  sequence  $\{\hat{a}^\alpha\}_{\alpha \in J}$ , of positive level  $n$  values, such that the following two conditions hold:

**Condition 1.13.1:**

Every positive level  $n$  value  $v$  is greater than some  $\varepsilon_\alpha$ .

**Condition 1.13.2:**

Every  $\varepsilon_\alpha$  is greater than or equal to every  $\varepsilon_\beta$ .

**Condition 1.13.3:**

Distance  $d_1$  is said to be *within distance  $d_2$  of distance  $d_3$*  if there is a set of points  $s_1, s_2$ , and  $s_3$  such that  $d_1 = (s_1, s_2)$ ,  $d_2 \hat{\%} \times (s_2, s_3)$ , and  $d_3 = (s_1, s_3)$ .

## Chapter 2: Examples

### Example 2.1:

Every metric space is a closeness space. Two distances are compared by ' $<$ '.

### Example 2.2:

We derive a space  $C$  from  $\hat{\mathbb{R}}^2$  under the Euclidean metric as follows:  
We make  $C$  a copy of  $\hat{\mathbb{R}}^2$ , and then we add a point  $O'$  to the space, and define closenesses as follows:  
 $O'$  is as close to every non-origin point as the origin is.  
 $O'$  and the origin are closer than any other distinct pair of points.

### Theorem 2.1.1:

*This closeness space cannot be described by any metric.*

#### Proof:

We prove this by contradiction.  
Assume that such a metric exists.  
If a metric did induce this closeness, it would have a least nonzero distance  $d$ , the distance from the origin  $O$  to  $O'$ .  
Let the distance from  $O$  to  $(0, 1)$  be  $d'$ .  
By the Archimedean property, there exists  $n$  such that  $d' \tilde{\cdot} n < d$ .  
By repeated application of the triangle inequality on segments from  $(0, 0)$  to  $(i \tilde{\cdot} n, 0)$  and from  $(i \tilde{\cdot} n, 0)$  to  $((i + 1) \tilde{\cdot} n, 0)$ , this means that

$d'$  is at most equal to  $n$  times the distance from  $(0, 0)$  to  $(1 \cdot \tilde{A} \cdot n, 0)$ .

This means that the distance from  $(0, 0)$  to  $(1 \cdot \tilde{A} \cdot n, 0)$  is less than  $d$ , but it is positive because they are two distinct points, and  $d$  is a minimal positive distance.  $\hat{a}'\hat{a}'\blacklozenge$

Q.E.D.

This space is in many ways a space very like a metric space; although it boasts unusual decoration, it has a strong amount of stricture, like a metric space, structure that might not be present in an arbitrary metric space.

### Example 2.2:

Let  $M$  be a metric space with metric  $\mu$  over a set  $E$  of equivalence classes partitioning a set  $S$ . Then we can define a closeness space  $C$  which has  $S$  as its space, and its closeness  $\mathcal{A}'$  defined as follows:

For every four points  $s_1, s_2, s_3, s_4$  in  $S$ :

#### Case 2.2.1:

If  $\mu(s_1, s_2) < \mu(s_3, s_4)$ , then  $\mathcal{A}'(s_1, s_2, s_3, s_4) = '<'$ .

#### Case 2.2.2:

If  $\mu(s_1, s_2) > \mu(s_3, s_4)$ , then  $\mathcal{A}'(s_1, s_2, s_3, s_4) = '>'$ .

#### Case 2.2.3:

If  $\mu(s_1, s_2) = \mu(s_3, s_4)$ , then:

##### Case 2.2.3.1

If  $s_1 = s_2$  and  $s_3 = s_4$  then  $\mathcal{A}'(s_1, s_2, s_3, s_4) = '='$ .

##### Case 2.2.3.2

If  $s_1 \hat{a}'\hat{a}' s_2$  and  $s_3 = s_4$  then  $\mathcal{A}'(s_1, s_2, s_3, s_4) = '>'$ .

### Case 2.2.3.3

If  $s_1 = s_2$  and  $s_3 \hat{\%}_0 s_4$  then  $\mathcal{A}E'(s_1, s_2, s_3, s_4) = '<'$ .

### Case 2.2.3.4

If  $s_1 \hat{\%}_0 s_2$  and  $s_3 \hat{\%}_0 s_4$  then  $\mathcal{A}E'(s_1, s_2, s_3, s_4) = '='$ .

In other words, if we have a metric space over equivalence classes, we can compare distances between pairs of elements of the classes by first looking at the distance between the elements' equivalence classes, and then doing something else to break ties — say, seeing where they are the same.

In relation to this, we have:

## Definition and example 2.3:

If we have two closeness spaces  $C$  and  $D$ , with underlying sets  $S$  and  $T$ , then we can take their cross product  $E = C \hat{\%} D$ , with underlying sets  $S$  and  $T$ , then we can take their product  $E = C \hat{\%} D$ , with closenesses compared in the dictionary order.

Specifically, let  $U$  be the underlying set for  $E$ . We compare two distances  $d_1 = (u_1, u_2)$  and  $d_2 = (u_3, u_4)$ , with  $u_1 = (s_1, t_1)$  and  $u_2 = (s_2, t_2)$ ,  $u_3 = (s_3, t_3)$ , and  $u_4 = (s_4, t_4)$ , as follows:

### Case 2.3.1:

If  $(s_1, s_2) < (s_3, s_4)$ , then  $(u_1, u_2) < (u_3, u_4)$ .

### Case 2.3.2:

If  $(s_1, s_2) > (s_3, s_4)$ , then  $(u_1, u_2) > (u_3, u_4)$ .

### Case 2.3.3:

If  $(s_1, s_2) = (s_3, s_4)$ , then:

Case 2.3.3.1:

If  $(t_1, t_2) > (t_3, t_4)$ , then  $(u_1, u_2) > (t_3, t_4)$ .

Case 2.3.3.2:

If  $(t_1, t_2) < (t_3, t_4)$ , then  $(u_1, u_2) < (t_3, t_4)$ .

Case 2.3.3.3:

If  $(t_1, t_2) = (t_3, t_4)$ , then  $(u_1, u_2) = (t_3, t_4)$ .

*N.B. This cross product, in the dictionary order, will be used later.*

### Example 2.3.4:

Let  $S, T = \hat{\alpha}, \hat{\alpha}^2$  under the closeness induced by the Euclidean metric. Then  $U = S \hat{\alpha} \circ T$  may be described as a Euclidean plane, where each point is itself a miniature Euclidean plane. It is a plane with infinitesimal distances, or alternately an infinitesimal Euclidean plane.

A typical ball in this space is the ball with center at the origin  $((0, 0), (0, 0))$  consisting of all points strictly closer to the origin than  $((1, 1), (1, 1))$ . This divides the large-scale plane into three regions: the interior, exterior, and boundary of the disk of radius 1, centered at the origin. The interior of the disk corresponds to miniature planes which are entirely within the ball, where every point is inside. The exterior of the disk corresponds to miniature planes which are entirely outside the ball, where no point is inside. The boundary of the disk corresponds to miniature planes where the interior of the disk of radius 1 centered at the origin (of the small one, not the large plane or metric space) is inside the ball, and its boundary and exterior are outside. The boundary of the given ball in  $U$  consists of, in the miniature planes, all circles of radius 1 centered at the origin which are themselves on the circle of radius 1 in the large plane.

Proof that this satisfies the axioms of the space:

The set of equivalence classes (under equality) of closenesses has a 1-1 order-preserving mapping to the nonnegative real number line cross itself, in the dictionary order. In other words, it is a dictionary order cross product of two totally ordered sets, and therefore totally ordered. This

product of two totally ordered sets, and therefore totally orders. This satisfies axioms 1.2.1-1.2.7.

To satisfy 1.2.8, we let  $s_2$  be closer to  $s_3$  than is  $s_1$ .

If the small planes of  $s_2$  and  $s_3$  are equidistant to the small plane of  $s_1$ , then the small plane position of  $s_2$  is closer to the small plane position of  $s_1$  than is the small plane position of  $s_3$ . There is, by topology, an open disk about the small plane position of  $s_1$  and boundary the small plane position of  $s_3$ ; if we take such a disk in the small plane  $s_3$  is actually contained in, it has points arbitrarily close to  $s_3$ , and is contained in the disk of center  $s_1$  and boundary  $s_2$ .

Every set  $T$  containing points arbitrarily close to  $s_3$  intersects the aforementioned disk infinitely many times. So we take some point inside that as our  $t_1$ ; every point  $s_4$  closer to  $s_3$  than is  $t_1$  and therefore closer to  $s_1$  than is  $s_2$ .

The same argument holds in the case that the small plane of  $s_3$  is closer to the small plane of  $s_1$  than is the small plane of  $s_2$ , save that we simply choose any disk contained in the small plane of  $s_3$ .

1.2.9 is satisfied; we simply have an open disk outside the open disk of center  $s_1$  and boundary point  $s_2$  instead of inside.

**Remark 2.3.4.1**

Note that in this case, a ball in the cross product was not a cross product of two balls, but the boundary of a ball in the cross product was cross product of the boundary of two balls. This leads us to:

**Theorem 2.3.4.2:**

*Let  $C$  and  $D$  be closeness spaces with underlying sets  $S$  and  $T$ , both of which consist of more than one point. Let space  $E = C \tilde{\wedge} D$ , with underlying set  $U = S \tilde{\wedge} T$ . Let ball  $B$  be a ball in  $E$  which does not contain any points  $(s_2, t_2)$  for any point  $s_2$  and some point  $t_2$ , contains all points  $(s_3, t_3)$  for any point  $t$  and some point  $t_3$ , and is centered at point  $u_1 = (s_1, t_1)$ .*

*Then  $B$  is not the cross product of two balls, but the boundary of  $B$  is the cross product of the boundaries of two balls. Furthermore, if the*

*aforementioned boundray is nonempty and contains point  $u_4 = (s_4, t_4)$ , then the boundary consists of the cross product of the circle of radius  $(s_1, s_4)$  of radius  $(t_1, t_4)$  centered at  $t_1$ .*

N.B. All of the hypotheses, which informally could be described as looking like clutter, are needed only to rule out degenerate exceptions. There are a number of equivalent replacements for the requirement that  $B$  contains no points at one  $T$  coordinate and all points at another.

**Proof:**

Proof by contradiction that  $B$  is not the cross product of two balls:

Assume that  $B$  is the cross product of two balls.  $B$  contains all of the points at one  $T$  coordinate,  $t_3$ , and none at another,  $t_2$ . Therefore,  $B$  contains  $u_5 = (s_5, t_5)$  with  $s_5 \hat{=} s_1$ . Every point  $(s_1, t_6)$  is closer to  $u_1$  than is  $u_5$ , so  $B$  contains a point at  $T$  coordinate  $t_6$ , and also does not contain that point.

We consider two cases now:

Case 2.3.4.2.1:

$B$  has an empty boundary. In that case, the further claim is vacuously true because the 'if' clause is not met. In addition, the former claim is also at least vacuously true: we observe that an entire space constitutes a ball, and the boundary of the entire space is empty. Therefore we examine the more interesting

Case 2.3.4.2.2:

$B$  has a nonempty boundary. In that case, we observe that all points on the boundary are equidistant from some point  $u_1$ ; if one were closer to another, we would have an exception to the triangle inequality.

I claim that if  $(s_7, t_7)$  and  $(s_8, t_8)$  are in the boundary  $B$ , then so are  $(s_7, t_8)$  and  $(s_8, t_7)$ :

Assume that  $(s_7, t_7)$  and  $(s_8, t_8)$  are in the boundary  $B$ . Then we can say the following, both for sets of points contained in  $B$ , and sets of points disjoint from  $B$ : there exists a set  $U_7 \hat{=} U$  containing points arbitrarily close to  $(s_7, t_7)$ , and a set  $U_8 \hat{=} U$  containing points  $(s_8, t_8)$ .  $U_7$  is a set of

ordered pairs of points, which contain points of arbitrary close  $S$  coordinate to  $s_7$ , and a set  $U_8$  containing points arbitrarily close to  $(s_8, t_8)$ .  $U_7$  is a set of ordered pairs of points, which contains points of arbitrarily close  $S$  coordinate to  $s_7$ , and arbitrarily close  $T$  coordinate to  $t_7$ , and  $U_8$  is a set of ordered pairs of points, which contains points of arbitrarily close  $S$  coordinate to  $s_8$ , and arbitrarily close  $T$  coordinate to  $t_8$ . Take the cross product  $V$  of the  $S$  coordinates in  $U_7$  and the  $T$  coordinates contained in  $U_8$ , and the cross product  $W$  of the  $S$  coordinates contained in  $U_8$ , and the  $T$  coordinates contained in  $U_7$ . As this argument applies both to sets of points contained in  $B$ , and sets of points disjoint from  $B$ , we have  $(s_7, t_8)$  and  $(s_8, t_7)$  as desired.

This establishes the independence of the  $S$  and  $T$  coordinates of points on the boundary, so the boundary is a cross product of some pair of sets in  $S$  and  $T$ .

This establishes the independence of the  $S$  and  $T$  coordinates of points on the boundary, so the boundary is a cross product of some pair of sets in  $S$  and  $T$ .

These sets must be equidistant from  $s_1$  and  $t_1$  respectively; if they were not, then we could select two radii of different length for the ball, and violate the triangle inequality. So they are subsets of the boundaries of balls; they must be the whole boundary because the cross product of two accumulation points of different sets is an accumulation point of the cross product of the two sets, as we argued above. And this establishes that the radius of the boundary must be the distance from the center to the cross product of two respective boundary points. So we have the boundary of  $B$ , for  $u_4 = (s_1, s_4)$  a point on the boundary, equal to the cross product of the circles of radius  $(s_1, s_4)$  and  $(t_1, t_4)$  centered at  $s_1$  and  $t_1$  respectively, as desired.

Q.E.D.

### Example 2.4:

Any subset of a closeness space is a closeness space.

### Remark 2.5:

The operations of taking a cross product of two closeness spaces in the dictionary order, and taking a subset of a closeness space, are together quite powerful. All other examples here are special cases of the operations taking a cross product of two closeness spaces in the dictionary order

taking a cross product of two closeness spaces in the dictionary order, and taking the subset of a closeness space.

**Example 2.5.1:**

The disjoint union of two closeness spaces  $C$  and  $D$ , in other words a union where  $C$  and  $D$  retain their closeness functions, and every function in one space is closer than every function in another space, is achievable by taking  $\hat{\alpha}, \diamond \times C$ , paring it down until we have only a copy of  $(0, 1)$  where 0 is identified with a copy of  $C$ , and then taking the cross product of the result in  $D$ , and again paring it down until we only have a copy of  $(0, 1)$  where 0 is identified with a copy of  $C$  for which each element is identified with a single element, and 1 is identified with a copy of  $D$ .

If we allow not only finite but transfinite sequences of these two operations (which must be well-ordered, in order to be well-defined), then possible closeness spaces can take an almost unbelievable complexity beyond what is possible for metric spaces. The faintest hint of this is provided by a transfinite algorithm, and partial proof of correctness which is not reproduced here, which seems (given the Axiom of Choice) to be able to embed an arbitrary partial ordering in a totally ordered field. I believe that the power is sufficient to justify making:

**Conjecture 2.5.2:**

Assuming the Axiom of Choice, any closeness space can be generated from  $\hat{\alpha}, \diamond$  under the closeness arising from the usual Euclidean distance metric, by the operation of taking cross products in the dictionary order, and taking subsets.

**Example 2.6:**

The long line appears to be a closeness space under what could intuitively be described as comparing the absolute value of differences. In general we cannot subtract ordinals as we can finite numbers, but we can do something comparable in this case.

We compare pairs of ordinals  $(o_1, o_2)$  and  $(o_3, o_4)$  as follows, in the case that both are distinct pairs:

Without loss of generality, assume that  $o_1 < o_2$  and  $o_3 < o_4$ .

$$\mathcal{A}'(o_1, o_2, o_3, o_4) = '<' \text{ if } o_1 + o_4 < o_3 + o_2.$$

$$\mathcal{A}'(o_1, o_2, o_3, o_4) = '=' \text{ if } o_1 + o_4 = o_3 + o_2.$$

$$\mathcal{A}'(o_1, o_2, o_3, o_4) = '>' \text{ if } o_1 + o_4 > o_3 + o_2.$$

### **Example 2.7:**

The numbering of items in this thesis may be taken to be a finite and discrete closeness space, with closeness compared with a dictionary ordering on the numberings.

## Chapter 3: Towards Constructing a Field

We now define the next level of values:

### Definition 3.1:

A *level 2 value* is defined to be a level 1 sequences of values  $\{d_\alpha\}_{\alpha \in J}$  which is Cauchy convergent: for every element  $\varepsilon_\beta$  of level 1 epsilon  $\{\varepsilon_\beta\}_{\beta \in K}$ , there exists an element  $d_\beta$  of  $\{d_\alpha\}$  such that every subsequent pair of values  $d_{\alpha_1}, d_{\alpha_2}$  are within  $\varepsilon_\beta$  of each other.

What we are doing here is taking the closure of the set of level 1 values under the operation of taking limits, which might or might not be embeddable in  $\hat{A}$ , and might be finer-grained. A level 1 value is included by a sequence that consists exclusively of that value.

### Note 3.2:

We compare two level 2 values  $v_1 = \{d_{1\alpha}\}_{\alpha \in J}$  and  $v_2 = \{d_{2\alpha}\}_{\alpha \in J}$  as follows:

If there is an element  $\alpha_0$  of  $J$  such that, for all subsequent values of  $\alpha_1$  and  $\alpha_2$  we have  $\alpha_1$  and  $\alpha_2$  then  $v_1 \hat{=} v_2$ .

If there is an element  $\alpha_0$  of  $J$  such that, for all subsequent values of  $\alpha_1$  and  $\alpha_2$  we have  $\alpha_1$  and  $\alpha_2$  then  $v_1 \hat{=} v_2$ .

If for every element  $\alpha_0$  of  $J$ , there exist subsequent  $\alpha_1, \alpha_2, \alpha_3$ , and  $\alpha_4$  such that  $d_{1\alpha_1} \hat{=} d_{2\alpha_2}$  and  $d_{1\alpha_3} \hat{=} d_{2\alpha_4}$ , then  $v_1 = v_2$ .

### Definition 3.3:

A *level 3 value* is defined to be an equivalence class of level 2 values under the partition induced by equality. Level 3 values are ordered in the same way that their members are ordered.

**Definition 3.4:**

A *level 2 zero* is defined to be an infinite sequence of level 1 zeroes.

**Definition 3.5:**

The *level 3 zero* is defined to be the equivalence class of the level 2 zeroes.

**Lemma 3.6:**

The set of points whose distances are less than  $v_1$  from point  $s_1$ , for any value  $v_1$  and point  $s_1$ , constitutes a ball.

**Proof:**

It is clear that every point in this set is closer to  $s_1$  than is any point not in the set. So we need only to know that the set does not contain any boundary points.

If there is a boundary point  $s_2$ , then there is an epsilon at that boundary point contained in the set, and an epsilon at that boundary disjoint from the set. From these can be chosen a sequence of distances that converges to  $(s_1, s_2)$  and is inside the set, whereby  $v_1 \hat{\%} \forall (s_1, s_2)$ , and can also be chosen by a sequence of distances that converges to  $(s_1, s_2)$  and is outside the set, whereby  $v_1 \hat{\%} \times (s_1, s_2)$ . So  $v_1 = (s_1, s_2)$ . The ball contains only points strictly closer than  $v_1$ , so it does not contain  $s_2$ .

â†’â†’

Q.E.D.

**Definition 3.7:**

The *supremum* (resp. *infimum*) of a nonempty set  $W$  of level 2 values is defined to be the equivalence class containing the sequences  $v_1$  of values which satisfy the following three conditions:

**Condition 3.7.1:**

All elements of  $v_1$  are contained in some element of  $W$ .

**Condition 3.7.2:**

$v_1$  contains at least one element greater than (resp. less than) or equal to any element of  $W$ .

**Condition 3.7.3:**

$v_1$  is monotonically nondecreasing (resp. nonincreasing).

**Remark 3.7.4:**

Not all sets will necessarily have a supremum or infimum. This a definition of what the supremum is if it exists, not necessarily a statement that one always exists.

There is at most a single equivalence class containing all such sequences, because any one contains an element greater than or equal to any element of any other, arbitrarily far along in the sequence.

The supremum and infimum of the empty set are undefined.

Now, we begin to develop an arithmetic.

**Definition 3.8:**

A value  $v_1$  is said to be *equal to*  $v_2 + v_3$  if  $v_1$  is the supremum over all triplets of points  $s_1, s_2$ , and  $s_3$  of the distance  $(s_1, s_3)$ , *such that the following two conditions hold:*

**Condition 3.8.1:**

$$(s_1, s_2) \hat{=} v_2$$

$$(s_2, s_3) \hat{=} v_3$$

**Condition 3.8.2:**

There do not exist any three points  $s_4, s_5,$  and  $s_6$  such that:

$$(s_4, s_4) \hat{=} v_2$$

$$(s_5, s_6) < v_3$$

$$(s_4, s_6) \hat{=} v_1$$

or

$$(s_4, s_4) < v_2$$

$$(s_5, s_6) \hat{=} v_2$$

$$(s_4, s_6) \hat{=} v_1$$

**Notation 3.8.3:**

A value  $v_1$  is said to be a *difference of  $v_2$  and  $v_3$*  if  $v_2 = v_1 + v_3$ .

**Remark 3.8.4**

This definition does not guarantee the existence of a sum of two values; it only tells how to tell if a given value is equal to the sum of two others.

This value is chosen for its simplicity, specificity, and power; there numerous other ways of defining addition, some of which would seem to be a more generalized version of addition, doing to addition in ordered, cyclic, abelian groups as we know them what metric spaces do to  $\hat{=}$ . However, we will not investigate that generality here, and in particular, we are going to restrict our attention to a specific subset of closeness spaces, those for which addition as here defined is associative and uniquely defined.

If we not only do not restrict our attention, but replace the given condition with the stipulation that  $v_1$  is the supremum over points  $s_1$  of distances from  $s_1$  is the supremum over points  $s_1$  of distances from  $s_1$  to a

point in the union of all closed balls of radius  $v_3$  whose centers lie in a closed ball of radius  $v^2$  centered at  $s_1$ , then we further lose commutativity; at least in the case of the long line, though, we have reproduced ordinal addition.

It appears that looking at those more general cases may be of mathematical interest and may allow the creation of an arithmetic that is looser and more general than that of an ordered, abelian group. However, we do not investigate that possibility here, and have not investigated it, beyond the brief attention paid in this remark.

This definition provides commutativity, and unique subtraction where defined (i.e.  $v_1 - v_2$  may not be defined, but if it is, it is unique; provided that  $v_1 - v_2$  may not be defined, but if it is, it is unique; provided that  $v_1 = v_2 + v_3$ , if  $v_4 < v_3$ , then the distances between pairs of points eligible for the definition of addition will be less by at least a minimum positive amount, by the triangle inequality, so  $v_2 + v_4 < v_2 + v_3 = v_1$ . This observation, as well as establishing that subtraction is not ambiguous (though possibly undefined), proves for us:

### **Theorem 3.9:**

For any three values  $v_1$ ,  $v_2$ , and  $v_3$  for which  $v_2 +$  is defined, we have:

If  $v_1 < v_2$ , then  $v_1 + v_3 < v_2 + v_3$ .

If  $v_1 = v_2$ , then  $v_1 + v_3 = v_2 + v_3$ .

If  $v_1 > v_2$ , then  $v_1 + v_3 > v_2 + v_3$ .

### **Sketch of Proof 3.9.1:**

The first case is established above. The second case is established from the first case by the symmetry of an ordering, and the third case is established by the contradiction which would arise from the transitivity of the ordering if one sum was less than the other.

We now define our next level of value; as we earlier developed a closure under the operation of taking limits, we now define a closure under the operation of addition. Again, we are going with the more specific and powerful definition of addition given, at the loss of some

generally.

### **Hunch 3.10:**

Addition of values is associative.

#### **Suggestion of Proof Idea 3.10.1:**

It seems that this arises from condition 3.8.2. Definition 3.8 is a refined version of earlier, less powerful definitions; we have not devoted enough time to the matter to establish associativity. We will continue on the assumption that this is true; one might say if need be that we are restricting our attention to spaces where addition is associative. We will further restrict attention to spaces which are closed under addition (although a slightly weaker condition is needed for my work, namely that any two level 4 values as defined below are uniquely comparable).

### **Definition 3.11:**

*A level 4 value* is defined to be a finite string of symbols as follows:

#### **Part 3.11.1:**

If  $v_1$  is a variable referring to a level 3 value, then " $v_1$ " is a level 4 value.

#### **Part 3.11.2:**

If " $s_1$ " and " $s_2$ " are two level 4 values, then " $(s_1 + s_2)$ " is a level 4 value.

#### **Part 3.11.3:**

If " $s_1$ " is a level 4 value, then so is " $-s_1$ ".

#### **Part 3.11.4:**

Nothing else is a level 4 value.

We compare level 4 values as follows:

we compare level 4 values as follows.

### **Comparison 3.11.5:**

If for level 3 values we have  $v_1 < v_2$ , then for level 4 values, we have “ $v_1$ ” < “ $v_2$ ” and “ $-v_1$ ” > “ $-v_2$ ”.

If for level 3 values we have  $v_1 = v_2$ , then for level 4 values, we have “ $v_1$ ” = “ $v_2$ ” and “ $-v_1$ ” > “ $-v_2$ ”.

If for level 3 values we have  $v_1 > v_2$ , then for level 4 values, we have “ $v_1$ ” > “ $v_2$ ” and “ $-v_1$ ” < “ $-v_2$ ”.

And we complete comparison by allowing certain manipulations, namely:

### **Part 3.11.6**

If for level 3 values we have  $v_1 = v_2 + v_3$ , then inside a level 4 value  $v_1$  may be substituted or back-substituted for  $v_2 + v_3$  and  $v_3 + v_2$ , then inside a level 4 value  $v_2$  may be substituted or back-substituted for  $v_1 + -v_3$ .

### **Part 3.11.7:**

We may associate and commute while preserving equality.

### **Part 3.11.8:**

We may add a like value to two different values without affecting their comparison.

### **Part 3.11.9:**

Comparison is transitive.  
We now define:

### **Definition 3.12:**

A *level 5 value* is an equivalence class of level 4 values under equality, with addition, additive inversion, and comparison of equivalence classes defined according to the equivalence classes of those operations on respective members.

We now have an ordered abelian group.

**Remark 3.13:**

It is well known that an ordered abelian group may be embedded in a field. (Source: Anand Pillay).

**Definition 3.14:**

For any two values  $v_1$  and  $v_2$ ,  $v_1$  is said to be *of the same magnitude* as  $v_2$  if there exists a positive natural number  $n$  such that either  $v_1 + v_1 + \hat{\leftarrow} + v_1 > v_2$  (with  $v_1$  added to itself  $nn$  times) and  $v_2 + v_2 + v_2 \hat{\leftarrow} v_2 > v_1$  (with  $v_2$  added to itself  $n$  times), or  $v_1 + v_1 + \hat{\leftarrow} + v_1 < -v_2$  (with  $v_1$  added to itself  $nn$  times) and  $-v_2 - v_2 - v_2 \hat{\leftarrow} -v_2 < v_1$  (with  $v_2$  added to itself  $n$  times).

It is clear that the magnitudes are equivalence classes of values.

The value 0 resides in its own magnitude, which will not be named.

**Part 3.14.1:**

Magnitude  $M_1$  is said to be *greater than* (resp. *less than*) magnitude  $M_2$  if it is a different magnitude, and  $M_1$  contains at least one positive value that is greater than (resp. less than) at least one positive value in  $M_2$ .

**Part 3.14.2:**

The magnitude which contains 1 is said to be *finite*.

All greater magnitudes than the finite magnitude are said to be *infinite*.

All lesser magnitudes than the finite magnitude (excluding the

magnitude of 0), are said to be *infinitesimal*. The variable  $\varepsilon$  will hereafter refer to an infinitesimal.

To give a specific example of what kind of ordered field we have, let us look at

### Example 3.15

Let closeness space  $C$  be the space examined in example 2.3.4, namely  $\hat{a}, \hat{a}^2 \tilde{A} - \hat{a}, \hat{a}^2$ , under the closenesses induced by the dictionary order on Euclidean closenesses.

Then the closenesses are of type  $\hat{a}, \hat{a}^2 \tilde{A} - \hat{a}, \hat{a}^2$ , in the dictionary order.

The elements of a minimal imbedding field are of order type  $S \hat{a} \hat{S}$ ,  $\hat{a}, \hat{a}^2 \hat{a}, \hat{a}^2$ , such that all but finitely many of the coordinates of an element of  $S$  are zero.

Comparison of values is a dictionary comparison of their coordinates.

Addition of two values is coordinate-wise addition of reals. I.e. if  $v_1$  and  $v_2$  are values and  $v_{1i}, v_{2i}$  are the  $i^{\text{th}}$  coordinates of  $v_1$  and  $v_2$  respectively, then the  $i^{\text{th}}$  coordinate of  $v_3$  of  $v_3 = v_1 + v_2$  is equal to  $v_{1i} + v_{2i}$ .

Multiplication of two values is as follows:

If  $v_1$  and  $v_1$  are as above, then  $v_3$  has coordinate  $v_{3i}$  equal to  $\sum_{j+k=i} v_{1j} \tilde{A} - v_{2k}$ .

This is isomorphic to the field of ratios of polynomials in a single variable, over the real numbers. Note that, although the order type is fixed, a constant  $c$  chosen so that  $c^0 = 1$ ,  $c^1$  is a number of the lowest infinite magnitude and zero coordinate in other magnitudes, and  $c^{-1}$  is a number of the highest infinitesimal magnitudes, is not a unique constant. Any one such value can be arrived at by multiplying another such value by a nonzero real number.

The interpretation of this representation as given is that the 0-coordinate is the finite component, components of positive  $\hat{a}, \hat{a}^2$  value are infinite components, and components of negative  $\hat{a}, \hat{a}^2$  value are infinitesimal components (or vice versa).

Under this interpretation, we can say that the given closeness space is

like a metric space, using the given field instead of  $\hat{a}$ ,  $\diamond$  as the measure. It could be stated to use the 0 coordinate for the large plane, and the  $-1$  coordinate for the miniature planes at each point of the large plan (in which case the space is interpreted as a roughly Euclidean plane with infinitesimal distances, or to use the 1-coordinate for the large plane, and the 0 coordinate for the small planes (in which case the space is interpreted as an infinite plane of real planes — it is to the Euclidean plane roughly as  $\omega^2$  is to  $\omega$  among ordinals), or indeed  $z$  and  $z - 1$  for any integer  $z$ .

### Example 3.15.1: Non-Standard Analysis

This allows achievement of at least some of the results of nonstandard analysis. For example:

#### Definition 3.15.1.1:

For the duration of this example, we define the *nearest real number* to a finite value to be the value of the same first coordinate, and zero component in the second coordinate. (I.e. a distance of  $3.7 \tilde{A} - 0$  is the nearest real number to  $3.7 \tilde{A} - 23.4$ .  $3.7 \tilde{A} - 23.4$  or  $0 \tilde{A} - 14$  are not the nearest real numbers to anything.)

#### Definition 3.15.1.2:

We define the *limit of a function  $\mathcal{A}'$  at point  $x$*  to be equal to the nearest real number to  $\mathcal{A}'(x + \varepsilon)$ , if such a real number exists and is uniquely defined across all infinitesimals  $\varepsilon$ .

For example, the limit of  $\mathcal{A}'(x) = x + 1$  at  $x = 1$  is the nearest real number to

$$\begin{aligned} \mathcal{A}'(x + \varepsilon) &= \\ f(1 + \varepsilon) &= \\ 1 + \varepsilon + 1 &= \\ 2 + \varepsilon & \end{aligned}$$

which has 2 as its nearest real number.

#### Definition 3.15.1.3:

We define a function  $f(x)$  to be *continuous at point x* if  $f$  is defined at  $x$  and if, for every infinitesimal  $\epsilon$ , we have  $||f(x + \epsilon) - f(x)||$  at most an infinitesimal.

For example, if we have

$$f(x) = x + 1 \text{ if } x \neq 0$$

$f(x) = 0$  otherwise

then we have  $f$  continuous at  $-1$  and  $1$ , but not continuous at  $0$ :

$$f(-1 + \epsilon) - f(-1) = 0 - 0 \quad f(1 + \epsilon) - f(1) = 1 + \epsilon + 1 - 1 + 1 = \epsilon$$

but problems when we examine a negative value of  $\epsilon$  with nearest real number at  $0$ :

If  $\epsilon < 0$ , then  $f(0 + \epsilon) = f(\epsilon)$ , but we have  $f(0) = 0 + 1 = 1$ , and  $0 - 1 = -1$  is not an infinitesimal.

**Definition 3.15.1.4:**

We define the derivative of a function  $f'$  at point  $x$  to be the nearest real number to

$$(f'(x + \epsilon) - f'(x)) / \epsilon$$

if such a number exists and is well-defined across all infinitesimals  $\epsilon$ .

For example, the derivative of  $f(x) = x^2$  is equal to the nearest real number to:

$$(x + \epsilon)^2 - x^2 / \epsilon =$$

$$(x^2 + 2x\epsilon + \epsilon^2 - x^2) / \epsilon =$$

$$(2x\epsilon + \epsilon^2) / \epsilon =$$

$$2x + \epsilon$$

and the nearest real number to  $2x + \epsilon$  is  $2x$ . So we have the derivative of  $x^2$  equal to  $2x$ .

## Closing remark

Providing a nonstandard analysis with derivatives seems straightforward enough; notwithstanding the fundamental theorem of calculus, it is not clear to this author how to adapt these findings to create an integral, although just as epsilon-delta arguments provide a finite workaround to infinitesimals, the core concept of integration in calculus find a finite workaround to summation of an infinite number of infinitesimally thick slices. It might be noted that this system does yet have the infinite sums and infinite integers of non-standard analysis. Perhaps our restricted attention disregarded some closeness spaces or other matters yielding fields that would allow a more powerful non-standard analysis; perhaps work with the closeness spaces involving the ordinals cross  $[0, 1)$  — a nonnegative long real number line — would achieve such things. However, we will draw a limit to the investigation here.

# The Commentary

Memories flitted through Martin's mind as he drove: tantalizing glimpses he had seen of how people really thought in Bible times. Glimpses that made him thirsty for more. It had seemed hours since he left his house, driving out of the city, across back roads in the forest, until at last he reached the quiet town. The store had printer's blocks in the window, and as he stepped in, an old-fashioned bell rung. There were old tools on the walls, and the room was furnished in beautifully varnished wood.

An old man smiled and said, "Welcome to my bookstore. Are you—" Martin nodded. The man looked at him, turned, and disappeared through a doorway. A moment later he was holding a thick leatherbound volume, which he set on the counter. Martin looked at the binding, almost afraid to touch the heavy tome, and read the letters of gold on its cover:

**COMMENTARY  
ON THE OLD AND NEW TESTAMENTS  
IN ONE VOLUME  
CONTAINING A CAREFUL ANALYSIS OF ALL CULTURAL  
ISSUES  
NEEDFUL TO UNDERSTAND THE BIBLE  
AS DID ITS FIRST READERS**

"You're sure you can afford it, sir? I'd really like to let it go for a lower price, but you must understand that a book like this is costly, and I can't afford to sell it the way I do most other titles."

"Finances will be tight, but I've found knowledge to cost a lot and ignorance to cost more. I have enough money to buy it, if I make it a priority."

"Good. I hope it may profit you. But may I make one request, even if it sounds strange?"

"What is your request?"

"If, for any reason, you no longer want the commentary, or decide to get rid of it, you will let me have the first chance to buy it back."

"Sir? I don't understand. I have been searching for a book like this for years. I don't know how many miles I've driven. I will pay. You're right that this is more money than I could easily spare—and I am webmaster to a major advertising agency. I would have only done so for something I desired a great, great deal."

"Never mind that. If you decide to sell it, will you let me have the first chance?"

"Let's talk about something else. What text does it use?"

"It uses the *Revised Standard Version*. Please answer my question, sir."

"How could anyone prefer darkness to light, obscurity to illumination?"

"I don't know. Please answer my question."

"Yes, I will come to you first. Now will you sell it to me?"

The old man rung up the sale.

As Martin walked out the door, the shopkeeper muttered to himself, "Sold for the seventh time! Why doesn't anybody want to keep it?"

---

Martin walked through the door of his house, almost exhausted, and yet full of bliss. He sat in his favorite overstuffed armchair, one that had been reupholstered more than once since he sat in it as a boy. He relaxed, the heavy weight of the volume pressing into his lap like a loved one, and then opened the pages. He took a breath, and began reading.

## **INTRODUCTION**

At the present time, most people believe the question of culture in relation to the Bible is a question of understanding the ancient cultures and accounting for their influence so as to be able to better understand Scripture. That is indeed a valuable field, but its benefits may only be reaped after addressing another concern, a concern that is rarely addressed by people eager to understand Ancient Near Eastern culture.

A part of the reader's culture is the implicit belief that he is not encumbered by culture: culture is what people live under long ago and far away. This is not true. As it turns out, the present culture has at least two beliefs which deeply influence and to some extent limit its ability to connect with the Bible. There is what scholars call 'period awareness', which is not content with the realization that we all live in a historical context, but places different times and places in sealed compartments, almost to the point of forgetting that people who live in the year 432, people who live in 1327, and people who live in 1987 are all human. Its partner in crime is the doctrine of progress, which says at heart that we are better, nobler, and wiser people than those who came before us, and our ideas are better, because ideas, like machines, grow rust and need to be replaced. This gives the reader the most extraordinary difficulties in believing that the Holy Spirit spoke through humans to address human problems in the Bible, and the answer speaks as much to us humans as it did to them. Invariably the reader believes that the Holy Spirit influenced a first century man trying to deal with first century problems, and a delicate work of extrication is needed before ancient texts can be adapted to turn-of-the-millennium concerns.

Martin shifted his position slightly, felt thirsty, almost decided to get up and get a glass of water, then decided to continue reading. He turned a

few pages in order to get into the real meat of the introduction, and resumed reading:

...is another example of this dark pattern.

In an abstracted sense, what occurs is as follows:

1. Scholars implicitly recognize that some passages in the Bible are less than congenial to whatever axe they're grinding.
2. They make a massive search, and subject all of the offending passages to a meticulous examination, an examination much more meticulous than orthodox scholars ever really need when they're trying to understand something.
3. In parallel, there is an exhaustive search of a passage's historical-cultural context. This search dredges up a certain kind of detail—in less flattering terms, it creates disinformation.
4. No matter what the passage says, no matter who's examining it, this story always has the same ending. It turns out that the passage in fact means something radically different from what it appears to mean, and in fact does not contradict the scholar at all.

This dark pattern has devastating effect on people from the reader's culture. They tend to believe that culture has almost any influence it is claimed to; in that regard, they are very gullible. It is almost unheard-of for someone to say, "I'm sorry, no; cultures can make people do a lot of things, but I don't believe a culture could have *that* influence."

It also creates a dangerous belief which is never spoken in so many words: "If a passage in the Bible appears to contradict what we believe today, that is because we do not adequately understand its cultural context."

Martin coughed. He closed the commentary slowly, reverently placed it on the table, and took a walk around the block to think.

Inside him was turmoil. It was like being at an illusionist show, where impossible things happened. He recalled his freshman year of college, when his best friend Chaplain was a student from Liberia, and come winter, Chaplain was not only seared by cold, but looked betrayed as the

icy ground became a traitor beneath his feet. Chaplain learned to keep his balance, but it was slow, and Martin could read the pain off Chaplain's face. How long would it take? He recalled the shopkeeper's words about returning the commentary, and banished them from his mind.

Martin stepped into his house and decided to have no more distractions. He wanted to begin reading commentary, now. He opened the book on the table and sat erect in his chair:

### **Genesis**

1:1 In the beginning God created the heavens and the earth.

1:2 The earth was without form and void, and darkness was upon the face of the deep; and the Spirit of God was moving over the face of the waters.

1:3 And God said, "Let there be light"; and there was light.

The reader is now thinking about evolution. He is wondering whether Genesis 1 is right, and evolution is simply wrong, or whether evolution is right, and Genesis 1 is a myth that may be inspiring enough but does not actually tell how the world was created.

All of this is because of a culture phenomenally influenced by scientism and science. The theory of evolution is an attempt to map out, in terms appropriate to scientific dialogue, just what organisms occurred, when, and what mechanism led there to be new kinds of organisms that did not exist before. Therefore, nearly all Evangelicals assumed, Genesis 1 must be the Christian substitute for evolution. Its purpose must also be to map out what occurred when, to provide the same sort of mechanism. In short, if Genesis 1 is true, then it must be trying to answer the same question as evolution, only answering it differently.

Darwinian evolution is not a true answer to the question, "Why is there life as we know it?" Evolution is on philosophical grounds *not* a true answer to that question, because it is not an answer to that question at all. Even if it is true, evolution is only an answer to the question, "*How* is there life as we know it?" If someone asks, "Why is there this life that we see?" and someone answers, "Evolution," it is like someone saying, "Why is the kitchen light on?" and someone else answering, "Because the switch is in the on position, thereby closing

the electrical circuit and allowing current to flow through the bulb, which grows hot and produces light."

Where the reader only sees one question, an ancient reader saw at least two other questions that are invisible to the present reader. As well as the question of "How?" that evolution addresses, there is the question of "Why?" and "What function does it serve?" These two questions are very important, and are not even considered when people are only trying to work out the antagonism between creationism and evolutionism.

Martin took a deep breath. Was the text advocating a six-day creationism? That was hard to tell. He felt uncomfortable, in a much deeper way than if Bible-thumpers were preaching to him that evolutionists would burn in Hell.

He decided to see what it would have to say about a problem passage. He flipped to Ephesians 5:

5:21 Be subject to one another out of reverence for Christ.

5:22 Wives, be subject to your husbands, as to the Lord.

5:23 For the husband is the head of the wife as Christ is the head of the church, his body, and is himself its Savior.

5:24 As the church is subject to Christ, so let wives also be subject in everything to their husbands.

5:25 Husbands, love your wives, as Christ loved the church and gave himself up for her,

5:26 that he might sanctify her, having cleansed her by the washing of water with the word,

5:27 that he might present the church to himself in splendor, without spot or wrinkle or any such thing, that she might be holy and without blemish.

5:28 Even so husbands should love their wives as their own bodies. He who loves his wife loves himself.

5:29 For no man ever hates his own flesh, but nourishes and cherishes it, as Christ does the church,

5:30 because we are members of his body.

5:31 "For this reason a man shall leave his father and mother and be joined to his wife, and the two shall become one flesh."

5:32 This mystery is a profound one, and I am saying that it

refers to Christ and the church;

5:33 however, let each one of you love his wife as himself, and let the wife see that she respects her husband.

The reader is at this point pondering what to do with this problem passage. At the moment, he sees three major options: first, to explain it away so it doesn't actually give husbands authority; second, to chalk it up to misogynist Paul trying to rescind Jesus's progressive liberality; and third, to take this as an example of why the Bible can't really be trusted.

To explain why the reader perceives himself caught in this unfortunate choice, it is necessary to explain a powerful cultural force, one whose effect cannot be ignored: feminism. Feminism has such a powerful effect among the educated in his culture that the question one must ask of the reader is not "Is he a feminist?" but "What kind of feminist is he, and to what degree?"

Feminism flows out of a belief that it's a wonderful privilege to be a man, but it is tragic to be a woman. Like Christianity, feminism recognizes the value of lifelong penitence, even the purification that can come through guilt. It teaches men to repent in guilt of being men, and women to likewise repent of being women. The beatific vision in feminism is a condition of sexlessness, which feminists call 'androgyny'.

Martin stopped. "What kind of moron wrote this? Am I actually supposed to believe it?" Then he continued reading:

This is why feminism believes that everything which has belonged to men is a privilege which must be shared with women, and everything that has belonged to women is a burden which men must also shoulder. And so naturally, when Paul asserts a husband's authority, the feminist sees nothing but a privilege unfairly hoarded by men.

Martin's skin began to feel clammy.

The authority asserted here is not a domineering authority that uses power to serve oneself. Nowhere in the Bible does Paul tell

husbands how to dominate their wives. Instead he follows Jesus's model of authority, one in which leadership is a form of servanthood. Paul doesn't just assume this; he explicitly tells the reader, "Husbands, love your wives, as Christ loved the church and gave himself up for her." The sigil of male headship and authority is not a crown of gold, but a crown of thorns.

Martin was beginning to wish that the commentary had said, "The Bible is misogynistic, and that's good!" He was beginning to feel a nagging doubt that what he called problem passages were in fact perfectly good passages that didn't look attractive if you had a problem interpretation. What was that remark in a theological debate that had gotten so much under his skin? He almost wanted not to remember it, and then—"Most of the time, when people say they simply cannot understand a particular passage of Scripture, *they understand the passage perfectly well*. What they don't understand is how to explain it away so it doesn't contradict them."

He paced back and forth, and after a time began to think, "The sword can't always cut against me, can it? I know some gay rights activists who believe that the Bible's prohibition of homosexual acts is nothing but taboo. Maybe the commentary on Romans will give me something else to answer them with." He opened the book again:

1:26 For this reason God gave them up to dishonorable passions. Their women exchanged natural relations for unnatural,

1:27 and the men likewise gave up natural relations with women and were consumed with passion for one another, men committing shameless acts with men and receiving in their own persons the due penalty for their error.

The concept of 'taboo' in the reader's culture needs some explanation. When a person says, "That's taboo," what's being said is that there is an unthinking, irrational prejudice against it: one must not go against the prejudice because then people will be upset, but in some sense to call a restriction a taboo is *de facto* to show it unreasonable.

The term comes from Polynesia and other South Pacific islands,

where it is used when people recognize there is a line which it is wiser not to cross. Thomas Aquinas said, "The peasant who does not murder because the law of God is deep in his bones is greater than the theologian who can derive, 'Thou shalt not kill' from first principles."

A taboo is a restriction so deep that most people cannot offer a ready explanation. A few can; apologists and moral philosophers make a point of being able to explain the rules. For most people, though, they know what is right and what is wrong, and it is so deeply a part of them that they cannot, like an apologist, start reasoning with first principles and say an hour and a half later, "and this is why homosexual acts are wrong."

What goes with the term 'taboo' is an assumption that if you can't articulate your reasons on the drop of a hat, that must mean that you don't have any good reasons, and are acting only from benighted prejudice. Paradoxically, the term 'taboo' is itself a taboo: there is a taboo against holding other taboos, and this one is less praiseworthy than other taboos...

Martin walked away and sat in another chair, a high wooden stool. What was it that he had been thinking about before going to buy the commentary? A usability study had been done on his website, and he needed to think about the results. Designing advertising material was different from other areas of the web; the focus was not just on a smooth user experience but also something that would grab attention, even from a hostile audience. Those two goals were inherently contradictory, like mixing oil and water. His mind began to wander; he thought about the drive to buy the commentary, and began to daydream about a beautiful woman clad only in—

What did the commentary have to say about lust? Jesus said it was equivalent to adultery; the commentary probably went further and made it unforgiveable. He tried to think about work, but an almost morbid curiosity filled him. Finally, he looked up the Sermon on the Mount, and opened to Matthew:

5:27 "You have heard that it was said, 'You shall not commit adultery.'

5:28 But I say to you that every one who looks at a woman

lustfully has already committed adultery with her in his heart.

There is a principle here that was once assumed and now requires some explanation. Jesus condemned lust because it was doing in the heart what was sinful to do in the hands. There is a principle that is forgotten in centuries of people saying, "I can do whatever I want as long as it doesn't harm you," or to speak more precisely, "I can do whatever I want as long as I don't see how it harms you." Suddenly purity was no longer a matter of the heart and hands, but a matter of the hands alone. Where captains in a fleet of ships once tried both to avoid collisions and to keep shipshape inside, now captains believe that it's OK to ignore mechanical problems inside as long as you try not to hit other ships—and if you steer the wheel as hard as you can and your ship still collides with another, you're not to blame. Heinrich Heine wrote:

Should ever that taming talisman break—the Cross—then will come roaring back the wild madness of the ancient warriors, with all their insane, Berserker rage, of whom our Nordic poets speak and sing. That talisman is now already crumbling, and the day is not far off when it shall break apart entirely. On that day, the old stone gods will rise from their long forgotten wreckage and rub from their eyes the dust of a thousand years' sleep. At long last leaping to life, Thor with his giant hammer will crush the gothic cathedrals. And laugh not at my forebodings, the advice of a dreamer who warns you away from the . . . *Naturphilosophen*. No, laugh not at the visionary who knows that in the realm of phenomena comes soon the revolution that has already taken place in the realm of spirit. For thought goes before deed as lightning before thunder. There will be played in Germany a play compared to which the French Revolution was but an innocent idyll.

Heinrich Heine was a German Jewish poet who lived a century before Thor's hammer would crush six million of his kinsmen.

The ancient world knew that thought goes before deed as lightning before thunder. They knew that purity is an affair of the heart as well as the hands. Now there is grudging acknowledgment

that lust is wrong, a crumbling acceptance that has little place in the culture's impoverished view, but this acknowledgment is like a tree whose soil is taken away. For one example of what goes with that tree, I would like to look at advertising.

Porn uses enticing pictures of women to arouse sexual lust, and can set a chain of events in motion that leads to rape. Advertising uses enticing pictures of chattels to arouse covetous lust, and exists for the sole reason of setting a chain of events in motion that lead people to waste resources by buying things they don't need. The fruit is less bitter, but the vine is the same. Both operate by arousing impure desires that do not lead to a righteous fulfillment. Both porn and advertising are powerfully unreal, and bite those that embrace them. A man that uses porn will have a warped view of women and be slowly separated from healthy relations. Advertising manipulates people to seek a fulfillment in things that things can never provide: buying one more product can never satisfy that deep craving, any more than looking at one more picture can. Bruce Marshall said, "...the young man who rings at the door of a brothel is unconsciously looking for God." Advertisers know that none of their products give a profound good, nothing like what people search for deep down inside, and so they falsely present products as things that are transcendent, and bring family togetherness or racial harmony.

It has been asked, "Was the Sabbath made for man, or was man made for the Sabbath?" Now the question should be asked, "Was economic wealth made for man, or was man made for economic wealth?" The resounding answer of advertising is, "Man was made for economic wealth." Every ad that is sent out bears the unspoken message, "You, the customer, exist for me, the corporation."

Martin sat in his chair, completely stunned.

After a long time, he padded off to bed, slept fitfully, and was interrupted by nightmares.

---

The scenic view only made the drive bleaker. Martin stole guiltily into the shop, and laid the book on the counter. The shopkeeper looked at him, and he at the shopkeeper.

"Didn't you ask who could prefer darkness to light, obscurity to illumination?"

Martin's face was filled with anguish. "How can I live without my darkness?"

# A Comparison Between the Mere Monk and the Highest Bishop

I believe that if some of the best bishops were asked, "How would you like to step down from all of your honors, and all of your power, and hand the reins over to an excellent successor, and become only the lowest rank of monk at an obscure monastery in the middle of nowhere with no authority over any soul's salvation but your own" would you take it?" their response might be, "Um, uh... *what's the catch?*"

If I may comment briefly on virginity and marriage: in a culture where you try to rip your opponent's position to shreds instead of aiming for fair balance in a critique, St. Gregory of Nyssa's [On Virginity](#) is *meant* to rip marriage to shreds. I don't mean that, and I would say something that I don't think needed to be said, or at least not needed to be said, as much: *true marriage should be seen as having something of the hallowed respect associated with monasticism*. A marriage in its fullest traditional sense, is becoming (or already is) something that should be called exotic if people didn't look down their noses at it. As far as true marriage relates to monasticism, the externals are almost antithetical but the goal is the same: self-transcendence. The person who said, "Men love women. Women love children. Children love pets. Life isn't fair," is on to something. Getting into marriage properly requires stepping beyond an egotism of yourself; raising children, if you are so blessed, requires stepping beyond an egotism of two. And Biblically and patristically,

childlessness was seen as a curse; the priestly father to whom one child was given in old age, the Mother of God herself, bore derision even in his high office because people viewed childlessness as a curse enough to be a sign of having earned divine judgment and wrath. And at a day and age where marriage is being torn from limb to limb, it might befit us to make particular efforts to honor marriage alongside monasticism.

There is one advantage to monasticism; actually, there are several, but one eclipses the others, and that is mentioned when St. Paul recognizes that not everyone can be celibate like him, marriage being a legitimate and honorable option. But he mentions a significant advantage to celibacy: the married person must have divided attention between serving family and the Lord, where a celibate person (today this usually belongs in monasticism) is able to give God an undivided attention, enjoying the blessed estate of a Mary sitting at the Lord's feet as a disciple taking in the one thing that is truly necessary, and not as a Martha who is busily encumbered with many other things. And while St. Paul knows that not everybody can walk the celibate path, he does at least wish that people could offer God an undivided attention. And I have yet to hear Orthodox challenge that any genuine marriage includes a condition of divided attention.

If we leave off talking about bishops just briefly, let's take a brief look at the abbot next to a simple monk under him ("simple monk" is a technical term meaning a monk who has not additionally been elevated to any minor or major degree of sacramental priesthood). The simple monk has lost some things, but he has in full the benefit St. Paul wants celibates to have: everything around him is ordered to give him the best opportunity to work on salvation. Meanwhile, any abbot who is doing an abbot's job is denied this luxury. Some abbots have been tempted to step down from their honored position because of how difficult they've found caring for themselves spiritually as any monk should, and additionally care for the many needs of a monastery and the other monks. An abbot may not focus on his own salvation alone; he must divide his attention to deal with disciples and various secular material needs a monastery must address. An abbot is a monk who must bear a monk's full cross; in addition, while an abbot has no sexual license, he must also bear the additional cross of a father who is dividing his attention in dealing with those under his care. He may be celibate, but he effectively forgoes the chief benefit St. Paul ascribes to living a celibate life.

Chief benefit St. Paul ascribes to living a celibate life.

To be a heirarch brings things another level higher. Right now I don't want to compare the mere monk with a bishop, but rather compare an abbot with a bishop. The abbot acts as a monk in ways that include the full life participation in the services and environment in a monastery. It may be true that the abbot is more finely clad than *other* monks, but abbot and simple monk alike are involved in the same supportive environment, and what abbot and simple monk share is greater than their difference. By comparison, unless the bishop is one of few bishops serving in a monastery, the bishop may be excused for perhaps feeling like a fish out of water. It may be desired that a bishop have extensive monastic character formation, but a bishop is compelled to live in the world, and to travel all over the place in ways and do some things that other monastics rightly flee. Now the heirarch does have the nicest robes of all, and has privileges that no one else has, but it is too easy to see a bishop's crownlike mitre in the majesty of Liturgy and fail to sense the ponderous, heavy crown of thorns invisibly present on a bishop's head all the time. Every Christian must bear his cross, but you are very ignorant about the cross a bishop bears if you think that being a bishop is all about wearing the vestments of the Roman emperor, being called "Your Grace" or "Your Eminence," and sitting on a throne at the center of everything.

Now it is possible to be perfectly satisfied to wear a bishop's robes; for that matter it is possible to be perfectly satisfied to wear an acolyte's robe or never wear liturgical vestments at all. But I know someone who is really bright, and has been told, "*You are the most brilliant person I know!*" The first time around it was really intoxicating; by the fifth or sixth time he felt more like someone receiving uninteresting old news, and it was more a matter of disciplined social skills than spontaneous delight to keep trying to keep giving a graceful and fitting response to an extraordinary compliment. Perhaps the *first* time a new heirarch is addressed as "Your Grace," "Your Emimence," or "Vladyka," it feels intoxicatingly heady. However, I don't believe the effect lasts much more than a week, if even that. There is reason to address heirarchs respectfully and appropriately, but it is really much less a benefit to the bishop than it is a benefit to us, and this is for the same reason children who respect adults are better off than children who don't respect adults. Children who respect adults benefit much more from adults' care, and faithful who respect clergy (including respect for heirarchs) benefit much more from

pastoral care.

As I wrote in [A pet Owner's rules](#), God is like a pet Owner who has two rules, and only two rules. The first rule, and the more important one, is "I am your Owner. Receive freely of the food and drink I have given you," and the second is really more a clarification than anything else: "*Don't drink out of the toilet.*" The first comparison is to drunkenness. A recovering alcoholic will tell you that being drunk all the time is not a delight; it is suffering you wouldn't wish on your worst enemy. "Strange as it may sound, you have to be basically sober even to enjoy getting drunk:" drunkenness is drinking out of the toilet. *But you don't need to literally drink to be drinking out of the toilet.*

There is something like a confused drinking out of the toilet in ambition, and in my own experience, ambition is not only sinful, but it is a recipe to not enjoy things. Being an abbot may be more prestigious than being a simple monk and being a bishop may be more prestigious than being an abbot but looking at things that way is penny wise and pound foolish.

Ambition reflects a fundamental confusion that sees external honors but not the cross tied to such nonors. I hope to write this without making married Orthodox let go of one whit of their blessed estate, but the best position to be in is a simple monastic, end of discussion. It is a better position to be a simple monastic than to be an abbot, and it is a better position to be an abbot than a heirarch. Now the Church needs clergy, including abbots and heirarchs, and it is right to specifically pray for them as the Liturgy and daily prayer books have it. Making a monk into a priest or abbot, or bishop, represents a sacrifice. Now all of us are called to be a sacrifice at some level, and God's grace rests on people who are clergy for good reasons. An abbot who worthily bears both the *cross* of the celibate and the *cross* of the married in this all-to-transient world may shine with a double *crown* for ever and ever. But the lot we should seek for is not that of Martha cumbered about with much serving; it is of Mary embracing the one thing needful.

The best approach is to apply full force to seeking everything that is better, and then have God persistently tell us if we are to step in what might be called "the contemplative life perfected in action."

The Patriarch's throne, mantle, crown, title, and so on are truly great and glorious.

But they pale in comparison to the hidden Heavenly honors given to a

but they pale in comparison to the hidden heavenly honors given to a simple monk, an eternal glory that can be present in power here and now.

# Connections

No man is an island. I live in connection with institutions and other people, and I would like to provide a list of some of them. My list of friends is necessarily incomplete because most of them don't have webpages. (If you know me and am wondering why I don't have a link to your homepage, please [contact me](#).)

## Organizations

My connections with these organizations vary. Some I am formally connected with, some informally; with some the connection is present and with some it is past. (And no, I don't speak for them, unless they say so.) There's a disproportionately high list of groups doing things with the mind; my guess as to why is that other communities I'm involved with aren't as likely to have web pages.

### [Calvin College](#)

I completed my bachelor's in pure mathematics at Calvin. In many ways it was like Wheaton: a beautiful campus, challenging classes available, and faculty who care about students. I enjoyed moving about by touch in dark underground tunnels there, and improvising on the chapel organ. It was there that my most prized writings began: [Religion Within the Bounds of Amusement](#) and [The Grinch Who Stole Christmas](#). The Christian Reformed Church, which runs Calvin, puts a heavy emphasis on thinking Christianly, and it shows. (They also have a goofy tendency to worship the human mind, but we won't go into that.)

### [Cambridge University](#)

I earned my second master's at Cambridge, England, a beautiful place where I took the pictures on my [home page](#) and the pictures I used for [Impressions of Cambridge](#), a Myst-like virtual tour.

### [Church of the Great Shepherd](#)

Church of the Great Shepherd has felt about as much of a home as any church has. A lot of things are nice—there's more than one culture present, and the people are interesting—but the one thing that draws me most about it is that there is a community of love, worship, and the presence of the Spirit. There are a lot of little things

I could point to and say "I like this, I like that," but the one overriding interest is that God's love is present. Leaving Church of the Great Shepherd, alongside leaving the people I know at Wheaton, is one of few things I was not looking forward to in my future studies at Cambridge. Church of the Great Shepherd is a place of fond memories for me.

### [Eolas Technologies](#)

One respected book on software development said that, if you find a technically competent boss, you should do everything in your power to keep him. Mike Doyle, CEO and founder of Eolas, is all that and more. He's a brilliant inventor who designed Eolas the way an inventor would design it, and as a person he's surprised me by going the extra mile. I'd love to see him meet Mike Welge, who hired me into the [National Center for Supercomputing Applications](#); both Eolas and NCSA combine deep thought, cool discovery, and technologies taken right out of science fiction books.

### [Illinois Mathematics and Science Academy](#)

IMSA has very much its own feel, and creates a niche both eccentric and intriguing. I would trace my being taught to think and explore as a scholar to IMSA—I consider it the beginning of my higher education, and I graduated ready to take the highest level of coursework in mathematics, computer science, physics, philosophy, and French. I missed my graduation because I was away at a math contest, and IMSA was kind enough to devote a whole minute of silence to me before other graduates walked up to receive their diplomas.

### [Mega Foundation](#)

The Mega Foundation exists to serve some of the needs of very bright individuals. (What special needs could there be? That would take a lot of explaining.) Among other things, the Mega Foundation runs the *Ultranet* (which has been important to me). It provides an environment for spellbinding conversation, and gave the warmest response of any online community when I shared that I'd been accepted to a good graduate school.

### [Newman Foundation](#)

The Newman Foundation at the University of Illinois was founded to provide a home away from home for Catholic students. It appears to be, with the InterVarsity Christian Fellowship, one of two

loci of vibrant Christian faith where "Christianity" does not mean "Christianity, revised and edited," or the "Church of Jesus, Buddha, and Socrates," or what some scholars term "Gnosticism." The Foundation runs Newman Hall, where I stayed, and Newman Foundation Koinonia, where a retreat serves as the entrance to a very warm community. The hall has a few priests etc. on staff whose job description is 90% to care about you, whether or not you're Catholic.

### Pooh's Corner

Pooh's Corner is a group of mostly Wheaton students (an administrator and a couple of alumni thrown in) who meet at 9:58 Tuesday evenings to read children's books aloud. It's a colorful tradition, at times quite animated, and the silliness and fellowship are delightful. At the beginning of this year, when we were making signs to invite people, one student suggested the slogan, "Pooh's Corner. Come for the women; stay for the food!" He was naturally met by a hail of crayons, but that sign ended up getting as much applause as any.

### [University of Illinois at Urbana-Champaign](#)

Many Illinois Mathematics and Science Academy alumni arrive there, where I earned a master's in applied mathematics with a computational science and engineering option. I was also the first student to graduate with the department's new thesis option. My thesis described a new kind of mathematical structure between a topology and a metric space. It turns out to be easy to use those spaces to derive new types of numbers. The University of Illinois at Urbana-Champaign, like many other universities, is a little universe of its own. Other Illinois Mathematics and Science Academy alumni complained that the environment was boring, but I think they missed one of the most valuable lessons from attending a boarding school in the middle of a cornfield (no cars allowed). The University of Illinois at Urbana-Champaign has the [National Center for Supercomputing Applications](#), a library of byzantine complexity, and all sorts of student organizations. There's plenty of reason to find that fascinating.

### [Université de Sorbonne](#)

My time at the Sorbonne is part of why I am so delighted to be accepted to Cambridge. I spent a semester studying abroad, and

when I left France, my heart stayed. There are so many things about France that feel like home: wine, beautiful architecture, and saying hi to friends with a kiss on the cheek are among the more concretely enumerable reasons why. They are important, but there's something of the mindset that's harder to describe and which I prize highly. England and France are not the same country, but I believe that that spark will also be seen in Cambridge.

### [Wheaton College](#)

I went to Wheaton College after high school, and have kept ties since then. When I realized that some community requirements were set in a way I couldn't keep in good conscience, I left; the experience was painful, but Wheaton remains a place of sharp thinkers and considerable kindness. Wheaton remains close to my heart.

## People

### [Angell O de la Sierra](#)

I met Angell over a mailing list, and he has probably extended a warmer welcome to me than anyone else on the list. Of the different things, I value his warmth most. He also is interested in law, medicine, cognitive science, writing, etc.

### [Josh Wibberley](#)

Josh grew up in Turkey, writes, thinks, and makes web pages. He's also good at entering other people's worlds.

### [Robin Munn](#)

Robin is my best friend. He grew up in France, double majored in computer science and philosophy, and wants to provide technical support for missionaries. He wants very much to be a good listener in his interactions with other people.

# Contemplation

## Enjoying something from legal English

A lawyer, one Dr. Sandburg, wrote [The Legal Guide to Mother Goose](#), doing his professional best to rewrite "Jack and Jill went up the hill" with the full precision of a legal document:

The party of the first part hereinafter known as Jack  
And the party of the second part hereinafter known as Jill  
Ascended or caused to be ascended  
An elevation of undetermined height and slope  
Hereinafter referred to as hill,

And it must be conceded that the English of legal documents is rarely held up as an example of how to communicate to people without extensive legal training. However, there is one point where we would do well to pay close attention to legal English.

"Enjoy" is a word frequently used in contracts, appearing like:

4. \_\_\_\_\_ will enjoy an unlimited right to sell, redistribute, publish, make derivative works to...

And "enjoy" means something that is alike powerful and beautiful here. It does not mean—one is tempted to say "has nothing to do with"—an agreement that someone will have pleasure. Contracts like this, even when they say "enjoy", really do not have much to say about how much fun and pleasure either party will take from the agreement. "Enjoy" is a

run and pleasure either party will take from the agreement. Enjoy is a technical term that means something like "derive the full benefits from", so that:

4. \_\_\_\_\_ will **enjoy** an unlimited right to sell, redistribute, publish, make derivative works to...

means something like:

4. \_\_\_\_\_ will **derive the full benefits from** an unlimited right to sell, redistribute, publish, make derivative works to...

And with that view in mind, let's take a look at the opening question of the Westminster Catechism:

Q: 1. What is the chief end of man?

A: Man's chief end is to glorify God and enjoy him forever.

"Enjoy" may here include taking delight from God, but I would like to point something out. In this famous catechism, what is enjoyed is not a legal right. (For that matter, [Orthodoxy can get along quote well without the Western obsession with rights.](#)) What is enjoyed is not a legal right such as contracts deal in, but God himself.

## **"Mission exists because worship does not."**

There is something in Protestant missions I would like to look at and then deepen.

Among devout Protestants who care most deeply about mission, there is a saying, "Mission exists because worship does not." The premise of this emphatic saying is that God has never created anyone for the purpose of missions. Every man who ever has been created has been created for one goal only: worshiping God. Or in the language of the catechism, "Man's chief end is to glorify God and enjoy him together." And some are quick to point out that these are not two separate things: glorifying God and enjoying him are the exact same thing. No one is created for mission; everyone is created for worship. But there is a tragic reality. Some people are not in a position to fulfill the purpose for which they are made. And because some people are deprived of the glorious worship they are made for, and there is this gap in worship, the Christian Church as a whole, and some Christians in particular, should serve in missions.

There are differences between Orthodox and Protestant understandings of mission: Protestant training, such as Wheaton College's *Institute for Cross-Cultural Training*, give a kickstart in both anthropology and linguistics, training people to learn languages and communicate well in cross-cultural situations. The Orthodox history of missions does not ignore language or culture, but its best mission work is to have monks who are trained in holiness go out among people and let their holiness itself speak. If one reads of a St. Herman of Alaska, whose mission work is still bearing fruit in Alaska today, the story is overall not of an endeavor to understand language and culture, but of a man pouring

himself out in love for God and having successful missionary activity precisely because he followed the maxim, "Seek first the Kingdom of God and his perfect righteousness, and all these things shall be added unto you as well." I've attended courses at Wheaton's *Institute for Cross-Cultural Training* and every person I spoke with was devout. But the content of the training itself, focused on language and culture, is by Orthodox standards a secular idea of how to succeed as a missionary. The Orthodox idea that the best missionary is a monk pursuing holiness as fully as he can, and that missions work when you live among people and seek first the Kingdom of God.

## **Ascesis exists because contemplation does not**

Ascesis, meaning the spiritual disciplines of the Orthodox walk, means an open-ended list that includes prayer, fasting, church attendance, giving to the poor, spiritual stillness, and other things. It is profoundly important in Orthodoxy. But in an even stronger sense than we can say, "Mission exists because worship does not," we can say, "Ascesis exists because contemplation does not." And the observation here is not that there are others who are missing the glory they were made to share. The observation is that we have fallen short of the glory we were made to share, and we need the purifying fire of ascesis. We and others need ascesis, but this is the point. We were not created for ascetical toil. We need ascesis because we have fallen away from the contemplation we were made for, the contemplation which is another name for enjoying God.

And I have wanted to speak of contemplation but find myself falling short. Of our sins and our need to be polished in ascesis it is easy to say something adequate. But for contemplation, words fail me, or at least my command of words. Contemplation is a joy and other things pale in comparison next to it: yet even to speak of it as a joy is misleading, as misleading as reading a contract and think that "enjoy" means nothing more than assuring that someone will experience pleasure. Better, perhaps, is to say that I thirst for honor, I want worldly accolades and am too ungrateful to be satisfied with the worldly honors I have. But when I taste contemplation, such honors grow strangely dim and I find myself wanting what is really good for me, thirsting and sated for real honor, real achievement, real love of others, and the debris I chase after in temptation looks like... in [Silence: Organic Food for the Soul](#) I wrote:

...is that we are like a child with some clay,  
trying to satisfy ourselves by making a clay horse,  
with clay that never cooperates, never looks right,  
and obsessed with clay that is never good enough,  
we ignore and maybe fear  
the finger tapping us on our shoulder  
until with great trepidation we turn,  
and listen to the voice say,  
"Stop trying so hard. Let it go,"  
and follow our father  
as he gives us a warhorse.

And so I am left saying that enjoying God in contemplation is  
beautiful beyond beauty, and words fail me, and ideas too. I want to tell  
of God and contemplation above all else, and nothing I can say fits them.

## Enjoying apples

Apples are a powerful symbol in Orthodoxy. It is not just that the Song of Songs has a lovesick bride say, "Refresh me with apples." Apples appear again and again in [the spiritual treasure housed in the lives of the saints](#). The saints are refreshed with apples; a priest prays to see what paradise is like, and St. Euphrosynos appears to him in a dream and invites him to take whatever he desires. He chose three apples, and the cook Euphrosynos wrapped them up. The priest awoke from the dream and was astonished to find three apples, wrapped as they had been in the vision, fragrant beyond all measure. (When he told what happened, the cook ran to flee from worldly honor.) Another story tells of an abbess, at the end of her life, being given three apples from paradise. It is perhaps a reminiscence of this that in *The Magician's Nephew*, Digory is sorely tempted to steal a Heavenly apple, comes clean about his covetousness, is told of all the evils that would have flown, and then to his astonishment is commanded to take such an apple as he desired to his ailing mother. And he returns home from Narnia and its garden:

...so the fruit of that mountain garden looked different too. There were of course all sorts of coloured things in the bedroom: the coloured counterpane on the bed, the wallpaper, the sunlight from the window, and Mother's pretty, pale blue dressing jacket. But the moment Digory took the Apple out of his pocket, all those things seemed to have scarcely any colour at all. Every one of them, even the sunlight, looked faded and dingy. The brightness of the Apple threw strange lights on the ceiling. Nothing else was worth looking at: you couldn't look at anything else. And the smell of the Apple of Youth was as if there was a window that opened on Heaven.

Such apples are no concoction that began in a fantasy writer's imagination, however creative. There are saints who have tasted them. But what makes the apple so astonishing is that **such apples are a bit like contemplation.**

# **A Cord of Seven Strands**

## Chapter One

"Boo!" Sarah, who had been moving silently, pounced on Jaben, and wrapped her arms around him.

"Hi, Sarah. Just a second." He typed in a few more lines of code, saved his work, and ran *make*. As the computer began chugging away, Jaben reached down and pinched Sarah's knee. She jumped, and squeaked.

"Aren't you ever surprised?"

"By some things, yes. But I have a preconscious awareness of when you're trying to sneak up on me."

"Even when you're deep in concentration, programming your whatever-it-is on the computer?"

"Even when I'm deep in concentration, programming my whatever-it-is on the computer."

Sarah paused, and looked around. They were in the place where their circle of friends met — a big, old house which an elderly couple in the church was allowing them to use. It had many niches and personal touches, nooks and crannies, and was home to a few mice, especially in the winter. (There was a general agreement not to get a cat or mousetraps, but simply to minimize the amount of food left about.) The house even had a not-so-secret secret passage, a perennial favorite of the children who came to visit. This room had deep blue, textured wallpaper, with a painting hanging on the wall: an earth tone watercolor of the sinful woman kissing Jesus's feet. There were bits and pieces of computers lying about, and a few computer books, some of which were falling apart. That room — and the whole house — was a place that bore someone's fingerprints, that said, "I have a story to tell."

"I was listening to the radio," Sarah said, "and the fire danger has gotten even worse. Things have gone from parched to beyond parched. It wouldn't take much to start a blaze."

"I know," Jaben said. "We can only be careful and pray."

---

Thaddeus drove up to the rifle range. He reached into the back seat, and pulled out a blue .22 competition rifle, a box of rounds, some nails, a small hammer, some targets... He sat down on a bench, and slowly cleaned his gun. There was a funny smell, he thought, but he did not pay it much attention.

He went over and nailed a target to a stump, then moved everything in front of him and to the left, lay prone, and slowly waited for target and sight to align, and fired. Nine points. Good, but he could do better. He reloaded, and this time went more slowly. He drew a deep breath, grew still, waited even more slowly for the sight and target to line up, and fired. Ten points, dead center. The same for the third round, and the fourth. "Good." Confident, Thaddeus fired a fifth shot, and frowned. He had only gotten seven points.

He started to go up to replace the target — "This time if I slow down and really concentrate, I think I can get 50 points." — and unwittingly kicked over a small plastic bottle. Then he turned around, and said to himself, "I think I'm going to try to shoot the nail." He lay down, loaded another round, and fired. Lead splattered at the top of the target face, and the target fell. He relaxed, and let his gun down.

"Boy, the sun is blistering hot today." Thaddeus blinked; the air seemed to shimmer as if it were a mirage. Then he looked around a bit. His eyes widened, and his jaw dropped.

There, in the dry grass before him, were dancing flames.

Thaddeus groaned; he immediately recognized the funny smell he'd ignored. He hadn't exactly grabbed the right fluid to clean his gun...

He threw his apple juice on the fire, which hissed and sizzled, but did not diminish much. Then he grabbed his gun and ran to his car.

As he drove away, Thaddeus heard the report as the unused rounds exploded.

---

Thaddeus ran through the living room, upsetting a game of Mao that was being played. He dialed 911. "There's a fire! Rifle range near this house." After a few questions, he called a phone tree and hurried those present into the cars. Sarah and Jaben joined Thad in his car — a rusty, ten year old black Cadillac with the driver's side window broken and deep blue pictures painted on the side — and the other four got into an equally rusty trade van, a nondescript brown with a ladder, some rope, some tools, several rolls of duct tape, some paint cans, some tents, inside. They locked up, and began to bounce up and down some primitive roads.

As they passed, the spreading wall of fire loomed ahead of them.

"What do we do now?" Sarah said.

"Floor it!" Thad said.

Jaben did. He jounced through the straight stretch of road by the rifle range, where everything on the ground was glowing ashes; the heat, coming through the broken window, was incredible, and singed Jaben's hair. "We're coming through the other side of the fire!" They did, and flew out. Behind them, they could see a falling sapling land on the van. A quarter of a second earlier, and it would have shattered their windshield.

Jaben breathed a little easier as cool air blew in through the window. "Woo-hoo!" shouted Thaddeus. They slowed down, and drove.

## Chapter Two

They continued several miles, and then Jaben pulled into a gas station, low on fuel. As he fueled up, Amos stepped out of the van and walked over.

"What do we do now?"

"Well, I think we're far enough away, and we're near Frank's Inn. It might be nice to sit and collect our thoughts there."

"Jaben, I like a good drink as much as you do—"

"—Miller Genuine Draft does *not* constitute a good drink—"

"—but do you really want the smell of a smoky tavern?"

"That's actually why I thought of Frank's. The new proprietor is allergic to cigarette smoke, and thought it would be nice to have one place in this county where people can have a good drink with their friends without having to breathe that stuff. I like the atmosphere there. People predicted that it would die out, but it's flourished."

"Frank's it is."

There was a moment's silence, as Jaben waited for the tank to fill up. He started to turn away to put the pump up, and Amos said, "You look like you have something to say."

"I know, but I can't think of what." He put the pump up. "It's one of those annoying times when you can't put your finger on what you want to say. I'll think of it later, as soon as you're not accessible."

Amos laughed a deep laugh.

Jaben walked in, paid, and drove to Frank's Inn.

---

As they walked in the door, Désirée breathed a sigh of relief. A large "Out of order" sign was on the television. There was some rock music playing, but even with the music the din was not too bad. They sat down around a table, and Jaben waved to the bartender.

A bartender walked over, and said, "Hi, my name's John. Will you be wanting something to eat?"

"Please," seven voices said in unison.

"I'll be back with menus in just a second. What can I get you to drink?"

"I'll have a cherry Coke," Thaddeus said.

"Sprite," Sarah said.

"A pint of Guinness," said Jaben, and winked at the bartender.

"MGD Lite," said Amos.

"I'm sorry," the bartender said, "We don't carry Miller. Can I get you something else?"

"Just give me the closest thing you have to a Miller."

"Ok."

"Strawberry daquiri," said Désirée.

"I'll have a glass of the house white," said Lilianne.

"A strawberry kir," said Ellamae.

"Oh, come, Belladonna, are you sure you wouldn't rather have a strawberry shake? It looks much more you," said Jaben.

Ellamae, who had somehow grown to womanhood without losing the beautiful visage of a little child, gave him a look you could have poured on a waffle.

"Could I see some ID, please?"

Ellamae, doing her best to keep a straight face, fished in her purse and procured a driver's license.

The bartender looked hard at the license, then at her, and said, "Thank you," returning the license, and walked off.

"Too bad he left," said Jaben. "He seemed to raise his eyebrows at hearing that name."

"Who asked you?" said Ellamae, trying to look cross while suppressing a laugh.

"Jaben, would you tell us—" said Amos.

"Shut up," laughed Ellamae.

Jaben continued. "Belladonna, n. In Italian, a beautiful lady. In English, a deadly poison. A striking example of the essential identity of

English, a deadly poison. A striking example of the essential identity of the two tongues."

Ellamae, laughing, said, "Die, Jaben, die!"

Some more people walked in the door, and the bartender came back, set seven menus on the table, and began to distribute drinks. "A strawberry daquiri for you, a glass of the house white for you, a strawberry kir for you, a cherry Coke, a Sprite, a pint of Guinness, and — aah, yes, the closest thing we have to a Miller." He set down a pint of ice-cold water.

Amos looked at his drink a second, and then burst into a deep laugh, shaking his head.

"Jaben, if you ever..." his voice trailed off.

The menus were passed around, and after a little discussion they decided to eat family style. They ordered a meat lover's pizza, a salad, and some French onion soup.

As the circle of friends sat and waited for the food, the song on the radio ended, and a news report came on. "The forest fire that we have all been worrying about is now burning. Starting somewhere near the campgrounds, it has been the subject of an evacuation effort. The rangers had a helicopter with a scoop at the lake for training exercises, and so the blaze should be put out speedily. Authorities are currently investigating the cause of the fire. Details coming up."

Thad sunk into his chair.

Lilianne caught his eyes. After looking for a second, she said, "Want to talk about it?"

"Not here."

"Want to take a walk outside, after dinner?"

Thaddeus nodded.

He really needs to talk — thought Jaben — but he's not in any hurry. Living in Malaysia for a couple of years has that effect. It changes your sense of time. It changes a lot of things.

Jaben longed to be back in France, longed for the wines, longed for the architecture, longed for the sophistication and the philosophical dinner discussions, longed for the language most of all.

"*Tu as amis içi*," Lilianne said in broken French. "You still have friends here."

Yes — Jaben mused — that was true. The friendships in this circle of friends are more friendships in French (or Malaysian) fashion than in the

American sense, which is really closer to acquaintanceship than friendship. Here are friendships to grow deeper in, to last for lifetime instead of for a couple of years until someone moves. Here are kything friendships. That is something. And my friends know what is close to my heart, and give me things that mean a lot to me. Désirée, Lilianne, Ellamae, and Sarah each give me kisses when they see me, and Lilianne is taking the time to learn a little French. She doesn't believe me when I tell her, but she has the gift of languages. *J'ai encore des amis ici*. And God is the same God in France and America; from him come the best of both. Perhaps it would be fitting to give him thanks now.

Jaben brought his hands up to the table. "Shall we pray?"

The others joined hands. Amos said, "Lord, you are faithful, as you were faithful to Israel."

Désirée said, "Lord, you are vast enough to care for our smallest details."

Lilianne said, "Lord, you have the imagination to create all the wonders about us."

Ellamae said, "You are he who searches hearts and minds, and perceives our thoughts."

Thaddeus said, "You are the fount of all wisdom."

Sarah said, "You are the Artist."

Jaben said, "You are the worthy recipient of all our worship."

Then Amos said, "Lord, I confess to you that I have harbored wrath against my white brothers and sisters, and seen them first through the label of 'racist'."

There was a silence. Not a silence at Amos confessing a sin — that was appropriate at that point of this form of prayer — nor that he would be guilty of that particular sin. It was rather that he had the courage to admit it, even to himself. Ellamae was reminded of a time she had spoken with a Canadian and, after a long discussion, watched him finally admit that he was anti-American. Jaben squeezed Amos's hand, and said, "I love you, brother."

Finally Désirée said, "Lord, I have coveted the time of others."

Lilianne said, "Lord, I have been vain, and not always relied on your help."

Ellamae said, "Lord, I have held pride in my heart."

Thaddeus said, "Lord, I have ignored the prompting of your Spirit."

Sarah said, "I have been quick in temper, and impatient."

Sarah said, "I have been quick in temper, and impatient."

Jaben said, "I have also been proud, and been unwilling to embrace America as I have embraced France."

Amos said, "Thank you for the many friends and family" — here he squeezed Désirée's hand — "that I have."

Désirée said, "Thank you for the butterfly I saw today."

Lilianne said, "Thank you for washing us clean from sin."

Ellamae said, "Thank you for drawing us into the great Dance."

Thaddeus said, "Thank you for the helicopter."

Sarah said, "Thank you for letting me paint."

Jaben said, "Thank you for my time in France."

Amos said, "Please allow the fire to be extinguished quickly, and not to do damage to our meeting place."

Désirée said, "Please help me to know the hearts of my friends better."

Lilianne said, "Please draw my heart — all our hearts — ever closer to you."

Ellamae said, "Please bless my music."

Thaddeus said, "Hold me in your heart, and keep my steps safe."

Sarah said, "Bless my touch."

Jaben said, "Bless my wonderful friends."

There was a moment of silence, and then they raised their voices.

Praise God from whom all blessings flow.

Praise him all creatures here below.

Praise him above, ye heav'nly host.

Praise Father, Son, and Holy Ghost.

Amen.

The place grew a little more silent as their harmony filled the room. The stillness was finally broken by Amos saying, "I'm ready for some good food."

Sarah heard some noise behind her, and turned and looked — there was a waiter bringing the food. As it was set on the table, she waited, and Thaddeus scooped some of the soup into her bowl. She took a sip, and said, "This is certainly turning out to be an interesting day."

Jaben reached his arm over her shoulders and gave her a squeeze. "I don't know if I'm going to sleep like a rock tonight, or not be able to sleep at all."

Ellamae said, "Whenever you say that, you sleep like a rock."

Jaben mumbled, "I suppose."

Lilianne took a hearty scoop of salad. "What were we talking about earlier?"

Ellamae said, "Moral theology. Good and evil. Except that I don't think Jaben really wanted to talk about good and evil. I think he wanted to talk about something different."

"But he still wanted to talk about moral theology, like the rest of us," Désirée said.

"How was that again?" said Amos.

Jaben said, "One way to put it would be like this: if goodness is likened to health, and evil to disease and death, then most of the discipline of moral theology may be likened to a debate about the boundary that separates health from disease, life from death. That is certainly a legitimate area of study, but I think it is overemphasized. I would like to see a moral theology that is concerned with the nature of life itself, abundant life. I would like a moral theology that studies people as they dance rather than debate over the boundary line between a dying man and a fresh corpse."

"Aah, yes," Amos said.

Thaddeus said, "Western culture has a very disease-centered view of medicine. The point of medicine is to keep a person out of disease."

"What else would medicine be about?" said Sarah.

"Instead of trying to keep a person out of disease, keeping a person in health. We have some elements of this concept. Preventative medicine kind of makes this step, and gradeschool schedules have physical education. It is picked up by," Thaddeus shrunk back into his chair slightly, and mumbled the words, "New Age—"

He turned to Jaben, waiting for a wisecrack. When none came, he cleared his throat and said, "New Age is half-baked and goofy, and if you talk with a New Ager about medicine, you'll get some garbled version of an Eastern religion's balancing energies or whatnot, but at the heart of that goofiness lies a real idea of cultivating health, a health that is a positive concept rather than a negative concept. That is worth paying attention to."

Désirée said, "That's deep."

Thaddeus paused a second, chasing after a thought. The others read the expression on his face, and patiently waited. Ellamae took a piece of

pizza.

"In China, people do — or at least did — pay doctors, not when they got sick, but when they were well. If you think about it, that difference in custom reflects a profound difference in conceptions of medicine."

Lilianne turned to Amos. "Amos, can you think of a difference in black custom that reflects your ways of thinking?"

Amos paused, looked like he was about to speak, and said, "Could I have a minute to think about that?"

Lilianne nodded.

Sarah said, "Today I had the idea for the coolest painting, and I started sketching it. It's in my studio — a big watercolor, with all of the colors of the rainbow swirling together. The real essence of the picture, though, will take a lot of looking to see. In the boundaries between color and color lie the outlines of figures — horses, unicorns, men fighting with swords, radiant angels."

Jaben said, "Interesting. Where did you get the idea to do that?"

Sarah said, "I don't know where I get my ideas from. I like color, moreso than shape even. I like Impressionist paintings. I guess I was just daydreaming, watching the colors swirl, and I had this idea." She smiled.

Thaddeus smiled, waited a moment, and then poked her in the side. Sarah squeaked loudly.

Jaben said, "Blessed are the ticklish—" and stopped, as Sarah's hands were covering his mouth.

"For the touch of a friend shall fill them with laughter," Amos said through a mouthful of pizza." Thaddeus poked Sarah again. She moved her hands to cover her side and her knee.

Jaben poked her in the other side. In her laughter, she began to turn slightly red.

"Ok, I thought of an answer to your question," Amos said to Lilianne. "Our family structures are different. Where you usually have a nuclear family living together and nobody else, we will often have not just a nuclear family but cousins, aunts, great-aunts, uncles... The extended family lives together, tightly knit. The difference has to do with how white culture is about individualism, and black culture is about community, in a sense. Three of the seven principles of Kwanza — Unity, Collective Work and Responsibility, and Cooperative Economics — are explicitly community oriented, and all seven of them say 'we' and 'our' instead of 'I'

and 'my'. We have all sorts of stories, but you'll have to look pretty hard to find a black Western."

"Was it hard way back when," Ellamae said, "hanging out with a group of otherwise white friends? Is it hard now?"

Amos said, "I'm not sure if you noticed then, but I didn't say 'Hi' to you when you walked by when I was with a group of black friends. It's just one of those things a black man doesn't do. It would be a lot harder if I didn't have some black friends and my family to be around. There are still some people who think I'm trying to act white by hanging around with you."

"And when you liked Country and Western," Désirée said.

"We all have our problems," muttered Thaddeus.

"And when I liked Country and Western, yeah. People say that if you don't like rap, you ain't black. Well, I like rap, but liking Country and Western is even worse in some folks' eyes than not liking rap."

Lilianne frowned. "Nobody thinks that a white man who listens to rap is trying to act black. I suppose that if I made heroic exertions to be like a member of some other race, people might think I was weird, but I can't imagine having to cut back on some part of being myself for fear of someone thinking I was trying to act Chinese."

Désirée nodded. "You got it, honey. It's hard for us."

Lilianne squeezed her hand.

Jaben turned to Amos and said, "There's something I've been meaning to ask you. Why did your parents name you 'Amos'? What with Amos and Andy and all, it seems a rather cruel name to give a little black boy."

Amos said, "I did get teased, and I ran home crying a couple of times. I asked them why. They explained to me what the name means — 'strong', 'bearer of burdens', that it was the name of a prophet. Then, when I was older, they explained to me something else." Here his voice rose. "My parents were determined that Amos and Andy should *not* have the last word about what it means for a black man to be named Amos."

Ellamae nodded. "Your parents named you well. They are strong people. So are you."

"Thank you," Amos said.

"Who are Amos and Andy?" Sarah asked.

"Amos and Andy were a couple of black comedians who acted the perfect stereotype of black men before their audiences."

"Ok," Sarah said. "Kind of like Eddie Murphy?"

Désirée giggled.

"Uh..." Amos's voice trailed off. After a second, he said, "Jaben, help me out here."

"Eddie Murphy's humor is coarse, vulgar, and entirely without class. That stated, he invites his audience to laugh *with* him, and there is a glow of camaraderie about even *Raw*. Amos and Andy invited their audiences to laugh *at* them, to laugh at the stupid blacks. Eddie Murphy is the sort of comedian who would strengthen a racist impression of blacks, but the whole point of Amos and Andy is to pander to racism."

By this time, the food was mostly finished, and the bartender had brought the bill. They fished in their wallets for cash, paid the bill, bagged the remaining food (none of the pizza or soup was left, but there was still some salad), and got up and walked out. Ellamae caught Thad's eyes, and the two of them walked off.

Thad and Lilianne stepped out into the privacy of the street. A car passed by; it was twilight, hot but not humid.

"Riflery is one of the times I can most grow still," he said. "I never touched a gun in Malaysia — was never interested in one, for that matter — and the concentration of riflery is different from the laid-back attitude Malaysians hold. All the same, the slowing down of riflery is a special treat, the one thing you don't have to fight against hurry to do at its own, unhurried pace."

Lilianne walked in silence.

"I must have grabbed the wrong bottle. I remember something smelling funny. I ignored that funny smell, all through cleaning my gun, and with it ignored a gut feeling. I didn't want to know where that gut feeling led; I wanted to clean my gun, and then I wanted to shoot. I fired five rounds — forty-six points — and then shot the nail off the target. And when I looked, a fire had started."

Lilianne said, "You feel awfully guilty."

"Shouldn't I feel guilty? After starting a forest fire?"

"If I had done something like that, would you love me any less?"

They walked in silence past a couple on the street.

Lilianne wanted to speak, but knew the futility of winning an argument. "Amos loves you. Désirée loves you. Ellamae loves you. Jaben loves you. Sarah loves you. I love you."

The two walked on in silence, turned a corner.

"I'm also scared," Thaddeus said. "Will I get in trouble? Will I go to jail?"

"You are in God's hands," Lilianne said.

"I know, but it doesn't make me feel any better," Thad said.

Lilianne stopped walking, turned, and gave him a long, slow hug. "You are in God's hands," she said.

"Thanks, I needed that."

They turned, and walked back in silence. For Thad, it was a silence that was wounded, but also a healing silence, the silence of healing washing over a wound. For Lilianne, it was a praying silence, a listening silence, a present silence. They walked slowly, but the time passed quickly, and they were soon back at the cars, and met the others.

## Chapter Three

Désirée stepped away from the tents and walked down the trail. It had been an exciting day, and she needed some time to quiet down.

She moved down the trail noiselessly. Up above was a starlit sky with a crescent moon, and around her were tall, dark pines. Below was a thick carpet of rusty pine needles. As she walked along, her heart grew still.

Thoughts moved through her mind, in images, sensations, and moments more than in words. She smiled as she recalled Sarah asking, "Kind of like Eddie Murphy?" She also cherished the expression on her husband's face, the look he had when a question arose, and he knew the answer perfectly, but didn't know where to begin to explaining. That look on his face bore the same beauty as it often did when she teased him.

She saw a glint out of the corner of her eye, and looked. For a second, Désirée couldn't make out what it was, and then she recognized it as a monarch butterfly, illuminated by a single shaft of moonlight. Désirée prayed, and slowly reached out her hand; the butterfly came to her finger, rested for just a second, and then flew off into the night.

Désirée sat down on a rock in silence. She heard the footfall of a small animal — a rabbit, perhaps. The sounds of insects rang faintly about her; she slapped a mosquito. To her, it was music, music and a kind of dance. She drank it in, praying as she breathed. Standing up, she walked further along the path, as it passed by the lapping shore of a lake. An abandoned canoe lay along the shore.

O-oh God,

she sang.

O-oh God,  
Build up your house

Build up your house.  
O-oh God,  
Build up your house.  
Your Kingdom in Heaven,  
Your Kingdom on earth.  
O-oh God,  
O-o-o-o-oh.  
A-a-a-a-men.

Stopping in the stillness, she heard a twig snap behind her, a heavier footfall than that of a small animal. Quickly but yet unhurriedly, she melted into the blackness. She looked out, and saw Lilianne's silhouette against the moonlit ripples dancing on the water.

"Désirée?"

Désirée stepped out of the shadows. "How are you, sister?"

"I wanted to talk."

"Something troubling you?"

"No, I just wanted to talk."

"Need to talk, or just be quiet together?"

They walked along the shore together. The path on the shore widened into a clearing filled with tall grass. Désirée took Lilianne's hand, and they spun around, dancing under the starlight.

After a time, they sat down, and Désirée said, "You know, I just realized something."

"What?"

"In parts of Africa, one of the biggest compliments paid for dancing is, 'You dance as if you have no bones.' Dancing is one of the things that couldn't be completely taken away in slavery, and... white folk in general would do better to learn to dance. I mean, really dance. There are so many good things about it, and the people who would benefit the most are the last people you'd find dancing. But what I realized is this, maybe something I saw but didn't believe: you dance as if you have bones, but your dance is no less beautiful for it. It is graceful, and has a different spirit."

Lilianne's blush was concealed by the moonlight and starlight.

"Ever sit and cloudwatch?" Désirée said.

"It's been a while," Lilianne said.

"What about with stars?"

Lilianne shook her head, her fair skin looking almost radiant in the moonlight.

Désirée and Lilianne lay down on their backs next to each other, looking up into the sky.

Lilianne said, "All I see are isolated stars. It's not like clouds, where there are clusters."

"Hush," Désirée said. "Look."

"That bright cluster over there looks like a blob, except a sparse and prickly blob."

"Just relax. Don't rush it."

Lilianne lay on her back. The stars just looked like stars. Then she saw how much brighter some were than others. Her mind began to enter a trance, and she almost thought she heard faint, crystalline singing. Then —

"There!" she pointed to the crescent moon. "There, a Phoenecian trading ship, laden with goods, with the moon as its sail."

Désirée blinked, and said, "That's it. The biggest jewel in the sky. I hadn't thought to look for a picture that would include the moon."

Lilianne sat for a few minutes, breathing in and out, and said, "Let's not look for any more patterns tonight." Thoughts moved in her mind about moderation and enjoyment and "A person who is full doesn't ask for more." She didn't want to see any other patterns. She was content looking on that one.

They lay in stillness for — how long? Neither one of them took any notice of time.

"When you were a little girl," Désirée said, "what did you most like to do?"

Lilianne paused, pondered the question for a few moments, and then said, "I liked to read, or have stories read to me, and imagine — imagine being long ago, and far away. Maybe it would be imagine. I still daydream a lot."

"I'm not sure why I had such difficulty with the stars tonight — or did I?" she continued. "My daydreaming is somewhere faroff, and seeing things in clouds at least requires that you be right there. Somehow I was able to look at the ship, though my mind wandered. Am I making sense?" She saw the two of them, as little girls, laughing and running, hand in hand, through a field in the summer's sun.

"Perfect sense. dear. Don't worry about making sense when you're

telling the truth, my mother always says."

"What about you, Désirée? What did you like to do as a little girl?"

"Ask questions of the grown-ups, and listen. I would ask questions most of all of my elder relatives. I can still remember asking a question of my grandfather, in his old, careworn rocking chair, and listening to all the stories he'd tell. He'd sit there with his corncob pipe, smelling of smoke and the sweat of hard labor, and speak in this deep, deep bullfrog voice. Listening to him always made me feel like I was curled up in his arms and falling asleep. I liked the new stories he told, but the old ones best of all."

"What were some of the stories he told you?"

"Let me see... there's one... wait, I shouldn't tell you that one."

"Why not? You can tell me anything, Désirée."

"Um... You won't get mad at me if you don't like it?"

"Désirée, you know me."

"Ok. Once there was an unusually kind master, Jim, who would talk with his slaves, especially a witty one named Ike. He would tell him his dreams, except, well, they were made more to impress than dreams. And Ike would tell good dreams, too, but they weren't usually quite as good as Jim's.

"One morning, Jim said, 'I had this dream, that I went to Negro Heaven. In there, everything was broken; the houses had holes in the walls and broken windows, and there was refuse in the streets, and the place was full of dirty Negroes.'

"Then Ike said, 'Wow, master, I had the same dream as you. I dreamed that I went to White Heaven. There, everything was silver and gold; there were great, spotless marble mansion, and the streets sparkled. But there wasn't a soul in the place!'"

Lilianne laughed. "That's very funny. It reminds me of Jewish humor."

Désirée said, "I don't know much Jewish humor."

Lilianne said, "Too bad. I'll tell you a couple of their jokes if I can remember them. Jaben commented that Jewish humor is subtle, clever, and extremely funny." She cleared her throat, and said, "Tell me another story."

"Grandpa was always telling stories about the animals, stories that he learned sitting on his grandfather's knee. Let me see... Aah.

"Brer rabbit saw Sis Cow with an udder full of milk, and it was a hot day, and he hadn't had anything to drink for a long time. He knew it was

useless to ask her for milk, because last year she refused him once, and when his wife was sick, at that.

"Brer Rabbit started to think very hard. Sis Cow was grazing under a persimmon tree, and the persimmons were turned yellow, but they weren't ripe enough to fall down yet.

"So Brer Rabbit said, 'Good morning, Sis Cow.'

"Good morning, Brer Rabbit.'

"How're you feeling this morning, Sis Cow?'

"I ain't doing so well, Brer Rabbit.'

"Brer Rabbit expressed his sympathy and then he said, 'Sis Cow, would you do me the favor of hitting this persimmon tree with your head and shake down a few persimmons?'

"Sis Cow said 'Sure' and hit the tree, but no persimmons came down. They weren't ripe enough yet.

"So then Sis Cow got mad, and went to the top of the hill, and she lifted her tail over her back and came running. She hit the tree so hard that her horns lodged in the wood.

"Brer rabbit,' said Sis Cow, 'I implore you to help me get loose.' But Brer Rabbit said, 'No, Sis Cow, I can't get you loose. I'm a very weak man, Sis Cow. But I can assuage your bag, Sis Cow, and I'm going to do it for you.

"Then Brer Rabbit went home for his wife and children, and they went back to the persimmon tree and milked Sis Cow and had a big feast."

Désirée had been speaking with animation, and Lilianne said nothing for a while. Désirée broke the silence. "You don't like it?"

Lilianne paused, and said, "No, and I'm not sure why. Hmm... I've heard a few more of those stories, but I can't remember any off the top of my head. I have this impression of Brer Rabbit as the hero, a hero who is characterized by being—" here she paused, "'intelligent' is not exactly the right word, and 'clever' comes closer but isn't quite what I mean.

'Cunning'. Brer Rabbit manipulates and uses the cow, and it is cast in a good light. The cow is mean, so it's OK to do anything to her. Same logic as 'Take ten!'" Then she hastily added, "Same logic as a lot of things in white culture as well. Same logic as *Home Alone* — the burglars are Bad Guys, therefore it's OK for Kevin to torture them."

She looked at Désirée, forgetting that the faint light would not permit her to read Désirée's expression. She paused, prayed a moment, and said, "Did you like that story?"

"My favorite."

Lilianne shuddered. "It's a terrible thing to bruise a childhood dream. I'm sorry."

They lay in silence for a minute.

Désirée said, "I was hurt, but I'm not sure you did anything wrong. When you're a child, you like things simply because they are, and because they're yours; everything lies under a cloak of wonder. Those stories were time with my grandpa, and they taught me that there is justice and injustice; they taught me that it is good to use my mind; they taught me that there is a time to trust and a time to be wary. Have you seen those *I Learned it All in Kindergarden* posters?"

"Yes."

"I learned it all from Brer Rabbit. I see the problem you point out, but those stories will always be to me the starting-place of wisdom, and a point where I can remember my grandfather's love."

Lilianne lay in silence, pondering what Désirée said. Then she slowly reached through the grass, fumbled, squeezed Désirée's hand, and said, "You ready to go back now?"

Désirée wiped a tear away. "Yes."

"Let's go."

## Chapter Four

Jaben asked, "Could I have the canteen?" As Sarah handed it to him, he took a swig of stale water, and rubbed his eyes. The harsh sun blazed in his eyes. "Why don't we do Bible study now, and then worry about what else to do today? I'm sure we'll be able to find something," he said, then muttered under his breath, "though I'd much rather be programming," and continued, "and, with something to eat, we'll have the day before us."

The others yawned their assent, and went back to the tents to get their Bibles.

"Whose turn was it to read? Lilianne's?" said Sarah.

Lilianne said, "No, I think it was Amos's."

Amos said, "Yeah, that's it." He paused a moment, and said, "Shall we pray?"

They joined hands, and bowed their heads in prayer. Jaben squeezed Lilianne's hand.

Lilianne prayed, "Father, we come before you a little excited, a little nervous. We don't know what the course of the fire will be, or how long it will burn, or why this is happening. We ask that you preserve our meeting place and the property around it, and most of all human life. We thank you that we were able to escape the fire, and we meet to give you glory. Amen."

They were sitting in a circle, on some logs, around a fire pit. Amos said, "I'll be reading from I Kings 18, verses 41-46. Elijah has been chastising king Ahab, there is a drought, and Elijah has at the end of chapter 17 been staying with the widow. Earlier in the chapter, he has his famous contest with the prophets of Baal, where he called fire from Heaven down on the bull." He cleared his throat.

"And Elijah said unto Ahab, 'Get thee up, eat and drink; for there is a

sound of abundance of rain.' So Ahab went up to eat and to drink. And Elijah went up to the top of Carmel; and he cast himself down upon the earth, and put his face between his knees, and said to his servant, Go up now, look toward the sea. And he went up, and looked, and said, 'There is nothing.' And he said, 'Go again,' seven times.

"And it came to pass at the seventh time, that he said, 'Behold, there ariseth a little cloud out of the sea, like a man's hand.' And he said, 'Go up, say unto Ahab, "Prepare thy chariot, and get thee down, that the rain stop thee not.'"

"And it came to pass in the mean while, that the heaven was black with clouds and wind, and there was a great rain. And Ahab rode, and went to Jezreel.

"And the hand of the LORD was on Elijah; and he girded up his loins, and ran before Ahab to the entrance of Jezreel."

Amos had been bending over the Bible, looking intently; now, he rested and sat up.

Jaben said, "Thoughts? Observations?"

Désirée said, "This story is one of my favorites, with the one before it. I like the Elijah stories."

A minute passed, in which they looked at each other. "Lilianne?" Jaben said.

Lilianne stared off in space.

"Lilianne?" he said a bit louder.

"Huh? Oh, I was having a daydream about three mermaids swimming in a moonlit pool, and chasing the fish around, and petting them..." She paused in thought a moment and said, "I think I got into that daydream by thinking about the water in the story."

"Sarah?"

"It's a good story."

Amos said, "What about you, Jaben? You've got to have something to say."

Jaben said, "I always have something to say when I've had my morning bowl of coffee. Ugh, not even an espresso machine. Let me get back to you."

Ellamae said, "Why don't we get some more sleep, then go into town and get something to eat, maybe some coffee, and then maybe, maybe, try this again."

The others nodded their groggy assent and nodded off back to the

THE OTHERS HODDED THEIR GROGGY ASSENT AND PADDED ON BACK TO THE three tents: one for the unmarried men, one for the unmarried women, and one for the married couple.

---

Jaben woke up, feeling delightfully refreshed. He felt sweaty, and the air was oppressively hot. The air felt slightly humid to him. He sat up, and looked around. Thaddeus was still sleeping, breathing deep breaths. Jaben slid out of his sleeping bag and stepped out of the tent.

The sun was high in the sky, and the sky was clear. He walked around on the pine needles, and lazily yawned. He walked over to a log, sat on a low part, and began to think.

That was a magnificent passage of Scripture, he thought, and the climax to a larger story. I've always taken away from it something about the wind of the Spirit. In a land dessicated by drought, the servant is told again and again to go back to look for signs of rain, going back even though he has seen nothing. On the seventh time, the servant sees a cloud the size of a man's hand. And then, "Gird up your loins and run, lest the rain overtake you!" That's how the wind of the Spirit blows — nothing for the longest time, and then a faint, imperceptible breeze, and then a storm.

His knee felt funny, as if there were pressure inside.

Now feels like the eye of the storm. Before was the fire, and now a moment of calm, and then there will be cleaning up. But this is a different kind of storm. Or is it?

He felt a soft arm over his shoulders, and turned and looked. Sarah kissed his cheek, and sat next to him.

"Hi, Sarah," Jaben said, and gave her a hug and a kiss. "Are any of the other women up?"

"Yes, we've been up for about an hour. Talking."

"Bout what?"

"Nothing."

"What kind of nothing?"

"Silly stuff. Girl stuff. You wouldn't be interested."

Jaben reached behind her, and touched the back of her neck very, very lightly with the tip of his finger. She curled up.

Jaben looked at Sarah, as she sat back and relaxed. She had straight red hair cascading over her shoulders, and a round, freckled, face, with fair skin and a ribbon of deep red lips. Her body was — 'fat' would be the wrong word; 'plump', perhaps, or 'rounded'. *Gironde*. She was attractive.

He looked at her, and felt glad that there are some women who do not feel the need to be twenty pounds underweight. Jaben smiled. Sarah plays the perfect ditz, he thought, and getting her into a deep conversation is usually impossible, but there's more to her than meets the eye.

"Did you go and see the lake?" Sarah said. "It's still, still, and every now and then a fish breaks the surface, and then ripples spread."

"I just got up. I paced around, and sat down, and thought. Then you came."

"Whatch'ya think about?"

"The Bible passage. I was thinking through. I feel that there's another thought coalescing, coming together, but I can't put my finger on it."

A faint rumbling came from faroff.

Sarah looked thoughtful for a moment, and said, "Think it'll rain?"

"I don't think so. It could, but... Looking for a prediction of the day's events in the Bible has the same aura as using it as a tool for divination. The fact that we read that passage today just means that this particular passage is what came up on the schedule."

"So you don't believe the Bible applies to our lives?"

"I do, it's just — not that way. I wouldn't have been thinking about it if I didn't believe it applied."

The land around them darkened, and they looked up. A cloud was between them and the sun.

"Hi, guys. May I join the conversation?" Lilianne was behind them.

Jaben's hand shot out, and poked Sarah in the side.

"Eep!" Sarah jumped.

Sarah's face turned slightly red, and she turned to face Jaben. "Do you never tire of tickling me?"

Jaben grinned, and winked. "Never."

"Oh, well." Sarah said, in mock resignation. "I suppose it can't be helped." She looked at Lilianne. "Do you think it's time to wake everyone up?"

"Yes, let's go."

A few minutes later, they were all out sitting on the logs. Ellamae said, "I think we've all had some rest now; food wouldn't hurt, but it's nice to be here, and we should be able to pick up that Bible study. What do you think?" Désirée said, "Um..."

"Yes, Désirée?"

"Well," she said

well, she said.

There was a rumble of rolling thunder.

"Never mind. Let's go on with the Bible study."

Amos opened the Bible. "I liked the part where Elijah said—"

Splat! A fat raindrop splattered across the page.

Amos's jaw dropped. He wiped the page off, closed the Bible, and looked up.

Another raindrop hit him in the eye.

Soon rain was falling all around them — sprinkles at first, then rain in earnest, then torrents. It was a warm, wet, heavy rain, with the sky dark as midnight, and the scene suddenly illuminated by flashes of stark, blue lightning. The wind blew about them; trees swayed rhythmically back and forth in the rain. Everything about them was filled with dark, rich, full colors, and was covered with the lifegiving waters.

The seven friends joined hands and danced in the rain.

## Chapter Five

"Well, look what the cat dragged in today!" said the waitress. The friends had burst in the door, laughing, and soaked to the skin. "I wish I had some towels to give you."

"That won't be necessary," Jaben said, looking around the diner. It was a small, cheery place, with a friendly noise about it. "Seven, nonsmoking."

The waitress counted out seven menus, and said, "Walk this way, please."

Sarah said, "Did you see the look on those people's faces when we walked in?"

Thaddeus said, "Yep."

They sat down around the table, and began to look through the menus. But not for long.

"Hey, Désirée. Tell us that joke you told me," said Lilianne.

"Ok," Désirée said. "There was once an unusually liberal and generous slave owner named Jim, who had a witty slave named Ike. Each morning they would tell each other their dreams (or so they said), and the one with the better dream won. Usually it was the master, Jim.

"One morning, Jim said, 'I dreamed that I went to Negro Heaven, and in there everything was broken and dirty. The houses had holes in the walls, the windows were broken, and there was mud in the streets, and there were dirty Negroes all over the place.'

"Ike said, 'Wow, master. We must have dreamed the same thing. I dreamed I went to White Heaven, and everything was spotless and immaculate — gold and ivory — and there were mansions and silver streets, but there wasn't a soul in the place!'"

Lilianne said, "I remembered the joke I mentioned to you last night, Désirée, but couldn't remember. There was a Jew named Jacob, who was

financially in a bad way. He went to the synagogue, and prayed, 'God, my bank account is low, and business is bad. Please let me win the lottery.'

"Some time passed, and he didn't win the lottery. He ran out of money, and was in danger of being evicted. So Jacob went to the synagogue and prayed more fervently, 'God, I've worked for you so hard, and I ask for so little. Please let me, just this once, win the lottery.'

"More time passed, and Jacob lost his house, his car. His family was out on the street. He came to the synagogue, and prayed, 'Why, God, why? Why won't you let me win the lottery?'

"The voice of God boomed forth, and said, 'Jacob! Meet me half-way on this one. *Buy a stupid ticket!*'"

There was silence, and then one laugh, and then another. The waitress came back, and asked, "Are you ready to order yet?"

"Um, uh, order. We were telling jokes. Could you give us a few more minutes?" asked Thaddeus.

"Certainly," the waitress said, walking off.

This time, they made use of their menus, and thought of what to eat. The waitress came at the end, and they ordered — a few sandwiches, some soups, some fish...

"What do you call someone who speaks three languages?" asked Jaben.

"Uh, trilingual?" said Désirée.

"Good. What do you call someone who speaks two languages?"

"Bilingual!" said Sarah, smiling.

"And what do you call someone who speaks only one language?"

There was silence.

"American," Jaben said.

Lilianne, smiling, said, "Here's one. An English politician was speaking in a town near the Scottish border. In his speech, he slowly and emphatically said, 'I was born an Englishman, I was raised an Englishman, and I will die an Englishman.'

"A Scottish voice from the back asked, 'Ach, man. Have you no ambition?'"

After the chuckles died down, Thad said to Ellamae, "You look like you have something to say."

Ellamae nodded, and said, "I do, but it's a story I'm thinking of, not a joke."

"Go ahead and tell it " Désirée said

Go ahead and tell it," Desnee said.

"My mother has a harelip, as you know; that is a bit difficult for her now, but it was devastating to her as a little girl. She was teased quite a bit, and she would tell people that she had cut her lip on a shard of glass — somehow that was easier to admit than a physical deformity from birth. She was always unsure of herself, embarrassed, feeling less than her peers.

"One of the teachers was a kindly, plump little woman, Mrs. Codman, who had a sunny soul and was the delight of the children. Children would clamor about her, and her heart was big enough for all of them.

"The day came for the annual hearing test, when the children would cup their hands to their ears, and Mrs. Codman would whisper a sentence into their ears — something like 'The moon is blue,' or 'I have new shoes,' and the children would say what they heard.

"My mother's turn came, and Mrs. Codman whispered into her ear," — and then Ellamae spoke very slowly, and her voice dropped to a whisper — "I wish you were my little girl."

There was silence. Ellamae sat with a kind of quiet dignity; she glowed.

She continued. "Those seven words changed her life. She became able to trust people, to venture forth, to have courage and see her own beauty. I think those words have changed my life, too. Now that I think of it, the unspoken message she gave me throughout my childhood was, 'I'm glad you're my little girl.'"

She smiled, in a subtle, subdued manner, her elfin features bore a look that was regal, majestic, aristocratic.

"Wow," Thaddeus said. "I never knew that about you or your mother." He paused, closed his eyes in thought a moment, and said, "And I can see how it has shaped you."

Ellamae's eyes teared. "*Terima kasih.*"

Thaddeus's eyes lit up. "*Sama sama.*"

They sat in blissful silence, a silence that spoke more powerfully than words.

Words were not needed.

The food arrived, piping hot; they joined hands and sat together in silence, their wet clothes beginning to dry. Finally, Amos said, "Amen," and they began to eat without breaking the quiet.

Or at least they did not use their voices; I cannot tell you in full truth

that they did not talk. They looked at each other, smiled, squeezed hands, let a tear slide, prayed. No words were exchanged, but a great deal was communicated.

When they finished, the waitress came with the check, and tarried a second.

"Ma'am?" Thaddeus said.

"Yes?" she said, slightly surprised.

"There is something you want to say to us, or ask us. What is it?"

She looked startled, and hesitated.

"You won't offend us. Promise," he said.

"Well, uh... You seem a little odd, not talking a whole meal long."

"That's not really what's on your mind."

"Ok, honey. Why are y'all telling racist jokes?"

Thaddeus said, "Thank you for being honest. To tell you the truth, we were a bit giddy. We probably shouldn't have told those jokes in a restaurant."

"No, I mean, why y'all telling racist jokes in the first place? You guys don't seem the type that needs to tell those jokes. You look me in the eye, for one thing. You confuse me."

"Do you ever tease your friends? Or do your friends ever tease you?"

"All the time."

"Do you ever insult your friends? Or do your friends ever insult you? A real insult, I mean?"

"Never."

"You see these jokes as being insults. Which racist humor may be. But this is not *racist* humor. It's *racial* humor. It's really much more like teasing."

"That joke about the Jew was just plain mean."

"That joke," Lillianne said, "is a Jewish joke, and was told to me by a Jewish friend. It is quite typical of Jewish humor."

The waitress hesitated. "But why do you need it in the first place? Don't race relations matter to you? I would hope so, seeing as how you have a group of friends with both black and white."

"They matter to us a great deal. What would your friendships be like if there was no room for teasing's rowdy energy, if you always had to always walk on eggshells? Wouldn't a friendship be better if it could absorb the energy of teasing and laugh a big belly laugh?"

"Could I have some time to think about it?"

COULD I HAVE SOME TIME TO THINK ABOUT IT.

"Take as much time as you want. We come by this town every now and then; we might stop in, and maybe we'll be able to see you. And at any rate, I think you grasp our point, whether or not you agree with it."

The waitress said, "Thank you." She turned, started to walk away, and said, "And thank you for explaining. By the way, I was listening to the radio, and the fire is put out. The helicopter plus that tremendous rainstorm did it, not to mention flooded a few basements."

"Woo-hoo!" shouted Sarah.

They paid the bill, leaving a generous tip, and headed out the door.

## Chapter Six

The vehicles drove slowly along the winding roads, and as they came closer, each heart prayed that the meetingplace would be OK. As they cleared the last turn, they parked the car and the van, and got out in silence.

The meetingplace was reduced to cinders.

"My computer!" Jaben said.

"My paintings!" Sarah said.

As they stood, speechless, memories flashed through each mind, of moments spent there, treasures that were no more.

"I heard a story," Sarah said through tears, "in which a man was fond of books, and had a massive library. One night, his angel appeared to him in a dream, and said, 'Your time is near. Do you have any questions about the next world?'

"'Will I have at least some of my books?'

"'Probably.'

"'Which ones? There are some that I really want to keep.'

"'The ones you gave away.'"

Jaben completed the thought. "And now the only paintings of yours that you can still see are the ones you gave away." He prayed a moment, and said, "You gave away some paintings that were very close to your heart. Now you can still see them."

"What shall we do? What shall we do?" said Désirée.

Silence.

Then Ellamae, in her high, pure, clear voice, sang the first notes of a song.

Silence.

She sang the notes again, and reached out her hands.

The friends formed a circle, and joined hands.

"Praise God from whom all blessings flow.  
Praise him all creatures here below.  
Praise him above ye heav'nly host.  
Praise Father, Son, and Holy Ghost.  
Amen.

## Chapter Seven

"Well," Amos said, "we should probably go and talk with the Weatherbys about the house.

Sarah slumped. "I don't wanna talk to them about it."

Amos said, "Neither do I, but we still should, and they are kind people. This is the first time I've thought about visiting them and not wanted to do it."

"What'll we say?" said Sarah.

"I don't know," said Ellamae, "but that is not reason not to go."

"Let's go," said Jaben.

They slowly got into the van.

The drive to the Weatherbys' dilapidated mansion seemed unusually long and slow, and Jaben carefully parked the van in the driveway. The friends got up, and walked up the gnarled path to the front door. Ellamae rang the doorbell, and listened to its echo.

"Well, at least the fire didn't get their home."

"Some of the plants are starting to bloom. The water was invigorating to them."

Silence.

Ellamae rang the doorbell again.

Silence.

"Maybe they're not home," Sarah said.

"That may be," said Ellamae. "We should probably leave them a note, and stop back. She fished in her purse for a pen and a notepad.

They talked a bit about what to say, and then wrote down:

Dear Mr. and Mrs. Weatherby;

As you know, there has been a fire; it was started by a riflery accident with Thaddeus. None of us were hurt (we do not yet know if

others were hurt), but the house you allowed us to use is in ashes.

We do not know what to say. We are very grateful to you for the use of that house, and we know it was a special place to others — children most of all. It was a place of memories for us, and we are the richer for it. We regret both to inform you that that wonderful house of yours is gone, and that you were out when we came, and so have to leave a note.

Thank you for the use of your house. We hope to be able to connect with you in person to speak about this.

The Kythers  
Amos, Désirée, Jaben, Thaddeus, Sarah, Ellamae, Lilianne

The friends walked back, and got back into the van. "Where do we go now?" said Sarah.

"There's the cave where we used to meet before the Weatherbys let us use the house," said Lilianne. "Why don't we go over there?"

"I want to give a gift to the Weatherbys," Sarah said.

"What do you have in mind?" said Jaben.

"I don't know, something special. Maybe something we could make."  
Jaben turned the keys, and they drove off.

---

The cavern was refreshingly cool, with air slowly passing through, sounding like a faint breathing. Amos's flashlight swept over a few small crates that served as chairs and larger ones that functioned as tables, candles, matches, some flashlights, papers, some blankets, some sweaters, a sleeping bag, a pillow, a few other odds and ends, and a toolbox. Jaben struck a match, and lit the three wicks of a large candle. Amos turned the flashlight off.

Sarah picked up a moist flashlight, and pressed the switch.

Nothing happened.

She opened it, and dumped out two corroded D cells.

"Why do we store all of our bad batteries in our flashlights?"

Ellamae, shivering slightly, put on a sweater. It was loose around her elfin frame.

Sarah snuggled up against Thaddeus, and put an arm over Lilianne's shoulder. "You know, it's been a long time since we've role played."

"Where were we?" Thaddeus said, interested.

"You were in the village, outside the castle. Looking for something — I don't remember what."

"And something happened when we drank from the spring," said Lilianne. "It was a cold spring, like the one running through this cave."

Sarah said, "Remember the time we went deep into this cavern, and found that pool this stream empties into, and petted the blind, eyeless fish?"

Lilianne nodded. Sarah had enjoyed that a great deal, and would have waded in had the others not stopped her.

Jaben closed his eyes, and appeared to be concentrating. "You are under a tree outside a chicken coop in the Urvanovestilli city Candlomita. There are children running around. About a hundred feet away, you see a troupe of performing Janra. One is juggling daggers and singing, one is playing a flute, three are doing acrobatics, and two are talking."

Lilianne said, "Janra always make a day more interesting. Let's go over."

Sarah said, "Yes, let's."

Amos said, "Janra always make a day a little *too* interesting, if you ask me."

Sarah said, "Spoilsport! I take Rhoz by the hand and start walking over."

over.

Jaben said, "A little Janra girl comes running, with brightly colored ribbons streaming from her wrists and ankles, and says, 'Spin me! Spin me!'"

Sarah said, "I take her to a clear spot and spin her."

Jaben said, "The path is narrow, and there are people passing through. There aren't any good places to spin her."

Sarah said, "I pick her up, give her a hug and a kiss, and say, 'What's your name?'"

Jaben said, "She says, 'Ank. What's yours?' and, before giving you time to answer, grabs your nose and says, 'Honk!'"

Sarah said, "I'm going to set her down."

Jaben said, "She runs over to Rhoz and says, 'Hey, Mr. Tuz-man! Throw me!'"

Amos said, "I'm going to pick her up and toss her about, while walking to the other Janra."

Jaben said, "A young Janra in a shimmering midnight blue robe approaches you, holding a small knife and a thick, sculpted white candle. He says, 'Greetings, fellow adventurers. May I introduce myself? My name is Nimbus, and I would like to offer you a greeting-gift. This is a candle which I carved. Perhaps, when you light it, it will remind you of the hour of our meeting.'"

Amos said, "I'm going to take it and look at it."

Jaben said, "Wrapped around the candle is a bas-relief sculpture of a maiden touching a unicorn, next to a pool and a forest grove. The detail is exquisite."

Amos said, "I'm going to hand it to Cilana for safe keeping and say, 'Thank you, Nimbus. I hope to be able to get to know you.'"

"Do you know anything about the crystalline chalice?"

Jaben said, "'The crystalline chalice? Yes, have heard of it. I used to own it, actually. The last I heard of it, were rumors that it was either in the towers of the castle, or possibly in the depths of Mistrelli's labyrinth. But those are only rumors, and they are old rumors at that.'"

Sarah said, "What time is it?"

Jaben looked at his watch, and said, "7:58."

Sarah gave him a dirty look, and said, "You know what I mean."

Jaben grinned and slowly said, "Oooh! In the game!"

Sarah continued to give him a dirty look, and said, "Yeeees."

Jaben said, "It is now dusk; you have been on your feet all day, and feel tired, dirty, hungry, and thirsty."

Sarah said, "'Nimbus, would you like to join us for dinner?'"

Jaben said, "'I would love to, but I told a group of friends that I'd meet them for some strategy games and discussion. If you're looking for a good bite to eat, I would recommend *The Boar's Head*;' and here he turns to Rhoz, 'it's the one place in this whole area where you can get a good beer. You know the saying, "Never drink Tuz wine or Urvanovestilli beer!" Well, they don't serve any Urvanovestilli beers. Plenty of Urvanovestilli wines — they even have Mistrelli green."

Ellamae's eyes widened.

"'But for beers, they have a couple of Yedidia and Jec lagers, and then a Tuz stout, and then a Tuz extra stout, and then a Tuz smoked!'"

Amos looked up. "'Thank you, Nimbus.'"

Jaben said, "Nimbus bows deeply, and then walks away at a pace that manages to somehow be both slow and relaxed, and move faster than you could run. After he leaves, a small, multicolored ball rolls between your feet."

Amos, Désirée, Ellamae, Thaddeus, Sarah, and Lilianne said, in unison, "We run, *post haste!*"

Jaben said, "You move along, and manage to clear the game, although you hear its sounds behind you. When you slow down, you come to an intersection of three streets; there is a beggar here."

Ellamae said, "I'm going to give him a silver crown, and say, 'Hi, there! Could you tell us where *The Boar's Head* is?'"

Jaben said, "The beggar points along one of the streets, and says, 'Two streets down, on the corner.' You reach the inn without event, and a pretty waitress leads you to a table. She recommends boar in wine sauce, and the chicken broth soup."

Amos said, "'If there are no objections, I think we'll go with that. I'd like a double of the Tuz smoked.'"

Ellamae said, "I'm going to set the candle Nimbus gave us in the middle of the table, and light it."

Jaben said, "The wick does not burn like most wicks; it sparkles brightly."

Ellamae said, "Interesting. I'm going to watch it."

Jaben said, "The wick burns down to the bottom, and then appears to go out. A thin column of white smoke rises."

go out. A thin column of white smoke rises.

Ellamae said, "That's odd."

Thaddeus said, "I'd like a glass of mild cider."

Jaben said, "She turns to you and nods, and then something odd happens. The candle begins to shoot brightly colored balls of fire. One of them lands in a nearby patron's drink, and another in some mashed potatoes. Most of them bounce down and roll around on the tablecloth, which catches fire. The waitress pours a pitcher of cider from a nearby table over the burning tablecloth, and turns to you, puts her hands on her hips, and says, 'Guests will kindly refrain from the use of pyrotechnic devices while inside the restaurant!'"

Amos buried his face in his hands, and then said, "He gave us a Roman candle!"

Jaben said, "Well of course it's a Roman candle! What did you think it was?"

Amos said, "No, you don't understand. A Janra named Nimbus met us and gave us what looked like a perfectly ordinary candle."

Jaben said, "She rolls her eyes, and says, 'Oooh, Nimbus! Please excuse me one moment.' She walks away, and in a moment returns with something in her hand. 'Please give this to Nimbus for me.' She heavily places a large lump of coal on the table."

Amos said, "I'm going to take it, and say, 'Thank you. And who should I say that this lump of coal is from?'"

Jaben said, "Oh, he knows perfectly well who I am. We're good friends, even if he is always trying to tickle me."

Thaddeus and Lilianne both poked Sarah in the side.

Amos waited until the others had finished ordering, and said, "Well, Nimbus was right about at least one thing."

"Ooh?" Lilianne said.

"When we lit the candle, we remembered the hour of our meeting with him."

## Chapter Eight

She stepped onto the construction site, and looked. The building's frame was almost complete, and workers were beginning to lay conduit and 4x8" sheets for the floors.

A young man — short, pale, wiry, and with sweaty black hair showing from under his headgear — walked over. "This site is dangerous. You need to wear a bump cap."

"A what?"

"A hard hat. Like I'm wearing. C'mon, I'll take you to get one."

They walked along in silence. "Penny for your thoughts," he said.

"Oh, I was just thinking about a book I'm reading."

"What's the title?"

"I'm not sure it's something a construction worker would recognize, let alone read," she said.

"Try me," he said.

"*Addicted to Mediocrity: 20th Century Christians and the Arts*, by Franky Schaeffer."

"Aah, yes. Like *Why Catholics Can't Sing*, only better. I liked, and wholly agree with, the part about the deleterious effects of pragmatism. Franky's father wrote some pretty good books as well; have you read *How Shall We Then Live: The Rise and Decline of Western Thought and Culture*? The history of art is summarily traced there. *Modern Art and the Death of a Culture* is another good title on that topic."

Her jaw dropped. "How long have you been a construction worker?"

"Only a few months. I've worked in a number of other professions — truck driver, child care worker, and firefighter, to name a few, and enjoyed them all. Why do you ask?"

She did not answer the question, but said, "Forgive me for asking this, and I know I'm breaking all sorts of social rules, but why on earth are you

working as a construction worker? Why aren't you working as a software engineer for instance?"

He smiled and said, "Well, I do program in my spare time; I've written a couple of applications in Java. But that's not answering your question."

He stopped walking and closed his eyes in thought for a moment, and then said, "I suppose there are a two reasons, a lesser and a greater. For the lesser — have you read Miyamoto Musashi's *A Book of Five Rings*?"

"No; I don't think I've heard of it."

"*A Book of Five Rings* is considered by many to be *the* canonical book on martial arts strategy. It—"

"You're a martial artist, too?" she said, her jaw dropping further.

"No, but martial arts embody a way of thinking, and that way of thinking is beneficial to learn. *A Book of Five Rings* was written by Miyamoto Musashi, the greatest swordsman in Japanese history, perhaps the greatest swordsman in world history. The book itself is cryptic and deep, and is used as a guidebook by some businessmen and some computer techs, though I came to know about it by a different route. After a certain point, Musashi would enter duels armed with only wooden swords, and defeat master swordsmen armed with the Japanese longsword and shortsword.

"One of the pivotal statements is, '*You must study the ways of all professions.*' And Musashi did. In the book, he likened swordsmanship to building a house, and he was an accomplished artist; he left behind some of Japan's greatest swords, paintings, and calligraphy. Not to mention a lot of good stories. Anyway, his legendary stature as a swordsman came in large part through his extensive study of disciplines that are on the surface completely unrelated to swordplay.

"I had not encountered that book yet in college, but (though my degree is in physics) I studied in subjects all across the sciences and the humanities. And I learned more outside the classroom than inside."

The woman closed her mouth.

"Now I am, in a sense, moving to another phase of my education, learning things I couldn't learn in an academic context."

By this point, they had reached a van.

"And your other reason?" she said.

"My other reason? It's work. Honest, productive, valuable work. It may be less valued in terms of money, and I may eventually settle down as a software engineer — I've gotten a few offers, by the way. But I am

as a software engineer. I've gotten a few offers, by the way. But I am right now building a building that will house books, for people to read and children to dream by. It will give me pleasure to walk in these doors, check out a book, walk by a little girl, watch her smile at the pictures in a picture book, and know that I helped make it possible. Surely that smile is worth my time." He reached into the van, and pulled out a bump cap. "Here's how you adjust the strap to fit your head. The cap should rest above your head, like so, rather than being right on it. That gives the straps some room to absorb the shock if something falls on you from above."

The woman, looking slightly dazed, extended her hand and said, "We've talked, but I don't think I've introduced myself properly. My name is Deborah."

The man shook her hand. "Pleased to meet you, Deborah. My name is Jaben."

## Chapter Nine

Ellamae heard a soft knocking on the door. "Come in, Sunny. I've been waiting for you."

A little girl with long blonde hair walked in, and held up her mouth for a kiss. Ellamae gave her a peck, and then helped her up on the piano bench. "What are you today?"

"I'm a flower. A daisy."

Ellamae thought for a second, and then said, "The petals on a daisy go around; if you move your finger along, you come back to the same one. With music, it's the same, but there's a twist. If you trace along the notes, you come back to the same one." She played a few notes, and then closed her eyes and said, "To you, are the notes a circle, like the petals of the daisy, or a line, like the piano keyboard is laid out?"

"A circle! A circle!" Sunny said enthusiastically.

"Ok. I want you to improvise something for me that sounds like a circle. It's interesting to me that you hear it that way."

"Why?" the little girl asked.

"Why do I want you to play a circle, or why is it interesting?"

"Why is it interesting?"

"Because you hear things in ways that I don't, and sometimes I learn something new from you."

"Even if I'm a little girl?"

"Especially if you are a little girl. To me, the notes sound like a line, and so I want to hear you play. I want to hear the circle through your ears. Besides, it will help me teach you."

"What keys can I use? The big ones, or the little ones, or both?"

"Right now I want you to stay with just the big keys, although you can feel the tips of the little keys to help you keep your place. And remember that, when you are not talking with me or your parents, you need to call

them the white keys and the black keys."

"Why?"

Ellamae closed her eyes in thought. "A smooth surface and a rough surface feel different, right?"

"Yes."

"And loud and quiet sound different, right?"

"Yes."

"There is a difference between the white keys and the black keys that is like those differences to a sighted person."

"On some pianos, the big keys and the little keys feel different. The big keys feel smooth, like hard plastic or glass. The little keys felt smooth, but a different kind of smooth, like bare wood. And on Gramp-Grampa's piano, the big keys feel like that funny stone in Polly's cage. I don't like pianos where the big keys and the little keys feel the same. Is that what you mean?"

Ellamae played a few notes, a musical question. Sunny played a startlingly simple answer.

"You hear and you touch, but they are different, right?"

"Yes, they are different."

"Well, seeing is different from hearing and touch, in the same way. It's hard to describe. Describing seeing to you is kind of like describing music to a man who doesn't hear."

"But music is like dancing! And swimming! And skipping!"

"Well, ok, I guess you're right." Ellamae's eyes lit up. "Imagine that you took off your shirt, and wherever you went, everything became really small and pressed up against your chest and your tummy."

"That would be fun! And confusing."

"But do you see how that would help you know where things are around you?"

Sunny frowned for a second, and said, "I think so."

"That is what seeing is like."

"I wish I could see!"

"I do, too. But you know what? You see a lot of things that other people don't. Your sense of touch picks up on things that most people don't — like one of my friends, Sarah."

"I want to meet her!"

"That can probably be arranged. Anyway, you hear things that other people don't hear. When we improvise together, you do things that I

people don't hear. When we improvise together, you do things that I wouldn't imagine, and in a way I can hear them through your ears. When you play music, you let other people hear the things you imagine, and that is a great gift."

Ellamae placed the child's hands on the keyboard, her left pinky on middle C. "Now, I want you to play music in a circle."

Sunny struck middle C, then the C an octave above, then the C an octave below. She played these three notes, venturing an octave further. Then she added D, F, and G, almost never striking two consecutive notes in the same octave. Then she added E, first playing fragmented arpeggios, and then all five notes, and then the whole scale, ranging all across the keyboard — quite a reach for her little body! Ellamae didn't like it at first; it sounded jumpy and disjointed. Then something clicked within her, and she no longer heard the octaves at all, but the notes, the pure colors of the notes, arranged in a circle. This must be what it is like to have perfect pitch, she thought. Sunny wound the music down.

"That's very good, Sunny. Sometimes I think I learn as much from you as you are learning from me. Did you practice 'By the Water' this week?"

The little girl placed her finger on her lip.

"Do you still remember how it goes?"

Smiling, the child started to plink the tune away, in a light, merry, happy-go-lucky way. Ellamae said, "That's how we play 'At the Circus.' 'By the Water' is slow and restful, like Mommy reading you a story at bedtime. Think about drinking hot cocoa when you are sleepy. Can you play it again?"

Sunny played the song again, but this time at a placid adagio place. Her touch was still light, but it was light in a soft way.

"That's good, Sunny. Now, would you scoot over a little, to the right? Let's play Question and Answer."

Sunny moved, and Ellamae sat down on the bench next to her. Ellamae played a phrase, and the little girl responded. Then she played something slightly different, and the child varied her response. Ellamae played a slightly longer question, and Sunny played a much longer, merrier, dancelike answer.

"That's good, Sunny. Keep your hands dancing on the keyboard."

Ellamae started to play a complex tune, and at the very climax stopped playing. Sunny, without missing a beat, picked it up and completed it. Then Ellamae joined in, and the two began to improvise a duet, a musical

dialogue — sometimes with two voices, sometimes with one, sometimes silent. Many threads developed, were integrated, and then wound down to a soft finish.

They sat in silence for a while, breathless, and then Ellamae reached atop the piano.

"I have something for you, Sunny."

"A CD!" the girl said, with excitement.

"Yes, this is a Bach CD. For practice this week, I want you to spend a half hour listening to the Little Fugue in G minor. Have the CD player repeat on track seven. Then I want you to spend half an hour improvising with the theme. Stay on the big keys; it'll sound a little different, but stick with it. Next time, I'll show you a way to use some of the big keys and some of the little keys."

"Cool!"

A knock sounded from the door. "Is Sunny ready to go yet?"

Sunny gave Ellamae a hug, and turned away. "Mommy! Mommy! Look what Teacher gave me!"

With that, she was off, leaving Ellamae in silent contemplation.

## Chapter Ten

Thaddeus marched down the steps, into the unfinished basement. He ducked under low hanging pipes and air ducts, not bothering to turn on the lights because he knew its nooks and crannies so well. He stepped onto a screw, yelped, and then ducked into a place called "the corner."

There was an armchair among the various odds and ends — old, tattered, and very comfortable. He wrapped a blanket around himself in the cool air, and sunk in.

He closed his eyes, and began to pray:

"Our Father,  
who art in Heaven,  
hallowed be thy name.  
Thy kingdom come,  
thy will be done,  
on earth as it is in Heaven.  
Give us this day our daily bread.  
Forgive us our trespasses,  
as we forgive those who have trespassed against us.  
Lead us not into temptation,  
but deliver us from evil.  
For thine is the kingdom,  
and the power,  
and the glory forever.  
Amen."

He began to grow still, grow still.

As he became quiet, he examined himself, confessed his sins. He began to sink deep into the heart of God, and there he rested and loved.

~~Words were not needed~~

words were not needed.

Thaddeus held his spirit stiller than his body, in a listening silence.

"Yes, God?" he asked without words.

He sat, still, in wordless communion, feeling with his intuition, with the depths of his being. And waited.

Gradually, a message formed in his heart. A message of task, of needed and even urgent action, of responsibility.

What kind of assignment, what kind of need? he thought.

Silence. A dark cloud of unknowing. Darkness and obscurity.

What do I do? he wondered.

Wait, child. Wait.

Thaddeus had a timeless spirit; he knew not and cared not whether three minutes had passed, or three hours. He let himself feel the notes of the timeless hymn and Christmas carol, "Let all mortal flesh keep silence." If he rested in God, he could wait.

Thaddeus slowly returned to consciousness, and left, his heart both peaceful and troubled.

## Chapter Eleven

*RING!* Sarah picked up the phone.

A businesslike and official voice said, "Hello. May I please speak with the Squeaky-Toy of the house?"

"Oh, hi, Jaben. What's up?"

"Amos said he was going to meet me for dinner to talk about some stuff, and he hasn't shown up. I called Désirée, and she said he's not in any of his usual haunts. It's not like him to break an appointment, and I was wondering if you would happen to know anything about it."

"Wow, no I don't. The last time I saw him was in the cave. By the way, do you know where my red bouncy ball is?"

"No idea."

## Chapter Twelve

Six friends stood in the cave in the early, early morning; none of them had slept well, and Jaben hadn't bothered to have his morning bowl of coffee.

"I called the police," Désirée said, "and they said that he can't be officially treated as a missing person until he's been gone for twenty-four hours. They asked me a number of questions — his height, weight, physical appearance, when he'd last been seen, and so on — and then left."

"I was praying yesterday," Thaddeus said. "I was praying, and I had a feeling of — urgency, but even more strongly of waiting. I'm confused. Usually, when God tells me to wait, it is for a long period of time. This was an eyeblink. Does this mean that the waiting is over, or that I — we? — should still wait?"

No one answered.

"What do we do now?" Sarah asked.

"We can sing," Ellamae said. "Sing and pray."

"Sing?" Désirée asked incredulously. "At a time like this?"

"How can you *not* sing at a time like this? If you can't sing at a time like this, when can you sing?" Ellamae replied.

Désirée nodded.

Ellamae's high, pure voice began, and was joined by other voices, deeper voices.

"O the deep, deep love of Jesus, vast, unmeasured, boundless,  
free!

Rolling as a mighty ocean in its fullness over me!

Underneath me, all about me, is the current of Thy love

Leading onward, leading homeward to Thy glorious rest above!

"O the deep, deep love of Jesus, spread His praise from shore to shore!

How he loveth, ever loveth, changeth never, nevermore!

How he watches o'er his loved ones, died to call them all his own;

How for them he intercedeth, watcheth o'er them from the throne!

"O the deep, deep love of Jesus, love of every love the best!

'Tis an ocean vast of blessing, 'tis a haven sweet of rest!

O the deep, deep love of Jesus, 'tis a heaven of heavens to me;

And it lifts me up to glory, for it lifts me up to Thee!

Désirée's heart had calmed considerably during the singing. "Let's sing it again," she said. And they did. Then her voice led a song:

"My life flows on in endless song above earth's lamentation.

I hear the sweet though far-off hymn that hails a new creation:

Through all the tumult and the strife I hear the music ringing;

It finds an echo in my soul— how can I keep from singing?

"What though my joys and comforts die? The Lord my Savior liveth;

What though the darkness gather round! Songs in the night He giveth:

No storm can shake my inmost calm while to that refuge clinging;

Since Christ is Lord of heaven and earth, how can I keep from singing?

"I lift mine eyes; the cloud grows thin; I see the blue above it;

And day by day this pathway smooths since first I learned to love it:

The peace of Christ makes fresh my heart, a fountain ever springing;

All things are mine since I am his— How can I keep from singing?"

"Can we pray now?" There was considerable concern in Ellamae's questioning.

Désirée hesitated, and then said, "Yes. I am calm now."

They joined hands and closed their eyes. For a while, there was silence, finally broken by Désirée's tear-choked voice. "Lord, keep my husband safe."

The songs held new meaning to her.

Jaben said, "I think of myself as a theologian, but I do not know the answers to the questions on our hearts. Lord, hold us in your heart."

The faint echo of a gust of wind was heard in the cave.

Sarah began to hum, "I love you, Lord," and the others joined in.

"Why?" asked Désirée.

Silence.

As the time passed, the silence changed in character. It became deeper, a present silence. The faint sounds — of air passing through the cavern, of people breathing, of cloth rubbing against cloth as people moved — seemed louder, more audible, and yet part of the silence.

"Lord, we come to you with so many things on our hearts," Ellamae said. "In the midst of all this, I wish to thank you for the many blessings we have enjoyed. I thank you for my music, and for all my students, especially Sunny. She is such a delight, and I look forward to seeing her abilities mature. I thank you especially for Amos, for the delight he is to us, his patience, his deep laughter." Voices had been saying "Amen," and Jaben added, "for his taking teasing so well." "If this is the last we have seen of him, we thank you for allowing us to pass these brief moments with such a friend," Ellamae finished.

"Your will be done, on earth as it is in Heaven," Lilianne joined. "Lord, we come before you in confidence that you have adopted us as your children, and whatever we ask will be done. May our request be your will, drawing on your willingness, as we ask that our fellowship be restored, and our friend and brother be found." They sat for a time, continuing to hold each other's hands, crying, listening to the silence. Then a squeeze went around, and with one voice they said, "Amen."

It had been an hour. The hugs were long and lingering, and Jaben felt the kisses a little more. The six friends went out of the cave and into their days' activities, their hearts deeply troubled and even more deeply at peace.

## Chapter Thirteen

Ellamae had come over to Désirée's and Amos's little white house, ostensibly to help with the housework. They were washing and drying dishes and chattering when the doorbell rang.

Désirée, in the middle of scouring out a dirty pot, said, "Could you get that, honey? My hands are kind of full."

Ellamae set down the dish she was drying, and the towel. She walked over to the front door.

There was a police officer there, and something about his demeanor said that he did not bear good news.

"Mrs. Godfrey?"

"She's in the kitchen, washing dishes. Come on in."

Désirée had rinsed and dried her hands, and came into the living room. She shook the officer's hand. "Hi, I'm Désirée."

"Officer Rick. Would you be willing to sit down for a second?"

With trepidation, Désirée sat down in the armchair. Ellamae perched on the edge of the couch.

"Following up on a call, we found your husband's car in a ditch by the roadside. The windows were broken, and the n-word was spray painted all over the sides."

Désirée brought her hand to her mouth, and her eyes filled with tears. She suddenly looked like a very small woman in a very big chair.

Ellamae closed her eyes in pain. The officer continued. "We are presently fingerprinting the car, and beginning a search of the area. We will call you if we find out anything definite. I'm sorry to bear this news."

Ellamae walked over, and wrapped her arms around Désirée. "Thank you, officer." She paused a moment, and said, "I think we need to be alone now. Sorry you had to bear this news."

The policeman said, "Yes, Ma'am," and stepped out the door.

Désirée and Ellamae stood, held each other, and wept.

## Chapter Fourteen

Jaben walked up the steps of the sanctuary slowly. Sarah was standing next to him, and squeezed his hand; he touched her, but did not feel her. The friends walked into the church quietly; the other members of the congregation gave them a little more space, and a hush fell. Désirée held on tightly to Ellamae's arm.

"Blessed be God: Father, Son, and Holy Spirit," the celebrant said.

"And blessed be his kingdom, now and for ever. Amen," the congregation answered.

"Almighty God, to you all hearts are open, all desires known and from you no secrets are hid: Cleanse the thoughts of our hearts by the inspiration of your Holy Spirit, that we may perfectly love you, and worthily magnify your holy Name; through Christ our Lord. Amen," the celebrant prayed.

The processional hymn was Amazing Grace, words and notes that flowed automatically, thoughtlessly, until the fourth verse:

"The Lord has promised good to me  
His word my hope secures;  
He will my shield and portion be,  
As long as life endures."

Jaben had been thinking, a lot, and he held onto those words as a lifeline. With them came a little glimmer of hope that his beloved friend might be OK.

"Glory to God, glory in the highest and peace to His people on earth.

Lord God, heavenly King. Almighty God and Father,

*"We worship You we give You thanks we praise You for Your glory"*

WE WORSHIP YOU, WE GIVE YOU THANKS, WE PRAISE YOU FOR YOUR GLORY.

"Glory to God in the highest and peace to His people on earth.  
Lord Jesus Christ, only Son of the Father, Lord God, Lamb of God,  
"You take away the sin of the world, have mercy on us.  
You are seated at the right hand of the Father, receive our pray'r.  
For You alone are the Holy One, for you alone are the Lord.  
For You alone are the most high, Jesus Christ, with the Holy Spirit,  
in the glory of God, the Father.

"Glory to God in the highest and peace to his people on earth.  
Amen. Give glory to God.  
Amen. Give glory to God.  
"Amen. Give glory to God."

In the music, Jaben felt lifted up into the divine glory — a taste of Heaven cut through his pain.

The celebrant said, "The Lord be with you."

The congregation echoed, "And also with you."

The celebrant bowed his head and said, "Let us pray.

"Almighty God, whose Son our Savior Jesus Christ came to seek out and save the lost: grant that we, looking in the divine Light you give us, and thinking in the holy wisdom you bestow on us, may succeed in the endeavors you set before us, through Jesus Christ our Lord, who lives and reigns with you and the Holy Spirit, one God, now and forever. *Amen.*"

A reader stepped up and said, "A reading from Ruth.

"But Ruth replied, 'Don't urge me to leave you or to turn back from you. Where you go I will go, and where you stay I will stay. Your people will be my people and your God my God. Where you die I will die, and there I will be buried. May the LORD deal with me, be it ever so severely, if anything but death separates you and me.'

"The Word of the Lord."

"Thanks be to God," the congregation answered.

The celebrant said, "We will read the Psalm together in unison."

The whole congregation read aloud, "O LORD, you have searched me and you know me.

You know when I sit and when I rise; you perceive my thoughts from afar. You discern my going out and my lying down; you are familiar with all my ways.

Before a word is on my tongue you know it completely, O LORD.

You hem me in—behind and before; you have laid your hand upon me. Such knowledge is too wonderful for me, too lofty for me to attain. Where can I go from your Spirit? Where can I flee from your presence? If I go up to the heavens, you are there; if I make my bed in the depths, you are there.

If I rise on the wings of the dawn, if I settle on the far side of the sea, even there your hand will guide me, your right hand will hold me fast. If I say, 'Surely the darkness will hide me and the light become night around me,'

even the darkness will not be dark to you; the night will shine like the day, for darkness is as light to you.'"

Two tears slid down Lilianne's and Désirée's cheeks.

"The word of the Lord," the celebrant said.

"Thanks be to God," the congregation answered.

"A reading from Paul's first epistle to the Corinthians," another reader announced.

"For the message of the cross is foolishness to those who are perishing, but to us who are being saved it is the power of God. For it is written: 'I will destroy the wisdom of the wise; the intelligence of the intelligent I will frustrate.' Where is the wise man? Where is the scholar? Where is the philosopher of this age? Has not God made foolish the wisdom of the world? For since in the wisdom of God the world through its wisdom did not know him, God was pleased through the foolishness of what was preached to save those who believe.

"Jews demand miraculous signs and Greeks look for wisdom, but we preach Christ crucified: a stumbling block to Jews and foolishness to Gentiles, but to those whom God has called, both Jews and Greeks, Christ the power of God and the wisdom of God.

"For the foolishness of God is wiser than man's wisdom, and the weakness of God is stronger than man's strength. Brothers, think of what you were when you were called. Not many of you were wise by human standards; not many were influential; not many were of noble birth. But God chose the foolish things of the world to shame the wise; God chose the weak things of the world to shame the strong. He chose the lowly things of this world and the despised things—and the things that are not—to nullify the things that are, so that no one may boast before him. It is because of him that you are in Christ Jesus, who has become for us wisdom from God—that is. our righteousness. holiness and redemption.

Therefore, as it is written: 'Let him who boasts boast in the Lord.'

"The Word of the Lord," concluded the reader.

"Thanks be to God," answered the congregation.

Jaben mulled over the texts.

The congregation rose, singing, "Alleluia! Alleluia! Opening our hearts to Him.

Singing Alleluia! Alleluia! Jesus is our King."

"A reading from the Holy Gospel according to Luke," said the celebrant.

"Or suppose a woman has ten silver coins and loses one. Does she not light a lamp, sweep the house and search carefully until she finds it? And when she finds it, she calls her friends and neighbors together and says, 'Rejoice with me; I have found my lost coin.'

"The Gospel of the Lord."

"Praise to you, Lord Christ," answered the congregation, and sat down.

The celebrant walked behind the pulpit, and said, "There was a Baptist minister who would every Sunday stand behind the pulpit and say, 'The Lord be with you!' And every Sunday, the congregation would answer, 'And also with you.'

"One Sunday, he said 'The Lord be with you!' as usual, but the microphone was turned off, and his voice did not carry very well in the large sanctuary. The congregation did not respond.

"He tapped the microphone, and saw that there was no sound, and so he said in a loud voice, 'I think there's a problem with the mike!'

"The congregation answered, 'And also with you.'"

There was a chuckle throughout the congregation. Jaben's nose wrinkled in distaste. Jaben objected strongly to Kant's idea of Religion Within the Bounds of Reason. He was quite fond of Chesterton's statement that, among intellectuals, there are two types of people: those that worship the intellect, and those that use it. He objected even more strongly to America's idea of Religion Within the Bounds of Amusement. It wasn't that he didn't like a good joke, or having a bit of fun. It was just that he didn't confuse those things with edifying instruction in the Word of God. When his irritation wore off, he began to sink into thought.

Jaben slowly turned the Scripture passages over in his mind. Each one seemed to say something about Amos.

It was then and there that Jaben Onslow Pfau decided that he would do everything he could, whatever the cost, come Hell or high water, to rescue Amos Regem Godfrey, his dear and beloved friend and brother.

## Chapter Fifteen

There was a clamor of people around the friends. A black man, standing 6'8" at just under 300 pounds, built like a brick wall, and bearing a gentle radiance, approached them, along with his little mother. The woman said, "I remember when Amos and my son were wee little boys, and there was rain after a heavy truck drove through the street. They both played in the mud, happy as pigs in a blanket!"

The man said, "If there's anything we can do to help, just tell us."

Jaben said, "As a matter of fact, Bear, yes, there is."

"Yes?" the man said eagerly.

"Could we join you for dinner? I need to think, and having more company and less work to do would help me."

"Certainly," Bear said. "It would be a pleasure," his mother added.

"What are we having?" Thaddeus said eagerly.

"Rice and gravy, fried chicken, and peach cobbler."

"Mmm, soul food," Thaddeus said, smiling. "I'll try not to drool on the way over."

"Ok," Bear said, his deep voice rumbling into an even deeper laughter.

---

Different people were in and out of the kitchen at different times, although Grace, Bear's mother, and Lilianne were always in. A pleasing aroma filled the house; Thad wasn't the only one who found it hard not to drool.

Bear picked Jabben up and squeezed him in a big Bear hug. Then he set him down, and, placing his arm over Jabben's shoulder, asked, "So, whatchya thinkin' about, Bro?"

Jabben closed his eyes. "I want to find Amos, if he's dead or alive. I know you're supposed to leave this to the authorities, but it is on my heart to do so. I want to do whatever it takes, whatever the cost, to find him."

Sarah walked out of the kitchen, her ears cocked. "I'm in."

"Me, too," said Lilianne's voice.

"How're you going to do that?" Bear asked, his eyebrows raised in curiosity.

"Don't bother me with details."

"I'm going with you, too," said Ellamae, and squeezed his hand.

"Do you want to use my gun?" Bear asked. His gun was legendary in the town as an elephant gun with a laser sight.

"Bear, you know I can't hit the broad side of a barn with a sniper rifle."

"I'm in," said Thaddeus, his eyes wide with interest. "Could we go out in the forest and shoot a few crabapples?"

"Just a second while I go get it." Bear disappeared up some stairs.

"Honey, you *know* I'm in," said Désirée.

Bear returned, carrying a very large rifle. He held it out to Thaddeus. Thaddeus hefted it, and said, "Let's go."

As the two walked out the door, Thaddeus asked, "Why do you use such a massive gun, Bear? Nothing you hunt needs that kind of firepower."

A stick snapped under Bear's weight. "I don't know. It's me, I guess. Same reason I use a sixteen pound sledgehammer, or thirty-two when they'll let me bring one. Part of it is toy and... you know the saying, 'The only difference between a man and a boy is the size of the toy.'"

"How do you turn the laser sight on?" Thaddeus asked. "I've never used one."

"Here," Bear said. "Like this."

Thaddeus lowered himself to the ground, and said, "See that crabapple tree out at battlesight zero? See that crabapple that sticks out

crabapple tree out at battlesight zero? See that crabapple that sucks out to the far left?"

"Battlesight zero for this gun is about three times what you're used to."

"Oh, yeah. Thanks. I'll adjust accordingly. Anyway, see that crabapple?" "The really little one?" Bear asked. "Uh-huh." Thaddeus grew still, his body's tiny swaying decreasing and decreasing. The tiny crabapple glowed red. Then it stopped glowing, and Thaddeus closed his eyes.

*Boom!* A resounding, thunderous gunshot echoed all around.

The crabapple was no longer there.

Thaddeus rubbed his shoulder, and handed the gun to Bear.

"I'm sorry, Bear, but I can't use that gun. It's much too heavy for me, and the kick from that one shot is going to give me bruises. I can feel it now. I really appreciate the offer; I have for a long time longed to fire Bear's gun. But I can't use it. I need to stick with my .22."

"You are a true marksman, Thaddeus, and a good man. I hope that you don't meet anything that requires the firepower to take down a grizzly."

"Oh, that reminds me," Thaddeus said. "I heard this from Jaben. Which is better to have if you're attacked by a grizzly: a 10-gauge, or a hollow-nosed .45?"

"Ummm..." Bear hesitated.

"The shotgun, because you can use it as a club when it runs out of ammo."

Bear laughed a deep, mighty laugh, and then they walked back. That man, Bear thought, was not entirely telling an innocent joke.

## Chapter Sixteen

*Ring, Ring, Ring, Ring.* "We're sorry, but the number you have dialed is an imaginary number. Please hang up, rotate the phone clockwise by ninety degrees, and dial again. *Beep!*"

"C'mon, Jaben. Pick up the phone." The voice paused, and reiterated, "Pick up the phone."

Jaben picked up the phone. "Leave me alone, Thad! I've talked with Bear, and he's given me time off. I need to do some thinking."

"Amos is in Mexico."

"*What?!?*"

"Amos is in Mexico."

"How do you know that? Did he call you? Is he OK?"

"No, he didn't call me. I was just... praying, and Amos is in Mexico."

"Ok. That changes my plans."

"Mine, too."

"Let's meet at the cave tonight. Could you call the others? I still need to do some processing."

"I already have called the others."

"Ok, see you there."

"See ya! Wouldn't want to be ya!"

## Chapter Seventeen

Only one candle flickered, but the cave did not seem dark. The air was cool, but the Kythers were much too excited to feel cold. They were there with a mission, with a purpose.

Jaben said, "I think we should take a day to prepare, and then leave for Mexico. In a way, a day is not nearly enough time, but in another way a day may be more than we can afford. We need to use the time wisely. What will you do? I will work on securing material provisions."

Lilianne said, "I will pray. Pray and fast."

Thaddeus said, "I will talk with God."

Désirée said, "I will talk with my kin for support."

Sarah said, "I don't know what I'll do. Maybe tell loved ones goodbye for a while, I'm going on an adventure."

Ellamae said, "Plant a tree."

"What?" Sarah asked.

"Martin Luther was asked what he would do if he knew what the Lord were coming the next day. His answer was very simple: plant a tree. It was the ultimate scatological response. Instead of nonstop singing, prayer, fasting, and wailing about 'I am a worm!' he reasoned that he had been planning to plant a tree, and if that was worth doing at all, it would be worth doing when the Lord returned. So he said he would plant a tree. Apart from packing, I'm just going to spend my day normally, and then go."

"I'm with you," said Sarah.

## Chapter Eighteen

Ellamae smiled at the familiar knock on the door. "Come in, Sunny," she said.

Sunny bounced in. "Teacher, teacher, I've been waiting to play for you." She jumped up on the piano bench.

"Go ahead and play," Ellamae said, looking with wonder on this little child.

Sunny began to play, and Ellamae listened with a shock. She had not taught the girl about different keys yet — other than C and the pentatonic key of the black keys, which were plenty to start with — and the child was confidently playing music in G minor. It sounded vaguely like Bach, at very least a set of variations on the theme of his little fugue — and then Ellamae realized what she was listening to. Ellamae was listening to a fugue in one voice.

She realized with a start that the music had shifted to the key of E minor, and was growing fuller, richer, deeper. Many different threads were introduced, developed, and then integrated. The music rose to a crescendo and then came to a sudden and startling conclusion. There was silence.

"Do you like it?" Sunny said, a bashful smile on her face.

"Yes, I like it very much. Did it take you all week to compose?"

"I didn't compose it, Ellamae. I improvised it."

"Sunny, how would you like to take a walk?"

"A walk? Where?"

"To go visit my friend Sarah. I'll leave your mother a note, and not charge for this lesson. I'm going to look for my friend Amos, and I may not be back for a while. I love the keyboard, but I'd like to spend these last moments doing something else. Will you come with me?"

"I would love to!"

Ellamae wrote out a note, and taped it to the door of the lesson room, and then said, "C'mon, Sunny. Take my hand."

As they walked out, Sunny turned her face up to the light, and said, "The sunlight is warm today!"

Ellamae said, "It is. Perhaps feeling sunlight is better than looking at sunlight. What did you do this past week?"

Sunny said, "I don't know."

"Yes, you do," replied Ellamae.

"I got to ride a horse bareback with my Mom. That was fun. The horse was hot, and I could feel him breathing in and out, and I could feel the wind kissing my face."

"Is wind a mystery to you?"

"What do you mean?"

"Sighted people find wind to be confusing; we can see what it does, like blow leaves around, but we can't see the wind itself. Jesus said that the Holy Spirit is like wind that way."

"I don't find wind confusing. I feel it, and hear it, and hear what it does. It's like a friend, moving around me and hugging me. Is that like the Spirit? I don't find God to be confusing; he's like a friend, or a warm bowl of soup, or... I don't know what else to say, but he isn't confusing."

Ellamae pondered these words. Perhaps later the child would know the side of God that is wild and mysterious — or was everything so wild and mysterious to her that she made her peace with them, and was not frightened at the wild mystery of God? This was a voice that could call God 'Daddy', and be completely unafraid.

"Is that like the Spirit?" Sunny repeated. "Is that like the Spirit, Teacher?"

"I don't know. I'm not a theologian. I think it is, but in a different way than Jesus meant. Maybe wind is different to blind people and sighted people. I wonder what else is—"

"What's a theo-lo-, a the-, a the-o-loge-yun?" Sunny interrupted.

"A theologian is someone who devotes his life to studying the nature of God, and faith, and hope, and love. A theologian is somebody who reads the Bible and learns deep lessons from it."

"Why aren't you a theo-logian? I think you're a theologian. I'm a theologian. Today I learned that God loves me. That's a deep lesson. I think everybody should be a theologian."

"Yes, but a theologian is somebody who does that in a special way, and

Yes, but a theologian is somebody who does that in a special way, and is more qualified—wait, that isn't right, a theologian is—" Ellamae paused, and closed her eyes. "I don't know. I don't know what makes a theologian. Maybe you and I are theologians. I don't know."

"But I thought grown-ups knew everything!"

"Nonononononononono!" Ellamae said. "Grown-ups don't know everything. Here's a story I was told when I was a little girl like you in Sunday school.

"An Indian and a white man were standing together on a beach. The white man took a stick, and made a small circle in the sand. He said, 'This is what the Indian knows.'

"Then he made a big circle around the small circle, and said, 'This is what the white man knows.'

"The Indian took the stick, and made a really, really, really big circle around both of the other two circles, and said, 'This is what neither the Indian nor the white man knows.'"

They were walking along a primitive road, and Ellamae bent over, saying, "Give me your finger. Point with it." She drew a small circle along the dirt, and said, "This is what children know."

Then she drew a larger circle, overlapping with the former circle, but not engulfing it. "This is what grown-ups know. Grown-ups know more than children know, but we also forget a lot of things as we grow up, and some of them are important. So grown-ups know more than children, but children still know some pretty big things that grown-ups don't."

Then she walked around in an immense circle, dragging Sunny's fingertip through the sandy dirt. "This is what neither children nor grown-ups know, but only God knows. Do you see?"

Sunny's face wrinkled in concentration. "Yes. So you want to tell me the things I ask, but you don't know them."

"Yes," Ellamae said, continuing to walk along.

"What do children know that grown-ups don't?" asked Sunny.

Ellamae took a long time to answer. "You know how sometimes I say something, and you ask me a question, and I change what I said? That's because you brought up something I forgot, like singing being like dancing. There are other things. Jesus said to become like a little child to enter; children know how to believe, and how — 'honest' is close, but not quite the right word. When a little boy says, 'I love you,' he means it. Children know how to imagine and make-believe, and how to play. Most

adults have forgotten how to play, though a few remember (maybe by taking time to play, maybe by making work into play). That is sad most of all. This life is preparing us for Heaven, and what we do in Heaven will not be work or rest, but play. You live more in Heaven than most grown-ups."

Sunny listened eagerly. "But you remembered."

"Yes, but not easily. And not all of it. I am lucky to have friends who know how to play."

By this time they had reached Sarah's house, and Sarah saw them and came out to greet them. They sat down on a log, with Sunny in the middle.

"Teacher tells me that you're tickulish," Sunny said.

"Maybe I am and maybe I'm not," Sarah said.

Sunny poked Sarah in the side. Sarah squeaked.

"Sarah is not a Squeaky-Toy," Sarah said, sitting up and looking very dignified (and forgetting that Sunny was blind).

Sunny poked Sarah in the side. Sarah squeaked.

"Sarah is not a Squeaky-Toy," Sarah reiterated.

Sunny poked Sarah in the side. Sarah squeaked.

Sarah grabbed Sunny's hands. "I hear you like music."

"Yes, I like it a lot. I especially like to play piano. What's your name?"

"Sarah."

"I love you, Sarah-Squeak."

"Thank you, Sunny." She paused, debated whether or not to say "It's 'Sarah', not 'Sarah-Squeak'," and continued, "What do you think of when you play music?"

"Music stuff. Do you play music?"

"No, but I paint. Painting is kind of like music."

"What do you do when you paint?"

"Well, I take all sorts of different colors, and I use differing amounts to make different forms and shapes, and when I am done people can see through my painting what I was thinking of, if I do it well."

"I take different notes, and I use differing amounts to make different melodies, and when I am done people can hear through my music what I was thinking of, if I do it well. Yep, painting is like music."

Sarah pondered the painting of rainbow colors she had been working on. "You know, I'd like for you to do something with me sometime. I'd like for you to improvise a song for me, maybe record it so I can hear it a

like for you to improvise a song for me, maybe record it so I can hear it a few times, and I'll see if I can translate it into a painting."

"What about words? Can you translate it into words?"

"I can't translate music into words. I don't know if anyone can. But maybe, if I tried hard enough and had God's blessing, I could translate it into a painting of color. Hmm, that gives me an idea of music for the deaf." She turned to Ellamae. "What about a video where each instrument or voice was a region of the screen, and the color went around the color wheel circle as the notes go around, and the light became more intense as you went up an octave? And they became bigger and smaller as the notes became louder and softer?"

"I'd like to see that. Music for the deaf," Ellamae said.

"Miss Sarah, please hold your arm out and pull up your shirt sleeve," Sunny said."

Sarah, curious, did as the child asked.

Sunny placed her fingers on Sarah's bare arm, and started to play it as if it were a piano keyboard. "*That* is music for people who can't hear," she said.

Sarah and Ellamae nodded.

## Chapter Nineteen

Thaddeus slowly got out materials — the right materials — and started cleaning his gun. Ellamae ducked in the doorway, and said, "What's up?"

Thaddeus said, "Cleaning my gun. Taking care of details." He looked at a small box of ammunition, and said, "And you?"

"I don't think we'll be needing that," Ellamae said. "No good will come of it."

"There's more than people in Mexico. There are animals. I'd prefer to be prepared," Thaddeus said.

"No good will come of it," Ellamae said.

## Chapter Twenty

Jaben thought about his visit with the Weatherbys. He called to apologize and explain why they wouldn't all be able to come then to talk in person, and they gave him — unasked-for, undeserved — a thousand dollars in traveller's cheques. He was very happy for the money. The friends had plenty of equipment from their other adventures, but money was tight, and he hadn't known where it was going to come from. Perhaps Bear.

When he finished packing the van, it contained:

- Children's toys: a truck, a doll, a top...
- Thaddeus's .22 competition rifle.
- A small box of ammunition.
- Gun cleaning supplies.
- A large box of MREs, military rations ("Meal Ready to Eat' is three lies in one," a marine had told them, but they'll keep you moving).
- Books:
  - The Bible, in four different translations (one Spanish, one French, and two English).
  - Madeline l'Engle's *A Wind in the Door*, the very first book (besides the Bible) that he thought of to bring along. (He identified very strongly with Charles Wallace.)
  - Jon Louis Bentley's *Programming Pearls*, for serious thinking about programming.
  - Larry Wall's *Programming Perl*, for light and humorous reading.
  - Neil Postman's *Amusing Ourselves to Death: Public Discourse in an Age of Show Business*, for pleasure, and to use road time to explain to his friends exactly *why* he believed that television

was a crawling abomination from the darkest pits of Hell.

- Jerry Mander's *Four Arguments for the Elimination of Television*. When Jaben first saw this book sitting atop a television, he thought, "The author could only think of four?" For that, he found this book to be far deeper than Postman's, and (in thinking about what to pack) thought it would be a good book to help appreciate nature and Mexico.
  - *A Treasury of Jewish Humor*, edited by Nathan Ausubel. Jaben found Jewish humor to be subtle, clever, and extremely funny, as did Lilianne; the others were beginning to catch on.
  - Antoine de Saint-Exupéry's *Le Petit Prince*, to share with Sarah most of all.
  - Charles Taylor's *Sources of the Self*, which he had read much too quickly and wanted to peruse, at least in part, to better understand his own culture.
  - Philip Johnson's *Darwin on Trial*. This book, apart from some web articles, was the first contact he had that changed the way he looked at academia. He thought there were some arguments to add to the ones in the book, but he couldn't put his finger on them.
  - Oliver Sack's *An Anthropologist on Mars*, to stimulate his mind and help show him different ways of thinking.
  - A small box of black pens (which had the most tremendous knack for disappearing) and a hardcover blank book to write in.
- Three climbing ropes.
  - Four notebooks, three of which were half-filled with miscellaneous scrawl.
  - The traveller's cheques.
  - A heavy-duty, broad-ranging medical kit, including a snakebite kit.
  - Lanterns.
  - Kerosene.
  - Various people's clothing, personal toiletries, etc.
  - Three large hunting knives, one of which had a serrated back.
  - A water drum.
  - Tents, groundcloths, and sleeping bags.
  - About 50 pounds in batteries.
  - Seven lantern flashlights.

- Six canteens.
- Five Swiss Army Knives.
- Four pair of binoculars.
- Three coils of bailing wire.
- Two rolls of duct tape.
- Sarah's red bouncy ball.

Jaben packed it in as best he could; the equipment was smaller than it sounded, and they had a big van. He arranged it like furniture, and then called the others to come in. They joined hands in prayer, and hit the road at sundown.

## Chapter Twenty-One

"Hello, and thank you for choosing Kything Airlines, where we not only get you there, but teach you how to pray. We will be cruising at an altitude of about fifteen to thirty-five hundred feet after hills, railroad crossings, and speed bumps, and zero feet otherwise. Our destination is Mexico City, Mexico, with an estimated time of arrival in thirty minutes. This is your copilot Jaben speaking, and our captain for this flight is Thaddeus."

"Dude," Thad said, "this van does like zero to sixty in fifteen minutes when it's loaded like this. But your point is well taken. I'll try not to speed."

"Yeah, I know. If this van were a computer, it would be running Windows now. Anyways, I'd like to take this time for a debriefing on Mexican culture," Jaben said.

"Don't we usually pray when we start off on a trip?" asked Sarah.

"Yes, but I would like to use the time to talk about Mexican culture when it will make a clear impression on people's minds," Jaben answered.

"But prayer is more important!" Sarah insisted.

"Yes, it's more important, but the more important things do not always take place first. Important and urgent are two separate things. You put your clothes on before you visit your friend, even though visiting your friend is more important," Jaben explained, although he was not satisfied with his example.

"I still think prayer is more important," Sarah said.

I'm not going to get into an argument, Jaben thought. An argument is definitely not the right way to start off this trip. "Very well, then, Sarah," he said. "Why don't you pray?"

"Me?" Sarah said with the earnest pleasure of a child. "I would love to.

"Dear Father, thank you for this trip, for all the good times we've had with Amos, even the time he named me Squeaky-Toy (even though I only let Jabben use that name). Father, I pray that you would help us find Amos, and Father, help us bring him back safely. And, oh, Father, please let him be all right. Amen."

Jabben took a couple seconds' more prayer to cool down, and let go of his angry thoughts about Sarah. Then he said, "Ok, for a primer on Mexican culture... let's see. Touch. When you enter or leave a room, you give everyone a firm handshake; if you don't, everyone will think you're rude. Kissing cheeks is OK among girls, and side hugs are OK on special occasions. In general, we'll have to back off on touch in public, and particularly avoid what would look like couples' PDA. This means both you and me, Sarah. We should talk less, and particularly avoid extended public conversations between the sexes. In general, avoid real, deep kything except when we're alone and away from eyes. Wait, that's not exactly right. Etiquette is very important, and chivalry and 'ladies first', and you stand when an elder enters. Address people by honorifics. Be formal; to quote Worf, 'Good manners are *not* a waste of time.' Mexican culture is much more community oriented than but our peculiarities in community that *can* be misunderstood in the United States, *will* be misunderstood in Mexico."

"Is Mexican culture higher-context than American culture?" Ellamae asked.

"Mmm, good question. Most cultures are less low-context than American culture; some Native American cultures are as high-context as the Japanese, and I think the Romance cultures are high-context. So by general guesswork and geneology, I would expect Mexican culture to be higher in context level. Except I don't know much about what that context is. There are some superstitious remnants of Roman Catholicism, but Rome is more a behind-the-scenes, unseen force than it is the pulsating life in the Catholics we know, especially Emerant. Like the grandmother in *Household Saints*. Um, what else... aah, yes, time. You'll fit in perfectly, Thaddeus. The rest of us, particularly me, will have to work on it. When you agree to meet someone at noon, that's noon, give or take two or three hours. Mexicans will wonder what the hurry is all about. Try not to fidget."

"How does Hispanic culture compare to black culture?" asked Désirée.

"Very similar: the two are probably closer than either is to white

very similar, the two are probably closer than either is to white American culture. On, and girls, avoid eye contact with men; everybody, avoid flirting," Jaben stated.

Sarah said, "I can't wait to get to Mexico. Seeing another country will be so much fun!"

Jaben said, "Sarah, as I remember, you haven't been out of the country, right?"

"No," she said.

"Ok. A couple of tips on crossing cultures: prepare to have expectations violated that you didn't even know you had. Crossing cultures is both wonderful and terrible, and it's particularly rough the first time. Or at least I've heard it is for most people; I don't experience culture shock the same way. It will look to you like people are doing all sorts of things the wrong way, and some of them will indeed be wrong, but a great many are just different, and some of them better," Jaben said. "Try not to complain, or at least not to take a complaining attitude."

"Oh, dear!" Sarah said. "That sounds frightful."

"It is, and it isn't," Jaben said. "You'll love Mexico, and, knowing you, you'll walk away with at least twenty different paintings in your head, and be able to execute all of them perfectly. Which reminds me, did anyone bring a camera?"

There was no response.

"Good. We are not coming as shutterbug tourists, and taking a bunch of pictures wouldn't be proper. Let's see... what else... Aah. Does anyone know the Hacker's Drinking Song?"

"Nope," said Lilianne.

"Ok, let me sing the first two verses.

"Ninety-nine blocks of crud on the disk,  
Ninety-nine blocks of crud,  
Patch a bug and dump it again,  
One hundred blocks of crud on the disk.

"One hundred blocks of crud on the disk,  
One hundred blocks of crud,  
Patch a bug and dump it again,  
One hundred and one blocks of crud on the disk."

The others joined in with a thunderous noise:

"One hundred and one blocks of crud on the disk,  
One hundred and one blocks of crud,  
Patch a bug and dump it again,  
One hundred and two blocks of crud on the disk..."

They continued singing noisily until the wee hours of the morning.

## Chapter Twenty-Two

"Wake up," a voice said. "Wake up; the sun is high in the sky."

"Oh, hi, Lilianne, can't I sleep more?" Thaddeus said.

"No, we should get moving."

"I like to be well-rested when I drive. My reflexes are faster."

"Speaking of faster, I'd like to congratulate you on the stop you made when you decided you were too tired to drive. I didn't know this van could stop that fast," Lilianne said.

"Could I have just a half-hour more sleep?"

"I'm setting my watch."

After another half-hour of sleep, Thaddeus was indeed alert; they drove along, stopping at an IHOP for breakfast. The conversation consisted mostly of how to rearrange the equipment to be more comfortable, and breakfast was followed by about half an hour of rearrangement. The friends got in, their stiffness reduced, and felt better about sitting down. This time, Ellamae rode shotgun.

"I'm bored," Sarah said as they hit the road.

"How would you like to play riddles?" Jaben asked.

"I would love to!" said Sarah.

Jaben said,

"A man without eyes,  
saw plums in a tree.  
He neither ate them nor left them.  
Now how could this be?"

"That's impossible!" Sarah said. "A cabin on a mountain—"

Sarah paused. "Are the eyes he doesn't have literal eyes, like you and I have?"

"Literal eyes."

Literal eyes.

"Not like the eye of a storm?"

"Not like the eye of a storm."

"And he literally saw? Did he see in a dream?"

"He literally saw, as I literally see you now."

"Exactly the same?"

Jaben closed his eyes. "There is a slight difference, that is understandable if you know a bit of biology or psychology."

"That's not a fair riddle!" Sarah said. "You know that only Ellamae knows psychology. Don't give me a riddle I can't answer!"

"You do not need to know of biology or psychology to solve this riddle. In fact, I never thought of connecting this riddle with biology or psychology until now."

"I know what the answer is," said Ellamae.

"What is it?" Jaben asked, smiling.

"The man had only one eye. He took some of the plums, but not others."

Sarah sat, silently, and then said, "Ooooooooooh."

Jaben said, "*Et voila!*"

"How did psychology tell you that?" Sarah asked, confused.

"Put one hand over your eye," Ellamae said. "Do you notice anything different in how things look?"

"Yeah, everything looks flat like in a picture."

"Your depth perception (things not looking flat, but having depth) is what happens when your brain takes input from both eyes (which are in slightly different positions, and see something slightly different) and puts them together. A man who had only one eye would see slightly differently from someone with two eyes — like you did when you covered one eye with your hand."

"Ok, what's the next riddle?"

Jaben chanted in a lyrical voice,

"'Twas whispered in Heaven, 'twas muttered in Hell,  
And echo caught faintly the sound as it fell;  
On the confines of earth 'twas permitted to rest,  
And in the depths of the ocean its presence confes'd;  
'Twill be found in the sphere when 'tis riven asunder,  
Be seen in the lightning and heard in the thunder;

"Twas allotted to man with his earliest breath,  
Attends him at birth and awaits him at death,  
Presides o'er his happiness, honor, and health,  
Is the prop of his house, and the end of his wealth.  
In the heaps of the miser 'tis hoarded with care,  
But is sure to be lost on his prodigal heir;  
It begins every hope, every wish it must bound,  
With the husbandman toils, and with monarchs is crowned;  
Without it the soldier and seaman may roam,  
But woe to the wretch who expels it from home!  
In the whispers of conscience its voice will be found,  
Nor e'er in the whirlwind of passion be drowned;  
'Twill soften the heart; but though deaf be the ear,  
It will make him acutely and instantly hear.  
Set in shade, let it rest like a delicate flower;  
Ah! Breathe on it softly, it dies in an hour."

The van was silent for a minute, and then Ellamae said, "The letter 'h'."

"You have a sharp mind," Jaben said.

A light of comprehension flashed in Sarah's eyes, as she murmured parts of the riddle to herself, and then she said, "Give us a riddle that will take longer to solve, and that Ellamae won't get."

Jaben closed his eyes, thinking, waiting. Then, as if not a moment had passed, he pulled a duffel bag onto his lap, and said, "What have I got in my pocket?"

"What have I got in my pocket? What have I got in my pocket?" Sarah said, again murmuring to herself, and said, "I know! A pair of pliers!"

"No," Jaben said. "My pliers is on my knife. And it's something very specific, not my wallet."

"A picture of me!" she said, beaming.

"No, I forgot to pack that. But I usually carry a picture of you in my pocket. I like to look at you."

"Ok, I give up. What is it?"

Jaben put the duffel bag back, reached into his pocket, and pulled out an annulus, which had a metallic shimmer and yet was not of metal. He handed it to Ellamae, and said, "Hold it in the sunlight."

Ellamae smiled. and said. "The sunlight is hot. and vet the CD-ROM

remains cool. On the inner edge of the central hole I see an inscription, an inscription finer than the finest penstrokes, running along the CD-ROM, above and below: lines of fire. They shine piercingly bright, and yet remote, as out of a great depth: 42 72 65 61 64 20 61 6E 64 20 74 65 6C 65 76 64 73 69 6F 6E 73. I cannot understand the fiery letters and numbers." She looked very elfin.

"No," said Jaben, "but I can. The letters are hexadecimal, of an ancient mode, but the language is that of Microsoft, which I will not utter here. But this in the English tongue is what is said, close enough:

"One OS to rule them all, One OS to find them,  
One OS to bring them all and in the darkness bind them."

## Chapter Twenty-Three

The friends stopped for a picnic lunch on the grass. Thaddeus remarked that it was a cool day, although sunny, and the women protested until Jaben pointed out that Thaddeus, having lived in Malaysia and spent a lot of time with Indians, used the words 'hot' and 'cool' to distinguish weather that will melt a brass doorknob from weather that will merely make it a bit mushy. They ate MREs and talked *de tout et de rien*, of everything and nothing, and then packed up the waste and left.

As they got into the van, Jaben picked up *A Treasury of Jewish humor*, and said, "Here, from the introduction. An anti-Semite says to a Jew, 'All our troubles come from the Jews!'

"'Absolutely! From the Jews—and the bicycle riders.'

"'Bicycle riders! Why the bicycle riders?'

"'Why the Jews?'"

There was a chuckle, but Désirée said, "You know, Jaben, your jokes are good, but I think we're all kinda laughed out now. Or at least I am. Why don't we do something else?"

"Did Jaben pack *A Wind in the Door*?" Sarah asked.

Lilianne smiled. All of the Kythers had read the book cover to cover at least three or four times, and Sarah knew it by heart. It was the book from which they had taken their name, alongside a lesser and obscure document listing 100 ways of kything.

Jaben rummaged among the bags, and produced a small, battered black book. "Lilianne, why don't you read?"

Lilianne took the book gently, and said, "Since we all know *Wind* so well, I'm just going to open it at random, look until I find something good, and read it aloud, and then we can talk about it. Lessee..." she opened the book to the middle, and read silently, then said, "Aah, here. Page eighty-one. Meg and Proginoskes are talking.

"Meg says, 'Okay, I can get to the grade school all right, but I can't possibly take you with me. You're so big you wouldn't even fit into the school bus. Anyhow, you'd terrify everybody.' At the thought she smiled, but Proginoskes was not in a laughing mood.

"'Not everybody is able to see me,' he told her. 'I'm real, and most earthlings can bear very little reality.'" Lilianne closed the book.

"That's my favorite part!" Sarah said, with an animated smile. "Or one of my favorites; I like positive parts. But 'most earthlings can bear very little reality' is true. Most people, when they grow up, lose their childhood. I don't mind that they become adults. That's good. But they stop being children and that's really sad. You can't be a true adult without being a child. Some people have asked me when my interminable childhood was going to end, and I have always told them 'never'. I was surprised and happy when Jaben told me, 'You have somehow managed to blossom into womanhood without losing the beauty of a little girl.' Jaben was the first to understand me.

"Children are able to bear reality. They are so expert at bearing reality that they can even bear not-reality just as easily. Santa Claus and Easter bunny and fairies don't harm them like they'd harm an adult, because they are from the same source as a deeper reality — faith and goodness and providence and wonder. This is why, when children pray, things happen. People are healed. Their prayers are real. This is also why Chesterton said, 'A man's creed should leave him free to believe in fairies,' or kind of. A child who looks at some leaves and sees the wee folk is wrong, but not nearly as wrong as the adult who looks at the human body and sees nothing but matter. Not only because the error is worse, but because the child knows he is a child and wants to grow up, and the adult thinks he already *is* grown up. I still want to grow up; it's a shame when a person's growth is stunted by thinking he's grown up. Anyways, God is too big and too real for us to deal with — so is his Creation — but most children can bear something they can't handle, and most adults can't bear much of anything they can't handle. Like death; our culture denies death, whether it is tearing the elderly and dying out of their houses and isolating them in hospitals and nursing homes, or this whole porn of death like Arnold Schwarzenegger movies. And that philosopher Kant's — what was it called? The book that cut faith into —"

"*Religion Within the Bounds of Reason*," Jaben said.

"I like the Jews who told Moses, 'We don't want to see the Lord. Be our

LIKE THE JEWS WHO TOLD MOSES, 'WE DON'T WANT TO SEE THE LORD. BE OUR prophet for us that we don't see him, so we don't die.' I count myself really, really, really lucky to have friends who can bear reality, who kythe, who touch me, who look into my paintings, who can see that I am not a ditz."

Thaddeus winked at her. "Yes, Squeaky-Toy."

"Hey!" Sarah said. "Only Jaben is allowed to call me that."

"Me rorry," Thad said affectionately.

A silence fell. Jaben began to hum a strand from a French lovesong — <<*Elle est femme, elle est gamine*,>> and when Sarah asked what he was humming, he explained that a man was singing of his beloved, that she was both a woman and a child. Sarah smiled, not feeling the slightest hint of romantic interest. Jaben was presently undecided as to whether he wanted to live celibate or married — presently not dating anyone, not seeking to, but not closed to the possibility — and yet was fascinated by lovesong and love poetry. It had taken Sarah some time to understand that his collection of erotica — from all places and all times — was not pornographic and was perused without lust by *un chevalier parfait, sans peur et sans reproche*. She was finally persuaded, not by the force of his arguments (for she knew how often forceful arguments could be wrong), but by the passion and the purity of his heart. Jaben had memorized Baudelaire's *l'Invitation au Voyage*, and had made his own translation of the Song of Songs because, he said, politics had coerced translators into bowlderizing the English rendition and using wooden literality to obscure its meaning. Sarah had turned a very bright shade of red when Jaben explained to her the meaning of "I have entered my garden;" her skin matched her shining hair, and Jaben had revelled in her beauty. Thereafter, and after Jaben gave explanations to un-bowlderize other areas of the Bible, she always giggled at certain texts. Sarah found it quite curious that most of the sexual content in the Bible was softened considerably, but none of the violence; in her mind, it was connected not only to the behavior of many Christians — who wouldn't touch a film with nudity (not even *Titanic*, which Sarah loved and Jaben hated), but didn't flinch at movies that were rated 'R' for violence, let alone cartoons that show how funny it is to drop an anvil on someone's head — but to a movie ratings system that, in the words of one magazine article, found "massaging a breast to be more offensive than cutting it off."

These — and many other things like them — were thought about in the

car. Some of them were discussed; others did not need to be said aloud, because of the common understanding between them; this gave the dialogue a unique potency and depth, and thus it remained the next day, and the day after, until when — as they were in Texas, approaching the Mexican border — something interesting happened.

    Their radiator blew out.

## Chapter Twenty-Four

"Well," Jaben said. "we just passed a town. Let's some of us stay with the van and some of us go in. Drink a goodly bit of water, he said, grabbing a canteen, "and we'll hope to be back soon." They talked amongst themselves, and Thaddeus, Jaben, and Sarah decided to go, leaving Désirée, Lilianne, and Ellamae to sit in the van's shade.

"Do you think you could ever write like Kant," Sarah said.

"Certainly," Jaben answered, "if I tried hard and studied a certain book."

"Which of Kant's books?" Sarah asked.

"Not one of Kant's books," Jaben said. "The *Handbook of Applied Cryptography*."

Sarah's eyes lit up, and then filled with perplexity. "You don't like that type of deep philosophical writing?"

Jaben said, "It is hard to think deep thoughts. It is harder still to think deep thoughts and record them faithfully. It is hardest to think deep thoughts and record them faithfully in a manner that people will understand. *That* is what I aim for."

As they walked around, they passed an abandoned 1950's truck, rusted and with one window broken. A small animal scurried behind a tire.

"Stop," Sarah said. "I want to look at this truck." They stopped, and Sarah stood, looked at the truck, tilted her head, bent over, walked a bit, and walked further. Then she finally said, "Okay. I have my picture ready," and continued talking into town as if not a moment had passed.

After stopping in a gas station, they found an auto body and repair shop, and junkyard, advertising, "Largest parts selection in fifty miles." There was a tall man who was sitting in a rocker in the shade outside the shop, and rose to greet them. "Hello, folks. May I help you?"

"Yes. Our van's radiator blew out, and we were looking for a mechanic." Jaben tried not to wince, thinking about the damage that the repairs would do to their funds.

"I wish Bear were here. He's so good with cars," said Sarah.

"You know a guy named Bear? The Bear I know is almost seven feet tall, weighs three hundred pounds—"

"—and has an elephant gun with a laser sight," Jaben finished. "How do you know him?"

"He's my cousin." Now all those present were astonished. "How do you know him?"

"He's my friend and my boss. My name's Jaben, by the way, and this is Thaddeus and Sarah."

"I'm Jim. I think I might have heard of you. What are y'all doing down here?"

Jaben's smile turned to a frown. "We are looking for our friend Amos, who has disappeared, and whose location we do not know."

Jim's jaw dropped. "Amos has disappeared? Bear said the best things about him. They used to play together as little boys, and—ooh, I'm not going to tell you that story, because Bear and Amos (if you find him) will kill me."

Jaben said, "He has, which is why we're on this adventure. It may be a fool's errand, but we want to see it through."

The mechanic looked at him with a deep, probing gaze. "Your friendship runs that deep?"

"Our friendship runs that deep," said Jaben.

The mechanic closed his eyes for a second, then said, "Come on over to my truck. I'll throw a blanket in the bed so the metal doesn't burn you, and there are a few containers of iced tea in the fridge. Y'all look like you're melting. The repair is on me. What's the make and model of your van?"

Jaben was so surprised that he forgot to tell James the requested information. Sarah ran up and gave him a hug and a kiss. Thaddeus asked, "What can we do to thank you?"

The mechanic took out a notebook, and wrote something on it. "This is my number. You can give me a call when you find Amos, or give up the chase. And, if you want to do something else, you can bring Amos by here when you find him. I've always wanted to meet him. Did Bear ever show you that gun of his?"

you that gun of his.

Thaddeus pulled his shirt collar aside to reveal several bruises. "These black and blue marks are from firing it, once. He offered to let me take his gun with us, but I can't handle a gun like that."

"Yep, that sounds like something Bear would do. He's a big man with an even bigger heart. Would you step inside? The fridge is there, and some of my tools. I've got several vans with radiators in the junkyard. Any of you handy with tools?"

Jaben raised his hand.

"All right. Here's my leather gloves; I don't want you burning your hands. Let's go."

## Chapter Twenty-Five

Jim invited them to stay for the night — which they did, unrolling their sleeping bags in the living room. In the morning the women especially were happy to have a real shower. After a breakfast of eggs and bacon, Jaben asked about where to get certain supplies, and insisted on paying for a siphon, a 12-pack of cigarette lighters with 7 left, a stack of old newspapers (*USA Today*, Jaben was glad to see, so he wouldn't feel bad about burning them), and a couple of other odd items. They drained the water drum and refilled it afresh, and left with a hearty goodbye and thank you, hugs and a kiss from Sarah.

There seemed to be not much change on the road from Texas to Mexico; they stopped at a border town on the way to change some money, and two or three hours after crossing the border, they came on the town of Juarez and decided to stop for lunch.

The marketplace was wild, colorful, and full of smells. It had an energy about it that was lacking in American supermarkets. "Ooh, look!" Sarah said, and walked over to a vendor. There were several paintings, and she was looking intently at a small painting of a seashell on the sand. "Two hundred pesos," the vendor said.

Jaben looked at the painting, looked at the vendor, and pulled out seventy pesos. "*Este dinero es suficiente.*"

The vendor seemed slightly surprised, and took the money.

As they walked over to the fruit stands, Jaben said, "I don't mind that you bought that picture, Sarah, but we are not here as tourists, and money is tight. Please don't buy anything else we don't need."

"But Jaben, look!" Sarah said, holding the picture up.

He looked, and there was a glimmer of comprehension in his eyes. The picture was a deep picture, and he would need some more time to understand it. The artist must have been talented. "Thank you for buying

it, Sarah," Jaben said slowly.

Picking up a few oranges, Jaben asked the vendor, "*Cuánto cuestan estas naranjas?*"

"*Uno peso.*"

As well as the oranges, they purchased some bananas, avocados, and a chili pepper or two for Thad to munch on. The friends sat down in a corner, and talked, and watched the children play. They were kicking a rock around; their clothing was well worn and their bodies thin, and yet the children seemed to be playing in bliss. One of them walked over, and Ellamae gave the little girl half of her orange. Thaddeus pulled out a knife and was about to cut up one of the avocados, when Sarah reached into the pockets of her baggy pants, and said, "I know why I brought my red bouncy ball along!"

Jaben said, "No, wait. Sarah!"

Sarah had already rolled the ball down the street. A child kicked it, and it knocked the avocado out of Thaddeus's hand, and looked very sheepish. Then Sarah batted it back to the children, and—

Perhaps the best way to describe the ensuing chaos would be to say that it would have given Amos a headache, and that Jaben loved it. The ball was tossed around; people said things in English and in Spanish, not understanding the words and yet somehow understanding the meaning; there was dance; there was chaos. At one point, two teams formed, but they were trying to give the other team possession of the ball, and then that shifted, and then there were three teams, and then none. At one point, the friends and the children were all hopping on one foot; at another, they were all weaving a pattern in the air with their hands. There was touch; there was tickling; there was dodging. At the end of the joyous romp, Jaben sat down, exhausted; Sarah took the ball, and placed an arm over Jaben's shoulder (Jaben shifted away, and said, "Not here. Remember what I told you."), and said, "So, Jaben, how'd you enjoy your first game of Janra-ball?"

Jaben laughed. "I didn't think it was possible."

## Chapter Twenty-Six

As they drove along, the desert gave way to rocky land. The friends pulled over about an hour's drive away from Mexico city, and got out to go.

Ellamae and Sarah started to head around a rocky corner — the first words out of Sarah's mouth when they stopped were, "I really need to pee!" — and stopped cold in their tracks. Ellamae, her voice stressed, said, "Thaddeus, come here. There's a rattlesnake raised to strike."

Jaben said, "Whatever you do, don't move a muscle. Be a statue."

Sarah said, "Still is the last thing I can be right now. I'm—"

Jaben said, "Recite to me the subjects of your last five paintings."

Sarah said, "I can't do that. I'm too scared."

Jaben calmly said, "Yes, you can. What is the first—"

*Bang!* A gunshot sounded. Ellamae and Sarah jumped high. The rattlesnake fell to the ground, dead.

Thaddeus was crouched on a rock, holding a smoking gun. He loaded another round, and then walked over. He drew a hunting knife. "You guys know that rattlesnake meat is considered a delicacy?"

Sarah quivered, and said, "Thank you, Thaddeus. Now if I can change my pants—"

Ellamae looked in his eyes, and said, "I'm sorry for what I said about your gun. You saved my life."

Thaddeus opened his mouth to say something, then closed it as he had nothing to say. Finally, he said, "You're welcome."

Jaben said, "Thaddeus, I've always wondered why you didn't even get a gun with a clip. Not that you have to have a semi-automatic, but..." his voice trailed off.

Thaddeus and said, "This was the only good rifle that was within my price range when I brought it, and I brought it for target practice, not for

hunting. But as to the other aspect — I just decided that I wanted to practice until my aim was good enough that I would never need to shoot twice."

Ellamae said, "Again, thank you."

They set up camp, and soon fell into a deep sleep.

## Chapter Twenty-Seven

Two warriors, clad in black, holding unsheathed katanas, silently approached each other in the forest. A sliver of moonlight fell. They circled around each other, slowly, crouched, waiting.

Then one of them swung, and there was a counter. Silence. Another swing. A flurry of motion. They circled.

They were both masters, and as they fought — one of them swinging, the other swiftly evading the razor sharp blade — it became apparent that one was greater than the other.

The greater swordsman lowered his weapon and closed his eyes, and in an instant the lesser struck him down.

Ellamae awoke, greatly troubled by her dream, but decided to tell no one.

As she drifted off to sleep again, Ellamae wondered who had really won the duel.

## Chapter Twenty-Eight

They pulled into Mexico City early in the morning, the stench of smog only a hint of how bad it would get. Thaddeus had no difficulty finding the governmental buildings, nor Jaben in finding the appropriate bureaucrats. Getting anything useful out of them was a different matter.

As the friends sat down for lunch, Jaben said, "I'm a little disappointed at progress, but not surprised. Mexican bureaucracies are almost impossible to navigate if you don't know someone on the inside."

"That stinks!" Sarah said. "Aren't the officials supposed to help people?"

"Sarah, culture shock is difficult. It's a leading cause of suicide, right up there with divorce. There is great beauty in seeing a new country, but also great pain. I'm surprised at how well you're adapting; you're in the hardest part now," Jaben said.

"Stop talking philosophy at me!" Sarah snapped, and then repeated her question. "Aren't officials supposed to help people?"

"Yes, but in this culture you don't just see someone when you want something from them. Relationships are very important, and you cultivate a relationship with someone inside the bureaucracy before trying to get something out of them. In a way, what we are doing is rude, asking for services without taking the time to first establish a connection. Except we have to be rude, because—"

"I still think it stinks," Sarah said.

"I would rather we were dealing with an American bureaucracy, too. American bureaucracies are sluggish and Machiavellian and do things wrong, but they have a rare achievement in being responsive to the needs of strangers — a Brazilian I know was amazed when he got a scholarship after just filling out a form, without knowing anyone on the inside. But we don't have that now; we are looking for Amos in Mexico, and therefore

have to deal with a Mexican bureaucracy. I didn't expect much, but I wanted to check just in case. Being open to the wind of the Spirit blowing, eh?" Jaben answered.

"So what do we do now?" Désirée asked, rubbing her arm nervously.

"We go to Tijuana," Thaddeus stated.

"What?" several voices said in unison.

"The voice of the Spirit says to go to Tijuana."

"Ok," Désirée said.

They finished their lunch in silence, and got into the van. As they pulled out of the city, Lilianne said, "Thaddeus, I'd give your driving in Mexico City about, oh, an 8.7."

"Really?" Thaddeus said, his eyes widening. "On a scale of 1 to 10?"

"No, on the Richter scale."

## Chapter Twenty-Nine

As they drove, Jaben said, "Sarah, remember that one time when you asked me what I didn't like about television, and I said, 'Sarah, I'd really like to explain it to you, but I have to go to bed some time in the next six hours?'"

"Yeah, I remember that. Why?" Sarah said.

"We're going to have a few days driving to Tijuana, and I think this would be a good time to give your question the answer it deserves," Jaben said.

"Ok," Sarah said thoughtfully. "But you still like Sesame Street?"

"I grew up on it, but no. I do not like Sesame Street," Jaben said.

"Why not?" Sarah said, with sadness in her voice.

"I mean to give your question the answer it deserves."

Ellamae cocked her ears, attentive. So did Lilianne.

"I have a number of thoughts to give. I would like to begin by reading the foreword to Neil Postman's book, *Amusing Ourselves to Death: Public Discourse in the Age of Show Business*, the first one I read on that score:

"We were keeping our eye on 1984. When the year came and the prophecy didn't, thoughtful Americans sang softly in praise of themselves. The roots of liberal democracy had held. Wherever else the terror had happened, we, at least, had not been visited by Orwellian nightmares.

"But we had forgotten that alongside Orwell's dark vision, there was another—slightly older, slightly less well known, equally chilling: Aldous Huxley's *Brave New World*. Contrary to common belief even among the educated, Huxley and Orwell did not prophesy the same thing. Orwell warns us that we will be overcome by an externally imposed oppression. But in Huxley's vision, no Big Brother is required to deprive people of

their autonomy, maturity and history. As he saw it, people will come to love their oppression, to adore the technologies that undo their capacities to think.

"What Orwell feared were those who would ban books. What Huxley feared was that there would be no reason to ban a book, for there would be no one who wanted to read one. Orwell feared those who would deprive us of information. Huxley feared those who would give us so much that we would be reduced to passivity and egoism. Orwell feared that the truth would be concealed from us. Huxley feared the truth would be drowned in a sea of irrelevance. Orwell feared we would become a captive culture. Huxley feared we would become a trivial culture, preoccupied with some equivalent of the feelies, the orgy porgy, and the centrifugal bumblepuppy. As Huxley remarked in *Brave New World Revisited*, the civil libertarians and rationalists who are ever on the alert to oppose tyranny "failed to take into account man's almost infinite appetite for distractions." In *1984*, Huxley added, people are controlled by inflicting pain. In *Brave New World*, they are controlled by inflicting pleasure. In short, Orwell feared that what we hate will ruin us. Huxley feared that what we love will ruin us.

"This book is about the possibility that Huxley, not Orwell, was right."

Jaben closed the book.

## Chapter Thirty

Jaben said, "Let's see. The first part of *Amusing* talks about how different media impact the content of discourse. Somewhat overstated, I think, but an extremely important point."

Sarah asked, "You mean there's a difference between reading something in a book and reading it on the web?"

Jaben replied, "Yes, there is. The web appears — and in some ways is — an author's dream come true. It is a kind of text where you can read about a surgical procedure and click on a link to see an MPEG of it being performed, or have transparent footnotes that actually pull up the document quoted. All of this has wonderful potential, but there is a dark side. For starters, a book has to be purchased or picked up at the library, which means that you have to invest something to get it, and if you're reading it, you have to get up and walk to put the book away and get another one. This makes for some commitment to the present document, which is not present on the web. Furthermore, putting color pictures in books is prohibitively expensive. This makes it more likely that a book which draws people's attention will do it with substance. But images are far cheaper on the web, and images grab attention much faster than books do. So if you'll look at a corporate website, you will find sound bites and flashy pictures, and almost nothing thought-provoking. *The web has potential to be far better than books, but it also has a strong tendency to be much worse.*"

"You mean with all the porn that's out there?" Sarah asked.

"Well, that's a part of it. But even apart from that — have you ever gone to look for some information on the web, and found yourself clicking all sorts of silly links, and looked at your watch and realized that an hour had gone by, completely wasted?"

"Well, yeah, but I thought that was just me."

"It's not just you. It's the Web."

Sarah pondered this in silence.

"Technology — some more than others — is something I treat like a loaded gun, or like alcohol. It can be beneficial, very beneficial, but you should never lay the reins on the horse's neck, and never treat it as something neutral. It has a sort of hidden agenda. Have you heard of the Sorcerer's Bargain?" Jaben explained.

"No, what's that?"

"In the Sorcerer's Bargain, the Devil says, 'I will give you power if you will give me your soul.' But there's a problem — obviously, you lose your soul, and less obviously, it isn't really you that has the power at all. All that has really happened in the exchange is that you've lost your soul. You haven't gained anything."

"That stinks," Sarah said.

"It does, and something of that is what happens with technology. Mammon and Technology are twin brothers, and I think I see part of why Jesus said, 'No man can serve two masters. Either he will love the one and hate the other, or else hate the one and love the other. You cannot serve both God and Mammon.' What I find fascinating is that he did not refer to money as a slave, but as a master. With technology — have you noticed that I use e-mail for all sorts of technical and intellectual matters, but never for personal matters? That I walk over and talk with you in person?"

"Yes, and it means a lot to me," Sarah said.

"Technologies have an obvious benefit, and a less obvious, insidious cost; there is always a cost, and with some it is worse than others. With—"

"Are you a Luddite?" Sarah asked.

"I am at present riding in a van; one of my hobbies is writing computer programs; I have a massive collection of books; I eat prepared foods, wear clothes, telephone people, and speak language. All of these are technologies, and I use them in clean conscience. Someone said of war, 'I don't think we need more hawks or more doves. I think we need more owls.' I don't want to be a hawkish technology worshipper or a Luddite dove. I want to be an owl.

"As I was saying, television has an incredible darkside. It is a sequence of moving images that stimulates the senses and makes brain cells atrophy. I fervently believe that, since the beginning of time, the twilight hours have belonged to the teller of tales and the weavers of songs. You

hours have belonged to the teller of tales and the weavers of songs. You know I like music, and role play, and listening to Désirée tell stories, and all sorts of things. But television is among pass-times what nihilism is among philosophy, what Bud Lite is among beers. That is why, I think, the author of the 100 ways of kything said, "Television is a crawling abomination from the darkest pits of Hell. It is a pack of cigarettes for the mind. It blinds the inner eye. It is the anti-kythe. A home without television is like a slice of chocolate cake without tartar sauce."

## Chapter Thirty-One

Jaben said, "The second half of the book deals with how television is impacting public life, how everybody is always expecting to be amused. A good place to start is," he said, flipping through the text, "let's see..."

After some more flipping, he started fiddling with the folded sheet of paper being used as a bookmark. "I'm not sure that there's a good, concise place to begin, and the problem may get worse with *Four Arguments for the Elimination of Television*."

"The author could only think of four?" Ellamae asked.

Jaben idly opened the sheet of paper, and then his eyes widened. "This'll do nicely. It must have been left as a bookmark by the previous patron to check the book out. It's a seminar announcement:

"The Middle School PTA is sponsoring a free parent education seminar — Why are we slowing down?"

"We're being pulled over," Thaddeus said.

Jaben reached into his wallet and pulled out 70 pesos, handing them forward to the front.

They stopped, and Thaddeus unrolled the window. "*Buenos dias, señor*." He held out the money; the officer took it, said "*Gracias*," and walked back.

Jaben put his foot on the pedal and rolled up the window at the same time.

"It's really cool that in Mexico you can pay a speeding ticket on the spot without having to go into an office. That would have cost us so much time," said Sarah.

"Why are you smiling, Jaben?" Sarah asked, after a moment had passed.

"That wasn't exactly paying a ticket, Sarah."

"Well what was it then."

"A little bit of grease on his palm."

"You bribed a police officer?" Sarah asked, incredulous.

"Yes, Sarah. It's not the same as in America." Jaben said, folding the paper, sticking it in the book, and closing the book.

"I can't believe you did that!" Sarah said. "Does breaking the law only count in the United States, not in Mexico? There is no authority except from God, and Romans 13 and all."

"Sarah, do you know why the cop pulled us over?"

"Because Thad thinks that he's in Malaysia."

"Uh, ok. You have a point there. But do you know why else he pulled us over?"

"Yes, he was going to write a ticket."

"No, the cop had no intention whatsoever of writing a ticket."

Sarah closed her eyes in concentration for a minute. "Are you saying he pulled us over in the hope of receiving a bribe?"

"No, I'm saying he pulled us over in the *certainty* of receiving a bribe."

"Well, if a corrupt cop pulls us over, why don't we go in and report him?"

"Sarah, do you know what would happen if we did that?"

"Yes, they'd put him under discipline."

"Not exactly."

"Ok, I give up. What would happen?"

"We'd be laughed out of court," Jaben said.

Sarah opened her mouth, then closed it.

"Police officers are paid much too little, like the majority of other Mexicans, and it's an accepted part of the culture. In our country, bribes are associated with corruption and subversion of justice, but in Mexico they do not have that meaning. It's just an informal income distribution system with very little overhead. The outrage you are experiencing is culture shock."

"So there's nothing wrong with Mexico? All there is is difference? You can critique American culture, but Mexican culture is off limits?"

"No; there are a great many things wrong with Mexican culture, some of which make me sick. It's a macho culture, but women hold all the power —"

"Go, women!" Sarah cheered. Jaben decided not to recite Ambrose Bierce's definition of 'queen', and continued, "—and it's an unhealthy, manipulative power that they hold. If you were my wife, you might get me

manipulative power that they hold. If you were my wife, you might get me drunk and steal money from my wallet. The phenomenon exists in the United States; it's just not so stark. It's why there were all those bumper stickers saying, 'Impeach President Clinton and her husband.' In many families, the husband's off doing his own thing, drinking with his buddies, and the wife is meeting her emotional needs with her children, especially her oldest son. It's not incestuous, but it's very unhealthy. In contradistinction to our own culture's exaggeration of 'leave and cleave', a man will choose his mother and sister over his wife and children. They have the opposite error. Mexican culture emphasizes family and community, but certain aspects of familial community are very unhealthy. Their culture is as much marked by the Fall as our own."

Sarah sat in thought, and said, "Why do you condemn these things, but condone bribing an officer?"

Jaben said, "Later, I'd like to talk with you about implications of fundamental beauty. But for now, just trust me on this."

"Ok," Sarah said slowly. "I'll trust you."

## Chapter Thirty-Two

"The Middle School PTA," Jaben read, "is sponsoring a free parent education seminar by So-and-so, a highly sought after seminar leader who combines practical strategies with a high energy 'you can do it' approach to parenting middle schoolers. So-and-so has been a professional communicator for over 20 years as a parent, teacher, clinical counselor, author and professor at the Adler School of Professional Psychology. She has addressed school districts, corporations and community organizations throughout the Chicago area on the subject of parenting. Noted for her ability to get audiences involved using a highly interactive humorous format, she has consistently received the highest level ratings for her warm, knowledgeable and practical presentations.

"So-and-so will tackle how to help your child develop attitudes and skills essential to withstanding peer pressure. She will also provide concrete ways to encourage building self-esteem in both our children and ourselves through practical techniques *that actually work*. Drawing on her years of experience in working with teenagers, So-and-so shares proven ideas you can use immediately. Don't miss this lively, inspiring and humorous session!" Jaben folded the sheet of paper, set it in the book, and closed it.

"What's wrong with that?" Désirée asked.

"Well, it doesn't distinguish between the presenter being entertaining and her being an expert in dealing with adolescents," Ellamae said.

Jaben said, "On one televangelist's show that Postman addresses, the saved get to play themselves before and after, and, Postman says, they are saved twice: by being brought into the presence of Jesus, and made a movie star. To the uninitiate, Postman says, it is hard to tell which is the higher estate." They discussed a bit more; Jaben did not say much of anything additional, beyond encouraging the others to sit down and read

the book, and that a week of careful television watching and attending consumer oriented services (for which he recommended a perusal of *Why Catholics Can't Sing*), listening to people, and otherwise examining American life would reveal a lot to a perceptive mind. Asked about Jerry Mander's *Four Arguments for the Elimination of Television*, he said, "That's another discussion for another day."

## Chapter Thirty-Three

Sarah said, "What was that about fundamental beauty?"

Jaben said, "There is a trinity of the good, the true, and the beautiful, in which we must neither confound the elements nor divide the substance. Those three words describe the same — being, but in different ways. And there is something I have called 'fundamental beauty', for lack of a better term in any language, to refer to something that is fundamental and is of the character of beauty that is shared between different things, things that may look different on the surface. My favorite example is singing and dancing — in one sense, they are not very much alike at all — one is sound, the other is motion, and (my physics training notwithstanding) the two are not the same. But in another, deeper way, there is something very much the same about them. They are both beautiful in the same way. *They share the same fundamental beauty.*

"The Chinese character for 'metaphor' is a compound character, a little like an English word like 'doughnut', and the constituent characters are 'hidden' and 'analogy'; there can be a hidden analogy, a shared fundamental beauty, between two objects that may look very different. A recognition of shared fundamental beauty seems to me to lie at the heart of all metaphor, and the more striking and poetic the metaphor the more disparate on the surface the two things are, and the more closely they share a fundamental beauty. When a poet compared a woman to a red, red rose, the comparison was not anatomical in character, nor along any other literal lines; he was rather seeing a shared fundamental beauty.

"The present grandmaster of ninjutsu, Masaaki Hatsumi, wrote in *Essence of Ninjutsu* about talking with a photographer who took pictures of horses, and had to deal with a basic problem: horses know when they're being watched, and stiffen up. When she takes a picture, she stands with her back to the horse, waits until the horse relaxes, and then

swiftly turns around and snaps a shot before the horse can tense up. He commented that it is like the ninjutsu 5th degree black belt test, where the master stands with an unsheathed katana over the disciple, and then sometime in the next thirty minutes gives a shout and brings the sword down. The disciple has to get out of the way. The grandmaster saw a likeness between the two disciplines at that point; you might say that he saw the same fundamental beauty, and commented that two disciplines, no matter how far apart, will share something in common. This kind of point of connection might also be why Musashi wrote in *A Book of Five Rings*, 'You must study the ways of all professions.' If so, it is most definitely *not* a lesson which should be confined to martial artists.

"What I realized in our discussion about bribing cops is that, not only is it possible for two different-looking things to share the same fundamental beauty, but it is possible for two similar-looking things to have very different fundamental beauties. I hesitate to use the term 'beauty' in reference to bribing a cop, but the fundamental essence of bribing an American cop and bribing a Mexican cop are different. They look the same, but the heart is different, just as ninjutsu and horse photography look quite different, but at that one point are very similar."

Sarah looked pensive for a few minutes, and said, "I see, Jaben. I really see. I'm glad I trusted you on this one."

By this point, it was getting very late, and so they pulled over and got ready to set up camp.

## Chapter Thirty-Four

They stopped in the rocks, and began to unload the groundcloths, sleeping bags, and tents. They were unpacking, when they heard a rustle. "What's that?" Ellamae said. Immediately, Thaddeus had his gun aimed at the sound.

Five bandits stepped out from behind the rocks, followed by more. They were armed with rifles. "Drop your gun," the leader said, in a thick but understandable accent.

Thaddeus casually cast aside his rifle.

"Give us your money, your women."

"No," Thaddeus said, stepping forward. "It will not help you."

"We will kill you," said the leader.

"No," Thaddeus said.

"Give now!"

"No," Thaddeus said.

The angry leader aimed his gun, grinned wickedly, and pulled the trigger.

*Click.* The gun jammed.

The leader angrily shook the gun, struck it against the rock, and successfully fired three shots into the air. Then he took aim once again, and pulled the trigger.

*Click.*

"My God is bigger than your gun," said Thaddeus.

The man threw down his gun, and drew a wicked-looking knife. He started advancing.

Thaddeus had the knife with a serrated back, but did not draw it.

Thaddeus looked intently into his eyes.

The brigand slowed his pace.

Thaddeus kept his intense, probing gaze.

The brigand stopped.

Thaddeus closed his eyes for a moment, and then looked with all the more focus.

The brigand stood still, returning his gaze.

"*Te amo*," Thaddeus said in broken Spanish, praying with his whole heart that it wouldn't be misunderstood.

The brigand sheathed his knife, took his gun, and walked away.

One by one, each of his thirty companions followed, leaving the six friends alone.

"Thanks be to God," Ellamae said.

Thaddeus collapsed in fear, relief, and exhaustion.

## Chapter Thirty-Five

Packing away the equipment after eating another round of MREs, the friends got into the van. Désirée rode shotgun, and the others got into the back. "And the *Four Arguments*?" Ellamae said, looking at Jaben.

"I'm not going to treat them all; there's a reason why those arguments are given in a long book. It's necessary for a fair treatment. I'm only going to mention, for example, the argument that 'the programming is the packaging, and the advertising is the content', and advertising's role in harmful manipulation. But I do want to treat Mander's argument of artificial unusualness, in conjunction with a transposed argument from Bloom's *The Closing of the American Mind*.

"Television is inherently boring," Jaben began.

"Tell us something new," Désirée said from up front.

"No, really. Even more than you think. Have you ever had a professor tape a class session, and be bored silly with the videotape even though your professor was an engaging speaker? Television has lousy picture quality, and the viewing area is only a tiny portion of your visual field, and the sound is terrible. It's a sensory medium, but its stimulation is second rate at best.

"When a person has a handicap, he can sometimes find ways to work around it, and become far stronger than a normal person would be. You know how weak I was in gradeschool. This happened with television; they found a number of unnatural ways of making material *artificially unusual*, kind of like taking a dull technical document and making it appear interesting by italicizing lots of text and putting an exclamation point at the end of each sentence. They do things like camera changes, or moving the camera, or adding music, or putting in computer graphics. These things are called technical events, and the rate of technical events seems to be going up; when Mander wrote his *Four Arguments*, he claims

that the average rate of technical events was one every ten seconds; Postman wrote a few years later, and said that the average rate of technical events was one every three and a half seconds; last time I watched television and counted technical events, it was toeing the line of one technical event per second. This is why, if you go to Blockbuster and rent an old movie — even an old color movie — it appears boring. The number of technical events to keep you stimulated is much lower, and it doesn't meet your threshold for interesting. It makes an interesting experiment to watch ten minutes of regular programming (doesn't matter whether it's sitcoms, tabloids, X-files, news, or other mindless entertainment), ten minutes of commercials, ten minutes of PBS, ten minutes of a movie from this decade, and then ten minutes of some 1960's movie, and monitor both the number of technical events, and how excited or bored you are. This, incidentally, ties in to sex and violence in TV and movies; it's not just that some of the producers have questionable morals, but also that a bit of skin flashing across the screen is stimulating in a way that wholesome shows cannot be. Two people respectfully talking through a disagreement doesn't have nearly the same camera appeal as a bit of a fistfight.

"This is where Allan Bloom comes in. In *The Closing of the American Mind*, he talks about different things that are crippling American students — interestingly, though he is not writing from a moralistic perspective, he is concerned about many of the same things we are, such as promiscuity and divorce of parents. He could be quoted in a sermon to argue that sin is harmful and that, in fact, God has given us moral law, not for *his* own good, but for *our* own good, just as the Bible says. One of the things he says in particular as a crimp on American students is drugs. The argument is terrifying, and if it were believed by our youth, it would keep them away from narcotics like no 'do drugs, do time' posters ever could.

"The argument is very simple. Once you have done drugs — once you have cheaply and for nothing experienced the godlike heights of pleasure associated with the greatest successes — a heroic victory in battle, or the consummation of a marriage — what, in your day to day life, could you *possibly* experience to compete with that? What can possibly compare? Suddenly, everything is bleak, dull, grey, boring. Everything.

"It would be like — remember that time when we were in the cave, our

eyes comfortably adjusted to the candlelight, and Sarah thought that Désirée and Amos looked so cute snuggling, and whipped out her pocket camera and snapped a picture? There was an instantaneous and tremendously bright flash of light, and then none of us could see *anything*, not even the candles' flames. This is why, by the way, I never use a flashlight when I am outside; I regard it as an implement of blindness rather than an implement of sight, because it brightly illuminates one area but prevents you from seeing the others. That's why, when Lilianne offered me a flashlight that one time, I said, 'No thanks, I want to see.' If you have to use a flashlight, you will never step out from a cabin into brilliant summer moonlight, and I don't know how to tell you — fair is the sunlight, fairer still the moonlight, fairest of all is the light of thy face —

"Television, video games, movies, are things that embody the same fundamental ugliness as drugs. Non-chemical narcotics, you might call them. The strength of this is hard to recognize if you've used them enough to get inured to them, but I remember the first time I watched that one James Bond movie, with 007 and 006 and that Georgian pilot... I was on the edge of my seat with lust after the usual James Bond opening of half-naked women — I believe the proper term for that is 'artistic porn' — and it still quickens my pulse to remember how my heart was pounding when James Bond was free falling and climbing into the free falling airplane. If you've seen the movie, you probably didn't experience it that way. Hollywood needs to build a stronger and stronger brew to have the same effect on people, and I was much more strongly affected by the movie than most other people would — just like I would be extremely affected by what would be to a drug addict just a little bit to tide him over until he needed more.

"After you've watched TV, where all the men have high-paying jobs and all the women look sexy in their tight clothes, and there's a camera change every second, and there is music and perhaps a laugh track, and every conversation is exciting and witty — just what, exactly what, in your normal experience is going to compete with that? Talking with your friends has lulls in the conversation, and not everything is a witty retort; running provides you with something like the same camera change, but the people who go for long runs aren't the people who sit in front of a television. A book, however profound, is not stimulating enough to even

lose a competition with television. So people watch television, at, what, six hours a day? Television is kind of like alcohol; a little bit can be good (or, in the case of television, tolerable), a lot at once induces a stupor, and a lot over time rots the brain."

The discussion that followed was vivid and animated. Sarah was disappointed to learn that Sesame Street had been created by a group of former advertisers, and listened with interest to Jaben's argument that advertising embodies the same fundamental ugliness as porn: "It arouses desires that cannot have a righteous fulfillment, in this case spending money on material possessions beyond even what natural greed would produce. This is, incidentally, why a television is the most expensive household appliance you can buy; it deducts from your pocketbook for long after you've paid it off." Lilianne was particularly interested in this claim; her way of believing (each believer, she said, who is in full orthodoxy has very much his own way of believing) placed a particular emphasis on living simply. "What should I do with my television, then?" asked Lilianne, who felt that she would never look at a television again in the same way. Jaben's reply was simple: "Give it to Thad. He could always use a new target."

## Chapter Thirty-Six

It was not long before they arrived in Tijuana, and searched everywhere. They searched high and low, in the resorts and in the slums; they prayed; Lilianne said glumly, "We're looking for a needle in a haystack." After a week of searching, Jaben said, "This city is too noisy. I need to go out into the countryside to think."

The friends drove aimlessly, and pulled over for a lunch of MREs. Each person grabbed one, and they sat down on the edge of a cornfield.

"So what do we do now?" Sarah asked.

"I don't know," Thaddeus said. "I felt positive that the Spirit was pulling us to Tijuana."

"At least we tried to be faithful," Ellamae said.

Jaben pulled out the Windows CD-ROM, placed it on the tip of his index finger, and ran his thumb along the edge. "I wonder. I think—"

"Why is the ground trembling?" Sarah asked.

The friends dropped their food and staggered to their feet.

There, not fifty feet away, molten rock was spewing into the air. A chunk landed ten feet away.

The heat was incredible.

Jaben hurled the annulus into the lava, where it disappeared in a burst of lambent flame. "Let's run!"

They did run, and this time Thaddeus's driving was estimated to be about a 9.5 on the Richter scale. They drove and drove, and after a time realized they were lost.

"We're approaching a small village," Lilianne said. "Maybe they'll be able to tell us where we are, or how to get to the nearest city."

"We'd better not," said Jaben.

"Men! Always refusing to ask directions," Sarah said.

"It's not that, Sarah. You know I ask directions at home," Jaben said.

"Which is why you should do it here, too," Sarah said, crossing her arms and nodding her head.

"It's standard procedure in Mexico, if you don't know where something is, to make up directions. They could give us driving directions to Brazil," Jaben said.

"They could hardly leave us more lost than we are now," Lilianne said. Jaben said, "Slow down. I want to get out."

Thaddeus stopped the van.

Jaben got out, and walked to the doorway of the nearest hovel. "*Por favor,*" he asked, "*dísez cómo encontrar—*"

"Jaben?" a faint voice queried from the darkness within.

"*Amos!*"

## Chapter Thirty-Seven

Amos was weak and slightly emaciated, but hardly ever had the friends seen so beautiful a sight as he — Désirée had never been so happy. They gathered around him, and laid hands in prayer; healing flowed through Ellamae's fingers, and Amos stood up, strengthened.

"*Por favor, dínez con nosotros,*" the peasant said.

It was a simple meal; the friends were each given a few corn tortillas.

"This isn't much food," Sarah said. "How much do they have?"

"Eat it," Jaben said. "This is more than they can spare. The family will go hungry tonight."

"I know!" Sarah said. "We could give them some of our MREs."

"No," Jaben said. "I'd be happy to give them, but to a great many Mexicans, corn is food and food is corn. Our own ancestors had difficulty finding food in a New England whose waters were teeming with lobster. Each culture has its own baggage, and these simple folk are giving us the only food they know. A gift of MREs would not do them much good."

Sarah wasn't the only one to wipe a tear from her eyes.

The meal was mostly quiet; Amos explained how he had been abducted, beaten, and left for dead in a field, and how the peasants had taken him in and slowly nursed to health. "Will this make it hard for you not to hate white people?" Jaben asked.

"Very hard," Amos said. "But you're worth it."

The peasant family consisted of a grandmother, a mother, a father, a teenaged son, a preteen daughter, two little boys, and a baby girl. They were all thin, and lines of suffering were etched on all but the youngest of faces, but at the same time there was a real joy, a glow, about them. "I would like to go to mass with them, if they go to mass, but we should really be going back," Jaben thought. "I need to get back to work." Still, he did not wish in the least to haste this moment.

After the meal, they said goodbye, gave *abrazos*, and then Jaben reached into the sheath on his left hip and pulled out a thick Swisschamp Swiss Army Knife, showed them every one of its twenty-seven features (the children liked the magnifying glass), and then ceremoniously handed it to the father. The man's eyes lit up.

Sarah stared at Jaben; she knew what that knife meant to him, where he had taken it. Then she ran to the van, and ran back, and threw her red bouncy ball to the children, gave them each a kiss, and departed.

## Chapter Thirty-Eight

Jaben said, "Amos, you're the guest of honor. Would you like to make the reading selection? We have *Darwin on Trial*, *An Anthropologist on Mars*, *A Wind in the Door*, *Four*—"

"*A Wind in the Door*," Amos said.

Jaben handed him the small volume. Amos opened it, flipped one way, flipped another way, closed the book, opened it, turned a few pages, and said, "Aah, here. Page 82." He read terrifying words as Proginoskes showed Meg a moment when stars had been murdered — Xed.

"I've had a lot of time to think, and to feel, and I've realized something. It is a chilling feeling — un-Named, Xed — to know that someone hates you. Their brutality, their words, their blows hurt, but not nearly as badly as the real knowing that there was hate. My stomach hurt so much when they were done beating me, but the pain was nothing. Désirée, remember the time when we were dating, and I got my thumb in your eye? I know that hurt, but it only hurt physically. With hate it is different. It is a hurt of the spirit, and it is worse. Terribly worse.

"I am drawn to *Wind*, as you are, for its bliss and beauty. But it shows as very real the power of evil, and this passage was the one my heart was drawn to. I never knew how real the story was until I knew that there were men who could kill me. Hate is a very real power, and I have come to appreciate that, in the end, Proginoskes gave everything he had to give to stop the Echthroi. He gave until there was nothing left to give. Hate is so evil, that sometimes it costs that much."

Amos opened his mouth, then closed it, then began to weep. Ellamae and Sarah crawled across the baggage; Ellamae was first, kissing him on the forehead, and Sarah wrapped her arms around him. Their tears began to mingle with his, and soon all but Thad (who was with them in spirit) joined in the embrace; no one offered him anything to say, because they

saw his pain was so great. And they stayed together for hours.

## Chapter Thirty-Nine

There was healing in Ellamae's touch, and that of the others — restoration not only for Amos's wounded body, but for his broken soul. Their love was a healing balm, and after a day of weeping and eating MREs as fast as he could keep them down, Amos graced them with his deep, rich smile, and a day later he called for a rousing chorus of "99 bottles of beer," sung very loudly and very off-key, sometimes in several keys at once. This was one of Amos's favorite traditions, and it had surprised more than a couple of people who knew how truly good his baritone voice was. They were in Texas, approaching Jim's village, when something interesting happened.

Their radiator blew.

Jaben and Amos walked into the village, although by the end of the walk they had each drunk a canteen dry, and were thirsty and sorefooted when they reached Jim's shack. Jim rose to greet them, and said, "Hi, Jaben, and is this Amos? Why the sheepish grin, Jaben?"

Jaben shuffled, cleared his throat, and said, "I'm embarrassed to say this, but could we impose on you for another radiator?"

Jim laughed, and said, "Sure. I just got another van of your make and model in this week. I thought your new radiator had a bit more life in it. Would come with me to the yard? I'll step inside for my tools."

Jim was pleased to make Amos's acquaintance, and it was mostly those two who were talking as Jim and Jaben worked on the radiator ("You'd make a great mechanic," Jim said — "I might try that when my present position ends," Jaben replied). It wasn't that long before the friends' van had a new radiator, and it wasn't long after that that they were sitting at Jim's regular table, with the card table pulled up, eating collard greens and smothered pork chops.

Sarah opened the conversation, by saying, "I'm grateful to you, Jim,

and I trust you."

Jim smiled, and said, "Thank you. Out of curiosity, why do you trust me?"

"Your touch is that of a trustworthy man."

"How can you tell that from touch?"

"You know when two strangers are sitting next to each other on the bus, and their legs are touching? Their bodies are touching, but their spirits aren't touching. They aren't really touching.

"I've had hugs that felt like handshakes, and handshakes that felt like hugs; what most people know is that a touch means different things depending on how much of the body is touching and where, but what most people don't know is that a touch also is different depending on how much of the spirit is touching and where. Children's hugs can be the best, because when they're touching you, they aren't doing anything else, not anything; you're their whole universe, and you're wrapped in their trusting arms. There is something in the touch of a child who has not yet learned to draw back, just like there is something in the words of a child who has not yet learned guile. I don't mean that young children can't lie, or pull back — but a child who will transparently lie about stealing cookies still doesn't know how to put guile into real and honest communication, and a child who draws back and says 'I don't want to hug you' still doesn't know how to draw back when he's touching someone. I —"

"So that's why your hug reminded me of a child," interrupted Jim.

Sarah began to blush, and continued. "You can tell a lot about a man by the way he touches. Kind of like what you can tell by whether and how he looks you in the eyes — *eye contact* is a form of touch — only moreso. Your touch has a lot of strength — even apart from your calloused hands, I can tell that you spend a lot of time applying force when you fix things — but it is a strength with complete control and gentleness. You are strong, but I do not fear you. And it is a touch that draws me into your heart. You have a big heart. If you were a man whom I couldn't trust, you would be holding something back; you can tell when a person's holding back, and his touch says, 'There is something about me that I don't want you to know.' But your touch doesn't say that. It's transparent. Even when you gave me a handshake, when I touched your hand, I felt your heart."

Jim sat, with his mouth open. "What else do you know about me?"

"Not much " Sarah said "I'm not an astrologer "

NOT MUCH," SARAH SAID. "I'M NOT AN ASTROLOGER."

"You saw more of Sarah than she usually shows at first glance. Most people think she's a ditz," Lillianne said.

Jaben got up, and gently pulled Sarah's hair aside, so he could see part of her scalp.

"What are you doing?" Sarah asked.

"What an odd tattoo," Jaben said. "It says, 'Do not exceed 65 PSI.'"

Sarah hit Jaben, and he sat down.

Amos said, "It's so good to have your friendship, your community, your banter.

Désirée said, "It's so good to have you back, Amos. Our communion is restored; our fellowship is complete."

Amens circled round the table. They joined hands over the meal:

Praise God from whom all blessings flow.

Praise him all creatures here below.

Praise him above, ye heavenly host.

Praise Father, Son, and Holy Ghost.

Amen.

They dug in, and for a time people were silent as they enjoyed the meal. Then Thad said, "I had a mystical experience when we were driving out of Tijuana. It was my first mystical experience while driving."

Jim raised his eyebrows, and said, "A mystical experience while driving? I thought they came in church, and deep meditation, and things like that. I've never had one. I'm too ordinary."

Thaddeus smiled, and said, "Those moments are gifts from God, that come quite often unexpected. The biggest qualification you can have is a sense of need before God. And there is something ordinary about the mystical — no, that's not quite right, or maybe there is. There is something mystical about the ordinary. Mysticism is not this strange and remote thing; it is very near to us, and you may know more mystics than you think. Every child is born a mystic. The problem is how to keep him that way."

Jim said, "So how do you become a mystic? Do you read a book, or spend a lot of time praying, or whatever?"

Thaddeus said, "I don't know. I don't know how I became a mystic. It's not something you can achieve by doing the right things; it's a gift from God. It's kind of like asking what we did to achieve being given two

GOD. IT'S KIND OF LIKE ASKING WHAT WE DID TO ACHIEVE BEING GIVEN TWO radiators; the answer is that we did, quite properly, nothing; we cooperated with your gift and God's, but it was given. Prayer can be helpful, but if you try praying six hours a day to make yourself a mystic —

"To borrow from a Zen koan:

"A master observed that a novice was very diligent in prayer; he prayed an hour a day more than anyone else, and could shut out all distractions. One day, the master asked the novice, 'What are you doing?'

"The novice said, 'I am praying hard to make myself a mystic.'

"The master took a tile, set it before the novice, and began to polish it vigorously. 'What are you doing?' the novice asked.

"'I am polishing this tile to make it into a mirror,' the master answered.

"'You can't make a tile into a mirror by polishing it!' the novice protested.

"'And neither can you make yourself into a mystic by prayer,' the master answered.

"Prayer is a fundamental part of mysticism, and there are good books — I can think of *Experiencing God* and, let's see, *Tales of a Magic Monastery*, which is my personal favorite. But if you go to a book and say, 'This will make me a mystic,' you are setting yourself up for failure."

"What was your last mystical experience like? How did you manage to drive and have a mystical experience at once? How much more often do they come when you become an experienced mystic?" James asked.

"I don't know how to describe it. I was driving, and I was with God, and I was suddenly very aware of his presence and love for me, in, under, and through everything around me. I was also intensely aware of my surroundings; it helped me drive, if anything. But I would not too much dwell on mystical experiences; they are a blessing, but there are far greater blessings, those that non-mystics think are dull next to mysticism. It's hard to explain," Thaddeus answered.

James said, "I am still listening with interest."

Thaddeus said, "I feel like I'm in a bind, like I can only explain these things to someone who needs no explanation — and, in saying this, I probably sound otherworldly and mysterious and an initiate of circles you cannot hope to probe. It is not like that at all. Perhaps my best advice is this: if you value mysticism, forget completely about being a mystic, and seek God with your whole heart. God will make you a mystic if he wants."

Jim said, "I am already doing that."

Thaddeus said, "Then I have nothing to add to you."

Ellamae held her plate, and said, "Could you give me a pork chop?" and then, receiving the food, said, "I think you were following God when you gave us the radiator. It helped us receive our friend back. And the story about that —"

"What is the story about you finding him? Were the Mexican police much help?"

An animated recounting of the story's events followed, and lasted long into the night. They stayed the night, showered, packed up, and headed on the road home.

## Chapter Forty

Jaben said, "Ellamae, why don't you choose our Bible reading today? It's been a while since we read the *sacra pagina*."

Ellamae said, "I'd like to read the extended commentary on the words 'The just shall walk by faith,' as found in Hebrews chapter eleven. It's my favorite passage of Scripture."

Jaben handed a Bible and a flashlight to Lilianne, and said, "Lili, will you do the honors?"

Lili took the book reverently, opened it, flipped a few pages, and began, "Faith is the realization of what is hoped for and evidence of things not seen. Because of it the ancients were well attested. By faith we understand that the universe was ordered by the word of God, so that what is visible came into being through the invisible. By faith Abel offered to God a sacrifice greater than Cain's. Through this he was attested to be righteous, God bearing witness to his gifts, and through this, though dead, he still speaks. By faith Enoch was taken up so that he should not see death, and 'he was found no more because God had taken him.' Before he was taken up, he was attested to have pleased God. But without faith it is impossible to please him, for anyone who approaches God must believe that he exists and that he rewards those who seek him. By faith Noah, warned about what was not yet seen, with reverence built an ark for the salvation of his household. Through this he condemned the world and inherited the righteousness that comes through faith.

"By faith Abraham obeyed when he was called to go out to a place that he was to receive as an inheritance; he went out, not knowing where he was to go. By faith he sojourned in the promised land as in a foreign country, dwelling in tents with Isaac and Jacob, heirs of the same promise; for he was looking forward to the city with foundations whose architect and maker is God. By faith he received power to generate, even

though he was past the normal age — and Sarah herself was sterile — for he thought that the one who had made the promise was trustworthy. So it was that there came forth from one man, himself as good as dead, descendants as numerous as the stars in the sky and as countless as the sands on the seashore.

"All those died in faith. They did not receive what had been promised but saw it and greeted it from afar and acknowledged themselves to be strangers and aliens on the earth, for those who speak thus show that they are seeking a homeland. If they had been thinking of the land from which they had come, they would have had the opportunity to return. But now they desire a better homeland, a heavenly one. Therefore, God is not ashamed to be called their God, for he has prepared a city for them.

"By faith Abraham, when put to the test, offered up Isaac, and he who had received the promises was ready to offer his only son, of whom it was said, 'Through Isaac descendants shall bear your name.' He reasoned that God was able to raise even from the dead, and he received Isaac back as a symbol. By faith regarding the things still to come Isaac blessed Jacob and Esau. By faith Jacob, when dying, blessed each of the sons of Joseph and 'bowed in worship, leaning on the top of his staff.' By faith Joseph, near the end of his life, spoke of the Exodus of the Israelites and gave instructions about his bones.

"By faith Moses was hidden by his parents for three months after his birth, because they saw that he was a beautiful child, and they were not afraid of the king's edict. By faith Moses, when he had grown up, refused to be known as the son of Pharaoh's daughter; he chose to be ill-treated along with the people of God rather than enjoy the fleeting pleasure of sin. He considered the reproach of the Anointed greater wealth than the treasures of Egypt, for he was looking to the recompense. By faith he left Egypt, not fearing the king's fury, for he persevered as if seeing the one who is invisible. By faith he kept the Passover and sprinkled the blood, that the Destroyer of the firstborn might not touch them. By faith they crossed the Red Sea as if it were dry land, but when the Egyptians attempted it they were drowned. By faith the walls of Jericho fell after being encircled for seven days. By faith Rahab the harlot did not perish with the disobedient, for she had received the spies in peace.

"What more shall I say? I have not the time to tell of Gideon, Barak, Samson, Jephthah, of David and Samuel and the prophets, who by faith conquered kingdoms, did what was righteous, obtained the promises,

conquered kingdoms, and what was righteous, obtained the promises, they closed the mouths of lions, put out raging fires, escaped the devouring sword; out of weakness they were made powerful, became strong in battle, and turned back foreign invaders. Women received back their dead through resurrection. Some were tortured and would not accept deliverance, in order to obtain a better resurrection. Others endured mockery, scourging, even chains and imprisonment. They were stoned, sawed in two, put to death at sword's point; they went about in skins of sheep or goats, needy, afflicted, tormented. The world was not worthy of them. They wandered about in deserts and on mountains, in caves and in crevices in the earth.

"Yet all these, though approved because of their faith, did not receive what had been promised. God had foreseen something better for us, so that without us they should not be made perfect."

Lilianne closed the book.

Sarah said, "That's awesome."

Ellamae said, "The part I like best about this is that there was no distinction made between those who were miraculously saved and those who died in faith. None whatsoever. In Daniel, the three men, Shadrach, Mechach, and Abednego say, 'Our God can save us, but even if he does not, know, O king, that we will not bow down.' Some manuscripts even say, 'if he cannot.' It reminds me of—

"Thaddeus, when you were looking down the barrel of that brigand's gun, what was going through your mind?" she asked

"My heart was completely at peace," Thaddeus said.

"Did you know that the gun was going to jam?"

"No."

"Did you pray that the gun would jam?"

"No."

At this, Ellamae was surprised. "What did you pray?"

"I prayed that God's will would be done."

There was silence for a second, and then Jabben said, "I like how the text says that we are strangers and aliens, that this world is not our home: we look for a better country, a heavenly one. I fit in better in French culture than American culture, but not even very well there; no culture on earth is a home. Each culture is a cave, as Bloom reminds us, and I can't wait for the day when I will climb *out* of the caverns and behold the sun in all its glory."

Amos said, "The chapter reminds me of the words, 'Here I stand, ready to live, ready to die.'"

Ellamae said, "'My name is Aragorn, son of Arathorn. If by life or death I may serve you, that I shall.'"

Jaben said, "Jewish tradition holds that the prophet Isaiah was sawn in two."

"Interesting," Lillianne said. "What was the story?"

"I don't know. I haven't spent nearly as much time studying the Talmud and Jewish tradition as I should. Maybe reading the Babylonian Talmud will be my next project."

"All things in this chapter point to the King of the Jews," Ellamae said. "Every righteous man was a shadow of the One who was to come. And there is more — I cannot say it."

The conversation went on for hours, days. Before they knew it, the friends pulled into a driveway...

## Chapter Forty-One

It was dusk as the van pulled out, finally at home, and slowed down. Everybody got out, yawning, Thaddeus still, out of habit, carrying his rifle slung over his shoulder. They closed the van doors and walked along, silently, when —

a roaring sound was heard

"Look out, a bear!"

the Spirit moved in Thaddeus's heart like rapid fire. "Shoot it."

Thaddeus, bewildered, was pushed into a dimension beyond time, out of ordinary time, and automatically took what seemed an eternity slowly aiming the gun into the bear's mouth, frozen open, hoping by some providence to sever part of the time

fired

a resounding, thunderous gunshot echoed

the bear staggered

Thaddeus looking at his smoking .22 in confusion

*BOOM!* another gunshot echoed

the bear staggered

*BOOM!* another gunshot echoed

the bear staggered

*BOOM!* another gunshot echoed

the bear fell

a stick snapped

a massive man, holding a massive gun, walked out of the forest

the gun still aimed at the dying bear

"Bear!" Désirée said. "Boy, are you a sight for sore eyes!"

"You're back. Is that Amos I see? How are you, Amos?"

"Happy."

Bear drew a few paces back from the grizzly's body, cautiously set his

smoking gun down, still pointing at the grizzly, and then drew all seven friends into his enormous, thick, strong, gentle arms. "Good to have y'all back, folks. Good to have ya back."

## Chapter Forty-Two

It was good to be back in church. The seven friends filed into the sanctuary and sat down.

"Blessed be God: Father, Son, and Holy Spirit," the celebrant said.

"And blessed be his Kingdom now and forever. Amen," the congregation answered.

"Almighty God, to you all hearts are open, all desires known and from you no secrets are hid: Cleanse the thoughts of our hearts by the inspiration of your Holy Spirit, that we may perfectly love you, and worthily magnify your holy Name; through Christ our Lord," the celebrant said, joined by the congregation in saying, "Amen."

Then came the opening hymn:

"Here in this place new light is streaming,  
Now is the darkness vanished away,  
See in this space our fears and our dreamings,  
Brought here to you in the light of this day.  
Gather us in— the lost and forsaken,  
Gather us in— the blind and the lame;  
Call to us now, and we shall awaken,  
We shall arise at the sound of our name.

"We are the young— our lives are a myst'ry,  
We are the old— who yearn for your face,  
We have been sung throughout all of hist'ry,  
Called to be light to the whole human race.  
Gather us in— the rich and the haughty,  
Gather us in— the proud and the strong;  
Give us a heart so meek and so lowly,  
Give us the courage to enter the Song.

"Here we will take the wine and the water,  
Here we will take the bread of new birth.  
Here you shall call your sons and your daughters,  
Call us anew to be salt for the earth.  
Give us to drink the wine of compassion,  
Give us to eat the bread that is you;  
Nourish us well, and teach us to fashion  
Lives that are holy and hearts that are true.

"Not in the dark of buildings confining,  
Not in some heaven, light-years away,  
But here in this place the new light is shining,  
Now is the Kingdom, now is the day.  
Gather us in and hold us forever,  
Gather us in and make us your own;  
Gather us in— all peoples together,  
Fire of love in our flesh and our bone."

Then all the voices stepped into the timeless, eternal song:

"Glory to God in the highest and peace to his people on earth.  
Lord God, heavenly King, Almighty God and Father,  
we worship You, we give You thanks, we praise You for your glory.  
Glory to God.

"Lord Jesus Christ, only Son of the Father, Lord God, Lamb of  
God.  
You take away the sin of the world, have mercy on us.  
You are seated at the right hand of the Father:  
receive our prayer, receive our prayer.

"For You alone are the Holy One, You alone are the Lord.  
You alone are the Most High. Jesus Christ, with the Holy Spirit  
In the glory of God the Father, in the glory of God the Father. Amen.  
Amen."

"The Lord be with you," the celebrant said.

"And also with you," answered the congregation.

"Let us pray," the celebrant began.

"Almighty and everlasting God, increase in us the gifts of faith, hope,  
and charity; and, that we, the redeemed, may obtain what you promise,

make us work with you the work of your redemption; through Jesus Christ our Lord, who lives and reigns with you and the Holy Spirit, one God, for ever and ever." The congregation joined in, "Amen."

"A reading from the book of First Kings," the reader said.

"Some time later the son of the woman who owned the house became ill. He grew worse and worse, and finally stopped breathing. She said to Elijah, 'What do you have against me, man of God? Did you come to remind me of my sin and kill my son?' 'Give me your son,' Elijah replied. He took him from her arms, carried him to the upper room where he was staying, and laid him on his bed.

"Then he cried out to the Lord, 'O Lord my God, have you brought tragedy also upon this widow I am staying with, by causing her son to die?' Then he stretched himself out on the boy three times and cried to the Lord, 'O Lord my God, let this boy's life return to him!' The Lord heard Elijah's cry, and the boy's life returned to him, and he lived. Elijah picked up the child and carried him down from the room into the house. He gave him to his mother and said, 'Look, your son is alive!' Then the woman said to Elijah, 'Now I know that you are a man of God and that the word of the Lord from your mouth is the truth.'"

"The Word of the Lord," the reader said.

"The psalm will be read with the women on the even numbered verses, and the men on the odd numbered verses."

The women began, "I will declare your name to my brothers; in the congregation I will praise you."

The men answered, "You who fear the Lord, praise him! All you descendants of Jacob, honor him! Revere him, all you descendants of Israel!"

"For he has not despised or disdained the suffering of the afflicted one; he has not hidden his face from him but has listened to his cry for help."

"From you comes the theme of my praise in the great assembly; before those who fear you will I fulfill my vows."

"The poor will eat and be satisfied; they who seek the Lord will praise him— may your hearts live forever!"

"All the ends of the earth will remember and turn to the Lord, and all the families of the nations will bow down before him,"

"for dominion belongs to the Lord and he rules over the nations."

"All the rich of the earth will feast and worship: all who go down to the

dust will kneel before him— those who cannot keep themselves alive."

"Posterity will serve him; future generations will be told about the Lord."

"They will proclaim his righteousness to a people yet unborn—for he has done it."

"A reading from the book of Acts," the reader said.

"Meanwhile, Saul was still breathing out murderous threats against the Lord's disciples. He went to the high priest and asked him for letters to the synagogues in Damascus, so that if he found any there who belonged to the Way, whether men or women, he might take them as prisoners to Jerusalem.

"As he neared Damascus on his journey, suddenly a light from heaven flashed around him. He fell to the ground and had a voice say to him, 'Saul, Saul, why do you persecute me?'

"'Who are you, Lord?' Saul asked. 'I am Jesus, whom you are persecuting,' he replied. 'Now get up and go into the city, and you will be told what to do.'"

"The word of the Lord," the reader said.

"Thanks be to God," answered the congregation.

The congregation rose, singing:

"Alleluia, alleluia! Give thanks to the risen Lord,  
Alleluia, alleluia! Give praise to his name!"

"The holy Gospel of our Lord Jesus Christ, according to St. Luke," the celebrant said.

"Glory to You, Lord Christ," the congregation answered.

"Now one of the Pharisees invited Jesus to have dinner with him, so he went to the Pharisee's house and reclined at the table. When a woman who had lived a sinful life in that town learned that Jesus was eating at the Pharisee's house, she brought an alabaster jar of perfume, and as she stood behind him at his feet weeping, she began to wet his feet with her tears. Then she wiped them with her hair, kissed them and poured perfume on them.

"When the Pharisee who invited him saw this, he said to himself, 'If this man were a prophet, he would know who is touching him and what kind of woman she is—that she is a sinner.' Jesus answered him, 'Simon, I have something to tell you.' 'Tell me, teacher,' he said. 'Two men owed

I have something to tell you. Tell me, teacher," he said. "Two men owed money to a certain moneylender. One owed him five hundred denarii, and the other fifty. Neither of them had the money to pay him back, so he canceled the debts of both. Now which of them will love him more?"

"Simon replied, 'I suppose the one who had the bigger debt canceled.' 'You have judged correctly,' Jesus said. Then he turned toward the woman and said to Simon, 'Do you see this woman? I came to your house. You did not give me any water for my feet, but she wet my feet with her tears and wiped them with her hair. You did not give me a kiss, but this woman, from the time I entered, has not stopped kissing my feet. You did not put oil on my head, but she has poured perfume on my feet. Therefore, I tell you, her many sins have been forgiven—for she loved much. But he who has been forgiven little loves little.' Then Jesus said to her, 'Your sins are forgiven.' The other guests began to say among themselves, 'Who is this who even forgives sins?' Jesus said to the woman, 'Your faith has saved you; go in peace.'"

"The Gospel of the Lord," the celebrant said.

"Praise to You, Lord Christ," the congregation answered.

"There is a Redeemer," the preacher began, "Jesus, God's own son,' begins one song. I'm not going to inflict my singing voice on you, but that's how the song begins. Today I want to talk to you about the message of redemption in the Gospel, in the whole Bible. This is one of the most important messages in Scripture.

"Forgive and forget. Forgive and forget. That's what our culture says, and I don't agree with that. I've thought and prayed, and I really don't agree with that. If you forgive, you don't forget. If you forget, you don't forgive. God takes evil, and makes it better than if nothing had gone wrong. The New Jerusalem will be better than Eden ever could have been — that's how powerful a God we serve. *Eloi, Eloi, lama sabachthane?* My God, my God, why have you forsaken me? These were the words that Christ cried in agony on the cross, and they were not new. He was quoting, and more specifically he was quoting the first verse of the twenty-second psalm. In those days, people emphasized memory a bit more than we do now. They didn't memorize Bible verses; they memorized the whole Bible. To those who were looking on, the Pharisees leering at him, Jesus was quoting the whole psalm, the Psalm of the Cross: I can count all my bones. They look, they stare at me. They divide my clothing among them; for my garments they cast lots. They pierced

my hands and my feet. These words, and others, foretold the exact way and manner of Christ's death, and in quoting them, Jesus was saying, 'Look, you who have pierced me. This prophecy is fulfilled this day in your midst.'

"The beginning of psalm twenty-two is a psalm of lament, but the end is a psalm of triumph, and those are the verses we read earlier in the service. The cross is the balance point of the story, but not its end. God's strength at work is very powerful, and they take the cross, because it was the most evil moment, the hour when darkness reigned, and placed it at the heart of his triumph. Christ trampled death by death, and when he rose from the dead, the power of death was forever broken, like the stone table in C.S. Lewis's *The Lion, the Witch, and the Wardrobe*. And not only can death not hold *him* any longer, but death is now too weak to hold those who believe. When the body dies, the spirit is held in God's heart until the resurrection we await, when the dead in Christ shall rise first, and the body will surge with power and be reunited with the spirit. That is how God has redeemed death.

"I want to tell you something important. God isn't just trying to restore Eden, he has a whole, new, bigger project. He can redeem me; he can redeem you. He redeemed the sinful woman in our Gospel reading, and not only left her with a new beauty but left behind one of the most beautiful stories in the whole Bible — and that story was very widely circulated among the ancient Church. The point of saving us, Lewis tells us, is to make us into little Christs. The whole purpose of becoming a Christian is simply nothing else. God is transforming us so that we may become gods and goddesses to reign with him forever in the holy City. Let me repeat that. God is transforming us so that we may become gods and goddesses to reign with him in the holy City.

"I would like to tell you a story. I prayed, and hesitated now — Lord, I pray, bind me from saying anything that would harm these little ones, bind the power of the Evil One, and keep me in your heart. But I'll tell the story, with a warning that I don't agree with all of it. When I told it to one young man, he asked me, 'So, do you really believe that God created man just to prove a point?' I stepped back and said, 'No. I don't believe that. That's not why I told the story at all; it's just that I don't know how to tell the story without it looking that way.' So I ask you to excuse my weakness, and I pray that you will see what in this story I mean to tell: God's power and wisdom as manifest in his redemption

God's power and wisdom as manifest in his redemption.

"In the very beginning, before God created the heavens and the earth, he created angels, stars of light to shine in the light of glory. He created one star higher and holier than any of the others, and named him Lucifer, the Light-Bearer.

"Lucifer saw his own wisdom, majesty and glory, and told God, 'I want you to give me my rightful place, as head of you as well as head of the angels. I am wiser than you.'

"God could have zapped Lucifer then and there, and that would have established his power. But not his wisdom. So God decided on something very different.

"'Very well, then,' God said, 'Prove it. I'll unfold my plan, and you'll unfold yours.'

"The great Dragon shouted in rebellion, and swept the sky with his tail, and flung down a third of the stars, and a third of the stars chose to become dragons, vipers, worms.

"Then God created Heaven and earth; he set the stars, in their courses, and created glory after glory after glory: no two blades of grass alike, thousands upon thousands of species of beetles, and as the crowning glory man, created godlike in his image, pure, holy, spotless.

"Then the Dragon appeared in the form of a serpent, and beguiled the woman, and the woman pulled the man down with her. The whole creation became accursed, and began to rot, with poison seeping in a wound.

"'Well, then,' the Dragon said, 'Who is wiser now?' And God wept.

"Then God pointed to one person and said, 'You see that man?'

"'Yes,' the Devil said.

"'Hey, there!' God said to the man. 'You in the desert. Build a huge boat.'

"And the man did. When the wind and rain came, the man and his household were saved.

"Then the Devil walked on the earth, and said, 'I see not one who is righteous,' and God said, 'Have you considered my servant Job?' And Job, bewildered, saw his children and his property taken away, and then his health — and cried in agony, cursing the day of his birth, but refusing to curse God like the Serpent said he would. In the midst of his misery, Job said, 'I know that my redeemer liveth, and in my flesh I shall see God. Though he slay me, yet shall I praise him.'

"The story unfolded, and God sent a prophet to give his people Law. When they strayed, he sent prophets, never tiring of loving them. Finally, in the fullness of time, he sent his Son, to become a man.

"This man was a stranger in a strange land, and passed through the world like a flame. The Serpent spoke beguiling words into the ear of one of his disciples, and he was betrayed, and nailed to a piece of wood, and left to die. And darkness reigned.

"'Surely you will acknowledge,' said the Serpent, 'that I am wiser?'

"God raised his Son from the dead, in a new and incorruptible life, surging with power. And the Devil trembled with fear.

"His Spirit filled those who were his Son's disciples, and they burst forth with new life. The Serpent tried everything to stop them — even making some of the people God had called to persecute them. God was not discouraged; he called one of the persecutors to join in the new life." The preacher took off his glasses, and said, "I'd like to read to you now from one of the letters written by that persecutor:

"'Although I am less than the least of all God's people, this grace was given me: to preach to the Gentiles the unsearchable riches of Christ, and to make plain to everyone the administration of this mystery, which for ages past was kept hidden in God, who created all things. His intent was that now, through the church, the manifold wisdom of God should be made known to the rulers and authorities in the heavenly realms, according to his eternal purpose which he accomplished in Christ Jesus our Lord.'

"The Church — I mean you and me, not just people who wear a white collar — stands as a family for Christ, his brother and sister and mother, as children for God the Father, as God's *magnum opus*, as a servant to the world, as a witness to the world, as a mother and family to those who believe, and lastly as a warrior against Satan. This is the secret God has concealed in his bosom, and his many-sided wisdom is displaying so that all of the angels and even all of the demons, Satan himself, can look and see the wisdom of God's plan.

"Christ came once; he will come again, and then every knee shall bow. Then the redeemed shall stand holy, spotless, pure, and perfect, gods and goddesses, sons and daughters of God, to enter into his eternal paradise. Then the Dragon will look and see beyond any question or doubt that God's plan is wiser. Then, and *only* then, will Satan and all his minions be

cast into the lake of eternal fire.

"I'd like to conclude by saying that Heaven is off in the future, but it is also here now. We can, and should, bring Heaven down to earth. Each time we forgive, each time by God's grace we work good out of evil, there is Heaven. When we arrive at the Holy City, we will see that Heaven has always been very close. Let's pray.

"Lord, thank you for being the Redeemer, and calling us out of our sin, out of our filth. Thank you for calling me out of my slavery to the bottle and my worship of alcohol. Help us to be co-workers and co-redeemers with you, with hearts that are holy and lives that are true. In Jesus' name, amen.

"Will you please stand?"

The congregation rose, and said with one voice,

"I believe in one God, the Father, the Almighty,  
Maker of Heaven and earth, of all that is, seen and unseen.

"I believe in one Lord, Jesus Christ,  
the only Son of God, eternally begotten of the Father,  
God from God, Light from Light, true God from true God,  
begotten, not made, of one Being with the Father.

Through him all things were made.

For us and for our salvation he came down from Heaven:

by the Holy Spirit he became incarnate from the Virgin Mary, and  
was made man.

For our sake he was crucified under Pontius Pilate;  
he suffered death and was buried.

On the third day he rose again in accordance with the Scriptures;  
he ascended into Heaven

and is seated at the right hand of the Father.

He will come again in glory to judge the living and the dead,  
and his kingdom will have no end.

"I believe in the Holy Spirit, the Lord, the giver of life,  
who proceeds from the Father and the Son.

With the Father and the Son he is worshiped and glorified.

He has spoken through the Prophets.

I believe one holy Catholic and apostolic Church.

I acknowledge one baptism for the forgiveness of sins.

I look for the resurrection of the dead

...FOR THE RESURRECTION OF THE DEAD,  
and the life of the world to come.  
Amen."

A deacon said aloud, "Father, we pray for your holy Catholic Church;"  
The congregation answered, "That we all may be one."

"Grant that every member of the Church may truly and humbly serve  
you;"

"That your Name may be glorified by all people."

"We pray for all bishops, priests, and deacons;"

"That they may be faithful ministers of your Word and Sacraments."

"We pray for all who govern and hold authority in the nations of the  
world;"

"That there may be justice and peace on the earth."

"Give us grace to do your will in all that we undertake;"

"That our works may find favor in your sight."

"Have compassion on those who suffer from any grief or trouble;"

"That they may be delivered from their distress."

"Give to the departed eternal rest;"

"Let light perpetual shine on them."

"We praise you for your saints who have entered into joy;"

"May we also come to share in your heavenly kingdom."

"Let us pray for our own needs and those of others."

A time of silence ensued.

The celebrant said, "Let us confess our sins against God and our  
neighbor."

The friends knelt in silence.

"Most merciful God," the celebrant began, joined by the people,

"We confess that we have sinned against you  
in thought, word, and deed,  
by what we have done,  
and by what we have left undone.

We have not loved you with our whole heart;  
we have not loved our neighbors as ourselves.

We are truly sorry and we humbly repent.

For the sake of your Son Jesus Christ,

have mercy on us and forgive us;

that we may delight in your will

that we may delight in your will,  
and walk in your ways,  
to the glory of your Name.  
Amen.

The celebrant raised his hand, and said, "Almighty God have mercy on you, forgive you all your sins through our Lord Jesus Christ, strengthen you in all goodness, and by the power of the Holy Spirit keep you in eternal life. Amen.

"The peace of the Lord be always with you."

"And also with you," the congregation answered.

The friends exchanged the Kiss of Peace; Jaben placed his lips on Sarah's cheek and planted a kiss. It was not romantic, erotic, or sexual, but it was very much real. Their bodies touched; their spirits touched. Jaben gave the kiss his whole attention; he wasn't doing anything else, not anything. This is why—Sarah thought afterwards—the Kiss of Peace between friends should not just be a handshake, but a hug, or even better a kiss. And why I like Jaben's kisses best of all.

The kiss bore the same fundamental beauty as singing  
dancing  
a small white feather in the air  
a placid lake  
deep green seaweed swaying under the ocean  
a glass of dry white wine  
silence  
stillness  
moonlight  
starlight  
crystalline ice  
a fire of roses  
a child falling asleep in its mother's arms  
agape  
life.

Someone said that, when thinking of singing Alleluia, one should not so much think of "We start and stop this song," as, "There is a song which always has been going on and always will go on, and when we sing, we step into it for a time."

This kiss was not a momentary kythe, but a moment stepping into the

Eternal Kythe.

It lasted less than a second, but it filled eternity.

The offering plates were passed around, and the voices joined together singing the doxology:

"Praise God from whom all blessings flow.  
Praise him, all creatures here below.  
Praise him above, ye heavenly host.  
Praise Father, Son, and Holy Ghost.  
Amen."

The celebrant said, "The Lord be with you."

"And also with you," answered the congregation.

"Lift up your hearts," the celebrant said.

"We lift them to the Lord," the congregation answered.

The celebrant said, "Let us give thanks to the Lord our God."

The congregation answered, "It is right to give him thanks and praise."

The celebrant said, "It is right and a good and joyful thing, always and everywhere to give thanks to you, Father Almighty, Creator of Heaven and earth. For by water and the Holy Spirit you have made us a new people in Christ Jesus our Lord, to show forth your glory in all the world. Therefore, we praise you, joining our voices with Angels and Archangels and with all the company of Heaven, who for ever sing this hymn to proclaim the glory of your Name:"

The eternal Song arose like incense:

"Holy, holy, holy Lord, God of pow'r and might.  
Heaven and earth are filled with your glory.

"Holy, holy, holy Lord, God of pow'r and might.  
Heaven and earth are filled with your glory.

"Hosanna! Hosanna in the highest.  
Hosanna! Hosanna in the highest.

"Blessed, blessed is He who comes in the name of the Lord.  
Hosanna in the highest.

"Blessed, blessed is He who comes in the name of the Lord.  
Hosanna in the highest."

The celebrant said, "Holy and gracious Father: In your infinite love

you made us for yourself; and, when we had fallen into sin and become subject to evil and death, you, in your mercy, sent Jesus Christ, your only and eternal Son, to share our human nature, to live and die as one of us, to reconcile us to you, the God and Father of all.

"He stretched out his arms upon the cross, and offered himself in obedience to your will, a perfect sacrifice for the whole world.

"On the night he was handed over to suffering and death, our Lord Jesus Christ took bread; and when he had given thanks to you, he broke it, and gave it to his disciples, and said, 'Take, eat: This is my Body, which is given for you. Do this for the remembrance of me.'

"After supper he took the cup of wine, and when he had given thanks, he gave it to them, and said, 'Drink this, all of you. This is my Blood of the new Covenant, which is shed for you and for many for the forgiveness of sins. Whenever you drink it, do this for the remembrance of me.'

"Therefore we proclaim the mystery of faith:"

The whole congregation said, with one voice,

"Christ has died.

Christ is risen.

Christ will come again."

The celebrant said, "We celebrate the memorial of our redemption, O Father, in the sacrifice of praise and thanksgiving. Recalling his death, resurrection, and ascension, we offer you these gifts.

"Sanctify them by your Holy Spirit to be for your people the Body and Blood of your Son, the holy food and drink of new and unending life in him. Sanctify us also that we may faithfully receive this holy Sacrament, and serve you in unity, constancy, and peace; and at the last day bring us with all your saints into the joy of your eternal kingdom.

"All this we ask through your Son Jesus Christ. By him, and with him, and in him, in the unity of the Holy Spirit all honor and glory is yours, Almighty Father, now and forever. Amen.

"And now, as our Savior Christ has taught us, we are bold to say:"

Celebrant and congregation joined voices in a natural, almost chantlike recital:

"Our Father  
which art in Heaven,

1 11 11 11

hallowed be thy name.  
Thy Kingdom come,  
thy will be done,  
on earth as it is in Heaven.  
Give us this day our daily bread,  
and forgive us our trespasses,  
as we forgive those who have trespassed against us.  
Lead us not into temptation,  
but deliver us from evil,  
for thine is the Kingdom,  
and the power,  
and the glory forever.  
Amen."

The celebrant said, "Alleluia! Christ our Passover is sacrificed for us;"  
"Therefore let us keep the feast! Alleluia!" the congregation answered.  
All said in unison,

"Most merciful Lord,  
your love compels us to come in.  
Our hands were unclean,  
our hearts were unprepared;  
we were not fit even to eat the crumbs from under your table.  
But you, Lord, are the God of our salvation,  
and share your bread with sinners.  
So cleanse and feed us with the precious body and blood of your Son,  
that he may live us and we in him;  
and that we, with the whole company of Christ,  
may sit and eat in your Kingdom.  
Amen."

The celebrant held up the elements, and said, "The gifts of God for the  
People of God. Take them in remembrance that Christ died for you, and  
feed on him in your hearts by faith, with thanksgiving."

The congregation was seated for a moment, and then rose with the  
power and energy of a song:

"The heavens are telling the glory of God,  
and all creation is shouting for joy

and all creation is shouting for joy.

Come, dance in the forest, come, play in the field,  
and sing, sing to the glory of the Lord.

"Praise for the sun, the bringer of day,  
He carries the light of the Lord in his rays;  
The moon and the stars who light up the way  
Unto your throne.

"The heavens are telling the glory of God,  
and all creation is shouting for you.

Come, dance in the forest, come, play in the field,  
and sing, sing to the glory of the Lord.

"Praise for the wind that blows through the trees,  
the sea's mighty storms, the gentlest breeze;  
They blow where they will, they blow where they please  
To please the Lord.

"The heavens are telling the glory of God,  
and all creation is shouting for joy.

Come, dance in the forest, come, play in the field,  
and sing, sing to the glory of the Lord.

"Praise for the rain that waters our fields,  
And blesses our crops so all the earth yields;  
From death unto life her myst'ry revealed  
Springs forth in joy.

"The heavens are telling the glory of God,  
and all creation is shouting for joy.

Come, dance in the forest, come, play in the field,  
and sing, sing to the glory of the Lord.

"Praise for the fire who gives us his light,  
The warmth of the sun to brighten our night;  
He dances with joy, his spirit so bright,  
He sings of you.

"The heavens are telling the glory of God,  
and all creation is shouting for joy.

Come, dance in the forest, come, play in the field,  
and sing, sing to the glory of the Lord.

"Praise for the earth who makes life to grow,  
The creatures you made to let your life show;  
The flowers and trees that help us to know

The heart of love.

"The heavens are telling the glory of God,  
and all creation is shouting for joy.  
Come, dance in the forest, come, play in the field,  
and sing, sing to the glory of the Lord.

"Praise for our death that makes our life real,  
The knowledge of loss that helps us to feel;  
The gift of yourself, your presence revealed  
To lead us home.

"The heavens are telling the glory of God,  
and all creation is shouting for joy.  
Come, dance in the forest, come, play in the field,  
and sing, sing to the glory of the Lord.  
Sing, sing to the glory of the Lord."

As they came up to receive communion, Jaben thought, "The body and blood of Christ. Real food and real drink."

Thaddeus thought, "The body of Christ, the Church. I am mystically united with the whole body of Christ, across all ages and all nations, and — what I hold more special still — I drink the divine life."

Désirée thought, "United again with my husband; made one in two ways now."

Amos thought, "United again with my wife; made one in two ways now."

Lilianne thought, "Here is a magic beyond anything in my daydreams, anything I can dream of."

Ellamae thought, "This chalice holds a fluid more precious than ichor. This cup is the Holy Grail."

Sarah thought, "God descends to meet my senses, and oh, how I appreciate that taste, that touch. He goes Within me."

They sat in silence after returning to their seats.

"Let us pray," the celebrant said.

The congregation joined him in saying,

"Eternal God, heavenly Father,  
you have graciously accepted us as living members  
of your Son our Saviour Jesus Christ,  
and you have fed us with spiritual food

in the Sacrament of his Body and Blood.  
Send us now into the world in peace,  
and grant us strength and courage  
to love and serve you  
with gladness and singleness of heart;  
through Christ our Lord.  
Amen."

The celebrant raised his hand in blessing, and said, "To him who is able to keep you from falling and to present you before his glorious presence without fault and with great joy—to the only God our Savior be glory, majesty, power and authority, through Jesus Christ our Lord, before all ages, now and forevermore! May the blessing of God Almighty, the Father, the Son, and the Holy Spirit, be upon you and remain with you for ever.", and the congregation said, "Amen."

They sang a recessional filled with joy:

"For the beauty of the earth  
For the glory of the skies,  
For the love which from our birth  
Over and around us lies.

"Lord of all, to Thee we raise,  
This our hymn of grateful praise.

"For the beauty of each hour,  
Of the day and of the night,  
Hill and vale, and tree and flower,  
Sun and moon, and stars of light.

"Lord of all, to Thee we raise,  
This our hymn of grateful praise.

"For the joy of human love,  
Brother, sister, parent, child,  
Friends on earth and friends above,  
For all gentle thoughts and mild.

"Lord of all, to Thee we raise,  
This our hymn of grateful praise.

"For Thy church, that evermore  
Lifteth holy hands above,  
Offering upon every shore

Shining upon every shore  
Her pure sacrifice of love.

"Lord of all, to Thee we raise  
This our hymn of grateful praise."

"For Thyself, best Gift Divine,  
To the world so freely given,  
For that great, great love of Thine,  
Peace on earth and joy in heaven.

"Lord of all, to Thee we raise  
This our hymn of grateful praise."

The celebrant raised his right hand in benediction, this time lowering his ring finger to meet his thumb. "Go forth into the world in peace, rejoicing in the power of the Spirit."

The congregation answered, "Thanks be to God."

## **Chapter Forty-Three**

Jaben was awoken by a phone call. "Be at Mortmain's Cove at 6:00 PM, and bring your friends along." He set the phone back on the receiver, and looked at his clock. 3:43 AM. Jaben scratched his head in puzzlement, and then drifted off to sleep.

## Chapter Forty-Four

The friends' van pulled around the corner, and they piled out. "I wonder what this could be about," Désirée murmured.

Jaben put his arm over Ellamae's shoulder, and said, "Ellamae, there's this one joke I've got to tell you. You'll laugh so hard, your breasts will fall off."

Then he glanced down at her chest for a moment, and said, "Oh, wait. You've already heard it."

Ellamae did not immediately react, then her mouth opened with a most delicious expression of "I can't believe I just heard what I thought I heard," and started laughing, and hit him in the arm. "Naughty, naughty," she said.

Thad said, "Ok. You are in a field. There is a clown suit, a crowbar, and a laptop here. Above are ominous clouds."

"I go west," Amos said.

"I do not recognize the verb 'I'."

"Take clown suit."

"Taken."

"Wear clown suit."

"The clown suit is about three sizes too small for you, and its colors clash with each other and your skin. Definitely you. You see—"

"Hullo, what's this?" said Ellamae.

Another van came up. It had no license plates.

Four men in white sheets stepped out. Two of them were carrying shotguns, and one of them was holding a box, about a fifteen by fifteen by six inches. The last one stepped out, and said, "Which of you is Jaben?"

Jaben stepped forward and said, "Me."

"Jaben," the Klansman said with a sneer. "Don't you think that when we get rid of one of *them*, it is with good reason?"

"We have rescued our friend," Jaben said calmly. "Is that not good reason?"

"No. You are ashamed of being white, and you are a disgrace to our race."

"I am very proud of being white," Jaben said. "I am proud of all the paintings and philosophy and poetry my race has produced. And I believe that loving others of your race comes before loving people not of your race."

"You do?" the Klansman asked with some surprise.

"Most definitely. But I don't think race defines the end of love. I believe in loving myself, my kin, my race, all of humanity, in an ever expanding circle of love. Your love of your kindred helps you love whites who are not your relations; my love of whites helps me love men who are not white. I am the richer for the friendships I have had with people who are not white, most of all Amos and Désirée. You would be the richer if you could expand your circle of love as well."

The Klansman snorted. "I did not come here to discuss philosophy with you. I came to challenge you to a duel." He opened the box to reveal two silver handguns. "Each of these is a .45."

"I don't believe in fighting. You can as much win a duel as win an earthquake."

Another Klansman fired a warning shot into the air. The echo resounded. "You will enter this duel, or we will mow down you and your friends, starting with the two of *them*."

Jaben closed his eyes, and prayed silently. His friends — not touching him, not moving — prayed with him. Then he opened his eyes, and said, "Ok."

Ellamae looked at him in absolute shock.

Jaben said — loud enough for the Kythers to hear — "Trust me," and walked over, and whispered something in Ellamae's ear.

Ellamae gulped.

Jaben walked over to the Klansmen, took one of the pistols. He stepped to the side, pointed the gun up, and turned his back.

The Klansman took the other pistol, and stood back to back with Jaben.

"One. Two. Three. Four. Five. Six. Seven. Eight. Nine. Ten."

Jaben turned, fired a shot into the air, and dropped his gun to the ground. "My brother!" he cried, facing his adversary.

ground. My brother. He cried, facing his adversary.

The Klansman turned, took aim, and shot him through the heart.

## Chapter Forty-Five

Ellamae was the first to reach him, and caught him before he reached the ground. She knelt down and held him, his hot blood coursing over her shirt. She kissed him on the forehead, and Jaben smiled. Then the life left his eyes.

The others gathered around, for one last embrace. Thaddeus closed Jaben's eyes, which were still open, vacant, empty. Ellamae's voice once again rose in a song that was high, clear, pure. It was immediately joined by Sarah's voice, Thaddeus's, Lilianne's, Désirée's, and Amos's.

"When peace, like a river, attendeth my way,  
When sorrows like sea billows roll;  
Whatever my lot, Thou hast taught me to say,  
It is well, it is well with my soul.  
It is well, it is well,  
With my soul, with my soul,  
It is well, it is well with my soul.

"Though Satan should buffet, though trials should come,  
Let this blest assurance control,  
That Christ hath regarded my helpless estate,  
And hath shed His own blood for my soul."

Amos could not sing. His voice was choked with tears.

"It is well, it is well,  
With my soul, with my soul,  
It is well, it is well with my soul.

"My sin! O the bliss of this glorious thought,  
My sin! not in part, but the whole,  
Is nailed to the Cross and I hear it no more

Is nailed to the Cross and I bear it no more,  
Praise the Lord, praise the Lord, O my soul!

It is well, it is well,  
With my soul, with my soul,  
It is well, it is well with my soul.

"And, Lord, haste the day when my faith shall be made sight,  
The clouds be rolled back as a scroll,  
The trump shall resound and the Lord shall descend,  
Even so, it is well with my soul.

It is well, it is well,  
With my soul, with my soul,  
It is well, it is well with my soul."

They sang a second time.

"When peace, like a river, attendeth my way,  
When sorrows like sea billows roll;  
Whatever my lot, Thou hast taught me to say,  
It is well, it is well with my soul.

It is well, it is well,  
With my soul, with my soul,  
It is well, it is well with my soul.

"Though Satan should buffet, though trials should come,  
Let this blest assurance control,  
That Christ hath regarded my helpless estate,  
And hath shed His own blood for my soul.

It is well, it is well,  
With my soul, with my soul,  
It is well, it is well with my soul.

"My sin! O the bliss of this glorious thought,  
My sin! not in part, but the whole,  
Is nailed to the Cross and I bear it no more,  
Praise the Lord, praise the Lord, O my soul!

It is well, it is well,  
With my soul, with my soul,  
It is well, it is well with my soul.

"And, Lord, haste the day when my faith shall be made sight,  
The clouds be rolled back as a scroll,  
The trump shall resound and the Lord shall descend

The trump shall resound and the Lord shall descend,  
Even so, it is well with my soul.  
It is well, it is well,  
With my soul, with my soul,  
It is well, it is well with my soul."

Amos choked back tears long enough to say, "Let's sing it a third time."

This time, they sang more slowly:

"When peace, like a river, attendeth my way,  
When sorrows like sea billows roll;  
Whatever my lot, Thou hast taught me to say,  
It is well, it is well with my soul.  
It is well, it is well,  
With my soul, with my soul,  
It is well, it is well with my soul.

"Though Satan should buffet, though trials should come,  
Let this blest assurance control,  
That Christ hath regarded my helpless estate,  
And hath shed his own blood for my soul."

Here they all stopped, and for a time there was only a sound of tears. Then the song continued, loudly, powerfully, mightily.

"It is well, it is well,  
With my soul, with my soul,  
It is well, it is well with my soul.

"My sin! O the bliss of this glorious thought,  
My sin! not in part, but the whole,  
Is nailed to the Cross and I bear it no more,  
Praise the Lord, praise the Lord, O my soul!  
It is well, it is well,  
With my soul, with my soul,  
It is well, it is well with my soul.

"And, Lord, haste the day when our faith shall be made sight,  
The clouds be rolled back as a scroll,  
The trump shall resound and the Lord shall descend,  
Even so, it is well with my soul

EVEN SO, IT IS WELL WITH MY SOUL.  
It is well, it is well,  
With my soul, with my soul,  
It is well, it is well, with my soul.  
"Amen."

Lilianne looked up, and looked around. The Klansmen had all fled in terror.

The Kythers had been so deeply enraptured in the song that they had not even heard the sound of the van.

"The gun!" Sarah said. "We still have a gun with their fingerprints on it. Maybe the police can trace whoever it was, and bring them to justice."

Ellamae picked up the gun with two fingers, as if she were holding a dead fish, and moved it a few paces away. Then she went into their van, took out a container and a cigarette lighter, poured some kerosene on the gun, and lit it.

"No," she said. "That is not the way."

She looked at Sarah, and said, sadly, "An eye for an eye only ends by making the whole world blind."

## Chapter Forty-Six

"I can't believe he's gone," Désirée said. "Or that his life was cut so short."

"I don't believe that he's gone," Lilianne said. "Or that his life was cut short."

"Explain," Désirée said, raising her eyebrows.

"You know Hebrews chapter 11, that great chapter cataloging all the heroes of faith? After that, Paul writes, 'Therefore, since we are surrounded by such a great cloud of witnesses, let us throw off everything that hinders and the sin that so easily entangles, and let us run with perseverance the race marked out for us.'

"The image is that of a stadium, where all those who have completed the race and received their laurel wreaths are standing around, excited, cheering on those who are still running. I may never hear from Jaben again this side of Heaven, but that doesn't mean he isn't here with us, watching us, praying, smiling on us. Jaben only lived a few years, but he managed in his own special way to cram more living into the scant years that he did live, than many people would live in a hundred years. I don't know how to explain it, but his life was complete."

The conversation gave way to a deep and powerful silence, a silence on which Jaben smiled.

## Chapter Forty-Seven

Friends and family gathered inside the church, weeping.  
The pastor began,

"I am the Resurrection and the Life, says the Lord.  
Anyone who believes in me, even though that person dies, will live  
and whoever lives and believes in me  
will never die.

"I know that I have a living Defender  
and that he will rise up last, on the dust of the earth.  
After my awakening, he will set me close to him,  
and from my flesh I shall look on God.  
He whom I shall see will take my part:  
my eyes will be gazing on no stranger.

"For none of us lives for himself  
and none of us dies for himself;  
while we are alive, we are living for the Lord,  
and when we die, we die for the Lord:  
and so, alive or dead,  
we belong to the Lord.

"Blessed are those  
who die in the Lord  
Blessed indeed, the Spirit says;  
now they can rest for ever after their work."

"The Lord be with you," the pastor said softly.

"And also with you," answered the congregation, even more softly.

"Let us pray."

There was a deep, still, empty silence, a wounded, grieving silence,  
that after a time took the form of the celebrant's words:

that after a time took the form of the celebrant's words:

"O God of grace and glory, we remember before you this day our brother Jaben. We thank you for giving him to us, his family and friends, to know and to love as a companion on our earthly pilgrimage. In your boundless compassion, console us who mourn. Give us faith to see in death the gate of eternal life, so that in quiet confidence we may continue our course on earth, until, by your call, we are reunited with those who have gone before; through Jesus Christ our Lord."

"Amen," all said together.

"Most merciful God," the celebrant said, "whose wisdom is beyond our understanding: Deal graciously with Amos, Désirée, Lilianne, Ellamae, Thaddeus, Sarah, Wallace, Elizabeth, and Bear in their grief. Surround them with your love, that they may not be overwhelmed by their loss, but have confidence in your goodness, and strength to meet the days to come; through Jesus Christ our Lord."

An Amen filled the church.

"A reading from the Song of Songs," said the reader.

"Set me as a seal on your heart,  
as a sigil on your arm.  
For love is stronger than death,  
more relentless than Hades.  
Its flame is a flash of fire,  
a flame of Yahweh himself.  
Many waters cannot quench love,  
neither can floods drown it.

"The Word of the Lord," the reader said.

"Thanks be to God," the congregation answered.

"A reading from Paul's first letter to the Corinthians.

"What you sow must die before it is given new life; and what you sow is not the body that is to be, but only a bare grain, of wheat I dare say, or some other kind; it is God who gives it the sort of body that he has chosen for it, and for each kind of seed its own kind of body.

"Not all flesh is the same flesh: there is human flesh; animals have another kind of flesh, birds another and fish yet another. There are heavenly bodies and earthly bodies; the heavenly have a splendor of their own, and the earthly a different splendor. The sun has its own splendor

the moon another splendor, and the stars yet another splendor; and the stars differ among themselves in splendor. It is the same too with the resurrection of the dead: what is sown is perishable, but what is raised is imperishable; what is sown is contemptible but what is raised is glorious; what is sown is weak, but what is raised is powerful; what is sown is a natural body, and what is raised is a spiritual body.

"The Word of the Lord," the reader said.

"Thanks be to God," the congregation echoed.

All rose, and the pastor said, "The Holy Gospel of our Lord Jesus Christ according to John."

The congregation answered, "Glory to you, Lord Christ."

"Do not let your hearts be troubled.  
You trust in God, trust also in me.  
In my Father's house there are many places to live in;  
otherwise I would have told you.  
I am going now to prepare a place for you,  
and after I have gone and prepared you a place,  
I shall return to take you to myself,  
so that you may be with me  
where I am.  
You know the way to the place where I am going.'

"Thomas said, 'Lord, we do not know where you are going, so how can we know the way?' Jesus said:

'I am the Way; I am Truth and Life.  
No one can come to the Father except through me.'"

The pastor closed the Bible, saying, "The Gospel of the Lord."

The congregation answered, "Glory to you, Lord Christ."

The pastor paused, and began, "A conservative, someone said, is someone who interprets the book of Jonah literally and the Song of Songs figuratively. A liberal is someone who interprets the book of Jonah figuratively and the Song of Songs literally." He paused, and then continued. "I'm not sure where that would place Jaben; I don't know how Jaben interpreted Jonah, but I do know that he interpreted the Song of Songs on at least three levels: a literal level, a figurative level, and a level of human relationships. He explained to me the last one by saying that if

of human relationships. He explained to me the last one by saying that if marriage is the crowning jewel of human relationships, as the Bible leads us to believe, then we should expect a book devoted to marriage to not only be a book about marriage, but a book about every human relationship. 'Catch for us the foxes, the little foxes, that wreak havoc on our vineyards' means to deal with the little problems that wreak havoc on a relationship, and that is sound advice for a marriage and sound advice for any other friendship.

"The Song of Songs was Jaben's favorite book, so much so that he made his own translation — that and, he said, the fact that existing translations are highly bowdlerized. Remind me to tell you sometime later what happened when the scholars working on the NIV made mistake of translating the greatest Song well. What you have in your Life Application Bible isn't what the translators—

"I normally read from the King James at funerals, but Jaben would not have liked that. The King James, he said, is a wonderful monument of Elizabethan prose that should respectfully be permitted to rest in peace. So other readings in the service were taken from the New Jerusalem Bible, the most current English equivalent to the French *Bible de Jérusalem* that Jaben read, but the passage from the Song of Songs was from Jaben's own translation. I would read other passages, but there are children listening.

"I thought about having 'His Banner Over Me Is Love' sung at this service, but I decided not to, for two reasons. The first reason is that it is a bouncy song, and does not very much sound like a dirge. And the second and most important reason? Jaben would have rolled over in his grave. The ultimate emasculation of an erotic text, he said, is to take a woodenly literal translation that obscures its meaning, and make it into a children's song. Come to think of it, I will tell you of one portion of Jaben's translation. He translated 'His banner over me is love' as 'He is gazing on me with desire.'

"Jaben was a brilliant man; he spoke four languages fluently, received a bachelor's degree in physics, and did things with computers I can't begin to understand. He was also quite a joker. I'll never forget the time he was talking with a senior political science major who was looking for a job, put an arm around his shoulder, and said, 'What did the computer science graduate say to the humanities graduate?' 'What?' 'I'll have the burger and fries, please.'

"And yet, as I think about him, not his humor, nor even his intelligence, strike me as most important about him. To explain exactly what *was* most important, I will in a moment tell you about his death.

"Jaben believed in living counterculturally. He believed in working to establish a culture of life in the midst of a culture of death. He always, always had time for people, from the youngest to the oldest. He would play with children, and sit at the feet of the aged and listen to their stories. He wouldn't have anything of disposable relationships—he kept up correspondence with his friends in France, and made a conscious decision to stay with his friends here until death. God alone knew how soon that death would come.

"His friend Amos was abducted, and I have never seen friendship so deep as in that seven-stranded cord of friends. He and the other friends left, and traveled through Mexico to find Amos, and at last came back as seven friends, singing loudly and off-key. That is quite a story, to be told another time. But when he came back—

"Amos was abducted out of hate, a hate that is real and not only white against black. Amos is struggling hard not to be consumed by the same hate that consumed his adversaries, and I ask you, brothers and sisters, to pray for him. He bears a heavy burden. The men who left Amos to die in Mexico were enraged that he be brought back alive, and insisted on a duel — their way. Jaben was not allowed to choose the place and weaponry as used to be the etiquette when duels were fought. The place was Mortmain's Cove and the weapon was a magnum .45. Jaben deliberately fired into the air, and then his opponent shot him through the heart.

"His last words, spoken to his murderer just before his death, were, 'My brother!'

"His next to last words, whispered into Ellamae's ears as he faced death, were, '*Tell my brothers and sisters that I love them.*'

"To understand the full extent of these words, let me tell you something. *Jaben was an only child.*

"When he said, 'Tell my brothers and sisters that I love them,' he was talking about you. And me. He loved us, and loves us still.

"When Jesus knew that his hour was approaching, he said over and over again, 'Love one another' — the heart of Christian ethics — and 'There is no love like this, that a man lay down his life for his friends.'

That is exactly what Jaben did. He gave his life as a ransom for Amos and

that is exactly what Jaben did. He gave his life as a ransom for Amos and the others. He decided to try to rescue Amos, whatever the cost — even his life.

"He gave more than money or time. He gave himself, his life. He lived well. He died well. We have before us the body of a man, of a hero. He is no longer with us. But his love remains.

"Let us pray.

"Lord, thank you for the scintillating light that shone in your servant Jaben. We stand bereaved; his candle burned short, but it blazed. Grant that each of us may learn from him and carry him in our hearts, and that you would enfold him in your own heart. Draw us into your heart. In Jesus' name, Amen."

The congregation began to rise, as the pastor said, "In the assurance of eternal life given at Baptism, let us proclaim our faith and say,"

One united voice said,

"I believe in God, the Father almighty,  
creator of heaven and earth.

"I believe in Jesus Christ, his only Son, our Lord.  
He was conceived by the power of the Holy Spirit  
and born of the Virgin Mary.  
He suffered under Pontius Pilate,  
was crucified, died, and was buried.  
He descended to the dead.  
On the third day he rose again.  
He ascended into heaven,  
and is seated at the right hand of the Father.  
He will come again to judge the living and the dead.

"I believe in the Holy Spirit,  
the holy Catholic Church,  
the communion of saints,  
the forgiveness of sins,  
the resurrection of the body,  
and the life everlasting.  
Amen."

The pastor said, "Lord, help us to be like you, just as your servant Jaben was like you. Let us be shaped in your image, in preparation for

that day when we shall ever be changing from glory to glory, in your presence even more fully than he is in your presence. Help us to know that we are strangers, we are aliens, we are not of this world, even as Jaben was not of this world, and is in it no longer. Draw us all into your eternal home, with its many dwelling places, in your eternal heart. Amen."

The pastor stood in silence for a full minute, the silence breathing life into the prayer. Then he closed his eyes, and said, "Lord Jesus Christ, we commend to you our brother Jaben, who was reborn by water and the Spirit in Holy Baptism. Grant that his death may recall to us your victory over death, and be an occasion for us to renew our trust in your Father's love. Give us, we pray, the faith to follow where you have led the way; and where you live and reign with the Father and the Holy Spirit, to the ages of ages." The congregation joined him in saying, "Amen."

The pastor and the others ordained walked over to the coffin, and prayed, "Give rest, O Christ, to your servant with your saints,"

The people joined him, saying,

"where sorrow and pain are no more,  
neither signing, but life everlasting."

"You alone are immortal," the pastor continued, "the creator and maker of mankind; and we are mortal, formed of the earth, and to earth shall we return. For so did you ordain when you created me, saying, "You are dust, and to dust you shall return." All of us go down to the dust; yet even at the grave we make our song: Alleluia, alleluia, alleluia."

All said in unison,

"Give rest, O Christ, to your servant with your saints,  
where sorrow and pain are no more,  
neither sighing, but life everlasting."

The pastor turned to the body, and said, "Into your hands, O merciful Savior, we commend your servant Jaben. Acknowledge, we humbly beseech you, a sheep of your own fold, a lamb of your own flock, a sinner of your own redeeming. Receive him into the arms of your mercy, into the blessed rest of everlasting peace, and into the glorious company of the saints in light." And all the people said, "Amen."

The pastor raised his hand in benediction, and said, "The peace of

The pastor raised his hand in benediction, and said, "The peace of God, which passes all understanding, keep your hearts and minds in the knowledge and love of God, and of his Son Jesus Christ our Lord; and the blessing of God Almighty, the Father, the Son, and the Holy Spirit, be among you, and remain with you always," and the congregation joined him in saying, "Amen."

"Let us go forth in the name of Christ," the pastor said.

"Thanks be to God," the people answered.

As the body was carried out from the church, the people chanted:

*"Christ is risen from the dead,  
trampling down death by death,  
and giving life to those in the tomb.*

"Into paradise may the angels lead you,  
At your coming may the martyrs receive you,  
and bring you into the holy city Jerusalem."

## Chapter Forty-Eight

Désirée said, "Remember Sarah's first time making hamburgers? She put raw meat on top of hamburger buns, and then put them in the oven at 550. When someone smelled smoke, the buns and the outside were burnt to a crisp, and the inside of the burgers was still raw. We scraped off the charred buns, and put fresh ones, and Amos said, 'Jaben, would you return thanks for this meal?'

"And Jaben folded his hands, and bowed his head, and began, 'Lord, bless the hands that repaired this meal...'"

A chuckle moved among the friends.

"Or remember," Désirée said, "the time when Bear ate a steakhouse out of shrimp, and the time after that that Jaben outate Bear? I never saw Bear stare like that. Or you, Amos, dear." She gave her husband a squeeze.

"Or remember that time on the internet when Jaben advertised free, automated technical support for all versions of Windows, and created a CGI that would read in a user's question, and then display a page that said, 'Your computer appears to be infected with a piece of malicious code known as Windows. To remedy this problem, try upgrading to the most recent version of Debian or Redhat.' Man, some of the flames he got after that!

"Or remember the time Jaben installed a Blue Screen of Death screensaver on Bear's laptop? I never seen Bear so mad.

"Or remember the time when he went into a bike shop, and opened the entire supply of locks the store had around a bar, and walked up to the front counter, and said, 'These aren't very effective, are they?'

"Or remember the time when Sarah was working on a paper, and called out, 'How do you spell "Approximately?'" And Jaben answered, 'Q-F-R-3.' And Sarah said, 'No, really. I want a real spelling of a real word,'

and Jaben answered, 'A-L-M-O-S-T?'

"Or remember that one last time when he called his medical insurance, waited for thirty minutes listening to music, and then said, 'Hello. I'm calling to inquire as to whether mental health will pay for singing lessons for the voices in my head?'"

The six friends were holding hands in a circle, laughing, weeping. Ellamae wiped a tear from her eye, and then softly whispered, "Fare thee well, Jaben. Adieu."

## Chapter Forty-Nine

Jaben looked. "Aah, Pope Gregory. There is something I'd like a theologian's feedback on."

"Yes?"

"My theories of prophecy. When I have asked people on earth to look at it, they have said that the theories are too deep to comment on."

"Aah, yes," the Pope said with a twinkle in his eyes. "They are great favorites in this realm. It serves to continually astonish us how someone so intelligent, so devout, and so open to the Spirit's leading could be so completely wrong."

Jaben looked, then smiled, then laughed, then laughed harder, then roared with laughter. His whole form shimmered with mirth. His laughter echoed throughout Heaven, and shook the foundations of Hell. Finally, he stopped laughing, and said, "That's the funniest thing I've ever heard."

He paused a second, and asked, "Will you introduce me to the folk here?"

"Mary!"

"Welcome, child," smiled the lady. "I have been waiting for you for ages."

"What news do you have to tell me?"

"Désirée is with child, though she does not know it, and will give birth to a man-child who will be no ordinary child."

"What will his name be?"

"His name shall be called Jaben."

"And what do you have to tell me of yourself?"

"Only this: I love you." She held him to herself as a little child.

Jaben asked Gregory, "Who was the greatest saint of all? Paul? Francis of Assisi? Theresa of Avila?"

"Come, let me show you to her." He introduced her to a little girl. "This child's name is Roberta. She lived in fourteenth century Italy, and you have not heard of her. She died at the age of seven in an epidemic, and she was not particularly attractive or bright — she was slightly retarded — she worked no miracles, and she was very easy to ignore (and most everyone did ignore her). She certainly wasn't canonized. If you were to find an earthly account of her life, it would strike you as that of an ordinary and somewhat dull child. But here, we look at things a little differently. God saw into her heart, and saw faith, hope, and love such as never has occurred in mere man before and will never occur again."

"Hi, Mister," the child said. "May I please hold your hand?"

They walked along, and saw three men talking. "Who are these?" he asked Gregory.

"These are Peter, Augustine, and Aquinas."

Jaben felt a moment of awe, and said, "May I join your theological discussion?"

"What a funny idea!" Aquinas said. "We weren't discussing theology. There is no need for that here. You don't need a picture of a friend when you can see his face. We were doing something far holier — telling jokes."

"Aah, wonderful. May I tell you my favorite joke? It involves you three."

"Certainly. Sit down."

"There is a seminary student who is about to finish his studies, when he is killed in a car accident. He goes and waits outside the Pearly Gates.

"Peter asks the first person in line, 'Who are you?' And then Augustine replies, 'I'm Augustine.' 'Prove it,' Peter says. So you talk for a time about the *Civitas Dei*, and Peter lets him in, saying, 'Welcome to Heaven, my dear friend.'

"Then Peter asks the next person in line, 'Who are you?' And Thomas replies, 'I'm Thomas Aquinas.' 'Prove it,' Peter says. So the two talk for a time about how Aristotle's *Nicomachean Ethics* can enlighten our understanding of the Natural Law. And he says to Aquinas in turn, 'Welcome to Heaven, my dear friend.'

"Finally, it's the seminary student's turn, and so you ask him, 'Who are you?' He replies, 'Well, I'm, like, Nabal, and I was, like, studying all this really cool stuff in seminary about how we can bring together the best in, like, Christianity and New Age and other religions, and how it's OK to honor the goddess in our worship, and then this car like creams me, and

honor the goddess in our worship, and then this ear, here, creates me, and so here I am.'

"Peter pauses a second, and says, 'Very well, then. You'll have to prove who you are, just like Augustine and Aquinas.'

"Augustine? Aquinas? Like, dude, man, who are they?"

"Welcome to Heaven, my dear friend."

They were swept up with a merry, joyful mirth, and then, another voice called out, "Come! Sing the great song! Dance the great dance!"

He was swept away in a tempest of fire and wind and motion — wholly wild, wholly uncontrollable, wholly good. Song was over it and in it and through it. Notes flowed in and out to something beyond notes, and this incredible unfathomable motion was somehow also perfect peace. It was neither work nor rest, but play — pure, unending, awesome, wondrous play.

At last he found himself before a throne of seven stones.

"Daddy! I have been so longing to meet you!"

"Why, child? You have known me from childhood."

"But oh, Daddy, how I long to touch your face."

"Blessed are you who long to touch my face, for that you shall. Come. Touch."

After a time, the Father said, "What else is on your heart, child?"

"Many things, but only one thing."

"Yes?" "My friends, and the men who murdered me. I want them to know each other, to be reconciled, and I want them all to be with me in the New Jerusalem. Oh, Daddy, will you give me that?"

"Absolutely."

With that, Jaben sunk into the Father's heart of love, never again to leave.

# **Creation and Holy Orthodoxy: Fundamentalism Is Not Enough**

## **Against (crypto-Protestant) "Orthodox" fundamentalism**

If you read Genesis 1 and believe from Genesis 1 that the world was created in six days, I applaud you. That is a profound thing to believe in simplicity of faith.

However, if you wish to persuade me that Orthodox Christians should best believe in a young earth creation in six days, I am wary. *Every single time* an Orthodox Christian has tried to convince me that I should believe in a six day creation, I have been given recycled Protestant arguments, and for the moment the entire conversation has seemed like I was talking with a Protestant fundamentalist dressed up in Orthodox clothing. And if the other person claims to understand scientific data better than scientists who believe an old earth, and show that the scientific data instead support a *young* earth, this is a major red flag.

Now at least some Orthodox heirarchs have refused to decide for the faithful under their care what the faithful may believe: the faithful may be

expected to believe God's hand was at work, but between young earth creationism, old earth creationism, and "God created life through evolution", or any other options, the heirarchs do not intervene. I am an old earth creationist; I came to my present beliefs on "How did different life forms appear?" before becoming Orthodox, and I have called them into a question a few times but not yet found reason to revise them, either into young earth creation or theistic evolution. I would characterize my beliefs, after being reconsidered, as "not changed", *and not* "decisively confirmed": what I would suggest has improved in my beliefs is that I have become less interested in some Western fascinations, such as getting right the details of how the world was created, moving instead to what might be called "mystical theology" or "practical theology", and walking the Orthodox Way.

There is something that concerns me about Orthodox arguing young earth creationism like a Protestant fundamentalist. Is it that I think they are wrong about how the world came to be? *That is not the point*. If they are wrong about that, they are wrong in the company of excellent saints. If they merely hold another position in a dispute, that is one thing, but bringing Protestant fundamentalism into the Orthodox Church reaches beyond one position in a dispute. Perhaps I shouldn't be talking because I reached my present position before entering the Orthodox Church; or rather I haven't exactly *reversed* my position but de-emphasized it and woken up to the fact that there are bigger things out there. But I am concerned when I'm talking with an Orthodox Christian, and *every single time* someone tries to convince me of a young earth creationism, all of the sudden it seems like I'm not dealing with an Orthodox Christian any more, but with a Protestant fundamentalist who always includes arguments that came from Protestant fundamentalism. And what concerns me is an issue of *practical* theology. Believing in a six day creation is one thing. Believing in a six day creation like a Protestant fundamentalist is another matter *entirely*.

## A telling, telling line in the sand

But, you may say, Genesis 1 and some important Fathers said six days, literally. True enough, but may ask a counterquestion?

Are we obligated to believe that our bodies are composed of earth, air, fire and water, and not of molecules and atoms including carbon, hydrogen, and oxygen?

If that question seems to come out of the blue, let me quote St. Basil, *On the Six Days of Creation*, on a precursor to today's understanding of the chemistry of what everyday objects are made of:

Others imagined that atoms, and indivisible bodies, molecules and bonds, form, by their union, the nature of the visible world. Atoms reuniting or separating, produce births and deaths and the most durable bodies only owe their consistency to the strength of their mutual adhesion: a true spider's web woven by these writers who give to heaven, to earth, and to sea so weak an origin and so little consistency! It is because they knew not how to say "In the beginning God created the heaven and the earth." Deceived by their inherent atheism it appeared to them that nothing governed or ruled the universe, and

In reading the Fathers, one encounters claims of a young earth. However, often (if not always) the claim is one among many disputes with Greek philosophers or what have you. To my knowledge there is no patristic text in which a young earth is *the* central claim, let alone even approach being "the article by which the Church stands or falls" (if I may borrow phrasing from Protestant fundamentalist cultural baggage).

that was all was given up to chance.

At this point, belief in his day's closest equivalent to our atoms and molecules is called an absolutely unacceptable "spider's web" that is due to "inherent atheism." Would you call Orthodox Christians who believe in chemistry's molecules and atoms inherent atheists? St. Basil does provide an alternative:

"And the Spirit of God was borne upon the face of the waters."  
Does this spirit mean the diffusion of air? The sacred writer wishes to enumerate to you the elements of the world, to tell you that God created the heavens, the earth, water, and air and that the last was now diffused and in motion; or rather, that which is truer and confirmed by the authority of the ancients, by the Spirit of God, he means the Holy Spirit.

St. Basil rejected atoms and molecules, and believed in elements, not of carbon or hydrogen, but of earth, air, fire, and water. The basic belief is one Orthodoxy understands, and there are sporadic references in liturgical services to the four elements of earth, air, fire, and water, and so far as I know no references to modern chemistry. St. Basil seems clearly enough to endorse a six day creation, and likewise endorses an ancient view of elements while rejecting belief in atoms and molecules as implicit atheism.

Why then do Orthodox who were once Protestant fundamentalists dig their heels in at a literal six day creation and make no expectation that we dismiss chemistry to believe the elements are earth, air, fire, water, and possibly aether? The answer, so far as I can tell, has *nothing whatsoever* to do with Orthodoxy or any Orthodox Christians. It has to do with a line in the sand chosen by Protestants, the same line in the sand described in [Why Young Earthers Aren't Completely Crazy](#), a line in the sand that is understandable and was an attempt to address quite serious concerns, but still should not be imported from Protestant fundamentalism into Holy Orthodoxy.

## Leaving Western things behind

If you believe in a literal six day creation, it is not my specific wish to convince you to drop that belief. But I would have you drop fundamentalist Protestant "creation science" and its efforts to prove a young earth scientifically and show that it can interpret scientific findings better than the mainstream scientific community. And I would have you leave Western preoccupations behind. Perhaps you might believe St. Basil was right about six literal days. For that matter, you could believe he was right about rejecting atoms and molecules in favor of earth, air, fire, and water—or at least recognize that St. Basil makes *other* claims *besides* six literal days. But you might realize that really there are much more important things in the faith. Like how faith plays out in practice.

The fundamentalist idea of conversion is like flipping a light switch: one moment, a room is dark, then in an instant it is full of light. The Orthodox understanding is of *transformation*: discovering Orthodoxy is the work of a lifetime, and perhaps once a year there is a "falling off a cliff" experience where you realize you've missed something big about Orthodoxy, and you need to grow in that newly discovered dimension. Orthodoxy is not just the ideas and enthusiasm we have when we first come into the Church; there are big things we could never dream of and big things we could never consider we needed to repent of. And I would rather pointedly suggest that if a new convert's understanding of Orthodoxy is imperfect, much less of Orthodoxy can be understood from reading Protestant attacks on it. One of the basic lessons in Orthodoxy is that you understand Orthodoxy by walking the Orthodox Way, by attending the services and living a transformed life, and not by reading books. And if this goes for books written by Orthodox saints, it goes all

the more for Protestant fundamentalist books attacking Orthodoxy.

Science won't save your soul, but science (like Orthodoxy) is something you understand by years of difficult work. Someone who has done that kind of work might be able to argue effectively that evolution does not account for the fossil record, let alone how the first organism could come to exist: but here I would recall *The Abolition of Man*: "It is Paul, the Pharisee, the man 'perfect as touching the Law' who learns where and how that Law was deficient." Someone who has taken years of effort may rightly criticize evolution for its scientific merits. Someone who has just read fundamentalist Protestant attacks on evolution and tries to evangelize evolutionists and correct their scientific errors *will be just as annoying to an atheist who believes in evolution*, as a fundamentalist who comes to evangelize the unsaved Orthodox and "knows all about Orthodoxy" from polemical works written by other fundamentalists. I would rather pointedly suggest that if you care about secular evolutionists at all, pray for them, but don't set out to untangle their backwards understanding of the science of it all. If you introduce yourself as someone who will straighten out their backwards ideas about science, all you may really end up accomplishing is to push them away.

Conversion is a slow process. And letting go of Protestant approaches to creation may be one of those moments of "falling off a cliff."

# **C.S. Lewis, *That Hideous Strength*:**

## **Science and Magic, Spirit and Matter, and the Figure of Merlin**

I write as someone who grew up first having my father read [The Chronicles of Narnia](#) to my brother and me at bedtime (my Mom recounted how Matthew and I were wide awake even when my father was nodding off), then reading [The Chronicles of Narnia](#) again and again, and eventually reading practically every essay, book, and story of Lewis's that I could get my hands on. I've read "Dymer" and [The Discarded Image](#) and am aware of one and only one major work of Lewis's that I have not read, a textbook that to my knowledge has not been superseded. I have been told that I write like an Englishman; if that is true, it is much more probably Lewis's influence than anyone else.

And, as Orthodox, I have written [A Pilgrimage from Narnia](#) and backed away from Lewis's objective of "mere Christianity". I still respect Lewis, but the Orthodox Church has a great many treasures and some of them are not even hinted at when he presents standard Christianity.

[The Abolition of Man](#) is a short book and is my favorite among Lewis's nonfiction writing. I could wish it were much longer. [That Hideous Strength](#) corresponds to [The Abolition of Man](#), at much greater length, and is expressed through masterful fiction instead of the prose argument of [The Abolition of Man](#). For a long time I have considered it the deepest of his fiction.

But I here write another [Pilgrimage from Narnia](#).

Having finally gotten around to finding what to do with free time after some generous time off from holidays and recuperating from sickness (my job and my boss are really good), I reread C.S. Lewis, [That Hideous Strength](#), in the hope that it would inspire something for me to write. Partway through I imagined a work consisting entirely of questions about how Druidry is envisioned in [That Hideous Strength](#). And in the end I arrived at inspiration for something to write, albeit not something I either welcomed or envisioned.

A physics teacher or show, I don't remember which, said that the Holy Grail of physics would be a so-called "Grand Unified Theory", which would essentially mean that everything we know about physics could be boiled down to a set of equations that could be written on one half of a side of a sheet of paper. And something, in a perverse way, is true for ancient Druids. Almost everything we reliably know about them could be written on one half of a sheet of paper. They are almost unknown from historical sources, and almost equally inaccessible to archaeological knowing: one source, cited in the Wikipedia article, says, "not one single artefact or image has been unearthed that can undoubtedly be connected with the ancient Druids."

Now there were ancient writers about Druids; Roman Caesars had something to say about the Druids of Gaul. But if their accounts were written today, they would be called Orientalist and dismissed even for grounds other than political correctness.

For those not familiar with the label of 'Orientalism', I would recall a conversation I sat in on at Cambridge, with German student who was researching for a thesis on 18th century English Orientalist views on China, and a Chinese student. The Chinese student, understandably enough, thought the German student would know a fair amount about China. But she did not, or at least she said she did not. And perhaps the German student was understating her knowledge: perhaps her flawless

command of the English language was accompanied by a flawless command of English manners. But she very well may not have known anything real about China: not because she was an academic professional slouch, but simply because Western Orientalist views of China are so far disconnected from life in China that even extensive understanding of China would not shed much light on Orientalism as studied.

Orientalist views are a projection: Charles Baudelaire's "*tout n'est que l'ordre, luxe, calme et volupté*" ("there is nothing but order, luxury, calm, and voluptuousness") really tells us nothing about *any* of the Asian constellation of cultures, and much about... *Charles Baudelaire*. Trying to read Orientalist sources to understand the people described is like trying to read a book of dirty jokes to understand the psyche of beautiful women. A "beautiful woman" in dirty jokes is only a projection of male desire, and unrefined male desire at that; beautiful women may exist well enough but their psyches are not to be found from dirty jokes, and Orientalism is far enough from reality that it actually makes sense for a Ph.D. student at Cambridge University, studying English Orientalism about China, to simply not attempt to understand much of Chinese culture: she might have been saving her elbow grease for topics that would actually illuminate her understanding of English views of China, and China and Chinese culture themselves were not among them.

The Roman reports we have of ancient Druids may illuminate something about Rome, although we have much knowledge of Rome already; they are Orientalist and do not tell us much about Druids. And again, what we reliably know about ancient Druids can fit on one half of one side of a sheet of paper.

Now what, in specific, did I find haunting about [That Hideous Strength](#)? Not all of it, and for that matter there is much in the book that is not objectionable; Lewis describes it as a counterpart to [The Abolition of Man](#), which is deep and truthful through and through. But there is an occult bent, not entirely hidden, and there was something that made my skin creep this time through when Venus's influence on Ransom's house is elaborated by saying that there is a lot of copper to be found around it. A quick Google search later for "Venus copper alchemy" turns up what I already really knew: that there is some identification between Venus and copper in alchemy. (I didn't go beyond the first search engine results page. Nor am I convinced it would have been particularly wise.) The

Melchizedek mentioned is the immortal Melchizedek of alchemy, not the prefiguring type of Christ in the Bible.

As a rule, Lewis sticks to what he, and a great many in his wake, calls "mere Christianity." That is, he tried as a rule to stick to those things that Christians had held in common for twenty centuries, and while a couple of clarifications to this might be given, in [The Chronicles of Narnia](#) Aslan appears somewhat as a traveler from afar; the question of who Aslan's mother might be and what significance she might hold is never even whispered and the reader is drawn into the narrative in such a way that the question probably never arises in the reader's mind. And with a nod of recognition to the fact that the Chronicles of Narnia are *not* a deliberately concocted allegory (and that it betrays a profound misunderstanding to read the book as a coded catechism), there is a reason the reader is never invited to even think about Aslan's mother: the question of who Christ's mother is, how great or small, and what it means for her to be great, has been an area of disagreement among Christians. Orthodox venerate her primarily as Mother, Catholics as Virgin, Puritans saw an ordinary mortal woman who is not to be venerated on pain of idolatry, and perhaps many Protestants today see as an "agree to disagree" matter, that is, not an essential question to Christianity. With obscure exceptions, Lewis rarely if ever discusses the place of the Mother of God and Ever-Virgin Mary, because "mere Christianity" such as he tried to limit himself to meets a bit of obstacle in the question of who is Mary and how we should relate to her, because there has

It might be commented that C.S. Lewis's popularity as a writer is owed partly to his efforts as writer to stick with "mere Christianity." Now this is not the only factor; he was profoundly gifted and managed to communicate in terms everyday Joe and Janes can read, and it is an unworthy suggestion to suggest that his sticking to mere Christianity was a mercenary move to increase his readership. But he chose to write in such a way that Catholic, High Anglican, Low Anglican, Lutheran, Calvinist, Arminian, Anabaptist, and so on and so forth can all read and find mostly or completely things they agree with. Even Orthodox find the teaching of the Greek Fathers in Lewis's words that the Gates

been no "mere Christian" agreement such as Lewis argues, and the question is significant enough that any stance in it is profound, specifically including "It's been centuries now. Can't we just agree to disagree?"

I should like to clear away a distraction now and say that I am not bothered by Lewis's portrayal of devils, nor am I bothered by the presence of devils in the fictional work corresponding to [The Abolition of Man](#), in which devils are not explicitly mentioned. In *that* sense the fictional portrayal is, if anything, *more* true than [The Abolition of Man](#), as the project and doctrines critiqued in [The Abolition of Man](#) are, to put it bluntly, inspired by diabolical plans. To anyone who objects to the discussion of devils in Lewis's work, I would say that Lewis understands spiritual struggle and his discussion of devils is true to the mark, or more pointedly that the one work which is the Orthodox Church's canonical anthology of post-Biblical spiritual classics is the [Philokalia](#), and the [Philokalia](#) spends more time discussing devils and their operations than any other work I've read. The fact that Lewis portrays diabolical plans as impinging on human history is no irresponsibility as a novelist, nor need it be chalked up to poetic conceit. If Lewis were to deny that his story of a diabolical assault on the earth were an unreal kind of story to tell, plenty of Orthodox at least might say that even if Lewis were to present it as a poetic conceit, it is no more a fantastic kind of thing to introduce to a story than Mary and Jane Studdock's getting hungry and tired.

Now the book, being labeled "a fairy-tale for grown-ups" by its author, should be given room for poetic license. However, amidst explanation of things that are mere Christianity and which were already under attack when Lewis wrote the book, is separated by no clear divider by Lewis from the less popular elements of mere Christianity that he defends. And these speculations are not Orthodox, nor Catholic, nor Methodist, nor Calvinist, nor Anabaptist, nor any major thread of what he considered mere Christianity, but occult in character, and these may be the most seductive passages in a book that seduces well enough with Truth. A discussion surrounds Merlin and related topics:

of Hell are bolted and barred from the *inside*, that the world is comprised of two kinds of people: those who tell God, "Thy will be done," and those to whom God ultimately says, "Thy will be done."

What exactly he [*Merlin*] had done there [*in Bragdon wood, where he was believed to be in suspended animation under a university campus*] they did not know; but they had all, by various routes, come too far to either to consider his art mere legend and imposture, or to equate it with what the Renaissance called Magic. Dimble even maintained that a good critic, by his sensibility alone, could detect the difference between the traces which the two things had left on literature. "What common measure is there," he would ask, "between ceremonial occultists like Faustus and Prospero and Archimago with their midnight studies, their forbidden books, their attendant fiends or elementals, and a figure like Merlin who seems to produce his results simply by being Merlin?" And Ransom agreed. He thought that Merlin's art was the last survival of something older and different—something brought to Western Europe after the fall of Numinor and going back to an era in which the general relations of mind and matter on this planet had been other than those we know. It had probably differed from Renaissance Magic profoundly. It had possibly (though this was doubtful) been less guilty: it had certainly been more effective. For Paracelsus and Agrippa and the rest had achieved little or nothing: Bacon himself—no enemy to magic except on this account—reported that the magicians "attained not to greatness and certainty of works." The whole Renaissance outburst of forbidden arts had, it seemed, been a method of losing one's soul on singularly unfavorable terms. But the older Art had been a different proposition.

But if the only possible attraction of Bragdon lay in its association with the last vestiges of Atlantean magic, this told the company something else...

The paragraph may make some readers want to read the book. Now I can accept something like Lewis's poetic conceit, if it is poetic conceit. I do not see the division between Merlin's age and our own, or whatever older thing there may have been that had a last survival in Merlin's age. *Animism or old-fashioned paganism are different from*

At least in medieval sources, there is a story about how the Devil caused a son to be incarnate in a virgin who had slipped in her prayers once, how great prayers were uttered

*the Renaissance magus or today's neo-Pagan as a virgin is different from a woman divorced.* The man who practices the animism he learned at his mother's knee as a member of his tribe or clan is a very different picture from the Renaissance magus, who bears a sword with which to cut through their society's Gordian knots, and a messianic fantasy with it. The traditional animist is embedded in the fabric of his society's existence; the Renaissance magus stood over and against society, viewing it as a rather despicable raw material to be used in Utopian plans; it is the Renaissance magus whose mantle left behind has created what we now know as political ideologies. "(though this was doubtful) been less guilty": animism and Renaissance magic alike put men in thrall to devils, and one hears of a missionary starting to converse with a local who knew the Bible, and nervously being pulled aside, and rightly told that he was a witch doctor. But I had rather find myself in the company of the traditional animist, who had no messianic fantasy about how to transform the world, than a magus. And in that qualified sense I agree to a point that is connected to Lewis's, even though it differs and may differ significantly.

There are phrases and sections that give a thrill. At one point it is mentioned that Ransom's company has a knowledge of XYZ point of Arthuriana that orthodox Arthurian scholarship would not reach for several centuries. But when I look at things in the book that thrilled me most, they seemed if anything to be poisoned. A lost world is a haunting reality; this is true of any finished epoch in history but the Atlantean society and magic Merlin represents are doubly exotic.

prayers were uttered, and Merlin was saved, a good man called a prophet in the legends, who none the less retained the supernatural powers of the figure the Devil intended. I do not say that this makes sense on Christian grounds—much of the Brut does not—but that is how the story is told, and it is not clear to me from the medieval versions of the legends how Lewis has this "special exception" character be a representative of a tradition or College.

## The blaring obvious

Perhaps most obvious of the ways that the story is occult is its Arthurian themes. I have read quite a lot of medieval Arthurian legends by today's standards, quite a lot: the Brut, Chrétien de Troyes, and Sir Thomas Mallory, but that only scratches the surface of even just the *medieval* tellings. The best way I can think of concisely describing Sir Thomas Mallory's *Le Morte d'Arthur* is as a terse thousand page synopsis of the library's worth of sources Mallory himself read. Now any serious student of the Arthurian legends will acknowledge that Mallory didn't just abridge; he made transformations of his work and rendered cycles of romances to be a little more like a novel. And I wrote my own riff on the Arthurian legends in [The Sign of the Grail](#), and the best way I can describe that is that I tried to write a Christian treatment of the Arthurian legends, and even in my successes I found the thing I was attempting was impossible. (I have not read Robert de Borron, arguably the medieval author I should most have read as he made the most effort to draw the legends into the Christian fold.) And there are things absent from the narrative that are abundantly present in the legends: the Puritan critique I am aware of is not that magical phenomena lurk around every corner and supply practically every plot device, nor the married flirting of courtly love (my brother years ago asked me, "If [Sir Lancelot]'s such a great knight, how come he has a crush on the queen?"), or for that matter of open adultery such as the story of Tristram and Yseult that was drawn into Arthurian orbit, but rather the Puritans raised objections to unending pages of open manslaughter. I would, off the cuff, place the combats between knights as at least half of Mallory and easily half of the Brut, as combat with it being a frequent occurrence for two mighty knights to hack each other to death's door and be well a fortnight later. In that regard the legends are comparable to a U.S. R-rated action-

adventure movie: there may be sex, but the bulk of the R comes from violence.

But the Arthurian legends are deeply occult, and it takes no heresiologist who has studied occult symbols to find treacherous occult symbolism behind seeming innocence. It is plain on a naive reading that magic and magical phenomena is a pillar of Arthurian foundations. And at the risk of a daft comparison between Lewis and myself, I will mention that Lewis also neglects completely the interminable fighting of medieval Arnold Schwarzenegger movies, and the central Arthurian figure Lewis brings is not Ransom (who has enough transcendence and wonder of his own), but Merlin, who is the riveting center of attention in the company of Ransom before he is awakened and even more rivets attention on himself once he has entered the picture in the most direct sense. One definition of a rounded character in literature is not about having such-and-such many attributes defined, but of believably surprising the reader. Lewis's Merlin is perhaps the most concentrated character in believable surprises in all of the literature I have read; he far eclipses the other characters, even Ransom, in a book whose characters are rounded enough. [That Hideous Strength](#) represents the culmination of a trilogy of which the first two books are not in particular Arthurian; Lewis does a deft job of shifting courses between [Out of the Silent Planet](#) to [Perelandra](#), where [the Unman appears and tells his tales to an Unfallen Eye](#), although here, even as he uses the symbolism of Mars and Venus much as John Gray does, he has two genders. In [That Hideous Strength](#) he discusses "the Seven Genders" in a way unconsciously unsettling to someone who had embraced his use of astrological symbolism in [Perelandra](#). In [Perelandra](#) the two genders covered are in fact two basic realities we would do well to acknowledge; in [That Hideous Strength](#) this is diluted and the genders represent more seven generic qualities than gender or sex as we know them; this is no gender rainbow, or at very least no **conscious** gender rainbow, but it muddies the foundation laid in [Perelandra](#). And when Lewis joins [That Hideous Strength](#) to the other two, deftly, he incorporates an element that is arguably more occult than the stories or supernatural plot element to be found in the other two books. He welds in the Arthurian legends, and the central Arthurian character in the book is the most magical, the Devil's son (though this attribution is denied in the text). And the result is more occult than the

astrology, which a perceptive reader of Lewis and the Middle Ages—and *not* the average Joe C.S. Lewis fan—is not about what is called (in a muddy term) "judicial astrology," the casting of horoscopes to inform a day's decisions, but something more like a worldview where the influences of the planets did the job of science as an overall enterprise, and "judicial astrology" was more like the specific application of science in engineering: perhaps a valid distinction if Lewis was writing for other medievalists only, but a subtle and not-at-all-obvious distinction given the fact that C.S. Lewis was probably the twentieth century's best loved Christian author and *Perelandra* and [That Hideous Strength](#) were written for a reading public who had no clue of the distinction between today's (judicial) astrology and the outlook represented by medieval astrology as a whole. C.S. Lewis did write, I believe in the well-named [The Discarded Image: An Introduction to Medieval and Renaissance Literature](#), that people in the Middle Ages or more probably the Renaissance would be astonished that astrology was lumped in with magic by readers today: magic asserted human power, while astrology asserted human impotence. Any number of such subtle distinctions can be made, but they are overly fine to the majority audience of the twentieth century's most popular Christian writer, the overwhelming majority of whom do not have enough history to understand how you can use and apparently endorse major astrological themes without being in the same league of the "Star Scrolls" sold in vending machines that I as a little boy wanted so much and my mother firmly forbade.

Now it may be asked, "Did you not read the label? Lewis offered a fairy tale for grown-ups." And this categorization both is and is not true; it seems to represent a fair description where categories break down. The characterization and plot are those of a modern novel; the only novel-length book I have read that I would characterize as a fairy tale is [Phantastes](#), by Lewis's role model, George MacDonald. Psychological as opposed to a more mythic motivation moves all of the characters; Lewis does deal in archetypal characters and fills [The Chronicles of Narnia](#) with the repentant traitor, the apostate: but he does not deal in the minutia of their psychology. He does deal with the minutia of how Mark Studdock comes to reject the N.I.C.E. and of how Jane Studdock refuses to be open to the embrace of a child. Of my own writing, [The Fairy Prince](#) hovers on the allegorical, and does not hover over the minutia of its characters'

psychology even when a profound change is implied. [Firestorm 2034](#) is speculative fiction, looks at its characters' psychology, and I would only with reservation call it a fairy tale. (If I were to choose a term for it, it would be "culture fiction", a term applicable to some degree to most of my fiction.) If I were to bring a paragraph's description of [That Hideous Strength](#) into a fragment of a sentence, I'm not sure I could do better. But [That Hideous Strength](#) is a novel, some of the best speculative fiction around, but not a fairy tale.

And all of this is beside the point. The basic moral question that I raise here is, "Does [That Hideous Strength](#) arouse a haunting lust for things occult?" And if it does, this represents a flaw, whether or not it may also be called a fairy-tale for adults. Arousing impure desire is a flaw to Christian writing, and this is not just true of sexual lust. There are other lusts around, and merely sexual lust is somewhat dwarfed by lusting for magic (or, really, magick), which is properly called an unnatural vice. And this latter thirst is a propeller in [That Hideous Strength](#).

## **A complication: Turning back the clock?**

The rough draft as I created it had a section that I later took out; partly because it was loosely connected with the main point as originally envisioned, and partly because a friend's disagreement suggested that it might be a liability to include. After thinking further, I wish to re-include it:

There is some speculation in the book that, if not specifically occult, is at least speculation and not mere Christianity:

"But about Merlin?" asked Mrs. Dimble presently.

"Have you ever noticed," said Dimble, "that the universe and every little bit of the universe, is always hardening and narrowing and coming to a point?"

His wife waited as those wait who know by long experience the mental processes of the person who is talking to them.

"I mean this," said Dimble in answer to the question she had not asked. "If you dip into any college, or parish, or family—anything you like— at a given point in its history, you always find that there was a time before that point when there was more elbow room and contrasts weren't quite so sharp; and that there's going to be a time after that point where there is even less room for indecision and the choices are even more momentous. Good is always getting better and bad is always getting worse: the possibilities of even apparent neutrality are always diminishing. The whole thing is sorting itself out all the time, coming to a point, getting sharper and harder..."

The Orthodox Church may know of a decisive turning point in the Incarnation of Christ, and perhaps others, but not of less elbow room by the year. If anything, in Orthodoxy in my time and locale, things are a free for all compared to the sharp Church discipline of the ancient church. Sins are lightly forgiven that would have a period of penitence of years' exclusion for communion. There are multiple bishops in any number of cities, and while things might not usually match [the former Anglican free for all in the Western Rite](#), today's Orthodoxy looks like a madhouse compared to better timesâ€”until you recognize why nineteenth century Russia has been called a Gnostic wonderland with everything to satisfy damnable curiosities, and the great Christological Ecumenical Councils of the fourth century were called, not because there was a golden age, but precisely because of how serious the problems were. The state of Orthodoxy today may look like a madhouse by historic standards, but still a Heaven that has beckoned in Orthodoxy in every age beckons now. Despair is no more an option than the legalism of "True Orthodoxy" or "Genuine Orthodoxy." There is if anything more elbow room today than historically, certainly more this year than last year.

Some qualifications may be needed: once one knows that Bultmann did not invent de-mythologizing and over a millenium earlier St. (Pseudo-)Dionysius did a much better job of it, it is recognized as inappropriate to read Genesis 1 as meaning that God spoke with physical lips and a tongue. Certainly God commanded: but anthropomorphism of the Father is forbidden as icons of the Father are forbidden. (The interesting truth is not that the Father may not be directly portrayed, but that the Incarnate son *may*, and in fact should, be portrayed.) And likewise for actions. The entire process of maturity includes a Vinedresser who prunes branches, and part of this pruning is that some things may not be done. As St. Paul famously said, "[But when that which is perfect is come, then that which is in part shall be done away. When I was a child, I spake as a child, I understood as a child, I thought as a child: but when I became a man, I put childish things behind me.](#)"

And there are other things that could complicate things. Christ counterculturally held a child as the model for entering into the Kingdom: when he chose his disciples the last "as one untimely born"

kingdom, when he chose his disciples, the last, as one authority says (i.e. as a miscarriage) had top-notch scholarly learning; apart from St. Paul, Christ selected a diverse group of apostles who were children as far as book-learning was concerned. But more to the point, if we accept the process of maturity as described in the paragraph above, it must be remarked that this is a truth of personal development: I as a child appropriately spoke, understood, and reason as a child, but my coming to an age to put childish things behind me do not mean that it is wrong for the youngest members of my parish to speak, understand as a child. And my childhood was not license for my grandparents to behave as befits a child. Things may grow sharper with people's processes of maturity; or may not: but this is a personal process, not a universal law. And on the key point under discussion in this passage, concerning magic and the relationship between spirit and matter. I have suggested earlier, in contradistinction to Lewis's timeline portrayal, that the opposite of the Renaissance magus is not a member of some almost-forgotten College of magic that has left traces on our literature, but was becoming extinct in the sixth century, but animism, as learned at a mother's knee and as practiced by cultures since before recorded history and continues to be practiced today.

Let me quote more of the same passage:

"Everything is getting more itself and more different from everything else all the time... Even in literature, poetry and prose draw further and further apart."...

"But about Merlin. What it comes to, as far as I can make out, is this. There were still possibilities for a man of that age which aren't for a man of ours. The Earth itself was much more like an animal in those days. And mental processes were more like physical actions."...

"No. I *had* thought of that. Merlin is the reverse of Belbury. He's at the opposite extreme. He is the last vestige of an old order in which matter and spirit were, from our point of view, confused. For him, every operation on Nature is a kind of personal contact, like coaxing a child or stroking one's horse. After him came the modern man to whom Nature is something dead—a machine to be worked, and taken to bits if it won't work the way he pleases... In a sense Merlin represents what we've got to get back to in some different way..."

My Orthodox response, is "*That's not what Rome would call a doctrinal development. It's a Western perversion.*" Regarding the first point on literature, we are indeed more specialized but as regards Bible translation we are worse. The King James Version is my preferred translation when I am reading in English, even though I have read any translation I wanted to. Someone has said, "The problem with the King James Version is the translators' shaky grasp of Hebrew; the problem with all modern translations is the translators' increasingly shaky grasp of English." The issue Lewis was concerned about in [The Elephant and the Fern Seed](#) has changed only by further specialization. And the difference between the King James Version and modern translations is that the King James Version is the work of Renaissance men, polymaths who were both scholars of original languages and wordsmiths in their own right, and often quite devout. By contrast, the average modern Bible translator is a specialist of the sort Lewis raised concerns about in [The Elephant and the Fern Seed](#), a specialist in ancient language and culture who is no published wordsmith at least. This is not a good thing, and that is part of why even though the King James Version used language that was old-fashioned when the translation was new, it has not been superseded in quality, even though the NIV (Now Indispensable Version) has exceeded it in current sales. Poetry and prose indeed grow further apart, to their detriment. Part of why G.K. Chesterton has his own following is that his prose never really leaves poetry behind; I've seen a Calvinist quote a passage from Chesterton that explicitly condemns Calvinism, partly because even though it condemned his beliefs it brought together the best of poetry and prose and bore a truth he could (in general) recognize. Now it may be commented that half-poetic prose is rare and Chesterton is significant partly as an exception. I would not contest the point. But however much the separation of poetry and prose may be a fact in Western historical development, it is not history sharpening all things, nor is it permanent. Fashions in education today may well create super-specialists far more than generalists, but my point is that this is a shift in fashion, and a point of how Western history has played out, but *not* the next step in the world's process of improvement.

And a similar, but deeper, disturbance is in the difference between Merlin's coaxing and stroking compared to the modern man's view of a machine that is to be pulled to bits if it does not satisfy. And on that score

Merlin is not a member of a College that was vanishing even in late antiquity, but a figure who agrees with Orthodoxy about the nature of Creation. Not, of course, in any sort of magic being lawful. But given the basic options of coaxing and pulling to bits, the Orthodox relationship is that of coaxing, and [I tried to commit to writing how Orthodox view Creation in "Physics."](#)

To give a hint and just illuminate things a little, I would comment that the more devout or higher up in the hierarchy a person is, the better with animals. It is a commonplace that animals, including wild animals, do not disturb monastics. I do not ask you to believe it, but even one journalist talked about eating lunch at Mount Athos, having a monk tell visitors not to worry about more than one boar in the bushes, and then telling his visitors, "Let me know when you're done with your melons and other food, and I'll give the signal." So the people finished their lunches, threw down their melon rinds as expected, and then the monk spoke and the boars devoured the rinds and other food remnants (all of the while not harming any of the people). Less spectacularly, there was one monastery which I used to visit, and I am told, though I did not see this myself, that the deer would approach and eat from the monastics' hands. I do know that I was visiting the monastery, in major deer hunting country where one wore a fluorescent orange hat and I lost count how many gunshots I heard, that two deer let another person and me approach within thirty feet of them. They slowly got out of our way after that, but they could have been keeping a whole lot more of a respectful distance than they did. The senior monk told me that the deer knew they were safe at the monastery. And even with domestic animals, I remember visiting someone and being told that the cat was bite-happy and would only settle down into the arms of clergy and monastics—I was advised to set the cat down. But I have in general been able fairly easily to make friends with animals—a dog that had been used as bait for pit bulls started by nervous barking, and ended by laying on his back in a condition of complete vulnerability, hoping for a good scratch. And I remember one time when a friend was moving in; all the rest of the friends were asked to carry things but I was handed the end of a leash and told the dog was uncomfortable and afraid of men. But even though at the beginning the dog was very clearly unhappy to be at the opposite end of his leash from me, I kept coaxing him by my actions and twenty minutes later he snuggled up with me, and to my astonishment approached the other men

snuggled up with me, and to my astonishment approached the other men in our group, sniffing hands and otherwise making doggy efforts to make friends. I don't believe this is some special or unique personal ability; clergy, monastics, and devout Orthodox faithful may or may not consider themselves good with animals, or even particularly interested in them, but when animals enter the picture, they are usually able to connect. In Lewis's story it may be poetic conceit that Ransom can have a chat with Mr. Bultitude or a tiger and they would thereafter be safe enough company, but that bit of imagination is in continuity with something real, if perhaps less spectacular.

This account is inadequate, but part of the picture has to do with headship. "Headship," as used in Evangelical circles, refers to a debate of whether a husband and wife are equal as regards authority or whether there is a relationship between husband and wife that is somewhat like that of the head and the body. To affirm it, in egalitarian circles, is taken to afford husbands a domination that greatly injures [what is good for women](#). And the overall reply to that is perhaps not, as John Piper said, that the ways husband and wife serve each other mirror the ways Christ and the Church serve each other, and if this distinguished service is removed from marriage, marriage ceases to illuminate Christ and the Church. A better reply is to say, [the full picture of headship is so far out of your orbit that it is probably pointless to press this point on its own](#).

There is a head-body relationship portrayed in Scripture and developed in the saints, which sees (this list is open-ended):

<b>Head</b>	<b>Body</b>	
God	Christ	As I write this in the wake of Christmas, I write as someone who has grown from a boy who likes to receive gifts to a man who likes to give them. Now as a boy I already liked to give gifts, and as a man I still like to receive gifts, but I would comment that the line between a boy

**But absolutely not**

Renaissance magus Nature  
Renaissance magus Society  
Renaissance magus Magic

The difference between the first long list and the second short list hinges on a single Greek word, *katakurieuo* used when Christ said that Gentile authorities "lord it over" those beneath them, but such is not permitted among Christians. And the term is not an exact match here; we are told in Genesis to domineer the creation, but there is a difference: domineering leadership can have a place and has to have a place (as, for instance, when a small child tests whether the rules are real), but there is

who likes to receive gifts and a man who likes to give them is a remarkably fine line.

Such is part of the truth for many things on this list, so that even in the distinction one may find a single essence.

an ocean of difference who domineers as a fierce medicine to free and nurture a disciple, and one who leads to make others an extension of his ego, or domineers to break a soul. And even when domineering is lawfully exercised, it is the exception, not the rule. The spirit of *katakuriuo* is the normal baseline in the Renaissance magus and mercy the exception; the servant leadership based on Christ is the normal baseline in all of these headships and an iron rod the exception. If there is an iron rod, it is much sooner applied to oneself than others—which is also not shared by the magus.

And there is a further point in St. Maximus the Confessor: all of these differences are to be transcended. In Christ there is no longer male nor female. In Christ even the distinction between created man and nature on the one hand, and uncreated God on the other, is transcended. The transformation reaches that far.

## What was lost rejected dismantled in the Scientific Revolution

The birth of science was heralded through the metaphor of sexual violence to a woman, personified Nature. As to why this was, let me draw an analogy with marriage. Marriage is a profound thing and leaves an indelible mark, so that there is no way to hit an Undo and Reset button and simply restore the mere friendship that preceded the romance. And the very depth of its mark is attested to in the absolute misery of either side of a divorce, of feeling squashed like a bug, and pouring anger over everything in the relationship. Coarse jokes attest that you can't simply wipe away a marriage and be where you started: "A wife is only temporary. An ex-wife is forever."; "When two divorced people sleep together, there are four people in the bed." The relationship can be torn apart, but it is deep enough of a thing that you can't just reset it to how things were before.

Something as deep as a divorce with the older way of relating to Nature is found in early modern science, and that is why there are all the sexually violent lurid imagery about torturing and raping the personification of Nature. Mary Midgley, in [Science as Salvation](#), argues:

It may be easier to see if we notice the way in which the pioneers of [scientific mechanist views] went about reshaping the concept of Nature. Very properly, they wanted to try the experiment of depersonalizing it. With that in view, the first step they surely needed to take was to stop using the feminine pronoun, or indeed any personal pronoun for 'Nature' altogether. But this was not done. We come to one more of the strange compensatory myths, dreams or dramas that are my theme. The literature of early modern science is

crises that are my theme. The literature of early modern science is a mine of highly-coloured passages that describe Nature, by no means as a neutral object, but as a seductive but troublesome female, to be unrelentingly pursued, sought out, fought against, chased into her inmost sanctuaries, prevented from escaping, persistently courted, wooed, harried, vexed, tormented, unveiled, unrobed, and 'put to the question' (i.e. interrogated under torture), forced to confess 'all that lay in her most intimate recesses', her 'beautiful bosom' must be laid bare, she must be held down and finally 'penetrated', 'pierced' and 'vanquished' (words which constantly recur).

Now this odd talk does not come from a few exceptionally uninhibited writers. It has not been invented by modern feminists. It is the constant, common idiom of the age. Since historians began to notice it, they have been able to collect it up easily in handfuls for every discussion...

This exceedingly foul imagery, persisting over time, attests to the durability and depth of the relationship that was being destroyed. Its vileness is like a divorce, ripping apart what cannot simply be dropped by dropping a personal pronoun. It is grieving, of a perverse sort: those who would object that for someone, "every operation on Nature is a kind of personal contact, like coaxing a child or stroking one's horse," can't undo that relationship simply by dropping personification in speech in nature. The old relation to nature could only be dropped by ripping apart the persona of nature. Those who take Newton's mathematical work to be a manual of rape may be wrong, but they are less wrong than you might think. And if Lewis's fictional Merlin lived from "every operation on nature is a kind of personal contact, like coaxing a child or stroking one's horse," know that *this is not a last survival in an ancient world of something far more ancient, but a common treasure held by East and West alike until centuries after the Great Schism, and held by the Orthodox Church today.*

## The lot of de-mythologizers

Is there room for the de-mythologizing discipline of science? Orthodox are on very shaky ground to dismiss de-mythologizing disciplines altogether. As was hinted at earlier, one of the most profound texts in the history of science is a profound and much more interesting de-mythologizing enterprise than the sciences founded with modernity, and with people who demean their discipline with the physics envy that says they are just-as-much-scientists-as-people-in-the-so-called-hard-sciences-like-physics (a claim that is very demeaning if is false, and much more demeaning if it happens to be true). The enterprise of de-mythologizing as we know it followed up a de-anthromorphized physics in Newton with a de-anthropomorphized psychology in behaviorists like Skinner. And no Orthodox can complain about de-mythologization as such; one of the most singular of the Church's texts finds its climax in the words,

The fact is that the more we take flight upward, the more our words are confined to the ideas we are capable of forming; so that now as we plunge into that darkness which is beyond intellect, we shall find ourselves not simply running short of words but actually speechless and unknowing...

So this is what we say. The Cause of all is above all and is not inexistent, lifeless, speechless, mindless. He is not a material body, and hence has neither shape nor form, quality, quantity, or weight. He is not in any place and can neither be seen nor be touched. He is neither perceived nor is he perceptible. He suffers neither disorder nor disturbance and is overwhelmed by no earthly passion. He is not powerless and subject to the disturbances caused by sense perception. He endures no deprivation of light. He passes through no

change, decay, division, loss, no ebb and flow, nothing of which the senses may be aware. None of all this can either be identified with it nor attributed to it.

Again, as we climb higher we say this. He is not soul or mind, nor does he possess imagination, conviction, speech, or understanding. Nor is he speech *per se*, understanding *per se*. He cannot be spoken of and he cannot be grasped by understanding. He is not number or order, greatness or smallness, equality or inequality, similarity or dissimilarity. He is not immovable, moving, or at rest. He has no power, he is not power, nor is he light. He does not live nor is he life. He is not a substance, nor is he eternity or time. He cannot be grasped by the understanding since he is neither knowledge nor truth. He is not kingship. He is not wisdom. He is neither one nor oneness, divinity nor goodness. Nor is he a spirit, in the sense in which we understand that term. He is not sonship or fatherhood and he is nothing known to us or to any other being. He falls neither within the predicate of nonebeing nor of being. Existing beings do not know him as he actually is and he does not know them as they are. There is no speaking of him, nor name nor knowledge of him. Darkness and light, error and truth—he is none of these. He is beyond assertion and denial. We make assertions and denials of what is next to him, but never *of* him, for he is both beyond every assertion, being the perfect and unique cause of all things, and, by virtue of his preeminently simple and absolute nature, free of every limitation, beyond every limitation; he is also beyond every denial.

However, this great classic needs to be placed today alongside a much lesser work such as is found in the following little chapter of the heart-warming [Everyday Saints and Other Stories](#):

In Egypt, in whose ancient Christian past there had once been many grand monasteries, there once lived a monk who befriended an uneducated and simple present farmer. One day this peasant said to the monk, "I too respect God who created the world! Every evening I pour out a bowl of goat's milk and leave it under a palm tree. In the evening God comes and drinks up my milk! He is very fond of it! There's never once been a time when even a drop of milk was left in the bowl."

Hearing these words, the monk could not help smiling. He kindly and logically explained to his friend that God doesn't need a bowl of goat's milk. But the peasant so stubbornly insisted that he was right that the monk then suggested that the next night they secretly watch to see what happened after the bowl of milk was left under the palm tree.

No sooner said than done. When night fell, the monk and the peasant hid themselves from the tree, and soon in the moonlight they saw how a little fox crept up and lapped up all the milk until the bowl was empty.

"Indeed!" the peasant sighed disappointedly. "Now I can see that it wasn't God!"

The monk tried to comfort the peasant and explained that God is a spirit, that God is something so completely beyond our poor ability to comprehend in our world, and that people comprehend His presence each in their own unique way. But the peasant merely stood hanging his head sadly. Then he wept and went back home to his hovel.

The monk also went back to his cell, but when he got there he was amazed to see an angel blocking path. Utterly terrified, the monk fell to his knees, but the angel said to him:

"That simple fellow had neither education nor wisdom nor book-learning enough to be able to comprehend God otherwise. Then you with your wisdom and book learning took away what little he had! You will doubtless say that you reasoned correctly. But there's one thing that you don't know, O learned man: God, seeing the sincerity and true heart of this good peasant, every night sent the little fox to that palm tree to comfort him and accept his sacrifice."

I cannot call this story the equal to the climax to St. Pseudo-Dionysius's greatest work. I cannot. But in our de-mythologized age, we much less need to beat such a drum even more than see what the learned monk could not: that God accepted and drank the milk offered to him, perhaps by means of a fox. [And we can show kindnesses to God when he suffers, perhaps in the person of our neighbor.](#) It is a loss to say that God does not suffer when you are standing by a neighbor who is suffering and you can help. God does not suffer in himself, but he does suffer in our

neighbor, and when we meet Christ's Judgment Throne we will find that the way we treated the suffering is how we treated Christ. Really, most of us have more productive things to do than de-mythologize things further.

The temptation here is to campaign for a program of re-mythologizing life, to call out, "Stop burning down the rainforests in South America! Reforest the Sahara!" And, for reasons discussed in [Exotic Golden Ages and Restoring Harmony with Nature: Anatomy of a Passion](#), this is a solution worthy of a magus and a spiritual dead end. What we may have instead, on a much smaller nuanced level, is a layer of spiritual awareness. One monk, who for exceptional reasons was working not on Mount Athos but at a U.S. print shop, discussed the unstable and unreliable print machines, and he talked about massaging and coaxing, and how you do not curse a machine that will not cooperate: those curses are real and have an effect. And I would specifically point out that a machine is about as far as you can get for a matter-based machine, understood by the laws of physics, and such a *kind* of thing as an early modern scientist would project onto much larger screen. He was not, for instance, talking about how to coax a tomato vine in your garden. He was talking about how to handle a machine, and while I do not remember him using the word 'love', the upshot of his discussion was that even a machine is something you govern through love. And he did not present this in particularly romanticized terms; it was a matter of fact man describing what work was like.

"Mother" and "matter" come from the same archaic root; in earlier ages the distinction was not so sharp. And we would do well to look on this whole creation on us as our mother, much as when we step into a temple we are stepping into an icon. I do not wish to push the point too far, but in the absence of a magus-paradigmed reform programme, we can open the doors of our heart to God, to our neighbor, to Creation, to everything we are able to love, and let God work with us.

What more are we to do to a right relationship? I think it's more of what sanctified relationships will do to us.

# **Creation and Holy Orthodoxy: Fundamentalism Is Not Enough**

## **Against (crypto-Protestant) "Orthodox" fundamentalism**

If you read Genesis 1 and believe from Genesis 1 that the world was created in six days, I applaud you. That is a profound thing to believe in simplicity of faith.

However, if you wish to persuade me that Orthodox Christians should best believe in a young earth creation in six days, I am wary. *Every single time* an Orthodox Christian has tried to convince me that I should believe in a six day creation, I have been given recycled Protestant arguments, and for the moment the entire conversation has seemed like I was talking with a Protestant fundamentalist dressed up in Orthodox clothing. And if the other person claims to understand scientific data better than scientists who believe an old earth, and show that the scientific data instead support a *young* earth, this is a major red flag.

Now at least some Orthodox heirarchs have refused to decide for the faithful under their care what the faithful may believe: the faithful may be

expected to believe God's hand was at work, but between young earth creationism, old earth creationism, and "God created life through evolution", or any other options, the heirarchs do not intervene. I am an old earth creationist; I came to my present beliefs on "How did different life forms appear?" before becoming Orthodox, and I have called them into a question a few times but not yet found reason to revise them, either into young earth creation or theistic evolution. I would characterize my beliefs, after being reconsidered, as "not changed", *and not* "decisively confirmed": what I would suggest has improved in my beliefs is that I have become less interested in some Western fascinations, such as getting right the details of how the world was created, moving instead to what might be called "mystical theology" or "practical theology", and walking the Orthodox Way.

There is something that concerns me about Orthodox arguing young earth creationism like a Protestant fundamentalist. Is it that I think they are wrong about how the world came to be? *That is not the point*. If they are wrong about that, they are wrong in the company of excellent saints. If they merely hold another position in a dispute, that is one thing, but bringing Protestant fundamentalism into the Orthodox Church reaches beyond one position in a dispute. Perhaps I shouldn't be talking because I reached my present position before entering the Orthodox Church; or rather I haven't exactly *reversed* my position but de-emphasized it and woken up to the fact that there are bigger things out there. But I am concerned when I'm talking with an Orthodox Christian, and *every single time* someone tries to convince me of a young earth creationism, all of the sudden it seems like I'm not dealing with an Orthodox Christian any more, but with a Protestant fundamentalist who always includes arguments that came from Protestant fundamentalism. And what concerns me is an issue of *practical* theology. Believing in a six day creation is one thing. Believing in a six day creation like a Protestant fundamentalist is another matter *entirely*.

## A telling, telling line in the sand

But, you may say, Genesis 1 and some important Fathers said six days, literally. True enough, but may ask a counterquestion?

Are we obligated to believe that our bodies are composed of earth, air, fire and water, and not of molecules and atoms including carbon, hydrogen, and oxygen?

If that question seems to come out of the blue, let me quote St. Basil, *On the Six Days of Creation*, on a precursor to today's understanding of the chemistry of what everyday objects are made of:

Others imagined that atoms, and indivisible bodies, molecules and bonds, form, by their union, the nature of the visible world. Atoms reuniting or separating, produce births and deaths and the most durable bodies only owe their consistency to the strength of their mutual adhesion: a true spider's web woven by these writers who give to heaven, to earth, and to sea so weak an origin and so little consistency! It is because they knew not how to say "In the beginning God created the heaven and the earth." Deceived by their inherent atheism it appeared to them that nothing governed or ruled the universe, and

In reading the Fathers, one encounters claims of a young earth. However, often (if not always) the claim is one among many disputes with Greek philosophers or what have you. To my knowledge there is no patristic text in which a young earth is *the* central claim, let alone even approach being "the article by which the Church stands or falls" (if I may borrow phrasing from Protestant fundamentalist cultural baggage).

that was all was given up to chance.

At this point, belief in his day's closest equivalent to our atoms and molecules is called an absolutely unacceptable "spider's web" that is due to "inherent atheism." Would you call Orthodox Christians who believe in chemistry's molecules and atoms inherent atheists? St. Basil does provide an alternative:

"And the Spirit of God was borne upon the face of the waters."  
Does this spirit mean the diffusion of air? The sacred writer wishes to enumerate to you the elements of the world, to tell you that God created the heavens, the earth, water, and air and that the last was now diffused and in motion; or rather, that which is truer and confirmed by the authority of the ancients, by the Spirit of God, he means the Holy Spirit.

St. Basil rejected atoms and molecules, and believed in elements, not of carbon or hydrogen, but of earth, air, fire, and water. The basic belief is one Orthodoxy understands, and there are sporadic references in liturgical services to the four elements of earth, air, fire, and water, and so far as I know no references to modern chemistry. St. Basil seems clearly enough to endorse a six day creation, and likewise endorses an ancient view of elements while rejecting belief in atoms and molecules as implicit atheism.

Why then do Orthodox who were once Protestant fundamentalists dig their heels in at a literal six day creation and make no expectation that we dismiss chemistry to believe the elements are earth, air, fire, water, and possibly aether? The answer, so far as I can tell, has *nothing whatsoever* to do with Orthodoxy or any Orthodox Christians. It has to do with a line in the sand chosen by Protestants, the same line in the sand described in [Why Young Earthers Aren't Completely Crazy](#), a line in the sand that is understandable and was an attempt to address quite serious concerns, but still should not be imported from Protestant fundamentalism into Holy Orthodoxy.

## Leaving Western things behind

If you believe in a literal six day creation, it is not my specific wish to convince you to drop that belief. But I would have you drop fundamentalist Protestant "creation science" and its efforts to prove a young earth scientifically and show that it can interpret scientific findings better than the mainstream scientific community. And I would have you leave Western preoccupations behind. Perhaps you might believe St. Basil was right about six literal days. For that matter, you could believe he was right about rejecting atoms and molecules in favor of earth, air, fire, and water—or at least recognize that St. Basil makes *other* claims *besides* six literal days. But you might realize that really there are much more important things in the faith. Like how faith plays out in practice.

The fundamentalist idea of conversion is like flipping a light switch: one moment, a room is dark, then in an instant it is full of light. The Orthodox understanding is of *transformation*: discovering Orthodoxy is the work of a lifetime, and perhaps once a year there is a "falling off a cliff" experience where you realize you've missed something big about Orthodoxy, and you need to grow in that newly discovered dimension. Orthodoxy is not just the ideas and enthusiasm we have when we first come into the Church; there are big things we could never dream of and big things we could never consider we needed to repent of. And I would rather pointedly suggest that if a new convert's understanding of Orthodoxy is imperfect, much less of Orthodoxy can be understood from reading Protestant attacks on it. One of the basic lessons in Orthodoxy is that you understand Orthodoxy by walking the Orthodox Way, by attending the services and living a transformed life, and not by reading books. And if this goes for books written by Orthodox saints, it goes all

the more for Protestant fundamentalist books attacking Orthodoxy.

Science won't save your soul, but science (like Orthodoxy) is something you understand by years of difficult work. Someone who has done that kind of work might be able to argue effectively that evolution does not account for the fossil record, let alone how the first organism could come to exist: but here I would recall *The Abolition of Man*: "It is Paul, the Pharisee, the man 'perfect as touching the Law' who learns where and how that Law was deficient." Someone who has taken years of effort may rightly criticize evolution for its scientific merits. Someone who has just read fundamentalist Protestant attacks on evolution and tries to evangelize evolutionists and correct their scientific errors *will be just as annoying to an atheist who believes in evolution*, as a fundamentalist who comes to evangelize the unsaved Orthodox and "knows all about Orthodoxy" from polemical works written by other fundamentalists. I would rather pointedly suggest that if you care about secular evolutionists at all, pray for them, but don't set out to untangle their backwards understanding of the science of it all. If you introduce yourself as someone who will straighten out their backwards ideas about science, all you may really end up accomplishing is to push them away.

Conversion is a slow process. And letting go of Protestant approaches to creation may be one of those moments of "falling off a cliff."

# The Damned Backswing

**Kaine:** What do you mean and what is the "damned backswing"?

**Vetus:** Where to start? Are you familiar with category theory?

**Kaine:** I have heard the term; explain.

**Vetus:** Category theory is the name of a branch of mathematics, but on a meta level, so to speak. Algebraists study the things of algebra, and number theorists study the things of number theory—an arrangement that holds almost completely. But category theory studies common patterns in other branches of mathematics, and it is the atypical, rare branch of mathematics that studies all branches of mathematics. And, though this is not to my point exactly, it is abstract and difficult: one list of insults to give to pet languages is that you must understand category theory to write even the simplest of all programs.

The achievements of category theory should ideally be juxtaposed with Bourbaki, the pseudonym of a mathematician or group of mathematicians who tried to systematize all of mathematics. What came out of their efforts is that trying to systematize mathematics is like trying to step on a water balloon and pin it down; mathematicians consider their discipline perhaps the most systematic of disciplines in academia, but the discipline itself cannot be systematized.

But the fact that Bourbaki's work engendered a realization that you cannot completely systematize even the most systematic of disciplines does not mean that there are patterns and trends that one can observe, and the basic insight in category theory is that patterns recur and these patterns are not

category theory is that patterns recur and these patterns are not limited to any one branch of mathematics. Even if it does not represent a total success of doing what Bourbaki tried and failed to do, it is far from a total loss: category theory legitimately observes patterns and trends that transcend the confines of individual subdisciplines in mathematics.

**Kaine:** So the "damned backswing" is like something from category theory, cutting across disciplines?

**Vetus:** Yes.

**Kaine:** And why did you choose the term of a damned backswing?

**Vetus:** Let me comment on something first. C.S. Lewis, in a footnote in [Mere Christianity](#), says that some people complained about his light swearing in referring to certain ideas as "damned nonsense." And he explained that he did not intend to lightly swear at all; he meant that the ideas were incoherent and nonsense, and they and anyone who believed in them were damned or accursed. And I do not intend to swear lightly either; I intend to use the term "damned" in its proper sense. Instead there is a recurring trend, where some seemingly good things have quite the nasty backswing.

**Kaine:** And what would an example be?

**Vetus:** In the U.S., starting in the 1950's there was an incredibly high standard of living; everything seemed to be getting better all the time. And now we are being cut by the backswing: the former great economic prosperity, and the present great and increasing economic meltdown, are cut from the same cloth; they are connected. There was a time of bait, and we sprung for it and are now experiencing the damned backswing.

**Kaine:** So the damned backswing begins with bait of sorts, and ends in misery? In the loss of much more than the former gain? Do you also mean like addiction to alcohol or street drugs?

**Vetus:** Yes, indeed; for a while drinking all the time seems an effective way to solve problems. But that is not the last word. The same goes from rationalism to any number of things.

**Kaine:** Do you see postmodern trends as the backswing of modern rationalism?

**Vetus:** All that and less.

**Kaine:** What do you mean by "and less"?

**Vetus:** The damned backswing did not start with Derrida. The understanding of "reason" that was held before the Enlightenment was a multifaceted thing that meant much more than logic; even as Reason was enthroned (or an actress/prostitute), Reason was pared down to a hollowed-out husk of what reason encompassed in the West before then. It would be like celebrating "cars", but making it clear that when the rubber hits the road, the truly essential part of "a set of wheels" is the *wheel*—and enthroning the wheel while quietly, deftly stripping away the rest of the car, including not just the frame but engine, and seats. The damned backswing of rationalism was already at work in the Enlightenment stripping and enthroning reason. And the damned backswing was already at work in economic boom times in the West, saying that yes, indeed, man *can* live by bread alone.

And perhaps the strongest and most visible facet of the damned backswing occurs in technology. There are other areas: a country erected on freedoms moves towards despotism, just as Plato said in his list of governments, moving from the best to the worst. But in technology, we seem to be able to be so much more, but the matrix of technology we live in is, among other things, a surveillance system, and something we are dependent on, so that we are vulnerable if someone decides to shut things off. Man does not live by bread alone, but it is better for a man to try to live by bread alone than live by SecondWife alone, or any or all the array of technologies and gadgetry. The new reality man has created does not compare to the God-given reality we have spurned to embrace the new, and some have said that the end will come when we no longer make paths to our neighbors because we are entirely engrossed in technology and gadgetry.

**Kaine:** And are there other areas?

**Vetus:** There are other areas; but I would rather not belabor the point. Does this make sense?

**Kaine:** Yes, but may I say something strange?

**Vetus:** Yes.

**Kaine:** I believe in the damned backswing, and in full.

**Vetus:** You're not telling me something.

**Kaine:** I believe in the damned backswing, but I do not believe that [the fathers eat sour grapes and the children's teeth are set on edge](#).

**Vetus:** What? Do you mean that you partly believe in the damned backswing, and partly not? Do you believe in the damned backswing "is true, from a certain point of view"?

**Kaine:** I understand your concern but I reject the practice of agreeing with everyone to make them feel better. If I believed in the damned backswing up to a point, I would call it such.

**Vetus:** How do you believe it, if you reject that [the fathers eat sour grapes and the children's teeth are set on edge](#)?

**Kaine:** Let me ask: do Calvinists believe in the Sovereignty of God?

**Vetus:** Is the Pope Catholic? (I mean besides John XXIII.)

**Kaine:** Let me suggest that the Reformed view of Divine Sovereignty could go further than it actually does.

**Vetus:** How? They are the most adamant advocates of Divine Sovereignty, and write books like [No Place for Sovereignty: What's Wrong with Freewill Theism](#).

**Kaine:** There's an awfully strong clue in the title.

**Vetus:** That the author believes so strongly in the Divine Sovereignty that he cannot countenance creaturely freedom?

**Kaine:** Not quite.

**Vetus:** Then what is the clue? I don't want to guess.

**Kaine:** The clue is that the author believes in the Divine Sovereignty so weakly that he cannot countenance creaturely freedom, and that if there is one iota of creaturely freedom, there is not one iota of Divine Sovereignty.

His is a fragile Divine Sovereignty, when in actual fact God's Sovereignty is absolute, with the last word after every exercise of creaturely freedom. There is no exercise of freedom you can make that will impede the exercise of the Divine Sovereignty.

**Vetus:** I could sin. In fact, I *do* sin, and I keep on sinning.

**Kaine:** Yes, but God is still Sovereign and can have the last word where there is sin. To get back to Lewis for a second, "All of us, either willingly or unwillingly, do the will of God: Satan and Judas as tools or instruments, John and Peter as sons." The Divine Sovereignty is the Alpha and the Omega, the Founder of

the beginning, and works in and through all: "even Gollum may have something yet to do."

**Vetus:** But what?

**Kaine:** "But what?", you ask?

For starters, there is Christmas. Good slips in unnoticed. God slips in unnoticed. True, it will become one of the most celebrated holidays in the Western world, and true, the Western world will undertake the nonsensical task of keeping a warm, fuzzy Christmas without Christ or Christmas mentioned once. But us lay aside both Christian bloggers speaking in defense of a secularized Christmas, and bloggers telling retailers, "You need Christmas, but Christmas doesn't need you." You speak of the damned backswing coming from an unexpected place; this is nothing next to God slipping in unnoticed.

There will be a time when God will be noticed by all. At the first Christmas, angel hosts announced good news to a few shepherds. When Christ returns, he will be seen by all, riding on the clouds with rank upon rank of angels. At the first Christmas, a lone star heralded it to the Magi. When he returns, the sky will recede as a vanishing scroll. At the first Christmas, a few knees bowed. When he returns, every knee will bow. And the seed for this victory is planted in Christmas.

And the same seeds of glory are quietly planted in our lives. You are not wrong to see the damned backswing and see that it is real: but one would be wrong to see it and think it is most real. Open one eye, and you may see the damned backswing at work. Open both eyes wide, and you may see [God at work, changing the game.](#)

And God will work a new thing in you. Not, perhaps, by taking you out of your sufferings or other things that you may pray for; that is at his good pleasure. But you have heard the saying, "We want God to change our circumstances. God wants to use our circumstances to change us." Whole worlds open up with forgiveness, or repentance, or any virtue. If you are moulded as clay in the potter's hands, unsought goods come along the way. [The best things in life are free,](#) and what is hard to understand is that this is not just a friend's smile, but

suffering persecution for the sake of Christ. It was spiritual eyes wide open that left the apostles [rejoicing that they had been counted worthy to suffer shame \[and violence\] for Christ's name. And he who sat upon the throne said, "Behold, I make all things new."](#) Also he said, ["Write this, for these words are trustworthy and true."](#) This newness begins here and now, and it comes when in circumstances we would not choose God works to give us a larger share in the real world. We enter a larger world, or rather we become larger ourselves and more able to take in God's reality. And all of this is like the first Christmas, a new thing and unexpected. We are summoned and do not dare disobey: [Sing unto the LORD a new song; sing unto the LORD all the earth.](#) And it is this whole world with angels, butterflies, the Church, dandylions, energetic work, friends, family, and forgiveness, the Gospel, holiness, the I that God has made, jewels, [kairos](#), love, mothers, newborn babes, ostriches, preaching, repentance from sins, singing, technology, unquestioning obedience, variety, wit and wisdom, xylophones, youth and age, and zebras.

The damned backswing is only a weak parody of the power of [God the Gamechanger.](#)

## **Abstract**

The author suggests how the concept of 'patterns' in architecture and computer science, or more specifically 'dark patterns' / 'anti-patterns', may provide a helpful vehicle to explicitly communicate tacit knowledge concerning problematic thought. The author also provides a pilot study which seeks to provide a sample analysis identifying indicators for the 'surprising cultural find' pattern in which cultural context is misused to explain away offending Bible passages.

# Introduction to Patterns, Dark Patterns, and Anti- patterns

The technical concept of *pattern* is used in architecture and computer science, and the synonymous *dark patterns* and *anti-patterns* refer to patterns that are not recurring best practices so much as recurring pathologies; my encounter with them has been as a computer programmer in connection with the book nicknamed 'GoF' [\[1\]](#). Patterns do not directly provide new knowledge about how to program; what they do provide is a way to take knowledge that expert practitioners share on a tacit level, and enable them both to discuss this knowledge amongst themselves and effectively communicate it to novice programmers. It is my belief that the concept is useful to Biblical studies in providing a way to discuss knowledge that is also held on a tacit level and is also beneficial to be able to discuss explicitly, and furthermore that dark patterns or anti-patterns bear direct relevance. I hope to give a brief summary of the concept of patterns, explaining their application to Biblical studies, then give a pilot study exploring one pattern, before some closing remarks.

Each pattern consists of a threefold rule, describing:

1. A context.
2. A set of forces within that context.
3. A resolution to those forces.

In the contexts of architecture and computer science, patterns are used to describe best practices which keep recurring and which embody a certain 'quality without a name'. I wish to make a different application, to identifying and describing certain recurring problematic ways of thought in Biblical or theological inquiry which may be understood as dark

... pattern of theological inquiry which may be understood as dark patterns, which often seem to be interlaced with sophistry and logical fallacy.

Two examples of what a dark pattern, or anti-pattern might be are the *consolation prize*, and the *surprising cultural find*. I would suggest that the following provide instances of the consolation prize: discussion of a spiritual resurrection, flowering words about the poetic truth of Genesis 1, and Calvin's eucharistic theology. If you speak of a spiritual resurrection that occurs instead of physical resurrection, you can draw Christians far more effectively than if you plainly say, 'I do not believe in Christ's physical resurrection.' The positive doctrine that is presented is a consolation prize meant to keep the audience from noticing what has been taken away. The context includes a text that (taken literally) a party wants to dismiss. The forces include the fact that Christians are normally hesitant to dismiss Scripture, and believe that insights can give them a changed and deepened understanding. The resolution is to dress up the dismissal of Scripture as a striking insight. Like other patterns, this need not be all reasoned out consciously; I suggest, via a quasi-Darwinian/meme propagation mechanism, that dismissals of Scripture that follow some such pattern are more likely to work (and therefore be encountered) than i.e. a dismissal of Scripture that is not merely undisguised but offensive.

In the surprising cultural find, a meticulous study is made of a passage's cultural context to find some basis to neutralise the passage so that its apparent meaning does not apply to us. The context is similar to that of the consolation prize, if more specific to a contemporary Western cultural setting. The forces, beyond those mentioned for the consolation prize, include ramifications of period awareness and the Standard Social Science Model: there is a very strong sense of how culture and period can influence people, and they readily believe claims about long ago and far away that which would seem fishy if said about people of our time and place. The resolution is to use the passage's cultural setting to produce disinformation: the fruits of careful scholarly research have turned up a surprising cultural find and the passage's apparent meaning does not apply to us. The passage may be presented, for instance, to mean something quite different from what it appears to mean, or to address a specific historical situation in a way that clearly does not apply to us.

It is the dark pattern of the surprising cultural find that I wish to

investigate as a pilot case study in this thesis.

# Case Study

## Opening Comments

The aim of this case study is to provide a pilot study of how the surprising cultural find may be identified as a dark pattern. In so doing, I analyse one sample text closely, with reference to comparison texts when helpful.

I use the terms *yielding* to refer to analysis from scholars who presumably have interests but allow the text to contradict them, and *unyielding* to refer to analysis that will not allow the text to contradict the scholar's interests. Yielding analysis does not embody the surprising cultural find dark pattern, while unyielding analysis does. I consider the boundary to be encapsulated by the question, 'Is the text allowed to say "No!" to a proposed position?'

Ideally, one would compare two scholarly treatments that are alike in every fashion save that one is yielding and the other is unyielding. Finding a comparison text, I believe, is difficult because I was searching for a yielding text with the attributes of one that was unyielding. Lacking a perfect pair, I chose Peter T. O'Brien's *The Letter to the Ephesians*[\[2\]](#) and Bonnie Thurston's *Reading Colossians, Ephesians & 2 Thessalonians: A Literary and Theological Commentary*[\[3\]](#) to represent yielding analysis and Craig Keener's *Paul, Women, Wives: Marriage and Women's Ministry in the Letters of Paul* [\[4\]](#) to represent unyielding analysis. I was interested in treatment of [Ephesians 5:21-33](#). When I use Biblical references without a book, I will always be referring to Ephesians. All three of secondary sources present themselves as making the fruits of scholarly research accessible to the layperson. O'Brien provides an in-depth, nonfeminist commentary. Thurston provides a concise, feminist commentary. Keener provides an in-depth, Biblical Egalitarian

monograph. Unfortunately, the ordered copy of Thurston did not arrive before external circumstances precluded the incorporation of new materials (and may have been misidentified, meaning that my advisor and I both failed after extensive searching to find a yielding feminist or egalitarian treatment of the text). My study is focused on Keener with comparison to O'Brien where expedient.

There seems to be an interconnected web of distinguishing features to these dark patterns, laced with carefully woven sophistry, and there are several dimensions on which a text may be examined. The common-sense assumption that these features are all independent of each other seems to be debatable. One example of this lack of independence is the assumption that what an author believes is independent of whether the analysis is yielding: the suboptimal comparison texts were selected partly because of the difficulty a leading Christians for Biblical Equality scholar and I experienced trying to locate yielding feminist analyses other than Thurston in Tyndale's library. I do not attempt to seriously investigate the interconnections, beyond commenting that features seem interconnected and less independent of each other than most scholars would assume by default.

The substance of my inquiry focuses on observable attributes of the text. I believe that before that point, observing a combination of factors may provide cues. I will mention these factors, but not develop them; there are probably others:

- Is the book a monograph organised around one of today's hot issues, or e.g. a commentary organised around the contents of a Biblical text?
- If you just open the book to its introduction, do you meet forceful persuasion? Are those first pages written purely to persuade, or do they attempt other endeavours (e.g. give factual or theoretical background that is not especially polemical)? What is the approach to persuasion?
- Does the book contain anything besides cultural arguments finding that Biblical texts which apparently contradict the author's camp need not be interpreted that way?
- How much does the author appear able to question our Zeitgeist (in a direction other than a more thorough development of assumptions

in our Zeitgeist)?

- What, in general, does the publisher try to do? The publisher is not the author, but publishers have specific aims and goals. It would seem to require explanation to say that a company indiscriminately publishes yielding and unyielding analysis because both resonate equally well with its editorial climate.

There will be a decided imbalance between attention paid to Keener and O'Brien. Part of this is due to external constraints, and part is due to a difference between O'Brien and Keener. With one major exception, described shortly, O'Brien's analysis doesn't run afoul of the concern I am exploring. If I were writing cultural commentary for my texts as Keener and O'Brien write cultural commentary for their texts, I would ideally spend as much time explaining the backgrounds to what Keener and O'Brien said. I believe they are both thinkers who were shaped by, draw on, and are critical of their cultures and subcultures. Explaining what they said, as illuminated by their context, would require parity in treatment. However, I do not elaborate their teachings set in context, but explore a problem that is far more present in Keener than in O'Brien or Thurston. I have more of substance to say about how Keener exhibits a problem than how O'Brien doesn't. As such, after describing a problem, I might give a footnote reference to a passage in O'Brien which shows *some* analogy without seeming to exhibit the problem under discussion, but I will not systematically attempt to make references to O'Brien's yielding analysis as wordy as explanations of Keener's unyielding analysis.

The one significant example of unyielding analysis noted in O'Brien is in the comment on 5:21: O'Brien notes that reciprocal submission is not enjoined elsewhere in the Bible, points out that 'allelous' occurs in some contexts that do not lend themselves to reciprocal reading ('so that men should slay one another'[\[5\]](#)), and concludes that 'Believers, submit to one another,' means only that lower-status Christians should submit to those placed above them. This is as problematic as other instances of unyielding analysis, and arguably more disturbing as it lacks some of the common indicators alerting the careful reader to be suspicious. There is a point of contact between this treatment and Keener's: both assume that 5:21 and 5:22-6:9 are not merely connected but are saying the same thing, and it is one thing only. It is assumed that the text cannot enjoin of

us both symmetrical and asymmetrical submission, so one must be the *real* commandment, and the other is explained away. Both Keener and O'Brien end up claiming that something is commanded in 5:21 with clarificatory examples following, without asserting that either 5:21 or 5:22-6:9 says something substantively different from the other about submission. I will not further analyse this passage beyond this mention: I consider it a clear example of unyielding analysis. This is the one part of O'Brien I have read of which I would not say, '...and this is an example of analogous concerns addressed by yielding scholarship.'

The introductions to O'Brien and Keener provided valuable cues as to the tone subsequently taken by the texts. Both are written to persuade a claim that some of their audience rejects, but the divergence in how they seek to persuade is significant. Keener's introduction is written to persuade the reader of Biblical Egalitarianism: in other words, of a position on one of today's current issues. The beginning of O'Brien's introduction tries to persuade the reader of Pauline authorship for Ephesians, which they acknowledge to be an unusual position among scholars today; the introduction is not in any direct sense about today's issues. O'Brien's introduction is written both to persuade and introduce the reader to scholarly perspectives on background; while nontechnical, it is factually dense and heavy with footnotes. Keener's introduction seems to be written purely to persuade: he give statistics<sup>[6]</sup> concerning recent treatment of women which are highly emotionally charged, no attempt being made to connect them to the text or setting of the Pauline letters. Keener's introduction uses emotion to bypass rationality, using loaded language and various other forms of questionable persuasion explored below; a naive reader first encountering this debate in Keener's introduction could well wonder how any compassionate person could be in the other camp. O'Brien works to paint a balanced picture, and gives a fair account of the opposing view before explaining why he considers it inadequate. O'Brien seeks to persuade through logical argument, and his book's pages persuade (or fail to persuade) as the reader finds his arguments to be sufficient (or insufficient) reason to accept its conclusions.

## **Emotional Disinformation**

Among the potential indicators found in Keener, the first broad heading I found could be described as *factual disinformation* and *emotional disinformation*. 'Disinformation', as used in military intelligence ordinarily denotes deception through careful presentation of true details; I distinguish 'factual disinformation' (close to 'disinformation' traditionally understood) from 'emotional disinformation', which is disinformation that acts on emotional and compassionate judgment as factual disinformation acts on factual judgment. While conceptually distinct, they seem tightly woven in the text, and I do not attempt to separate them.

## **An Emotional Plea**

One distinguishing feature of Keener's introduction is that it closes off straightforward rebuttal. Unlike O'Brien, he tries to establish not only the content of debate but the terms of debate itself, and once Keener has established the terms of debate, it is difficult or impossible to argue the opposing view from within those terms. Rebuttal is possible, of course, but here it would seem to require pushing the discussion back one notch in the meta-level hierarchy and arguing at much greater length. O'Brien seems more than fair in his style of argument; Keener loads the dice before his reader knows what is going on.

One passage is worth citing for close study [\[7\]](#):

There are issues where most Biblically conservative Christians, including myself, disagree with prominent elements of the feminist movement... But there are other concerns which nearly all Christians, including myself, and nearly the whole women's movement plainly share....

[Approximately two pages of alarming claims and statistics, including:] ...Although "bride-burning" is now illegal in India, it still happens frequently; a bride whose dowry is insufficient may be burned to death so that her husband can find a new partner. There is no investigation, of course, because it is said that she simply poured cooking oil over herself and set herself on fire accidentally.... A Rhode Island Rape Crisis Center study of 1700 teenagers, cited in a 1990 InterVarsity magazine, reported that 65% of the boys and 47% of the girls in sixth through ninth grades say that a man may force a

of the girls in sixth through ninth grades say that a man may force a woman to have sex with him if they've been dating for more than six months.... Wife-beating seems to have been a well-established practice in many patriarchal families of the 1800's....

But while some Christians may once have been content to cite proof-texts about women's subordination to justify ignoring this sort of oppression, virtually all of us would today recognise that oppression and exploitation of any sort are sinful violations of Jesus's commandment to love our neighbour as ourselves and to love fellow-Christians as Christ loved us. [Keener goes on to later conclude that we must choose between a feminist conception of equality and an un-Christian version of subordination.]

The text starts by presenting Keener as Biblically conservative, moves to a heart-wrenching list of wrongs against women, implicitly conflates nonfeminist Christians with those who condone rape and murder, and presents a choice crystallising the fallacy of the excluded middle that had been lurking in prior words. It has more than one attribute of emotional disinformation.

Keener both identifies himself as Biblically conservative and says that, among some Christians, the egalitarian position is the conservative one (contrast chapter 4, where 'conservative' means a reactionary misogynist). Why? People are more likely to listen to someone who is perceivedly of the same camp, and falsely claiming membership in your target's camp is a tool of deceptive persuasion.

The recitation of statistics is interesting for several reasons.

On a strictly logical level, it is a non sequitur. It has no direct logical bearing on either camp; even its rhetorical position assumes that conservative, as well as liberal, members of his audience believe that rape and murder are atrocities. This is a logical non sequitur, chosen for its emotional force and what impact that emotional recoil will have on susceptibility. The trusting reader will recoil from the oppression listed and be less guarded when Keener provides his way to oppose such oppression. The natural response to such a revolting account is to say, 'I'm not that! I'm the opposite!' and embrace what is offered when the fallacy of the excluded middle is made explicit, in the choice Keener later presents.

Once a presentation of injustice has aroused compassion to

indignation, most people do not use their full critical faculties: they want to right a wrong, not sit and analyse. This means that a powerful account of injustice (with your claims presented as a way to fight the injustice) is a powerful way to get people to accept claims that would be rejected if presented on their logical merits. Keener's 'of course' is particularly significant; he builds the reader's sense of outrage by adding 'of course' with a (carefully studied but) seemingly casual manner. It is not obvious to a Western reader that a bride's murder would be left uninvestigated; adding 'of course' gives nothing to Keener's logical case but adds significantly to the emotional effect Keener seeks, more effectively and more manipulatively than were he to visibly write those words from outrage.

The sentence about proof-texts and loving one's neighbour is of particular interest. On a logical level, it is restrained and cannot really be attacked. The persuasive and emotional force—distinct from what is logically present—is closer to, 'Accepting those proof-texts is equivalent to supporting such oppression; following the Law of Love contradicts both.'

This is one instance of a broader phenomenon: a gap between what the author *entails* and *implicates*. Both 'entail' and 'implicate' are similar in meaning to 'imply', but illustrate opposite sides of a distinction. What a text *entails* is what is implied by the text in a strictly logical sense; what a text *implicates* is what is implied in the sense of what it leads the reader to believe. What is implicated includes what is entailed, and may often include other things. The entailed content of 'But while some Christians...' is modest and does not particularly advance a discussion of egalitarianism. The implicated content is much more significant; it takes a logically tight reading to recognise that the text does not entail a conflation claiming that nonfeminist Christians condone rape and murder. The text implicates much more than it entails, and I believe that this combination of restricted entailment with far-reaching implication is a valuable cue. *It can be highly informative to read a text with an eye to the gap between what is entailed and what is implicated.* The gap between entailment and implicature seemed noticeably more pronounced in Keener than in yielding materials I have read, including O'Brien. Another example of a gap between entailment and implicature is found close [\[8\]](#), '...the secular generalization that Christians (both men and

women) who respect the Bible oppose women's rights is an inaccurate caricature of these Christians' admits a similar analysis: the entailment is almost unassailable, while the implicature establishes in the reader's mind that the conservative position is excisable from respect for the Bible, and that the nonfeminist position denies something basic to women that they should have. The term 'women's rights' is by entailment the sort of thing one would not want to oppose, and by implicature a shorthand for 'women's rights as understood and interpreted along feminist lines'. As well as showing a significant difference between entailment and implicature, this provides an example of a text which closes off the most obvious means of rebuttal, another rhetorical trait which may be produced by the same mindset as produces unyielding analysis.

What is left out of the cited text is also significant. The statistics given are incomplete (they focus on profound ways in which women suffer so the reader will not think of profound ways in which men suffer) but as far as describing principles to discriminate yielding versus unyielding analysis, this seems to be privileged information. I don't see a way to let a reader compare the text as if there were a complementary account written in the margin. Also, a careful reading of the text may reveal a Biblical nonfeminist position as the middle fallaciously excluded earlier, in which sexual distinction exists on some basis *other* than violence. All texts we are interested in—yielding or unyielding—must stop somewhere, but it is possible to exclude data that should have been included and try to conceal its absence. Lacunae that seem to have been chosen for persuasion rather than limitation of scope may signal unyielding analysis.

## Further Examples

In a discussion<sup>[9]</sup> of the *haustafel's* ([Ephesians 5:21 and following](#)<sup>[10]</sup>) injunction that the husband love his wife based on Christ's love for the Church, Keener says, 'Indeed, Christ's love is explicitly defined in this passage in terms of self-sacrificial service, not in terms of his authority.' The passage does not mention that self-sacrificial service is a defining feature of Christ's model of authority, and in these pages the impression is created that the belief in servant love is a Biblical Egalitarian distinctive, so that the reader might be surprised to find the conservative

O'Brien saying<sup>[11]</sup>:

...Paul does not here, or anywhere else for that matter, exhort husbands to rule over their wives. They are nowhere told, 'Exercise your headship!' Instead, they are urged repeatedly to love their wives (vv. 25, 28, and 33). This will involve each husband showing unceasing care and loving service for his wife's entire well-being...

O'Brien is emphatic that husbands must love their wives; examples could easily be multiplied. Keener argues for loving servanthood as if it were a claim which his opponents rejected. The trusting reader will believe that nonfeminists believe in submission and egalitarians alone recognise that Paul calls husbands to servant love. I believe that this selective fact-telling is one of the more foundational indicators: some factual claims will be out of a given reader's competence to evaluate, but so far as a reader can evaluate whether a fair picture is presented, the presence or absence of selective fact-telling may help.

Chapter 4 is interesting in that there are several thoughts that are very effectively conveyed without being explicitly stated. The account of 'conservatives' (i.e. misogynistic reactionaries) is never explicitly stated to apply to Christians who disagree with Keener, but works in a similar fashion (and for similar reasons) to the 'Green Book' which introduces the first major argument in [The Abolition of Man.](#)<sup>[12]</sup> By the same mechanism as the Green Book leads the reader to believe that claims about the outer world are in fact only claims about ourselves, not the slightest obstacle is placed to the reader believing that Keener exposes the true nature of 'conservatism', and that the picture of Graeco-Roman conservatism portrayed is a picture of *conservatism*, period, as true of conservatism today as ever.

A smaller signal may be found in that Keener investigates inconvenient verses in a way that never occurs for convenient ones. Keener explores the text, meaning, and setting to 5:22-33 in a way that never occurs for 5:21; a careless reader may get the impression that 5:21 doesn't *have* a cultural setting.

## **Drawing on Privileged Information**

I would next like to outline a difference between men's and women's communication, state what Keener's Roman conservatives did with this, and state what Keener did with the Roman conservatives. One apparent gender difference in communication is that when a woman makes a claim, it is relatively likely to mean, 'I am in the process of thinking and here is where I am now,' while a man's claim is more likely to mean, 'I have thought. I have come to a conclusion. Here is my conclusion.' Without mentioning caveats, there is room for *considerable* friction when men assume that women are stating conclusions and women assume that men are giving the current state of a developing thought. The conservatives described by Keener seem frustrated by this friction; Keener quotes Josephus [\[13\]](#):

Put not trust in a single witness, but let there be three or at least two, whose evidence shall be accredited by their past lives. From women let no evidence be accepted, because of the levity and temerity of their sex; neither let slaves bear witness, because of the baseness of their soul.

This passage is introduced, "...regards the prohibition of women's testimony as part of God's law, based in the moral inferiority inherent in their gender." The reader is not likely to question whether it's *purely* misogyny for a man (frustrated by women apparently showing levity by changing their minds frequently) to find this perceived mutability a real reason why these people should not be relied on as witnesses when someone's life may be at stake. Keener has been working to portray conservatives as misogynistic. Two pages earlier[\[14\]](#), he tells us,

An early Jewish teacher whose work was undoubtedly known to Paul advised men not to sit among women, because evil comes from them like a moth emerging from clothes. A man's evil, this teacher went on to complain, is better than a woman's good, for she brings only shame and reproach.

This, and other examples which could be multiplied, deal with something crystallised on the previous page[\[15\]](#). Keener writes,

Earlier philosophers were credited with a prayer of gratitude that

they were not born women, and a century after Paul a Stoic emperor could differentiate a women's soul from that of a man.

The moral of this story is that believing in nonphysical differences between men and women is tantamount to misogyny. This is a highly significant claim, given that the questions of women's ordination and headship in marriage are largely epiphenomenal to the question of whether we are created masculine and feminine at every level of our being, or ontologically neuter spirits in reproductively differentiated bodies. Keener produces a conclusion (i.e. that the human spirit is neuter) *without ever stating it or drawing the reader to consciously consider* whether this claim should be believed. In a text that is consistently polite, the opposing view is not merely negated but vilified: to hold this view (it is portrayed) is tantamount to taking a view of women which is extraordinarily reprehensible. Either of these traits may signal unyielding analysis; I believe the combination is particularly significant.

## **Tacit and Overt Communication**

Although the full import of tacit versus overt communication is well beyond my competency to address, I would like to suggest something that merits further study.[\[16\]](#) Keener seemed, to a significant degree, to:

- *Tacitly convey most of his important points, without stating them explicitly.*
- *Present claims so the opposing view is never considered.*
- *Build up background assumptions which will produce the desired conclusions, more than give explicit arguments.*
- *Work by manipulating background assumptions, often provided by the reader's culture.*

As an example of this kind of tacit communication, I would indicate two myths worked with in the introduction and subsequently implied. By 'myth' I do not specifically mean 'widespread misconception', but am using a semiotic term comparable in meaning to 'paradigm': '[M]yths act as scanning devices of a society's *'possibles'* and *'pensables'*' [\[17\]](#). The two myths are:

- *Men are powerful and violent aggressors, whilst women are powerless and innocent victims.* The alarming claims and statistics[18] mention aggression against men only in the most incidental fashion.
- *The accurate spokesperson for women's interests is the feminist movement.* Keener diminishes this myth's force by disclaiming support for abortion (and presenting a pro-choice stance as separable from other feminist claims), but (even when decrying prenatal discrimination in sex-selective abortion[19]) Keener refers to the feminist movement interchangeably as 'the feminist movement'[20] and 'the women's movement'[21], and does not lead the reader to consider that one could speak for women's interests by contradicting feminism, or question the *a priori* identification of women's interests with the content of feminist claims.

## Argument Structure

As well as the emotional disinformation explored in many of the examples above, there are several points where the nature of the argument is of interest. Five argument-like features are explored:

- Verses which help our position are principles that apply across all time; verses which contradict our position were written to address specific issues in a specific historical context.
- X had beneficial effect Y; X was therefore purely instrumental to Y, and we may remove X if we no longer require X as an instrument to Y.
- The absolute position taken in this passage addresses a specific historical idiosyncrasy, but the relative difference between this passage and its surroundings is a timeless principle across all times.
- If X resonates with a passage's cultural context, then X need not be seen as part of the Bible's revelation.
- We draw the lines of equivalence in the following manner...

'Verses which help our position are principles that apply across all time; verses which contradict our position were written to address specific issues in a specific historical context' is less an argument than an

emergent property. It's not argued; the text just turns out that way. Keener gives a diplomatically stated reason why Paul wrote the parts of 5:22-6:9 he focuses on: 'Paul was very smart.'[\[22\]](#) The subsequent argument states that Paul wrote in a context where Christians behaving conservatively would diminish he perceived threat to social conservatives. Keener writes[\[23\]](#), 'Paul is responding to a specific cultural issue for the sake of the Gospel, and his words should not be taken at face value in all cultures.' There is a fallacy which seems to be behind this argument in Keener: being timeless principles and being historically prompted are non-overlapping categories, so finding a historical prompt suffices to demonstrate that material in question does not display a timeless principle.

'X had beneficial effect Y; X was therefore purely instrumental to Y, and we may remove X if we no longer require X as an instrument to Y.' Keener argues[\[24\]](#) that the [haustafel](#) mitigated prejudice against Christianity, which is presented as a reason why we need not observe the [haustafel](#) if we do not perceive need for that apologetic concern.

'The absolute position taken in this passage addresses a specific historical idiosyncrasy, but the relative difference between this passage and its surroundings is a timeless principle across all times.' A text embodies both an absolute position *in se*, and a relative difference by how it is similar to and different from its surrounding cultural mainstream. 5:22-33 requires submission of wives and love of husbands; that absolute position can be understood with little study of context, while the relative difference showed both a continuity with Aristotelian haustafels and a difference by according women a high place that was unusual in its setting. The direction of Keener's argument is to say explicitly[\[25\]](#) that the verses should not be taken at face value, and to implicitly clarify that the absolute position should not be taken at face value, but *part* of the relative position, namely the sense in which Paul was much more feminist-like than his setting ('[A quote from Plutarch] is one of the most "progressive" social models in Paul's day... It is most natural to read Paul as making a much more radical statement than Plutarch, both because of what Paul says and because of what he does not say,'[\[26\]](#)) is a timeless principle that should apply in our day as well as Paul's. Without proper explanation of why the relative difference should be seen as absolute, given that the absolute position is idiosyncratic, the impression is

strongly conveyed that respecting Paul's spirit means transposing his absolute position so that a similar relative difference exists with relation to our setting.

'If X resonates with a passage's cultural context, then X need not be seen as part of the Bible's revelation.' This is often interwoven with the previous two arguments. Apart from showing a feminist-like relative difference, Keener works to establish that Paul used a *haustafel* in a way that reduced Christianity's perceived threat to conservatives. This is presented as establishing that therefore wives are not divinely commanded to submit.

'We draw equivalences in the following manner...' This is not a single argument so much as an attribute of arguments; I believe that what is presented as equivalent can be significant. In the autobiographical comments in the introduction, Keener writes<sup>[27]</sup>:

"But it's part of the Bible!" I protested. "If you throw this part out, you have to throw everything else out, too." I cannot recall anyone having a good response to my objection, but even as a freshman I knew very well that if I were consistent in my stance against using culture to interpret the Bible, I would have to advocate women's head coverings in church, the practice of holy kisses, and parentally arranged marriages.

What Keener has been arguing is not just the relevance of culture but the implicit necessity of a piecemeal hermeneutic. The implication (beyond an excluded middle) is that using culture to argue a piecemeal, feminist modification to Paul is the same sort of thing as not literally practicing the holy kiss.<sup>[28]</sup> The sixth of seven chapters, after emotionally railing against slavery, argues that retaining the institution of marriage while excising one dimension is the same sort of thing as abolishing the institution of slavery; 'The Obedience of Children: A Better Model?'<sup>[29]</sup> explicitly rejects the claim that marriage is more like parenthood than owning slaves. While no comparison is perfect, I believe that these are examples of comparisons where it is illuminating to see what the author portrays as equivalent.

In some cases, the argument types I have described are not things which must be wrong, but things which lack justification. The claim that

an absolute position is parochial but the relative difference is timeless is not a claim I consider to be unjustifiable, but it is a claim which I believe *requires* justification, a justification which is not necessarily provided.

In my own experience at least, this kind of argument is not purely the idiosyncrasy of one book. The idea this thesis is based on occurred to me after certain kinds of arguments recurred. Certain dark patterns, or anti-patterns, came up in different contexts like a broken record that kept on making its sound. I'm not sure how many times I had seen instances of 'X had beneficial effect Y; X was therefore purely instrumental to Y, and we may remove X if we no longer require X as an instrument to Y,' but I did *not* first meet that argument in Keener. These arguments represent fallacies of a more specialised nature than *post hoc, ergo propter hoc* ("after the fact, therefore because of the fact") or *argumentum ad ignorantiam* ("appeal to ignorance"). I believe that they allow a persuasive, rational-seeming argument of a conclusion not yet justified on logical terms. The experience that led to the formation of my thesis was partly from repeatedly encountering such fallacies in surprising cultural find arguments.

## Conclusion

I have tried to provide a pilot study identifying indicators of unyielding analysis. These indicators are not logically tied in the sense of 'Here's something which, on logical terms, can only indicate unyielding analysis.' The unyielding analysis I have met, before and in Keener, has been constructed with enough care to logic that I don't start by looking at logic. There are other things which are not of logical necessity required by unyielding analysis, but which seem to be produced by the same mindset. I have encountered these things both in the chosen text and in repeated previous experiences which first set me thinking along these lines.

At a fairly basic level, the case study is a study of a cultural dimension of communication. I believe that portions of this pilot study may be deepened by the insights of scholars from humanities which study human culture and communication. I believe that some of my remarks would be improved by a serious attempt to connect them with high-context and low-context communication as studied in anthropology. If I am doing a pilot study that cannot provide much of any firm answers, I do hope to suggest fruitful lines of inquiry and identify deep questions which for which interdisciplinary study could be quite fruitful.

It is unfortunate that my control text made little use of emotion. I believe my case study would have been better rounded, had I been able to contrast emotion subverting logic in Keener with emotion complementing logic in the control text. As it is, the case study lends itself to an unfortunate reading of "logic is good and emotion is bad", and gives the impression that I consider the bounds of legitimate persuasion to simply be those of logic.

On a broader scale, it is my hope that this may serve not only as a pilot study regarding unyielding analysis but a tentative introduction of a modified concept of 'pattern', or rather 'dark pattern' or 'anti-pattern' in

theology. The concept of pattern was introduced by the architect Christopher Alexander and is sufficiently flexible to be recognised as powerful in computer science. I believe there are other patterns that can be helpful, and I would suggest that books like Alexander's *The Timeless Way of Building*[\[30\]](#) are accessible to people in a number of disciplines.

## Directions for Further Inquiry

There were other indicators which I believe could be documented from this text with greater inquiry, but which I have not investigated due to constraints. Among these may be mentioned:

- *Misrepresentation of material.* Recognising this would seem to require privileged information, and work better for an area where the reader knows something rather than nothing, but I believe that a reader who knows part of the covered domain stands to benefit from seeing if it is covered fairly.
- *Doing more than a text presents itself as doing.* A certain kind of deceit, in which the speaker works hard to preserve literal truth, has a complex quality caused by more going on than is presented. I believe an exploration of this quality, and its tie to unyielding analysis, may be fruitful.
- *Shared attributes with a test case.* A small and distinctive minority of cases qualify to become test cases in American legal practice; they possess a distinct emotional signature, and portions of Keener's argument (i.e. 'Would [Paul] have ignored her personal needs in favour of the church's witness?'[\[31\]](#)) are reminiscent in both argument and emotional appeal of test cases.
- *An Amusement Park Ride with a Spellbinding Showman.* Especially in their introductions, O'Brien seems to go out of his way to let the reader know the full background to the debate; Keener seems more like a fascinating showman who directs the reader's attention to certain things *and away from others*; knowing the other side to statistics cited[\[32\]](#)—or even knowing that there *is* another side—destroys the effect. A careful description of this difference in rhetoric may be helpful, and I believe may be tied to disinformation in that there is a difference in working style; yielding persuasion suffers far

less from the reader knowing the other side than does unyielding persuasion.

More broadly, I believe there is room for inquiry into the relation between this use of patterns and that in other disciplines. The application I have made is not a straight transposition; in architecture and computer science patterns are a tool to help people communicate about best practices to follow, not identify questionable practice to criticise as I have done here. What becomes of the Quality Without a Name may be interesting. This thesis only suggests two patterns; GoF[33] describes twenty-three computer programming patterns broken into three groups, so that they provide a taxonomy of recurring solutions and not merely a list. A taxonomy of Biblical studies patterns could be a valuable achievement.

Lastly, I would suggest that a study of *sharpening* and *leveling* would be fruitful.[34] 'Sharpening' and 'leveling' refer to a phenomenon where people remembering a text tend to sharpen its main points while leveling out attenuating factors. For many texts, sharpening and leveling are an unintended effect of their publication, while Keener seems at times to write to produce a specific result after sharpening and leveling have taken effect. What he writes *in itself* is more carefully restrained than what a reader would walk away thinking, and the latter appears to be closer to what Keener wants to persuade the reader of. Combining narrow entailment with broad implicature is a way for an author to write a text that creates a strong impression (sharpening and leveling produce an impression from what is implicated more than what is entailed) while being relatively immune to direct criticism: when a critic rereads a text closely, it turns out that the author didn't really say the questionable things the critic remembers the author to have said.

## Footnotes

[3] Macon: Smyth & Helwys, 1999.

[4] Peabody: Hendrickson, 1992.

[5] Rev. 6:8, RSV.

[6] Keener, pp. 7-9.

[7] *Ibid.*, pp. 6-9; compare almost any of O'Brien pp. 4-47.

[8] Keener, p. 9.

[9] *Ibid.*, p. 167.

[10] A *haustafel* is a household code such as the one found in Ephesians; for my purposes, the Ephesians *haustafel* stretches from 5:21 to 6:9.

[11] O'Brien, p. 419.

[12] Lewis, C.S., chapter 1, pp. 1-26, San Francisco: Harper San Francisco, 1943, 2001.

[13] Keener, p. 163; O'Brien in pp. 405-438 does not cite a non-Biblical primary source likely to be similarly repellent, and portrays opposing secondary sources as mistaken without setting them in a disturbing light, i.e. in footnote 211, page 413.

[14] Keener, p. 161.

[15] *Ibid.*, p. 160.

[16] My attempts to find material discussing how these things work, academic or popular, have had mixed success. If I were to write a thesis around this issue, I would initially explore works such as Michael I. Polanyi's *Personal Knowledge: Towards a Post-Critical Philosophy*, Chicago: University of Chicago Press, 1958, and anthropological

treatments of the high-context/low-context and direct/indirect axes of human communication (which suggest relevant lines of inquiry). C.S. Lewis's account of the Unman's dialogue with the Lady in *Perelandra* (chapters 8-11, pp. 274-311 in *Out of the Silent Planet / Perelandra*, Surrey: Voyager Classics, 1938 / 1943), seems to represent a very perceptive grappling with the issue of tacit communication in relation to deceit.

[17] Maranda, Pierre, 'Elusive Semiosis', *The Semiotic Review of Books*, Volume 3, Issue 1, seen in 2003 at <http://www.bdk.rug.nl/onderzoek/castor/srb/srb/elusive.html>.

[18] Keener, pp. 7-9.

[19] *Ibid.*, p. 7.

[20] *Ibid.*, p. 6.

[21] *Ibid.*, p. 9.

[22] *Ibid.*, p. 141. Contrast O'Brien's comments on 6:5-9 in 447-456, seemingly the most obvious place to portray at least *some* of the text as parochial; O'Brien disclaims that Paul was making any social comment on slavery (p. 448), but unpacks the verses without obviously approaching the text from the same mindset as Keener.

[23] Keener, p. 170.

[24] *Ibid.*, pp. 174-8. O'Brien covers some of the same basic facts without obviously presenting argument in this vein (pp. 405-409).

[25] Keener, p. 170.

[26] *Ibid.*, p. 170.

[27] *Ibid.*, p. 4; contrast the series preface before O'Brien: 'God stands over against us; we do not stand in judgment of him. When God speaks to us through his Word, those who profess to know him must respond in an appropriate way...' (page viii).

[28] Remember that Keener is an American. The suggestion he makes is more significant in U.S. than English culture. U.S. culture has a place for giving kisses to one's romantic partner, to family, and to small children, but not ordinarily to friends. Because of this, culture shock affects almost any attempt to consider ecclesiastical usage. 'Greet one another with a holy kiss.' serves in U.S. Evangelical conversation as the standard example of a New Testament injunction which cannot be taken seriously as a commandment to follow. It seem to be often assumed as an example of cultural noise in the Bible.

[29] Keener, pp. 186-188; contrast O'Brien, pp. 409-438, where he elaborates the text's analogy with Christ and the Church as a model for understanding marriage, rather than comparing to slavery (which Keener not only does but works to give the reader a reservoir of anger at slavery which may transfer when he argues that marital submission is like slavery).

[30] Oxford: Oxford University Press, 1979.

[31] Keener, p. 148.

[32] *Ibid.* pp. 7-8.

[33] I.e. the 'Gang of Four': Gamma, Erich; Helm, Richard; Johnson, Ralph; Vlissides, John, *Design Patterns: Elements of Reusable Object-Oriented Software*, Boston: Addison-Wesley, 1994.

[34] Comments from Asher Koriat, Morris Goldsmith, and Ainat Pansky in 'Toward a Psychology of Memory Accuracy (in the 2000 *Annual Review of Psychology* as seen in 2003 at [http://www.findarticles.com/cf\\_o/m0961/2000\\_Annual/61855635/p7/term=](http://www.findarticles.com/cf_o/m0961/2000_Annual/61855635/p7/term=)) provide a summary, with footnotes, suggesting the basic psychological mechanism. An accessible treatment of a related, if not identical, application to what I suggest here is found on pp. 91-94 in Thomas Gilovich's *How We Know What Isn't So*, New York: The Free Press, 1993.

# **Dastardly Duo Considered Harmful: “Our Thoughts Determine Our Lives” and “Wounded By Love”**

A couple of years ago, perhaps, I heard that the pairing of *Our Thoughts Determine Our Lives: The Life and Teachings of Elder Thaddeus of Vitovnica* and *Wounded By Love: The Life and Wisdom of Saint Porphyrios* were blasting through the ranks, and the last endorsement I heard for *Wounded by Love* was earlier the month this article was posted.

Both are associated with precious Elders, and neither is appropriate for most Orthodox to read. Let me explain some of why:

## **Our Thoughts Determine Our Lives: *It's an occult book!***

I'm not really sure how to explain this. *Our Thoughts Determine Our Lives* is simply the most occultic book I have read from any canonical author. It never advocates any kind of cursing, but with the terrain it covers, it describes just how someone could kill another in a motorcycle accident by a thought, or three examples of how a subconscious curse of envy could shatter another person's beautiful *objet d'art*.

The book and its message are extremely subtle, but that is not a good thing. The snake, we read in Genesis, was extremely subtle. Speaking as the author of [The Sign of the Grail](#), I have read Arthurian legends at length, and Merlin is asked to exercise "subtlety," with meaning including but not limited to magic powers, but only one version I've read (T.H. White's *The Once and Future King*) gives any sense of how one might go about achieving the kinds of effects you covet from the never-neverland of the Arthurian literary tradition that flourished in the Middle Ages and remains a name people have heard of.

This book offers an occult dimension that I have failed to see in reading half of the collected works of the [Ante-Nicene Fathers and Nicene and Post-Nicene Fathers](#). One work whose title I forget discusses sorcerors as charlatan illusionists and then gives the equivalent of how explaining how a modern magic trick works. But even then, I have no Orthodox work which so sensitizes the reader to how one may lay a potent curse.

If we look for parallels Western Christianity, I recall a fantasy-novel-loving friend who read mainstream fantasy at length, but put down a Charles Williams novel because of how much more occultic it was than

anything in the fantasy literature she was drawn to. (Charles Williams was a member of the Inklings but tried hard to be a Christian without decisively severing ties to the occult and Rosicrucianism.) I've read three of Charles Williams' novels (that's about three too many on my part). Those three novels show the closest parallel I am aware of to the subtle and occultic character of *Our Thoughts Determine Our Lives*.

This is not to say that the book is 100% false. Precious few of even the worst books are 100% false, and cultivating inner calm in chaotic circumstances with eyes fixed on God and the Light is a very valuable lesson, but there are better and less occult Orthodox treatments of the matter.

One example of a cleaner source for peaceful thoughts is Fr. Thomas Hopko's 55 maxims, of which #52 is, "Focus exclusively on God and light, not on sin and darkness." A slightly longer form is available in [an Ancient Faith Radio podcast on Fr. Thomas Hopko's 55 maxims](#):

"Focus exclusively on God and light. Never focus on darkness, temptation, and sin. That's classic teaching. Fill yourself with good things. Don't be mesmerized by dark things. Don't meditate on evil things. Meditate on good things, and God will take care of the rest."

**Wounded by “*Wounded by  
Love:*”  
*Monastic TMI!***

There is such a thing as Too Much Information (TMI). Perhaps the most common way of violating a listener’s boundaries with TMI is to provide excessively visceral details, and *Wounded by Love* does not vividly describe carnal temptations or the like, even though we may assume that someone who grew up as an incredibly strong and rugged mountain man presumably faced certain temptations common to men with a decent amount of testosterone.

But that is not the only form of TMI. There is a rather strong rule, violated especially at the end of this title, that monastics do not share their esoteric experiences with laity, period, and even in the book the elders advise the future monastic elder not to speak of at least some spiritual experiences and charisms strictly to them: the demons might hear. But he, or rather the sisters whom he oversaw, placed things in public sight that should never have been leaked outside monastic circles. As I wrote to my spiritual father:

The latter divulges esoteric monastic experiences in ability including an Abbot traveling spiritually without having left his monastery physically for decades, and a kind of limited omniscience where the protagonist could see through anything (late in life and physically blind, he did perhaps chastely the work of a water witch, although it might be better to suggest that the latter is demonic parody of a legitimate aspect of charism).

Christ told people to do their good works in secret, and this applies

much more forcefully to monastic spiritual experiences. Monastics normally view the parading of their intimate experience before the public eye to be a great misfortune, and I believe the rule is much more intended for the benefit of laity than for monastics themselves. It is a rule of mystagogy that you do not mock people with realities they are not ready to cope with, and one minor application is the advice that if you know the truth, and you know that another person will reject the truth if told, *you do not tell the other person that truth*. It's better for the other person before Christ's Judgment Throne not to have rejected the truth, and it is better for *you* not to have pushed the other person into that position. And that is really just the least, most diluted shade of mystagogy as it can and should in Orthodoxy. Molesting the reader with monastic TMI is simply not needed.

## Beware of *all* fashions

Peter Kreeft, one amiably writing Roman apologist, discussed at some point differences between ancient and modern concepts of authorship. The modern concept, especially if we forget the hard work of editors who try to make authors look better in print, tends to say, “If it has your name on it, you are responsible for 100% of its content,” where the ancient conception can admit many hands and classic books are more the work of a school of people sharing the same sympathies than one individual. What is interesting is the remark that follows: Kreeft does not state that the ancient fashion is better, or for that the matter that the modern fashion is better, but advises us to beware of *all* fashions.

The spiritually questionable character of *Our Thoughts Determine Our Lives* and *Wounded by Love* is not really a feature of *Orthodoxy*; it is a feature of *fashion*. It applies to the two books that were fashionable five years ago, and it applies to the one or more ebooks that will be fashionable five years in the future. *Fashions really exist in Orthodoxy as much as NPR, and they are no more helpful.* But this is not any reason to throw up our hands in despair.

One thing I explained to a newly illumined Orthodox about reading recommendations, as another person explained to me when I was myself newly illumined, is that I should have a relationship with a priest who could provide helpful books to read. If you are a bookworm, part of your spiritual father or parish priest’s job description is to recommend good books. And indeed a priest who knows you personally and hears your needs in your confessions may be the best person in the world to give you something better than you could know to ask for. (Now it is entirely possible for a parish priest to recommend an obvious dud, but that is *much* less serious of a problem than *any* problem that is seductive in character.) However much parish priests may be wrong about the

helpfulness of the occasional dud, they are usually familiar with many books and human spiritual needs, *and they are significantly more often right than the rumor mill is.*

## A dark memorial, and a warning sign

I would suggest that these two books by Orthodox elders be remembered.

There are many strands within Judaism, but 6,000,000 is the first number a Jewish child hears, and the sense is not just, “This happened in the past,” but “This could happen again.” And recent events do nothing to prove this to be groundless paranoia or confusion between what is past and what is future. Dietrich Bonhoeffer watched one professor he admired after another rally behind the swastika. (On a much lesser scale, I’ve watched one theology professor after another sign a petition, older than a certain rainbow-colored Supreme Court judicial legislation, demanding that organizations extend any benefit extended to married couples to same-sex couples even if their religious tradition and conscience simply reject such vindication of others’ inimical demands.) In my mind the question is not why so many theology professors Bonhoeffer admired stood behind the Nazi flag; it is why that one person, Dietrich Bonhoeffer, bucked an *overwhelming* consensus. Something similar is akin to my puzzlement, not about how innumerable Protestant efforts to reconstruct the ancient Church went awry, but how the one such effort I know well, the Evangelical Orthodox Church which entered canonical Orthodoxy and provided one of my dear past parish priests, got it right.

The Orthodox Church remembers the bloodshed of its members across the centuries, [many of whom are commemorated in the saints’ lives](#), but the Eastern Orthodox Church’s “This could happen again” is not about bloodshed. “This could happen again” is about heresies. One Subdeacon, a little bit lightly, said, “Arius gets it worse in the Liturgy than

Judas,” and founders of subsequent heresies such as Nestorius are said to be “taught by Arius.” Arius was not the first heretic by any means, and St. Irenaeus’s long and dull [Against Heresies](#) predates Arius by over a century. However, there is reason to call Arius the father of heretics. The Orthodox Presbyterian Church was formed after some vein of Presbyterianism ordained someone who denied that Jesus was the Son of God, and Protestants I know from mailing lists have, without even needing to know post-Biblical Orthodox texts, that Arianism is not just one heresy among others; it is the one heresy that keeps on popping up, possibly comparably to gnosticism. And if the Jewish population is sharply aware that genocide has happened in the past and could happen again, this is not odd; what is odd to me historically is not that a genocide was *started*, but that a genocide was *stopped*. But the Orthodox consciousness is not as much of bloodshed, but of heresy and heterodoxy.

And all in this lie two little books that have swept Orthodoxy as a fad, both written by monastic elders. Perhaps they are not front and center as far as problems go. But they show much less about healthy Orthodoxy than healthy fads, and there is a warning about whatever next flourishes in the rumor mill.

# Death

In the time of life,  
Prepare for death.  
Dost thou love life?  
Be thou of death ever mindful,  
For the remembrance of death,  
Better befits thee,  
Than closing fast thine eyes,  
That the snares before thee may vanish.  
All of us are dying,  
Each day, every hour, each moment,  
Of death the varied microcosm,  
The freedom given us as men,  
To make a decision eternal,  
The decision we build and make,  
In each microcosm of eternity,  
Until one day cometh our passing,  
And what is now fluid,  
Forever fixed will be made,  
When we will trample down death by death,  
Crying out from life to death,  
O Death, where is thy victory?  
O Grave, where is thy sting?  
So even death and the grave,  
Claim us to their defeat,  
Or else,  
After a lifetime building the ramp,  
Having made earth infernal,  
Closing bit by bit the gates of Hell

Closing bit by bit the gates of Hell,  
Bolting and barring them from the inside,  
We seal our decision,  
Not strong enough to die rightly in life,  
We sink to death in death,  
Sealing ourselves twice dead.  
Choolest thou this day,  
Which thou shalt abide.

Seekest thou a mighty deed,  
Our broken world to straighten out?  
Seek it not! Knowest thou not,  
That the accursed axe ever wielded in the West,  
To transform society, with a program to improve,  
Is a wicked axe, ever damned,  
And hath a subtle backswing, and most grievous?  
Wittest thou not that to heal in such manner,  
Is like to bearing the sword,  
To smite a dead man to life therewith?  
Know rather the time-honeyed words,  
True and healthgiving when first spoken,  
Beyond lifesaving in our own time:  
Save thyself,  
And ten thousand around thee shall be saved.

We meet death in microcosm,  
In the circumstances of our lives and the smallest decisions,  
The decision, when our desire is cut off,  
In anger to abide, or to be unperturbed.  
Politeness to show to others, little things,  
A rhythm of prayer to build up,  
Brick by brick, even breath by breath,  
Our mind to have on the things of Heaven or on earth,  
A heart's answer of love and submission,  
To hold when the Vinedresser takes knife to prune,  
The Physician takes scalpel to ransack our wounds,  
With our leave, to build us up,  
Or to take the gold,  
The price of our edification,  
And buy demolition in its stead.

Right poetic and wondrous it may sound right now,  
Right poetic and wondrous it is in its heart,  
But it cometh almost in disguise,  
From a God who wishes our humility never to bruise,  
To give us better than we know to ask,  
And until we see with the eyes of faith,  
Our humble God allows it to seem certain,  
That he has things wrong,  
That we are not in the right circumstances for his work,  
When his greatest work is hid from our eyes,  
Our virtue not to crush,  
Knowing that we are dust,  
And not crushing our frame dust to return.  
Right frail are we,  
And only our Maker knows the right path,  
That we may shine with his Glory.

Canst thou not save thyself even?  
Perchance thou mayest save another.  
Be without fear, and of good cheer:  
He saved others, himself he cannot save,  
Is but one name of Heaven.  
Canst not save thyself?  
Travail to save another.  
Can God only save in luxury?  
Can God only save when we have our way?  
Rather, see God his mighty arm outstretched in disaster,  
Rather, see glory unfurl in suffering.  
Suffering is not what man was made for,  
But bitter medicine is better,  
And to suffer rightly is lifegiving,  
And to suffer unjustly has the Treasure of Heaven inside,  
Whilst comfort and ease sees few reach salvation:  
Be thou plucked from a wide and broad path?  
Set instead on a way strait and narrow?  
Give thanks for God savest thee:  
Taking from thee what thou desirest,  
Giving ever more than thou needest,  
That thou mightest ever awaken

That thou mightest ever awaken,  
To greater and grander and more wondrous still:  
For the gate of Heaven appears narrow, even paltry,  
And opens to an expanse vast beyond all imagining,  
And the gate of Hell is how we imagine grandeur,  
But one finds the belly of the Wyrn constricting ever tighter.

Now whilst the noose about our necks,  
Tightens one and all,  
Painful blows of the Creator's chisel stern and severe,  
Not in our day, nor for all is it told,  
That the Emperor hears the words,  
In this sign conquer,  
The Church established,  
Persecutions come to an end,  
And men of valor seeking in monastery and hermitage,  
Saving tribulations their souls to keep,  
The complaint sounded,  
Easy times rob the Church of her saints,  
Not in our day does this happen:  
For the noose is about our necks,  
More than luxury is stripped away;  
A Church waxen fat and flabby from easy living,  
Must needs be sharpened to a fighting trim,  
Chrismated as one returning to Orthodoxy,  
Anointed with sacred oil for the athlete,  
And myrrh for the bride.  
And as Christian is given gifts of royal hue,  
Gold, frankincense, and myrrh:  
Gold for kingship,  
Frankincense for divinity,  
Myrrh for anointing the dead,  
A trinity of gifts which are homoousios: one,  
Gold and frankincense which only a fool seeks without myrrh,  
Myrrh of pain, suffering, and death,  
Myrrh which befits a sacrifice,  
Myrrh which pours forth gold and frankincense.  
And as the noose tightens about our neck,  
As all but God is taken from us,

And some would wish to take God himself,  
The chisel will not wield the Creator,  
The arm of providence so deftly hid in easy times,  
Is bared in might in hard times,  
And if those of us who thought we would die in peace,  
Find that suffering and martyrdom are possible,  
We must respond as is meet and right:  
Glory to God in all things!

Be thou ever sober in the silence of thine heart:  
Be mindful of death, and let this mindfulness be sober.  
Wittest thou not the hour of thy death:  
Wete thou well that it be sooner than thou canst know.  
Put thy house in order, each day,  
Peradventure this very night thy soul will be required of thee.  
Be thou prepared,  
For the hour cometh like a thief in the night,  
When thou wilt be summoned before Christ's dread judgment seat.  
If thou wilt not to drown,  
Say thou not, I can learn to swim tomorrow,  
For the procrastinator's tomorrow never cometh,  
Only to-days, to use right or wrong.  
If thou wilt not to drown,  
Learn, however imperfectly, to swim today,  
A little better, if thou canst:  
Be thou sober and learn to swim,  
For all of our boats will sink,  
And as we have practiced diligently or neglected the summons,  
So will we each sink, or each swim,  
When thy boat is asink, the time for lessons is gone.

For contemplation made were we.  
Unseen warfare exists because contemplation does not.  
Yet each death thou diest well,  
A speck of tarnish besmircheth the mirror no more,  
The garden of tearful supplication ever healeth,  
What was lost in the garden of delights:  
Ever banished our race may be from the garden of delights:  
'Til we find its full stature in vale of tears,  
'Til we find what in death God hath hid

IN WE FIND WHAT IN DEATH GOD HATH MUD,  
'Til each microcosm of death given by day to day,  
Is where we seek Heaven's gate, ever opening wide.

The Lord shepherdeth me even now,  
And nothing shall be wanting:  
There shall be lack of nothing thou shalt need,  
In a place of verdure, a place of rest, where the righteous dwell,  
Hath he set my tabernacle today,  
He hath nourished me by the waters of rest,  
Yea, even baptism into Christ's lifegiving death.  
My soul hath he restored from the works of death,  
He hath led me in the paths of righteousness,  
That his name be hallowed.  
Yea though my lifelong walk be through the valley of the shadow of death,  
I will fear no evils;  
Thy rod and thy staff themselves have comforted me:  
Thy staff, a shepherd's crook,  
A hook of comfort to restore a sheep gone astray,  
Thy rod a glaive, a stern mace,  
The weapon of an armed Lord and Saviour protecting,  
Guarding the flock amidst ravening wolves and lions,  
Rod and staff both held by a stern and merciful Lord.  
Thou preparest before me table fellowship,  
In the midst of all them that afflict me:  
Both visible and invisible, external and internal.  
Thou hast anointed me with oil,  
My head with the oil of gladness,  
And thy chalice gives the most excellent cheer.  
Thy mercy upon me, a sinner, shall follow me,  
All my days of eternal life even on earth,  
And my shared dwelling shall be in the house of the Lord,  
Unto the greatest of days.

Death may be stronger than mortal men, yet:  
Love is stronger than death.

**Devotees of Fr.  
Cherubim (Jones)  
the Half-Converted  
Demand his  
Immediate  
Canonization and  
Full Recognition as  
"Equal to the  
Heirophants"**

Adamant devotees of Fr. Cherubim (Jones) the Half-Converted demand immediate canonization and full recognition as "Equal to the Heirophants". They have stepped beside their usual tactics of demanding canonization whether or not Fr. Cherubim the Half-Converted should be canonized, and demanding that any problems be swept under the carpet, to insist that he be called, "Equal to the Heirophants."

Much of the work in his wake consolidated in the book, *Christ the Eternal Doubt*. Our devotee explained, "Cherubim Jones saw more than anything the spiritual toxicity of postmodernism. And he sensed, perhaps even more than he realized, that the proper rebuttal to postmodernism is to reconstruct modernism: indeed, there are powerful modernist currents

in his thought even when he seems to condemn all Western trends. The great grandfather of modernism was René DesCartes, and Blessed Cherubim Jones uncovered layer after layer of this philosopher whose very name means 'Born Again' and whose *Meditations* put doubt on a pedestal and said, in essence, 'Doubt what you can; what remains after doubt is unshakable.' And Λογος or Logos is interchangeable, one might almost say homoousios, with logic and with doubt." And to quench the ills of the postmodern world, Cherubim Jones the Half-Converted mined a vein that would come together in the classic *Christ the Eternal Doubt*.

Fr. Cherubim the Half-Converted has left a considerable wake; the tip of the iceberg is in his contribution to a wave of committed Evangelicals deciding that being Orthodox is an indispensable aid to pursuing their cottage industry of reconstructing the ancient Church. The sycophant excitedly commented, "Yes; there was an article on this phenomenon in *The Onion Dome*. It was a bit like that article in *The Onion*, um, what was it... there was a woman, a strong woman, who overcame years of childhood abuse to become a successful porn star. And this is nothing next to what happened when he was the only fashionable Orthodoxy the communist East could listen to."

Fr. Cherubim the Half-Converted was indeed very concerned that his version of the Fathers be adhered to. He pointed out that many Church Fathers, in giving the theology of the created world, absolutely denied that matter was made from atoms and molecules, but insisted that science properly interpreted proves that matter was made from the four elements: "earth, air, fire, and water." And he drew a line in the sand here, and most of his devotees are extraordinarily suspicious about whether you can be Orthodox and believe anything like modern atheistic chemistry.

There is some slight controversy surrounding Fr. Cherubim the Half-Converted's teaching on the phantom tollbooth. His position, as carried forth by others, is that practically every major element of [The Phantom Tollbooth](#) is already in the Fathers and is attested in quite ancient liturgy. Consequently, many argue, the book [The Phantom Tollbooth](#) is no mere imaginative children's tale, but an entirely literal factual account describing life beyond the mundane.

# A disruptive take on (un)-branding

## An opening “Heads up!”

This article is intended to do something that is usually best avoided, at least in the context of an article.

Some students of culture describe semiotic frames that define a society’s *possibles et pensables*: they shape what is seen as **possible** and what is even **thinkable** within a society. And it is usually preferable to handle communication so that you aren’t asking people to overhaul their mental frameworks: if you can think far enough outside the box that you find *possibles et pensables* the sort of thing that can be easily brought into question, that’s a wonderful thing to be able to do, but it is usually best kept under wraps, and usually best kept in a back pocket.

This piece is designed to delve into deeper work and not be as quickly digested as other fare. It’s harder to process than an article intended to persuade you between two options that we both *already* understand well enough. I tried to think about how to make my point while dodging working on what is seen as possible and what is even thinkable, and I don’t see how to eliminate that work from my point. I want to revise what is seen as **possible** and what is **thinkable** about branding today.

## Where did *branding* come from anyway?

To the best of my knowledge, and to only present the beginning and end of a story, branding was once what happened when cattle owners would use a hot iron symbol to *brand* an identifying mark on cattle they owned, to be able to claim whose cattle they were if there were any question. There is a fairly close equivalent to this in the modern business world, but the equivalent isn't really "how a company communicates itself and its offering to the outside world." It's really much more the unsexy practice of attaching metal tags to valuable company equipment that say, "This is property of XYZ corporation, serial number 12345." And while there may be good reasons for engaging in this part of due diligence, it is hardly that interesting or deep.

Not so with real branding in today's business world, not by any stretch. As I have prepared and thought about the question, I'm not sure I can think of an equally significant concept that I have met. To pick two examples from my own field in information technology, Agile development and open source software may be significant concepts, but I do not see the same niches and layers. There is some theory about open source software as such, and people may complain that a company that releases software under an open source license but "drops patches [external contributions] on the floor" isn't really walking the walk, but in my experience the theory that most open source software developers are interested are the computer science and software engineering issues concerning their tools and pet projects, and you simply don't have subspecialized high value consultants on the theory and ideology of open source. But branding is in fact a *very* big concept, and you do have high-value consultants actively engaged for their expertise in some

specialization or subspecialization somewhere under the “branding” umbrella.

And with this significance comes something else, maybe something less attractive: however useful or prominent it may be, it is far from a worldwide universal, and I am not aware of any Great Teachers who have thought in terms of branding. Not only that, but Socrates might very well have lived to a ripe old age, instead of being condemned to death, if he had lived a brand that would have been socially acceptable to the citizens of his city. (The entire story of his gadfly’s teaching and life is an example of how to avoid branding yourself if you want to succeed and live.) Discussion of branding may be anachronous if applied to Socrates, but the principle justifies such an intrusion.

## Two seismic shifts, one after another

In the popular *Seven Habits of Highly Effective People*, that a shift had taken place in wisdom literature: that is, what people have written about how to succeed as a person; one definition offered for such wisdom is, “skill for living.” Whenever the text was written, the author had apparently read a great deal of wisdom literature over time and made [a cardinally important distinction between a \*character ethic\* and a \*personality ethic\*](#). Up until about World War II, the basic framing assumption in wisdom literature in the U.S. is that success is success arising from character. One needs to be diligent, and humble, and merciful to others, and so on. In short, we need virtuous living to get ahead. These virtues may include practices: Ben Franklin’s “A penny saved is a penny earned” is an exhortation to the virtue of thrift. But success is acquired through growing as a person, by growing in virtue.

The subsequent sub-par *personality ethic* was much more superficial; it offered tips and tricks to get ahead, while avoiding anything calling for real internal transformation. And while there are definitely mere practices that we could do better (I could smile more), most of my problems aren’t on the level of personality, but where I need to do more inner work. The shift Covey documents is a seismic shift, and it is difficult to overstate its significance. Something like the character ethic and the personality ethic exist at least to some extent side-by-side in information technology: there are people who have been educated in computer science and software engineering, and who maintain a lifelong curiosity towards those areas as well as working their way through fads and individual tools, and there are educational programs that just teach buzzwords and individual tools with only incidental coverage of deeper

issues in theory. A manager who has dealt with both kinds of programmers will know the difference well.

I would posit, or rather point out, that there has been a second shift after a shift from a *character ethic* to a *personality ethic*: a shift from a *personality ethic* to a (personal) *brand ethic*. There are books I've read that offer an induction into a brand ethic in ways that someone who's not already an insider will understand: but I don't remember anything I've read treating as a live question whether we need a *brand ethic* or a *personality ethic*, or whether we need a *brand ethic* or a *character ethic*. Personality has a place: it has a place because a personal brand on Twitter that incorporates some amount of what feels like personality is a stronger brand than one that is one-dimensional. The place for personality is neither more nor less than what the brand ethic calls for. And that's *odd*.

## **But you, *C.J.S. Hayward*, have a brand!**

In one sense, at least some people will say that I have a brand, and one that I have consciously contributed to. This blog's background, for instance, is one touch out of many things that provide a sense of brand. Old-fashioned, exaggeratedly recognizable links could be called another. None the less, I meet the concept of a personal brand with some degree of puzzlement. I've written dialogues before, but I'm drawing a blank at how to flesh out a dialogue with pretty much any of the world's great teachers about marketing-style branding as a paradigm for how to relate to others. I do not find branding in the [Sermon on the Mount](#), I have difficulty envisioning what Sun Tzu or other sages would say, and for that matter I do not think that Muhammad would have understood the concept, and if he *had* understood it, would find it to be extremely offensive: much as democracy's foundational attitude that you have a say in things is profoundly un-Islamic (when George Bush was pushing to endow Iraq with democracy, my comment to friends was, "I wish that Bush would herald a goal that would be less offensive to Muslims, like a hambone in every pot.").

It is possible for brands to be layered. It is possible for brands to have depth. It is possible for brands to present a tip of an iceberg with lots of room to dig. However, I would pick as a particularly bad piece on personal branding a book chapter which advised the reader to pick three positive adjectives on the list, and simply decide, "These will be my brand." And this isn't just one book. When a company has announced that XYZ represent its values, it gives the impression of something arbitrarily chosen and tacked on, something plastic, something that would really make Michael Polanyi squirm.

Our close contemporary Michael Polanyi ([Wikipedia](#)), to pick one of the achievements he is best known for, argued essentially that knowledge is not something separate from people. When people are initiated into a tradition of expert practice, there is knowledge tacitly held by those who are already insiders in the culture of expert practices, and this knowledge is tacitly transmitted to people who are being trained to become insiders, without ever being held or passing consciously to those in *either* role. He comments that swimming coaches and swimmers alike breathe differently from non-swimmers in that they expand their lungs to hold more air when they breathe in, and they keep more air in their lungs when they breathe out, using their lungs this way for added buoyancy. Other explanations may be available in this case, but, the broader picture is one that uses *tacit knowledge*, or to take the deliberately chosen title of his magnum opus, **Personal Knowledge**, and recognize that we have many layers beyond the surface. And I'm trying to imagine Polanyi reading a text telling him to pick three adjectives that should identify him as his personal brand. I see him squirming, much like the Far Side cartoon entitled, "Baryshnikov's ultimate nightmare" that shows a square dance caller saying, "*Swing your partner 'round and 'round, now promenade left and don't fall down...*"

However, the concern I raise, which may or may not be terribly distinct from Polanyi, isn't just that a personal brand is shallow, or at least has been shallow in every book I've read telling me I need a personal brand. It's also designed as artificial and plastic, not real and alive. It may have an alive motif, like the handmade-looking lettering and art in cookie-cutter Starbucks locations. But it is what Neal Stevenson described in [In the Beginning was the Command Line](#), in describing a mediated and vicarious experience waiting in line for a ride at Disneyland:

The place looks more like what I have just described than any actual building you might find in India. All the stones in the broken walls are weathered as if monsoon rains had been trickling down them for centuries, the paint on the gorgeous murals is flaked and faded just so, and Bengal tigers loll amid stumps of broken columns. Where modern repairs have been made to the ancient structure, they've been done, not as Disney's engineers would do them, but as

thrifty Indian janitors would—with hunks of bamboo and rust-spotted hunks of rebar. The rust is painted on, of course, and protected from real rust by a plastic clear-coat, but you can't tell unless you get down on your knees.

And on this point I'd like to mention a point from *The Cost of Discipleship*. I don't know now whether I'd agree with the suggestion Bonhoeffer makes, but he highlights that the [Sermon on the Mount](#) says both [Let your light so shine before men, that they may see your good works, and glorify your Father which is in heaven](#), and also that we are to conceal our good deeds: [But when thou doest alms, let not thy left hand know what thy right hand doeth](#). Asking how these two incongruous commands fit together, Bonhoeffer says that we should do good deeds but hide them from ourselves, that we should reach a state of doing goodness that we do it without being aware of it. Now whether that should exactly be believed in reference to the Gospel, I don't know. But something like that is true of some secular skill. I remember a conversation with a Unix professional who said that in a job interview he had claimed to be a Unix wizard because that was required in that social situation, but it would have been “an outright lie” for him to make that claim among his peers. I assure you he was very competent. But his competency had reached a level where (among other things) he knew how little he knew and how much more there was to know, and like almost any good Unix wizard, he found calling himself a Unix wizard to feel like an outright lie. When I was asked in high school as the school's student Unix system administrator, I hesitated, and I was both surprised and delighted when a friend said “Yes” for me; I would have been making an outright lie (in my mind) to make that claim. Nor is this a specific local feature of Unix wizardry. That is just an example close to my experience, and it seems that nobody considers themselves what in H.G. Wells' *The Time Machine* terms would be called Morlocks. There is a kind of “reverse hypocrisy” here. A Morlock, to expert practitioners, is someone else at a higher level of skill. (Linus Torvalds has voiced confusion about why others consider him technical.)

The general rule is that the most confident in their performance are usually the most-overconfident, and the most competent are actually less confident; unlike the over-confident, they are guided by a sharply tuned inner self-criticism the same self-criticism that in any competent practice

inner self-criticism, the same self-criticism that in any competent practice of classical music means that musicians hear their performance mistakes more quickly than even the most discerning audience members. What is going on here is the same thing as was told to me as a child, which I'll leave in politically incorrect terms:

An Indian and a white man were standing on a beach, and the white man drew a small circle and said, "This is what the Indian knows." Then he drew a larger circle around it and said, "This is what the white man knows." Then the Indian drew a huge circle encompassing both other circles and said, "This is what neither the Indian nor the white man knows."

And this quality, of seeing a huge encompassing circle of things that none of us know, is foundational to being a genuine expert almost anywhere. Hence a high school biology text compares the discipline of biology to trying to discern the characters, plot, and themes of a long and intricately complex movie, when all you have is half a dozen stills in varying conditions. Hence one biology teacher I remember fondly saying very emphatically that we don't know what's going on: all that biologists know now is only a tiny slice of the truth.

So what does this all mean for branding? It means a couple of things, and perhaps it may be good to have three positive adjectives you seek to represent. But one thing it means is that people are often not aware of their good (and bad) properties, or at least not all of them. This *might* be true morally, but it is also true in terms of professional competence. I remember going to a presentation on getting a government job and the "stupid questionnaire" (the presenter's preferred term) where you were asked to rate yourself from 1 up to 5 on different areas of competency. Now coming from a business background where I had been asked to rate myself 1 to 10 in competency and advised the higher self-rating I gave, the harder test questions would be asked of me, thought of rating myself mostly 3's with a couple of 4's on the ones I was strongest, the presenter made crystal-clear that that was not going to work. The only acceptable answer was a 5, or maybe you could get away with one or possibly two self-ratings of 4. And that's *not* selecting for *competency*. It is selecting for *overconfidence*, and for *gaming the system*. For someone who is genuinely *competent*, and is not aware of how and why to game the

system here, giving a sincere and well-thought-out self-evaluation is a recipe for elimination even if that employee's past five supervisors would mark the person as a clear 5 across the board.

The title I've been mulling over, *The Twitter Job Search Guide*, is part of the cohort of books where branding is bedrock. It also suggests that Twitter competencies expand outside of Twitter, so that a cover letter is composed of a few tweets and a resume is composed of a few more tweets. Now that's an idea I'd be cautious about dismissing; communicating value concisely is a valuable skill, and in some sense Twitter might be seen as a Toastmasters of written communication. Toastmasters' Competent Communicator course trains people with five to seven minute speeches addressing core competencies in speaking (plus a couple of other details), and the thought is not exactly that participants will only need to give speeches of that length, but rather to lay a foundation that is explicitly intended to be adaptable to longer or shorter speeches. And Twitter is not always 140 characters of nothing; there are profound contributions made, and it is a valuable skill, and one quite often present among the most ~~competent~~ gifted, to make a significant point clearly and concisely. For a business world that just wants the time, not the whole process of a watch being built, it may be good discipline and skill to be able to write a six tweet cover letter and twelve tweet resume. But I am concerned when this all falls under the aegis of branding. And in *The Twitter Job Search Guide*, the tweets for a cover letter and resume all fall under the heading of communicating a brand. Though there is (for instance) discussion of what constitutes a good ratio between professional and personal tweets, I've read two thirds of the text and I haven't yet seen advice to tweet or communicate something that does not fall under the aegis of your personal brand. The beginning, middle, and end of what you are advised to communicate is *brand*. There is no other way to relate to others, it seems, and this is a plastic form of life.

Now before going further, there is one point I would like to clarify about boundaries (a topic that I believe is ill-framed, but that is not my interest here). One professor, addressing graduate students who were or probably would be teaching assistants, talked about "being the same on the outside and on the inside." She went on very directly to state that this did *not* mean "letting it all hang out"; that was precisely what it was *not*.

Normal social interactions embody both what is anthropologically called “positive politeness” and “negative politeness”, and on this point I would recall another professor talking about appropriate communication in crossing cultures. He gave some examples of positive politeness, things like saying “Hello!” to a friend (the sort of examples of politeness that jump to mind). Then he said that when strangers approach each other and look down at the sidewalk when they’re a few meters apart, that’s *politeness*. It is a refusal to wantonly intrude; it says, “You have not invited me in and I will not presume where I am not invited and I do not belong.” And that is *politeness*. He mentioned, to drive the point a little bit further, that he had one good friend he visited, and though he did not do so at this visit, he would have thought *nothing* of opening his friend’s refrigerator and helping himself to anything inside. The principle of negative politeness is that you do not do things without invitation; one may surmise that some point along the way the professor’s friend gave one or several invitations to rummage through the fridge without asking specific permission, and I would be almost certain that the professor had not *asked* permission to arbitrarily rummage his friend’s fridge; he had presumably been *given* that permission as the friendship developed. And outside of a few exceptions like this, it is a significant violation of negative politeness to rummage through someone’s fridge without asking.

Socially appropriate relations, or boundaries, or negative politeness, or whatever you want to call it, applies; that can and should mediate our interactions, and brands that have any sense to them will stay within these boundaries. However, while I believe we need the mediation of negative (and positive) politeness, there is something plastic about the mediation of brands. It’s good not to give TMI, but a personal brand is neither the only nor the best way to communicate within positive and negative politeness that respects boundaries.

I’m not sure this addresses all of branding; I’d expect that someone who knew branding well could point to currents within branding that survive this critique. I’ve picked examples that struck me as silly; I haven’t discussed the silliness I see about corporations picking three identifying values, and in much more mainstream and professional venues than a book in a career center offering a list of positive adjectives and an invitation to pick three as defining your personal brand. But for what I’d like to see instead, I don’t have a big program to offer, just

appropriate social interaction: social interaction that is appropriate to degree of relationships and the roles of the participants. Others have written [The Clue Train Manifesto](#); I have not examined that manifesto in depth but its opening words about a human voice suggest I'm not the only person, nor the first person, concerned with human communication.

## My personal unbrand

I wanted to give a bit on my personal brand, or rather unbrand, or, if you prefer, ersatz brand. You're welcome to say, if you like, that it is in *fact* just a personal brand, only a personal brand that embodies at least one classic and cardinal mistake. Or at least two mistakes, apart from the easily digested simplicity of an effective brand, the bulk of my effort is growing in terms of both who I am as a person, and how I can achieve deeper competence. Some attention is given to appearance, but a brand works primarily on image management. Skills one acquires, for instance, are there because of their usefulness to a branded image. But let's return to the other basic attribute in what makes sense in a brand.

One of the parameters that is desired in a brand is doing one thing well, simplicity. There may be contours to the brand's landscape, but if you are a jack of all trades you are assumed to be a master of none. One part of a brand's job description, personal or otherwise, is to present a simple core, perhaps one core feature that offers a value proposition with one core benefit. Or, perhaps, there are a few pieces working together, but if you can't write it on the back of a business card, you have failed. And in fact this is not restricted to branding. [Good to Great](#) talks about good companies that became great companies having and/or discovering a core "hedgehog concept" that they keep returning to, and while such a general title on business has to assume marketing and with it branding as part of the picture, I do not recall the emphatic "hedgehog concept" discussion portraying it as a particular issue for marketing and branding. In [Good to Great](#), the "hedgehog concept" defines a one-trick pony that fundamentally outperforms Renaissance man opponents.

In my own case, what I offer is a profoundly gifted portfolio of interconnected skills. Want to know what reading Latin and Greek has to do with the business world? At a competitive local exchange carrier, we

were working with an upstream provider who did business with us because they were required to by law, even though they didn't want to, because they saw us as cream-skimmers. Nobody else in my group could make sense of their opaque, bureaucratic communication. I could, and there wasn't much of a hiccup when my boss, with my consent, added communication with that provider to my responsibilities. I don't know if any of my bosses have cared that I enjoy writing, but several have cared that I could create and edit clear and high-value documents. I don't know whether any of my bosses have particularly cared that I've received rankings as high as 7th in the nation in math contests, but they do care when I apply that to solo programming that hits the ball out of the park. In the positions I'm focusing on now in User Experience, I don't really expect my prospective bosses to care that I have postgraduate coursework in essentially *all* major User Experience disciplines: anthropology, cognitive science, computer science, linguistics, philosophy, and psychology, with [a distinctive work addressing something at the core of User Experience competency](#). However, once I am hired and running usability tests, I expect they'll care how much that background lets me draw out of a test.

And, to dig a bit deeper, the achievements I value are not because of intelligence, but *communication*. I've calmly spoken to a bawling four-year-old with an extremely painful blood blister under her thumbnail, until she she had stopped completely. I've been asked why I know how to relate to Ukrainians. I've been told, "You are like a white American and like a black African, and closer than an African brother." I've communicated across large gaps with remarkable success.

And, to give one last detail, I've had many projects and there is a common thread running through virtually all the ones I've liked most: I've reduced user pain, or made something a joy to work with. To pick one example from when I had just started a new job, I was given a four-word spec before my boss left for his vacation: "*Get [name of employee] off overtime.*" The employee was a revenue assurance auditor who was trying to keep on top of a provider who was slipping us inappropriate charges, a responsibility that had him on heavy overtime in a company which normally stuck with a 40 hour workweek. And I winced when I saw what he was doing. I respected him and his actions as a team player, but he was cutting a steak with a screwdriver because that was the only game in

town, and I wanted to give a razor-sharp knife, designed for him personally. When he said he was perfectly willing to do drudge work, my unspoken response was, “I appreciate and respect that you’re willing to do drudge work. I still want to get it off your plate.” And I drew on Edward Tufte’s principles and made a carefully chosen greyscale (instead of numbers) system that cut his involvement down to 40 hours a week, then further down so only part of his time was spent keeping on top of this responsibilities, and he was in a position to engage other responsibilities that were out of the question earlier. At a certain point into the process, I told him, “The only reason I *ever* want you to do us the old tools is because you *want* to,” and he very quickly answered, “I don’t want to!” In other words, the new tool completely superseded prior methods, which is a rarity. I don’t remember *exactly* how far along we were when my boss returned from vacation, but the employee told me he was raving to my boss, and in that whole position my boss never really showed much inclination to micro-manage me. (He described me as “nearly self-managing.”)

These and other things could be a basis for a number of personal brands that I could treat as my working contract with the professional world. However, it is my preference not to have my dealings mediated by a constructed personal brand. I’d like to give my friends and employers alike the real “me”, and while I will act differently with friends, family, church, and an employer, I don’t want people dealing with an artificially infused personal brand. *I want them to deal with me.* And while one friend explained that a fellow graduate student in psychology who dealt in measuring psychological traits answered a questionnaire for a job application, she understood exactly how the test worked, answered like the personality profile that the company wanted, and just made sure to act like the profile they wanted while she was at work. I don’t want to judge, but I find something very sad about the story. And it has everything to do with working with a personal brand.

*This is not as crystalline as a normal brand. That’s intended.*

# **Does Augustine return to the interpersonal image of love as representing the Trinity, or does he abandon this in favour of the psychological image?**

## **I. Mindset considerations**

Does Augustine return to the interpersonal image of love as representing the Trinity, or does he abandon this in favour of the psychological image? Behind this question may lurk another question that is both connected and distinct from it: 'Does Augustine have a relational understanding of the image, or is his understanding ultimately solipsistic?' I take Rowan Williams[\[1\]](#) as an example of a scholar writing from a mindset which fails to adequately distinguish the two questions. He opens with quotes that read Augustine as almost Sabellian, and ends

his opening paragraph with a spectacular strawman:

Augustine stands accused of collaborating in the construction of the modern consciousness that has wrought such havoc in the North Atlantic cultural world, and is busy exporting its sickness to the rest of the globe, while occluding the vision of the whole planet's future in its delusions of technocratic mastery — a hugely inflated self-regard, fed by the history of introspection.[\[2\]](#)

Williams is building up to a rescue operation. He offers a careful study which either counterbalances Augustine's apparent meaning or replaces it. He brings up quotations like, 'In the West, especially since the time of Augustine, the unity of the divine being served as the starting point of Trinitarian theology'[\[3\]](#), as examples of the reading he doesn't like. Williams's presentation of Augustine's text does not bring up Augustine's claim that all three persons of the Trinity speak in Old Testament theophanies. This claim is significant because Augustine rejects the Patristic claim that Old Testament theophanies are specially made through the immanent Son.[\[4\]](#) Williams seems to be fighting an obvious reading so he can rescue relationality in Augustine. I would argue that the psychological image is relational from the beginning, and that Augustine's image is psychological.

We're looking for relationality in the wrong place if we look for it in where Augustine stood in the controversies of his day. The deepest relationality does not lie in i.e. his writing against Arianism, but something that was so deeply ingrained in the Church that he would never have thought it necessary to explain. The very individualism he is accused of helping construct had not come together. In the Reformation-era Anabaptist/Zwinglian controversy over infant baptism, the issue was *not* whether faith precedes baptism. Both sides believed that much. The issue was whether that faith was reckoned along proto-individualist lines, or whether the faith of a community could sanctify members too young to embrace faith on terms an individualist would recognise. Augustine lived over a thousand years before that controversy. His tacit theory of boundaries was that of a community's bishop, *not* a counselor imparting the 'value-free' boundaries that flow from atomist individualism. I mention these examples to underscore that Augustine's understanding of

where one person ends and another begins is much less articulate, much less thorough, much less basic, much less sealed, and in the end much less focal than ours. The difference is like the qualitative difference between Father, Son, and Holy Spirit in the Bible, and what either Arian or a Trinitarian did with what is present in the Bible. One is tacitly present, something you can't explain ('That's just the way things are!'), and the other is articulate, the sort of thing you can at least begin to explain and give reason for. In the end Augustine's understanding of how one person can meet another arises from a very different mindset from a setting where scholars argue that communication is impossible. This means that combining passages with individualist assumptions gives a very different meaning from combining the same passages with Augustine's patristic assumptions. It is the latter which represents Augustine's thought. I believe that Augustine did plant proto-modernist seeds. These seeds became a vital ingredient of modernism with many thinkers' successive modifications. However, the fact that they have become modernism today with the influence of a millenium and a half of change does not make Augustine an early modernist. His beliefs were quite different from atomist individualist modernism.

What is most important in Augustine's thought, and what he believed most deeply, includes some of what would never occur to him to think *needed* saying. These things that leave less obvious traces than his explicit claims. With that in mind, I would like to look more closely at Augustine's interiority:

But it [the mind] is also in the things that it thinks about with love, and it has got used to loving sensible, that is bodily things; so it is unable to be in itself without their images. Hence arises its shameful mistake [*errus dedecus* ], that it cannot make itself out among the images of things it has perceived with the senses, and see itself alone...[\[5\]](#)

What is interesting is what Augustine *doesn't* say here. A materialist would see bodily things as including other people, but Augustine did not think from that starting point. Would he have included people? That's a little less clear-cut. People are equal to oneself, and purely sensible objects are inferior. One is trying to go upwards, and Augustine does not

seem to include equal people with inferior objects. Perhaps he does not raise this question. Augustine does go on to give a primacy to 'Know thyself,' but this is a matter of means, *not* of final end. Augustine is telling us to start with what is near at hand[6]. The distinction between what Augustine called 'interior' and what we would call 'private' is significant. It contains not only phantasms (sense impressions) but the *res ipsa* (the realities themselves) of intelligible things, and is where the soul meets intelligible truth. God is in the interior, and is shared between people. Furthermore, when we unite with God, we are united with others united with God. Where there is privacy, this is darkness caused by the Fall.[7]

## II. Is the psychological image relational?

I would suggest that the psychological image is relational. Furthermore, I would suggest that the deepest relationality comes *before* making God the object of the *vestigia* (divine shadows or traces in Creation) of memory, understanding, and will. Augustine comments:

Even in this case [I Cor. 8:2], you notice, he [Paul] did not say "knows him", which would be a dangerous piece of presumption, but "is known by him." It is like another place where as soon as he said, *But now knowing God*, he corrected himself and said, *Or rather being known by God...*[\[8\]](#)

Before we worry if God is the object of our love, he must be the Subject behind it. And that does not mean we need to worry about orienting the *vestigia* (traces of God imprinted in Creation) so we add relationality as something external; relationality is there in the beginning, as God knowing us.

Is remembering, understanding, and willing oneself a relational activity? If it's sought on the right terms, it is. That means that it is not the pre-eminent *goal*, but a *means*, the bridge that must be crossed to gain access to other places.[\[9\]](#) That means that remembering, understanding, and willing have God as their *goal* even before he is their *object*. Augustine comments in another draft of the psychological image:

This word is conceived in love of either the creature or the creator, that is of changeable nature or unchangeable truth; which means either in covetousness or in charity. Not that the creature is not to be loved, but if that love is related to the creator it will no

longer be covetousness but charity. It is only covetousness when the creature is loved on its own account.[\[10\]](#)

Augustine's discussion of use and enjoyment forbids the psyche to enjoy itself: regardless of immediate object, God is the goal or *goal* of 'Know thyself.'

In regard to the rest of Creation, it is much easier to read a psychological image as non-relational. His enjoyment/use distinction is not utilitarian but helped make utilitarianism[\[11\]](#). Whilst he chose Christianity over Manicheanism and Platonism, these other beliefs left a lasting imprint[\[12\]](#); Augustine rejected their claims that matter was evil, but his conversion to believing in the goodness of created matter was less thorough than one could desire. At one point Augustine considered sex a major to *reject* marriage; later he acknowledged sex an instrumental good when it propagates the people of God[\[13\]](#). Augustine's much-criticised views on sex were in continuity with his understanding of creation, especially material creation. The created order that is neither called evil nor fully embraced as good, even fallen good: 'Cleansed from all infection of corruption, they are established in tranquil abodes until they get their bodies back—but incorruptible bodies now, which will be their guerdon [beneficial help], not their burden.'[\[14\]](#) This negative view of our (current) bodies is not a view of something one would want to be in relation with, and that is part of who we are created to be. From these, one could argue a continuity, if perhaps not parity, with a mindset that would support an individualistic psychological image. The argument has some plausibility, but I believe it is not ultimately true.

The biggest difference between a person and mere matter is that a person has spirit. Augustine can say, 'Now let us remove from our consideration of this matter all the many other things of which man consists, and to find what we are looking for with as much clarity as possible in these matters, let us only discuss the mind,' and abstract away a person's body to see the mind. I did not find a parallel passage abstracting away a person's mind to see body alone. Even if we assume he remained fully Manichean or fully Platonist, both Manicheanism and Platonism find some people to be above the level of matter. Augustine was free enough of Platonism to forcefully defend the resurrection of the body in *De Civitate Dei*[\[15\]](#) (The City of God). His belief in community is

strong enough to make the interpersonal image important in his discussion. As argued in 'Mindset Considerations', he was quite far from individualism to begin with.

If community is important, why have a psychological image? Let me give one line of speculation. Augustine may be trying to put community on a proper ground. The Trinity turns outwards, not in an attempt to remedy any kind of defect, to try to get the creation to fill some need that it can't fill itself. The Trinity turns outwards out of abundance and fulness. Augustine may not want half persons seeking other half persons to try and create fulness. I believe he wants whole persons turning outwards out of the fulness within. In other words, a psychological image lays the ground for robust interpersonal relationship. Leaving this speculation aside, community was deeply ingrained in the patristic mindset, so that it didn't need saying. A psychological image could be explored without Augustine needing to add constant footnotes saying, 'But I still believe in community.'

### **III. What understanding does Augustine hold in the end?**

Augustine explores a number of possible images of the Trinity before settling on one. He starts with an interpersonal image of lover, beloved, and love representing Father, Son, and Spirit respectively. Then he explores a 'psychological' image of mind, mental word, and will, which he revises into memory, understanding, and will. [16] Besides these images there are others not explored in this essay, such as thing seen, sense impression formed, and will. I would like to show which image Augustine chooses.

I would also like to make a distinction which makes sense of his choosing one image from several candidates. The distinction is the distinction between images that are 'built in' and 'after the fact'. [17] The difference between an image that is 'after the fact' and one that is 'built in' is the difference between a portrait which resembles a person, and a cloud in which a resemblance is found. Is the image something prior to anything observable, something around which other things are shaped, or is the image what we can find when we find things that look like a trinity?

This is arguably latent in Augustine's discussion of enigmas [18], and in remarks like 'It is true of all of his creatures, both spiritual and corporeal, that he does not know them because they are, but that they are because he knows them.' [19] The discussion of enigmas discusses things mysteriously hidden and then brought forth: Augustine mentions the story of Hagar and Sarah and then Paul drawing out their hidden symbolism. He wrote, 'As far as I can see then, by the word "mirror" he wanted us to understand an image, and by the word "enigma" he was indicating that although it is a likeness, it is an obscure one and difficult to penetrate.' [20] Augustine has looked through any number of images

'after the fact.' Now Augustine is trying to find out which of these plausible 'after the fact' candidates holds its plausibility precisely because it is the image 'built in'. He wants to know which of the resemblances to the Trinity is there precisely because the Trinity created it to be 'after our likeness'.[\[21\]](#)

What, at heart, is the distance between an image 'built in' and 'after the fact'? An 'after the fact' image is an 'after the fact image' because the behaviour and properties it shows, whilst a 'built in' image is such by its internal logic. An early draft of the psychological image compares the mind to the Father, its word to the Son, and the will joining them together to the Holy Spirit. Augustine, conscious of Arianism, says that a human mental word is equal to the mind that begot it. Even if he did not say this, and the word was described as inferior to the mind, there would be reason to see the mind/word/will psychological image as a 'built in' image. A person looking for an 'after the fact' image would look for the property that word and mind are equal because Father and Son are equal; if we look at 'built in' logic it is possible that uncreated God can beget a Word equal to himself, but a creaturely mind lacks the stature to beget a word that is its equal. Then the image would lack the property of equality, but it would have the internal logic of begetting what word one can beget, and reflect the Trinity at a deeper level.[\[22\]](#) This is like the difference between a literal translation and a dynamic equivalent. A literal translation tries to faithfully represent the text word for word; a dynamic equivalent tries to faithfully represent the text's impact, and it may give the text much more breathing room than a literal translator feels is respectful. A literal translation preserves details, but only a dynamic equivalent can render a poem into something that breathes as poetry. This may be part of why Williams writes, 'Growing into the image of God, then, is not a matter of perfecting our possession of certain qualities held in common with God... It is for us to be at home with our created selves...'[\[23\]](#) Growing into the image of God is not to look as if we had not been created, a literal rendering of God's attributes, but a creaturely dynamic equivalent in which a glimpse of the Trinity is rendered in creaturely idiom. This is inadequate; the creaturely idiom isn't powerful enough to capture the divine original, regardless of how it is rendered. Yet Augustine does settle on one image, one translation, not just as bearing 'after the fact' resemblance, but as having been constructed to

have a 'built in' resemblance.

At the end of XV.3, Augustine quotes [Wisdom 13:1-5](#) on recognising creation as the work of the Creator, and comments:

I quote this passage from the book of Wisdom in case any of the faithful should reckon I have been wasting time for nothing in first searching creation for signs of that supreme trinity we are looking for when we are looking for God, going step by step through various trinities of different sorts until we arrive at the mind of man.

This sets the programme for much of book XV. This program has subtleties of various sorts, and Augustine says far more than merely settling on the psychological image. The mind is the genuine image of the Trinity in that God has projected his own likeness downwards, but if we try to project anything in creation upwards—even the image God himself has fashioned—it must fall immeasurably short. The most faithful photograph captures at best a glimpse of the living person it portrays. So while Augustine settles with the psychological image, he is careful to portray its fundamental incompleteness. The psychological image may hold a unique privilege. Of all the 'after the fact' images surveyed, it alone bears apparent 'after the fact' resemblance because it was built to be image. In the end, this privilege of place underscores the book's apophasis all the more powerfully. Not only do the various apparent 'after the fact' images which we see fail to accurately convey the Trinity, but the image which the Trinity itself has built into us, itself falls fundamentally short of God's transcendence. This is a far greater testimony to the divine transcendence: if an 'after the fact' image breaks down on closer observation, that only says that one specific 'after the fact' image breaks down on closer inspection. When the one 'built in' image, created by the Trinity itself, *also* breaks down, this says that the Trinity utterly transcends anything the creation can contain. The bigger it is, the immeasurably harder it falls, and the more we can learn from its failure.

But is this a failure of the created image?

Let's look more specifically at Augustine settling on the psychological image. In book X, Augustine writes:

These three, then, memory, understanding, and will, are not three lives but one life, not three minds but one mind.... Are we already

then in a position to rise with all our powers of concentration to that supreme and most high being of which *the human mind is the unequal image, but image nonetheless?*[\[24\]](#) [emphasis added]

This is an important distinction. Augustine is not looking for a perfect and uncreated image of the Trinity, as the Son is the perfect and uncreated image of the Father. This is stated here, but I am not sure that this is a basic insight which informed his thought. He writes,

Again, there is this enormous difference, that whether we talk about mind in man and its knowledge and love, or whether about memory, understanding, and will, we remember nothing of the mind except through memory, and understand nothing except through understanding, and love nothing except through will. But who would presume to say that the Father does not understand either himself or the Son or the Holy Spirit except through the Son...[\[25\]](#)

This is an observation that the 'built in' image he has chosen does not have what one would seek in a 'after the fact' image. In the surrounding text[\[26\]](#), Augustine doesn't explicitly state that the differences are failings. However the long discussion of how much of the Trinity is not captured in this image does not seem a verbose way of saying that this image functions along 'built in' rather than 'after the fact' lines. It seems to be criticising the 'built in' image for failing to demonstrate 'after the fact' properties. If so, Augustine made something like a category error. This would suggest that the meticulous Augustine, so careful in accounting for the details of Bible verses, didn't conceive this as something to be meticulous about. The impression I receive from reading Augustine is that Augustine probably had thoughts like the 'built in'/'after the fact' distinction I drew, but they were probably tacit, much less developed and much less prominent, and in particular not an organising principle or winnowing tool Augustine used in deciding which of many trinities he would rest with.

And there are other texts which show a psychological image:

So the trinity as a thing in itself is quite different from the image of the trinity in another thing. It is on account of this image that the thing in which these three [memory, understanding, and love] are

found is simultaneously called image...[\[27\]](#)

## **IV. Directions for further enquiry**

The distinction between 'built in' and 'after the fact' appears to be significant. It would be interesting to study more specifically what is the relation between Augustine and this concept. There are quotations one could piece together to argue that Augustine thought in these terms, but other passages make this somewhat less clear. I have raised a question, but I believe more work needs to be done. My comments about that distinction in regard to Augustine's choice of image may be treated more as a question than an answer.

People who read Augustine as overly unitarian seem to find a psychological image, and people who read him as a balanced Trinitarian seem to find an interpersonal image. Reading the psychological image as relational may suggest an alternative placement with regard to these basic positions.

## **V. Conclusion**

The earliest Church Fathers, writing more or less systematic theological treatises, generally didn't write about the Church. Was this because it was not important or not believed? To the contrary, it was air they breathed so deeply that they would never have thought of that as needing saying. Augustine was a Church Father and had the mindset of a Church Father. He chose a psychological image and did not try too hard to make it relational because he never thought it was the sort of thing that needed to have relationship added.

I have chosen an obvious reading which people may give people pause because it appears individualistic and not relational; this reading is that Augustine chose memory, understanding, and will as the 'built in' image

of the Trinity. Of things raised in this essay that could merit further study, the most interesting is probably the concept of 'built in' images as contrasted with 'after the fact' images.

# Does God Suffer?

I had the privilege of reading [A Foot in Two Worlds](#) recently, and posting the following five star review titled, "REAL Theology":

I'm Orthodox where Vince is old-style UMC, and one of the things valued in theology is that it's not some sort of game you play in your head; it is what you work out, what you live. In that sense real theology is more like a wrestling class than a math class.

This is a book of real theology. The pastor who wrote it met a terrible pain, the abrupt news that his son, the kind of child who has it rough and who is especially dear to a parent's loving heart, without warning collapsed in death. One day there, the next gone.

And in the midst of a pain no man should have to suffer, Pastor Vince dug down, deep down, and found that the bottom was solid, and built his house on rock. This is real theology. I don't agree with every detail of what he says; if I were responsible for sorting out his ideas, a duty no one has appointed me to, I might try to convince him that all he says about the people who he calls sparrows in life is true, but the God who loves sparrows with an infinite and everlasting love, and sees every sparrow fall, is beyond suffering. No one can force him to suffer: but he chooses to enter into the suffering of his Creation. Even the formula "One of the Trinity has suffered" has been considered and roundly rejected. And the point is important; it is wrestling and not mental chess, but it is not one I would force upon the book. The theology in the book is real, and I would not try to argue him out of his belief that the God who loves the suffering ones, is compelled to Himself suffer. It would be less real theology if we entered a debate and he acknowledged I scored that point.

I mention theology because that is of cardinal interest to me. But that is, perhaps, not the biggest point to be made. He has taken pain, again a pain no parent should know, and crafted a work that is human and beautiful. It is painful, but it is beautiful, and if I were at my young age to keel over dead this instant, as abruptly as Vince's son Gabe collapsed having no pulse, and leave my parents to sort out what would be left behind, I would scarcely have a better final message to give them than to leave my computer open to "[A Foot in Two Worlds](#)."

Disclosure: I am a poet, of sorts, and Pastor Vincent Homan asked permission to quote my poem "Open", taken from the volume [The Best of Jonathan's Corner: An Anthology of Orthodox Christian Theology](#). Permission was gladly granted, and I am glad to have provided one of the many beautiful quotes Vince wove into this book.

I stand by every accolade I gave in that review, not to mention that the book represents superb writing. And if I were to pass away at my young age, I would want my parents to read [A Foot in Two Worlds](#). But the more time passes, the less the question of whether God suffers looks purely academic. It is a question of doctrine of God, of theology proper, and it has more than meets the eye. And I am grateful to Pastor Vince because in writing his book he gave me the possibility of writing this work. In a real sense I owe the possibility of writing it to him.

There is a quote, "I would not give a fig for the simplicity this side of complexity, but I would give my life for the simplicity on the other side of complexity." My point is that God does not suffer in the sense of being a God too small to avoid suffering. My point is that "on the other side of complexity", a God whom no one can constrain to suffer, a God utterly beyond anything we can imagine, has chosen to suffer.

I will look at several authors, some of them Eastern and some of them Western, and try to unfold the grandeur of a God who is beyond suffering, yet chooses to suffer in us, closing with why a God who is not bound to suffer is better news to us who suffer than a God who suffers would be.

The first stop I wish to make is with Anselm of Canterbury. His *Monologion* makes different arguments about God and is a bit of a hodge-podge that Anselm seemed to want to simplify on second thought.

So he wrote the [Proslogion](#). In it he presents the following argument:

*God, whether or not he exists, is by definition **that than which nothing greater can be thought**. Now either he exists a real God in actuality, or only as a concept in people's minds. But it is greater to be a God who exists in actuality than to exist only in people's minds, so God must exist, or else reality is based on contradiction.*

Most people on hearing this think the argument has slipped something past them, and atheists respond to this backward argument from the Middle Ages by saying, "But if that is true, by the same logic there must be some ultimate exotic paradise where it rains Champagne, and *filet mignon* and lobster grow on trees!" And in fact this argument has a quite venerable precedent; a man named Gaunilo published this argument soon after Anselm and Anselm offered a rebuttal arguing, "Yes, but not in the case of God." Anselm expressed a wish that Gaunilo's objection, and Anselm's own response, be published together with the original piece, and so far that wish has been honored; [my link to the Proslogion is actually to a translation that contains the Proslogion, Gaunilo's objection, and Anselm's reply](#). And I have never heard an atheist show knowledge of Gaunilo's having anticipated their objection centuries ago, or of Anselm's attempt to respond to it.

I am not asking that you accept this argument; it has been called the most controversial argument in the history of philosophy, and I'm not completely sure what to make of it. Something said of Bishop Berkeley's strange arguments might be said of this "ontological argument": "*They admit no answer and produce no conviction.*" My own reasons relate to why Thomas Aquinas said that the peasant who does not murder because the law of God is so deep in his bones is greater than the theologian who can reason, "Do not murder" from first principles. I have seen the argument compel a grudging head; I have never known the argument to directly compel a heart. And for that reason I hold it with tongs.

But I bring this up because whatever the status of the argument as a whole, it hits the nail on the head in terms of nature of God. God is greater than anything else that can be thought; Anselm rightly goes further in saying that God is greater than *can* be thought. God is the

Greatest God That Could Possibly Be.

Editors often have the right aesthetic distance to pick out a title for a work, and are sometimes much better than authors about picking an appropriate title to a work that the author has deeply burrowed into. One editor described to me the title "Maximum Christology" to an article on the Christological Councils: the Councils met the various debates of their day by affirming that Christ is maximally God, maximally Man, and the Divine and human natures are both maximally united and maximally unconfused. This is the essence of what is called Chalcedonian Christology.

Humans suffer, and human parents suffer when their children suffer. But it is my thesis, which I will argue below, that God does not suffer in himself, as creatures do. He chooses to suffer in others, in Christ and in mankind: in the *communicatio idiomatum*, God "without change became Man," as the Liturgy says, and Christ transcended his own state beyond suffering so that the Son of God suffered in the Son of Man everything Jesus suffered as a man. In fact the God whom no external force could compel to suffer, but chooses to suffer in Christ and in Creation, has something to offer suffering men that a God that could be forced to suffer would not. *Perhaps the greatest God that we can think of is one bound to suffer.* But there is a God who is greater than we can think of, and nothing can make him suffer against his will.

Let me try to explain.

Rudolf Bultmann is perhaps known for "de-mythologizing:" stripping out the mythological elements of Scripture to get at the truths behind them. What is perhaps less well known is that well over a millenium before, [St. Dionysius, also called Pseudo-Dionysius](#), had done a much better and more interesting job of the de-mythologizing project.

Some hint of this project came up, as all theological issues came up, on a Sunday where the Gospel message had two Apostles, James and John (or, perhaps more embarrassingly, their mother) ask to sit on the right and left hand of Christ in glory. He said, "This is a strange request. What could it possibly mean?" I pointed out that the Creed, chanted in church every Liturgy, says that Christ "[sits to] the right hand of the Father," and this "cannot be taken literally", which he corrected to, "cannot literally be true." This is an example of de-mythologizing: the Nicene Creed says things that cannot literally be true, and we say and mean them without crossing our fingers. Some people know that the

mean them, without crossing our fingers. Some people know that the words are "best approximations", and try to mean what the words are intended to approximate. Other people with less education may mean that Christ "came down from Heaven" literally speaking. But this is a little more a distinction of erudition than a distinction of faith itself; hence, as one person said, there are "grandmothers who don't know the Creed, but are all ready for Heaven." The story is told of a saint who went off in a boat to educate hermits, and spoke with three old hermits who were about as thick students as he could ask for. After an exhausting teaching visit when it seemed that no theology could get through to these thick-headed students, he started to row away, when the three men came out running on the water as if it were dry land, apologizing that they had forgotten even the first line of the "Our Father" and asking him to teach it to them again.

Something like this is why I inwardly winced at someone saying that, in [Genesis 1](#), God spoke with a voice, lips, and a tongue—I think I challenged it in some form, but it was not a failure of faith. And if Orthodoxy admits a form of de-mythologization, it is not the center of gravity. De-mythologization isn't worth much if it does not lead to a deeper participation in God.

[We do not live in the best of all possible worlds, but we have the best of all possible Gods.](#) And we have the best of all possible Gods regardless of how much right de-mythologization we undergo.

Children can be fond of asking, "Can God make a rock so heavy that he cannot lift it?", on hearing that God can do anything. But the Bible, especially in places like [Job](#), portray not exactly a picture of omnipotence, as such, but of absolute authority that extends beyond omnipotence. God cannot be tempted. He cannot change, nor can he lie. His nature is beyond suffering and cannot suffer directly. In the West, Thomas Aquinas said that nothing contradictory falls under the divine omnipotence.

Divine omnipotence does not mean that anything we can conceive or put into words must be something God can do.

*It may be closer to the truth to say that what God can do is not anything we can conceive or put into words.*

If we are to understand the divine omnipotence, the divine authority, we must let questions like "Could God create a rock so heavy he couldn't lift it?" to fall away, like a booster rocket.

Some things we think are in God are in our relationship to God. And no, this relationship doesn't have to be quasi-romantic in nature; it can be filial. By relationship here I mean how we are connected with God and not a second romance in our lives. We read, [Wherefore God also hath highly exalted him, and given him a name which is above every name: That at the name of Jesus every knee should bow, of things in heaven, and things in earth, and things under the earth; And that every tongue should confess that Jesus Christ is Lord, to the glory of God the Father.](#) The saved and the damned shall alike bow their knees and confess that Jesus Christ is Lord; but their relationships make it entirely different. To the saved, this will be a seal of ultimate victory; to the damned, a crushing blow of ultimate defeat. Here at least, the difference between our absolute victory and absolute defeat lies entirely in our relationship to God.

The difference between victory and defeat is not in what God does here. The difference is in us.

While I was studying as an undergraduate at Calvin, in one of the oldest pieces on my website, I wrote, [The Way of the Way](#),

What does Heaven look like?

He who is proud will see that every man present is present, not because of, but despite what he merits.

He who is rebellious will see people serve an absolute King.

He who desires self-sufficiency will see that joy is offered in community.

He who seeks wealth, prestige, power, and other ways to dominate others, will find his effort in Heaven to be like buying a gun in a grocery store.

He who strives will see that there is no one to strive with.

He who despises the physical will see a bodily resurrection.

He who desires his own interpretation and his own set of beliefs, will see absolute truth in crystalline clarity.

To those who will not let God change their character to virtue and love, even Heaven would be Hell.

A friend advised me, "It almost sounds like you are saying that Heaven and Hell are the same thing." At that point, out of what healthy instincts I had, I pulled back and said that Heaven and Hell are two different things. But among the images in Orthodoxy is one image, the

River of Fire, in which the Light of God shines on all, and the saints embrace the Light as ultimate bliss, and the damned fight the Light and experience it through their rejection of Him: and to them, the Light of Heaven is experienced as the fire of Hell. The choice Adam made in Eden can be repeated:

Adam reigned as an immortal king and lord over the whole world. He had a wife like nothing else in all Creation, paradise for a home, and harmony with nature such as we could not dream of. *And*, he was like a little boy with a whole room full of toys who is miserable because he wants another toy and his parents said "No."

God cannot but love. He cannot but shine. He cannot but resurrect. And regardless of how far that image should be taken—or de-mythologized—this much is clear: he resurrects the saved and the damned alike.

And something like this image is known in the West: I have not exactly seen the claim, "[God does not send people to Hell, but the fires of Hell are nothing other than the light of Heaven experienced through the rejection of Christ](#)" in Western sources, but C.S. Lewis says, "Heaven offers nothing that a mercenary soul can desire. It is safe to tell the pure in heart that they shall see God, for only the pure in heart want to." He does not go so far as to say that mercenary souls will also see God, but the implication is that the experience of seeing God is in no way welcome or desirable to a mercenary soul. And it is possible—even if the point should not be pressed too far—that *all* will see God, and the pure in heart will delight in it, while mercenary souls will be beyond squirming; they will be scorched by it. And Lewis may press the point further in [The Great Divorce](#):

Hell is a state of mind - ye never said a truer word. And every state of mind, left to itself, every shutting up of the creature within the dungeon of its own mind - is, in the end, Hell. But Heaven is not a state of mind. Heaven is reality itself. All that is fully real is Heavenly.

The formula, "Unus ex Trinitate passus est." ("One of the Trinity has suffered.") is one of few formulas from my education that I remember

first in Latin, then in other languages. It was a debated formula that was considered, rejected by the same Church that rejected Nestorius for dividing the Christ, and ultimately accepted. If you will, it was decided that God is utterly beyond suffering, and then that God transcends this so that the Son of God was crucified. The Chalcedonian affirmation is that Christ is maximally God, maximally man, and the natures are maximally unconfused and maximally united. And suffering belongs to the human nature, not the Divine nature. But there is a distinction between I would speak of suffering in oneself and suffering in another: Not One of the Trinity has suffered in himself, but the Son of God suffered in the man with which he was maximally united, and suffers in the human race he became a member of. But something of this again exists in the creature's relationship to God. Christ has ascended into Heaven, into the glory that we will also participate if we take up God's offer of salvation. Then is there a possibly a way we can describe him as hungering or thirsting, sick or in prison?

The apocalyptic buildup in St. Matthew assures us there is:

When the Son of man shall come in his glory, and all the holy angels with him, then shall he sit upon the throne of his glory: And before him shall be gathered all nations: and he shall separate them one from another, as a shepherd divideth his sheep from the goats: And he shall set the sheep on his right hand, but the goats on the left.

Then shall the King say unto them on his right hand, Come, ye blessed of my Father, inherit the kingdom prepared for you from the foundation of the world: For I was an hungred, and ye gave me meat: I was thirsty, and ye gave me drink: I was a stranger, and ye took me in: Naked, and ye clothed me: I was sick, and ye visited me: I was in prison, and ye came unto me. Then shall the righteous answer him, saying, Lord, when saw we thee an hungred, and fed thee? or thirsty, and gave thee drink? When saw we thee a stranger, and took thee in? or naked, and clothed thee? Or when saw we thee sick, or in prison, and came unto thee? And the King shall answer and say unto them, Verily I say unto you, Inasmuch as ye have done it unto one of the least of these my brethren, ye have done it unto me.

Then shall he say also unto them on the left hand, Depart from me, ye cursed, into everlasting fire, prepared for the devil and his angels. For I was an hungred and ye gave me no meat: I was thirsty

angels. For I was an hungred, and ye gave me no meat: I was thirsty, and ye gave me no drink: I was a stranger, and ye took me not in: naked, and ye clothed me not: sick, and in prison, and ye visited me not. Then shall they also answer him, saying, Lord, when saw we thee an hungred, or athirst, or a stranger, or naked, or sick, or in prison, and did not minister unto thee? Then shall he answer them, saying, Verily I say unto you, Inasmuch as ye did it not to one of the least of these, ye did it not to me. And these shall go away into everlasting punishment: but the righteous into life eternal.

This passage is not for Christ's benefit; it's for ours. If we cannot properly love Christ when he comes to us in the person of a beggar, how will we see him in the last day when he brings us to him face to face? The ascended Christ, enthroned in Heaven, is not thirsty *in himself*. However, each person is made in the image of God, is built according to the presence of God, and if we see beggars as a nuisance rather than an icon of Christ, and an icon in whom Christ suffers, what are we practicing for Judgment Day?

My music teacher in gradeschool emphatically stated, "Practice does not make *perfect*. Practice makes *permanent*," the point being that we should not just log time practicing, but log time practicing as well as we could. Each person we meet is one for whom God ordained that we should cross paths, and with each of these are *practicing* how we will meet Christ in his *own* person on Judgment Day. And one day, the results of our *practicing* will be made irrevocably *permanent*.

But what about the question of whether God suffers? Pastor Vince in [A Foot in Two Worlds](#) talks at length about "sparrows", a point just nicked on in my review. Literal sparrows, in the Bible, were sold for offerings, two for a penny or five for two pennies: the fifth one thrown in because it wasn't really worth much of anything. Metaphorical sparrows, infinitely dear to a parent's heart, were those who suffer in life: those who lost at sports, or were clumsy, or got lousy grades, or were social outcasts, or didn't look the prettiest. The person who was low man on the totem pole, who had it rough: these were the children dearest to a parent's heart. Vince gives thicker description than the parable of the Last Judgment quoted above, but it is quite a similar roster of usual suspects. And a parent's heart goes out to sparrows, and suffers with them. The greatest virtue the book paints of parental love is that it goes out to sparrows, and

suffers with them. Suffering is not an option: the constitution of love demands it. If a child suffers, and a parent loves the child, the parent suffers the child's suffering; and the parent suffers more than the child suffers. This is behind a statement that seems ludicrous sophistry to a child receiving punishment: "This hurts me more than it hurts you." But it is not ludicrous sophistry: it is quite literally true.

And what can God be if he does not share in his children's sufferings? And, of course, all of the people considered to be God's children really are what the book says they are.

Something of the same thinking undergirds some of the texts for my classes: a Radical "Orthodoxy" essay stated that God was masculine, and feminine, and supramasculine, and suprafeminine, and I think neuter may have been thrown in there somewhere. What is going on is the same as texts one would expect Radical Orthodoxy, on the surface of it, to oppose: seeing that men and women exist equally on earth, an identical measure or kind of man-ness and woman-ness must be ascribed to God, and not a God who is masculine beyond any sense of femininity, because if that's the case, then the good of woman is impaired. And scholars won't see things any other way, and the possibility that the good of women could be advanced by [the Father for whom every fatherhood in Heaven and earth is named](#), is inconceivable.

(But to those few who do glimpse what the alternative to the politically correct canon may be, there is a freedom and a fittingness that is like a lifelong experience of falling off a cliff.)

Charles Darwin buried a child, and his theory of evolution was a product of his grieving. Almost a triumph of it. Darwin could not believe that a good God, and one who intervened with miracles, could choose not to

I cannot fully engage the question of the good of women here, and what on earth that could be besides the fulfillment of feminist prescriptions, but I have engaged it in multiple other pieces including:

- [Where Is the Good of Women? Feminism Is Called "The Women's Movement." But Is It?](#)
- [The Patriarchy We Object To](#)
- [The Fulfillment of Feminism](#)
- [Knights and Ladies](#)

For here, let it

save his son. And so he developed a theory where God had not intervened with miracles, not only in the time of Christ, but at any time. Even before humans, the origin of species was to be without miracles. God was like a Watchmaker who carefully built a watch, wound it, set it in motion, and then never needed to touch it again. And so Darwin, in his efforts to save his belief in God, proposed a mechanism, evolution via natural selection, whereby species could appear without miracles. God, a good and honorable God if necessarily a distant one, could thus remain a good God even if Darwin's son had died, because such a God was necessarily absolved of any guilt for failing to answer prayers. To rescue the goodness of God, Darwin found an ingenious way to cut God down so that the divine goodness would fit into his head. Later, Darwinian and neo-Darwinian evolution would be taken up by some religious faithful, and by many naturalists who want to avoid the conclusion that life is the creation of a Creator God. The consequences are impressive. But the core is that in pain and grief, Charles Darwin cut down God until he would fit inside of his head.

I hesitate very much to lump Pastor Vince in with Darwin; it would be a brutal blow, and in poor taste. But consider this: parents, as a rule, love children. Love for children is part of the landscape even in abortion, where whatever the rhetoric of "my body, my choice" may be, women who have abortions grieve the loss of a child. No competent and honest post-abortion counselor will say that psychologically an abortion is just the removal of an unwanted parasite; the love of mother for child is real and a deeply engraved portion of the landscape, and this is true even when people cut against the grain by setting things up so women believe they are better off with an abortion. In other words, the love of parent for child is a major landmark even when the parent chooses a separation.

If this much is true, what is to be said for a man who has had years to learn to love his son, whose heart goes out to sparrows, who out of love for his neighbor has become a pastor, who

suffice to say that I am a conservative Orthodox Christian, and I care *deeply* about the good of women.

Something like this may be why one feminist, early on in the movement, called abortion the ultimate violation of a woman.

I would like to look at one important concept a little more deeply.

pours out his love, his regrets, his sorrow, and his hope into a masterpiece, who still suffers in the suffering of his son and remains in regret even when his pain has come to be coupled by hope so he has one foot in suffering and one foot in hope? And if he believes that God as a parent must be a suffering God? The words, "Do not judge" come to mind. None the less, God does not suffer as earthly parents do. No external force pushes him into grief he did not choose. He is beyond all such constraint.

I have been speaking of the transcendence of God, although I have not used that term much. Words about Christ "[sits to] the right hand of the Father" as words that cannot literally be true, underscore his transcendence. Words about the Greatest God That Could Possibly Be underscore his transcendence. Words about the maximum Christology of the Maximum Christ underscore his transcendence. The entire thrust of the argument in this article has been to underscore that God infinitely transcends anything we could possibly ask or imagine. And this brings me to one last point:

*God transcends his own transcendence.*

St. Dionysius, in the height of what may be the height of the Orthodox Church's works of theology on the transcendence of God, wrote:

The fact is that the more we take flight upward, the more our words are confined to the ideas we are capable of forming; so that now as we plunge into that darkness which is beyond intellect, we shall find ourselves not simply running short of words but actually speechless and unknowing...

Properly speaking, there is a dual aspect to suffering. One is to endure sorrow; another is to be pushed from without and moved. But both are present in Vince's story; he is pushed out to where he would not go. He never so far as I remember quotes King David in the Absalomic bereavement, "[O my son Absalom, my son, my son Absalom! would God I had died for thee, O Absalom, my son, my son!](#)" But unless one is to do extreme violence to the spirit of Homan's writing, it is clear that he would have willingly died in place of his son in a heartbeat. And his suffering has both aspects; he would not have endured sorrow unless he were pushed out as he was.

I will not treat here the dimension of enduring sorrow, but suffering in the sense of compulsion from

So this is what we say. The Cause of all is above all and is not inexistent, lifeless, speechless, mindless. It is not a material body, and hence has neither shape nor form, quality, quantity, or weight. It is not in any place and can neither be seen nor be touched. It is neither perceived nor is he perceptible. It suffers neither disorder nor disturbance and is overwhelmed by no earthly passion. It is not powerless and subject to the disturbances caused by sense perception. It endures no deprivation of light. It passes through no change, decay, division, loss, no ebb and flow, nothing of which the senses may be aware. None of all this can either be identified with it nor attributed to it.

of compulsion from outside cannot belong to God. If the infinite God may suffer, and he does suffer, it is something other, something deeper, than being pushed around as a finite creature is pushed around.

Again, as we climb higher we say this. It is not soul or mind, nor does It possess imagination, conviction, speech, or understanding. Nor is It speech per se, understanding per se. It cannot be spoken of and It cannot be grasped by understanding. It is not number or order, greatness or smallness, equality or inequality, similarity or dissimilarity. It is not immovable, moving, or at rest. It has no power, It is not power, nor is It light. It does not live nor is It life. It is not a substance, nor is It eternity or time. It cannot be grasped by the understanding since It is neither knowledge nor truth. It is not kingship. It is not wisdom. It is neither one nor oneness, divinity nor goodness. Nor is It a spirit, in the sense in which we understand that term. It is not sonship or fatherhood and It is nothing known to us or to any other being. It falls neither within the predicate of nonbeing nor of being. Existing beings do not know It as It actually is and It does not know them as they are. There is no speaking of It, nor name nor knowledge of It. Darkness and light, error and truth—It is none of these. It is beyond assertion and denial. We make assertions and denials of what is next to It, but never of It, for It is both beyond every assertion, being the perfect and unique cause of all things, and, by virtue of his preeminently simple and absolute nature, free of every limitation, beyond every limitation; It is also beyond every denial.

And yet there is one point further: God transcends his own transcendence.

*God is love.*

[In him we live, and move, and have our being.](#)

The same God who is beyond the farthest stars is infinitesimally near.

We live by feeding off of the energies of God. It may be mediated by food and drink, but it is simply and ultimately God who sustains us.

The fact that God is Father *and not Mother* matters less than you think. Or rather, it does not hurt things. It is transcended.

Again to return to C.S. Lewis, "Prayer does not change God. Prayer changes me." But the divine Transcendence of God is so great that *the fact that prayer does not change God, matters less than you might think.* Or rather, it does not hurt things. It is transcended. God is Transcendent, and prayer is powerful; it is among the most powerful things we can do. And the fact that we cannot change God's mind detracts **nothing** from the power of prayer. Indeed, it is better for us that we cannot change God's mind, as it is better for us that The Greatest God That Can Possibly Be is untouched by how we would solve problems.

And the fact that God cannot suffer in himself matters less than you think. Or rather, it does not hurt things. It is transcended. Every earthly suffering borne out of love for another who suffers is a shadow of the God who is beyond suffering and yet transcends this to choose to suffer in his Creation.

In his book, Vince spoke of a wound rubbed raw, in people telling him, "I know just how you feel." Now a tangent might speak of genderlects and explain that this is a helpful assurance when speaking to a woman but not to a man; here the Golden Rule needs a little adjustment in that it is wiser not to give a member of the opposite sex the exact same form of encouragement you would best respond to. But this sensitivity was not present, and people assured him that because of some bereavement they'd experienced, "I know just how you feel." (The most offensive example was the loss of a pet.) I've lost both grandparents on my mother's side, and while there was grief—my grandmother's death came as a shock even as it was expected—it's not just sensitivity of "He's said he doesn't like being told others know just how you feel" that stops me from saying that I know just how he feels. I've experienced bereavements that cause pain that fades after time. Some of them hurt much worse than my

grandmother's death. But the death of a child can cause lifelong pain, and his experience has been one of unending pain that in one sense improves by being accompanied by hope as time goes on, but in another sense never stops stinging. Thanks be to God, my pains have not been like that. But I would say this: "God knows just how you feel. He understands you perfectly. He understands your sorrows, and every nook and cranny of your grief. Every regret you feel, he sees from the inside. And he is at work. *Suffering is God's workshop*. And he is working on you with eternal intentions. Perhaps he does not suffer in himself. He has chosen to enter your sufferings. He understands and loves you better than if he did." And I would hesitate to say this, because the greatest insensitivity to his nerves has been to calmly say, "I know just how you feel," and speaking personally as a cancer survivor, when I met with my Uncle Mark who had travelled for cancer treatment, he voiced pain at people saying, "I know just how you feel." I didn't offer him any such assurance, even though I possibly did know something like what he felt. But someone who knows just how you feel may connect without saying, "I know just how you feel;" if I did understand my uncle's experience, he picked it up without my making the claim. But with all due respect to a wound rubbed raw, God knows just how the pastor feels, and does this no less because he does not suffer himself.

And here is where the God who is beyond suffering, who suffers because he transcends his own transcendence, has most to give us. In Isaiah, we are told, [For my thoughts are not your thoughts, neither are your ways my ways, saith the LORD. For as the heavens are higher than the earth, so are my ways higher than your ways, and my thoughts than your thoughts.](#) We are dealing, with so to speak, the ultimate benevolent alien Intelligence. (No, not crop circles. Crop circles are toxic and something to turn your back on if you want any spiritual or mental health.) The alien Intelligence, as it were, speaks our language, but is beyond the "abstractions of half a million years of wildly alien culture" found in [Robert A. Heinlein's \*Stranger in a Strange Land\*](#), a perennially interesting cult classic that has never gone out of print. The premise of the book is that a rocket ship travels to Mars, a baby boy is born before all adults die or are killed, and the boy is raised in the wisdom and spiritual discipline of Martian culture, and then brought "back" as a young "man" to earth. ("Smith... is... not... a... *man*." - "Huh? Explain yourself,

Captain." - "Smith is an intelligent creature with the ancestry of a man, but he is more Martian than man. Until we came along he had never laid eyes on a man."...) Amidst unfolding space opera political drama, Michael struggles to adapt to survive, has to struggle terribly to adjust to human culture and human language, then becomes adept in both human culture and language, which he fuses with the treasure of Martian culture and becomes a Messiah-figure, bringing to mankind the wisdom and spiritual disciplines of Martian culture, making a quite literal "best of both worlds" that offers a profound improvement to human life. (At least that's a sanitized summary of the story.)

I mention [Stranger](#) because something like this happens in the Bible and God's drama with the world, and I wrote, [Looking at Stranger in a Strange Land as a Modern Christological Heresy](#), basically because its attraction is a theme more interestingly engaged in the Bible itself. Not, specifically, that [Stranger](#) is a Christological heresy in the sense of being a flawed attempt at Christology someone worked out; Charles Taylor's [Sources of the Self](#) comments that one scholar had made a *perceptive* study of Martin Luther's momentous crisis of faith in light of the psychological literature of modern midlife identity crises, even though Martin Luther probably would not have understood the comparison and probably would have found it reprehensible if he *had* understood it. In like fashion, Heinlein cannot properly be considered someone who was trying to get Christology right and failed, but his book can be studied in light of the various Christologies of which the Church has said, "This is inadequate to the Maximum Christ... That is inadequate to the Maximum Christ... That one, too, is inadequate to the Maximum Christ..."

I would like to close with the letter I wrote Vince after a bit of time to recoil from the force and power of [A Foot in Two Worlds](#). I didn't mention that he had placed my quotation in the most honoring place it could have been, even though I was deeply grateful. I believe it shows something of the Alien Intelligence Who Loves Us, The Greatest God That Could Be, the God Who Cannot Suffer In Himself But Suffers In Us, Embracing Our Suffering, the God Who Is Greater Than Can Be Thought:

Vince, I am in awe of your work of honesty and practical theology. It's been a while since I have read something of this caliber in what I read.

I was wondering if I could give an appropriate response and I

I was wondering if I could give an appropriate response, and I think I will send you an email today. The book you wrote was of unexpected pain; this is of unexpected joy. I don't want to say this is as good as your son's death was bad, when such is manifestly and obviously not the case. But surprises come, and I started reading your book in suffering without hope of release, and to my surprise this is what I have to offer you in my hands in response to what you had to offer from your hands.

I pray that God may bless you.

---

One of my doctors referred me to a sleep center, which did some studies that seemed to me at first to be a simple disappointment. They didn't seem to offer hope that I could be more awake, when I had decreasing energy during the day.

Then I met with one of their specialists, and he basically unravelled the puzzle reflected by my habits and medications. There had been an earlier conversation on a list when I mentioned nausea, in light of preceding history.

There had been an ill-advised medication switch by one doctor that resulted in a long-term underdose that almost killed me: I experienced nausea that built over months and led to me going without food or water for two days before I figured out that the approved underdose was making nausea. I asked generalists and specialists for help with nausea and the only thing I found was that if I increased my dosage of some medications [again], I could stave off nausea [for a little longer].

And in light of this conversation, it was singularly helpful that a friend pointed out that ginger is a potent anti-nauseant. This was much more helpful than the doctor's "I dunno", or a pharmacist informing me that non-prescription anti-nauseants boil down to sugar. (I was steered to a chemically engineered concoction of table sugar, [pharmaceutical grade] corn syrup, etc. and decided that if sugar was the only game in town besides a prescription anti-nauseant, which I had been refused, I'd rather have real honey than corn syrup.)

And the specialist I spoke with today explained to me why I felt so tired: the controlled sleep medicine I was given was one that has over 50% still remain in your system 24 hours later, so yes, he saw reason for my trouble escaping sleepiness. He wants to work with me to ratchet down the [prescription] drug complex I have after all my adventures, so I am really at doses that are medically necessary and not at doses that happen to include nausea control.

He wants me to do that, but first I need to make a preliminary adjustment for two weeks: get down to my normal 10 hours of sleep. (I legitimately need more sleep than most people, but not as much as I've been getting.)

I began to try to think about what to do. Jobhunting has had me a little more active, but it has its lulls. Then I remembered that I know little of Dickens, who has been described to me as "the primer for character and plot." Once I finish the piece I'm reading, the humanness of Dickens lies open. And I may ask on social media for reading recommendations, and read and reread the Fathers. Perhaps I will need breaks, but it looks like something to use the time constructively and help me grow as an author and as a man. I want to give my jobhunting first attention, but of all jobhunts this is the one that I would be most happy with my being slow at. I am not in my best state now, and up to a point the longer I wait the better I may be prepared to work. And there are other things I can do; *pro bono* technical work, maybe, and walking.

I feel like I've crossed a threshold. I don't expect any sudden changes of any sort, but vistas lie open. Thanks to Cynthia, the friend mentioned on this mailing list, I have a "nearly side effect free" way of controlling nausea; and now thanks to this I hope for a slow but effective process of waking up from my present state of being medicated to narcosis, and getting back to the Christos Jonathan you knew earlier.

This piece, that you are reading, is the first work of theology I have been able to create in months. [My site's list of recent postings](#) has three items from previous months that were posted out of something older, but this is the first blade of grass showing after a thaw.

# **Dissent: Lessons From Being an Orthodox Theology Student at a Catholic University**

## **Where to take our bearings: A telling starting point**

I enrolled in a Ph.D. program in historical theology at a Catholic university. Part of this program was a seminar with various readings to help us get oriented to what history is and how we should approach it. One of the first readings, possibly the first, was Stafford Poole's [History versus Juan Diego](#) (PDF).

The article had the ring of truth as far as the story it sketched out, but it is quite a grave matter to tell budding historical theologians that this is the sort of thing that should orient their study of history and historical theology.

The article raises grave concerns about the very existence of a major figure in Mexican piety and nationalism; the comparable equivalent as far as U.S. nationalism to go would be to uncover good reasons why we should believe that neither Thomas Jefferson nor Benjamin Franklin ever

existed, and the only "evidence" that anyone believed in either of these men before the Civil War was a complete forgery. The lay faithful and clergy who disagreed with the author come across like the Three Stooges.

The article may have been appropriate in itself, and in this case the historian may have legitimately been a figure like the little boy who saw that the emperor had no clothes. But to enshrine this article in a seminar meant to give an orientation to history is another matter entirely, and paints the inspiring, romantic image of the heroic, noble historian who delves past popular piety and the decisions of clergy up to and including the Pope, heroically rips apart a cherished fixture that neither the faithful nor Church officials are noble or brave enough to question, and his trust is shamefully betrayed by the Vatican.

Making *this* a paradigm example of how a historian should interact with Church hierarchy and popular piety is like holding up, so people can get their bearings, a singularly improbable story about how someone, who was drunk, blindly shot a gun into a building and hit a fire extinguisher, putting out a deadly fire and saving several lives. The problem is not so much the original event, but the fact that the extremely unusual story is being used to give the impression that it is a good idea to get drunk and randomly shoot guns around in a city.

Even aside from classes taught by Catholic dissidents, the question of dissent loomed large in a class on "The Profession of Faith," in which Rome asked some professors to be basically faithful to Catholic teaching. One of the questions was: If a Catholic scholar through research comes to a conclusion that seems to contradict what the Church teaches, *and* further communication and research clarifies that there is an irreconcilable difference between the scholar's findings and the Church officials' position, what should the scholar do? In the context of the class, with the examples and distinctions we had been asked to consider, this almost meant, "If this happens, how much pressure may the scholar appropriately use to bring the Catholic Church to accept his research, and what kinds of pressure are or are not appropriate?" And the professor was very gracious when I offered a different answer to the question of what a scholar should do: "It should be handled pastorally."

My response was received very kindly, and welcomed as a breath of fresh air, but it was completely different from anything I had heard in the class up to that point. In the midst of discussing what scholars should do

if their research collides with the Church, no one seemed to even consider the possibility that the discrepancy could be handled pastorally on the part of the researcher.

## Thinking in terms of "private doubts"

There is a big difference between having a doubt and pressuring the Church to agree with you, and having a doubt which was handled pastorally. I remember one conversation with my godfather, who was complaining about people broadcasting their doubts in the fashion of a dissident theologian, and he saw this as a major problem. But he liked what I suggested about "private doubts," meaning doubts that were handled pastorally and privately, struggled with, and brought to confession.

As far as "private doubt" is concerned, if you need to privately struggle to believe the deity of Christ, or the Church's teaching on some aspect of sexuality, *fine*. It may not exactly be *good*, but people bring all kinds of sin to confession, and if an Orthodox Christian has doubts in light of scholarly study, this is no more unforgivable than any other sin that gets obliterated in confession. Doubts may be unfortunate, but if these doubts are handled as *private* doubts and dealt with pastorally, this is not the world's biggest problem.

This point is why I was somewhat puzzled at journalists making a big to-do over the public announcement that Mother Theresa had painful doubts about God's existence. (Some asked if she was really a crypto-atheist.) I was underwhelmed at the revelation and wanted to ask, "So?!?" We might have sympathy for her difficult spiritual struggle, but she evidently treated her doubts as *private* doubts, brought them to confession, and still served God in love to her neighbor. That is about as much as one can ask.

## **Are scholars' difficulties really *that* different?**

This is related to why I am a bit bothered when someone who reads the Bible devotionally shows respect to a scholar by saying that his own Bible study is just lightweight and insignificant, but the scholar with access to historical sources is doing the real, serious Bible study. It may be great if they can be humble and out of their humility respect the work of scholars, but the Bible is given by God for devotional use and it is backwards to say that the devout layman reading the Bible is making a flimsy and insubstantial study next to the serious work of scholars. I've seen a lot of methodical scholarship that is not nearly as interesting as the devotional reading of common people, and in theology it is simply not true that scholarship is the industrial strength tool to really understand things.

I know that it may appear plausible, even obvious, to place scholarship in a separate category as far as doubt and dissent goes from doubts among the rest of the faithful. But my own experience casts doubt on this. I may have seen liberal Catholics doubting the Vatican's condemnation of contraception. I do not remember if I have ever read a dissident who tried to fairly understand theological and historical sources and come to their dissident position even though they tried very hard to give their Church's official position the benefit of the doubt. The invariable trend is to write something that sounds like people who want contraception for the same reason most moderns want contraception, and then shanghai whatever academic resources they can force to back them up.

## **Catholics do not have a monopoly on wrongful academic dissent**

If you're Orthodox, are you tempted to say, "Duh, you're talking about Catholic dissidents! It is the sworn duty of His Majesty's Loyal Opposition to oppose, and you can count on His Holiness's Disloyal Opposition to at least do *that* much. But Orthodoxy has none of those problems"?

Don't.

Almost every issue described above with Catholic dissidents is also something I've seen in Orthodoxy, perhaps on a smaller scale. The biggest thing I remember about one Orthodox scholar's lecturing is the consistent meta-message, never put in so many words, that the way we should relate to the ancient works of holy Fathers is ultimately with haughtiness and scorn, as *we* could unmask what the texts *really* were like. Nor is it just this one professor. If, in our age, humanities scholars rehabilitate figures like the Marquis de Sade, and some academic theologians rehabilitate Arius and Nestorius, then sure enough, Orthodox scholars, who are not *exactly* free to rehabilitate heretics, at least rehabilitate the much-maligned Augustine. The list goes on.

There may be a place for scholarship. But whatever that place may be, it is not a reason to stop handling difficulties pastorally. I know that I have, in my research, turned up stuff that appeared to be a reason to impose a significant change. This has happened more than once, and sometimes I was wrong. I once heard an Orthodox bishop give advice to a newly-ordained priest that he should not set about agendas for change in his parish-to-be, even for a pure and honorable purpose that is unquestionably right. That is to say that a priest can be right about something with respect to a parish under his care, and it is not his place

to whip it into shape. And if it is not the place of clergy in authority to whip a parish into shape, still less is it the duty of researchers to apply political force to straighten out a benighted hierarchy who don't see things their way.

## But what if you are right?

But what if you're right? And your words are not heeded? Then there may be sin in the picture, but *the sin does not belong to you*. St. Paul, at the end of his life, had greater achievements than one would expect of a Nobel Prize laureate. He could have written to St. Timothy, "*Veni, vidi, vici!*" "I came, I saw, I conquered!" But what he wrote instead was, "I have fought a good fight, I have finished my race, I have kept the faith" ([II Tim 4:7](#)): he did not say, "I achieved," but only, "I was faithful," and in our life of faith it is not our responsibility to achieve, but only to be faithful.

**But what if things are really,  
*really* bad?**

There is a profound difference between Dante and Luther, to give a Western example, and it is not really which centuries they lived in: both lived in troubled times where there were major problems in the Roman Church. Dante and Luther alike were absolutely incensed at abuses they knew full well, and one surprise to naive Protestants first reading the *Commedia* is that Dante placed the Pope in Hell and seemed to treat the Pope's very name as an abomination. The difference between Dante and Luther is this: Dante remained to his dying day a loyal son of the Roman Church, but Luther took matters into his own hands—and created problems that are with us to this day.

## True discipleship

What we should aspire to is discipleship: sitting at the feet of the Lord, the Church, the Apostles, the Fathers, the clergy, and the faithful. The academic approach that is called "critical" may be enough to grasp logic, but it utterly fails to grasp the Logos: what makes a theologian and a teacher is not being critical *par excellence* but being a disciple *par excellence*. The paradigm example is not "...the inspiring, romantic image of the heroic, noble historian who delves past popular piety and the decisions of clergy up to and including the Pope, heroically rips apart a cherished fixture that neither the faithful nor Church officials are noble or brave enough to question, and his trust is shamefully betrayed by the Vatican." It is rather everything that such a scholar would seek to push past.

Perhaps I am pushing my own romantic image and ripping up cherished fixtures of my own. But to an interlocutor concerned about irony, I would not deny that I am pushing a romantic image, but rather I would suggest that I am pushing an image that is worth pushing: that of discipleship, that of sitting at the Lord's feet, that of divine sonship, that of being a servant at the Lord's disposal, that of living the divine Life. It is not the knowledge of the Enlightenment's version of Reason, but a knowledge that runs deep as the Song of Songs: the knowing that drinks and the drinking that knows.

## A practical example

Let me give one illustration from my own life. Even from very early on, I remember the local priest telling me that, contrary to the prohibition of contraception I expected, the Orthodox Church holds that it can be allowed or disallowed by a couple's priest after consultation, that it was not permissible to decide not to have children altogether, and the Orthodox Church has never spoken beyond that. I submitted then to Orthodoxy and accepted what he said. Then, later on, I found a really nasty surprise: despite ancient Orthodox condemnations of contraception, a spin-doctoring doozy of an article had apparently been taken simply as a straightforward account Orthodox teaching. And I wrote [Orthodoxy, Contraception, and Spin Doctoring: A Look at an Influential and Disturbing Article](#), and apart from showing it to an Orthodox priest or two and some trusted faithful, kept it off the record for a long time. And then, after a long time, I published it on [Jonathan's Corner](#), and later, after publishing it, found that I fit in as part of a quite broad consensus on an excellent online Orthodox forum.

What would I do differently if I had to do it over again? The answer is that I probably published my article too quickly: however important the issue may be, I might have done well to wait until later on. But I do not regret, as I was moving towards Orthodoxy, accepting the priest's word for what Orthodoxy taught, even though something about it seemed wrong at the time. Nor do I regret sitting on my writeup and do nothing with it for a long time, besides bring it up with a few people off the record. I believe it is an important issue (and anything but a matter of correctness for the sake of correctness: [contraception bears some nasty hidden price tags](#)), and that discipleship is more important, so that it is a fundamental error to let My Important Issue trump living and acting as a disciple. Even if I were right and the Church leadership had responded

sinfully and wrongly, the sin would belong to them, not me: my concern and duty is discipleship. It would be sin for me to decide it was my place to whip the Orthodox Church into shape, even if I happened to be right about what I thought of as the only issue!

(And there have been other, more embarrassing instances when I thought I could improve things and guess what? I was wrong.)

**Scholarship may be useful—  
but it *cannot* replace  
discipleship**

Scholarship and discipleship can be found together: some excellent theology has been written by scholars and in an academic context. However, genuine theology is theology because it comes from discipleship rather than scholarly rigor. Even the more academic examples of good theology are good by virtue of discipleship: to ask the scholarly training shared by Christian and anti-Christian scholars alike to power the movement of good theology is like asking a computer with a word processor to be the decisive force in writing a good novel. A word processor is a useful tool and perhaps not wisely ignored: but do not bark up the wrong tree by asking it to make someone a novelist, and do not bark up the wrong tree to ask scholarship to make someone a theologian.

For a theologian to push an agenda to improve the Church makes sense if you think theology falls under the heading of scholarship. But once you understand theology as a flower of discipleship, the picture starts to look quite different.

Theology in its deepest sense cannot be held by books at all: it is contemplation and the flower and the fruit of discipleship. But even for those of us who may never climb so high, the sort of theology one can write down is a flower and a fruit of discipleship. And it seems that academic research is rarely allowed to veto whatever orients a person's life: conservative and liberal alike go to the sources and return with their beliefs confirmed. It takes something fundamentally vaster—living discipleship in the Church—to unlock the heart of theology.

*Let us be disciples!*

# Doxology

How shall I praise thee, O Lord?  
For naught that I might say,  
Nor aught that I may do,  
Compareth to thy worth.  
Thou art the Father for whom every fatherhood in Heaven and on earth is  
named,  
The Glory for whom all glory is named,  
The Treasure for whom treasures are named,  
The Light for whom all light is named,  
The Love for whom all love is named,  
The Eternal by whom all may glimpse eternity,  
The Being by whom all beings exist,  
יהוה  
O ΩN.  
The King of Kings and Lord of Lords,  
Who art eternally praised,  
Who art all that thou canst be,  
Greater than aught else that may be thought,  
Greater than can be thought.  
In thee is light,  
In thee is honour,  
In thee is mercy,  
In thee is wisdom, and praise, and every good thing.  
For good itself is named after thee,  
God immeasurable, immortal, eternal, ever glorious, and humble.  
What mighteth compare to thee?  
What praise equalleth thee?

If I be fearfully and wonderfully made,  
Only can it be,  
Wherewith thou art fearful and wonderful,  
And ten thousand things besides,  
Thou who art One,  
Eternally beyond time,  
So wholly One,  
That thou mayest be called infinite,  
Timeless beyond time thou art,  
The One who is greater than infinity art thou.  
Father, Son, and Holy Spirit,  
The Three who are One,  
No more bound by numbers than by word,  
And yet the Son is called Ο ΛΟΓΟΣ,  
The Word,  
Divine ordering Reason,  
Eternal Light and Cosmic Word,  
Way pre-eminent of all things,  
Beyond all, and infinitesimally close,  
Thou transcendest transcendence itself,  
The Creator entered into his Creation,  
Sharing with us humble glory,  
Lowered by love,  
Raised to the highest,  
The Suffering Servant known,  
The King of Glory,  
Ο ΩΝ.

What tongue mighteth sing of thee?  
What noetic heart mighteth know thee,  
With the knowledge that drinketh,  
The drinking that knoweth,  
Of the νοϋς,  
The loving, enlightened spiritual eye,  
By which we may share the knowing,  
Of divinised men joining rank on rank of angels.

Thou art,  
The Hidden Transcendent God who transcendest transcendence itself,  
The One God who transfiguratest Creation

THE ONE GOD WHO TRANSFIGURED CREATION,  
The Son of God became a Man that men might become the sons of God,  
The divine became man that man might become divine.

Beyond measure is thy glory,  
The weight of thy power transcendeth,  
Thy power of thine all-surpassing authority bespeaketh,  
And yet art thou,  
Not in fire, not earthquake,  
Not wind great as maelstrom,  
But in soft gentle whisper,  
Thy prophets wait upon thee,  
For thy silence is more deafening than thunder,  
Thine weakness stronger than the strength of men,  
Thy humility surpassingly far exceedeth men's covetous thirst for glory,  
Thou who hidst in a manger,  
Treasure vaster than the Heavens,  
And who offerest us glory,  
In those things of our lives,  
That seem humble to us,  
As a manger rude in a cavern stable.

Thou Christ God, manifest among Creation,  
Vine, lamb, and our daily bread,  
Tabernacled among us who may taste thy glory,  
Art come the priest on high to offer thy Creation up into Heaven,  
Sanctified,  
Transfigured,  
Deified.

Wert thou a lesser god,  
Numerically one as a creature is one,  
Only one by an accident,  
Naught more,  
Then thou couldst not deify thine own creation,  
Whilst remaining the only one god.

But thou art beyond all thought,  
All word, all being,  
We may say that thou existest,  
But then we must say,  
Thou art, I am not.

And if we say that we exist,  
It is inadequate to say that thou existest,  
For thou art the source of all being,  
And beyond our being;  
Thou art the source of all mind, wisdom, and reason,  
Yet it is a fundamental error to imagine thee,  
To think and reason in the mode of mankind.  
Thou art not one god because there happeneth not more,  
Thou art The One God because there mighteth not be another beside  
thee.

Thus thou spakest to Moses,  
Thou shalt have no other gods before me.  
Which is to say,  
Thou shalt admit no other gods to my presence.

And there *can* be no other god beside thee,  
So deep and full is this truth,  
That thy Trinity mighteth take naught from thine Oneness,  
Nor could it be another alongside thy divine Oneness,  
If this God became man,  
That man become god.

Great art thou,  
Greater than aught that can be thought,  
And thus dealest thou,  
With thy Creation.

For thou camest into the world,  
O Christ,  
Thy glory veiled,  
But a few could see thy glory,  
In a seed.

But thou returnest soon,  
In years, or centuries, or ages untold,  
A day or a thousand years, soon,  
Then a seed no more.  
None shall escape seeing you,  
Not an angel choir to shepherds alone,  
But rank on rank of angel host.  
Every eye shall see thee,  
And they also which pierced thee

And they also which pierced thee,  
Thou camest and a few knees bowed,  
Thou wilt return,  
And every knee shall bow,  
And every tongue shall confess,  
Jesus Christ is Lord,  
To the glory of God the Father,  
As the Father triumphs in the Son.

Who mighteth tell of thy glory, thy might?  
We hope for Heaven yet,  
Yet the Heavens cannot contain thee.  
Great art O ΩN,  
And greatly to be praised.  
Thou art awesome beyond all gods,  
Who sayest,  
Wound not my christs.  
For the Son of God became the Son of Man,  
That the sons of man might become the sons of God,  
And the divine image,  
The ancient and glorious foundation,  
And radix of mankind,  
Be transfigured,  
Into the likeness of Christ,  
And shine with uncreated Light,  
The glory of God shining through his sons.

Let our spiritual eye be ever transfixed upon thine eternal radiant  
glory,  
Our hearts ever seeking thy luminous splendour,  
Ever questing,  
Ever sated,  
Slaked by the greatest of draughts,  
Which inflameth thirst.

Glorified art thou,  
In all ages,  
In every age,  
Thy soft, gentle whisper,  
Speaking life,  
In every here and now,

And today.

Let us give our lives,  
To thine all-surpassing greatness,  
From this day,  
From this hour,  
Henceforth and forevermore.

Αμην,  
So be it. Amen.

# Do We Have Rights?

As we [Paul and Silas] were going to the place of prayer, we were met by a slave girl who had a spirit of divination and brought her owners much gain by soothsaying. She followed Paul and us, crying, "These men are servants of the Most High God, who proclaim to you the way of salvation." And this she did for many days. But Paul was annoyed, and turned and said to the spirit, "I charge you in the name of Jesus Christ to come out of her." And it came out that very hour.

But when her owners saw that their hope of gain was gone, they seized Paul and Silas and dragged them into the market place before the rulers; and when they had brought them to the magistrates they said, "These men are Jews and they are disturbing our city. They advocate customs which it is not lawful for us Romans to accept or practice."

The crowd joined in attacking them; and the magistrates tore the garments off them and gave orders to beat them with rods. And when they had inflicted many blows upon them, they threw them into prison, charging the jailer to keep them safely. Having received this charge, he put them into the inner prison and fastened their feet in the stocks.

But about midnight Paul and Silas were praying and singing hymns to God, and the prisoners were listening to them, and suddenly there was a great earthquake, so that the foundations of the prison were shaken; and immediately all the doors were opened and every one's fetters were unfastened. When the jailer woke and saw that the prison doors were open, he drew his sword and was about to kill himself, supposing that the prisoners had escaped. But Paul cried with a loud voice, "Do not harm yourself, for we are all here."

And he called for lights and rushed in, and trembling with fear he

And he called for lights and rushed in, and trembling with fear he fell down before Paul and Silas, and brought them out and said, "Men, what must I do to be saved?"

And they said, "Believe in the Lord Jesus, and you will be saved, you and your household." And they spoke the word of the Lord to him and to all that were in his house. And he took them the same hour of the night, and washed their wounds, and he was baptized at once, with all his family. Then he brought them up into his house, and set food before them; and he rejoiced with all his household that he had believed in God.

#### Acts 16:16-34, RSV

As he [Jesus] passed by, he saw a man blind from his birth. And his disciples asked him, "Rabbi, who sinned, this man or his parents, that he was born blind?"

Jesus answered, "It was not that this man sinned, or his parents, but that the works of God might be made manifest in him. We must work the works of him who sent me, while it is day; night comes, when no one can work. As long as I am in the world, I am the light of the world."

As he said this, he spat on the ground and made clay of the spittle and anointed the man's eyes with the clay, saying to him, "Go, wash in the pool of Silo'am" (which means Sent). So he went and washed and came back seeing.

The neighbors and those who had seen him before as a beggar, said, "Is not this the man who used to sit and beg?" Some said, "It is he"; others said, "No, but he is like him." He said, "I am the man."

They said to him, "Then how were your eyes opened?"

He answered, "The man called Jesus made clay and anointed my eyes and said to me, 'Go to Silo'am and wash'; so I went and washed and received my sight."

They said to him, "Where is he?" He said, "I do not know."

They brought to the Pharisees the man who had formerly been blind. Now it was a sabbath day when Jesus made the clay and opened his eyes. The Pharisees again asked him how he had received his sight. And he said to them, "He put clay on my eyes, and I washed, and I see."

Some of the Pharisees said, "This man is not from God, for he does not keep the sabbath." But others said, "How can a man who is a sinner do such signs?" There was a division among them.

So they again said to the blind man, "What do you say about him, since he has opened your eyes?" He said, "He is a prophet."

The Jews did not believe that he had been blind and had received his sight, until they called the parents of the man who had received his sight, and asked them, "Is this your son, who you say was born blind? How then does he now see?"

His parents answered, "We know that this is our son, and that he was born blind; but how he now sees we do not know, nor do we know who opened his eyes. Ask him; he is of age, he will speak for himself." His parents said this because they feared the Jews, for the Jews had already agreed that if any one should confess him to be Christ, he was to be put out of the synagogue. Therefore his parents said, "He is of age, ask him."

So for the second time they called the man who had been blind, and said to him, "Give God the praise; we know that this man is a sinner."

He answered, "Whether he is a sinner, I do not know; one thing I know, that though I was blind, now I see."

They said to him, "What did he do to you? How did he open your eyes?"

He answered them, "I have told you already, and you would not listen. Why do you want to hear it again? Do you too want to become his disciples?"

And they reviled him, saying, "You are his disciple, but we are disciples of Moses. We know that God has spoken to Moses, but as for this man, we do not know where he comes from."

The man answered, "Why, this is a marvel! You do not know where he comes from, and yet he opened my eyes. We know that God does not listen to sinners, but if any one is a worshiper of God and does his will, God listens to him. Never since the world began has it been heard that any one opened the eyes of a man born blind. If this man were not from God, he could do nothing."

They answered him, "You were born in utter sin, and would you teach us?" And they cast him out.

Jesus heard that they had cast him out, and having found him he

said, "Do you believe in the Son of man?"

He answered, "And who is he, sir, that I may believe in him?"

Jesus said to him, "You have seen him, and it is he who speaks to you."

He said, "Lord, I believe"; and he worshiped him.

### John 9:1-38, RSV

The Gospel today deals with physical blindness, but it is about much more than physical blindness. In this passage, the man who was blind from birth received his physical sight. That is an impressive gift, but there's more. The passage deals with the Pharisees' spiritual blindness, but the Church has chosen to end today's reading with the blind man saying, "Lord, I believe," and worshipping Christ. When he did this, the blind man demonstrated that he had gained something far more valuable than physical sight. He had gained spiritual sight. The Bible actually gives a few more chilling words about the Pharisee's spiritual blindness, but the Church, following the Spirit, is attentive to spiritual sight and ends its reading with the man demonstrating his spiritual sight by adoring Christ in worship.

What is spiritual sight? We see a glimmer of it in the passage from Acts, where we read something astonishing. We read that Paul and Silas were stripped, savagely beaten, and thrown into what was probably a dungeon. And how do they respond to their "reward" for a mighty good deed? Do they say, "Why me?" Do they rail at God and tell him he's doing a lousy job at being God? Do they sink into despair?

In fact none of these happen; they pray and sing to God. Like the man born blind, they turn to God in worship. As should we.

That is advanced spiritual sight. I'm not there yet and you're probably not there either. But let me suggest some basic spiritual sight: Next time someone cuts you off on the road and you almost have an accident, instead of fuming and maybe thinking of evil things to do the other driver, why don't you thank God?

What do you have to be thankful for? Well, for starters, your eyes work and so do your driver's reflexes, you have a car, and your brakes work, and probably your horn. And God just saved you from a nasty scrape that would have caused you trouble. Can't you be thankful for some of that?

SOME OF THAT.

In the West, we think in terms of rights. Almost all of the ancient world worked without our concept of rights. People then, and some people now, believed in things we should or should not do—we should love others and we shouldn't steal, cheat, or murder—but then there was a queer shift to people thinking "I have an entitlement to this." "This is something the universe owes me." Now we tend to have a long list of things that we're entitled to (or we think God, or the universe, or someone "owes me"), and if someone violates our rights, boy do we get mad.

But in fact God owes none of the things we take for granted. Not even our lives. One woman with breast cancer responded to what the women's breast cancer support group was named ("Why me?"), and suggested there should be a Christian support group for women with breast cancer called "Why not me?"

That isn't just a woman with a strong spirit speaking. That is the voice of spiritual sight. Spiritual sight recognizes that we have no right to things we take for granted. We have no right to exist, and God could have created us as rocks or fish, and that would have been generous. We have no right to be free of disease. If most of us see, that is God's generosity at work. He doesn't owe it to us. Those of us who live in the first world, with the first world's luxuries, do not have those luxuries as any sort of right.

I am thinking of one friend out of many who have been a blessing. I stop by his house, and he receives me hospitably. Usually he gives me a good conversation and I can hold his bunny Smudge on my lap and tell Smudge that my shirt is not edible. This is God's generosity and my friend's. Not one of these blessings is anything God owes me, or for that matter my friend owes me. Each visit is a gift.

It isn't just first world luxuries that none of us are entitled to. We have no right to live in a world where a sapphire sky is hung with a million constellations of diamonds. If there is a breathtaking night sky, God chose to create it in his goodness and generosity. Not only do I have no right to be a man instead of a butterfly or a bird (or to exist in the first place), I have no right to be in community with other people with friendships and family. God could have chosen to make me the only human in a lonely world. Instead, in his sovereignty, he chose to place me in a world of other people where his love would often come through them. I have no right to that. I'm not entitled to it. If I have friends and family,

that is because God has given me something better than I have any right to. God isn't concerned with giving me the paltry things I have a right to. He is generous, and gives all of us things that are better than our rights. We have no right to join the seraphim, cherubim, thrones, dominions, powers, authorities, principalities, archangels, and angels—rank upon rank of angels adoring God. Nor do we have any right to live in a world that is both spiritual and material, where God who gives us a house of worship to worship him in, also truly meets us as we work, garden, play, visit with our friends, and go about the business of being human.

Isn't it terrible if we don't have rights? It's not terrible at all. It means that instead of having a long list of things we take for granted as "Here's what God, or the universe, or somebody owes me," we are free not to take it for granted and to rejoice at God's generosity and recognize that everything we could take for granted, from our living bodies to the possessions God has given us to God placing us at a particular point in place in time and choosing a here and now for us, with our own cultures, friendships, languages, homelands, sights and sounds, so that we live as much in a particular here and now as Christ, to a world carpeted with life that includes three hundred and fifty thousand species of beetles, to the possibility of rights. Every single one of these is an opportunity to turn back in praise and worship God. It is an opportunity for joy, as we were created for worship and we find our fullest joy in worshipping God and thanking him. Would you rather live in a world where you only have some of the things that can be taken for granted, or in a world where God has created for you so many more blessings than he or anyone else owes you?

There is, actually, one thing that we have a right to, and it's a strange thing to have a right to. Hell. We have a right to go to Hell; we've earned a ticket to Hell with our sins, and we've earned it so completely that it cost God the death of his Son to let us choose anyone else. But Hell is not only a place that God casts people into; it is also where he leaves people, with infinite reluctance, after he has spent a lifetime telling people, "Let go of Hell. Let go of what you think you have a right to, and let me give you something better." Hell is the place God reluctantly leaves people when they tell him, "You can't take my rights away from me," and the gates of Hell are barred and bolted from the inside by people who will not open their hands to the Lord's grace. The Lord is gracious, and if we allow him, he will give us something infinitely better than our rights. He will give us Heaven itself and God himself and he will give us the real beginnings of

Heaven itself, and God himself, and he will give us the real beginnings of Heaven in this life. The good news of God is not that he gives us what we think we have a right to, but that he will pour out blessings that we will know we have no right to, and one of these blessings is spiritual sight that recognizes this cornucopia as an opportunity for joyful thanksgiving and worship.

When I was preparing this homily, there's one word in the Greek text that stood out to me because I didn't recognize it. When the blind man says that Christ must be from God and have healed him as a "worshiper of God," the word translated "worshiper of God" is *theosebes*, and it's a very rare word in the Orthodox Church's Greek Bible. Another form of the word appears in Acts but this is the only time this word appears in either the Gospels or the books John wrote. It is also rare in the Greek Old Testament, the Septuagint. It occurs only four times: once in IV Maccabees 15:28 where the mother of seven martyred sons sees past even her maternal love "because of faith in God" (15:24) and is called "the daughter of God-fearing [*theosebes*] Abraham," and three times in Job where the blameless Job is called a *theosebes*, or "worshiper of God." In Job, this word occurs once in the book's opening verse, then Job is twice called a "worshiper of God" by God himself. The Maccabees' mother is not even called *theosebes* herself, but "the daughter of *theosebes* Abraham."

What does this mean? I'm not sure what it all means, but John didn't use very many unusual words. Unlike several New Testament authors, he used simple language. In the Greek Old Testament, this word is reserved for special occasions, it seems to be a powerful word, and it always occurs in relation to innocent suffering. Job is the very image of innocent suffering and the Maccabees mother shows monumental resolve in the face of innocent suffering—the text is very clear about what it means for a mother to watch her sons be tortured to death. The Gospel passage is about innocent suffering as well as spiritual sight. When the blind man calls Christ a "worshiper of God," he is speaking about a man who would suffer torture for a miracle, before Paul and Silas, and this little story helps move the Gospel towards the passion. But Christ says that the blind man suffered innocently, and I'm not sure that we recognize all of what that meant.

People believed then, as many people believe now, that sickness is a punishment for sin. The question, "Who sinned? Who caused this man's

blindness?" was an obvious question to ask. And Jesus says explicitly that neither this man nor his parents sinned to bring on his blindness. Jesus, in other words, says that this man's suffering was innocent, and he was saying something shocking.

What does this have to do with spiritual sight?

Spiritual sight is not blind to evil. The Son of God came to destroy the Devil's work, and that includes sin, disease, and death. Sin, disease, and death are the work of the Devil. The woman who survived breast cancer who suggested there should be a Christian support group called "Why not me?" never suggested that cancer is a good thing, and would probably never tell a friend, "I wish you could have the sufferings of cancer." When Paul and Silas were beaten with rods, being spiritual didn't mean that they didn't feel pain. I believe the beatings hurt terribly. Sin is not good. Disease is not good. Death is not good. Spiritual sight neither ignores these things, nor pretends that they are blessings from God. Instead, God transforms them and makes them part of something larger. He transformed the suffering of Paul and Silas into a sharing of the sufferings of Christ, a sharing of the sufferings of Christ that is not only in the Bible but is written in Heaven. I've had sufferings that gave terrifying reality to what had always seemed a trite exaggeration that "Hell is a place you wouldn't wish on your worst enemy." My sufferings are something I wouldn't wish on my worst enemy, and it is terrifying to realize that Hell is worse. So why then is spiritual sight joyful?

C.S. Lewis in *The Great Divorce* describes a journey. This journey begins in an odd place, and one that is not terribly cheerful. Anyone can have anything physical he wants just by wishing, only it's not very good. The ever-expanding borders of this place are pushed out further and further as people flee from each other and try to get what they want.

A bus Driver takes anyone who wants into his bus, which ascends and ascends into a country that is painfully beautiful to look at, where not only are the colors bright and full but heavy, rich, and deep. It is painful to walk on the ground because the people who got off the bus are barely more than ghosts, devoid of weight and substance, and their feet are not real enough to bend the grass. This is in fact a trip from Hell to Heaven, where Hell is mediocre and insubstantial, and Heaven is real and hefty beyond measure, not only beautiful and good but colorful and rich and deep—and infinitely more real than Hell. One part that really struck me was that when Lewis's Heavenly guide (*George MacDonald*) explains why

was that when Lewis's heavenly guide (George MacDonald) explains why a woman in Heaven, whom MacDonald said had gone down as far as she could, did not go so far as descending to Hell:

"Look," he [MacDonald] said, and with the word he went down on his hands and knees. I did the same (how it hurt my knees!) and presently saw that he had plucked a blade of grass. Using its thin end as a pointer, he made me see, after I had looked very closely, a crack in the soil so small that I could not have identified it without his aid.

"I cannot be certain," he said, "that this is the crack ye came up through. But through a crack no bigger than that ye certainly came."

"But—but" I gasped with a feeling of bewilderment not unlike terror. "I saw an infinite abyss. And cliffs towering up and up. And then this country on top of the cliffs."

"Aye. But the voyage was not mere locomotion. That buss, and all you inside it, were increasing in size."

"Do you mean then that Hell—all that infinite empty town—is down some little crack like this?"

"Yes. All Hell is smaller than one pebble of your earthly world: but it is smaller than one atom of this world, the Real World. Look at yon butterfly. If it swallowed all Hell, Hell would not be big enough to do it any harm or have any taste."

"It seems big enough when you're in it, Sir."

"And yet all loneliness, angers, hatreds, envies and itchings that it contains, if rolled into one single experience and put into the scale against the least moment of the joy that is felt by the least in Heaven, would have no weight that could be registered at all. Bad cannot succeed even in being bad as truly as good is good."

Bad cannot succeed even in being bad as truly as good as good is good, and spiritual sight knows this. To have spiritual sight is not to close your eyes so tight they don't even see evil, but to let God open your eyes wider. Our eyes can never open wide enough to see God as he truly is, but God can open our eyes wide enough to see a lot. Why were Paul and Silas able to turn from being viciously beaten and imprisoned to singing and praying to God? For the same reason a butterfly from Heaven could swallow all of Hell without it even registering. In that image of Heaven, not just the saints but the very birds and butterflies could swallow up Hell. This is just an image; the Real Place, real Heaven, is far more

then. This is just an image, the real place, real heaven, is far more glorious.

Death is swallowed up in victory. Let us let spiritual blindness be swallowed up by spiritual sight that begins to see just how much God's generosity, grace, mercy, kindness, love, and 1001 other gifts we have to be thankful for. Let us worship God.

# A Dream of Light

You pull your arms to your side and glide through the water. On your left is a fountain of bubbles, upside down, beneath a waterfall; the bubbles shoot down and then cascade out and to the surface. To your right swims a school of colorful fish, red and blue with thin black stripes. The water is cool, and you can feel the currents gently pushing and pulling on your body. Ahead of you, seaweed above and long, bright green leaves below wave back and forth, flowing and bending. You pull your arms, again, with a powerful stroke which shoots you forward under the seaweed; your back feels cool in the shade. You kick, and you feel the warmth of the sun again, soaking in and through your skin and muscles. Bands of light dance on the sand beneath you, as the light is bent and turned by the waves.

There is a time of rest and stillness; all is at a deep and serene peace. The slow motion of the waves, the dancing lights below and above, the supple bending of the plants, all form part of a stillness. It is soothing, like the soft, smooth notes of a lullaby.

Your eyes slowly close, and you feel even more the warm sunlight, and the gentle caresses of the sea. And, in your rest, you become more aware of a silent presence. You were not unaware of it before, but you are more aware of it now. It is there:

Being.

Love.

Life.

Healing.

Calm.

Rest.

Reality.

Like a tree with water slowly flowing in through roots hidden deep

Like a tree with water slowly flowing in, through roots hidden deep within the earth, and filling it from the inside out, you abide in the presence. It is a moment spent, not in time, but in eternity.

You look out of the eternity; your eyes are now open because you have eternity in your heart and your heart in eternity. In the distance, you see dolphins; one of them turns to you, and begins to swim. The others are not far off.

It lets you pet its nose, and nestles against you. You grab onto its dorsal fin, and go speeding off together. The water rushes by at an exhilarating speed; the dolphin jumps out of the water, so that you see waves and sky for a brief moment before splashing through the surface.

The dolphins chase each other, and swim hither and thither, in and out from the shore. After they all seem exhausted, they swim more slowly, until at last you come to a lagoon.

In the center, you see a large mass; swimming closer, you see that it is a sunken ship. You find an opening; inside, all is dark, but you find a passageway.

After some turns, you come up in a different place. You come up through a fountain in a public garden; the bushes and ivy are a deep, rich shade of green, and sheets of water cascade down the yellowed marble of the fountain. It is ornately and intricately sculpted, with bas-relief scenes of a voyage.

As you study the pictures, day turns to night, and all that you see is bathed in moonlight. You are looking upon a statue: a delicate, slender, elfin nude, whose long hair cascades over her shoulders and about her body. She is reaching up to the sky, as if to touch the moon and stars. She is carved out of white marble, which looks pale blue, almost luminous, in the moonlight. It looks as if she was taken from the moon, and is rising up to touch it again.

The statue is on a tall pedestal of black marble. In the moonlight, the forest has a very deep color, a green that is almost blue or purple; the dark beauty of the night makes the statue seem almost radiant. Off in the distance, you hear a high, melancholy, lilting song; it is played on a harp and sung by a voice of silver. There is something haunting and yet elusive about the melody; it subtly tells of something wanted and searched for, yet not quite reached. And it is beautiful.

You sit, looking at the statue and listening to the song, for a time. They seem to suggest a riddle, a secret - but you know not what.

You walk along; fireflies begin to appear, and you can hear the sound of crickets chirping. There is a gentle breeze. The sky stands above like a high and faroff crystalline dome; the trees and grass below surround you, like little children who see a beloved elder coming, and run clamoring for a kiss. The grass is smooth and cool beneath your feet. There is a sweet, faint fragrance in the air, as of lilacs.

A round little girl, wandering through the forest, sees you and comes running. She is dark, with olive skin, and her black hair flares out behind her. She is wearing a dark green robe, the color of the forest, and her step is almost that of a dance - as if she is from a people where moving and dancing are not two different things. She is holding, in her hand, a simple bouquet of dandelions. "Look, look!" she says, "I have flowers!"

She jumps into your arms, welcoming you. Her touch is soft, and gentle. It is not near the softness of a grown woman; it has rather a ... simplicity. It is hard to find the right word. Then you recognize what it is. It has something of the carefree play of a child, but there is more than even abandon. She is holding you with complete trust. You do not doubt that she could fall asleep in your arms.

She begins to talk to you about many things. She talks about the forest, about people, about the stars, about God. After a time, you realize that she is not merely talking, but singing, as if the first words she heard were the words of a song. After another time, you realize that you have lost her words completely, and are entranced by the song. Presently she stops, and says, "Spin me! Spin me!"

Little children everywhere like to be held by the arms and swung around; this one is no exception. After you are both very dizzy, she takes you by the hand and begins, leading you along a path, to show you little details of the forest that you had never noticed before. Apart from the little details, there is something else which you begin to slowly see in the forest. The song by which she speaks, the dance by which she moves - and not just her, you do not doubt, but her people - seem to be echoed in the forest... and then you realize that rather they are echoes of the forest. Hearing, seeing, feeling that beauty from another person - you still do not doubt that they come from her, but they also help you to see what was always there but you had not noticed. As you walk along, you are lost in thoughts about the genius of all great artists... and begin to think about visiting an art gallery, not so that you can see what is in the gallery, but so that you can see what is not in the gallery.

that you can see what is not in the gallery.

The path widens out, around a shimmering pool. The golden flames of torches around the pool glimmer when reflected in the pool. There is singing - singing like that of the little girl, but the sound of a whole orchestra as next to the sound of a beginning flute. Men and women together pour fourth a rich harmony. The air is sweet with a delicate fragrance of incense; one of them brings you a cool wooden cup. Inside is a strawberry wine. It is sweet, and sour; the taste brings back memories of earliest childhood.

A circle forms among the people, then another, then another. Soon all of the people are spinning and weaving in a joyful dance. After a time, you realize that you are at the center; they are softly singing, "Welcome, Somebody," and listening intently. Arms and hands reach out, and sweep you into the dance. The dance is ordered, but also free; it draws you in, and, as you move, you feel that you can do no wrong.

How long the dance lasts, you do not know; still filled with its bliss, you find yourself sitting and talking with the people. One of them finds a soft seat of moss for you to sit on; another brings you a plum. Its taste is tart, and it has the texture that only a plum has — and, when you bite into it, you know that it was still on the tree when it was chosen.

The night winds on, and, after a time, you are led into a building woven out of living trees, with a bed of loam. Into it you sink; it is soft and deep...

You find yourself standing at the edge of a forest and a grassy plain. The mouth of a cave descends into the earth, and just before this is an old man sitting on a three-legged wooden stool. He is wearing a coarse grey-green robe, and has a long, flowing white beard. He is staring intently into the forest, with a concentration you have never seen before. It is like a gaze into a lover's eyes — nay, even deeper, a probe into the soul.

He shifts positions a few times, in his sitting, and at last stands up, takes the stool, and begins to walk towards the cavern. When he was looking into the forest, you were absorbed in watching him; now, you notice another man, a young one, approach the former.

"Is it Senex?"

"I am he."

"Senex, the great teacher?"

You see the old man's hand move to cover his mouth, but not quite quickly enough to conceal the faintest crack of a smile. The young man

stands attentively, waiting for words to come.

The old man's frame shakes once. A second passes, and then it shakes again and again. Then sounds the laughter that he had been attempting to conceal. Soon, the old man is convulsed with mirth, and making no attempt to conceal it.

After a while, almost doubled over with laughter, he begins to pull himself up. You can see his face from a different angle, and you see a merry twinkle in his eye. He places his arm over the young man's shoulder.

"Forgive me, brother, but it has been ages since anyone has addressed me as 'teacher' or 'great'. You cannot imagine how funny it sounds to me."

"Are you not Senex, who has traveled the seven seas, who has seen visions and been visited by angels, who has written treatises and instructed many?"

The man chuckles, and says, "Yes, I am all that, and much more. I am the image, likeness, and glory of God. I pray, and in my prayers I touch the stars and shake the foundations of the kingdom of Hell. I am a king and priest. I am a son of God. My name is written in the book of life. I am a god."

"Then why do you find it funny that I address you as 'great', or 'teacher'?"

"Because I am more than a great teacher, as are the children who dance through this field, as are you." Here the old man smiles at the young. "Come, now. Do you doubt that you are God's own son? What teaching, or miracles, or visions, or conquests, or exploits compare with that?"

"But if you are so great, why should you object to being called a great teacher? Surely the title is not false."

"My dear god - and now I am not addressing the Creator, but you yourself - what is wrong with the title is not that it says that I am a great teacher. I am. What is wrong is that the title implies that there are others who are not so great," and here the old man gave a great belly laugh, "when the truth of the matter is that the other people are so much more than a great teacher. I will not mind being called 'teacher' by you, if you agree to address everyone else as 'god' and 'goddess'. But if you will not call them 'god' and 'goddess', then simply call everyone 'brother' or 'sister'."

The young man stands in silent reflection for a time. "I come in search

The young man stands in silent reflection for a time. "I came in search of a man who could share with me profound wisdom; I see now that I have found him. So now I ask you: Give me a profound insight, that I may contemplate it for the rest of my life, and grow wise."

"Do you not know that God is love, that God loves mankind, that we have the new commandment to 'Love one another'?"

"All of this I have believed since I was a little boy."

"Then I give you one more lesson, to contemplate and learn for the rest of your life."

The young man listens, eager with expectation.

The old man bends down, plucks a blade of grass, and holds it in his outstretched hand.

The young man takes it, and waits for an explanation. When, after a time, the old man says nothing, he says, "This blade of grass is like the blade of a sword. Have you given this to me as a sign that I should contemplate spiritual warfare, and be ready with the sword of the Spirit?"

The old man says, "You should, but that is not why."

The young man thinks for a time, then says, "This grass is nourished by the sun, and so tells of it. Grass and sun exist as God's creation, and tell of him. Is this why you have given me the blade of grass?"

The old man says, "What you said is very true, but that is not why, either."

The young man says, "When Christ lived on earth, he lived as a carpenter, and observed and was surrounded by the birds of the air, the grass of the field, the lilies, and ten thousand other things. Have you given me this blade of grass to remind me of Christ's time on earth, or of his humanity, or that this is a place he passed by?"

The old man says, "You are still right, and you are still wrong."

The young man says, "Then what profound truth can you be teaching me? What secret key escapes my grass? I asked if you had given it to me as a symbol of a profound spiritual truth, and you said, 'no'. Then I asked you if you had given it to me that I might deduce by logic what it tells about God, and you still said, 'no'. Then, after that, I asked you if you had given it to me as a historical reminder of what has happened about blades of grass, and your answer is still the everchanging 'no'. What can I possibly be missing? What am I leaving out?"

The old man turns to face the young, and looks deep into his eyes. "This blade of grass I have given you," he said, "because it is a blade of

grass."

There is a look of puzzlement on the young man's face, which slowly melts into dawning comprehension. He steps forward and kisses the old man, with a long, full kiss on the lips, and then steps back and bows deeply - and the old man bows to him - and says, "Thank you." When the old man has responded, "You are very much welcome, brother," the young turns, clutching the blade of grass as if it were a diamond - no, more than that, as if it were a blade of grass - and walks back into the forest. There is a smile on his face.

You walk off in the field, and lie down on the grass. The day is growing warm and sultry; a faint breeze blows.

The breeze carries with it a small, white feather of the softest down. It gently falls on the sole of your foot. The breeze blows this way and that; the feather catches here, rolls there on your foot, brushing ever so lightly, up and down, up and down.

You feel a finger, cool as marble, just barely touching the back of your neck. It tingles; you can feel the sensation radiating up and down your spine. The feather brushes against your foot, and the finger just barely touches the back of your neck. It is a slow, lingering, tingling sensation; as time passes, the sensation becomes more and more real, and just won't go away. It tickles so.

A time passes, and you find yourself walking along a beach. It is almost dusk, and the rainbow colors of sunset are beginning to spill across the sky. It is autumn, and the many-hued leaves of the trees fall about, twirling this way and that in the wind. There is a smell of mist and brine in the air; the waves run and twirl about your toes.

A bird flies off to the right; its flight is light and agile. It flies to and fro, this way and that, until it disappears into the sunset.

There is a feeling of wistfulness, of a presence departed. To the left, you see a grayed swing, rocking back and forth in the wind; its rusty chain squeaks. It is in the yard of a boarded up house, with a garden long overgrown in weeds.

On a whim, you slowly walk up the path into the yard, and sit down on the swing. You rock back and forth; there is a feeling of emptiness. Images form and swirl in your mind.

A tree is felled; from its trunk are taken the staves of a barrel. Fresh and white, the staves are slowly covered with dust; each time the dust is disturbed or brushed off, the wood underneath is darker, grayer, rougher

undisturbed or brushed on, the wood underneath is darker, grayer, rougher.

People are born, walk hither and thither, grow old, and die. Generations come and pass, and the earth grows older. People learn how to live - and then die. Vanity of vanities.

Everything is dreary, desolate, fleeting. The walls of your vision grow narrow and dark; your mind and imagination seem to protest the motion. It grows darker and darker.

After a time, you see a light - a little light. As everything around grows darker and more drab, the light does not grow brighter, but neither does it grow dimmer.

A voice sounds in the shadows - you do not doubt that is the voice of the light - says, "Come closer."

You come closer, and you see that she is a flame. A little flame.

A thousand questions form in your mind. They pour forth from you - Why is it all so meaningless? Why do things wither and decay? Why does evil run rampant?

The flame listens patiently, and then speaks. "Look into me."

You look into the flame, and you see everything you saw before, but it looks different. The boards of the cask are no less grey. But you see that inside the cask is wine - wine which grows rich and well-aged. The people still die - and now you see an even darker death for some. But you also see past the death, past the mourning and grieving, to a birth into life - a richness and a fullness that could not be imagined from before.

"Flame, can I step into you, so that I may be delivered from the unpleasant things?"

"No, dear one. That is not the way of things."

"Then what can you give me?"

"I give you this: that you may always look into me, and that I will never be quenched."

"Flame, what is your name?"

"My name is Hope."

You look into the flame, and again see the outside world. There is still the sadness, but there is an incredible beauty. An ant crawls across your finger; you sit entranced at the wonder as its little body moves. Then you look at a rose bush, quivering in the wind - it is covered with thorns, but at the top of each stem is a flower that is still God's autograph.

You get up and walk further.

You see a little girl on her knees, and standing against her, a man

holding an immense sword. The man raises his sword over his head, and brings it down.

Then you see the sword stop in the middle of the air. There is a clanging sound; the man's powerful muscles ripple in his exertion, but the sword does not move an inch further.

Then you slowly see a shimmer in the air, and there is another sword - a sword that seems to be forged of solid light. A sword that is blocking the first. As you watch, you see an angel beginning to become visible. It is powerful, majestic, and terrifying. The man drops his sword, and runs in blind terror.

You can see the angel's sword here, a hand there, the hem of his luminous robe. But what you see is fleeting, and you cannot see the whole angel.

"Why cannot I see you? I can see the grass, and see the girl. Are you not as real as they?"

You see a little boy, walking on the beach, picking up a pebble here, a shell there, a piece of driftwood every now and then, and putting them into a sack.

Then he comes upon a fallen log. And he grabs one protrusion, and then another, trying to lift it. But it will not budge.

"Some day, you will be able to see God himself. But now, you can not see things that are too real for you to see."

You see a diamond, slowly rotating, in light. One facet after another seems to sparkle.

As you watch, not just what appear to be the facets, but what appears to be the diamond, seems to change form, shift, and sparkle in different ways. The light itself seems to shift color, direction, focus.

Then speaks an almost silent voice: "You are looking upon the one thing which never changes, in a light that has been the same since before the creation of time."

There is a moment of silence, and you feel a surge of power rush about you, and tear through your very being. It is like a blast of wind, throwing you off your feet so violently that wind itself is knocked out of you. It is like the liquid fire that explodes out of a volcano. It is like a flash of light beyond intense, light that is so much light that you cannot see. It bears like an immeasurable weight and presence on your mind and spirit; its might and force fills you with awe - no, more than awe, fear - no, more than fear, terror. It is a reality which lies beyond imagination.

man fear. terror. It is a reality which lies beyond imagination.

A booming, thunderous voice commands, "Fear not!" Then a hand reaches out and touches you, and you are filled with strength. It holds and stills you; you dimly realize that you have been quivering as a leaf. You somehow find the strength to stand, and if anything see a greater glory and majestic power than before. This being before you is like a storm in solid form. His feet press into the earth with the weight of a mountain, and shine like the sun in full glory. He wears a robe woven of solid light, and at his side hangs a sword sheathed in fire and lightning. His hands radiate power; they seem by their energy as if they are about to tear apart the fabric of space. You dare not look upon his face. Suddenly, you find yourself falling at his feet.

Again booms the voice: "Do not worship me! I am not God!"

A hand lifts you up, and sets you on your feet. His touch is more intense even than his appearance - you are sure that it will destroy you - yet somehow it makes you more solid.

It is all you can do not to fall down again. Somehow the words come, "Who are you?"

"I am a spirit, formed before the foundation of the world. I am a star, who sang for joy as the world was created. I am a messenger, who stands in the presence of God himself and then flies out of the heavens to wage war against the darkness. I am your servant. I am an angel."

Suddenly, images flash through your mind, images to which it would be merciful to call surreal and bizarre. You see chubby little boys fluttering about on birds' wings. You see voluptuous women, suspended in mid-air, whose clothing is perennially falling off. It is as if you have all your life seen pictures of Don Quixote wearing a wash-basin as a helmet, holding a dull sword and sitting astride poor, plodding Rozinante - and then, suddenly and out of nowhere, find yourself staring the paladin Roland, with his sword Durendal drawn and the rippling muscles that have torn trees out of the ground, face to face. You find yourself babbling and attempting to explain what you remember, and suddenly see the angel shaking with a booming, resounding laughter.

"What, my dear child, you would wish me tame and safe, like a little pet?"

It would be much easier to face a creature which was safe, which one could predict. It would be a great deal less disquieting, and a great deal less disturbing. Yet, somehow, you feel a feeling deep within you that it

would be an immeasurable loss.

He stretches out his hand. "Come, take my hand. I have something to show you."

You extend your hand, and find it engulfed in a force that is like electricity. Yet somehow, you feel something else as well - a touch. The angel spreads out great, glorious, golden, many-hued wings, and with a mighty jump launches into the air.

You speed along, both of you. Colors and forms speed by. Then, suddenly, you are at a place that is absolutely still, absolutely silent, and pitch black. "Where are we?"

"That is not a question that I can answer in terms that you will understand. Only watch."

You begin to see a pair of hands, They are together, and facing outward. Then they slowly move outward - and behind the hands is left a rainbow, in all its colors. The hands turn, move along, complete a perfect circle. It is the most perfect rainbow you have ever seen.

Then the left hand strikes the rainbow, and it shatters into innumerable miniscule fragments. The right hand takes the shards, and with a single motion scatters them across the blackness. Each piece of the rainbow glows with light, a little reflection of the whole, and then you see a faint, pale, crystalline blue glow. The pieces are scattered irregularly, and one looks almost like - here an insight comes like a flash - a constellation.

There is no horizon, no landscape, no other light. There are stars in every direction and from every view. The view is the most breathtaking view of the sky that you have ever seen.

Then the angel takes your hand again, and says, "Do you understand what you saw?"

"I think I do."

"Good. Then let me show it to you again."

Forms shift and move, and you see a faint, nebulous sea of matter spread about in every direction. It is not still - no, it is moving. You look deeper, and you can see that it is dancing.

Then you see a circle forming, and spinning. And another around it, and another. Soon many circles shift and melt together. The ones on the inside seem to move with more speed, vibrancy, energy. Then you can see a kind of a ball forming.

The swirling matter around it spins inward, more and more tightly

The swirling matter around it spins inward, more and more tightly, until a fire seems to light inside - and fills the new-formed sphere with radiance. Flashes of light, bursts of glowing forms, like water on a pot boiling, seethe and foment. In your silence and stillness watching it, you begin to realize that spheres are forming, coming to light, becoming stars, all around - and, just as the stars formed out of forms dancing, the stars themselves are forms dancing, in a great, glorious, majestic dance.

The strains of a Christmas carol ring in your ears: "Fall on your knees. O hear the angel voices!" Suddenly you realize that you and your host are not still at all, but swept into the great dance - and, about you, you can see shimmers of... you know not what.

After a long, glorious, blissful time, the angel again takes your hand, and again you find yourself swept away. When you find yourself at rest, you are again in pitch black.

"And why am I here?"

"To see what you have seen, for the third time."

You wait with eager expectation, to see what could be next. Inside you, the images foam and mix. The rainbow, containing each piece and found in each piece, the colors, the moving dance, the energy... You try to push it aside, so that you may attentively perceive whatever changes may be happening...

Time passes, with still the forms fermenting in your mind. You feel serene and at rest; the place is a place of profound peace. After a time the images begin to fade, leaving behind a feeling, a wholeness, a satiety. It is like, after a vivacious dance has ended, sitting down, cooling off - and, then, at rest, finding the joy and the intoxication of the dance still in your heart, and your head floating in the air. It is like, after finishing a meal, sitting with its feeling of fullness.

After a time, you break the silence. "Why has nothing happened here? Why have I seen nothing, heard nothing, felt nothing? Am I here to wait?"

"Has nothing really happened here?"

"Nothing that I can perceive. I haven't seen, or heard, or felt anything."

"Really? You have perceived nothing?"

"Perhaps I have perceived something so subtle and ethereal that I can not notice it. I do not doubt that this place holds something wonderful. But I have not noticed anything."

"Really?"

"Why do you answer my questions with other questions, with riddles, instead of telling me anything?"

"Do I?"

After a time, pondering what this could mean, you ask, "Am I here to wait, for something that will happen? If I am, can you tell me when it will happen? Or at least tell me if you can tell me?"

The angel is silent for a moment, and then says, "When you have seen one of these things, you have seen more than one thing. You have seen the shattering of the rainbow; one of its fragments is the one near your home that shines light on your fields and mountains. But the rainbow is also the one, beautiful, perfect language that was before man took upon himself a second time the quest to become gods."

"But did not the sage say that we are gods?"

"Yes, you are gods, and more than gods, and will become more than you even are now. But the man who would exalt himself to godhood, blasphemes. Would that men could learn to be men, without trying to ascend to godhood or even be heroes."

"Should I not learn to be godlike?"

"Learn to be a god, not in the way of the man who wills to be the highest of gods, but in the way of the God who was willing to be the lowest of men."

After a time, the angel continues on.

"In a way, each shattered piece of the rainbow - including the language that you now speak - contains the pattern and image of the whole. But in another way, it has lost some of the colors. There are things that were in the whole rainbow, that are not in the piece.

"So I will answer your question, about waiting, with a word from another language. The word is not a word which answers the question, but rather which un-asks it. So I answer you with this word: Mu."

"But why do you un-ask the question, instead of simply answering it?"

"That I will tell you, if you first tell me, to use an expression from the child's' words of your land, if the elephant in your refrigerator is eating peanut butter. Is the elephant in your refrigerator eating peanut butter? Yes, or no?"

Your mind is quite full; it is slow work, pondering and absorbing all that you have seen and heard. Finally you ask, "Before anything happens, may I wait here and ponder, and digest things?"

may I wait here and ponder, and digest things:

The angel says, "Yes indeed; that is why you were brought here."

A time passes in the silence, the stillness, the darkness. It is the beginning of the slow growth that makes a newborn experience into a full-grown memory, and brings it into who you are. It is the rest which makes every work perfect.

This lasts you know not how long. After a time, you realize that you are in a different place. You are with a man of sorts - if 'man' is the correct word to use. 'Man' is not a wrong word, but there are many others. He seems to be of no particular age. He is fully what every simple child is; he is fully what every ancient sage is.

After a time, you begin to wonder what his age is, and how long you have been there. You see him smile, and then burst out laughing. "Come," he says, "Let me show you what I see." He places his hand on your head, and suddenly you see an image - of a little child, in a magnificent and wondrous cavern full of rubies, and emeralds, and sapphires, and diamonds. He is off in a corner, picking up lumps of coal.

"This place is full of diamonds; come, enjoy, take and carry off as much as you are ready to carry."

Then you begin to look around, and see that you are indeed in a cavern of sorts. It is filled with a brilliant, powerful light; the walls and ceiling, full of irregular bulges and niches, seem to be gilded and encrusted with glowing gems. The space is full of forms magnificent and wonderful - fountains, statues, pedestals, crystalline spheres, animals. Everything in the room seems to have the breath of life.

You begin to gather gems; each one, luminous, seems to have its own particular feel, its own particular energy - you can almost hear a music when you touch them. Their cool, crystalline forms seem to be of congealed light.

After you have gathered a great many, you notice a peculiar phenomenon: the more you carry, the easier it seems to be to pick up even more. The gems embrace each other, and begin to form a vast interlocking structure about you. It forms a great, shining suit of armor - a scintillating armor of adornment, a living form that is as light as thought. As even more time passes, the gems begin to melt into you. As each flows into your body, you feel its energy and light, and soon, a high, subtle, ethereal music courses through your veins.

At last you stand, armored with an armor that is flawless. It gives, you

do not doubt, a protection against blows that a man of iron would envy. Yet the armor is not dark and cumbersome; it is light and energizing. Your skin is as soft and sensitive as ever, and you feel the unfettered lightness of nudity, free as Adam - no, you realize, a greater lightness, for a nude person is only not fettered by clothing, but this armor fills you with the freedom of which fetters are but a crude attempt to oppose. Carrying this armor leaves you more free to move and dance, and fills you with a positive energy.

You revel in the fullness, the intoxicating lightness. After a time, you realize that the man is looking upon you. He is smiling.

You begin to ask how much you owe for this wonderful treasure, and he breaks forth in peals of merry laughter. "These treasures are not for sale. They are a free gift. Come and fill yourself to overflowing with these treasures as often as you wish."

"Then they cost nothing?"

"No, they are very costly. They are more costly than you can ever imagine. But they are given freely, like water and light and breath, and a thousand thousand other treasures that no money can possibly buy."

"Then why are they given freely? Surely such things are worth a price!"

The man laughs again. "You are beginning to grow alive - just beginning. When you are truly alive, you will dance so freely that you will need no one to tell you these things, because the answers will be in you."

After a while, he hands you a chalice. "Here, drink this, that you may remain dreaming." You drink it, and have a flash of insight that waking is not the only aroused state. In a moment, you reach out and touch a star.

You find yourself inside a castle of ice. It is cold, elegant, pure. It is night-time, and the deep blue of the starry sky provides the light. You walk about in a magnificent structure, through halls and archways, around pillars and doorways, all the time in a great silence. The place is majestic and massive.

The coldness of the ice fills the palace with a deep peace. There is a rest here. You cannot see, nor feel the presence of, yet you somehow sense a kinship to the resting dead, sleeping, awaiting the dawn when sleepers shall rise.

As you step, as you breathe, you hear your echoes, and then the echoes of your echoes. The silence has a presence.

It is a timeless place. There is no hurry, no rush, no clutter. The

It is a timeless place. There is no hurry, no rush, no clutter. The sparseness of the architecture is matched only by the stillness of the air. You stand and walk, footfall after footfall penetrating the vastness. For it is vast and large; it is ordered, and yet unknown.

Through the glassy ceiling above you see the stars, and as you look at them, you can begin to hear the faintest tinklings of ethereal music. Your ears listen with a new keenness, flowing from the crystalline armor, and you can hear, not a music breaking the silence, but a music in the silence. It is, like the palace, sparse, and simple. It has an order and structure, and yet not time; it is a music which sounds as if it has always been there.

After a time, you realize that you are singing a song - sparse, simple, crystalline, and beautiful. It would not be quite right to say that you started a song: rather, that you have joined a song - a song that always has been, and always will be - a song which is sung not by you alone, but by angels and archangels, by the living and the dead, by the rocks and stars and trees themselves. And for the tiniest fraction of an instant, you can almost see the song rising, as incense, in the presence of He Who Is.

As you walk through a corridor, a transformation begins. Tendrils of mist curl about your feet as a shroud slowly rises from the ground. The walls become the walls of tall, narrow buildings lining the sides of the road. They are like ancient, cracked vellum, and ivylike bushes of yellow roses climb the sides.

All is still as you walk the streets; the only motion you can see is that of the mist dancing about you. Every now and then, you catch, out of the corner of your eye, what seems to be the form of a person just disappearing around a corner - but you are never sure.

After a time, you come upon a massive, dark Gothic cathedral. It is carved out of black marble. As you pass through the doors, the air becomes very dry; there is a feeling of imminence.

As you step into the sanctuary, the building itself is rocked by a blast of sound. Your body vibrates as you hear the deep, rich sounds of an organ resound all about you. The song is a fugue, turgid and complex. You hear three parts playing, then four, then six - interwoven, turning about, speaking to each other. It is in the key of E minor.

The song continues for almost an hour, woven with a deep sense of mystery. Like the building, like the city, it is filled with a dark majesty. There is a strain you are listening to hear - and you seem almost to have caught it, now here, now there, but then it vanishes. The song comes to a

climax, and then a thunderous resolution. Then the sanctuary becomes as silent as before.

A shaft of light falls, and you see a man walking towards you. He is tall and lean, and wearing a black robe with golden edges. He has black hair, and a thin, close beard. His step is stately and regal, but does not make a single sound. He reaches you, and, bowing deeply, says, "Greetings."

His eyes meet yours, and you see that he has a piercing, probing gaze. It is intense, looking deep into your eyes - no, more, deep into your soul. And there is something else - you can not tell what. You begin to gaze back, and you realize what it is. His gaze is gentle.

He reads the questions on your face, and after a time says, "I cannot tell you everything that you wonder now. If I were to say the answers, answers that I am only beginning to understand, they would sound like trivia, or sound meaningless. And if I could make you understand them all, I would do you a great disservice."

"Why?"

"Because the questions you ask are the right questions, but they are also the wrong questions."

After a time, he begins again.

"But there is something which I can do. I can lead you to the library."

He leads you through a twisted passageway, then down a stairwell. The stairwell alights in a room with shelves upon shelves upon shelves of dust-covered tomes.

"And," the man says, "I can give you this."

He reaches into the folds of his robe, and gives you a black rose.

It is a queer feeling to be alone with that many books. You reach on one of the shelves and pull one out. It is an illuminated manuscript. It tells a story deep, and detailed, and rich, and subtle. What you can read of it is like barely seeing the ripples on the surface of a lake, while untold forms move about below in the depths.

You replace it and look at another. It is a manual of philosophy and theology. It tells something about God - but it is also too subtle and complex to understand. And there is something else... It is like reading a book about arrangements and variations of color - to a man who has been blind from birth.

Then another... You can tell from its form that it has a sort of reason, or structure to it, but you cannot tell what. At first, you find what seem to be logical errors - and it does contradict itself, sharply and in many

be logical errors - and it does contradict itself, sharply and in many ways... and yet... you have the feeling that you are like a man, versed in logic and philosophy but devoid of emotion, poring over a joke, trying to understand it as an argument - and having no idea why others read it and then do something called laughing.

Another book, and another. Each time it seems like you understand something, you find yourself more confused than before. After a time, it becomes words upon words - and the more words are added, the less meaning there seems to be.

You sit down, exhausted and bewildered. After a time, you realize that a woman is standing some distance off. She is wearing a robe that is purple and black, with long sleeves and a long, flowing skirt. Her long hair, which falls behind her to a length you cannot tell, is jet black, and yet her skin is almost luminous.

She steps forward, and, embracing you, gives you three kisses on alternate cheeks. "Have you learned anything yet?"

"Nothing. I can't understand anything in the books."

"Have you thought to see what you can learn?"

"I have thought, and I do not doubt that there is a lesson, but it is seven times over too subtle and too complex for me."

"There is a lesson that you are missing, but not because it is too subtle and too complex. You are missing it because it is too simple and too obvious."

"I have read from two and ninety books, and cannot share with you the least shred of wisdom that is found in them. I do not understand. So in what wise am I to claim that I have learned?"

"Is there not even one thing you can claim to have learned?"

It is with frustration that you say, "Only the littlest thing - that I do not understand."

"That is not so little as you think."

She looks at you for a second, and now you can see, as well as a probing gaze, a hint of a smile. "Come; you are fatigued. Let me take you so that you can eat and rest." She places an arm around you - her touch is soft and responsive - and leads you through other passageways into a room with a table.

The table is set with plates of clear glass; the table is set with bread, fish, and white cheeses, and there are two glasses of white wine. She leads you to a chair, which offers a welcome rest, and then sits down opposite

you.

After you have eaten a couple of pieces of bread, you see her again gently looking upon you. "I can see the question in your eyes. You are wondering, are you not, why you were not simply told that you do not understand."

"Yes."

"Would you have understood that you do not understand? As you do now?" She pauses, and takes a sip of the wine. "A mouse can only drink its fill from a river, and no man can learn what he is not ready to understand."

The rest of the meal is eaten in silence. It is a calm, peaceful, prayerful silence. The bread is flavorful and dense; the cheese is mild; the wine is dry and cool.

After the meal, you both sit in more silence. It is a time of rest... and also of community. There are no words and there is no touch, and yet you can sense a kind of attention, a welcome, from the lady.

When you feel refreshed, she leads you through another passageway, and out to a door to the street. She gently embraces you, and says, "It is time for you to go, and begin to taste some of the other secrets of this city. I do not know if we shall meet again, but I suspect that it will come to pass. Fare Thee well."

The street is different from the one you first saw - it also is enshrouded by a cloak of mist, but it is wider, and there are people passing by. Their clothing varies some, but much of it is variation on a dark grey theme, almost seeming to be mist in solid form. A young woman passes by on the other side of the street; a cascade of ebon hair hides part of her face - yet you can still see, in one corner of her mouth, a hint of a smile.

You come across an open square, with an intricate pattern of stone tiles in the center. Two opposite corners have trees - gnarled, angular, and leafless. One of the corners has a fountain; cascading sheets of water fall between many-leveled pools, in which silvery and golden fish swim about. The opposite corner has a statue.

The statue is on a large pedestal of dark grey marble; the statue itself is of blackened bronze. It is of a man, gaunt and haggard, and clad in rags. His arms are raised up to Heaven, as is also his head, and yet his face bears a look of despair. The pedestal bears the inscription, "I am thirsty. Who will give me something to drink?"

thirsty. Who will give me something to drink?

You find a jug, and, filling it at the fountain, climb up the statue and pour water into the statue's mouth. You hear sounds of water flowing, and then there is a click. It is followed by a whirr of moving clockwork, and, getting down, you see that one of the sides of the pedestal has turned inwards, revealing a shaft descending into the earth.

A lantern is at your feet; you light it, and begin to climb down the ladder at one side. It descends into a passageway; taking one direction, you come to a four way intersection. The left path turns into a circular room, with a domed roof, and a pool in the center. You test its depths - and find it descends below the floor.

Inside, you find an underwater passageway. You swim through it, and surface in a room with rough walls. Climbing upwards, you find the room to narrow into a shaft, which turns into a low passageway, and then opens into another room.

This room is lit by the glow of torches; it is large and rectangular. At the center is a thick, low stone column, about three feet tall, with some protrusions bulging from the top. When you come closer, you see that it is an intricate clockwork device; working with it, you find a pattern in its motions, and work with it until there is a click, and a segment of the far wall slides into the ground.

The passageway is dark, as was the room and passageway which you traversed without your lantern, and it opens shortly into another room. At first you cannot see; then, as you step in, your eyes slowly adjust to the darkness. Inside this room, you see another statue.

This statue is a male nude. It is an iron statue; it is immense, and the figure is powerfully built. It is in the middle of a stride - a long, powerful stride, one which seems almost to shake the ground. His eyes bear an intense gaze, one which seems to almost flash lightning, and one arm is raised, and hand outstretched, in a gesture of authority. The surface of the statue is rough and unfinished. There is something in this statue that seems to almost radiate power and energy and weight and light.

And yet, when you look closer, you notice something different. The eyes seem sad. And then, looking closer, you suddenly realize that the statue is bound by shackles. The shackles are a monstrosity, a violation; they threaten to wear down his energy and burden his strength. You grab at the shackles to see if you can pull them free, and feel a chill and drain run through the body. You drop them in shock.

As you stand in the room, you seem to even more be able to see - not only the forms, but the absurdity and injustice. The man's great strength - it is straining against the binding chains. Your eyes trace the shackles to where they are engulfed by the floor.

Then you realize that there is another set of shackles, empty, open. You shudder to look at them; the touch of one of the chains sapped your soul; breathing felt as if you had been forcefully struck on the chest. You begin to back out of the room... and you see the statue's eyes.

He is not pleading; he is not begging. If anything, his eyes say "Go far away; that these chains imprison me is bad enough, without one more." You do not see pride, of someone unwilling to receive help, or the cowardice of one who dare not ask. It is rather the compassion, of someone who would not wish his worst enemy to feel the misery he feels. You feel a stirring inside your heart. What the man does not ask, conscience and every noble instinct demand. And you walk in.

A chill sweeps through you as you cross the threshold. You can almost see a presence that is unholy. At each step you are jolted. And yet... you have the strength to follow.

You fasten one of the open shackles about your feet; it stings like the sting of a scorpion. The other, and you feel as if you are sinking into the ground. A shackle is fastened around one hand, and it is all you can do not to fall down. You place your other hand in the last, and begin to close it...

The shackles fall from the man's feet, and you see a surge of power ripple through his muscles. He crouches down, and then jumps up with a force that shakes the earth. He raises his hands upward, and there is a blinding flash of light.

Your sight slowly returns, and you find yourself on a grassy knoll bordering a field. A small grove of saplings is to the left, and a field of dandelions is to the right. From somewhere near come the sounds of birds chirping, and a babbling brook.

You see the man who was shackled, standing nearby. He is looking upon you, and smiling. He picks you up and gives you a hug - a crushing, invigorating bear hug that makes you feel very much alive - and a big kiss. Then he sets you down and opens a large leather pouch. He fills two large stone bowls with stew, and draws two draughts of cider from a small barrel. The stew is a piping hot, well-spiced, and hearty beef stew, but the cider is cold and mild - you could drink quite a lot without getting drunk.

cider is cold and mild - you could drink quite a lot without getting drunk.

He tells you of how he came to be imprisoned - he let a love of probing mysteries become a love of secrecy, and a love of the beauty in natural darkness become a love of evil, so that what was wholesome and free became perverted and enslaved - and then asks of your story, how you came to rescue him. He listens eagerly and intently.

After a time, he says, "There are many people who knew of my disappearance and do not know that I am free; it is time for me to go and tell them that I am free, and how you rescued me. But before I go, I give you this." He raises one hand to Heaven and places the other on your head, and speaks a blessing. You cannot understand the blessing, but there is something about it that strikes you... and then you see, in an instant, not just one little fragment in the blackness, but the whole radiant rainbow. He is speaking the first language, before it was broken, and - though you cannot understand it - you are moved by its power, its love, its light.

He presses slightly harder on your head, and your spirit surges with joy. Then he runs off into the distance, bounding like a stag.

After a time, you begin to walk along, into the forest. It grows thicker, and the colors richer and deeper. You can feel warmth, and humidity, and wind.

As you walk along, the forest opens into a wide, grassy clearing, with thick, long bluegrass. A few small raindrops sprinkle on your face; thunder rumbles, and soon there is a heavy and torrential rainstorm. The rain is warm, and in it you begin to run and play.

A woman, short and with a full and rounded figure, begins to dance with you, and soon you are swinging around, and dancing in the rain. Sheets and columns of rain fall, and in the lightning flashes you can see the trees, the leaves - the whole forest - dancing and spinning in the wind.

The woman is laughing; you can hear the laughter in her voice and see the laughter in her eyes. On a whim, you reach and pinch her side; she laughs and squirms. She jumps and tackles you - it is half a tackle and half a hug - and knocks you over.

After wrestling around for a few minutes, she turns and walks towards a large, ancient, gnarled oak tree, and sits on a large bulge a little distance above the ground. As she sits, you vaguely realize that the tree's form has almost the shape to welcome a human - your eyes did not pick it out, but she seemed to have walked to it as naturally as if she were breathing. She

is leaning a little to her left; a ledge of wood forms almost a cushion for her to lean on - one might say that her body is curled into the wood.

You begin to look on her, and see how beautiful she really is. Her skin glistens with little drops of water. She is dark, with olive skin and large, soft, welcoming eyes that seem to enfold you, taking you in as the waters of a lagoon take in a swimmer. There is something that draws you about your hands.

Her hands are small, and seem to contain the beauty of her whole body in miniature. They are rounded, curved, and Rubenesque. You can see soft skin gently enfolding the inside of her hands; it has a looseness and ampleness so that you do not see vein and bone, only the rich color of skin. Her fingers are tiny and thin, with very mignonne nails and fingertips. The texture of her hands is subtle, yet gives her hands reality; you can see the strata and shapes in the tiny wrinkles on the back of her hand, the dark, faint hairs, and the many sheets of lines that twist and turn over the inside of her hand. Through her fingernails, you can see a glimpse of white, pink color which contrasts brightly with the rest of her hand.

And yet the shape is only half of the beauty that is in her hands, for they are not still, but in motion. It is a slow, still, lyrical motion, an adagio dance. It does not overpower the senses or make a clamoring demand for your attention, but it is yet deeply moving. Her fingers, palm, and thumb slowly move, in a rich harmony. You can see waves in her fingers as they wend back and forth. The motion is extremely simple, and has a periodicity that comes back to a single thing, yet somehow you do not wish it to be more complex, or do something new - at the moment, you would have difficulty understanding why anybody watching this slow undulation would want to see anyone else. It seems that she is speaking in a language with her hands, and you long to understand what her hands are saying, to put it into words. Then you look deeper, and you realize that you do understand what her hands are saying, and you cannot put it into words because it is a truth different from what words express. You rather feel and sense... peace... rest... stillness... the motion of breath... the beating of a heart... the music that lies in and beyond silence... the ebb and flow of water... day and night and the four seasons turning in cycle... the rhythm of a song that does not pulse, and yet has order... tufts of long, dry grass, resting in a field... the tops of trees, blowing in a wind... a rock, buried deep in the earth, remaining a rock, in the process of not

a rock, buried deep in the earth, remaining a rock, in the process of not-changing... the light at dusk, and yet not the light of dusk for the sunlight at dusk fades, and this, even in its softness, would not rightly be said to fade.

She begins to walk along a path, leading you, and takes you to a small hovel. You step inside, and as your eyes adjust to the light, you see a very old woman. She is emaciated, and in her face are etched lines of pain. She begins to try to get up, and say something, but the sounds are hardly understandable as words, and the young woman gently places her hand over the old woman's mouth and leads her to lie down. Reaching up to the wall, she brings a flask of wine to the old woman's lips, and helps her drink a little. After that, she goes to a chair, and picks up a wooden recorder, and plays it. It is the same song as her hands danced: soft, still, and beautiful. It has a very soft, woody sound, and the notes themselves are... like the color grey, like a gentle light, like a friend's voice. You are lost in the music, carried away by its beauty. Slowly, the song tapers into silence, into a rest allowing the music heard to sink in. You look at the old woman, and see that she is still, absolutely still. Her eyes vacuously point into space.

The young woman gets up, with infinite gentleness, and with her hand slowly closes the old woman's eyes. She turns to you, and, speaking so softly that you can barely hear her, says the first words you have heard from her: "She was my grandmother." You can see the tears forming in her eyes.

It is dusk, and the last rays of the sun ebb into darkness, into a dark and moonless night.

The next day, you begin to build a pyre in the middle of the field. Some people come by from the wood and help; they are bearing little gifts, and each embrace her. There is not what you would understand to be a ceremony; they each come and go. After a time, you realize that the animals also come, and pay their respects in their own ways. Dusk comes again, and she takes a lantern and sets it at the bottom of the fire. Flames begin to lick upwards, and then touch the grandmother's body. Then the young woman screams, a piercing, dissonant, discordant scream of which you would not have thought her capable. She begins to sob uncontrollably, and weeps the whole night long.

The woman stands up to greet the coming of the dawn, the tears still streaming down her face. The first rays begin to break over her face, and

then you notice something... different. Something that you had not noticed before.

You see pain in her face; it is of no effort to see that a great hole has been torn in her soul. And yet there is something else. She is beaten, but not crushed; wounded, but not destroyed. If she is bleeding, it is because there is living blood coursing through her veins. It would not be quite right to say that she is not too badly hurt because she is a deep person; rather, she is very badly hurt because she is a deep person. And yet... you cannot quite tell what it is.

She turns to you, and sees the puzzlement in your face. She reaches, and with one hand touches your eyes; her lips move in silent prayer. Then she takes her hand back, and you slowly see something else. You see angels all around, and feel the Spirit of God. One of the angels - great, mighty, magnificent - has wrapped his arms around her. The angels are still, and... intent. It would be a gross distortion to say that one of them waves a magic wand and makes the pain go away, and yet...

You cannot quite see, and yet in your spirit you sense, prayers, around and under and in her. You cannot understand all of what is going on. The pain is not taken away, and you share the pain as well. And yet... Though you cannot say what, you can sense someone, and something happening, which is infinitely greater than the pain. And you, again, hear singing.

Sister, let me be your servant. Let me be as Christ to you. I will laugh when you are laughing. When you weep, I'll weep with you. Pray that I might have the grace to Let you be my servant, too.

When you feel so weak and burdened, When the world is harsh to you, Know that Christ has gone before you, Felt the pain and shed the tears. As Christ has so giv'n to others, So he will also give to you.

And e'en with Christ you're not alone, For we are Christ's body, too. We are all brother and sister. Your burden is our burden, too. As you have so giv'n to others, So we all shall give to you.

A little boy runs up with something clutched in his hand, and kisses her. He says, "I love you. Sorry you hurt bad. Havva big gift. Look!" He opens his hand.

Inside is a blade of grass.

# The Eighth Sacrament

"Holy" is an important word in the Bible, and there are many holy actions described in the Bible: Communion, prayers, and worship, to pick some of the larger ones. But there is only one act in the Bible that is called holy, and it is one we might not think of. What is it? "Greet one another with a holy kiss," which is repeated four or five times. "Holy" is *not* just another way of saying "appropriate," or rather it means "appropriate" but also something much stranger, much wilder. "Holy" means set apart to God, an element of Heaven here on earth.

The New Testament's main word for a profound display of respect in fact means "kiss", even if our translations hide it. Bowing and kissing have some interesting similarities throughout the Bible, and they mean something similar. Kissing has one meaning in American culture, but it has a very different set of colors in the Bible, and we are missing something of the holy kiss until we can see it as a display of profound reverence for one who is living in the life of Christ and becoming a little Christ. Is giving a kiss to an Orthodox Christian really different from kissing an icon?

The holy kiss is an opportunity to meet others in love. Do you know how someone gives you a greeting, a gift, or *something* and you know it isn't fake, you know another person has put his heart into it? That's what the holy kiss should be, and for many people here, *is*. Why? There was one tenth degree black belt in karate who was asked what he thought our society could learn from his martial art. He didn't give any of the answers we find so obvious: exercise, self-defense, discipline, and the like. What he said, very emphatically, was "to bow," at which point he stood up and

gave a great, courteous, and majestic bow. Bowing was bigger to him than any of the things that draw us, and that is what the holy kiss should be. What's the connection? Bowing and giving a kiss are never very far in the Bible, and once you understand them, you understand that they are a place where quite a lot come together. Furthermore, some of the warmest kisses I've received have been from bishops and other devout Orthodox Christians, and then the kisses have been worthy of that bow. How you give the holy kiss is related to your spiritual state.

The holy kiss is tied to holy communion. It is part of the eucharistic liturgy, and the Fathers draw interesting connections. St. Ambrose of Milan said, "We kiss Christ with the kiss of Communion:" we embrace Christ when we embrace each other, and yet there's something that the holy kiss adds. The kiss is itself an image for the Eucharist: even our prayers before communion say more than that. Yet the holy kiss is not just something indirectly connected to Holy Communion. The holy kiss is an act of communion between persons, and if we pray before Communion, "Neither like Judas will I give thee a kiss," this means not only that love must be in our reception of Holy Communion, but that we must not like Judas kiss our brethren without the love of Communion. There is difference between an embrace to someone who is Orthodox and someone who is not, because as with Holy Communion the kiss does not stand by itself: full communion makes a difference.

There are many other things one could say; the holy kiss takes different forms in different cultures and in my home parish is usually a hug. But the holy kiss is, in its way, the eighth sacrament, and is a window that opens out onto the whole of Orthodoxy. It is well worth living.

# **Eight-Year-Old Boy Diagnosed With Machiavellian Syndrome By Proxy (MSBP)**

Eight-year-old Uriah Hittite is an African-American boy with a disturbing history. He has been found guilty of single-handed, extended, and wasteful manipulations and draining government resources at a scale comparable to a large and coordinated [/b/tard trolling attack](#).

Like a polished con artist, Hittite manipulated others so deftly they never guessed the bomb he was about to drop. He was reported to be outgoing, friendly and vigorous in physical activity. Neither friends, nor family, nor all the regular doctor visits showed the faintest problem.

Then, shortly after he turned five, he was administered a safe and routine second MMR vaccination, and only then did he tip his hand. And wow, did Hittite pull a surprise!

At first it started as a tiny trickle; he feigned such ordinary sickness as most healthy children do; his birth parents gave him a few days' bed rest in the hopes that that would clear things out. Instead, he started acting worse and worse, to his birth parents' complete bewilderment. Besides remaining symptoms of sickness, he drew into a shell, and his speech became much clumsier. While his birth parents were of limited means and not insured, they did what they should have done immediately and took him to the shelter of a local hospital's emergency room.

The emergency room staff far too trustingly fell to Hittite's deceit, and

The emergency room staff far too trustingly fell to Hittite's deceit, and ran usual tests that failed to produce a medical explanation. Psychiatric staff, experienced as they were, were taken in too. His birth parents continued to foolishly request tests and all but appoint themselves as their little Uriah's own doctors when it became evident that none of the MD's was providing any sort of explanation.

When the birth parents failed to improve the matter, one of the doctors suggested that a change of scenery, *without* the birth parents' dubious expenses. The birth parents consented to a brief and provisional custody.

Once inside better custody, external settings were better and he received the benefit of highly skilled cult deprogrammers who helped free him of certain needlessly constricting beliefs. This was done at great expense to the State, as deprogramming is difficult enough with grown adults of adequate intelligence, and he refused to communicate even at the level of a boy of his calendar age. It was decided to extend the custody indefinitely.

Finally a diagnostician was willing to call a spade a spade, and identify a classic case of Machiavellian Syndrome by Proxy (MSBP). There was nothing wrong with Hittite physically; he just had a master plan to squander and drain the states' resources. However, with the laws presently in force, you are not allowed to unplug a useless eater. He remains a ward of state, in bed for twenty-three hours each day, not talking with anyone. The total amount he has drained state coffers is in the millions, not counting the expenses of quieting his former parents' inappropriate efforts to regain contact with their former child.

*There ought to be a law* against demonstrating Machiavellian Symptom by Proxy (MSBP) like this!

# **Espiritichus: Cultures of a Fantasy World Not Touched By Evil**

## **Nor'krin**

The Nor'krin are tall and strong, with thick, sandy blonde hair, deep blue eyes, and white skin that turns reddish when they go south from their frost-kissed land; the Janra affectionately refer to them as the Northern giants. They love to run across the snowy plains and up to the peaks, to feel the crispness of the air, and to drink the cold and crystalline waters of the flowing streams.

There are not very many of them; they live nomadic lives, spread out across the snowy North, carrying with them only their clothing, their hunting weapons (a large bow and quiver of arrows, an axe, and a knife), a canteen, and a handful of tools and other miscellanea.

Theirs is a culture of oral tradition and folklore, filled with a richness of symbolic thought. Their thought is expressed by storytelling. Some tell of people and actions full of goodness, love, and wisdom; some are allegories packed with symbolic detail; some are both. The evenings — from the meal onward — are times when the clans gather together, and the oldest member tells tales until long into the night, when the fire has died down to embers and the icy mountain peaks glisten in crystalline blue starlight.

(The language is one which revolves around the oral tradition; its grammar is fairly simple, sufficient for basic expression, but there is an extensive vocabulary fitted to epic poems, great tales, and the transmission of a symbol-filled body of lore)

Their experience of sense is primarily aural, centering around the communication and preservation of their tradition. The other senses all play a part in their knowing about the world around them and its enjoyment, of course, but the ears dominate.

Coming of age is very significant in Nor'krin culture. It is the event upon which a child becomes a full member of Nor'krin community, and appreciates it fully, for it is accomplished in solitude. It is the same for male and female, big and small.

Denuded of all possessions save a hunting knife and the clothing on his back, the child begins a solitary trek, south through the land of the Urvanovestilli and Yedidia, penetrating deep into the thick forests inhabited by the Tuz, until he enters a village, and, coming inside a shop, says, "Blacksmith, blacksmith, find me a task, give me a quest."

There are as many quests as there are questions. Some are easy, some are hard; some are simple, some are complex. Whatever the quest be — be it finding an amethyst in the caves, climbing an immense mountain, answering a riddle, memorizing a book — he leaves the blacksmith shop and does not return until the quest is completed. (It must be said that, though some quests have taken years to complete, recorded history has yet to see a Nor'krin fail. A child leaves the immediate presence of his family, but remains in their prayers; they have great faith, and it is in this faith that they tread securely into the unknown.

Upon the return, the blacksmith begins to ask questions: "What is your name? What is your family? Who are you? What is your story?" — and begins to fashion an iron cross. This cross is at once a cross as any other, and a unique reflection of the person who wears it; no two are alike.

It is with this cross worn about the neck that he returns to his clan, come of age.

Nor'krin greet each other by standing opposite the other, placing the left hand on the other's right shoulder, and lowering the head slightly; the gesture is a sign of respect.

The emotional side of their culture is not as intense or spectacular as many others but is present and offers an important reflection of what

many others, but is present and offers an important reflection of what they value. They know a deep sense of respect and appreciation; when they think of others, the first thought is, "This person is an image of God," and there is a feeling of respect. The mountains, the trees, and the streams all bear a magnificence which they appreciate. Nor'krin worship services are filled with awe at the One whose glory is declared by tales, by lives, and by the created order. They are traditional liturgical services, where the place of the homily is taken by long tales and stories, conducted by the eldest members of the clan.

The Nor'krin homeland is named 'Cryona'.

## Tuz

Many wayfarers go south, early in life, to buy equipment; they need only wait, and a blacksmith will forge a pair of iron boots which will last for life.

The people are dark and strong; their eyes shine with power and lightning. The average Tuz male is short, stout, very broad-shouldered, and built like a brick wall; a thick, straight, jet black moustache and a thick, curly beard push out of leathery skin. Women are equally short and stout, but do not have such broad shoulders, being (relatively) more plump and less muscled, and do not have the moustache and beard (usually).

Their buildings are hewn of solid granite, with iron doors. The villages are small and scattered, joined by worn paths passing through the rich, deep green of the forest. It is this forest, fertile and full of beasts, from which the heart of their meal comes. They are more than fond of spicy meat stews and bear jerky. Their beer is dark, thick, and strong, and every house has at least a little bit of khor, a spiced rum which is occasionally used by the other peoples as a pepper sauce.

The Tuz work hard and play hard. They are often hired for heavy work in the construction of Urvanovestilli palaces, and their work rarely receives complaint. After work is over, they tend towards wrestling and general rowdiness; if they are present, Janra children (and occasionally adults) are tossed about.

For all of their rowdiness, the Tuz do possess a great deal of restraint; even after a couple of beers, they seldom give each other injuries beyond occasional bruises and abrasions, and Janra children do not receive even a scratch. (Most of them rather enjoy being tossed about).

The usual greeting is a crushing bear hug, often accompanied/ followed by a punch in the stomach, some wrestling or

tossing around, etc; it is generally toned down a bit for children and visitors from afar, but there is always at least a spark of rowdy play.

As much as the Nor'krin are at home in the cold, loving everything that is crisp and chilly, the Tuz love heat. Their land is by far the hottest, but that doesn't stop them from munching on peppers and wrestling around. Blacksmiths' shops and fire and sun-hot iron — these are a few of their favorite things.

The Tuz also build obstacle courses of stone and iron and rope, which the Janra have no end of finding new and inventive ways to use; a slack rope which Tuz climb along the underside of will be walked — or occasionally run — atop by the Janra; jumping shortcuts, backwards or inverted travel, and acrobatic ways of avoiding raw strength moves are common. Tuz, by contrast, have very slow and methodical paths.

They are, indeed, probably the most constant and unchanging of peoples; the process of maturing is a process of becoming more who they are. Their sense of order is also great; they value greatly the gift of being well ruled.

A child, at the age of ten, is presented to the village elders and the various guildmasters. They spend a day talking with the child and his parents, in order to determine his talents, interests, and personality; then they spend another day talking and discussing amongst themselves; then, on the third day, his profession is announced, along with the master to whom he will be apprenticed. The results are sometimes surprising, but always embody a great deal of wisdom, and the selection of a vocation is a gift for which the child is grateful.

Children learn a way of life filled with discipline, tradition, and respect for elders. It is quite simple, not at all ornate when compared to some other philosophies, but it has a power, a solidity to it, and love, faith, honor, friendship, and hospitality are things that they truly live by. Their families and communities are very close, and their friendships are loyal until death. They do not pay as much emphasis on verbal articulation of teaching as a way of life. There is thought, but in its expression, words take a second place to actions. That a life of faith involves discipline is declared very loudly by Tuz hands.

They are very aware of the value of solitude and prayer; it is a common practice to simply leave, taking nothing save clothing and a hunting knife or axe, and go up into the mountains for a few days of solitude, allowing time to pray and to be refocused

time to play and to be released.

Their language has, in speech, a very heavy, thick, consonantal feel, full of grated 'h's (which is often present in 'k's, 'r's, 'g's, and 'b's). The speech is terse and concrete.

Their experience of sense is also very concrete, centered somewhere between visual and aural. Sight tells what is around and where, and what is happening and where. Hearing tells what is happening, and where, and what is being said.

The emotional side of their culture knows such things as accomplishment, tradition, exertion, and discipline. There is an emotion that comes from a job well done and a challenge mastered; they value it. To have a heritage and respect elders as well as enjoy children brings a feeling of right order. To wrestle around, run, or laugh heartily has a pleasure. To control oneself has a joy. Things such as these are what they feel.

Tuz worship services are be short and sweet, with worship embodying a great deal of fervor.

The Tuz homeland is named 'Rhog'.

## Urvanovestilli

The first thing to strike a visitor is the devices. In every house and many shops there is a tinkering room; a large workbench is covered with every imaginable sort of gear, spring, hinge, lever, chain, and shaft; the clock is only the beginning of clockwork. Two nearby cabinets — one filled with tools, one filled with parts and working materials — stand neatly closed; at the touch of a button, a drawer springs out, and shelves slowly slide up.

The craftsmanship of clockwork devices is, along with the study of diverse subjects — theology and philosophy, history and literature, science and mathematics — a hobby that symbolizes the culture. Each piece is created not only for utility, but also for artistic effect. Cuckoo clocks and spring loaded umbrellas, Swiss Army Knives and mechanical pencils, player pianos and collapsible telescopes: mechanical objects such as these fill the land.

The ornate complexity of the devices reflects the ornate complexity of thought. The language, quite possibly the most difficult to learn, allows a speaker to express detailed and nuanced thought in exacting specificity. There are twenty four verb tenses, so that there is (for example) a different past tense for a brief, well demarcated action, and one which occurred over a period of time; there are twenty four other verb forms, which are like verb tenses as to conjugation and construction, but express the verb in an atemporal manner. Their language has much room built in for conjunction and logical connectives, nesting and predicates, as well as subtlety, implication, and allusion.

They have a complex and formal system of etiquette, although it must be said to their credit that they take no offense at a wayfarer who is warm and friendly but does not know their rules; they understand how simple the heart of politeness is.

Their speech is clever and witty, and they are fond of abstract strategy games. They enjoy ornate and complex polyphony, and will spend hours exploring theology and philosophy (two disciplines which they have the wisdom not to separate).

Urvanovestilli culture places a very heavy emphasis on a facet of virtue which they call *contrainte*. *Contrainte* is a kind of inner constraint, where order is approached by adjusting conditions inside before conditions outside, and not letting oneself be wrongly controlled by external circumstance. A similar concept is embodied in the words 'moderation' and 'self-control.'

*Contrainte* enables a man to be free and use that freedom responsibly; it enables a man to have access to drink without getting drunk; it enables him to think constantly without becoming rationalistic. The Urvanovestilli homeland has the richest natural resources in the world, and (with centuries of first rate craftsmanship and efficient work) they are by a wide margin the richest nation in the world. Despite this, they keep a very cautious eye on wealth, so as not to be enslaved by it. Theirs is not a culture of consumption; though some of their interests — art, sculpture, board oriented strategy games, tinkering — generally are pursued in a manner that involves wealth, the bulk — discussions, prayer, dance, imagination, thought — do not. Consumption as a status symbol and waste are both seen as vulgar.

In *contrainte* is also balance and complement. There is time in solitude and time in community, freedom and responsibility, private and public property, work and rest.

It is in *contrainte* that an ornate system of etiquette does not obscure love, and elaborate ceremonies do not obscure worship. Just as they do not have their sights set on wealth — they do not look to it for happiness, security, and other things that it can not provide — and are therefore able to enjoy it (among other and greater blessings) without being harmed, so also they set their sights on love and worship, and therefore do not permit rules of etiquette or liturgical forms to make themselves the focus and cause hearts to become cold and dusty.

*Contrainte* likewise allows them to act efficiently without becoming efficient. Off of work, life takes a calm and leisurely pace; nobody fidgets. It allows them to be very judicious in their use of money, and at the same time very generous; their hospitality is lavish, and it is unheard of for anyone — friend or stranger, native or foreigner — to go hungry in their

anyone — friend or stranger, native or foreigner — to go hungry in their land.

The single greatest mark of *contrainte* lies in that, with all of their achievements, they remain open to the gifts of God. *Contrainte* itself — though they work very hard to cultivate it — is not something that they try to achieve on their own power, but ask for in prayer, expecting to receive as a gift from God. Nor is it set up as the supreme context, the *Supra-God* to which God must bow down; they know nothing of religion within the bounds of *contrainte*. *Contrainte* does not "point to" itself as an object of worship, but rather God; it brings, in worship of God, a desire to grow in faith, hope, and love. It is like being reasonable enough not to be rationalistic.

On the surface, the *Urvanovestilli* culture appears to be the antithesis of that of the *Shal*. One is complex, and the other simple; one is rich, and the other poor; in one, people sit and talk for hours; in the other, people sit in silence for hours.

At the very heart, though, they are very much the same; *Urvanovestilli*, when traveling and visiting the *Shal*, feel that they are at home; the *Shal* find the *Urvanovestilli* to be brothers. They see beyond, rest in God's love, and love their neighbors.

---

The Urvanovestilli are quiet, patient, temperate, and refined. They are classically educated and cultured; their country is a federation of republics, each one ruled by a senate in a tradition that has remained unchanged for centuries. Tradition is strong, and families remain together; come evening, three or four, sometimes even five generations sit down at one table, eating and drinking, talking and listening, long into the night. There is a great respect for age, but a respect that in no way despises youth; the oldest spend a great deal of time caring for the youngest. Indeed, one of the first sights to greet a visitor who steps inside an Urvanovestilli mansion is often a grandfather or great-grandfather, with a long, flowing white beard, sitting with a child on his knee.

---

Urvanovestilli names are long and ornate. The full name is rarely spoken outside of formal ceremonies; even Urvanovestilli do not often pronounce thirty syllables to refer to one entity; all the same, each one is considered important. The names are:

**Family name:** This is the first and foremost of names, and the most cherished; it is the most commonly used.

**Maiden name:** Among married women, this follows.

**Birth name:** This is the name given at birth, and is often used within families and when there are several people of the same family present.

**Reserve name:** This is a very intimate name, which is not always known outside of family and close friends; it is spoken with a great deal of affection and familiarity.

**Baptismal name:** This name is chosen at baptism by people who know the person well, and given a great deal of prayer; it is used especially in religious contexts.

**Regional name:** This tells of the city or village a person comes from, carrying with it connotations of regional flavor and culture. It is used primarily in reference to travelers or (occasionally) people far away.

**Friend names:** These names (some do not have any; a few have ten or eleven; the average is two or three) come according to friends; a friend can bestow a name, and it becomes thereafter formally a part of an Urvanovestilli full name. When such a name is bestowed, it will become the name used primarily by the person who chose it.

The phrases of politeness — those which would correspond to hello, goodbye, please, thank you, you're welcome — are all benedictions; they take innumerable forms and beauties according to the people and situation. Blessing is something which they value; they often speak of good things — friends, virtue, art and music, food and drink — as so many blessings from the heart of the Father.

The traditional greeting is a hand raised, open save that the ring finger bends down to meet the thumb, or (when greeting a child) placed atop the head; the gesture is a symbol of benediction. It is followed by three kisses on alternate cheeks.

In youth, Urvanovestilli are filled with a wanderlust. They voyage to many different places, seeing different nations and lands — as well as the variety of their own cities — and enjoy experiences which provide a lifetime's worth of memories. The wayfaring is never really complete

memories worth of memories. The wayfaring is never really complete, though, until it becomes the voyage home: the Time sometimes comes after two years of travel and sometimes after ten, but the Spirit always makes it clear. When that Time comes, each Urvanovestilli spends a little longer — perhaps a month — with the people he is visiting, and then leaves, with a very passionate and tearful goodbye.

It is Time to return home, to put down roots, to deepen, to mature; Time to wholly enter into the homeland. From this point on, the Urvanovestilli is no longer a wayfarer. The memories of his travels are cherished and very dear, a set of riches that he will always carry with him, and he will still send blessings, gifts, letters, and occasionally visits to friends in far away lands, but it is no longer time to go here and there; it is Time to grow into family, friends, and city.

Urvanovestilli writings and teaching, the means by which theology and philosophy are transmitted, take many forms — poems, riddles, parables and allegories, personal conversations, to name a few — but the predominant form is a systematic and structured logical argument: point one, point two, point three, subpoint three b, conclusion one... The structure carries allusion, nuance, and beauty; it leaves room for the speaker to make a very beautiful craft of words.

They enjoy being absorbed in thought; it is how they spend a good time of each day. They do not look down on sensation — indeed, they have a great appreciation for what is a very highly developed art, music, and cuisine — but it does not fill their world as it does that of many others. Abstraction and complexities of thought are fundamental to their experience of the world: sensation leads into perception, perception leads into concrete thought, and concrete thought leads into abstract thought. Moments of immersion in the senses are rare, Sensation, being the outermost layer, is governed and enjoyed from within. Its form is generally of aural and visual character; the aural side is shaped by words, and then accommodates the other plethora of sounds, and the visual side is shaped by the forms, the spaces, and the interactions of their devices, and sees something of springs and gears in the world around.

Their faces appear at first glance to be almost expressionless — a faint hint of a smile, perhaps — until you look at their eyes, the first window to the fire and intensity within. Urvanovestilli eyes — whether brown, amber, hazel, grey, or blue — bear an intense, probing gaze; in Urvanovestilli culture, eye contact is almost continual, and reflects a fire,

an intensity, a passion, that fills their way of life. It does not take long to be reminded that eye contact is a form of touch; their eyes seem to be looking into your spirit. The gaze, in its intensity, is never cold and calculating, never the chilling, devouring stare of a steel face beyond which lies a heart of ice; at its most intense and most probing, it is the most filled with love, and most easily shows the intense fire within. They can rest — and they know calm and tranquility — but there is a great energy within, an energy that shows itself in their artwork and writings. Those who read their theologians certainly do not fail to notice the depths of wisdom and insight, but what is most striking is their love for God. The passion — of their love for God, for spouse, for family, for their neighbor; of desire to grow in virtue and knowledge, for their work — burns, and their experience of emotion — of discovery, of awe, of appreciation of beauty — is long and intense, complex and multifaceted. This emotion is the other side of contrainte; it is the same virtue that enables them to enjoy wine in temperance, and to be moved to tears by music and theater. It is not a "virtue" of stifling — that would be far too easy, but of control and proper enjoyment. Just as they find abstinence from drink to be too easy, a way of dodging the lesson of moderation, stifling emotion and crushing it would be, to them, a way of dodging the lesson of passions rightly oriented in accordance with holiness and love — not to mention an unconscionable destruction of an integral facet of being human.

Those Urvanovestilli who are the most virtuous, the most filled with contrainte, are nearly always the most passionate.

---

Urvanovestilli are usually short, but look like very tall in miniature, with clear white skin and jet black hair. The men have a thin and wiry frame, with sharp and angular features. They have flaring eyebrows coming out of a prominent brow, a thin, hooked nose, and tufts of fine hair flaring away from their ears. Skin holds tightly to bones, muscles, and veins, and arms end in long, thin hands with nimble fingers. Their voices are a very soft, almost silent tenor.

The women are somewhat slender, but a slenderness which is graceful and rounded. Their features, as well as their build, bear this slender, graceful, rounded character, and their movements are light and flowing. (If the men know more of passion, the women know more of calm). Their voices are high and clear, with a sound that is like silver, like cold and crystalline water, like clear, light, dry Alsace blanc.

Urvanovestilli worship services are long and complex, with ornate liturgy and ritual. The language is florid and ornate (like that of the liturgy stemming from St. John Chrysostom) and every sentence of the liturgy would embody theological truth. The homilies (although not the only part of the service which varies (much of the liturgy itself changing according to a traditional pattern dictated by a complex algorithm) from week to week) are themselves not that long. They are of moderate length, and differ from the liturgy — which presented different doctrines sentence by sentence — in being a full and well-developed presentation of one single idea, expressed in unequalled detail and eloquence.

---

The Urvanovestilli homeland is named 'Flaristimmo'.

---

## Urvanovestilli city — Capitello

Capitello is the capital of the Urvanovestilli land, and the classical Urvanovestilli city.

At the very heart lies a cruciform cathedral. It is an immense domed building, the outside in white marble, covered with statues and spires. Inside, all is dark — or so it seems to a person who first steps in.

Someone who steps in first stands in place, seeing nothing really, perhaps a few points of light in the darkness... and then, very slowly, begins to adjust. It is cool inside, and very still. The silence is a silence that can be heard, a very real and present stillness. As he begins to step into the coolness and the silence, he begins to see light — light that had gone unnoticed at first, but as he steps into it, becomes more and more visible. The light is shining through a thousand candles, each one bringing a little bit of light, a little bit of warmth, to what is around it. Then, after the candles become visible, it is seen what they illuminate — mosaics, worked with colored dyes and gold leaf... and faces.

Outside of the cathedral lies an open garden with fountains and statues. Around the garden lies a circle of seven great halls. In clockwise order, beginning south of the cathedral, they are:

**Library:** This collection, the largest in the world, has at least one copy of all known writings, and a scriptorium in which they are copied and transmitted.

**Device museum:** This is a clockwork building filled with exemplary devices (and copies in various states of disassembly).

**Senate:** This building is decorated with arts and crafts from the cities throughout the land; it is a place where senators (two from each city and one from each village) meet to govern the nation.

**Mayorship:** This is the local senate, the seat from which public affairs are run; the majority of political power is on a local level (the senate being the head of a confederation), vested in the town elders.

**Forum:** This is an immense amphitheater which hosts a variety of speakers, panels, and open talks. Lecture is the predominant medium and presentation, but poetry and storytelling occur not infrequently. The forum, along with the evening worship services in the cathedral, walking in the garden, attending a concert, or looking through the art museum, is appreciated as an enjoyable way to spend a night out.

**Music hall/theater:** This hosts concerts and recitals, theatrical

MUSIC HALL/ THEATER. THIS HOSTS CONCERTS AND RECITALS, THEATRICAL performances, operas, dances, pyrotechnic displays, occasional Janra acrobatic performances, dramatic readings, puppet shows...

Art museum: Half of the space is devoted to permanent exhibits, and half to temporary displays. Most of the finest artwork ever produced by Urvanovestilli, and a good deal of the finest artwork from other cultures, may be seen here.

Outside of the seven halls lies what is called "the mélange"; outside of the mélange lie fields, pastures, and vineyards; outside of the farmland lies forest.

The mélange is a large annulus which contains mansions, shops, roads, paths, public squares, gardens, open lots, little forums and theaters, restaurants, and so on. It is where a great deal of life and culture transpires; in the little nooks and crannies, inside the parlors of the houses, a lot transpires.

The Urvanovestilli enjoy going out, but the enjoyment does not come from despising being at home. The parlors, which have the distinction of being within a person's home and hospitality, are lavishly furnished, with couches, chairs, lanterns, some instruments, a liquor machine, some sculpture or paintings, often a fountain or clock or... and people enjoy sitting around, talking, reading, performing music...

---

Urvanovestilli city: Éliré

Éliré is known among the Urvanovestilli as the city of seashells. While most Urvanovestilli cities are built out of white stone, in ornately embellished classical geometric forms, Éliré is built out of sandy yellow stone, in flowing curves; buildings seem like giant seashells. The artwork and jewelry are crafted from seashells and other treasures from the sea — coral and pearls — and the public squares are filled with fountains and pools, where colorful fish swim about.

The people enjoy swimming, and often meet the dolphin population; they enjoy each other.

---

### Urvanovestilli city: Mistrelli

Mistrelli lies in the heart of the Fog Valley; a shroud of mist cloaks the ground, out of which rise trees and tall buildings with spires and towers. Inside the buildings are all manner of tunnels of tunnels, secret passages, and trapdoors; there are clockwork devices in each one. Throughout the city are spread a handful of entrances to a vast underground labyrinth, of which the better part is known; there are all manner of doors and puzzles inside.

The city is full of rose bushes, climbing up the sides of the buildings, over and around gates; most are yellow, but there are some of every color.

The people take a long time to get to know, and their personalities always have hidden gems. Their study of theology emphasizes mystery and the incomprehensible nature of God; Connaissance, a theologian from Mistrelli, began and ended his magnum opus with the words, "I do not know."

---

### Urvanovestilli city: Fabriqué

Fabriqué is the biggest of Urvanovestilli port cities; it lies on the Tuz border, and is the site where ships — full rigs with multiple masts, many sails, and innumerable ropes — are built. They are polished and ornately carved, well suited for transport and trade as well as a work of art. The crews hired tend to be heavily Tuz — strong and sturdy workers who have no problem tying a rope as thick as a wrist in waves and storm — and set sail to other Urvanovestilli ports and ports around the world, transporting voyagers and cargo to destinations near and far.

## Yedidia

The Yedidia culture is a culture of vibrant life. They live in buildings woven out of living trees and plants; the doorways are filled by hanging curtains of leafy vines which softly part as a person passes through.

Their manner of gardening spins out of a wonderful talent for drawing beauty out of the forest; many visitors come for the first time, do not even realize that they have stepped into a garden; they only notice that the forest's beauty is exceptional there.

The Yedidia are very sensitive to the rest of Creation; they speak in a melodic, lilting tongue of the purest song, but even that language is not the one that is closest to them. The first language of every child is that of rocks and trees and skies and seas. They know how to call birds out of the forest to fly into their hands; they know how to make plants flourish.

They have ears to hear the crystalline song by which the Heavens declare the glory of their Maker. They appreciate the beauty of the created order as it tells of the Uncreate with a power that can not fully be translated into words — and they use the language of Creation to speak of the mysteries of the Creator, whose fingerprints are everywhere in nature.

They look into the great and unfathomable vastness of space; it furnishes the language by which they tell of the great and unfathomable vastness of the Creator. They know the energy, the great fire out of which the sun pours out light and energy; it furnishes the language by which they tell of the energy and great fire in the heart of the Father, offering warmth and light freely and without cost. They dance in the rain, the life giving water poured out from above; it furnishes the language by which they speak of springs of living water come down from Heaven. They admire the beauty of the lilies of the field, which simply rest in the sunlight, rain, and dew showered on them; it furnishes the language by which they speak of resting in the love poured out. Their eyes are not

closed when a grain of wheat falls to the earth and dies...

They are sensitive to the silent beauty that is sometimes unnoticed even by the Janra. They enjoy the brilliance of the sun, and the pale blue luminescence of the moon; the gentle warmth of a summer night, and the powerful motion of a pouring rainstorm (and there are few things many Yedidia enjoy more than being thoroughly drenched). They look at the veins of a leaf, the hairs of a caterpillar, the motion of a snail; they listen to the song of birds, the sound of wind whispering amidst the leaves, the splashes of water flowing over rocks; they taste the cold freshness of water, the tartness of lemons, the sweetness of strawberries; they smell the soft fragrance of jasmine, the spice of cinnamon, the freshness after a rain; they feel the velvety softness of a rabbit's fur, the raspiness of a rhubarb leaf, the roughness of bark, the smoothness of a worn stone, the gentle kiss of a summer breeze, the springiness of pete moss, the shimmering heat of fire long into the night, the light tickle of a crawling gecko, the fineness of a child's hair, and the warmth of a friend's face.

They are as intuitive as they are perceptive; the emotions of friends especially, but strangers as well, are quickly understood; be it singing together, a friendly joke, talking, listening, leaving alone, sitting together in silence, holding a hand, giving a hug — they always seem to know.

The Yedidia make wines and incense which even the Urvanovestilli do not come close to. It is, though, the Urvanovestilli who make their garments. Some are short, some are tall; some are slender, some are rounded; they tends towards being fairly short and fairly round, but there is a lot of variety. All, though, have olive skin and dark, shiny black hair; the women wear a long, flowing robe of kelly green, over which cascades of hair fall and spin, sometimes reaching to the waist, sometimes almost touching the ground; the men wear cloaks and tunics of walnut brown. The clothing is soft and light as air; it streams out in the motion and jumps of dance — like their music, smooth, soft, flowing, graceful.

"Dance, then, wherever you may be, for I am the Lord of the Dance, said he." Theirs is a culture full of joy and celebration; it is full of smiles, and always willing to welcome a visitor. Finding something good, they look for someone to share it with.

They are very sensitive to the cycles of nature, of the day, of the phases of the moon, of the seasons in turn. They shape the regular rhythm of their songs, and provide a sense of constancy and regularity, again, which furnishes the language by which they speak of the constancy and

furnishes the language by which they speak of the constancy and regularity of the Creator.

The traditional greeting is a soft and gentle hug, one which often lasts a while (or a butterfly kiss, or...). That touch, as their faces and voices as they speak, bears a great deal of expression: The phrase of greeting used means, literally, "Here is a person in whom I find joy." The words remain the same, but the music of the speech colors it to perfection.

Though each culture has its own drink — even the icy cold water enjoyed by the Nor'krin is appreciated by visiting Janra, who recognize it as a gift given without sowing or reaping — drinks are one of the first things that come to mind when most people hear the word 'Yedidia'.

First of all are their wines. Nearly all of the finest wines are made in their land. Red and white, and a little bit of rose and green, are stored away in caves to age for years, perhaps decades, before being opened to enjoy with friends and memories.

After the wines come cider; it is served hot and well spiced; the spicing is done in many different ways, and gives a wonderful variety to a very soothing drink to warm a cool evening.

There are fruit juices of every color of the rainbow; strawberry, pear, guava, banana, apple, peach, and fig are but the beginning of a very long and flavorful list. There is, though, one strong point of commonality: the fruit is always still attached to the plant a few minutes before it is served.

(the variety of fruit juices is fermented and aged as are grapes to make wine, but that variety of drinks is reserved for very special occasions)

They also enjoy teas and infusions; the trees and herbs provide another spectrum of tastes to sip with friends.

Roots of various plants are sometimes spiced to provide another drink.

Yedidia cuisine varies somewhat from region to region. In some places, it is based on fresh fruit, and in others, on breads, cereals, thick soups and vegetable stews; the latter is spiced, lightly salted, and often has some meat for added flavor. All forms of Yedidia cuisine begin with a small salad (either garden or fruit), have a main course of some form of the local specialties, are followed by a platter with an assortment of breads and fresh fruits, and end with a dessert of cheeses or cured fruit.

Life, to the Yedidia, is one big, long party, and, to the Yedidia, song is the symbol of celebration. They sing in the morning, and sing in the evening; they sing while working, and sing a prayer — hands joined

together — before meals. Thought is expressed in song; the first place to look for an expression of their perspective on theology and philosophy is in the verses of their hymns. There are many cherished songs shared across the nation, but there is also much spontaneity and improvisation; their way of speaking/singing is in metered verse, and a wealth of their wisdom is embodied in the rhythm of hymns, regular and dependable as the cycles of nature. The day, the moon, the year — these different cycles are echoed in the structure of verses.

For the beauty of the earth, for the glory of the skies, For the love which from our birth over and around us lies: Lord of all, to Thee we raise this our hymn of grateful praise.

For the beauty of each hour of the day and of the night, Hill and vale and tree and flower, sun and moon and stars of light: Lord of all, to Thee we raise this our hymn of grateful praise.

For the joy of human love, brother, sister, parent, child, Friends on earth, and friends above; for all gentle thoughts and mild; Lord of all, to Thee we raise this our hymn of grateful praise.

For Thy church, that evermore lifteth holy hands above, Offering up on every shore her pure sacrifice of love: Lord of all, to Thee we raise this our hymn of grateful praise.

For Thyself, best Gift Divine! To our race so freely given; For that great, great love of Thine, peace on earth, and joy in Heaven: Lord of all, to Thee we raise this our hymn of grateful praise.

This is my Father's world, and to my listening ears, All nature sings, and round me rings the music of the spheres. This is my Father's world: I rest me in the thought Of rocks and trees, of skies and seas; His hand the wonders wrought.

This is my Father's world, the birds their carols raise, The morning light, the lily white, declare their Maker's praise. This is my Father's world: He shines in all that's fair; In the rustling grass I hear him pass, He speaks to me everywhere.

This is my Father's world, O let me ne'er forget That though the wrong seems oft so strong, God is the Ruler yet. This is my Father's world: the battle is not done; Jesus who died shall be satisfied, and earth and Heaven be one.

The Yedidia are the most alive to sensation; each sense is valued, and each one provides something a little different.

Touch is pre-eminent; it is enjoyed immensely, and they consider it the most informative of senses. Touch tells them of texture and temperature, of moist and dry; by how things respond to pressure, they can feel what is present beneath the surface and what structure it forms; it tells much of emotion. When sensation yields perception, touch provides them with the greatest richness.

Smell is a sense of memories; to walk through an orchard is to remember seasons past. It no less bears a tale of what has happened; each person bears his own distinctive smell, and a place by its smell tells who has passed by. Many different things leave a mark on a placés scent, and to smell is to be told, as if in a far-off memory (indeed, like those that smell mysteriously triggers), what plants are present, what the weather is like and has been, who has passed by, what fruit was picked — though not all of this is perceived all of the time, the fragrance of a place often tells bits and pieces.

Sight is a sense that works by light illuminating all that it shines on (and this is something from which they draw a lesson). It tells of the color, the form, and the beauty of what is around; what is moving and what is still; it tells of what is far away and can not yet be touched. It serves as a guide to what is around, as a guide by which to move and act in an unknown situation, and it bears its own beauty; all of this provides lessons about God and about faith.

The first sound in their mind, and the one they most love, is song. The song of a friend's voice, the song of a bird chirping, the song of a babbling brook, the silent song of silvery blue starlight — all of these are listened to and enjoyed.

The taste of food tells of the time of year and of culture. Drink and food are a kind of art, and its taste tells both of the time of year and how it was prepared.

Yedidia emotions have a fluid character; they are a sensitive people who are easily moved and who show their emotions quickly. Their celebration is filled with smiles and mirth — as is, indeed, much of life. Tears are held to be very precious — in their language, the same word means 'tear' and 'diamond' — and they know tears, not only of sorrow, but also of joy. Tears come to greet both memories and powerful music, and mark as both sign and symbol the most significant events in life.

and mark as both sign and symbol the most significant events in life — farewell and death, yes, but also a loved one regained, and birth, and marriage. Memories and hopes, also, are precious. They know sorrow, but never bitterness; however deep and angst-ridden the sorrow may be, deeper and more healing is the joy. Farewell is always marked by the thought of, "I will be able to enjoy your presence again;" on many a deathbed has been spoken the words, "We will be brought back together again in the heart of the Father. It will not be long."

Yedidia worship services are filled with songs — celebrations in which everybody participates.

The Yedidia homeland is named 'Syllii'.

---

Yedidia character: Sylla

Sylla is relatively short and rounded; she has dark, olive skin and soft, brown eyes. Her hair falls down to her waist, and she wears a long, flowing kelly green robe, as is traditional among Yedidia women; more often than not, a chain of flowers rests in her hair. She chooses to go barefoot, so that she can feel the grass, the moss, the earth, and the stones beneath her feet.

The only possession which she carries is a small harp; a slow strum accompanies a soft and gentle song. She also has with her a pet: a milshh: a small, eyeless animal, about two feet long, with brilliant golden fur that is long and soft, two large, pointed ears, eight short, flexible legs ending in large paws, and a shiny black nose which is always sniffing inquisitively. It is both shy and curious, and it is very warm and affectionate; it is usually very calm and sedate, but often becomes very excited when it smells someone familiar.

A quote:

Fair is the sunlight;  
Fairer still the moonlight:  
Fairest of all, is the light of thy face.

## Jec

The Jec life is filled with faith, humility, and simplicity. They live in small rural villages, where farmland — pastures, fields, orchards and vineyards, the village commons — outlies a few houses, some artisan's shops, and a simple church.

They are peasants very much like those chosen to be apostles, and the carpenter who chose them. Farmers, blacksmiths, cobblers — clothed in rough, plainly colored robes, they are the sort of people one could easily overlook in the search for the spectacular. It is calloused hands and dirty fingernails that are lifted up to God in worship, and that continue to worship by placing a yoke on a pair of oxen, gathering firewood, peeling carrots and potatoes, or threshing wheat. There are many who are given great wisdom and knowledge, a faith to move mountains, or who speak in the tongues of men and angels, but they do not bear an otherworldly air or a strange electricity; they appear as men and women like any other, usually harvesting barley or carving wood.

Their thought is expressed in parables, little stories, and proverbs, the first and foremost of which are "Love Yahweh your God with all of your heart, and all of your soul, and all of your mind, and all of your might," and "Love your neighbor as yourself." There is a great sense of community and continuity, carrying the torch passed down by the saints who walked before.

They do not really travel; most are born, live, and die within a few miles of a single point. They do not look down on wayfarers who voyage far and wide to see the height of mountains and the vastness of seas, and enjoy the richness of the visible and invisible artifacts of the variety of cultures, but they pay a lot of attention to what is easy to pass by without noticing. They know their culture, their village, and its people very well.

Jec culture is a culture of the very small. They see the great in the

small; in the Law of Love is seen all of virtue and right action; in a tiny shoot pushing out of the ground they see an immense oak whose branches will someday provide shade; in a simple gift, they see the love that gave it. They are fond of the words, "He who is faithful in little is also faithful in much." Piety is given expression in the tiny details of everyday life, to which careful attention is devoted. They search to love God by seeing to the needs of whoever they are with.

Gift giving occupies an important cultural position; each gift serves as a little symbol, a little morsel, of love. The gifts are very simple — poverty does not permit the spectacular — but are given generously. A flower, an apple, a song, a blessing, a handshake, a prayer, a poem, a cup of cold water wood carved into a statue or a whistle, an oddly shaped pebble, a skin of wine, a walk, a story, a patterned candle — all of these are given.

Sight, sound, touch, smell, taste — there is nothing really special about their use of senses. They notice and enjoy little details; there is not much more to say.

The language has simple rules and few words; it is one of the easiest to learn, and bears well the load of talking about everyday matters, about personality and friendship, and about God.

When two Jec meet, one is usually coming to visit the other, and something of this notion of visit and welcome is embodied in the greeting. The visitor comes with one arm outstretched and hand open, saying, "I give you my love." The host clasps the outstretched hand, bowing slightly, and says, "And I return to you mine." These actions are accompanied by a gentle smile.

They are fairly short, with tan skin, brown eyes, and hair that is usually brown (and sometimes black or sandy blonde).

Their emotions are the emotions of being human, the common points of feeling shared across all culture. They know at least something of laughter and peace and passion and tears and awe; if there is one point that runs strong, it is a sense of tradition, community, continuity, and place; they have a sense of unique importance and a part in the great plan (two concepts which are not really separate in their thought).

Jec worship services are simple, without any real distinguishing remarks — no bells and smells, just a week by week liturgical service presenting the Gospel message and embodying worship. The opening words of each service are, "Hear, O Israel, Yahweh your God is one. You shall love Yahweh your God with all of your heart and with all of your

shall love the Lord your God with all of your heart, and with all of your soul, and with all of your mind, and with all of your might. You shall love your neighbor as yourself. Love one another."

The Jec homeland is named 'Tev'.

## Shal

The language is soft, gentle, simple, and calm. It is spoken slowly, as if it were a lullaby; it has few words: simple, little words with rich and profound connotations; 'Way', 'Tao', and 'Word' are like the nouns which are used.

Even the verbs are rarely verbs which tell of action. Rather, they describe that which is; 'be', 'abide in', 'embody', 'love', 'nourish', 'support', 'is the friend of', 'know', 'receive', 'is from', 'resemble', 'live', are the essential words which a child would learn as one of our children would learn words such as 'walk', 'talk', 'eat'. Just as our language has different words — 'walk', 'run', 'jog', 'sprint', 'mosey', 'trot', for example — which tell of the action of moving by the use of legs, so their language has at least a few different words to tell of being, or understanding, or abiding, or loving. The way of speaking sometimes does not even need verbs; there are more adjectives than adverbs.

The genius of the language is embodied in a flowing prose which is the purest poetry; words with the simplicity of a child. It does not have abruptly ending sentences, but rather slides somewhat like Hebrew; one thought gives form to the next. It has something like the feel of the prologue to John's account of the Gospel, or his first letter; it has something like the feel of a Gregorian chant; there is nothing abrupt in their speech or music. They speak, but even more, they are silent; there is a communion.

The understanding is one which sees beyond, which looks at the surface and sees into the depths. They stand dazzled by the glory of the starry vault, and worship the awesome Creator who called them into being; they look at a friend's face and see the person behind.

Their culture is a place of perfect order. It is ordered by things being placed rightly; by God worshiped by man, the spiritual ahead of the

physical, being beyond doing.

It is of this that God is known in all of his majesty, that spirituality becomes rich and profound, that there is a right state of being. This brings the lesser things to flourish. Men shine as they reflect the glory of God. That which is physical is enjoyed immensely — the warmth and softness of a friend's touch, the sweetness of a freshly picked orange, the fragrance of a garden of flowers, the sound of a bird's song, the colors of a sunset — all of these things are received gratefully. Being, they do; they tend the garden, and create.

The order flows from resting in the Spirit and from love; there is no one who thinks of order. The truthfulness knows nothing of oaths; the order knows nothing of rules, nor even of honor and morality.

The culture is best understood, not by looking at men, but by looking at God. God gives generously, and they receive and rest in his love.

There are many people in modern society who, when waiting in an office or at a traffic light, become agitated and begin to fidget; they are hollowed out by an excess of doing. The Shal are innocent of such hurry. They act, but it is a doing which flows from being.

Food, wine, music, incense, touch, silence, storytelling, dance, drama, puppetry — it is not often that they all get together to have a celebration (they prize greatly time spent alone with one person, and then extended families and tightly knit communities).

Shal culture does not exactly have greetings as such; their way of thought works differently.

To say 'hello' or 'goodbye' is an action of an instant, in two senses. In one sense, it lasts for an instant; no one says 'hello' twenty times or shakes hands for five minutes. In the other sense, it marks an instant, the instant where absence becomes presence or presence becomes absence.

The Shal do not really think in terms of instants; time is measured and perceived — or, rather, not measured and not perceived — by moments. A friend is present, and he is enjoyed, and then he is absent, and then there is solitude. In the place of a greeting, the Shal have a presence. With the Shal, you never get the feeling that you are alone and there is another person nearby who is also alone; you never get the feeling that there is a close group of friends nearby and they are inside and you are outside. If a Shal is nearby, he is present; indeed, the Shal have a very present touch.

Life, to the Shal, is full of moments. There is a meal with friends, and then there is reflection in solitude, and then there is a beautiful song, and

then there is reflection in solitude, and then there is a beautiful song, and then there is time with a friend, and then there is prayer, and then there is sleep, and then there is work tending to the trees... There is not interruption or haste; a moment lasts as long as it is appropriate for a moment to last.

Their moments of community are profound; their moments of solitude are even more profound. 'Withdrawing' is what they call it; it is a time of stillness, and an expression of a love so profound that all other loves appear to be hate. It is a time of finding a secret place, and then withdrawing — from family, friends, and loved ones, from music and the beauty of nature, from cherished activities, from sensation — into the heart of the Father. It is a time of — it is hard to say what. Of being loved, and of loving. Of growing still, and becoming. Of being set in a right state, and realigned in accordance with the ultimate reality. Of purity from the Origin. Of being made who one is to be. Of communion and worship. Of imago dei filled with the light of Deus. Of being pulled out of time and knowing something of the Eternal.

This withdrawing fills them with an abundant love for other people, and gives them a renewed appreciation for nature and music; it fills them with silence, and fills their words and song.

Their perception of the world is quintessentially tactile. Sight, hearing, and smell all work at a distance; touch perceives what is immediately present. The eyes, ears, nose, and tongue are all organs of sense at one place on the body — more sensitive in some places and less in others, to be sure — and feels all of what is immediately present. Touch provides the physical side of the presence which is so greatly valued.

The emotional side of the culture is filled by peace, in which is embedded joy and contentment. It does not change very much or very quickly — though it encompasses affection, or appreciation of beauty, or a special serenity, or absorption in thought.

Their appearances have the peculiar property of not seeming to be any particular age. If you look, age is not very difficult to judge, but somehow the thought doesn't come up. They have a rounded shape, soft eyes, and warm, soft skin.

Shal worship services are different from the others. They are characterized, not by the presence of words, but by the presence of a profound and penetrating silence where God is imminent. There are a few words, but they are not where the essence lies.

The Shal homeland is named 'Liss'.

## Janra

The Janra, unlike any of the other cultures, have no homeland; they voyage among the other lands, where they are generally well-liked and warmly received. Their wayfaring is at once literal and symbolic: literal in the sense that they know that they are passing through this earthly country for a better one. They enjoy all of the lands that they visit — they have an informal character, and always seem to be at home — but they know that none of them is really home.

It must be said that they know how to move. They can walk, skip, and run, of course, but that is only the beginning. Trees, buildings, and cliffs are climbed like ladders. Come oceans, rivers, and lakes, they will happily swim. Be it lightly skipping atop a thin wall, or jumping out of a window to grab a tree branch and swing down, or running at top speed through the twisty passages of the Southern mines and caves, they make acrobatics seem another form of walking. Somehow, even flipping through a window or somersaulting under a table, they have an extraordinary knack for barely missing collisions with hard objects; the Urvanovestilli are still debating whether this is the result of skill or luck.

The dances of the Urvanovestilli have a marvelous complexity, and those of the Yedidia are known for their flowing grace, but there is still nothing like the spinning energy of the Janra. The Janra are very adaptable, pulling bits and pieces from other cultures and setting them together in vital new combinations. In some of the dances can be seen bits and pieces — moves of strength that look like Tuz wrestling, or complexity from the Urvanovestilli — and the result is nothing short of breathtaking.

In their adaptability, they usually speak at least a few words of each language, and usually borrow whatever form of greeting is common in the land they are visiting. They are familiar with the household objects (often

enough to use them in new ways). This, combined with a flair for practical jokes, is occasionally enough to annoy the town guards, but (more often than not) their antics leave people laughing, sometimes to the point of tears.

The Janra have a remarkable talent for not remaking God in their image. Their description of Jesus is anything but boring and respectable — a firebrand with a phenomenal knack for offending religious leaders, in the habit of telling respectable pillars of society things such as, "The prostitutes and tax collectors are entering the Kingdom of Heaven ahead of you." — and they are known for an honesty that can be singularly blunt. They know that he passed over scribes and lawyers to call, as disciples, a motley crew of fishermen, tax collectors, and other peasants — one terrorist thrown in to make matters interesting. They are, however, just as cautious not to water him into only being a social reformer who had nothing to say about sexual purity.

For all of their sharpness, for all of their ability to bring forth the most embarrassing Scriptural teaching at the worst possible moment, it must also be said that the Janra have hearts of pure gold. Love and compassion are constantly in their thought and action; they are the first to share their food with a beggar, say hello to the person who is alone, or ask, "Are you hurting?" The accusations brought against them are accusations of having too many quirks, not of being unloving.

Their language is of a force that is not easily translated into writing; of course it has nouns, verbs, adjectives, adverbs, etc. and respects masculine and feminine, but intonation, speed, vocal tension, and other factors tell at least as much; they carry connotation and sentiment, express the level of clarity of understanding the speaker believes he has, and many more things. There are also a number of verbal tics, on the order of two or three dozen ('Eh?' is, however, not included, and apparently perceived to be a mark of general silliness); in a sense, they don't do anything, but in a sense, they add a very nice pepper to the speech.

Janra thought involves a kind of sideways logic, which is part of why their ways of speaking are difficult to describe. They take little bits and pieces from different places, and put them together in unexpected ways, making connections that can be very surprising. They are very good at reading between the lines, and sometimes perceive things which were not intentionally meant to be communicated. Sometimes they borrow

intentionally meant to be communicated. Sometimes they borrow manners of speech from other people — conversation, structured argument, metered verse, stories, parables, and so on — but their usual way of speaking has all sorts of sideways jumps and turns, with segues that can be rather odd, and often leaves gaps; these gaps are not a matter of sloppiness, but rather something like a joke or riddle where the hole is intentionally left to be filled in by the listener.

"When it comes to games, never try to understand the Janra mind."

-Oeildubeau, Urvanovestilli philosopher and anthropologist

It is known that Janra sports usually last for at least half an hour, involve a ball, two or more teams, running and acrobatics, and animated discussion. Beyond that, neither the Urvanovestilli's logic nor the Yedidia's intuition are able to make head or tail of them. In general, the teams appear to have unequal numbers of players; the players often switch teams in the course of play; teams are created and dissolved; the nature of the activities makes sudden and radical changes; there is no visible winning or losing. There are occasionally times in the course of play when some intelligible goal appears to be being approached... but then, all players seem to be approaching it in a rather erratic manner (when asked why he didn't do thus and such simple thing and achieve the approached goal by an inexperienced anthropologist, one of the Janra said, "Technically, that would work, but that would be a very boring way to do it," and then bolted back into play: the extent to which game play is comprehensible heightens its incomprehensibility). Late in life, Oeildubeau hinted at having suspicions that, if the Janra believe that they are being watched, they will spontaneously stop whatever sport they are playing, and instead begin a series of activities expressly designed to give any observer a headache.

Janra come in all shapes, sizes, and colors, showing bits and pieces of other races; they tend to be of moderate to tall height and a lithe build. Most are fairly light skinned (although a few are rather dark); a fair number of them have skin spotted with freckles. They have every imaginable color of hair (black, brown, blonde, grey, white, red, tweed, shaven head, etc). and eyes (brown, blue, hazel, grey, amber, purple, etc). They wear loose clothing in a variety of colors, usually quite vivid: red

They wear loose clothing in a variety of colors, usually quite vivid, red, purple, and green are the most common of solid colors, and patches or stripes of some pattern or the whole rainbow appear not infrequently. Therefore, Al is a pud.

Their sensation of the world is primarily visual, and in a way patterned after their thought; visualizing and visual problem solving comes very naturally to them. They see, as well as beauty, a world to interact with, and parts to rearrange and make something new. Sound and touch serve largely to complement and extend visual image; taste and smell are enjoyed, but do not play a terribly large role. The other side of the coin (to problem solving) is observing and enjoying, which is also very much a part of culture.

Their emotional life has several sides. They carry with them, in their emotions, a little bit of every place and people they visit — the passion and control of the Urvanovestilli, the peace of the Shal, the festivities and music of the Yedidia, the respect of the Nor'krin, the enjoyment of exercise of the Tuz, the common factor of the Jec. Perhaps the most prominent side of all is laughter. Janra are immeasurably fond of banter and practical jokes, and have an uncanny knack for guessing who is ticklish. There is an element of what is carefree, spontaneous, and given to pure enjoyment of simple pleasures; there is also a large element of being immersed in sidethink, and they enjoy greatly the flash of insight when everything fits together. They are curious and enjoy discovery.

There is another side to this emotion which seems paradoxical, but fits perfectly. There is a difference between childlike and childish, and not a trace of childishness is to be found among them. They enter the Kingdom of Heaven as little children — in particular, like one little boy who stood up before crowds of thousands and asked, "Why is the Emperor naked?" Of all the skills people learn as a part of growing up, they know perhaps least of all closing their eyes and using intelligence as a tool to make oneself stupid. They are moved by what goes unnoticed, smiling at the beauty in a single blade of grass, and weeping at the death of a beggar who, homeless, friendless, handicapped and burned, explained that he was unable to drop a knife taped to his defunct hand for self-defense, but was still shot and killed outside of the White House by men entrusted with the responsibility of protecting innocent life.

There are two things to said about Janra worship. The first is that they adapt and participate in whatever is the local manner of worship (as do

traveling Urvanovestilli and other wayfarers) — in that regard, they make no distinction between themselves and the peoples that they visit. The second — and this does not stem from any perceived defect in the other forms of worship, but from who they are — is that they hold their own worship services.

These services do not occur at a fixed time and place (though they occur more frequently when Janra are on the road between different locations), but at random intervals and locations, spontaneously. Anyone and everyone is welcome, and children and sometimes adults of other races are usually present.

They are a warm and informal occasions, where anyone can take the lead, and a great many activities are recognized as worship; the Janra have a particularly strong emphasis on the priesthood of the believer and the sacredness of everyday life. People sit in a big circle, and people or groups of people come to the center to present or lead as they wish.

There is no canonical list of activities that are performed at these services, but the following are common.

- \* Songs. The Janra sing their own songs (often improvised) or those of other peoples; those of the Yedidia are especially treasured. While singing, the people are sometimes still, sometimes swaying, sometimes clapping, and sometimes dancing with their arms.

- \* Prayer. One person will lead a prayer, or people will pray popcorn style, or...

- \* Sermons. A theologian or philosopher will preach a sermon.

- \* Sharing. Someone will share an insight or experience from personal life.

- \* Dance. The whole assembly will dance, sometimes in a long, snaking line.

- \* A joke is told. The Janra are fond of laughter.

- \* Drama. One of a few people will present a dramatic presentation, play, or skit.

- \* Group hug, usually in whatever is the common greeting of the land.

- \* Ticklefest. "Blessed are the ticklish, for the touch of a friend will fill them with laughter."

- \* Silence. This is treasured.

- \* Reading from the Scriptures.

- \* Reading or recitation of poetry.

- \* Storytelling.

- \* ~~Inoeling and similar activities~~

~~gugging and similar activities.~~

- \* Acrobatics.
- \* Instrumental music.
- \* Non sequiturs.
- \* Miming.
- \* Mad libs.
- \* Impressions and impersonations of various and sundry people.
- \* Janra-ball. This occurs in a modified form such that members of other races, while still not understanding anything, are capable of participating. (Nobody gets a headache.)
- \* Eucharist. This is the most solemn and important moment, and occurs exactly once in a service — at the end.
- \* None of the above. This category is especially appreciated.

---

Janra character: Nimbus

Nimbus is fairly short and wiry; he has light, almost white blonde hair, deep, intense blue eyes which sparkle and blaze, and a rich, laughing smile. He wears a loose, shimmering two-legged robe of midnight blue, from the folds of which he seems to be able to procure innumerable items of Urvanovestilli make (for example: goggles (waterproof), telescope, silk rope and grappling hook with spring-loaded launcher, climbing/rapelling harness and gear/self-contained, spring-loaded belay), lantern, tool kit (large blade, precision blade, compass, wire saw, corkscrew, ruler, reamer, chisel, pliers, scissors, needle, punch, protractor, file, and sharpening stone), paper pad, mechanical pencil, supply kit (string, pencil lead, chalk, flask of oil, wire, miscellaneous device components (gears, springs, shafts, etc.), cloth), meal kit, tinderbox, mechanical puzzle, mirror, whistle...).

During childhood, he spent a lot of time in the land of the Urvanovestilli, and began to take an interest in tinkering. He has very much his own way of tinkering, from an Urvanovestilli perspective; he is fond of all manner of kludges. The resulting devices have caused his Urvanovestilli mentors to conclude that he is mad (the truth of the matter being that he is not mad, but produces and modifies contraptions in such a manner as to drive any honest Urvanovestilli tinkerer mad). When the city unveiled a new fountain in the public square, he added a pyrotechnic spark; when, in a public ceremony, the mayor celebrated his wife's birthday by presenting a specially commissioned music box, the tune somehow changed from "Happy birthday to you" to "The old grey mare ain't what she used to be."

He does, however, possess a sense of what is and is not appropriate; his practical jokes never take on a mean or spiteful character, and he does possess a strong degree of contrainte. He does appreciate the variety of cultures he visits, and enjoys Urvanovestilli philosophical and theological discussions.

He is, in short, as Janra as any — left-handed and colorful, warm and compassionate, and a heart of solid gold.

A quote: "What? You think I would do something like that? I'm hurt." (generally accompanied by a wide grin)

## All

"Not all flesh is the same: men have one kind of flesh, and beasts have another kind of flesh, fish have another, and birds another still. There are also celestial bodies, and terrestrial bodies; the glory of the celestial is one, and the glory of the terrestrial is another. The sun has one glory, and the moon another, and the stars still another; star differs from star in glory."

I Cor. 15:39-41

"God does not create two blades of grass alike, let alone two saints, two angels, or two nations."

C.S. Lewis, That Hideous Strength

This world is an exploration of good, a set of musings about cultures not fallen. The variety of cultures exists because of the nature of good.\*

Matthew, Mark, Luke, and John all tell the same Gospel, the same message of Jesus Christ, Son of God and Son of Man, crucified for the forgiveness of sins and raised from the dead.

They each, however, present this one Gospel with a distinct flavor; it is with a great deal of wisdom and respect for this one Gospel message that Christian tradition has vigorously resisted attempts to reduce the four books to one single, homogenized account. Matthew emphasizes the Kingdom of Heaven and peace; Mark emphasizes action; Luke provides a physician's account of healing and sensitivity towards the despised; John provides a poetic and mystical account of love and intimacy. It is to faithfully represent this one Gospel that the Spirit inspired the writing of multiple accounts.

Faithfulness to a God of color and vibrancy means anything but a dull, monotonous cookie cut-out series of identical believers; just as a person is most faithfully represented, not by multiple copies of one photograph, but by many different photographs from many different angles, so images

of God may faithfully reflect him by being different from each other.

This is why there are different cultures, each with its own emphasis on philosophy and way of life. (Within these cultures, though I have far from described them, should be many different sub-cultures, communities, and individuals. There is a masculine and a feminine side to each culture — or, more properly, each culture recognizes the importance of men who are masculine and women who are feminine). The differences, however, are differences of emphasis, just as the previous analogy spoke of different photographs for the sake of faithfully representing one entity.

It is in this same substance that people of other cultures look at each other and immediately see human beings; the differences are a source of heightened enjoyment between brothers and sisters. It is in this same substance that they love God with their whole being, and love their neighbors as themselves. That there is one God, the Father, the Almighty, Maker of Heaven and earth, of all that is, visible and invisible, that God is holy, possessing all authority and all wisdom, that there is one Lord, Jesus Christ, God from God, Light from Light, Love from Love, the Word made flesh, perfect God and perfect man, crucified for the forgiveness of sins and raised from the dead to be the eldest of many brothers and sisters, that there is the Holy Spirit, a fire of love and energy shooting between the Father and the Son, the new structure of obedience, that the fear of the Eternal is the beginning of wisdom, that God created the sky, the earth, the seas, the plants, the animals, and saw that it was good, and then created man in his image, and saw that it was very good, that the order of the universe is spiritual as well as physical, that God loves man and has given him the Law of Love, that man has as facets *cultas* and *culturas*, individual and community, that he created them male and female, faith, hope, love, joy, peace, patience, kindness, gentleness, goodness, faithfulness, self-control — things such as these are the reality unequivocally confirmed by all men. Cultural differences provide richness and variety that enhances understanding between brothers and sisters who love one another.

When a character is developed, with a cultural and personal flavor, do not overlook that which is to be common across all cultures and people, the same identity which holds culture and personal uniqueness.

One brief note, in the interest of clarity to avoid unnecessarily offending people: I am a white, male American who has lived in South-East Asia and Western Europe. I find cultures to be objects of great

East Asia and Western Europe. I find cultures to be objects of great beauty, but make no pretense to be well-versed in all of them, nor to have included each of them in this world. The absence of some cultures is not meant as a statement of "My culture exists because of Creation and your culture exists because of the Fall;" I tried to envision a world not fallen, and began to create it with a background that certainly includes my theological knowledge, but also includes my cultural background and my own personality. If some members of other cultures would like to make a similar creation based on their knowledge, go for it; if you send it to me, I'll enjoy reading it. I have not, however, myself gone out of my way to include other cultures; I am not ashamed of this. I am grateful to God for the personal and cultural fingerprints that I have left on this creation, and hope that other people, other images of God to whom it is given a slightly different manner of reflecting God's glory, have been able to read it in an atmosphere of mutual respect.

\* Careful readers will have noticed some things — ergo, meat eating, rebuke, the Cross (a symbol of redemption from sin), which do not correspond to Eden. The cultures exist, not always as what sinless cultures might have been in Eden, but sometimes what sinless Christian culture might be today, were such a thing possible. To state some things more precisely: it is a world in which physical evil exists, but not moral evil. I would request that the reader overlook the indirect marks of sin, as the cultures were designed around other concerns primarily.

# Evangelical Converts Striving to be Orthodox

Anytown, USA. The Parish Council at St. Patrick of Ireland Very Antiochian Very Former Evangelical Orthodox Very Orthodox Very Orthodox Church is working hard to become more Orthodox, in *all* that it means to be Orthodox.

Fr. Joseph explains. "It's part of our Protestant heritage to turn outward in warmth and evangelism. But as an Evangelical Orthodox congregation, we realized that Orthodoxy is the fulness of what we were reaching for, and it's time to free ourselves from our Protestant heritage and become more truly Orthodox. True Orthodox know how to serve and even evangelize—as the monks did in Alaska—while remaining an inward-looking church that extends a rather chilly lack of welcome to visitors. We *can* turn a cold shoulder if we try."

As a result, the Parish Council will be holding a brainstorming session on ways to make the parish less friendly to visitors. The council will be handing out prizes for best ideas, including a thick accent, a long and bushy beard, and a series of motivational tapes on how to have a more lukewarm approach to morals.

Objections were raised in the parish to the effect that there was no Evangelical Orthodox Church in 19th century Russia. 19th century Russia was not available for comment.

# The Evolution of a Perspective on Creation and Origins

*Adapted from a mailing list post. I've still left it as clunky as when it was first written.*

In the interests of providing a fuller picture, and perhaps letting other list members understand *why* I hold a perspective that seems hard to explain in someone who has given thought to the question, I have decided to give an account of how I came to my present position. A serious attempt at representing the cases for and against different perspectives — even the case for my own perspective — is beyond the scope of this letter; I intend to state, without tracing out in detail, my present perspective, but not to give arguments beyond a scant number without which the plot would be diminished. That stated, I *am* attempting, to the best of my ability, to write with the kind of honesty Feynman describes in "Cargo Cult Science" [in his memoirs *Surely You're Joking, Mr. Feynman*]— not a selective account of facts designed to optimize persuasive effect, but (after combing through my memory) as comprehensive an explanation as I can provide without reproducing arguments, one that includes details that will hurt my persuasive impact every bit as much as those that would advance whatever facade I might expect to hold the most compelling influence. I am attempting to place chronological events in chronological order, explicitly noting the exceptions. If there are relevant details ('relevant' from the perspective of any side of the debate, not just my

own) that are not reproduced here, it's because I couldn't find them after looking for them.

My earliest remembered belief, from childhood, was of a six day young-earth creationist view. I read from the Bible, and I think I read some conservative Christian children's material, although I can't remember what; I don't remember it explicitly arguing for a young-earth view so much as assuming it, and warning readers about hostile science teachers when it came to evolution. My father (who holds a doctorate in physics and teaches computer science at Wheaton College) believes in an old earth, but has not (so far as I know) committed to details of theories of the origin of life in a sense that would interest a biologist; in a discussion a year or two ago, I remember him responding to Wheaton's President's perspective that some origins questions are purely exegetical by saying, "Science is a *human* discipline; theology is a *human* discipline." (I would not put things that way exactly, but I am providing it as an example of the situation I grew up in.) I don't specifically remember my mother saying anything about origins questions. The only time during my childhood I can recall a Christian adult trying to influence my thought about origins-related questions was when I looked at my Bible, which had a timeline of different figures and events in the Jewish lineage, with estimated years for different people, and then at the far left had the Creation, the Fall, and some other event (I think the Flood or the Tower of Babel), for which no estimated date was given. Assuming a linear relationship between position on the timeline and time, I extrapolated a date for Creation, and my Sunday School teacher tried to explain to me that I couldn't do that, that that wasn't using the figure properly. I don't know what she believed about origins questions, just that she tried to dissuade me from misreading a timeline. At any rate, my beliefs congealed after I had enough mental maturity to understand the details of the Genesis 1 account, and before I had serious contact with scientific findings or with the Biblical-theological case that the natural order is subject to legitimate exploration and discovery.

Sometime in middle to late childhood — I think before eighth grade, but I'm not positively sure — I read a long *Christianity Today* article about origins questions, following a "four views" format. I remember that theistic evolution was included, and that one of the respondents was Pattle Pun, a biologist at Wheaton; I have vague, inconclusive

rememberances that one perspective was progressive creation, and that one of them might have been six day, young-earth creationism, but I'm not sure on either of the last two accounts. After reading it, my beliefs began to shift. I don't remember exactly what I believed when the process of shifting was going on; to fast forward a bit, I do remember the resting point they came to and stayed for quite a while. It was a theistic evolution account, drawing on quantum uncertainty and chaos theory, and intermittently including a belief in distinctly supernatural punctuations to equilibrium. Ok, end of fast-forward; back to chronological order.

In eighth grade (I was attending Avery Coonley School, a private magnet school for the gifted), the yearlong biology course was taught by Dr. John A. Rhodes, a biologist and the school headmaster, a man for whom I hold fond memories. Early in the course, Dr. Rhodes made a very emphatic point that we should tell people at prospective high schools that we were taught from BSCS Blue, which was widely recognized as *the* best biology text to be taught from (I believe it to have probably been a high school text; math, at least, was broken into one year advanced and two years advanced). I don't have independent confirmation on this claim, and perhaps a teacher who wanted to de-emphasize molecular biology in favor of other branches of biology might have preferred another text, but he was very emphatic that the text was what I would call the biological equivalent of an O'Reilly technical book.

When it came to the beginning of the chapter on evolution, Dr. Rhodes commented that he was always interested in hearing new theories on questions of origins, and I wrote him a letter stating what I believed at the time. He thanked me, and a couple of class periods later told me that he'd enjoyed reading it. I was preparing for a battle of wills, and found nothing of the sort; I doubt if he believed anything similar to what I believed (before or after), but he provided an open atmosphere and encouraged inquiry.

Some time (I have difficulty dating this as well, but it appears to have been after I was first exposed to serious arguments for believing in something besides young-earth creationism, probably after eighth grade biology, and before my beliefs came to a theistic evolution attractor in high school) I was browsing at the library — not looking for anything specific, just trying to find something interesting and stimulating to read. I found a book from the Creation Research Institute, and read with

interest the back cover, which stated that it explained powerful scientific evidence that showed that the world was created in six days, a few thousand years ago. This was *exactly* what I was looking for. I checked it out and started reading it.

I didn't get a quarter of the way through.

I was disgusted by what the book presented as arguments and evidence; however much I might have liked to have something I could claim scientific evidence for my young-earth beliefs, I didn't want it *that* badly. (Reading that book was part of why I had no reservations in putting Creation Science in front of my "If it has 'science' in its name, it probably isn't" list.)

I skipped freshman year, and entered the Illinois Mathematics and Science Academy as a sophomore. (For those of you not familiar with IMSA, it's a high-powered magnet school; a master's degree is required to teach, and several times the senior class has gotten the highest average ACT score in the nation. When I went to Wheaton, I was able without difficulty to start off in 300-400 level courses, and I was puzzled as to why so many people had warned me about college being tougher than high school.) There was a lecture by Dr. Pine (staff scientist; didn't teach any classes) on science and pseudo-science, one that was abrasively naturalistic, and began by saying "It's OK not to be a scientist; George Washington wasn't a scientist," but later parts of which would only make sense under an assumption that science has a monopoly on legitimate inquiry into those questions it concerns itself with (or something equivalent for discussion purposes). His name was a symbol of arrogant scientism even among those who weren't familiar with the scientism/science distinction, and I remember (when talking about the lecture with an acquaintance) my friend commenting that there were a lot of people offended by that lecture. The lecture wasn't focally concerned with origins questions, Dr. Pine having focused more of his attack on things like ESP, but I wanted to include this in the record.

Senior year, we had university biology; it wasn't an AP course in that it wasn't geared towards the AP tests, but it was a college-level course. I don't remember the text for this one, but (under the circumstances) I think it was about as competently taught, by people who knew what they were talking about, as one could reasonably guess. (This was after my belief had settled.)

At Wheaton, my Old Testament class covered a few exegetical theories

At Wheaton, my Old Testament class covered a few exegetical theories on interpreting the beginning of Genesis (i.e. the gap theory, which says that the Genesis chronologies are accounts with significant gaps), albeit not in a manner that would be interesting to a biologist; they would be equally compatible (or incompatible) with Darwinian and Lamarckian evolution. I remember in particular the time given to the Ten Plagues in Israel's deliverance from Egypt; massive energy was given to a forced interpretation that would reconcile the Biblical account with an explanation that a materialist could easily swallow (i.e. the water turned to blood was an explosive bloom of some sort of reddish colored micro-organism in the waterways), and I would rather that the teacher have said, "The ten miraculous plagues are too much for me to swallow," than "I will rescue the ten miraculous plagues by explaining how they were ten ordinary disasters that weren't miraculous at all." (Readers may perceive a degree of intellectual dishonesty in my own version of theistic evolution; such an accusation probably has some degree of truth to it, but I will not try to address it here.) This, and the other two classes mentioned below for completeness, did not alter my perspective so far as I remember.

I took an environmental science elective, and the course material made sporadic reference to evolution (for that matter, one video began with a beautiful quotation from a Biblical psalm about the wonder of the natural order), but neither the teacher nor the texts made a serious attempt to address origins questions, being much more concerned with explaining (part of) how the environment works, and how to be a responsible citizen minimizing unnecessary environmental degradation.

The last class I am mentioning for the sake of completeness of record is my philosophy of science class. Evolution was discussed in so far as the history of scientists accepting the theory is interesting to a philosopher of science; there were no arguments made for or against it, apart from a brief comment in a discussion where one student used the acceptance of Darwinian evolution as an example of a good decision on the part of the scientific community.

To wrap up this part of the discussion, I transferred out of Wheaton for reasons of conscience, and finished up my bachelor's at Calvin, and did a master's in applied mathematics at the University of Illinois. I did not have occasion to revise my beliefs concerning origins questions until some time later, and to properly explain exactly what opened up the

question again, I need to give a little more background.

There was one Saturday Night Live where the news announcer said, "Michael Bolton just came out with his new Christmas album. [Pause] Happy birthday, baby Jesus! I hope you like *crap!*"

Being somewhat aloof from pop culture, it took me the longest time to get it through my head that Michael Bolton was *not* a Christian artist. By that point, I had written in my dictionary:

**Christian Contemporary Music**, *n.* A genre of song designed primarily to impart sound teaching, such as the doctrine that we are sanctified by faith and not by good taste in music.

One thing that has distressed me to no end is that much of today's Christian culture (popular sense, not anthropological sense) is garbage. What Dante and Handel produced is cherished on artistic merits by people openly hostile to their beliefs; the same cannot be said for the contents of John's Christian Bookstore. I don't want to analyze historical causes or implications, but it is something I find to be quite embarrassing — and one of the reasons I spend so much time on writing, namely to be one person who produces Christian art that is not trash.

At any rate, there was one point where I was browsing the web, searching for provoking Christian musings — and wading through one banal, syrupy, intellectually juvenile posting after another. I was quite bored, and kept searching long after I should have given up — and then read an article entitled, "Abortion: A Failure to Communicate", and sat there, stunned.

The article made an argument why, from a pro-life perspective, it is not helpful to say "Save the children!", argue that a foetus is a child rather than unwanted tissue, or erect a place called "New Life Adoption Center". The particular argument (or even issue) is not why I was stunned. I was stunned because the article represented an intellectually mature, nuanced, and insightful perspective, and raised points that made sense but which were not at all obvious trivialities. Once I got over being stunned, I poked around and found out a bit more about the site hosting it — an anthology site called Leadership University at [www.leaderu.com](http://www.leaderu.com). In the following days, I looked around and found a number of stimulating articles.

After reading a while — and enjoying it thoroughly — I paid attention

to something I had not previously looked at, that the site had a science section. That seemed somewhat strange; I wasn't surprised at sections for humanities disciplines, as thinking Christianly makes a big difference in the humanities, but why science? My Dad shared both faith and enjoyment of heavily mathematical disciplines (math, computer science, physics) with me, but he had never hinted at what e.g. "Christian physics" would mean — nor had anyone else I knew of — so I clicked on the link to find out what on earth the site listed as a distinctively Christian way to think about science.

My estimation of the site dropped by about ten notches when I saw a list of titles attacking Darwinism. So this otherwise serious and intellectually responsible site had stooped to host Creation Science. I left the computer in disgust.

Some time after that, I began to experience quiet, nagging doubts — doubts that I was not being fair to Leadership University or even to those articles by dismissing them (and assessing penalty points) without consideration. I could see no justification for stooping to Creation Science, for trying to rehash a battle that was decided and over, but at the same time, there was no other point at which I had looked at the site and regretted taking the time to read an article. If a friend (whom I had hitherto known to be trustworthy) were to say something I found hard to believe, wouldn't I consider him to have earned the benefit of the doubt? So I went back to the computer, expecting to read more Creation Research Institute-style materials, and met with yet another surprise.

I expected to see an attack on Darwinism. I hoped (but did not expect) to instead see something that would live up to Leadership University article standards. What I found was an attack on Darwinism that lived up to Leadership University article standards, and it produced a *lot* of cognitive dissonance in me.

Some years before, I might have jumped at an argument that Darwinism was seriously flawed. Not now. Darwinian evolution was a part of my education, and (if I did not go into naturalism) an argument that Darwinism was much more flawed than I had been led to believe, affected me as would an argument that any other major scientific theory was much more flawed than I had been led to believe — it had some very troubling implications. So I looked through several articles, hoping to find a fatal flaw — and the hope waned.

I was not open to resolving the question based on the online articles, but the articles disturbed me enough that I very distinctly believed that there was a question in need of resolution. So, not too much longer, I poked around until I found Philip Johnson's *Darwin on Trial* and, a bit later, Michael Behe's *Darwin's Black Box*, hoping to find justification to persist in my previous belief, but even more hoping to resolve the inner tension between believing (and wanting to believe) one thing, and seeing evidence that appeared to suggest another.

Reading *Darwin on Trial* fleshed out what was sketched in the articles. (*Darwin on Trial* took me an afternoon to read, and I am probably not a fast reader by Megalist standards; *Darwin's Black Box* took me a day.) The articles, at least at Leadership University, do not provide what I would consider a basis to decide; they outline the argument, but the length restriction makes it hard to make an argument without holes. The book, on the other hand, had the room to argue systematically and carefully. Its arguments were sufficient to dislodge me from the resting place I had found, and the best metaphor I can use to describe the subsequent sifting of thoughts is a loss of faith.

In a conservative Catholic family, perhaps pre-Vatican II, a child grows up to believe that if the priests say it, speaking officially, it is true — perhaps there is room for miscommunication and the like, but there is a basic faith that the mouth of a priest is the mouth of an oracle. In a contemporary scientific schooling context, a student is taught to believe that if the science teachers say it, it is a *bona fide* attempt to convey the truth as best understood by the scientific enterprise. There are any number of basic nuances — miscommunication, error, intentional simplification for any of several obvious reasons, the teacher articulating the views of one position in a controversy — but, as with the Catholic family, there is a basic faith (even if it's not put that way, a mistrust of faith and authority being one of the items on the catechism) that the teacher represents the best science can offer, and so (for instance) if evolution is portrayed as an established theory that explains reasonably well everything one would expect it to explain, then that must be true.

It is that faith which I lost.

There is one example that particularly sticks in my mind. I am not going to call it 'typical', with the accompanying implication that I could easily pull half a dozen other examples that serve my point equally well; there are a number of other examples, and this is the one made the most

there are a number of other examples, and this is the one made the most forceful impression on me.

One example that occurred in both my textbooks — as best I recall, they both had photographs to illustrate camouflage effects — concerns pepper moths in England. Before the Industrial Revolution, the majority of pepper moths were white, with a significant minority that were black. Come the Industrial Revolution, when everything was blackened by soot, the proportions shifted, so that the majority of pepper moths were black, with a significant minority that were white. Then, after the Industrial Revolution had run its course and things were no longer covered with soot, the proportions again shifted, so that the majority of pepper moths were white, with a significant minority of black moths. This is given as a supporting example of "evolution".

Johnson does not treat "evolution" as one amorphous mass; he regards the distinction between microevolution and macroevolution as significant, including that evidence of one is not necessarily evidence of the other. Neither he nor anyone else I've read challenge microevolution (or the existence of natural selection as an influence on what survives — though he suggests that natural selection is a conservative force). What is specifically challenged is macroevolution, and whether natural selection constitutes a generative force that is responsible for the diversity of life now on this planet.

The pepper moth example shows natural selection in action; what it does not show is that natural selection is a creative force that causes new kinds of organisms to appear. If black pepper moths were unknown before the Industrial Revolution, and then (once the smoke started billowing) a mutation (one that hadn't occurred, or at least hadn't survived, before) introduced a black gene into a previously all-white pool, and the new kind of moth started to take over for as long as trees were covered with soot — then this would constitute a small-scale instance of evolution as a generative force. As it is, both kinds of moths existed before, during, and after the Industrial Revolution, in significant numbers — nothing even went extinct (at least in the pepper moth population). This provides evidence of natural selection in some form, but to present it as evidence of "evolution" is presenting evidence of one claim as evidence of two or more distinct claims, at least one of which is not supported by the evidence — a practice that is, at best, sloppy, and at worst, deceitful.

(This one claim, by itself, is not fatal; it would be in principle possible to present a collection of examples so that natural selection, microevolution, and macroevolution all have their corresponding support; I am not presenting it to establish a case so much as to illustrate a picture.)

My disappointment at my teachers' presentation of undue optimism about macroevolution was not nearly as significant as my own disappointment at myself, and my having believed it. Perhaps it would have been easier to merely be angry at my teachers, but I was not angry; my chief disappointment was with myself.

After I had to some extent regained my bearings, I read *Darwin's Black Box*, which provided one major new concept not addressed by *Darwin on Trial*, and several examples of that concept (irreducible complexity), and started talking about it on IMSA alumni notesfile forums.

What I saw there was, for the most part, shock and outrage that anyone dare question Darwin's truth — most ridiculed what I was saying without providing counter-argument; one person, when I discussed the Cambrian explosion, suggested that it could have been caused by mutagen exposure. Mutagen exposure is a hypothesis I'm willing to entertain (stranger things have happened), but when I started doing some Feynman calculations to show how astronomically low the odds are of mutagen exposure producing Cambrian explosion effects, after first saying, "Suppose I claim to be able to predict lottery numbers, and suppose for the sake of argument you can rule out charlatan trickery on my part. After one success, I have your attention. After two successes, you say, 'What a bizarre coincidence!' Is there any number of successful guesses (subject to one guess per minute and an assumption of my death in fifty years) that will lead you to believe that you may not know how I'm doing it, but it's not luck?" — and he said that at most a dozen would suffice, and then I showed how much lower the chances of raw mutagen exposure producing the Cambrian explosion would be than the chance of successfully guessing twelve consecutive lottery numbers — at which point he backed up and said, "There are some things we can never know."

The one exception was a microbiology graduate student. He read the arguments I drew from the other sources, and commented that I seemed well-read and that the arguments seemed plausible. Part of that is being diplomatic, but I don't think it was diplomatic politeness covering

diplomatic, but I don't think it was diplomatic politeness covering disrespect or distaste — he didn't want to commit to a position without first taking an unhurried investigation of the question (which I didn't want to do either — the web articles didn't convince me of any conclusion besides that I should read the unabridged take on them).

What is my present position? Let me list a few things that I presently hold, subject to revision if and when I encounter further evidence or indications that my past analysis is less valid than I thought:

- Old earth/universe.
- Microevolution as a consistent force in our time and probably at ages past, probably a conservative force.
- Sudden appearance and disappearance of species, such as has not been accounted for in evolutionary theory so far as I know (perhaps acknowledged in punctuated equilibrium, but not accounted for — saying that changes happen off camera in 100,000 year geological eyeblinks, without explaining why, doesn't constitute a valid theory).
- Irreducible complexity in living organisms due to intelligent design, and in many cases not explained by any known plausible evolutionary scenario.

This is not a scientific theory so much as a framework, a partial specification; it represents a move away from naturalistic evolution as the complete answer and does not represent a fully detailed alternative — I think other people should work on that; I just haven't invested in it myself. It is like, after having long believed a story about an event, coming to believe that the story is false — another explanatory story does not automatically spring up, although in a scientific community the rejection of one theory as flawed leads to the appearance of other theories to take its place, perhaps involving a shift in framework — witness the ultraviolet catastrophe. If I were a biologist working on a theory of origins, I would try to take this framework and extend it to the point of being a falsifiable theory — *Darwin's Black Box* at the end addresses some issues towards constructing falsifiable theories, suggesting the sort of questions to ask in the process. There might be material to be mined in cryptanalysis; a codebreaker who sees a pattern is constantly asking whether the pattern represents a step towards cracking the code, or is only fool's gold. The concept of p-values may be relevant.

[Remaining specific point, responding to other post, deleted for privacy concerns.]

-Jonathan

***Post Script, May 5, 2003:*** *Since I posted this some time back, I have learned that leading members of the MegaList have become increasingly involved in the Intelligent Design movement.*

*I do not believe I can take more than incidental credit for this; I believe they are persuaded, not by my eloquence in a small number of posts, but because the evidence itself suggests things which a purely Darwinian account has trouble explaining.*

# Exotic Golden Ages and Restoring Harmony with Nature: Anatomy of a Passion

## It's exotic, right?

The website for the Ubuntu Linux distribution announced that Ubuntu is "an ancient African word" meaning humanity to others. It announced how it carried forward the torch of a Linux distribution that's designed for regular people to use. And this promotion of "an ancient African word" has bothered a few people: [one South African blogger](#) tried to explain several things: for instance, he mentioned that "ubuntu" had been a quite ordinary Xhosa/Zulu word meaning "humanity," mentioned that it had been made into a political rallying cry in the 20th century, and drew an analogy: saying, "'Ubuntu' is an ancient African word meaning 'humanity'" is as silly as saying, in reverential tones, "'People' is an ancient European word meaning, 'more than one person.'" There is an alternative definition provided in the forums of Gentoo, a technical aficionado's Linux distribution: "Ubuntu. An African word meaning, 'Gentoo is too hard for me.'"

The blogger raised questions of gaffe in the name of the distribution; he did not raise questions about the Linux distribution itself, nor would I.

Ubuntu is an excellent Linux distribution for nontechnical users, it gets some things very much right, and I prefer it to most other forms of Linux I've seen—including Gentoo. I wouldn't bash the distribution, nor would I think of bashing what people mean by making "ubuntu" a rallying-cry in pursuing, in their words, "Linux for human beings."

The offense lay in something else, and it is something that, in American culture at least, runs deep: it was a crass invocation of an Archetypal Exotic Culture's Nugget of Profound Wisdom. It is considered an impressive beginning to a speech to open by recounting an Archetypal Exotic Culture's Awesome Nugget of Profound Wisdom: whether one is advertising a Linux distribution, a neighbor giving advice over a fence in *Home Improvement*, or a politician delivering a speech, it is taken as a mark of sophistication and depth to build upon the Archetypal Exotic Culture's Nugget of Profound Wisdom.

At times I've had a sneaking suspicion that the Archetypal Exotic Culture's Awesome Nugget of Profound Wisdom is the mouthpiece for whatever is fashionable in the West at the time. Let me give one illustration, if one that veers a bit close to the Archetypal Exotic Culture's Nugget of Profound Wisdom:

One American friend of mine, when in Kenya, gave a saying that was not from any of the people groups she was interacting with, but was from a relatively close neighboring people group: "When you are carrying a child in your womb, he only belongs to you. When he is born, he belongs to everyone." The proverb speaks out of an assumption that not only parents but parents' friends, neighbors, elders, shopkeepers, and ultimately all adults, stand *in parentis loco*. All adults are ultimately responsible for all children and are responsible for exercising a personal and parental care to help children grow into mature adulthood. As best I understand, this is probably what a particular community in Africa might mean in saying, "It takes a village to raise a child."

What is a little strange is that, if these words correspond to anything in the U.S., they are conservative, and speak to a conservative desire to believe that not only parents but neighbors, churches, civic and local organizations, businesses and the like, all owe something to the moral upbringing of children: that is to say, there are a great many forces outside the government that owe something to local children. And this is quite the opposite of saying that we need more government programs

because it takes a full complement of government initiatives and programs to raise a child well—because, presumably, more and more bureaucratic initiatives are what the (presumably generic) African sages had in mind when they gave the Archetypal Exotic Culture's Nugget of Profound Wisdom and said, "It takes a village to raise a child." There is some degree of irony in making "It takes a village" a rallying-cry in pushing society *further away* from what, "It takes a village to raise a child," *could* have originally meant—looking for advice on how to build a statist Western-style cohort of bureaucratic government programs would be as inconceivable in many traditional African cultures as looking for instructions on how to build a computer in the New Testament.

My point in mentioning this is not *primarily* sensitivity to people who don't like hearing people spout about a supposedly "ancient African word" such as, "Ubuntu." Nor is my point really about how, whenever a saying is introduced as an ancient aboriginal proverb, the Archetypal Exotic Culture's Nugget of Profound Wisdom ends up shanghied into being an eloquent statement of whatever fads are blowing around in the West today. My deepest concern is that the Archetypal Exotic Culture's Nugget of Profound Wisdom hinges on something that is bad for us spiritually.

The Archetypal Exotic Culture's Nugget of Profound Wisdom is tied to what the Orthodox Church refers to as a "passion," which means something very different from either being passionately in love, or being passionate about a cause or a hobby, or even religious understandings of the passion of Christ. The concept of a passion is a religious concept of a spiritual disease that one feeds by thoughts and actions that are out of step with reality. There is something like the concept of a passion in the idea of an addiction, a bad habit, or in other Christians whose idea of sin is mostly about spiritual state rather than mere actions. A passion is a spiritual disease that we feed by our sins, and the concern I raise about the Archetypal Exotic Culture's Nugget of Profound Wisdom is one way—out of many ways we have—that we feed one specific passion.

The Archetypal Exotic Culture's Nugget of Profound Wisdom is occult, and we cannot give the same authority to any source that is here and now. If we listen to the wise voices of elders, it is only elders from faroff lands who can give such deeply relevant words: I have never heard such a revered Nugget of Wisdom come from the older generation of our own people, or any of the elders we meet day to day.

people, or any of the elders we meet day to day.

By "occult" I mean something more than an Archetypal Exotic Culture's Nugget of Profound Wisdom that might note that the word "occult" etymologically signifies "hidden"—and still does, in technical medical usage—and that the Archetypal Exotic Culture's Nugget of Profound Wisdom has been dug up from someplace obscure and hidden. Nor is it really my point that the Nugget may be dug up from an occult source—as when I heard an old man, speaking with a majestic voice, give a homily for the (Christmas) Festival of Lessons and Carols that begun by building on a point from a famous medieval Kabbalist. These are at best tangentially related. What I mean by calling the Archetypal Exotic Culture's Nugget of Profound Wisdom occult is that the Archetypal Exotic Culture's Nugget of Profound Wisdom is the fruit of the same tree as explicitly occult practices—and they are tributaries feeding the same river.

Occult sin is born out of a sense that the way things are in the here and now that God has placed us in are not enough: Gnosticism has been said to hinge, not so much on a doctrine, but something like a mood, a mood of despair. (You might say a passion of despair.) Gnostic Scripture is a sort of spiritual porn that offers a dazzling escape from the present—a temptation whose power is much stronger on people yearning for such escape than for people who have learned the virtuous inoculation of contentment.

It takes virtue to enjoy even vice, and that includes contentment. As a recovering alcoholic will tell you, being drunk all the time is misery, and, ultimately, you have to be at least somewhat sober even to enjoy getting drunk. It takes humility to enjoy even pride, and chastity to enjoy even lust. Contentment does not help us escape—it helps us find joy where we were not looking for it, precisely in what we were trying to escape. We do not find a way out of the world—what we find is really and truly a way into where God has placed us.

One can almost imagine a dialogue between God and Adam:

**Adam:** I'm not content.

**God:** What do you want me to do?

**Adam:** I want you to make me contented.

**God:** Ok, how do you want me to do that?

**Adam:** First of all, I don't want to have to engage in ardent, strenuous labor like most people. I don't want to do that kind of

work at all.

**God:** Ok.

**Adam:** And that's not all. I want to have enough bread to feel full.

**God:** Ok.

**Adam:** Scratch that. I want as much *meat* as I want.

**God:** Ok, as much meat as you want.

**Adam:** And sweet stuff like ice cream.

**God:** Ok, I'll give you Splenda ice cream so it won't show up on your waistline.

**Adam:** And I don't like to be subject to the weather and the elements you made. I want a home which will be cool in the summer and warm in the winter.

**God:** Sure. And I'll give you hot and cold running water, too!

**Adam:** Speaking of that, I don't like how my body smells—could we do something to hide that?

**God:** I'll let you bathe. Each day. In as much water as you want. And I'll give you deodorant to boot!

**Adam:** Oh, and by the way, I want to make my own surroundings—not just a home. I want electronics to put me in another world.

[*Now we're getting nowhere in a hurry!*]

This may be a questionable portrayal of God, but it is an accurate portrayal of the Adam who decided that being an immortal in paradise wasn't good enough for him.

Have all these things made us content?

Or have we used them to feed a passion?

We have a lot of ways of wishing that God had placed us someplace else, someplace different. One of the most interesting books I've glanced through, but not read, was covered in pink rosy foliage, and said that it was dealing with the #1 cause of unhappiness in women's relationships. And that #1 cause was a surprise: romantic fantasies. The point was that dreaming up a romantic fantasy and then trying to make it real is a recipe, not for fulfillment, but for heartbreaking disappointment *in circumstances where you could be truly happy*. (When you have your heart set on a fantasy of just how the perfect man will fulfill all your desires and transform your world, no *real* man can seem anything but a disappointing shadow next to your fantasy.)

This is not just a point about fantasies in romance. It is also a point that has something to do with technological wonders, secret societies

that has something to do with technological wonders, secret societies, fascination with the paranormal, Star Trek, World of Warcraft, television, Dungeons and Dragons, sacramental shopping, SecondLife, conspiracy theories, smartphones, daydreams, Halloween, Harry Potter, Wicked, Wicca, The Golden Compass, special effects movies, alienated feminism, radical conservatism, Utopian dreams, political plans to transform the world, and every other way that we tell God, "Sorry, what you have given me is not good enough"—or what is much the same, wish God had given us something quite different.

Why, in my life, is \_\_\_\_\_ so difficult to me about \_\_\_\_\_? (I don't know; why has she forgiven every single one of the astonishingly stupid things I've done over the years?) Why can't I lose a couple of pounds when I want to? (I don't know; why do I have enough food that I wish I could lose pounds?) Why am I struggling with my debts? (I don't know; why do I have enough for now?) Why did I have to fight cancer? (I don't know; why am I alive and strong now?) Why does I stand to lose so much of what I've taken for granted? (I don't know. Why did I take them all for granted? And why did I have so many privileges growing up?) Why \_\_\_\_\_? (Why not? Why am I ungrateful and discontent with so many blessings?)

*Contentment is a choice*, and it has been made by people in much bleaker circumstances than mine.

I write this, not as one who has mightily fought this temptation to sin and remained pure, but as one who has embraced the sin wholeheartedly. I know the passion from the inside, and I know it well. Most of my cherished works on this site were written to be "interesting", and more specifically "interesting" as some sort of escape from a dreary here and now.

There is enough of this sin that, when I began to repent, I wondered if repenting would leave anything left in my writing. And after I had let go of that, I found that there was still something left to write. C.S. Lewis, in [The Great Divorce](#), alluded to the Sermon on the Mount (where Christ said that if our right hand or our right eye causes us to sin, we should rip it out and enter Heaven maimed rather than let our whole body be thrown into the lake of burning sulfur): Lewis said that the journey to Heaven may cost us our right hand and our right eye—but when we arrive in Heaven, we will find that what we have left behind is precisely *nothing*. Continuing to repent has meant changes for me, and it will (I hope) mean

further changes. But I let go of writing only to find that I still had things to write. I gave up on trying to be "interesting" and make my own interesting private world and found, by the way, that God and his world are really *quite* interesting.

When we are repenting, or trying to, or trying not to, repentance is the ultimate terror. It seems unconditional surrender—and it is. But when we do repent, we realize, "I was holding on to a piece of Hell," and we realize that repentance is also a waking up, a coming to our senses, and a coming to joy.

## What we don't want to hear

I would like to say a word on the politically incorrect term of "unnatural vice." Today there is an effort on some Christians to not distinguish that sharply between homosexuality and straight sexual sins. And it is always good practice to focus on one's own sins and their gravity, but there are very specific reasons to be concerned about unnatural vice. Let me draw an analogy.

It is a blinding flash of the obvious that a well-intentioned miscommunication can cause a conflict that is painful to all involved. And if miscommunications are not necessarily a sin, they can be painful enough, and not the sort of thing one wants to celebrate. However, there is a depth of difference between an innocent, if excruciatingly painful, miscommunication on the one hand, and the kind of conflict when someone deliberately gives betrayal under the guise of friendship. The Church Fathers had a place for a holy kiss as a salute among Christians, but in their mind the opposite of a holy kiss was not a kiss that was what we would understand "inappropriate," but when Judas said, "Master," saluted the Lord with a kiss, and by so doing betrayed him to be tortured to death. A painful miscommunication is bad enough, but a betrayal delivered under the guise of friendship is a problem with a higher pay grade.

Lust benefits no one, and it is not just the married who benefit from beating back roving desire, but the unmarried as well. But when Scripture and the Fathers speak of unnatural vice, they know something we've chosen to forget. And part of what we have forgotten is that "unnatural vice" is not just something that the gay rights movement advocates for. "Unnatural vice" includes several sins with higher pay grades, and one of them is witchcraft.

To people who have heard all the debates about whether, for instance,

same-sex relationships might be unnatural for straight people but natural for gays, it may be a bit of culture shock to hear anything *besides* gay sex called "unnatural vice." But the term is there in the Fathers, and it can mean other things. [It might include contraception.](#) And it definitely includes what we think of as a way to return to nature in witchcraft.

Adam reigned as an immortal king and lord over the whole world. He had a wife like nothing else in all Creation, paradise for a home, and harmony with nature such as we could not dream of. *And*, he was like a little boy with a whole room full of toys who is miserable because he wants another toy and his parents said "No." And lest we look down on Adam, we should remember that I am Adam, and you are Adam.

We have not lost all his glory, but we are crippled by his passion.

Adam wanted something beyond what he was given, something beyond his ken. An Orthodox hymn says, "Wanting to be a god, Adam failed to be god." More on that later. Adam experienced the desire that draws people to magic—even if the magic's apparent promise is a restored harmony with nature. This vice shattered the original harmony with nature, and brought a curse on not only Adam but nature itself. It corrupted nature. It introduced death. It means that many animals are terrified of us. It means that even the saints, the holiest of people, are the most aware of how much evil is in them—most of us are disfigured enough that we can think we don't have any *real* problem. There is tremendous good in the human person, too; that should be remembered. But even the saints are great sinners. All of this came through Adam's sin. How much more unnatural of a vice do you ask for than that?

## **Trying to restore past glory, and how it further estranges us from the past**

When I was visiting a museum promising an exhibit on the Age of Reason, I was jarred to see ancient Greek/Roman/... items laid out in exhibits; what was being shown about the Enlightenment was the beginning of museums as we have them today. I was expecting to see coverage of a progressive age, and what I saw was a pioneering effort to reclaim past glory. Out of that jarring I realized something that historians might consider a blinding flash of the obvious. Let me explain the insight nonetheless, before tying it in with harmony with nature.

When people have tried to recover past glory, through the Western means of antiquarian reconstruction, the result severs continuity with the recent past and ultimately made a deeper schism from the more remote past as well.

The Renaissance was an attempt to recover the glory of classical antiquity, but the effect was not only to more or less end what there was in the Middle Ages, but help the West move away from some things that were common to the Middle Ages and antiquity alike. The Reformation might have accomplished many good things, but it did not succeed in its goal in resurrecting the ancient Church; it created a new way of being Christian. The Protestants I know are moral giants compared to much of what was going on in Rome in Luther's day, and they know Scripture far better, but Protestant Christianity is a decisive break from something that began in the Early Church and remained unbroken even in corrupt 16th century Rome. And it is not an accident that the Reformers dropped the traditional clerical clothing and wore instead the scholar's robes. (Understanding the Scripture was much less approached through reading

the saints, much more by antiquarian scholarship.) The Enlightenment tried again to recover classical glory, and it was simultaneously a time, not of breaking with unbroken ways of being Christian, but of breaking with being Christian itself. Romanticism could add the Middle Ages to the list of past glorious ages, and it may well be that without the Romantics, we would not have great medievalists like C.S. Lewis and J.R.R. Tolkien. But it was also something new. Every single time that I'm aware of that the West has tried to recover the glory of a bygone age, the effect has been a deeper rift with the past, both recent and ultimately ancient, leaving people much further alienated from the past than if they had continued without the reconstruction. I remember being astonished, not just to learn that two Vatican II watchwords were *ressourcement* (going back to ancient sources to restore past glory) and *aggiornamento* (bringing things up-to-date, which in practice meant bringing Rome in line with 1960's fads), nor that the two seemed to be two sides of the same coin, but that this was celebrated without anybody seeming to find something of a disturbing clue in this. The celebrations of these two watchwords seemed like a celebration of going to a hospital to have a doctor heal an old wound and inflict a new wound that is more fashionable.

The lesson would seem to be, "If you see a new way to connect with the past and recover past glory, be very careful. Consider it like you might consider a skilled opponent, in a game of chess, leaving a major piece vulnerable. It looks spiritually enticing, but it might be the bait for a spiritual trap, and if so, the consequences of springing for the bait might be a deeper rift with the past and its glory."

## **Not quite as shallow an approach to translate the past into the present...**

Here is what you might do one day to live a bit more like prehistoric Grecians, or ancient Celts, or medieval Gallic peasants, or whatever. Keep in mind that this is at best half-way to its goal, not a full-fledged return to living like an ancient in harmony with nature to a day, but making a rough equivalent by using what is closest from our world:

1. However exotic the setting may seem to you, remember that it is a fundamental confusion to imagine that the setting was exotic *to those inside the experience*. We not only meet new people frequently; we see new technologies invented frequently. In The Historic Setting, people most likely were born, lived, and died within twenty miles, and even meeting another person who was not part of your village was rare. A new invention, or a new idea, would be difficult to imagine, let alone point to. So, for one day, whatever you're doing, if it feels exotic, avoid it like the plague. Stop it immediately. Don't read anything new; turn off your iPod; don't touch Wikipedia. Don't seek excitement; if anything, persevere in things you find boring.
2. Remembering that there was a lot of heavy manual labor, and stuff that was shared, spend your nice Saturday helping a friend move her stuff into her new apartment. Remember that while stairs were rare in antiquity, it would be an anachronism to take the elevator. Be a good manual laborer and do without the anachronism.
3. Remembering how the Sermon on the Mount betrays an assumption that most people were poor enough that houses would only have one room, spend your time at home, as much as possible, in one room of

your house.

4. Remembering that the ancient world had no sense of "Jim's trying to lose weight and is on an old-fashioned low-fat diet, Mary's a vegan, Al's low carb...", but rather there was one diet that everybody day ate, go to McDonald's, order a meal with McDonald's McFries McSoaked in McGrease, and a sugary-sweet, corn-syrup-powered shake. If you just said to yourself, "He didn't say what size; I'll order the smallest I can," order the biggest meal you can.
5. Remembering that in the ancient world the company you kept were not your eclectic pick, spend time with the people around you. Go to your neighbor Ralph who blares bad '80s rock because he thinks it's the best thing in the world, and like a good guest don't criticize what your host has provided—including his music. Spend some time playing board games with your annoying kid sister, and then go over to visit your uncle Wally and pretend to tolerate his sexist jokes.
6. Lastly, when you head home do have a good night's sleep, remember that a bed with sheets covering a smooth mattress was only slightly more common than a Frank Lloyd Wright home is today, go to sleep on a straw pallet in your virtual one room house. (You can use organic straw if you can find any.)

This may seem, to put it politely, a way you would never have thought to live like an age in harmony with nature. But let me ask a perfectly serious question:

What *did* you expect? Did you imagine dressing up as a bard, dancing on hilltops, and reciting poetry about the endless knot while quaffing heather ale?

G.K. Chesterton said that there is more simplicity in eating caviar on impulse than eating granola on principle. In a similar fashion, there is more harmony with nature in instinctively pigging out at McDonald's than making a high and lonely spiritual practice out of knowing all the herbs in a meadow.

The vignette of harmony with nature as dancing on hilltops is an image of a scene where harmony with nature means fulfilling what we desire for ourselves. The image of hauling boxes to help a friend is a scene where harmony with nature means *transcending* mere selfish desire. There is a common thread of faithfulness to unadvertised historical

realities running through the six steps listed above. But there is another common thread:

Humility.

It chafes against a passion that people in ages past knew they needed to beat back.

Living according to nature in the past did not work without humility, and living in harmony with nature today did not work with humility.

There is a great deal of difference between getting help in living for yourself, and getting help in living for something more for yourself, and living for something more than yourself—such as people needed to survive in ancient communities close to nature—is the real treasure. It is spirituality with an ugly pair of work gloves, and it is a much bigger part of those communities that have been in harmony with nature than the superficially obvious candidates like spending more time outside and knowing when to plant different crops. If you clarify, "Actually, I was really more interested in the *spirituality* of a bygone age and its harmony with nature," you are missing something. Every one of those humbling activities is pregnant with spirituality—and is spiritual in a much deeper way than merely feeling the beauty of a ritual.

Perhaps we would be wise to remember the words of the Delphic Oracle, "Know thyself," which does not say what we might imagine today. Those words might have been paraphrased, "Know thy place, O overreaching mortal!"

And, in terms of humility, that has much more to give us than trying to reach down inside and make a sandcastle of an identity, and hope it won't be another sandcastle.

## Should I really be patting myself on the back?

I try to follow a diet that is closer to many traditional diets, has less processing and organic ingredients when possible, and I believe for several reasons that I am right in doing so: medical, animal welfare, and environmental. But before I pat myself on the back too hard for showing the spirit of Orthodoxy in harmony with nature, I would be well advised to remember that there is far more precedent in the Fathers and in the saint's lives for choosing to live on a cup of raw lentils a week or a diet of rancid fish.

Saints may have followed something of a special diet, but that is because they believed and acted out of the conviction that they were unworthy of the good things of the world, including the common fare what most people ate. My diet, like other diets in fashion, is a diet that tells me that the common fare eaten by most people is simply unworthy of *me*. This may well enough be true—I have doubts about how much of today's industrially produced diet is fit for human consumption at all—and I may well enough answer, "But *of course* the Quarter Pounder with 'Cheese' eaten by an inner-city teen is unworthy of me—it's just as unworthy, if not more unworthy, of the inner-city teens who simply accept it as normal to eat." Even so, I have put myself in a difficult position. The saints thought they were unworthy of common fare. I believe that common fare is unworthy of me, and trying to believe that without deadly pride is trying to smoke, but not inhale.

In [the Book of James](#), the Lord's brother says that the poor should exult because of their high position while the rich should be humble because of their low position. The same wisdom might see that the person who eats anything that tastes good is the one in the high position, and the

person who avoids most normal food out of a special diet's discrimination is in a position that is both low and precarious.

The glory of the Eucharist unfurls in a common meal around a table, and this "common" meal is common because it is shared. To pull back from "common" food is to lose something very Eucharistic about the meal, and following one more discriminating diet like mine is a way to heal one breach of harmony with nature by opening up what may be a deeper rift.

## **If evil is necessary, does it stop being evil?**

Orthodoxy in the West inherits something like counterculture, and there is something amiss when Orthodox carry over unquestioned endeavors to build a counterculture or worldview or other such Western fads. If Orthodoxy *in the West* is countercultural, that doesn't mean that counterculture is something to seek out: if Orthodoxy is countercultural, that is a cost it pays. Civil disobedience *can* be the highest expression of a citizen's respect for law. Amputation *can* be the greatest expression of a physician's concern for a patient's life. However, these things are not basically good, and there is fundamental confusion in seeking out occasions to show such measures.

## **Another basis to try and learn from the past**

To someone in the West, Orthodoxy may have a mighty antiquarian appeal. Orthodox saints, for the most part, speak from long ago and far away. However, this isn't the point; it's a side effect of a Church whose family of saints has been growing for millennia. Compare this, for instance, to a listing of great computer scientists—who will all be recent, not because computer science in an opposite fashion needs to be new, but because computer science hasn't been around nearly long enough for there to be a fourth century von Neumann or Knuth.

Some people wanting very hard knife blades—this may horrify an antiquarian—acquire nineteenth century metal files and grind them into knife blades. The reason for this is that metallurgists today simply do not know how to make steel as hard as the hardest Victorian-era metal files. The know-how is lost. And the hobbyists who seek a hard metal file as the starting point for their knife blades do not choose old metalwork because it is old; they choose old metal files because they are the hardest they can get. And there is something like this in the Orthodox Church. The point of a saint's life is not how exotic a time and place the saint is from; the point of a saint's life is holiness, a holiness that is something like a nineteenth century adamantite-hard metal file.

If there are problems in turning back the clock, the Orthodox Church has some very good news. This good news is not exactly a special way to turn back the clock; it is rather the good news that the clock can be lifted up.

There is a crucial difference between trying to restore the past, and hoping that it will lift you into Heaven, and being lifted up into Heaven and finding that a healthy connection with the past comes with it. The Divine Liturgy is a lifting up of the people and their lives up to Heaven: a

life that begins here and now.

The hymn quoted earlier, "Adam, trying to be a god, failed to be god," continues, "Christ became man that he might make Adam god." The saying has rumbled down through the ages, "God (the Son of God) became a Man (the Son of Man) that men (the sons of men) might become gods (the Sons of God)." The bad news, if it is bad news, is that we cannot escape a present into the beauty of Eden. The good news is that the present can itself be lifted up, that the doors to Eden remain open.

In some ways our search for happiness is like that of a grandfather who cannot find his glasses no matter how many places he looks—because they are right on his nose.

## **Men are not from Mars!**

I was once able to visit a Mars Society conference—a conference from an organization whose purpose is to send human colonists to Mars.

To many of the people there, the question of whether we are "a spacefaring race" is much weightier than the question of whether medical research can find a cure for cancer. It's not just that a human colony on Mars would represent a first-class triumph of science and humanity; it is rather that the human race is beyond being a race of complete, unspeakable, and obscene *losers* if we don't come to our senses and colonize Mars so the human race is not just living on this earth and living the kind of life we live now. The question of whether we colonize Mars is, in an ersatz sense, the religious question of whether we as a race have salvation. The John 3:16 of this movement is, "Earth is the cradle of mankind, but one does not remain in a cradle forever."

The Mars Society holds an essay contest to come up with essays about why we should colonize Mars; the title of the contest, and perhaps of the essays, is, "Why Mars?" And, though I never got around to writing it, there was something I wanted to write.

This piece, having a fictional setting, would be written from the perspective of a sixteen year old girl who was the first person to be raised on Mars, and would provide another comparison of life on Mars to life on earth. And the essay would be snarky, sarcastic, angry, and bitter, because of something that people looking with starry eyes at a desired Mars colony miss completely.

What does the Mars Society not get about what they hope for?

When I was a student at Wheaton College, one of my friends told of a first heavy snowfall where students from warmer climates, some of whom had never experienced such a snowfall personally, were outside and had a delightful snowball fight. And they asked my friend, "How can you *not* be

out here playing?" My friend's answer: "Just wait four months. You'll see."

One's first snowball fight is quite the pleasant experience, and presumably one's first time putting on a spacesuit is much better. But what my unattractively cynical friend didn't like about Wheaton's winter weather is a piece of cake compared to needing to put on a spacesuit and go through an airlock on a planet where the sum total of places one can go without a bulky, heavy, clumsy, uncomfortable, and hermetically sealed spacesuit, is dwarfed by a small rural village of a thousand people, and dwarfed by a medium sized jail. If you are the first person to grow up on Mars, the earth will seem a living Eden which almost everyone alive *but you* is privileged to live in. And the title of the snarky, sarcastic, and bitterly miserable essay I wished I could write from the perspective of the first human raised on Mars was, "*Why Earth?*"

I'm used to seeing people wish they could escape the here and now, but the Mars Society took this to a whole new level—so much so that I was thinking, "This is not a job for science and engineering; this is a job for counseling!" People were alienated from the here and now they had on earth, and the oomph of the drive to go to Mars seemed to be because of something else entirely from the (admittedly very interesting) scientific and engineering issues. Having the human race not even try to live on Mars was so completely unacceptable to them because of their woundedness.

If you don't know how to be happy where God has placed you, escape will not solve the problem. In the case of Mars, the interesting issue is not so much whether colonization is possible, but whether it is desirable. Escape may take you out of the frying pan and into the thermite. (What? You didn't know that astronauts do not feel free, but like tightly wedged "spam in a can," with land control micromanaging you more than you would fear in a totalitarian regime, down to every bite of food you take in? Tough; a real opportunity to colonize Mars won't feel like being in an episode of *Star Trek* or *Firefly*.)

This is the playing out of a passion, and what the Mars Society seeks will not make them permanently happy. Success in their goals will not cure such misery any more than enough fuel will soothe a fire.

Confucius said, "When I see a virtuous man, I try to be like him. When I see an evil man, I reflect on my own behavior." Assuming you're not from the Mars Society (and perhaps offended), do you see anything of

from the Mars Society (and perhaps offended), do you see anything of yourself in the Mars Society?

I do.

## A more satisfying kind of drink

I talked with a friend about a cookbook, [Nourishing Traditions](#), which I like for the most part but where there was a bit of a burr: the author ground an axe against alcoholic beverages fermented by yeast. The stated position of the book is a report of a certain type of traditional nutrition, and the author overrode that when it came to traditions that used rum and such.

My friend said that what I said was accurate: certain more alcoholic drinks were traditional, and the principles of [Nourishing Traditions](#) did not support all the ways the author was grinding an axe against yeast-fermented alcohol, just as I thought. However, my friend suggested, the author was right about this. Lacto-fermented beverages, fermented by another ancient process that gives us cheese, sourdough, sauerkraut, corned beef, and the like, which [Nourishing Traditions](#) did promote, satisfy in a way that yeast-fermented beverages do not. People, it seems, use beer, wine, and liquor because they remind them of the satisfaction of the more ancient method of fermentation.

I'm not looking at giving up the occasional drink, but something of that rings true—and parallels a spiritual matter. People turn to a quest for the exotic, and that is illicit. But the Orthodox experience is that if you stay put, in the here and now, and grow spiritually, every year or so something exotic happens that is like falling off a cliff, when you repent. And that may be what people are connecting with in the wrong way in the pursuit of the exotic. If you give up on following the exotic, something beyond exotic may follow you.

## The idiot

There was another piece that I was thinking of writing, but did not come together. The title I was thinking of was, *The Idiot*—no connection to Dostoevsky's work of the same name, nor to what we would usually think of as a lack of intelligence.

I was imagining a Socratic dialogue, along the same lines as [Plato: The Allegory of the... Flickering Screen?](#) in which it unfolds that the person who doesn't get it is someone who has great success in constructing his own private world through technology, introspection, and everything else. Etymologically, the word "idiot" signifies someone who's off on his own—someone who does not participate in the life of civilization—and our civilization offers excellent resources to dodge civilization and create your own private world. And that is a loss.

And being an idiot in this sense is *not* a matter of low IQ. It is not the mentally retarded I have known who need to repent most, if at all. Usually it is the most brilliant I have known who best use their gifts and resources to be, in the classical sense, idiots.

## Some adamantine-hard metal files that may hone us

At the risk of irony after opening by a complaint about words of wisdom from other lands selected for being exotic...

My mother recounted how a friend of hers was visiting one of her friends, a poor woman in Guatemala. She looked around her host's kitchen, and said, "You don't have any food around." Her hostess said, "No, I don't, but I will," and then paused a moment longer, and said, "And if I had the food now, what would I need God for?" That woman is wise. Those of us who live in the West pray, "Give us this day our daily bread," and probably have a 401(k) plan. Which is to say that "Give us today our daily bread" is almost an ornament to us. A very pious ornament, but it is still an ornament.

If we are entering hard times today, is that an end to divine providence?

St. Peter of Damaskos wrote, in [The Philokalia vol. 3](#),

We ought all of us always to thank God for both the universal and the particular gifts of soul and body that He bestows on us. The universal gifts consist of the four elements and all that comes into being through them, as well as all the marvelous works of God mentioned in the divine Scriptures. The particular gifts consist of all that God has given to each individual. These include:

- Wealth, so that one can perform acts of charity.
- Poverty, so that one can endure it with patience and gratitude.
- Authority, so that one can exercise righteous judgment and establish virtue.
- Obedience and service, so that one can more readily attain

salvation of soul.

- Health, so that one can assist those in need and undertake work worthy of God.
- Sickness, so that one may earn the crown of patience.
- Spiritual knowledge and strength, so that one may acquire virtue.
- Weakness and ignorance, so that, turning one's back on worldly things, one may be under obedience in stillness and humility.
- Unsought loss of goods and possessions, so that one may deliberately seek to be saved and may even be helped when incapable of shedding all one's possessions or even of giving alms.
- Ease and prosperity, so that one may voluntarily struggle and suffer to attain the virtues and thus become dispassionate and fit to save other souls.
- Trials and hardship, so that those who cannot eradicate their own will may be saved in spite of themselves, and those capable of joyful endurance may attain perfection.

All these things, even if they are opposed to each other, are nevertheless good when used correctly; but when misused, they are not good, but are harmful for both soul and body.

The story is probably apocryphal, but I heard of an African pastor (sorry, I don't know his nationality) who visited the U.S. and said, "It's absolutely amazing what you can do without the Holy Spirit!" That is, perhaps, not what we want to hear as a compliment. But here in the U.S., if we need God, it's been easy to lose sight of the fact. Homeless people usually know where their next meal is coming from, or at least it's been that way, and homeless people have been getting much more appetizing meals than bread alone. Those of us who are not homeless have even more power than that.

An English friend of mine talked about how she was living in a very poor country, and one of her hosts said, "I envy you!" My friend didn't know exactly what was coming next—she thought it might be something that offered no defense, and her hosts said, "You have everything, and you still rely on God. We have *nothing*; we have no real alternative. So we

rely on God. But you have *everything*, and you still rely on God!" The point was not about wealth, but faith. The friend's awe was not of a rich woman's treasures on earth, but a rich woman's treasures in Heaven. The camel really *can* go through the eye of the needle, and we may add to the list of examples by St. Peter of Damaskos, that we may thank God for first world wealth, because it gives us an opportunity to *choose* to rely on God.

Maybe we can add to St. Peter's list. But we would do well to listen to his wisdom before adding to his list. We have been given many blessings in first world economic conditions, and if our economy is in decline—perhaps it will bounce back in a year, perhaps longer, perhaps never—we no less should find where our current condition is on the list above.

To have the words "Give us this day our daily bread" unfortunately be an ornament is rare, and perhaps it is not the most natural condition for us to be in. Whatever golden age you may like, centuries or millenia ago, there was no widespread wealth like we experience. Our natural condition is, in part, to be under economic constraint, to have limits that keep us from doing things, and in some sense the level of wealth we have had is not the most natural condition, like having a sedentary enough job that you only exercise when you choose to, is not the most natural condition. Now I don't like being constrained any more than I have to, and I would not celebrate people losing their homes. However, if we have to be more mindful of what they spend, and don't always get what we want, that may be a very big blessing in disguise.

Dorothy Sayers, speaking of World War II in "The Other Six Deadly Sins" (found in [Christian Letters to a Post-Christian World](#) and other essay collections), discussed what life was like when the economy was enormously productive but as much productivity as possible was being wasted by the war effort. What she pointed out was that when people got used to rationing and scarcity, they found that this didn't really mean that they couldn't enjoy life—far from it. People could enjoy life when most of their economy's productivity was being wasted by war instead of wasted by buying things that people didn't need. She argued that England didn't have a choice about learning to live frugally—but England could choose to apply this lesson once the war got out. England didn't, and neither did the U.S., but the lesson is still good.

A recent news story discussed how adult children moved in with their parents as a measure of frugality, where the family was being frugal to the point of planning meals a month in advance and grinding their own flour

point of planning means a month in advance and grinding their own flour.  
And what they found was that living simply was something of an  
adventure.

## An unlikely cue from science fiction?

Mary Midgley, in [Science as Salvation: A Modern Myth and Its Meaning](#), says of science fiction and science fiction writers,

But the best of them have understood, as Wells and Stapleton did, that their main aim was imaginative. They were using 'the future' as a screen on which to project timeless truths for their own age. They were *prophets* primarily in the sense in which serious poets are so — spiritual guides, people with insight about the present and the universal, rather than literal predictors. For this purpose, it no more matters whether these supposedly future events will actually happen than it does for *Hamlet* and *MacBeth* whether what they show us actually happened in the past. The point of *The Time Machine* is not that the machine would work, nor that there might be Morlocks [a powerful, privileged technological elite] somewhere, some day. It is that there are Morlocks here now.

Note the last words. C.S. Lewis may quite directly and literally believe in a literal Heaven and a literal Hell, but Lewis understands Midgley's closing point well, even if he wrote [The Great Divorce](#) decades before. He offers an introduction that ends with, "The last thing I wish is to arouse curiosity about the details of the after-world." He may have no pretensions of knowing the details of the next life, but the reason he writes so compellingly about Heaven and Hell is not that someday, somewhere, we will experience Heaven or Hell. (Even if that is true.) He is able to write with such depth because Heaven and Hell are in us, here and now. And one of the cardinal spiritual factors in [The Great Divorce](#) is a cardinal spiritual factor here now. It is called repentance.

In [The Sign of the Grail](#), Fr. Elijah brings George, a Christian, into the communion of the Orthodox Church. Orthodox speak of this as a conversion, but this means something beyond merely straightening out George's worldview. Fr. Elijah may share wisdom with George, but he is interested in something fundamentally beyond getting George to accept a worldview. He is trying, in all of his various ways, to get George to *wake up*. It is the same as the blessed spirits in [The Great Divorce](#) who are in Heaven and keep saying to visitors from Hell, "*Wake up! Wake up!*" They do often discuss ideas with their visitors, but their goal is never merely to straighten out a tormented worldview; it is to open their visitors' spiritual eyes so they will wake up to the reality of Heaven.

In [The Great Divorce](#), visitors come from Hell, visit Heaven, keep receiving invitations to wake up and live in Heaven, and mostly keep on choosing Hell. If it is put that way, it sounds like a very strange story, but it is believable not primarily because of C.S. Lewis's rhetorical powers, but because of the spiritual realities Lewis knows to write about. I have only heard one person claim to want to go to Hell, and then on the misunderstanding that you could enjoy the company of others in Hell. However, people miss something big about Hell if they think everybody will choose Heaven.

God does not send people to Hell, but the fires of Hell are nothing other than the light of Heaven experienced through the rejection of Christ. Hell appeared as a seed in the misery when, as I wrote earlier:

Adam reigned as an immortal king and lord over the whole world. He had a wife like nothing else in all Creation, paradise for a home, and harmony with nature such as we could not dream of. *And*, he was like a little boy with a whole room full of toys who is miserable because he wants another toy and his parents said "No."

[The Sermon on the Mount](#) says, "Blessed are the pure in heart, for they shall see God." But *everyone* will see God. God is love; his love is absolute and will flow absolutely. Because of that love, everybody will see God. And the saved will know this as blessing and as bliss beyond description. But to those who reject Christ, the light of Heaven, the light of seeing God, will be experienced as *Hellfire*. Hell is Heaven experienced through the rejection of the only ultimate joy that exists: Christ.

Repentance is recognizing that you are in a little Hell and choosing to leave by the one way you do not wish to leave. Elsewhere from the quotation from St. Peter, [the Philokalia](#) says, "People hold on to sin because they think it adorns them." The woman addicted to alcohol may be in misery, but she has alcohol to seemingly anaesthetize the pain, and it is incredibly painful to give up the illusion that if you try hard enough and get just a bit of a solace, things will be OK. That's a mighty hard thing to repent of: it's easier to rationalize, decide to give it up by sheer willpower (perhaps tomorrow), or make a bargain to cut back to a more reasonable level—anything but wake up and stop trying to ignore that you're standing barefoot in something really gross, and admit that what you need is not a bigger fan to drive away the stench while you stay where you are, but to step out in a cleaning operation that lasts a lifetime and cuts to your soul.

An alcoholic walking this path craves just a little bit of solace, just for now, and it is only much later that two things happen. First, the cravings are still hard, but they are no longer *quite* so overpowering. Second, she had forgotten what it felt like to be clean—really and truly *clean*—and she had forgotten what it was like to be doing something else with her life than trying to hide in a bottle. She had forgotten what freedom was like. And long after she gave up on her way of escaping life, she found she had forgotten what it was like to experience life, not as something to escape, but as something with joy even in its pain.

The gates of Hell are bolted and barred from the *inside*. This much is true of passion: we think our sins adorn us, and we try to flee from the only place joy is to be found. Fleshly lust disenchantments the entire universe; first everything else becomes dull and uninteresting, and ultimately stronger doses of lust lose even the semblance of being interesting. Spiritual lust, the passion that seeks escape from where God has placed us is, if anything, a sin with a higher pay grade than the fleshly lust that is bad enough, but spiritual lust too is the disenchantment of reality, a set of blinders that deflates all the beauty we are given in nature. Spiritual lust is the big brother of merely fleshly lust. Spiritual lust is something really, really, *really* gross that we need to step out of and get *clean*. We need to realize that the passion does not adorn us, that the sparkle of an exotic escape from a miserable here and now is, on a spiritual plane, spin doctoring for experiencing the here and now with despair. We do not see

that we need not an escape from what God has given us, but gratitude and contentment.

But what if the here and now is not the best here and now? What if it's with an Uncle Wally who tells sexist jokes no matter how you ask him to stop? What if the people you are with have *real* warts? There are a couple of responses. You might also think of what your uncle has done that you might be grateful for. You know, like when he helped you find and buy your first car. Or you could learn the power of choosing to be joyful when others act unpleasantly. Or you might read C.S. Lewis, [The Trouble with X](#), and then look at how you might stand to profit from praying, with the Orthodox Church, "Lord Jesus Christ, Son of God, have mercy on me, a sinner."

Once, when things went from hard times to easy times, one saint complained, saying that easy times rob the Church of her martyrs and her glory. If we are entering hard times, that does not place us outside of God's reach nor Christ's promise in [the Sermon on the Mount](#): "For your heavenly Father knoweth that ye have need of all these things. But seek ye first the kingdom of God, and his righteousness; and all these things shall be added unto you."

*I glorify Thee,  
Who hast cast Adam out of Paradise,  
That we might learn by the sweat of our brow  
The joy and the life that Adam scorned  
As King of Paradise.  
Glory be to the Father  
And to the Son and to the Holy Ghost  
Both now and ever and unto the ages of ages.  
Amen.  
Glory forever.  
And glory be to Thee,  
Thou who blessest us  
For better or for worse,  
In sickness and in health,  
In the Eternal Light and Love  
Who illuminest marriage.  
Glory forever.  
Glory be to thee whose blessings are here,*

*Not in an escape,  
But in the place wherein Thou hast placed us.  
Glory forever.  
Glory be to Thee,  
Who offerest Eden,  
To us men who forever dodge our salvation.  
Glory forever.  
Glory be to the Father  
And to the Son and to the Holy Ghost  
Both here and now, and in Eternal Life that beckons us  
The Son of God became a man in his here and now in Bethlehem.  
In your forever honored place,  
From this very moment,  
Become a Son of God.  
Repent, for the Kingdom of Heaven is near,  
Heaven awaits with open arms,  
Step out of Hell.  
Grieve for your sins,  
That grief that holds more in her heart,  
Than discovering that the scintillating escape from Hell  
Scintillates only as a mirage.  
And the repentance you fear,  
So constricted it seems from outside,  
Holds inside a treasure larger than the universe,  
Older than time,  
And more alive than life.  
Glory beyond glory,  
Life beyond life,  
Light beyond life,  
The Bread from Heaven,  
The infinite Living Wine,  
Who alone canst slake our infinite thirst,  
Glory forever.  
    Glory be to God on high.  
Glory forever.  
Glory be to the Father and to the Son and to the Holy Ghost,  
Both now and ever and unto the ages of ages,*

*Amen:*  
*Glory forever.*  
**Alleluia!**

# FAQ

## Frequently asked questions (and their answers)

[Could I reprint or redistribute something from this site?](#)  
[Could you tell me a bit about yourself?](#)  
[Do you mind if I email you?](#)  
[How can I navigate this site?](#)  
[How is this site organized?](#)  
[There's a lot of stuff here. Where should I start?](#)  
[What is the purpose of this website?](#)  
[What should I do if I find an error?](#)  
[Why don't you use HTML5 Boilerplate](#)  
[Why isn't my question answered here?](#)

1. **Could I reprint or redistribute something from this site?**

Please [contact me and ask](#). In the past I've given fairly generous permission to reprint or redistribute my items, but please do ask.

*Special exception:* If you want to use the picture from [Eloi, Eloi, lema sabachthane?](#) for a church bulletin, you have my permission to do so. (I suggest using the image from the [printer-friendly version](#) if you want a slightly higher-resolution.)

[Back to questions.](#)

2. **Could you tell me a bit about yourself?**

I am an Eastern Orthodox Christian, have degrees in math and theology, have a lot of interests, and have had some pretty interesting experiences (including riding an elephant in Malaysia). I invite you to read [the author biography](#), but most of all to browse [what there is to read](#).

[Back to questions.](#)

3. **Do you mind if I email you?**

I love to hear from visitors! [Please contact me.](#)

[Back to questions.](#)

4. **How can I navigate this site?**

There are several ways you can find things in this website. You can choose whatever seems easiest.

- **Search.** At the top and bottom of each left hand menu are a search box.
- **Left-hand menu.** At the left of each page, between the search boxes, is a menu listing what the sections of this website and the contents of each section. ([See the next question](#) if you're curious about this site's sections.)
- **Browse descriptions.** Clicking on the name of a section in the left hand menu will take you to a browseable index which describes what is in the section. Some are broken into subsections. If you find one thing you like, you might like others nearby.
- **Site map.** There is a site map for the site, arranged both [alphabetically](#) and [by subject](#).

# Farewell to Gandhi: The Saint and the Activist

## Saying farewell to heroes

C.S. Lewis was one of my youth heroes, and after much quoting of him I have said farewell to him, in [A Pilgrimage from Narnia](#).

The oldest written work on this site, [Blessed Are the Peacemakers: Real Peace Through Real Strength](#), is one that I owe to Gandhi. It is an apology for the Christian pacifist position, and I as a Christian held tight to the [The Sermon on the Mount](#) and nonviolence as best I could. And I was positive Mohondas K. Gandhi had openly pulled from Christianity in his nonviolence, and part of my debt to him is expressed in that in [Blessed Are the Peacemakers: Real Peace Through Real Strength](#) I took as my model a chapter called "Ahimse or the Way of Nonviolence" in [All Men Are Brothers: Life and Thoughts of Mahatma Gandhi as Told In His Own Words](#). And in fact Gandhi did borrow from Christianity; he says that the three men he holds as his heroes are Jesus, Daniel, and Socrates, all of whom held their lives as nothing next to their souls. Elsewhere he said that Jesus offered himself as a sacrifice for the sin of the world, a perfect act. Gandhi in fact wanted to become a Christian, and was soured to Christianity when a missionary turned him away because of the color of his skin. *Absolutely disgusting.*

Yet I am taking leave of Gandhi as the same Orthodox who took leave of C.S. Lewis. I take leave of Gandhi even as it unravels the style of nonviolence I found as a best interpretation of the [The Sermon on the Mount](#). I find in the end not that I was too fixated on the [The Sermon on the Mount](#) and took too much from it, but that I took too little. The Indian style of nonviolence has much to commend it, and I am impressed that Indian nationalism identifies with nonviolence instead of glorified violence that affects nationalism in so many other places. India and others have not let Gandhi be the last of a particular nonviolent alternative to violence. But there is a little bit of a burr under my saddle here. [The Sermon on the Mount](#) does not, in the main, offer an alternative answer to the questions addressed by just war and violence, not even the alternative answer of voluntary suffering that brought India's freedom. *It answers another question altogether.*

## How else could it be?

The rather obvious question to be raised, by just war Christian and by pacifist as well, is "How else could it be?" How does a Sermon on the Mount that says, "Do not resist evil" not call for nonviolent resistance if it is not taken as a hyperbolic statement that for more ordinary mortals means something like, "Be restrained when you must resist evil, and grieve when you must do so."? And on this point I would place my own earlier position, and [Blessed are the Peacemakers](#), in the same category as just war theory. It is an answer to what is the most effective legitimate means to address certain dark situations.

And the answer I would give is that the [The Sermon on the Mount](#) does not say, "Do not resist evil." Or at least it does not stop there. It says in full,

And seeing the multitudes, he went up into a mountain: and when he was set, his disciples came unto him: And he opened his mouth, and taught them, saying,

Blessed are the poor in spirit: for theirs is the kingdom of heaven.

Blessed are they that mourn: for they shall be comforted.

Blessed are the meek: for they shall inherit the earth.

Blessed are they which do hunger and thirst after righteousness: for they shall be filled.

Blessed are the merciful: for they shall obtain mercy.

Blessed are the pure in heart: for they shall see God.

Blessed are the peacemakers: for they shall be called the children of God.

Blessed are they which are persecuted for righteousness' sake: for theirs is the kingdom of heaven.

Blessed are ye, when men shall revile you, and persecute you, and

shall say all manner of evil against you falsely, for my sake. Rejoice, and be exceeding glad: for great is your reward in heaven: for so persecuted they the prophets which were before you.

Ye are the salt of the earth: but if the salt have lost his savour, wherewith shall it be salted? it is thenceforth good for nothing, but to be cast out, and to be trodden under foot of men. Ye are the light of the world. A city that is set on an hill cannot be hid. Neither do men light a candle, and put it under a bushel, but on a candlestick; and it giveth light unto all that are in the house. Let your light so shine before men, that they may see your good works, and glorify your Father which is in heaven.

Think not that I am come to destroy the law, or the prophets: I am not come to destroy, but to fulfil. For verily I say unto you, Till heaven and earth pass, one jot or one tittle shall in no wise pass from the law, till all be fulfilled. Whosoever therefore shall break one of these least commandments, and shall teach men so, he shall be called the least in the kingdom of heaven: but whosoever shall do and teach them, the same shall be called great in the kingdom of heaven. For I say unto you, That except your righteousness shall exceed the righteousness of the scribes and Pharisees, ye shall in no case enter into the kingdom of heaven.

Ye have heard that it was said by them of old time, Thou shalt not kill; and whosoever shall kill shall be in danger of the judgment: But I say unto you, That whosoever is angry with his brother without a cause shall be in danger of the judgment: and whosoever shall say to his brother, Raca, shall be in danger of the council: but whosoever shall say, Thou fool, shall be in danger of hell fire.

Therefore if thou bring thy gift to the altar, and there rememberest that thy brother hath ought against thee; Leave there thy gift before the altar, and go thy way; first be reconciled to thy brother, and then come and offer thy gift.

Agree with thine adversary quickly, whiles thou art in the way with him; lest at any time the adversary deliver thee to the judge, and the judge deliver thee to the officer, and thou be cast into prison. Verily I say unto thee, Thou shalt by no means come out thence, till thou hast paid the uttermost farthing.

Ye have heard that it was said by them of old time, Thou shalt not commit adultery: But I say unto you. That whosoever looketh on a

woman to lust after her hath committed adultery with her already in his heart. And if thy right eye offend thee, pluck it out, and cast it from thee: for it is profitable for thee that one of thy members should perish, and not that thy whole body should be cast into hell. And if thy right hand offend thee, cut it off, and cast it from thee: for it is profitable for thee that one of thy members should perish, and not that thy whole body should be cast into hell.

It hath been said, Whosoever shall put away his wife, let him give her a writing of divorcement: But I say unto you, That whosoever shall put away his wife, saving for the cause of fornication, causeth her to commit adultery: and whosoever shall marry her that is divorced committeth adultery.

Again, ye have heard that it hath been said by them of old time, Thou shalt not forswear thyself, but shalt perform unto the Lord thine oaths: But I say unto you, Swear not at all; neither by heaven; for it is God's throne: Nor by the earth; for it is his footstool: neither by Jerusalem; for it is the city of the great King. Neither shalt thou swear by thy head, because thou canst not make one hair white or black. But let your communication be, Yea, yea; Nay, nay: for whatsoever is more than these cometh of evil.

Ye have heard that it hath been said, An eye for an eye, and a tooth for a tooth: But I say unto you, That ye resist not evil: but whosoever shall smite thee on thy right cheek, turn to him the other also. And if any man will sue thee at the law, and take away thy coat, let him have thy cloak also. And whosoever shall compel thee to go a mile, go with him twain. Give to him that asketh thee, and from him that would borrow of thee turn not thou away.

Ye have heard that it hath been said, Thou shalt love thy neighbour, and hate thine enemy. But I say unto you, Love your enemies, bless them that curse you, do good to them that hate you, and pray for them which despitefully use you, and persecute you; That ye may be the children of your Father which is in heaven: for he maketh his sun to rise on the evil and on the good, and sendeth rain on the just and on the unjust. For if ye love them which love you, what reward have ye? do not even the publicans the same? And if ye salute your brethren only, what do ye more than others? do not even the publicans so? Be ye therefore perfect, even as your Father which

is in heaven is perfect.

Take heed that ye do not your alms before men, to be seen of them: otherwise ye have no reward of your Father which is in heaven. Therefore when thou doest thine alms, do not sound a trumpet before thee, as the hypocrites do in the synagogues and in the streets, that they may have glory of men. Verily I say unto you, They have their reward. But when thou doest alms, let not thy left hand know what thy right hand doeth: That thine alms may be in secret: and thy Father which seeth in secret himself shall reward thee openly.

And when thou prayest, thou shalt not be as the hypocrites are: for they love to pray standing in the synagogues and in the corners of the streets, that they may be seen of men. Verily I say unto you, They have their reward. But thou, when thou prayest, enter into thy closet, and when thou hast shut thy door, pray to thy Father which is in secret; and thy Father which seeth in secret shall reward thee openly.

But when ye pray, use not vain repetitions, as the heathen do: for they think that they shall be heard for their much speaking. Be not ye therefore like unto them: for your Father knoweth what things ye have need of, before ye ask him. After this manner therefore pray ye:

Our Father which art in heaven,  
Hallowed be thy name.  
Thy kingdom come.  
Thy will be done in earth,  
as it is in heaven.  
Give us this day our daily bread.  
And forgive us our debts,  
as we forgive our debtors.  
And lead us not into temptation,  
but deliver us from evil:  
For thine is the kingdom, and the power, and the glory, for ever.  
Amen.

For if ye forgive men their trespasses, your heavenly Father will also forgive you: But if ye forgive not men their trespasses, neither will your Father forgive your trespasses.

Moreover when ye fast, be not, as the hypocrites, of a sad countenance: for they disfigure their faces, that they may appear unto men to fast. Verily I say unto you. They have their reward. But

thou, when thou fastest, anoint thine head, and wash thy face; That thou appear not unto men to fast, but unto thy Father which is in secret: and thy Father, which seeth in secret, shall reward thee openly.

Lay not up for yourselves treasures upon earth, where moth and rust doth corrupt, and where thieves break through and steal: But lay up for yourselves treasures in heaven, where neither moth nor rust doth corrupt, and where thieves do not break through nor steal: For where your treasure is, there will your heart be also.

The light of the body is the eye: if therefore thine eye be single, thy whole body shall be full of light. But if thine eye be evil, thy whole body shall be full of darkness. If therefore the light that is in thee be darkness, how great is that darkness!

No man can serve two masters: for either he will hate the one, and love the other; or else he will hold to the one, and despise the other. Ye cannot serve God and mammon. Therefore I say unto you, Take no thought for your life, what ye shall eat, or what ye shall drink; nor yet for your body, what ye shall put on. Is not the life more than meat, and the body than raiment? Behold the fowls of the air: for they sow not, neither do they reap, nor gather into barns; yet your heavenly Father feedeth them. Are ye not much better than they? Which of you by taking thought can add one cubit unto his stature? And why take ye thought for raiment? Consider the lilies of the field, how they grow; they toil not, neither do they spin: And yet I say unto you, That even Solomon in all his glory was not arrayed like one of these. Wherefore, if God so clothe the grass of the field, which to day is, and to morrow is cast into the oven, shall he not much more clothe you, O ye of little faith? Therefore take no thought, saying, What shall we eat? or, What shall we drink? or, Wherewithal shall we be clothed? (For after all these things do the Gentiles seek:) for your heavenly Father knoweth that ye have need of all these things. But seek ye first the kingdom of God, and his righteousness; and all these things shall be added unto you. Take therefore no thought for the morrow: for the morrow shall take thought for the things of itself. Sufficient unto the day is the evil thereof.

Judge not, that ye be not judged. For with what judgment ye judge, ye shall be judged: and with what measure ye mete, it shall be

measured to you again. And why beholdest thou the mote that is in thy brother's eye, but considerest not the beam that is in thine own eye? Or how wilt thou say to thy brother, Let me pull out the mote out of thine eye; and, behold, a beam is in thine own eye? Thou hypocrite, first cast out the beam out of thine own eye; and then shalt thou see clearly to cast out the mote out of thy brother's eye.

Give not that which is holy unto the dogs, neither cast ye your pearls before swine, lest they trample them under their feet, and turn again and rend you.

Ask, and it shall be given you; seek, and ye shall find; knock, and it shall be opened unto you: For every one that asketh receiveth; and he that seeketh findeth; and to him that knocketh it shall be opened. Or what man is there of you, whom if his son ask bread, will he give him a stone? Or if he ask a fish, will he give him a serpent? If ye then, being evil, know how to give good gifts unto your children, how much more shall your Father which is in heaven give good things to them that ask him? Therefore all things whatsoever ye would that men should do to you, do ye even so to them: for this is the law and the prophets.

Enter ye in at the strait gate: for wide is the gate, and broad is the way, that leadeth to destruction, and many there be which go in thereat: Because strait is the gate, and narrow is the way, which leadeth unto life, and few there be that find it.

Beware of false prophets, which come to you in sheep's clothing, but inwardly they are ravening wolves. Ye shall know them by their fruits. Do men gather grapes of thorns, or figs of thistles? Even so every good tree bringeth forth good fruit; but a corrupt tree bringeth forth evil fruit. A good tree cannot bring forth evil fruit, neither can a corrupt tree bring forth good fruit. Every tree that bringeth not forth good fruit is hewn down, and cast into the fire. Wherefore by their fruits ye shall know them.

Not every one that saith unto me, Lord, Lord, shall enter into the kingdom of heaven; but he that doeth the will of my Father which is in heaven. Many will say to me in that day, Lord, Lord, have we not prophesied in thy name? and in thy name have cast out devils? and in thy name done many wonderful works? And then will I profess unto them, I never knew you: depart from me, ye that work iniquity.

Therefore whosoever heareth these sayings of mine. and doeth

them, I will liken him unto a wise man, which built his house upon a rock: And the rain descended, and the floods came, and the winds blew, and beat upon that house; and it fell not: for it was founded upon a rock. And every one that heareth these sayings of mine, and doeth them not, shall be likened unto a foolish man, which built his house upon the sand: And the rain descended, and the floods came, and the winds blew, and beat upon that house; and it fell: and great was the fall of it.

When Christ preached these words, the crowds were astounded.

What is at the heart of this is a Life, a life like the birds of the air and the grass of the field, the Divine life, that is as naked as Adam. One of the greatest idols and transgressions against the [The Sermon on the Mount](#). One particularly illumining footnote in [The Orthodox Study Bible](#) reads:

Luke 12:16-21:

Then [Jesus] spoke a parable to them, saying, "The ground of a certain rich man yielded plentifully. And he thought within himself saying, 'What shall I do, since I have no room to store my crops?' So he said, 'I will do this: I will pull down my barns and build greater, and there I will store all my crops and my goods. And I will say to my soul, "Soul, you have many good things laid up for many years; take your ease; eat, drink, and be merry." ' But God said to him, 'Fool! This night [angels shall require] your soul of you; then whose things be which you have provided?'

"So is he who lays up treasure for himself, and is not rich towards God."

The comment reads:

"Whose will those things be by which you have provided?" is the key to understanding the saving up of material goods. St. John Chrysostom writes that the only barns we need we already have: "the stomachs of the poor." St. Basil the Great taught that the bread in our cupboard belongs to the hungry man; the coat hanging unused belongs to the one who needs it; the shoes rotting in our closet belong to the one who has no shoes, and money we hoard belongs to the poor. St. Ambrose teaches, "The things which we cannot take with us are not ours. Only virtue will be our companion when we die." Even when Joseph stored up grain in Egypt (Gn 41) it was for

etc. Even when Joseph stored up grain in Egypt (Gen 41), it was for the benefit of the whole nation.

Sandwiched between "Do not store up treasure on earth" and "No man can serve two masters" is the strange-sounding, sandwiched "The eye is the lamp of the body." But this is of a piece with the text that surrounds it. Is our eye fixed on providing for ourselves through earthly means, or looking up to God in the trust that he will provide and the realization that he knows our needs better than we do and loves us better than we know how to love? If we are confused here then our eye is not "single", but poisoned. Those of us who are not monastics are permitted some possessions, but better not to create an endowment that provides the illusion that we are not at the hands of the severe mercy of a providing God. And when we begin to loosen our grip on money, God's providence is written in stronger, starker strokes.

And the point of this is not to fetter us, but to free us from what seems necessary and recognize the shackles we were bound to. On this point I am talking about money; but I might as well speak of a gun and self-defense lessons. [The Sermon on the Mount](#)'s motto is not a Boy Scout's *Be prepared*, but a carefree, *Don't be prepared. Be as naked as Adam.*

The Divine Liturgy and its associated readings speak of "He who of old stripped you both naked," meaning "The Devil who of old stripped you, Adam and Eve, both naked." It wasn't just that their flesh in its pure form raised no question of lust. Neither fire nor water nor the elements could touch Adam or Eve until they abdicated, and there are stories of a saint who threw down the gauntlet to a sorceror, walked into a fire and said "I'm unharmed," and when the sorceror was thrown into the flame with him and was burned, healed him and sent him out unharmed. On a more mortal level, monks and nuns can dress almost or exactly the same in terms of layers of clothing between summer and winter, and that includes an American Midwest summer and winter. Paradise is where the saints are; the door may have been closed to Adam and Eve but it is open to the saints.

And all of this is an invitation to freedom, free and absolute, unencumbered and unchained freedom. It is not legalism that bids us, "If someone conscript you to go with him one mile, go with him two;" it is utter freedom even from selfishly stopping with what was asked. Christ the Lily of the Valley is the flower that leaves a fragrant scent on the heel

that crushes it: but what we may find is that those things we expect to crush us, are just the removal of a shackle. And at the end saintly peacemakers are of a piece with the merciful, the pure in heart, those who hunger and thirst for righteousness, those who are persecuted for righteousness's sake: there is a unity of the beatitudes and they are rightly sung as a shorthand for the entire [Sermon on the Mount](#) in every Orthodox Liturgy. There is freedom to trust in the Lord's providence, freedom to every kind of generosity, freedom from lust, freedom from anger, every freedom that counts.

**Q: So what's the difference?**  
**A: The Saint and the Activist.**

Some readers may wonder where really I have departed from Gandhi. If he were alive, quite possibly he could say he agreed with most or all of it, not out of diplomatically seeking common ground, but out of a direct candour. But I assert there is a difference.

Military action and nonviolent resistance are two answers to the same question. Between the two, military action has much to commend it, and in fact Gandhi had great respect for soldiers: in [Blessed Are the Peacemakers](#), I wrote:

Once the men of a village came, running, and told Gandhi that they had run away while the police were raping and pillaging. When they told him that this was because of his instruction to be nonviolent, he hung his head in shame. He would not have been angry with them if they had defended their families by the power of a sword. He would have approved had they stood in harm's way, calling all injury to themselves without seeking to strike or to harm, to the point of death. But to run away like that and passively leave those who could not run was an act of great and terrible cowardice, the darkest possible answer to the problem.

From speaking with and listening to soldiers, I recognize military training and life as the cross of St. George, an ascetical framework that is much more disciplined than most life outside the military. Hard work and dedication are good things, and there is much to be praised about the cross of St. George. Nonviolent activism such as Gandhi offered, the practice of satyagraha which I refer to as 'peacemaking', perhaps questionably, has more to commend it. It is also disciplined, and it does

not resist force with force. None the same, it is an alternative in the same orbit as military action. It does not stain its hands with others' blood, but it is a tool you can use to achieve the same kind of end as military resources. India's independence was won with nonviolent resistance. But it is the sort of goal that could have been achieved by warfare, and in fact it stands in stark contrast to other nations as "achieving without bearing the sword what elsewhere has not been gained except by bearing the sword." And this falls infinitely short of resting in the hands of providence, naked as Adam.

I have written elsewhere of the Saint and the Activist: in [The Luddite's Guide to Technology](#), in [The Most Politically Incorrect Sermon in History: A Commentary on the Sermon on the Mount](#), and principally in [An Open Letter to Catholics on Orthodoxy and Ecumenism](#). If I may put it in a table:

<b>Question</b>	<b>The Activist</b>	<b>The Saint</b>
<i>What is the chief end of mankind?</i>	To change the world.	To glorify God and enjoy him forever.
<i>What is that in a word?</i>	Change.	Contemplation.
<i>By what means do your pursue that end?</i>	By means an atheist and a religious person could equally recognize as effective.	Seek first the Kingdom of God, and all these things shall be added unto you. This means that you work sometimes in ways an atheist would see as foolish.
<i>What is the place of nonviolence?</i>	It is a tool for political influence.	It is a flower of spiritual growth.
<i>What is the place of</i>	If you are disciplined, you are more	Protestants have said, "Mission exists because worship does not:" no one, without exception, exists for the sake of missions. All mankind, without exception, exists for the sake of worshipping God. Some people, however, are deprived of the purpose for which they are created and therefore some

*discipline?* effective at getting things done. ~~which they are created, and therefore some~~ people are missionaries so that more people may enjoy the purpose for which they are made. In like fashion, spiritual discipline exists because contemplation does not. It is a corrective when we have lost touch with the life of contemplation.

*What do you live to become?* A catalyst for a better world. To become by grace what Christ is by nature.

*What is the Bible for?* To push moral authority behind the causes we further. Part of God's work to shape us to grow in faith.

*What is justice?* Equitable redistribution of resources, as conceived by assuming that political reforms included in this goal will do nothing to hinder the economy's ability to do all that is asked of it. One of the four cardinal virtues of classical antiquity, that is at times interchangeable with spiritual righteousness.

*What is the government's* The more important a task is, the more essential it is that it is channeled through the government. Government has a place, but that place is not the place of a messiah. Success is not

<i>role?</i>	government. Success usually includes bringing about governmental reforms.	usually connected to governmental reforms.
<i>Can human nature be improved on?</i>	Yes; we can bring it about in others through political programs.	Yes; if we let God work with us we will be improved in the work.
<i>What attitude brings real success?</i>	Let there be peace on earth, and let it begin with me.	Be it unto me according to thy word.
<i>What is wrong with the world?</i>	A number of issues, most importantly the issues I am fighting and giving the most advocacy for.	<i>Me.</i>

Where does Gandhi stand in all of this?

[There was one document forwarded that listed a bunch of statements like, "If you disapprove of sport utility vehicles and private jets and own a sport utility vehicle and private jet, you might be a liberal."](#) And on that count, Gandhi cannot be called an unadorned Activist. He didn't just say, "The world has enough for everyone's needs, but not everyone's wants;" his gaunt frame attests to the fact that he was attending to the beam in his own eye rather than the speck in his brother's eye. His writing is devout; "God" is not, as with many of today's Activists, a word not to be used in polite company. Gandhi cannot be completely understood except

with reference to Saints, and what I would call the centerpiece of his Activism is drawn out of from Saint terrain. Gandhi's particular genius is to take nonviolent resistance as one of many particular eddies in the flow of holiness in the plane of the Saint, and transform it to be a keystone in the plane of the Activist. That places Gandhi away from being at least a pure saint to being substantially an Activist. It makes him, in fact, more of an Activist than if he had merely used existing Activist tools; he was Activist enough to profoundly contribute to the bedrock of Activism.

Furthermore, I am concerned about the wake that he has left. Not that this is a unique concern about Mr. Gandhi; [I have raised concerns about the wake left by Fr. Seraphim \(Rose\)](#). I have seen one Gandhi quote in the wild that alludes to the [Sermon on the Mount](#), "An eye for an eye only ends by making the whole world blind." But this is an Activist argument; an atheist Activist and a Saint could equally agree that the basic argument is sound or unsound. And that's it for religious quotes. *In [All Men Are Brothers](#), Gandhi unashamedly, frequently, and freely refers to God. But I have never seen a Gandhi quote in the wild that uses the G-word. And when Gandhi's style of nonviolent resistance is imitated today, it is used in a way that is completely detached from the Saint's freedom, that is more removed from the Saint than not protesting.*

## Rivers of living water

By contrast, I would tell the story of St. Photini, the Woman at the Well, or part of it. It was shameful for the Woman at the Well to come alone to draw water; women would come together to draw water in groups. No other woman would be caught dead with a woman of her reputation, and when she evasively answered Jesus's "Go and call your husband," she was dodging her shame. Earlier she had sought to enlist Christ's help in running from her shame; her words, "Give me this water," were not so that she could dodge the manual labor of drawing water, but so that she could run from the shame of having to draw water alone. And Christ did not give her what she wanted; instead, in answering her evasive "I have no husband" with, "You have truly said, 'I have no husband', for you have had five husbands and the one you have now is not your husband," pulled her through her shame and opened her eyes to higher things. The story builds up to her running, free from shame, telling people, "Come and see a man who told me every thing I ever did!" She sought Christ's help in covering up her shame; *instead he made her unashamed as Adam*. And it is in this unashamed woman that the story unfolded of a Great Martyr and Equal to the Apostles.

This is what it means to be naked as Adam. It is not a license for indecency; when she gave Christ an evasive answer, he called a spade a spade. But she did become like the Adam whom fire and water could not harm. The point of this is not that her story goes on to her being tortured and her whole company drinking poison and being unharmed by it, but that everything at the heart of the [Sermon on the Mount](#) was alive in her. [In her later story much is told of miracles](#), but perhaps we should make less of the fact that she went to tortures and was miraculously delivered, and more of the fact that she went to tortures *and was faithful*. She did, in the spirit of giving more than was asked, when Nero decided to bring

her to trial, she went ahead and tried to convert him. She didn't succeed at *that*, but she did seem to convert practically everyone else she came in contact with. But what is significant is not just the results that she brought about. What is significant is that she was faithful, with the overflowing freedom that soars as the birds of the air. Perhaps we are not Saints on the level of St. Photini; perhaps it is not within our reach to be called Equal to the Apostles. But what is in our reach is to be a little more a Saint, a little less of an Activist.

Now, a word on being naked as Adam. St. Photini wore clothes and so should we. It is true that there are some saints who labored without clothing: the pre-eminent example is [St. Mary of Egypt](#), and there have been male Desert Fathers who were naked. But we should wear normal clothes even as St. Photini did. *What is forbidden to those who would be naked as Adam is not literal clothing but metaphorical armor.* What is forbidden is not trusting in God's Providence but trying, in addition to the Lord's Providence, or instead of it (if these are really two different things) to straighten things out for ourselves. The opposite of this is someone like St. Photini who, instead of waiting to be captured, went on her own initiative to Caesar Nero. She trusted in God's Providence in a way that could be seen as blackmailing God. But there is something very like Gandhi's nonviolent resistance, not in how the Saint deals with evil in the world, but how the Saint works with God. If a Saint were told, "You are making no provision to take yourself but it's like you're blackmailing God by your actions," one Saint might respond, giving more than was asked, "Yes, I'm emotionally blackmailing God, and you should emotionally blackmail him too!"

## Deep in our bones

Activism runs deep in our bones today; I surprised one professor who discussed disability and an "autism and advocacy" conference, that the natural way to seek the best interests of the autistic community is by political advocacy. And I tried, perhaps in vain, to show her that of the two assigned articles she gave on dealing with autism and disability, one offered a clear activist agenda for autism and disability, and the other was not political, at least not in an overly narrow understanding of politics, but was the father of an autistic child speaking of limitless love. My professor couldn't see what would benefit the autistic besides rolling out one more theme in political activism.

And so, with activism deep in our bones, if we look for a saint, the kind of figure that so naturally comes to mind is Gandhi, or Martin Luther King if we insist on a Christian. Both admired and sought to imitate Christ; both led nonviolent resistance against laws that were legislated evil. Both sought a response to evils out of the [Sermon on the Mount](#). And both contributed to the Activist outlook that is now non-negotiable in the academy. Not necessarily that Gandhi's style of nonviolence is non-negotiable; Gandhi respected his enemies, while it is perfectly socially acceptable in some queer circles to break in to Catholic churches and vandalize them, and spray paint swastikas to identify Romans with Hitler. But the question in so much of the academy is not, "Are you a Saint or an Activist," but, "On to the real question. What *kind* of Activist are you?" (If they have enough distance to recognize that that is the only *real* question in their eyes.)

## Conclusion: Saints forever!

The Activism we see in the Academy may be [the damned backwing of Gandhi's nonviolent Activist precedent](#). That much will not be investigated here. What I will say is much the same thing I would say to C.S. Lewis, that I in fact did imply to him in [A Pilgrimage from Narnia](#):

You helped me reach where I am now, and I would be much poorer had our conversation been deleted from my past. I have sat at your feet. But now even what I have taken from you summons me to bid you farewell. *If your right eye or your right hand causes you to stumble, cut it off and throw it away.* Holding on to your ecumenism, Mr. Lewis, or—it is a deeper cut—your nonviolence, Mr. Gandhi, is to lose everything you sought for. The journey in faith involves many times when we cut off a right hand or take out a right eye. Perhaps we lose nothing, or only a piece of Hell, when we do so. But God created man to glorify him and become him forever, and I cannot be an Activist: I can only strive to be a Saint.

Thus I bid farewell to heroes of my youth.

# Favorite Haunts

The following, in alphabetical order, are some of my favorite places on the web. (The list is partially gleaned from [Jonathan's Canon](#).) I have a feeling that a list like this should be longer, but I haven't recently spent a lot of time browsing the web, and therefore can't tell of too many times I've found that rare gem buried under mounds of sand.

## Institutional Pages:

### [Alertbox](#) (Jakob Nielsen)

Alertbox is a regular column on how to make computers fit for human consumption. It might only be interesting to technical people, but he says some invaluable things.

### [The Bible Gateway](#)

A powerful and easy to use interface permits visitors to look up passages and perform keyword searches in several Bible translations (in English and other languages).

### [Christian Classics Ethereal Library](#)

The [Christian Classics Ethereal Library](#), available on CD-ROM, is a collection of numerous classic Christian public domain e-texts, a lifetime's worth of reading. G.K. Chesterton's [Orthodoxy](#) is a good place to start. This site also has links to other sites hosting noteworthy Christian content.

### [First Things: A Journal of Religion and Public Life](#)

After long and frustrated surfing through innumerable web pages looking for serious Christian thought, and finding pages that are among human thought what MacDonald's is among foods, I found a [First Things](#) article entitled *Abortion: A Failure to Communicate* that was a breath of fresh air and then some: it was serious, thought-provoking, and drew attention to facts that were important but not obvious. [First Things](#) is a good place to go if you want to chomp on conceptual meat.

### [Freefind](#)

Free Find is a free search engine, and powers the search functionality on this site.

### [The Gutenberg Project](#)

[The Gutenberg Project](#) makes numerous classic books available

online. It is the place I go if I want to read something on my computer and the [Christian Classics Ethereal Library](#) doesn't have it.

[iTools](#)  
A collection of research tools for searching web, newsgroup, dictionary, encyclopedia, phone directory, biography, quotation, ...

[The Jargon File](#)

[The Jargon File](#) is a massive collection of slang terms from the hacker community. The language it records has problems — it is elitist, and a distressingly high number of the terms are pejorative — but it is also a witty, insightful, and fascinating document, one that gives a feel for the way a subculture thinks.

[java.sun.com](#)

Most people won't need this link, either because they would not benefit from it, or because they already know it and have it bookmarked. For that minority that does not fit either category:

This is the homepage for Java, a very sweet programming language that has come out a few years ago. It has the programs you need to get started, *extensive* documentation (the part I use most is about twenty times the length of the Bible, and very well organized, so that I can usually find what I want in less than a minute), and forums where you can talk with other people. If you want to learn how to program (it's quite possible to teach yourself to program — I did), this is a wonderful place to start.

[Leadership University](#)

[Leadership University](#) is a massive compilation of articles from [First Things](#) and other sites; it's a good place to go and read and think. It was actually the place where I first found *Abortion: A Failure to Communicate*.

[The Onion Dome](#)

The Onion Dome is an online journal about the funnier side of Orthodoxy.

[Orthodox Church in America Saints: The Prologue](#)

The links in the [Prologue](#) are an excellent way to get a daily taste of the Orthodox tradition of biography as theology.

[Orthodox Circle](#)

This is an example of what community portals should be: practical, friendly, and a work of art. This one is for Orthodox Christians

Unusuals.

### [Vote Smart](#)

For reasons elaborated by Neil Postman in *Amusing Ourselves to Death: Public Discourse in an Age of Show Business*, present American political discourse is a matter of show business, sound bites, empty phrases, and hard-hitting images — not rational arguments and positions — to the effect that most of what reaches us from the candidates is not helpful in choosing who to vote for.

When I asked around for websites that would cut through the circus and tell where candidates stand on issues, [Vote Smart](#) was recommended to me. I am mentioning it, not to say that it's better than other sites in the same category, but in hopes that people may use resources like this to get past TV showmanship, and vote based on where the candidates stand on the issues.

## Personal Sites

This category is for personal sites, including those of friends and acquaintances who publish real content, that I like. At the moment, it's small (my best friend Robin's site, for instance, has little besides a resume and some links), but I'm hoping that it will grow over time.

### [How to Make an Annoying Web Page!](#)

Once upon a time, in the University of Illinois's student web pages, there was a web page entitled, "HTM-Hell". HTM-Hell featured, among other lowlights, "The magical world of frames", with a prize offered for clicking a button buried in no fewer than thirty frames, and "Shrine to the Goddess Tracey Ullman" (which, after a number of clicks, revealed a large black-and-white portrait of an old man).

Sadly, the HTM-Hell I knew is no longer available, but in the course of reading up on usability, I found a page that occupies a similar niche. Written by a usability expert, this page should be visited by every web developer who has a terrible web page — and may be enjoyed by visitors who have suffered through bad web pages.

### [Josh Wibberley's Wolfhawke](#)

[Wolfhawke](#) is on this page because it contains fiction and some nonfiction — as well as having a nice look and feel. Josh is an American who grew up in Turkey and has lived in Germany, and we mesh well.

# Fingerprinted Collects

At my congregation, part of the worship liturgy includes a prayer, the 'collect', which varies from service to service. I decided to write my own miniature ensemble; they were written first in French (some corrections courtesy of my good friend Robin Munn), and then translated to English. I wanted to make prayers that would be universal and at the same time bear a personal touch: fingerprints.

Why French? I prayed, thought, and felt, and even though my French is not perfect, there are ways it is closer to my heart than English.

## **français      English**

Éternel, Seigneur Dieu, qui      Lord God, who knows all  
connait toutes les cultures, l'Objet cultures, the object of worship in  
du culte dans les cultures, et qui every culture, and who is at the  
reste quand-même au-delà des same time beyond cultures, even  
cultures, même la culture juive à Jewish culture on which you have  
laquelle tu as donné tant d'amour: bestowed so much love: help us to  
aides-nous a voir grace a nos see through our cultures and yet  
cultures mais néanmoins ne pas not become blind to what culture  
devenir aveugles a ce qui la culture cannot contain. In the name of the  
ne peut contenir. En nom du Père Father who lived before culture,  
qui vivait avant du culture, du Fils and of the Son who went into one  
qui entra dans une culture et a béni culture and has blessed all cultures  
toutes cultures par elle, et du through it, and of the Holy Spirit  
Saint-Esprit qui montre la Lumière who shows the Light of God in all  
de Dieu dans toutes les cultures cultures where it is permitted to  
que l'on permit d'entrer, enter,

Amen. Amen.

Éternel, qui nous as donné des      Lord, who has given us hearts  
coeurs percés de la memoire de pierced by the memory of the  
l'avenir que tu nous prepares: future you have prepared for us:  
    laisses-nous sensibles a ton keep us aware of your absence, our  
absence, l'imperfection de notre imperfect knowledge of your glory,  
    connaissance de ta gloire, et and at the same time give us the  
quand-même avoir la force de vivre strength to live as strangers  
    étrangers hors de notre vrai outside of our home with you. As  
domicile avec toi. Comme Pierre a Peter cried much each day, and  
tant pleuré chaque jour, et quand when asked why, said, "I desire my  
on lui demanda pourquoi, disait, Lord," help us to deeply hope for  
    <<Desirado Domine,>> aides- the time you will welcome us in  
nous de tant espérer que tu nous Heaven. In the name of the Father  
accueille au ciel. Au nom du Père of Glory, of the Son who veiled the  
    de Gloire, du Fils qui voilait la Glory of his Father, and the Holy  
    Gloire de son Pere, et du Saint- Spirit who breathes on the waters,  
Esprit qui souffle sur les eaux, le the earth, and soon Heaven with  
terre, et bientôt le ciel avec nous us in it,  
    en-dedans, Amen.

Amen.

O Éternel, Dieu d'Hénoch: Aides-      O Lord, God of Enoch: Help us  
nous à voir que ce qui se passe to see that the usual patterns  
habituellement autour de nous around us are not necessarily what  
n'est pas forcément ce qui ne peut must be: help us to be open to the  
être différent: aides-nous à être Holy Spirit and the mysteries  
    ouverts au Saint-Esprit et les which you are preparing for us:  
mystères que tu nous prepares: give us the wisdom which can  
donnes-nous la sagesse qui peut ou either build a great boat in the  
    bâtir un grand bateau au fond du middle of the desert, or work hard  
    désert, ou dût travailler, et and silently on obscure tasks that  
    silencieusement, aux oeuvres are ignored by our judges of the  
obscur et a l'insu de tous nos important. In the name of the  
    juges de ce qui est important. Au Father whose ways are not like our  
nom du Père dont les voies ne sont ways, of the Son who is the way,  
    pas comme nos voies, du Fils qui and the Holy Spirit whose holiness  
est la voie, et du Saint-Esprit dont is to be separate,

1. Amen. Amen. Amen. Amen. Amen. Amen. Amen. Amen. Amen. Amen.

la saintete est etre separe, Amen.

Amen.

Dieu, le Don Éternel: aides- God, the Eternal Gift: help us to  
nous à voir que nous avons en nous see that in our hearts there is an  
un vide infini, qui ne peut être infinite void, which can only be  
rempli que par un objet infini et filled by an infinite and immutable  
immuable, c'est-a-dire par toi- object, by you yourself: help us to  
même: aides-nous à chercher en seek in your creations what we  
tes créatures ce que nous devons y should seek among your creation,  
chercher, et d'autant plus chercher and much more to seek in you  
en toi-même ce que nous devons yourself what we should seek in  
chercher en toi. Donnes-nous soif you. Makes us thirsty for you, and  
de toi, et ne nous laisse pas à don't leave us us to seek in your  
chercher en tes créatures ce qui creatures what should draw us to  
doit nous mener a toi-même. Au yourself. In the name of the Father  
nom du Père qui désire nous who wants to welcome us all into  
accueillir tous au fond de son the depths of his heart, of the Son  
coeur, du Fils qui marchait sur who walked on earth and knows  
terre et qui connaît comme c'est how hard it is to be man in a  
tellement d'être homme dans broken world, and of the Holy  
un monde brisé, et du Saint-Esprit Spirit who comes to ease our  
qui vient pour soulager nos sufferings at not being totally  
souffrances de ne pas être reunited with you,  
totalement réunis avec toi, Amen.

Amen.

Éternel, qui nous a créés en ton Lord, who created us in your  
image, laisse-nous à connaître que image, let us know that we are  
nous sommes d'autant plus grands much more than the images we  
que les images que nous créons de make of ourselves: that is, that our  
nous-mêmes: c'est a dire que nos greatest to create (and not just  
plus grands efforts a créer des gens pro-create) people, once by  
(non seulement procréer), jadis en mechanical statues and now by  
statues mécaniques et cognitive science, cannot come to  
aujourd'hui par la science what you have done in us. Let us  
cognitive, ne peuvent arriver a ce know ourselves at once great and  
que tu as fait en nous. Laisse-nous small, and have the humility that  
nous connaître à la fois grands et comes from knowing the truth. In  
petits, et avoir l'humilité qui vient the name of the Creator, Father, of

peut, et avoir l'humaine qui vient the name of the Creator-Father, or  
de connaître la vérité. Au nom du the Son found in the likeness of a  
Père Créateur, du Fils trouvé en creature, and of the Holy Spirit,  
l'image du crée, et du Saint-Esprit, which is still a wind one cannot  
qui reste un vent que l'on ne peut exclude in trying to create a  
exclure en essayant de créer un hermetically sealed world, a wind  
monde hermétiquement scellé, un which blows eternally,  
vent qui souffle éternellement, Amen.

Amen.

O Éternel, qui reste hors du O Lord, who remains outside of  
temps, et qui nous invite à la vie time, and who invites us to eternal  
éternelle, non seulement en life, not only in the future, but in  
l'avenir, mais en cette vie-ci: laisse- this life here: let us spend this life  
nous de passer cette vie en in preparation for living in  
préparation pour la vie au ciel, Heaven, little christs apprenticed  
petits christs apprenticiés au to the Christ, and to have this love,  
Christ, et avoir cet amour, ce this power, this joy, this life, today  
pouvoir, cette joie, cette vie, and in the future. In the heart of  
aujourd'hui et à l'avenir. En le the Father, the Son's eternity  
coeur éternel du Père, l'éternité hidden in time, and the mysterious  
temporellement voilée du Fils, et love of the Holy Spirit,  
l'amour mystérieux du Saint- Amen.

Esprit,

Amen.

Éternel, merci de tout ce que tu Lord, thank you for all you have  
nous a donné: given us:  
Ton Esprit, au-delà meme des Your Spirit, beyond even the  
magies auxquelles tant d'autres magics so many hope in;  
espèrent; The earth, and all that is in it: your  
La terre, et tout ce qu'elle contient, work of art;  
ton oeuvre d'art; Your eternal Church, your  
Ton Église éternelle, ton chef masterpiece, which you are  
d'oeuvre, que tu es en train de perfecting and which will perfect  
perfectionner et qui sera parfaite, and without defect before your  
sans défaut devant ton trône; throne;  
Le petit temps passant que nous The short present which we have  
avons comme l'église militante; as the church militant;  
La gloire sans cesse que nous The endless glory which we will

aurons comme l'église victorieuse; have as the church victorious;  
Ton pardon, qui ne nous laisse pas Your forgiveness, which doesn't  
tomber, même quand nous just let us fall away, even when we  
choisissons de tomber; choose to fall;

L'amitié, de laquelle tu ne nous Friendship, in which you not only  
donne pas seulement l'amour de let us love you in worship, but also  
toi en culte, mais aussi l'amour love other images of you;  
d'autres images de toi; Material details, be they

Les détails matériels, ou des computers, trees, or old toys, by  
ordinateurs, ou des arbres, ou des which you bless us and let the  
anciens jouets, par lesquelles tu material accompany the spiritual;  
nous bénis, le bon material Our souls, which are rooms: not  
accompagnant le bon spirituel; only rooms in which we will live in  
Nos âmes, qui sont des chambres: the future, but today rooms in  
non seulement chambres dans which we can accompany other  
lesquelles nous viverons en people;

l'avenir, mais aujourd'hui des The beauty which pierces us even  
chambres en lesquelles nous and especially in our greatest  
pouvons accueillir d'autres gens; happiness, reminding us that there  
La beauté qui nous perce même et is a much greater happiness which  
surtout pendant les plus grands awaits us;

bonheurs, en nous rappelant qu'il Father eternal, for all that is  
y a un bonheur d'autant plus grand named here, for all that we forget  
qui nous attend; to thank you for, for all we would

Père éternel, de tout ce qui est not dare expect to receive, and all  
nommé ici, de tout que nous we think about and are ashamed to  
oublions de te remercier, de tout thank you for because we believe it  
que nous n'oserons croire recevoir, to small: in your name, and in the  
et de tout dont nous pensons et name of your Son, the perfect gift,  
avons honte de te remercier car and your Spirit, still given today,  
nous le croyons trop petit, au ton Thank you, and let us appreciate  
nom, et au nom de ton Fils, le don your kindness.

parfait, et ton Esprit, donné encore Amen.

aujourd'hui,  
Merci, et laisse-nous d'apprécier ta  
bonté.  
Amen.

# Firestorm 2034

## Acknowledgments

*When I read a book*, I usually skip or maybe skim the acknowledgements; I find a long list of names of people I've never heard of to be deadly dull. There have been two times that I've read a list of acknowledgments that I've actually liked. One was written by a very witty writer who could, and did, make even technical documentation interesting to read. (Making someone want to read a list of names is only slightly more difficult than writing interesting documentation, and I don't consider myself a good enough writer to do either.) The other time was an acknowledgement that personally named and thanked me, and that was my favorite part of the whole work. Apart from that, I don't think that a list of strangers' names is fair to inflict on the reader. So I'm not going to try it.

Of course this is not solely my work; many others paid a role in it. You know who you are. I do wish to explicitly thank one person, though, whom many authors omit from their long lists. I wish to thank *you*, the reader. Of course the people who helped me write this are important, but they are not nearly so important as the people who take the time to sit down and read it, let the story live in their imaginations, and (I hope) tell a friend if they think it's cool. My work is only half done when, I write down my thoughts and put them on the web. It is finished when you breathe life into the story as you read it, and consider its ideas and make them a part of you. Only then can my story be complete. I therefore give my thanks to you, the reader.

# In the Glade

"I still do not understand," Grizelda said, "why you asked your father not to find you a wife, if you are not going into a monastic order. And why he listened to your request."

"As Solomon said, he who finds a wife, finds a good thing," said Taberah, and then paused. A quotation from a written source came quickly to him, but a more substantial reply would take a moment's thought. *I am at home among most all of the people I have visited, Taberah thought, but I am not like any of them. And explaining myself is difficult.*

Grizelda stopped and looked at him; her pale blue eyes bore a gaze that was intense and probing, and yet not piercing. Her hair was pulled back from the sides of her head, and fell darkly onto her blue dress. The people at the castle spoke highly of Grizelda; some said she had a mind like a man. Her husband, Melibée, stood at her side, listening. They were in a forest glade outside the town walls, and were nearing the banks of a river.

Taberah nimbly climbed a tree, and tossed down two large pears. Then he climbed down, an even larger pear in his teeth.

"One good need not be the only good; even God, when he was the only good, chose to become not the only good. That is what creation means. For a man to have a wife is not the only good; there is also good in a man being single."

Melibée spoke up. "But then why not enter a monastery? Surely that is a good place."

Taberah shook his head. "Being celibate is good, a good that monastic life embraces; it does not follow that being celibate requires entering a monastery. I see another option; marriage and monkhood are not the only possibilities."

only possibilities.

Grizelda began walking again, followed by the others. "There is still something in it I question. The different kinds of heretics often see other options, and the Church has condemned them. I know you don't have condemnation from the Church, but I don't see why you don't."

Taberah thought for a moment about whether to explain a logical principle, but decided not to. "All of the monastic orders were also started by people who saw other options; if you will think on the saints' lives, you will see that God led them outside of what everyone else was doing."

Grizelda stopped, and asked, softly, "You claim to be a saint?"

"Hardly," Taberah said. "I try to serve God, but I do not reach that standard. The reason I brought them up is that they are examples of how God wants us to live life. They play by the same rules as us; they just do a better job. I am not married because I am serving God in a way that does not involve marriage, at least not yet; I seek to follow him."

Grizelda began to speak when there was a thunderous boom. The ground shook, and a luminous being stood before them. Around the being was a presence, a reality of terrifying glory, as solid and real as if the weight of a mountain were pressing down on their spirits, and then more real. It was like a storm, like the roaring of a lion. The three friends fell to the ground in fear.

The Presence spoke with a voice like roaring water. "Fear not! Stand up!" As the quaking bodies heard those words, the command gave them the power to rise, and they did rise, and bow low. Again he spoke: "Never!"

As the friends stood in awestruck fear, the being turned towards Taberah and said, "Taberah. Will you go wherever God leads you? I have been sent to call you to come on a voyage, to a land you do not know and have never heard of, a voyage you may never return from. Will you come along?"

Taberah closed his eyes. In an instant, time stopped, and Taberah was thinking, neither in his native Provençale nor erudite Latin nor any of the dozen other languages he had worked with, but beyond words, beyond language. He looked into his own heart, and into God's, and a single word formed on his lips, without effort or volition: "Yes."

There was a tremendous flash of light, and Grizelda and Melibée fainted.

# An Encounter

Taberah looked around. Four immense young men were throwing around a dinner plate — or at least that's what it looked like on first glance. They were brawny, and the plate had something unearthly about it —

One of the men shouted something, and hurled the plate at Taberah. He dodged, and then watched in amazement as it bounced off a tree but did not shatter. It was red, and it had an unearthly symmetry, symmetry like he had never seen before. He went over and picked it up; it was light, and felt vaguely like leather or wood.

One of the men walked over, and said something in a language he did not recognize. Taberah said, "Taberah," and looked at him. The man extended a finger towards him and said, "Taburah," and then took the artifact and tugged on his arm. He was standing on the edge of a forest, and was being led into a clearing with buildings. The architecture was alien, and looked like a slightly grotesque simplification of what he was used to. There was a strange precision to the buildings, and a smell like smoke and roasting flesh — though he could see no firepit, nor any animal.

The man took him out into the open field — the grass was strangely short and uniform in height, lacking the beautiful variety in the fields he was used to seeing. He bent over, and plucked a blade of grass. It had been clipped. Not grazed by animals, but painstakingly clipped.

Looking around, he saw the men tossing the strange plate between each other. It sailed through the air, almost as if it had wings. One of them caught his eye, and tossed it over. Taberah snatched it out of the air with one hand, and then tried to throw it. It fell like a stone.

One of the men came over, and made the motion of throwing it with exaggerated sloppiness. It was different from how one throws daggers, or

exaggerated slowness. It was different from how one threw daggers, or stones, or much of anything else; it vaguely resembled skipping a rock. Taberah took the plate and held it properly; one of the men took it and turned it upside down. Holding it upside down, Taberah tried to imitate the throw he'd seen; the plate wobbled and fell to the ground. The people clapped.

One of the people said something that he didn't understand; seeing Taberah's incomprehension, he repeated his words, only louder. When Taberah didn't understand that, they beckoned him over to where the smoke was coming from. There was some sort of miniature fire, above which geometrically shaped pieces of meat were roasting; one of them gave him a large piece of meat — they were all large — wrapped in bread, with some brightly colored liquids poured over — some sort of decoration? He wondered what the feast was, that they were eating meat, and had such a sumptuous banquet. The meat tasted slightly strange, although fresh, and the bread was finer than anything he had ever tasted. It didn't have any pebbles, and it was softer than cake.

Not knowing the local language, Taberah expressed his gratitude with his eyes; he listened intently to the conversation, trying to see if he could make sense of the language. Every once in a while, he heard a word that sounded vaguely like Latin, and by the end of the conversation he had figured out these people's names. The man standing by the fire was very old, so old that wisps of silver hair were beginning to appear among the black locks of his temple. He looked mature, regal, venerable. He must be a king, owning the small palace nearby and the ones around it; he could look in the windows (fitted with *glass* — and glass so smooth you could barely see it), and see the illumination of a thousand candles. Or was he a servant? He looked mighty, built like a great warrior, and was even taller than the other men. And it was a lordly thing to give food to anyone who came. He was cooking, but the demeanor of the other men treated him as their elder, and not just in years. By the end of the conversation, Taberah had conveyed his name, and knew their names. After the effort of listening to the conversation and trying to see if he could hear any words related to ones he knew, he sat down in one of the chairs — at least he thought it was a chair; it was sturdy, but so light he could lift it with one hand.

Taberah sat down in this chair, happy to sit and think as the others romped on the plain. Where to begin thinking? The language had Latin

words, but it did not sound like any Romance language; that was confusing. And these people owned massive wealth, wealth far beyond anything his lord owned, and different goods than he had seen before. And they were immense. But that was only the surface of what he was sure was there. These people seemed to treat him hospitably, but what struck him wasn't exactly hospitality so much as something like friendship. Why were they treating him as a friend when they had just met him? When he watched them, he was puzzled at seeing respect in the younger men's treatment of the elder, but not etiquette. How could this people have respect without having its form? They did, but how? Or was their etiquette merely strange? They were not accustomed to wayfarers; they didn't look like heathen, but they didn't recognize Latin — or Greek, or even Arabic, for that matter. And what would motivate anyone to cut grass at a uniform, mathematically precise height? What strange symbolic gesture would be manifested in that way? Or was it a symbolic gesture? It seemed more like a rash vow. Or was it something stranger still?

To the eyes around him, Taberah looked lost in thought. And he was — he saw certain things that were human, but there were other parts that he could not understand at all. What did they mean?

# First Clues

Aed looked on the stranger as he gazed. He was unbelievably short and scrawny, not to mention gamy; his clothing looked like a getup from the Middle Ages, a tunic and hose with irregular stitching and any number of holes. He could readily believe it when he walked by and saw lice. He had a thick, scraggly head of hair with a very thin beard. And yet, for all this, Taberah was quite attractive. He had a merry, comely face, with a deep, probing gaze. It was a penetrating gaze; Aed had the feeling that if he stared at a piece of paper too long, it would catch fire. Taberah had been listening intently, and was now off in his own little world.

*I must look up one of those charities that deals with foreigners, Aed thought, as he seems quite lost. For now, he can have the guest bedroom. It's a good time it's summer; I have a little more free time to deal with him. He looks a little older than my children.* Aed began to gather up the food, called his son and daughter to help, and then they went in; it only took the stranger a couple of times to learn the gesture that meant, "C'mon! You're invited over here!"

The stranger looked with some bewilderment over the contents of a room, and then his eyes lit up over a chess table packed in the corner. He started to pull the pieces off and walk over to the table; Aed stopped him, pulled out the table, and arranged a game before them. *The international game, he thought. We don't know a common language, but we have a common game.*

Aed's first thought upon seeing the stranger play was, "He has seen this game before, but does not know how to play." This was revised to, "He does know how to play, but he cheats — making moves that are almost legal and always to his advantage." Then a moment of dawning comprehension came, and he realized that the stranger was not cheating — he just didn't understand that chess was played over a grid. Aed

— he just didn't understand that chess was played over a grid. Aed groaned, and picked up the pieces and arranged them on the table, understanding why Taberah had made such a bizarre action as to take them from what he now understood was taken as a storage place, and decided to play it his way.

Aed was rated at 1975, although on a good day he could give almost any chess player a run for his money. He was therefore stunned after he lost five games in a row. The young stranger was very, very cunning, and saw things that would never occur to him. After the fifth game, he felt quite tired, and he could see that the stranger was tired—

—and was therefore quite stunned as, in the living room and in the presence of his teen-aged son and daughter (his wife was away at a conference), Taberah took off all his clothes and lay down on the floor. He sent his daughter Fiona out of the room, and then covered Taberah with a blanket that lay at hand. Taberah's face told a thousand words; shocked as Aed was, he saw at once that Taberah's action was not sexually provocative, or for that matter done as anything significant; he apparently saw that he had made a social blunder, but was at a loss for what. He did not feel any shame or guilt, but perhaps regret that something he had done had upset his generous host — and gratitude to be given a blanket, and puzzlement at why his host had invited him into his house but not to crawl into his family's bed. Puzzling, but Taberah had enough to think about already, and was sure that tomorrow would have enough puzzles of its own.

Aed, for his part, could see how to send him out, but not how to tell him to put his clothes on first; he went to bed, grumpily thinking, *He may stay tonight because he's here, but tomorrow night he's spending at PADS. What kind of manners is it to strip in front of your host's daughter? ...* He had a feeling of shock, of wrongness, of indignation at a transgression against reality; he told himself that this was culture shock, but that did not make things easy.

He drifted in and out of sleep, and was awakened by the sound of someone vomiting. Habits of a father, habits stronger than the weight of his grogginess, marched him out to the living room, where he stared in horror. Taberah was shaking, shivering in a cold sweat.

What shocked Aed most was not that one side of Taberah's face was wet with his own vomit.

What shocked Aed most was that Taberah looked so miserable that he

didn't seem to even care.

# The Hospital

The hospital was a nightmare. Taberah had no insurance, no paperwork and no legal guardian; it was only because of the dire nature of the emergency that he was admitted at all. In the absence of identification or any ability to speak English, the hospital was by law required to file paperwork with the Bureau of Immigration and Naturalization Services; an embarrassed hospital representative explained that Taberah was in the eyes of the law an illegal immigrant and nothing more; if there was a way for him not to be deported to his country of origin, he didn't see it.

Aed came back each day for a week, during which his whole parish was speaking with him; his conversation with the doctors was alarming.

"I am baffled by this young man's condition. He is sick, but no test has been able to tell what he has. It might be a virus."

"Do you have any ideas of what it is?"

The doctor looked slightly embarrassed.

Aed stood in silence and prayed.

"Uh, have you read Ahmik Marison's *How the West Was Lost From a Medical Point of View?*"

"Never heard of it."

"Off the record, this young man is suffering from one — or several — of the conditions that ravaged the American Native population when European settlers came."

Aed stood in stunned silence. This did not make any sense at all. Or (he had the exacting honesty to admit to himself) it made sense in a way he couldn't believe.

# An Anthropologist's Visit

"Noah, he doesn't speak any English." By now, Dr. Pabst and Dr. Kinsella were at the doorway to Taberah's room; they turned in, and saw him looking with interest at a book. Taberah looked up and said, "Grace and peace from God our Father, and the Lord Jesus Christ." His accent was thick, but mostly understandable.

"I'm an anthropologist and not a linguist," Noah said, "but that sounded an awful lot like English to me."

Aed opened his mouth, closed it, and said, "This isn't the first time he's surprised me." He explained about Taberah playing chess, and undressing.

Dr. Pabst turned to the young man. He said, "Do you understand me?" The man scrambled off his bed with remarkable speed, and crouched in front of the anthropologist, and said, "I thou under stand."

Dr. Pabst simplified his language, and spoke slowly, separating his syllables. "How speak English?"

"English, that is what?"

"This language."

"Language, that is what?"

"How we speak now."

Taberah's eyes lit up. "I am in read Bible."

The anthropologist scratched his head. The young man appeared not to be lying, but even for a genius, learning a new language was difficult, and learning from a book written in the language without any people to help, unless—

"What you call Bible in your language?"

"No Bible in language."

NO BIBLE IN LANGUAGE.

Noah scratched his head. Then he said, "Have you read Bible before here?"

"*Biblia Sacra Iuxta Vulgatam Versionem*. I not know not how to say in English."

Aed said, "The lad is tired from concentration, and perhaps he shouldn't have jumped from his bed to —" Dr. Kinsella cleared his throat, "—under stand you. Perhaps we could talk out in the hallway?"

In the hallway, Aed said, "So, what nationality is he?"

Noah said, "I haven't the foggiest idea. He looks Western European, perhaps Mediterranean, by ancestry, Third World by nourishment. His accent is that of a Romance language, but I don't know. Picking up an alien language by studying a text in that language is next to impossible; the Mayans have left behind three codices that we still haven't deciphered for the most part. Or at least, it's almost impossible unless you already know the text in another language. I don't know how to coalesce my observations into a coherent picture. He — is it OK if I change the subject slightly to recommendations?"

"Certainly."

"He's very bright and is picking up English quickly. He probably knows multiple languages, which makes it easier to pick up another; I'd get him three Bibles — one in the Latin he knows, one in a literal rendering in modern English, and a free translation to contemporary English. And continue to visit him. My summer class starts tomorrow, so I won't be able to visit, but in brief: speak slowly; in-it-ial-ly break up the syl-la-bles; pay attention to what words he uses. (And, when he understands it, speak as you would to another American.) Contrary to intuition, he might understand you better if you use big words."

"What?"

"He already knows Latin, or perhaps some other language or languages derived from it; there are a lot of common roots in the bigger words. They came over with the Norman invasion of England; small words change much more quickly, and many of our small words are Germanic in character. And you know the artificial intelligence findings that big words are impossible for a computer to deal with, and small words doubly impossible? What is easy for us and what is easy for him may be two very different matters."

"Yes, I see," Aed said.

"Oh, and one more thing. Keep me posted; if you want, I may be able to send in a grad student. He's a puzzle, and I like puzzles. Maybe something will click about him."

"I'll keep the grad student in mind; maybe later, when I have more to tell. Actually, why don't you give me the net address of a student whom I will be able to talk with? I'll probably have some questions. Or should I ask you?"

"Feel free to ask me. Just keep it down to a few minutes a day."

# Trouble

After a phone conversation with Dr. Pabst, Aed began to understand how the universality of good will he believed in coexisted in an arbitrariness of manners; he restrained himself from knocking on the door before entering, and saw Taberah bright-eyed as he entered.

"Hell!" Taberah said eagerly, jumping up. He had a long tether from his intra-venous tubes, and he was becoming stable on his feet. (He still felt slightly dizzy as he rose.)

"What?" said Aed and the other visitor.

"Hell! Hell!" Then Taberah saw their puzzlement, wondered what was wrong, and then reminded himself of how important pronunciation was. "Hello!" he said.

Aed laughed, and said, "Hello! Taberah, I'd like you to meet my wife, Nathella. She is—"

Taberah grinned, said, "Beautiful!" and jumped up, pressing up against her and kissing her on the lips.

Nathella stood in paralyzed shock for a second, then drew back and ran out of the room, Aed on her heels.

She slowed to a brisk walk after they reached a second corridor, and said, "I don't know why you let him in our house. I don't want to see him again. There are differences between cultures, but that lust is unacceptable in any culture."

Aed said, "I am sorry he did that. I was not expecting that when I brought him in."

They walked on in silence, Nathella setting a fast pace in silent fury.

"You're holding out on me," she said. "You're not telling me something."

"His eyes," Aed said.

"What?" Nathella said

what? Nathella said.

"Did you see his eyes?" Aed asked.

"I assure you, I was quite occupied with his lips!" she snapped.

"What do you think was in his eyes?"

"Lust. Selfishness. A lack of any caring and decency."

"I saw his eyes," Aed said.

They walked on in silence, now a bit more slowly.

"You're waiting for me to ask you what you saw in his eyes. Out with it," Nathella finally said.

"I was watching his eyes, and I didn't see the faintest trace of greed or lewdness. I saw a rambunctious energy, the same rambunctious energy Clancy uses when he's picking on Fiona."

"Are you saying that what that man did to me was right?"

"No; I'm saying that he didn't know what he was doing."

# Confusion

As Aed walked back, he processed through a memory, and realized the look in Taberah's eyes after Nathella had run out of the room. He looked like a hurt puppy. Aed had promised his wife not to have the man back on their property without talking with him and then talking it over with her.

The conversation that ensued between him and Taberah was maddening. It wasn't just the language barrier, even though they got a good half hour into the conversation before Aed realized that Taberah thought Aed was talking about something else entirely. It was rather that Aed was just beginning to see an alien conceptual map, an alien interpretation of the world. After clearing up the initial confusion, Aed managed to paraphrase "You don't have the right to go around kissing women on the lips," in different ways until Taberah appeared to understand, when he got to the second difficulty: "What is a right?" Taberah seemed not to think in terms of rights, to find them an alien philosophical concept; this difficult was not surmounted so much as circumvented, in being told, "It is wrong to go around kissing women on the lips." That was met with a third difficulty: "Why not?"

After a long and involved conversation, Aed pieced together the following observations:

- Taberah regarded his actions as being a very warm greeting, meaning roughly what Aed would have meant in sending someone he'd just met a virtual card. Taberah could envision a concept of "too warm and friendly, to the point of being unpleasant and unwelcome" if Aed led him to see it, but it was not a natural concept, much as "paying too many compliments, to the point that they are an annoyance that occupies too much time" would be an understandable but not natural

concept to Aed — when Aed complimented a friend on her shirt, it never occurred to him to ask "Is she receiving so many compliments that this one would be unwelcome and repetitive?"

- Taberah was saddened to have made a *faux pas*, but bewildered as to what was wrong about what he did. (He initially wondered if she was upset because he had not greeted her with words first.)
- Taberah did not regard the breast as being a body part that especially symbolized sexuality, and would consider a woman not wearing a shirt to be less significant than one of the nurses in long miniskirts — to the extent that he found seeing body parts to be arousing, which was not much.
- If Taberah's reasoning on one line were translated into 21st century concepts, they would not so much be "A man has a right to invade a woman's touch-space," so much as really a non-concept of "There is not enough of a personal touch-space for there to be an invasion necessary to a question of whether a man has a right to do so" — in many regards, like Aed regarded tapping shoulders.
- Taberah had a very different understanding of sexuality and touch; his line of acceptable touch was drawn so that it included a great deal of touchiness in contexts that Aed's culture did not even consider regarding as acceptable.

Taberah looked crestfallen when Aed told him not to touch women without asking permission; Aed revised this to, "Don't touch people in a way you haven't seen," knowing full well that this would lead the door open to further confusion. When Aed told Taberah in an authoritative tone of voice, "Don't kiss anyone you don't know well," and then thought and added, "Don't touch women's breasts," the hurt Taberah cried for a few minutes, and then asked, trembling, why he was not ever to give a woman a hug. Aed was puzzled as to why Taberah would make such a connection, and then when he saw the very straightforward reason why, it seemed that his explanation of why it was OK to touch a woman's breasts with his chest but not his hands caused more confusion than it alleviated.

Aed's head was spinning when he left the room. He was barely able to call his friend Noah and explain what had happened.

Dr. Pabst cursed himself for not coming himself, and had his graduate student teach the first day of class so he could try to provide the young man with hand-aid coaching for at least one cultural land mine

man with pain and coaching for at least one catarrhal and more.

Taberah sat, shaking in sadness. He knew he would make mistakes, but to make such a big mistake so soon, and then not be able to understand why he was wrong — this was the most confusing place he had ever been in. He closed his eyes and cried himself to sleep.

# Immigration and Naturalization Services

Aed had barely slept, and when he returned early the next morning with Dr. Pabst, he found three men in dark suits standing near Taberah. "Good morning. I am Dr. Kinsella, a professor at the University. Who might you be?"

One of the men showed a badge and said, "Salisbury, Bureau of Immigration and Naturalization Services."

A chill ran down Aed's spine. "May I ask what your interest in this young man is?"

"This patient is an illegal alien. We are here to deport him to his country of origin."

*If I thought, I could make enough publicity to hurt the INS badly if they deport this wayfarer, Aed thought, but even then felt a prompting of intuition, that is not the way. Still, he continued thinking, I could say, "I can't stop you from deporting this man, but I can see to it that you will have publicity that hurts you. Do you have authority to stop the deportation? No? Would you rather give me contact information for someone who has such authority now, or have me find out as I create publicity and then contact him and have you fired?" If I think further, I can probably think of something truly Machiavellian...*

Even as he thought, he struggled, and Aed resolved to follow his conscience. "I'll be praying for you; I'm an interested party, and if you need to get in contact with me, the hospital has my net address." He decided it better not to give the INS agents a brain dump of the interactions; a description of a rocky adjustment to American culture was

interactions, a description of a rocky adjustment to American culture was sure to hurt the lad. Dr. Pabst didn't think there was any advantage to staying, so they left. Aed returned home and brooded.

---

Taberah was not well; he was mostly over his sickness, but the INS agents had pressured the hospital staff for a release as soon as possible. He left the hospital weak and slightly unsteady on his feet.

His first ride in a moving room, he had been too miserable to notice what was going on. Now, he was able to observe, see what he had to learn. The room was bouncing around, but not nearly as much as a galloping horse — even though it was moving faster. Through an arrangement of squares and a glass window he could see the city and countryside whizzing past; the speed was unpleasant, and it nauseated him. If he hadn't tried hard to control himself, he would probably have thrown up.

The two men were in the compartment with him, along with some men who looked vaguely like Saracens, only with redder skin, who seemed to be ill at ease. The two men looked — not exactly like soldiers; there was a noble bearing and heroic resolve to even commoners who took arms to war with a neighboring city-state, but these men looked more like mercenaries set to guard. He tried to speak with them, but they would not speak to him; even in the hospital, they had spoken with the hospital staff but never addressed him personally.

Two of the red-bronze Saracens began talking, and he found with delight that they spoke with a familiar accent. He could not recognize the language, but he felt that he could learn their language quickly.

He tried to see what else he could grasp — with his mind; there were some kind of thin shackles about his wrists, which set him ill at ease — was he being taken to the torturer's for whatever crime he had committed against Nathella? There was noise about, a strange alien noise; everything about his surroundings was alien. And the bouncing room made it impossible to think.

Taberah realized he was ready to throw up, and he focused his attention on trying not to throw up.

---

Aed was sitting in his living room, staring sadly at the chess pieces on the table. Taberah's king had been knocked down, even as the pieces stood to checkmate Aed. Nathella walked into the room, leaned against Aed, and said, "Do you want to talk about Taberah? I've — adjusted; I can deal with his rambunctiousness."

Aed said, "The INS is taking him to be deported. I don't want to talk about it."

Nathella put her hand to her mouth, and then held Aed. "I'll be waiting in the kitchen, when you're ready to talk. I'll be praying," she said, and kissed him.

Aed sat and stared at the dusty bookshelf for a while, and then picked up Taberah's king and set it down. He stared, and realized that he had placed the king in check from one of his knights.

Aed looked at the king and said, "Did you have to leave before I knew you?"

The game gave him no reply. Aed went to the computer room, got in to the computer, and went to a dreamscape where colors and shapes shifted. He watched the forms flow. Maybe that could distract him. No; time dragged, and even the fantasia of images could not fascinate him.

An avatar appeared before him. He looked; the avatar said, "May I speak with you?"

Muttering, "This had better be good" under his breath, Aed said, "Who is it?"

"Salisbury, Bureau of Immigration and Naturalization Services."

Aed winced. He doubted he could go through an interview without hurting both himself and Taberah. "Yes?"

"We have had a number of translators try to talk to the young man, and none of them is able to identify his language beyond something coming from the Romance family. We have run genetic tests on him, and France, Spain, and Romania among other countries have all said not only that he was not born there, but that they do not have any close relations on file. We are therefore unable to identify his country of origin, and are releasing him to your temporary protective custody. Are you at your home?"

Aed caught himself, and said, "Yes, we will be waiting."

After talking about a few technical details, Aed went upstairs. Someone had bumped the table, and tried to get the pieces back up where

someone had bumped the table, and tried to set the pieces back up where they were — Clancy? If he did, he was in a hurry; the pieces were not in a similar state. This looked a little different. Taberah's king was now in check from both the knight and a rook, but he had a few moves left to stave off checkmate. And they were not playing on a grid; there were uncertainties. Could Taberah escape?

# Home Again

Taberah spent a few days in the hospital, regaining his strength, but the staff could see that he was eager to escape its confines. He avidly read the three Bibles, plus a Latin-English dictionary Aed had procured; Aed for his part was reading a book Dr. Pabst had given him on the art of crossing cultures, both for his own sake and to be able to explain things to Taberah. He had never kissed a man on the lips before — not even his own son — but when he saw how delighted Taberah was at Noah giving him a kiss, he set his mind to enter Taberah's world as much as possible. He slowly realized, with certainty, that his willingness to do one thing against his gut reactions was only a shadow of what Taberah was willing to, and had to be willing to, do. He was not surprised when Noah explained to him that culture shock is one of the top causes of suicide, ranking with divorce.

Getting him home from the hospital bore an unexpected surprise. Taberah was happy to be walking out of the hospital, and then stiffened when he saw that they were walking towards Aed's car, a sleek hybrid between a minivan, a sport utility vehicle, and a station wagon. Noah said, "He's had more trauma in the past two weeks than most of us have in a year; is there any way to circumvent a car trip?"

Nathella looked at Aed for a moment, and said, "We can walk."

Aed winced. "It's eighty-five degrees, and we're eight miles from home. It will take two hours to walk home!"

Nathella said, "I'll walk with him. He has a lot of extra energy. Why don't you drive home and make lemonade?"

Aed said, "Um, you want to be alone with him, even in public? I know he hasn't given us his last surprise."

"I'd rather take whatever risks there are than force that child through a car ride. And trusting people can make them worthy of being trusted."

a car ride. And trusting people can make them worthy of being trusted.  
Honey, did he ride in a car with the INS?"

"Uh... I'll walk, too, and we can get the car later."

Noah said, "If you give me your keys, I'll get my son, and we can drop your car off at your house."

Three hours later, the trio arrived at home, hot, sweaty, tired, and parched. They made a gallon of lemonade, and then another; it took two and a half gallons of lemonade to fill them all. Aed expected a conversation of some sort, but Taberah was happy to sit in a chair and smile and fall asleep.

Aed expected it would be an interesting endeavor to teach Taberah to take a shower.

# Logical Rocks

Taberah read avidly; he wished to derive as much benefit from the four books he had been lent (*four!* — the *Vulgate Versio*, the *Revised New American Standard Bible*, *The New Message: Complete Text, Revised*, and *Harrah's New College Latin and English Dictionary, Revised*) before they had to be returned to the patron who owned them. He very much wished to meet the man. It was about a week before he began to see that his hosts wanted him to talk with them from time to time — mostly out good manners; he had never been in the possession of even two books at the same time, and never encouraged to read outside! — and another week before Aed sat down with him to try to explain to him that there was life outside of books.

Then Taberah became a fount of unending questions, questions as startling as those Clancy and Fiona had asked as a child — and yet questions that showed the intellect of a sharp adult. They were, nine times out of ten, questions about things he would never think about, and questions he had no ready answer for. At times Aed thought it would have been easier to answer, "Why do things look smaller when they are farther away?"

One day, Aed was sitting in his chair and thinking about how quickly his children were growing up — and he was beginning to think of Taberah as a child, or a foster child at least — and realizing that things had been silent for too long. This was longer than the silence after Taberah had realized that a screwdriver can unscrew the screws that were holding the blender together...

"Aed!"

"Yes, Taberah, what is it?"

"Aed, what is this?"

The sound of his voice was coming from a specific room, it was

The sound of his voice was coming from a specific room, it was coming from —

*Oh, no!* Aed thought. *Anything but that. I am ready to explain anything but—* but his feet had carried him to the room Taberah was in.

"Aed, what is this?" Taberah repeated.

A dozen replies flitted through his mind: a moving picture, something to think with, a hobbyist's delight, a shortcut in talking with people —

"This is a rock that can do logic."

"What?"

"This is a rock that can do arithmetic and logic very, very quickly."

Taberah said, confused, "How numbers they and logic they make a picture move?"

Aed sighed. "Taberah, can I answer another question? This one's awfully hard to explain."

Taberah slowly said, "Yes. What question to answer?" But his eyes betrayed him.

Aed thought, and asked, "Do you know that clock in the living room?"

Taberah said, "Yes. Why have you a clock? And not you use it to pray? It rings bells, but I not you see not pray."

Aed said, "One question at a time, please. Do you know what it has inside?"

"I have seen opened one clock."

If he'd opened the grandfather clock, he had put it back in working order. Aed respected the lad's abilities, but this seemed too much. Or had he opened another clock? "What did you see inside, child?"

"Springs rods gears moving *beautiful!*" Taberah said, his eyes glowing with excitement.

"Do you know how clocks work?"

Taberah said, "Yes," followed shortly by, "No. What?"

Aed moved his forearms like the hands of a clock. "Know why hands turn?" he said.

"Yes! Fixed hands, stopped turning."

Aed said, "You can do many things with gears and pulleys. You can store numbers, add them, make decisions: if this rod is here, turn. A computer is like that, only it uses things besides gears. It uses pictures on tiny rocks. And it is very fast."

Taberah looked at Aed, and then looked at the computer screen. He was trying to believe him, but just couldn't see a connection.

Aed said, "See this wall? Look very closely. There are arranged pieces of color. They are called *pixels*. Do you see them?"

Taberah squinted, and touched the surface. "I see."

Aed said, "The computer uses numbers and rules to decide what color to make each pixel. All of them together make a picture."

Taberah closed his eyes in concentration. He moved his hands, sorting out concepts. Then —

"Why is the picture moving?"

"Because the computer is making many different pictures, one after another, and together they look like they're moving. The moving picture is made up of still pictures like the still pictures are made up of pixels."

Taberah stared at a small patch of the wall as colors flowed. His face met with a dawning comprehension. Then he said, "The computer very, very intelligent! I want talk with computer."

Aed shook his head. "You can't, son."

"Why not?"

"The computer is not intelligent."

"But you said it can do logic!"

"It can do logic, but it's not intelligent."

Taberah ran out of the room, and returned holding the Latin-English dictionary. He flipped through several the entries, several times, and then looked at Aed in puzzlement. "I don't understand."

Aed said, "Can you write?"

Taberah said, "I can write Latin. I not know not the script of your books."

Aed said, "One moment." He returned, holding a notebook and a pencil.

"Write down, with logical rules, how to talk in a conversation. In your language," he said.

Taberah's jaw dropped in shock. "Write *that* on paper?" Taberah would as soon scratch the surface of a painting as write something that unimportant on precious paper.

Aed scratched his head. He didn't see what could possibly be so offensive about an innocuous attempt to write rules. "Ok, don't write that. But can you think of rules for a conversation?"

Taberah began to translate a Quixotic code of etiquette.

"No, not those rules. Logical rules."

Taberah looked frustrated. "But polite is reasonable!"

Taberah looked frustrated. But point is reasonable:

"Explain to me how to talk using only if-then-else and while-this-is-true rules, and words you decide ahead of time."

Taberah's gaze bore into him. Then, "I can't. That isn't how I talk."

"That isn't how anybody talks. You can't talk that way. But that's the only way a computer can work. Computers can't think."

"Then how create beautiful moving picture?"

"Some people spent a lot of time thinking of clever ways to explain how, using only math and logic. There are a lot of things we can do, but a lot of things we can't do. We have an old phrase, 'silver bullet', which refers to a way to make everything easy with computers and fix all problems. The term is kind of a joke; calling something a silver bullet is a way of saying that it's supposed to do something impossible. And the same thing has happened with the effort to make computers think — it's called artificial intelligence, and people have learned a lot from trying to do it, but they haven't succeeded. A very great mind named Alan Turing proposed the Turing Test: a computer is intelligent if you can't tell it from a human when you talk with it. No computer has been able to make it."

Taberah looked irritated, flipped through memories of conversations, and said, disgustedly, "Bad reason! False reason!"

"What, Taberah?"

"Is bad think. What human is and what human talks like is much different thing. If logic is not whole human reason, talk is not whole human reason." He flipped through the book, and read out, "Confusion, accident, substance." He closed the dictionary. "Is accident confused with substance. And is possible cheat Turing Test."

"Cheat on the Turing Test? How? How can you talk like a human without understanding human reason?"

Taberah closed his eyes, and said, "Moving picture? How? How can you move like world without understanding world?"

Aed thought for a moment, and said, "I see how you can think that. But decades of attempts have failed to produce anything that can even cheat on the Turing Test. Most people don't try."

Taberah looked in the book. "Fifty attempts are not many."

Aed said, "Not fifty. Over fifty years' worth."

"Why number attempts in years? Is not sense."

It took a good two hours more conversation to answer all the questions Taberah came up with, and afterwards Aed padded off to his

bedroom, exhausted, but at least happy to have gotten *that* conversation out of the way. He drifted off to sleep in blissful happiness that tomorrow was Saturday, and he could sleep in until noon.

At 10:00 he was awakened by a voice calling, "Aed! Aed! How to use computer?"

# Thinking About Logical Rocks

"Taberah, can I please get a couple of hours' sleep? This is Saturday, and I'd like to sleep in."

Taberah was puzzled as to why one should sleep in on a particular day, but thought this a poor time to ask. "Okay!" he said, and went to try to memorize parts of the dictionary. He was beginning to feel accustomed to the books — their size, their print, their light weight, their smooth sides — at least, although he was still puzzled about why someone had bothered to make a book for the sole purpose of keeping track of words. Were there not scholars who could be asked about these things?

Aed woke up some time later, and looked at the clock. It was 13:00. Taberah had given him a fair amount of time. He lay in bed, ruminating about how to explain how to use a computer. Taberah knew enough of how a computer worked — explaining memory and parallel computing should not be that much harder — but how to explain how to use it?

Space would be the first major obstacle to overcome. The computer gave a virtual reality environment, with the walls of a room as screens; when you put on a pair of goggles, it was as if the walls were transparent and you could see through them to the world, as if the walls were only a glass box. But space behaved differently than in the real world. Aed thought for a moment about the mathematical abstractions by which the space worked — the classic introduction described taking a tessellation of cubes, and then cutting them apart and connecting the sides arbitrarily. You could take two windows of a bedroom, and attach them so that looking out the North window gave a view as if you were looking in the East window, and vice versa. It was fantastic and dreamlike; it allowed portals between different areas of space, so that there were no difficulties

portals between different areas of space, so that there were no difficulties in taking a room in Chicago and making a doorway open out of a subway closet in Paris. Aed remembered the first time he played a game with a labyrinth connected in this manner; he had been awed when he walked around a pillar again and again and never came to the same place twice.

Space might be the first obstacle, but it wouldn't be the only obstacle. How could he describe the richness of the environment? And how could he describe its weak points?

Aed thought over the many things that contributed to the richness of the environment. There were:

- Jump points. These were like travel locations, but with all manner of portals to interesting places. One was a long hallway full of doors, through which a person could step into other areas. Another was a library full of books which, when opened, would expand into other places. (How would he explain to Taberah that objects were putty-like, able to expand and contract, that you could push a button and have a menu pop out?) Another still was a slide show, where you could jump into the show at any point and be where it portrayed. There were others; there was not yet a standard.
- Programming workshops. Programming constructs behaved like any other object; one could assemble them as objects, algorithms, constructs, patterns. It was also possible to take programmable objects and pull off the skin to reveal the structure underneath, and tinker with it. It had taken Aed a long time to get used to this interface — it was a bigger transition even than moving from text-based languages to graphical development and intentional programming — but even then he objectively realized that it was a simpler environment to use, and now it was second nature. Aed realized another thing to explain to Taberah — that objects were not permanent; they could be modified, extended, simplified, cloned at will, and the many implications — there was nothing that had the status of gold, of being something valuable because it was scarce. Taberah had enough difficulty understanding that paper was cheap; what would he make of this?
- Virtual brothels. Aed winced at the time Taberah would stumble on one of these; the freedom to avoid porn was hard to come by; it was like avoiding advertisements when he was growing up. There were

perennial attempts made to curb porn, but — even when it was widely acknowledged fact that the vast increase in rape since the web's second successor appeared was due to sexual addicts who got their start online, and then ravaged real women because porn could only go so far — they always fell on the rocks of a freedom of speech argument. Aed grumpily muttered to himself that household appliances were in some sense sculpture, in that their designs involved commercial artists, but the banner of freedom of expression did not make for any exemptions from environmental regulations in manufacture; it was recognized for the commercial product that it was. Why wasn't porn recognized as a commercial product? Had the news ever carried a report of a pornographer who lost business because of making an artistic statement that was less arousing? Had there ever been a site where the valerie was glaring in hate at the voyeur? It seemed a funny form of expression that could only express itself in ways that coincided with a calculated commercial product. But the courts had argued that brothels popping up everywhere you wanted them and everywhere you didn't want them was sacrosanct free speech, and 'censorship' (that pejorative term) was tantamount to violating the Constitution. Well, not exactly. The phrase, "The illegal we can do right away, the unconstitutional takes a little longer," was obsolete, because the Constitution was a dead letter. In *Roe v. Wade* in 1974, the Court had made a strained argument finding an unnamed right to privacy to make the question of an unborn child's right to life irrelevant, skirting even the issue of whether that entity was a person or a part of another person. When the decision was reviewed in the late 1990s, the ruling recalcitrantly acknowledged that the 1974 ruling was wrong, but said that it would be wrong to take away the sexual freedom that young people had gotten used to. In *Purdie v. Braverman* in 2024, fifty years after *Roe v. Wade* to the day, the courts had ruled infanticide legal, "up to a reasonable age", and specified neither what a reasonable age was, nor even a contorted lip service argument as to why the Constitution justified infanticide — perhaps because they could find none. It had not surprised Aed two years later when the courts legalized euthanasia, with only the vaguest and most confusing guidelines as to when it was permissible and when consent was even necessary —

he shuddered when he remembered the definition of implied consent. Now, it was 2034, and the date had passed when Aed was no longer surprised by anything the courts did. He — Aed suddenly realized that he was not thinking about computers. He tried to focus his thoughts — what else after brothels?

- Society for Creative Anachronism re-enactment arenas. These places set up an environment to resemble that of a time and date in the past, and then people attempted to live and interact as people of that era and place. Even the avatars looked like people from those times — avatars were another thing to explain to Taberah. An avatar was the moving image which represented a person in the world — like the piece that represented a king in a game of chess. The image was completely customizable and configurable, with the effect that many people looked like a supermodel, although it was not uncommon to encounter unicorns, dragons, mermaids, cybernetic organisms, anthropomorphic robots... but never a person who was fat or ugly. Human-like robots had never materialized, any more than the anti-gravity devices imagined of old; the development of technology had shifted direction towards a primary focus on information technology, but this and all manner of fantasy appeared in the virtual worlds. Aed reflected that there was a good sense and a bad sense to the word 'fantasy', and both of them were amply represented in the virtual worlds.
- Bedrooms. A bedroom was a place with one person's very personal touch; there were elements there that would never surface in an institutionalized setting. There were not exactly bedrooms *per se*, so much as creatively developed spaces that had personal sharing. Because it was possible to let someone in a room without being able to easily do damage, you could go and visit people's bedrooms. There were quite a lot of interesting sites to see.
- Clubhouses. If a bedroom expressed the spirit of a person, a clubhouse expressed the spirit of a group of people. These had both function and decoration to them, and almost always had something of a personal touch.
- Museums. There were museums of almost every sort to visit. Because a painting could be in more than one place, and it was not nearly as expensive to build them, there was a much more vast diversity of

museums, many which were much more specialized. The low expense of creation made for a much greater diversity, with many more excellent things available, but also a much lower average quality. Sturgeon's law applied *a fortiori*: "90% of everything is crap."

- Special museums which had disassemblable and scalable models of human and animal bodies and machines. Aed's children had not dissected animals in school; they went into museums where it was possible to strip off skin, strip off muscle, double the size, half the size, make everything but the skeletal and nervous systems translucent...
- Role play arena. In the 20th century, the basic unit of time-consciousness was the decade; now it was the semi-decade, or semi. Role play was one of the trends that was in this semi, and there were virtual worlds for all kinds of different role playing games.
- Dreamscapes. In these places, there were a number of momentary images, represented by blocks something like the Capsella toys Aed had played with as a child. One put them together in a particular way, and then set the composed dreamscape in his pack. Then nothing happened, until you hadn't done anything with the computer for a while. The computer would then begin "dreaming" — start a random walk that began with one block, and shift, images flowing, to a neighbor, and then a neighbor's neighbor... Aed had seen some truly beautiful artwork that way.

Aed wondered, "What time is it?" Then he looked at the clock. 15:00. Yikes! He got up, got dressed, and looked for Taberah.

Taberah was reading the bilingual dictionary with rapt concentration.

# Using Logical Rocks

Aed walked over to the computer room, grabbing two pair of goggles. He showed Taberah how to put one of them on, and then said, "Sit down and wait here for a moment."

In a few minutes, an avatar appeared before Taberah and said, "Take my hand." Taberah reached for it and grabbed, but felt nothing. He was confused. The scene changed, and he saw that he was inside a sunny field, with forest to the east.

Taberah asked the avatar, "Who are you?"

The avatar said, "I am Aed."

Taberah said, "But you not resemble not Aed. You look — your clothes are different, and skin different, and —"

Aed said, "Never mind that. Do you see my hands?"

Taberah said, "Yes."

Aed said, "Move your hands like mine."

Taberah did, and found himself moving rapidly through space. His stomach lurched; he put his hands over his eyes.

Aed said, "Take your hands off your eyes, son."

Taberah did, and saw he was a good fifty hands off of the ground. He braced himself for the fall, and put his hands over his eyes again.

Aed thought for a moment, and said, "We're going to try something different. It takes a little while to get used to moving about, but you'll learn. In the mean time, I'll let you see through my eyes."

Instantly the perspective changed. Taberah looked down, and saw a pair of hands pull a book-shaped object from a pocket, with a picture on front. The hands pulled on the book and expanded it, then pressed buttons, flipping through pictures. Taberah saw a picture of a stag, and said, "Ooh!"

The picture expanded, and they fell through it. They were in a forest

The picture expanded, and they fell through it. They were in a forest glade; a stag was looking at them curiously.

Then Taberah saw himself walking rapidly to a door with a picture over it; he said, "Too much of fastness!" and the pace slowed. He was through, to a dark forest with unfamiliar plants, and a large snake slithering towards them. Afraid, he said, "Snake!" and saw himself walking towards another door with another picture, and he looked around. The landscape was alien; it was rough terrain covered completely by snow, and he saw fat black and white birds walking around, and some big black fish-like animals on the ice.

Taberah looked intently at all that was around him; it was strange, but none of the animals began to threaten him. After a few minutes, he said, "I have sick of sea." He wasn't feeling very good.

There was moment of nothing happening, then a jar of perspective, and then stillness. Taberah closed his eyes to shut out the view. Then he heard Aed calling, and touching his shoulder. He was holding a tiny cup of the thinnest glass, with something that looked like wine. "Drink," he said.

Taberah drank it, and the nausea began to go away. Had he been given a magic potion? He was confused, but pushed this question to the back of his mind. He wasn't sure yet what was magic in this land and what wasn't — that seemed a confusing question here, and the people treated the moving rooms as something as believable as a horse! Aed asked him to step out and sit on the sofa.

Aed was trying to think of how to explain the way space worked. He was expecting a question about why there was a door, all by itself, in the jungle, and the moment you stepped through it, you were in Antarctica. When Taberah remained silent, he asked, "Taberah, was there anything you found confusing about that world?"

"Yes, movement."

"Ok. Anything else?"

"Yes, doors."

Aed went into a long and involved attempted explanation of how different parts of space were connected, and saw the confusion on Taberah's face growing with each step. Finally, he said, "Taberah, why are you confused?"

"What is it that the pictures?"

"Huh?"

"Pictures on doors. Why?"

Aed said, "I don't understand. Could you rephrase that?"

"Pictures. Doors. Top."

Aed said, "One moment," and went over to the computer to look at one of the doors. "Aah," he said, returning. "Those are advertisements."

"What is advertisement?"

"An advertisement is a message from a company telling a customer about one of its products."

"I not understand not. For what is it that advertisement needed? Is it that townspeople not tell not where merchant is?"

Aed thought for a moment, and said, "Advertisements exist to stimulate sales, to help a company sell things to people that otherwise wouldn't buy them."

Taberah looked even more confused, thought for a moment about wording and grammar, and said, "And which of the seven deadly sins is it that this custom embodies?"

In the ensuing discussion, Aed slowly realized that Taberah had not been troubled by the nature of space. He had been able to accept as perfectly natural a portal between two different regions of space, and Aed wondered what kind of conception of space his culture had to let him accept that at least quite placidly. The first time he had entered that kind of virtual environment, Aed had been thrown off by the conception of space. And he had felt nauseated, his head spinning after — suddenly he found Taberah's "sick of sea" more understandable. And he began to see something that he had not thought about, not for a while: that advertisement does not exist for the customer's benefit, but for the company's benefit, so that it can get more money out of the customer; this practice clearly ran contrary to Taberah's way of thinking, and at the end of the discussion, Aed walked away, for once, with his head not spinning, and thinking not only that Taberah's way of thinking was understandable, but that he might have a point.

# A New Friend

The next few days saw animated discussions, a lot of reading on Taberah's part, and a few more minutes using the computer — at Aed's urging; Taberah wanted nothing more to do with it.

Taberah was sitting on the ground outside, drinking a glass of nice, warm water, when he saw a large, black, almost grown Newfoundland puppy come wandering by. And gulped. Such a beast would be a prime candidate for a dog race.

Dog races, in his homeland, occurred when people would gather together stray dogs, tie metal pots to their tails, and then let the dogs go. The dogs would start to walk, then hear the sound of the pots scraping against the stones of the road, get scared, and start running to get away from the noise. When the noise grew louder, the terrified dogs would run, and run, and run, and run — until they dropped dead from exhaustion. The winner was the boy whose dog ran the farthest before dying.

Taberah hated the dog races with a passion. They made him sick; after his protestations, his lord issued a rule that no dog races were to be held while Taberah was around, but that was the best that had happened. He was humored at best; nobody else save Grizelda shared his objections to the races. Most people were so blazé that they didn't see what the big deal was in the first place. Yes, it was his homeland, but it wasn't his homeland. It was the place he was from, and the place where he had spent most of his life, but he wasn't at home there. In a way, he could adjust to almost any place — was adjusting to the kingdom he was in now (what was it called, and who was its king?) — but in a way he was never at home. There was always something about him that didn't fit. Why was he the only one who cared about dogs? Francis of Assisi was venerated, but the people who venerated him did not imitate his treatment of animals. Well, he could try to save at least one dog from the races

well, he could try to save at least one dog from the fates —

Hastily setting down his glass, Taberah sprinted at full speed after the dog, which ran away from him, barking. He continued chasing the dog for a full hour, his toughened feet pounding on the asphalt until they were sore, until he dropped in exhaustion, panting and thirsting. It wasn't until he stopped that he realized the exquisite pain in his feet. He looked down, and realized his feet were cut. Where was he? The buildings looked different; the outside looked more like buildings than outside. He was by a room of sorts with two walls missing, but with a ceiling. It was raining; he crawled over to a puddle, and began to lap at it.

He looked up, and saw the dog drinking from the other side of the puddle. It came over and sniffed at him; Taberah hugged and kissed it. Beginning to feel chilled, Taberah crawled under the shelter, holding the Newfoundland next to him. He could not get to sleep, both because of all the moving rooms passing by, and because he had plenty to think about.

Taberah felt happy and comfortable as he had not felt in a long time. The wealth he had been in was strange to him; it did not seem real. Out, even in a strange, semi-open place (why would someone build two walls and a roof of a room, and then make the inside part of a thoroughfare?), finally next to another warm body (even if only a dog's), Taberah felt happy. He settled into a slumber, thanking God for bringing him to a place that felt a little home-like.

# Midnight Oil

Aed drove around, trying to see if he could find where Taberah had gone. Fiona had run and told him that had seen a dog and bolted; as he drove around, he called the police and summarized what had happened. The dispatcher explained that he could not be classified a missing person until he had been gone for twenty-four hours; that was twenty-four hours in which to brood. The family looked until three in the morning, and then went home because both Aed and Nathella were too tired to continue driving.

At four in the morning he was awakened by a call. Groggy, Aed turned on the videophone and said, "Yes?"

A police officer in a car sent a still shot and said, "Officer Shing, State Sheriff. Is this the man?"

"We found him sleeping under a bridge, along with a dog he refuses to part with. He had lacerations to the soles of his feet; the EMT thinks he ran barefoot over broken glass. We have taken him to Mercy Memorial Hospital; he is presently in the emergency room, waiting for treatment."

Aed said, "Thank you. Why did you take him to Mercy? I don't understand that. Mercy is almost fifty miles away from here."

Shing replied, "Mercy is the closest hospital to where we found him. Is there anything else we can help you out with?"

Aed thought for a moment, and said, "Not now, but I might call you if I think of something else. I'm going to grab a few coffee beans, and then go to pick him up. Is there anything else I need to know?"

The officer said, "No, but you might want to take him shopping for some clothing and shoes. He's wearing a ragged getup, and — the hospital will be able to tell you about his special needs to heal from the lacerations."

Aed said, "Thanks. Over and out."

Aed said, "Thanks. Over and out."

Nathella rolled over and said, "You weren't thinking of getting him without bringing me, were you, honey?"

Aed said, "Get dressed, and come along. I'll get the coffee beans."

Two voices from below said, "Me, too!"

The emergency room was fairly quiet; doctors were removing glass shards from Taberah's foot and stitching up the cuts. Taberah looked confused; there was something in his eyes that even Nathella didn't understand. He was under local rather than general anaesthesia, but he still started nodding off to sleep.

He received some soft "shoes" made of bandages, and the doctor told Aed to keep his feet bandaged and give him high top athletic shoes a couple of sizes too large. When it was time to go, everybody climbed in to their van, the dog brought along as well. Aed tried to ask why this attachment to a dog (it belonged to a neighbor, and periodically ran loose), but could find out nothing beyond that Taberah did not want it to be raced. Aed let that be; he wanted to get back to sleep, and wait until tomorrow to tackle the puzzles. Taberah agreed not to leave the house without having someone else along, and seemed relieved to learn that this kingdom didn't race that type of dog. He was even happier to find out that the dog belonged to someone nearby, and would be taken care of; he wanted to meet the neighbor the next day. "Very well," Aed said, "but we need to get some sleep first." This time, Taberah joined everybody else in sleeping in until the afternoon.

# I Can't Believe...

Nathella and Fiona were working in the kitchen; good smells came upstairs. The Kinsellas (and Taberah) settled down for a late dinner, a family complete, such as it were.

They sat in silence around the table; there was a simple joy in everyone — or almost everyone. After Dr. Kinsella said grace and the food was passed around the table, Taberah broke the silence by saying, "Nathella, would you pass the *I Can't Believe It's Not Better?*"

Nathella smiled and passed the spread, and made a mental note to buy butter the next time she went shopping. As she passed it, she saw something in Taberah's face. "Taberah, are you homesick?"

Taberah looked at her. "What is 'homesick'?"

Nathella thought for a moment and said, "Homesick is when you aren't comfortable in one place, and you miss the place that is your home."

"I don't know if I'm homesick. Maybe. Yes. No. I don't know if I have a home; maybe if I understood the word better..." His voice trailed off, but the others remained silent. "It's just a bunch of little things, like strange foods and too soft bread without any rocks and no touching, not even wrestling, and... Or maybe that's not a little thing." He stared at his food.

Clancy said, "C'mon out back dinner. We can roughhouse in the back. Fiona and I wrestle a lot, only not recently. We've been busy with you, and we didn't know you liked to horse around. Fiona's in the house to be picked on," Fiona made a face at him, "and I'll flip you around. I would pin you, but you need to be soft on your feet."

Taberah's face brightened.

Nathella said, "Is there anything we can do that will bring you a little piece of home?"

Taberah hesitated, and then said, "Have you no wine in this country?"

Taberah hesitated, and then said, "Have you no wine in this country?"  
Nathella smiled gently and looked at him. "Yes, we do, but not in this house. I'm an alcoholic."

Taberah asked, "What's an alcoholic?"

Nathella said, "Do you know the word 'drunkard'?"

Taberah said, "You're not a drunkard! I haven't seen you drunk. I haven't even seen you drink wine."

Nathella said, "Not now, but once my life was given over to alcohol. Escaping alcohol was the hardest thing I ever did, and if I start to drink, I won't be able to control it. It would control me. So I can't have alcohol in the house."

Taberah looked disappointed. He said, "Then it is good of you not to drink."

Nathella said, "Thank you, Taberah. Maybe sometime when I'm visiting with one of my friends, Aed will buy a small bottle of wine for you two to have. He likes a good drink, and he will have a beer when he's out with his friends. But he doesn't drink in the house. He doesn't want to tempt me."

Taberah smiled. He was warmed with a patient assurance that he would have wine, and was in no particular hurry. He looked around, and then his gaze settled on Fiona. "Why are you homesick, Fiona?"

Fiona smiled, and said, "I'm not homesick, at least not for a place. I wish it were Christmas, with the family and gifts and wassail and — ooh! the music. I miss the music."

Taberah said, "What kind of music?"

Fiona said, "One is, O come, O come Emmanuel. Do you know it?"

Taberah thought for a moment, and then thought a little more, and said, "Could you sing it for me?"

Fiona sang, in her thick countertenor,

O come, O come, Emmanuel  
And ransom captive Israel  
That mourns in lowly exile here  
Until the Son of God appear.

Rejoice! Rejoice! Emmanuel  
Shall come to thee, O Israel.

Taberah said, "I think I know it. Let me sing it as I know it." He took a

sip of milk, and then stood up on the chair, and began to sing:

*Veni, veni Emmanuel!  
Captivum solve Israel!  
Qui gemit in exilio,  
Privatus Dei Filio.  
Gaude, gaude, Emmanuel  
Nascetur pro te, Israel.  
Veni, o Sapientia,  
Quae hic disponis omnia,  
Veni, viam prudentiae  
Ut doceas et gloriae.  
Gaude, gaude, Emmanuel  
Nascetur pro te, Israel.  
Veni, veni Adonai!  
Qui populo in Sinai  
Legem dedisti vertice,  
In Majestate gloriae.  
Gaude, gaude, Emmanuel  
Nascetur pro te, Israel.  
Veni, o Jesse virgula,  
Ex hostis tuos ungula,  
De specu tuos tartari  
Educ et antro barathri.  
Gaude, gaude, Emmanuel  
Nascetur pro te, Israel.  
Veni, Clavis Davidica,  
Regna reclude caelica,  
Fac iter tutum superum,  
Et claude vias inferum.  
Gaude, gaude, Emmanuel  
Nascetur pro te, Israel.  
Veni, veni o Oriens!  
Solare nos adveniens,  
Noctis depelle nebulas,  
Dirasque noctis tenebras.  
Gaude, gaude, Emmanuel  
Nascetur pro te, Israel.*

*Veni, veni, Rex gentium,  
veni, Redemptor omnium,  
Ut salvos tuos famulos  
Peccati sibi conscios.  
Gaude, gaude, Emmanuel  
Nascetur pro te, Israel.*

Taberah sat down and was very still. The room was very still — one could hear a pin drop. His singing voice was a tenor, but there was nothing flimsy about it; it was rich and powerful, like silver, like something between a stream and a waterfall, and for the moment he had looked like a bard. It was hard to believe that such a mighty voice, filled with silent strength, could come from such a tiny body — and yet, somehow, after that song, Taberah did not again look tiny to the Kinsellas. Nothing about his physical appearance was changed, but none the less the way he looked to them was different.

Aed finally broke the silence by saying, "I never knew you could sing like that, Taberah, and I should very much like to have you over for Christmas. Is there any way I can thank you for that song?"

Taberah said, "Over for Christmas? All twelve days?"

Aed thought. School resumed classes from winter break on the third of January; getting permission to take time off through the seventh would involve some major administrative headaches. "All twelve days," he said. "I'll make sure of it."

Taberah said, "Then what I would most like for my song is to go out and wrestle."

Clancy bolted out of his chair and had Taberah in a fireman's carry before anyone else knew what was going on; Taberah was out of Clancy's grip and bolting out the door before Clancy knew what was going on. It wasn't until later that Aed wondered how he could run with healing, stitched lacerations in his foot; soon they were all outside, a crazy, happy, moving, squirming bundle of arms and legs with grass stains on its shirts. And Taberah was happy, happy as he could ever remember being.

It was only a few minutes before they were all sitting and panting; Taberah did not understand why they wanted to rest so soon, or why they didn't give him more resistance in the fray, but he basked in the afterglow. The memory of that moment would be a treasure to him as long as he walked the paths of the earth

long as he walked the paths of the earth.

# A Guided Venture

Nathella said, "We need to give him some of Clancy's old clothes so he's decent, and then take him to one of the old-fashioned clothing stores — he won't be able to try stuff on online. Clancy, would you come with to help him with the clothing?"

They arrived at the store, and Nathella said, "Here we are, to get some clothing. You can take anything in the store."

Taberah looked, and bright colors caught his eye. He went over and started to stare at a rack of shirts.

"Not there," Nathella said. "Those are children's clothing."

Taberah thought it strange that there should be special clothing for children, but said, "I am a child. You're a child. Clancy's a child. Want children's clothing."

Nathella, who had felt almost guilty about her age since her thirtieth birthday, said, "That's sweet, honey, but I am not a child. Neither are you. And Clancy's not really a child any more."

("Thanks, Mom!")

("Shut up, dear.")

Taberah looked puzzled. "Are you not born of a woman?" he asked.

Nathella said, "Uh, of course I — ooh, I see. Taberah, we use the word 'child' to mean someone who's younger than Clancy, and 'adult' to mean someone who's older than Clancy. Clancy's — in between."

("Thanks, Mom!")

("Shut up, dear.")

Nathella continued. "And children wear different clothing than adults."

Taberah said, "Why?"

"Because children are different from adults."

"A7h...2"

Why?

"Have you seen a tadpole?"

"Yes."

"Have you seen a frog?"

"Yes."

"Do you know that tadpoles turn into frogs?"

"Yes."

"But tadpoles and frogs are different, right?"

"Yes."

"Children and adults are different in the same way, right?"

"How?"

Nathella did not reply to the question. Clancy, in a particularly mischievous mood, would be able to ask a series of questions like that while keeping a perfectly straight face, and he often managed to catch his father. But she could sense a complete honesty in Taberah's questions; they were as honest as a child's. And as unending. She was beginning to realize that he did not perceive anything approaching a sharp demarcation between childhood and adulthood. "Come over to this section. I want you to pick out a shirt from one of these racks, and a pair of pants from one of these racks."

By the second or third try, Taberah had picked out clothing that would fit him; it seemed a bit loud to her, but she did not want to argue with that. He went into a fitting room, and, with Clancy's help, put the pants on properly and the shirt on backwards. He came out, and said, "I like it. Let's pay for it."

Nathella said, "Hold on, Taberah. I want to pick up a week's worth of clothing."

Taberah said, "This clothing will last for a week, more."

Nathella said, "I want to buy you enough clothing so that you can wear different clothing each day and not have to wear the same clothing for a week."

Taberah's jaw dropped. He had a vague realization that the others' clothing looked different over time, and he knew that some of the people of his home town were wealthy enough to have two sets of clothing — one for summer and one for winter. He had not, in his greediest dreams, ever wanted to wear different clothing each day. He asked, "Why?"

---

The trio arrived at home, carrying a large bagful of clothing. Aed asked, "Hi, guys! How was the shopping?"

Clancy asked, "Would somebody stop the room, please? I'd like to get off."

# I Envy...

Taberah asked Aed, "What is your trade?"

Aed recalled a moment in graduate school where one of his colleagues had said, "I envy people in nuclear physics. They can tell other people what they do for a living." He said, "I teach — do you know logic?"

Taberah said, "Yes."

Aed asked, "Have you done geometry?"

Taberah said, "Yes."

Aed said, "What I do is like geometry and logic; logic and geometry are examples of it."

Taberah said, "Give me an example."

Aed thought of the three rules of a metric space, then thought how little those rules illuminated what he was thinking — as little as a list of chess rules gave any obvious feel for deep strategy. Aed had learned long ago that it was possible to understand the rules of a game completely without having the foggiest idea what its strategy was like — human understanding never included instant sight into logical depths, any more than good eyes enabled you to see infinite detail despite distance and twilight! In the classroom at the university, Aed would have to bow to custom and labor over the basic rules, but Taberah was not a student at school, and — "I am studying collections of objects where you can tell how far apart two objects are."

"Like geometry!" Taberah said.

"Yes, but it includes many things that do not have the structure of a space. Like words. 'Man' is close to 'woman', farther from 'dog', farther from 'tree', and farther still from 'rock', and very far from words like 'move'.

Taberah said, "Yes! That's how to cheat on Turing test!"

Aed winced and said, "Uh, how?"

Aed winced and said, "Oh, how?"

Taberah paced the room in thought. "Can computers record conversations?"

"There are many, many conversations on record. I can download a collection of them now, if you wish."

"Well, first find out how to measure the distance between two words," Taberah said.

Aed nodded. The artificial intelligence literature had found a way to map the distance between words by measuring frequencies of words occurring before and after them in a histogram.

"Then have something that will look through conversations, matching up by words and grammar, and return the closest match!"

Aed looked at Taberah hard, and then said, "Son, how'd you like to learn how to program?"

# Hacking Away

Aed led Taberah into the computer, and then left him; Aed's avatar soon appeared nearby. "Put your hand on that picture on the wall," Aed said, and when Taberah reached out, he was in a large room, with alien artifacts on the walls and shelves.

Aed flew through the room, touching partially assembled objects; they vanished, leaving an open space to work in. "The first thing to do," he said, "is to make a Turing test room. Touch that bin over there."

Taberah touched it; it grew to fill half the room, and then its sides vanished. "See that red thing? Take it out of the bin, and then touch the button on the bottom of the bin; it will shrink back to its normal size. That is a room object; say 'Options.' See that popup menu? That's the thing that looks like a sheet of paper. Turn on the one that says 'Maximum occupants'; set the number to three. Then press the 'recording' button. I'll come back and record messages for the three users; the first user is the tester, and the second and third users are trying to convince the tester that they're human. Initially they'll both be human; later, one will be an avatar for our program. Pick up a dialogue slate; say, 'Record: Which user do you think is human? Now touch choice one, and say: Contestant one. Choice two: Contestant two. Choice three: Can't tell.' Ok; expand the room, and place the dialogue levitating in the center, in front of the tester's door. Wait, put three doors on for the user to enter. Oh, that looks funny because you have a bug. You have the buttons switched. You should —"

After the room was completed, Aed summoned the chancellor of the university and asked him to make an announcement of a Turing game. He recorded the announcement, and, after the chancellor disappeared, said, "This will give us some time to work out the artificial intelligence deceiver. If you give me a moment, I will find the metric for words." "

decoy. If you give me a moment, I will find the metric for words...

It took Aed and Taberah a long time to get to sleep that night; it took them a long time to stop tinkering, but even after that, they were filled with an excitement of discovery, of uncertainty, asking, "Could this be? Have we really discovered what we think?" Their excitement was raised in the morning when Nathella said, "Why don't we go downtown this evening for a Tridentine mass? Taberah, it's in Latin; I think you'll enjoy it."

Taberah was not sure why the Kinsellas went to mass every week; it had not been any special holiday, so far as he could tell, and he could never get out of them a straight answer as to why they went to mass when there was no particular reason to do so. But now he was in such high spirits that he wanted to go.

# Another Era

Nathella walked in to the massive church. It was plain, and all was still. As the liturgy began, the stillness was not broken; the majestic Latin spoken by those up front only augmented the silence. Each step was majestic; she lost herself in its familiar details.

After the service, she put her hand on Taberah's shoulder, and asked him, "So, whatchya think?"

Taberah's eyes were misty. He closed them, then opened them, saying, "I don't understand. I did not see the guest of honor. Was he a theologian?"

Nathella said, "What?"

"Was the guest of honor a theologian?"

Nathella reminded himself that Taberah sometimes approached matters strangely. "I would rather think of him as God who told stories. What do you think?"

Taberah said, "Not Jesus, the person the — now I remember the word — funeral is being held for. Was he a theologian?"

Nathella withdrew, slightly surprised. She said, "Why do you think this was a funeral?"

Taberah said, "It was so mournful. People were silent; they did not say anything, and the person up front was impossible to hear. There weren't any changing songs. And I didn't hear any instrument music, no organ. And this church had its walls stripped — no statues, no color in windows. Does this building have anything besides funerals?"

Nathella accepted that Taberah's perception of the Latin mass was very different from her own. No, that wasn't quite right. He wasn't responding to the Latin, *per se*; it was something else that accompanied the Latin. It — she decided to stop musing and respond to him. "At home

we have a machine that can make organ music; would you like to come home?"

At home, they sat down on a sofa and set the computer to play music. Taberah listened to the sound, the familiar sound of an organ — no, it was not; it had range and voices and a perfection of sound such as he had never heard, and such speed! Then it unfolded, into two voices, three, four. Taberah felt dizzy with the complexity, or more accurately, giddy, drunk; he heard wheels within wheels within wheels within wheels. It was alien in many ways; most of all, he felt that he had never encountered such a mind. He never knew that such music existed. When the moment wound down after several pieces, he said, "I awe," and then, "Who was that?"

Nathella smiled and said, "That was Bach."

"May I speak with Mr. Bach? I would very much like to meet him."

"Honey, Bach has been dead for almost three hundred years."

At this, Taberah was surprised. "If Bach is dead, how did he play that?"

"Bach wrote his music down, then someone else played it on an organ, then the computer kept and transported the sounds so we could hear them."

"How can a rock transport sounds?"

"Aed, would you explain that?"

As Aed explained, Nathella observed Taberah. He no longer seemed so completely homesick; his face bore the excitement of discovery. Taberah was adapting to his new land.

# Angels Dancing

"And all they were doing," Nathella said to Aed, "is endlessly debating 'How many angels can dance on the head of a pin?!'"

"That's the best question," Taberah said. "That's a very good question."

"What?" Nathella and Aed said together.

"'How many angels can dance on the head of a pin?' is a good question."

"Why?" Nathella said.

"Do you know how many angels can dance on the head of a pin?" Taberah asked.

"Um, I don't know. Five? Twelve? Seventeen? I have no idea." Nathella said.

Taberah looked displeased. "I don't think you understand the question. Say seventeen angels can dance on the head of a pin, but not eighteen. Why?"

Nathella said, "I don't know. That's why it's a silly question."

Taberah said, "Ok. How many people can dance on the head of a pin?"

Nathella answered, "If the pin was lying on the floor, one."

"Why not two? Why not three? Why not five?"

"Because people have bodies, and they'd bump into each other."

"Do angels have bodies?"

"No; they're spirits."

"Can angels bump into each other?"

"No; there can be as many angels in the same place as want to be, because spirit — ooh! Two, or five, or seventeen, or an infinite number of angels can dance on the head of a pin at once, because they don't take up space the way we do."

Taberah smiled. "Is that a silly question?"

Taberah smiled. Is that a silly question?

Nathella hesitated, and said, "If you are asking an abstract question, why embed it in a concrete and silly-looking facade? Why not ask it abstractly?"

Clancy burst in the door, out of breath, and said, "Hey, Mom! How many field service engineers does it take to screw in a light bulb?"

Nathella was about to say, "I'm in the middle of something, dear," when Clancy said, "Two. One to find a bulb, and one to pound it into the socket."

Nathella giggled for a moment, then her face showed confusion, which slowly turned into dawning comprehension. Clancy watched her, and said, "*Et voila!* It took you long enough this time, Mom!"

Nathella said, "It's not that, honey; I got the joke immediately. It was just that Taberah had asked an abstract question in a way that looked simple and silly, and I had asked why he did that, and now I realized that our light bulb jokes work the same way. The canonical 'How many morons does it take to screw in a light bulb?' 'Five. One to hold the bulb, and four to turn the ladder,' is only incidentally about ladders or even lightbulbs. It's about stupidity trying to do things in an ineffective and unproductive manner, and it provides an illustration. Wouldn't you say so, dear?"

Aed said, "I was just thinking about what impact such a presentation might have on my teaching at school. A concrete capture of an abstract idea is harder to make than an abstract decision, and much more powerful to understand. Whether I have the political strength to get away with a non-standard treatment of content is —"

Clancy cut him off. "What was the question Taberah asked? Was it something like 'How many angels can dance on the head of a pin?'"

# Beyond a New World

Taberah was sitting on the lawn, resting, thinking — when he realized that he had never explored the computer. He had gone to a couple of its rooms when Aed had led him, but he had never set out to see what there was to be seen.

That was strange. When he was little, Taberah had explored every building he was allowed in with a sense of fascination; he still remembered the wonder with which he had imagined a door opening, beams of light showing from behind. He asked Aed if he could explore the computer; Aed would have liked to accompany him, but was thinking about a problem he was researching. So Aed said, "Go ahead. Touch the picture with a gold border."

Taberah went in; he was in a gallery of pictures, and reached out for one of them. He was drawn to it  
was through it.

Taberah looked around. He was in an immense labyrinth; he started to fly around, the walls shifting and changing as he walked. There were statues, and fountains, and shadows lurking; there was something strange about it that felt like home.

Taberah turned a corner, and looked around. He was in a circular room with no doors; after looking around for a moment, he saw a knob at the side of a large black disc in the middle of the floor. He reached for it, and pulled; downwards was a brick tunnel, reaching into fathoms of darkness. After thinking a moment, Taberah left the annulus and tumbled down.

It was dark, or almost dark, around him; it looked like a room with candlelight. As his senses adjusted, Taberah heard crickets chirping, and

canlight. As his senses adjusted, Taberah heard crickets chirping, and realized there was the sound of the ocean; he looked around, and saw starlight. Which reminded him — but he would have to do that later. He started to fly about, and realized that he was in a huge forest. He came to the water's edge and dove down.

It was scary to see the water close above him; Taberah held his breath before reminding himself that he was just surrounded by moving pictures. He went in and down, in and down.

After a little while of pitch darkness, Taberah could see a faint blue light. He flew towards it, and saw color dancing. He saw thin slivers moving by twos and threes — fishes, he thought, and then went closer and saw that the swimming creatures were mermaids and tritons. Then he recognized the light: it was a vast city of sunken stone, an alien ruins. A mermaid swam by; he reached for her hand, and then he realized that he could not touch her. He followed her around, through streets and doorways and tunnels, between walls with runes glowing blue-white. The mermaid swam off; he opened one door, and saw a decorated room which made him forget he was underwater. Then he saw a strange picture on the wall; it puzzled him. He reached for it —

# What is This?

"Aed!" Taberah called. "Aed! What is this?"

Aed came running, muttering under his breath, "This had better be good!"

Aed looked at the screen — a nude female avatar was writhing in sexual ecstasy — and, after staring a moment, turned the video off. "That's a valerie," he said. "I should think that her purpose should be obvious enough."

Aed looked at Taberah, and then realized that he had misjudged the look in Taberah's eyes. Taberah had been staring at the valerie in fascination, but not exactly lust. He had rather been staring in puzzlement, and in the same horrid fascination that he had seen on Clancy's face, looking at a car wreck. Aed began to realize that an off the cuff response was not going to work here. After collecting his thoughts, Aed said, "Well, what do you think the picture was about?"

Taberah said, "I do not understand. She looked on her face like a woman wanting to be bounced, but she had her clothes off, and what a horrid body! Her breasts were enormous; they were ten times as large as beautiful breasts, and the rest of her body looked like a muscular boy's body, or a man's." He paused a moment, and then his face was filled with a flash of insight. "Aed! Was this valerie made for lust by a pedophile who wanted to pretend that he was looking at a woman instead of the boy's body he was looking at? He must have been trying very hard to fool himself, to have put on such huge, ugly breasts! But why make a picture to lust at in the first place?"

Aed mulled over this response, and mentally compared the valerie's body with his wife's — and then looked into his own reactions. "Taberah," he said, "a valerie looks like that because that is what my nation thinks a beautiful woman looks like. I don't know how to explain it, but even

beautiful woman looks like. I don't know how to explain it, but even though I try to love and honor my wife, the trend is strong to me; the valerie looks better to me."

Taberah turned green, and said, "Why? And I still don't understand why to make pictures for that purpose. Do you not think God's way of making women is beautiful?"

Aed thought for a moment and said, "Taberah, the culture we are in is sick. It is dying. This is one of many signs of its sickness."

Taberah said, "Then why not heal it?"

Aed said, "I don't know."

# In the Stars

After taking some time to rest — Taberah was still quite confused — he asked Aed, "When was the day of your birth?"

Aed said, "It's really not that important."

Taberah said, "Why should a man of your age not want to tell when he was born?"

Aed said, "I'm old enough, Taberah. Why do you want to know?"

Taberah was puzzled; Aed had attained a very respectable age, and Taberah could not understand why he looked uncomfortable about it. Maybe to explore later...

"I want to go outside at night," Taberah said, "and gaze upon the stars and the crystalline spheres, and know the influence of the planets when you were born upon your life and at the present day."

Aed took a moment to parse this sentence, and said, "You want to cast my horoscope?"

"Yes."

"I thought you were a Catholic."

"I am."

"Then why do you want to cast my horoscope?"

"In order to understand you better."

"Don't you think there's something wrong with astrology?"

"What?"

"What do you think astrology is?"

"Natural philosophy, exploring the interconnected world in which we live."

"Taberah, astrology is not science. It's magic, or like magic. It belongs to the occult."

Taberah was trying to sift this apart. "Why?"

"It is divination. It does not work according to the basic laws of

IT IS DIVINATION. IT DOES NOT WORK ACCORDING TO THE BASIC LAWS OF science. Astronomy is science; it studies how the heavens go. But it does not believe in influences, any more than looking at the entrails of a chicken will tell the future."

Taberah said, "Aed, what's the difference between science and magic?"

Aed was caught completely off guard. The disowning hostility of science to magic, *The Skeptical Inquirer*, the use of the word 'scientific' to mean 'rational' and 'working' and 'magic' as a pejorative metaphor for technology that did not appear to behave according to rational principles — Taberah might as well have asked him to explain the difference between light and darkness. But his question deserved an answer; science does not include divination — no, that would exclude weather forecasting; science provides theories and laws about how the world works — so does magic; science is about exploring the forces of nature — no, magic claimed to do that as well; science is reductionistic and magic holistic — no, that was, if true, looking at the surface rather than the nature of things, and that wasn't true; it excluded psychology; science produces predictable results according to its theories that — well, that also rules out psychology as science...

"Taberah, what can astrology tell you about a person?"

Aed listened to Taberah's explanation, and slowly stopped fighting a realization that this made more sense than what he was taught in his undergraduate psychology class, particularly behaviorism — he felt he would be much better understood by Taberah's astrology than by a behaviorist account. Astrology at least accounted for the stuff of common sense — emotions, tendencies, thoughts, good and bad timing — while behaviorism reduced him to an unbelievably simplistic account of just a black box that does actions. Listening to Taberah's account sounded goofy here and there, and the idea that the influence of the stars and planets controlled matters was straight-out hogwash, but Taberah's explanation overall gave him the impression of a rational account believed by a rational mind.

Science did experiments rigorously, and its standards did not validate any claims of magic — no, wait, the dice were loaded on that question; in Taberah's explanation, Aed saw a wisdom that just wasn't found in psychology; science did not meet the standards of interesting magic. No, that was not quite right; when did science really begin flourishing? At the same time as magic began flourishing, and often in the same people;

Newton's discovery of physics was almost a vacation from his work in alchemy. The two enterprises were born out of the same desire, to control nature and gain power, and in both people would readily engage in practices that had been hitherto regarded as impious and disgusting, such as digging up and mutilating the dead. Still, there was a difference, a difference which Aed felt if he could not think. They —

Aed came to himself and said, "I can't tell you the difference between science and magic, Taberah. I can't tell you, but I do know it. You shouldn't be doing astrology. You shouldn't be doing divination. If you're not sure of whether something is science or magic, you can ask me." Aed thought about buying him a psychology text, but decided not to, at least not for the moment. The psychology text he'd read, he was beginning to realize, was parochial and in many ways backwards; of course it was written by psychologists at respected schools, but the zeitgeist was — Taberah would encounter enough of it on its own, without having it embedded in something Aed told him to have replace his belief in astrology. Aed felt vaguely guilty about destroying a treasurehouse of lore, but let this go to the back of his mind. Once Aed had explained a simplified version of physics and astronomy, it was with some deflation that Taberah saw why Aed placed astrology among divination, but not weather forecasting.

Taberah stepped out that night, and lay on his back to look at the stars. He could not see many of them, and those badly, because of all the light. It seemed to him that something had departed from their song, but he could almost see something new. It was beautiful that the planets should revolve around the sun and not the earth; just as there were nine orders of angels — the highest six of whom gazed continually on the glory of God, and only three of whom were sent out among men — there corresponded nine planets, six of which were further out in the Heavens, the third of which contained life, and all of which revolved around the Light! His head went dizzy when he realized what it meant that he lived on a planet, and the sun was a star.

# The Trial

A representative from the Turing Society called Aed. "We hear that you have a program that is trying to pass the Turing test. I would like to administer the Turing test to your program at 2:00 PM on Tuesday, with observation. Is that acceptable to you?"

Aed's heart jumped, and he had to force himself to stand still. "Yes. I will look forward to it."

The test room was modified to support an arbitrary number of lurkers, and excitement built around the university. Quite a number of eyes were watching as the tester strode into the room. One of the contestant avatars looked like a unicorn; the other looked like a dragon. The tester managed to conceal her surprise, and said, "Good morning. How are you today?"

The unicorn said, "I am doing quite well. You?"

The dragon said, "I've had a lousy day, but it's getting better. I love playing the Turing game."

The tester said to the dragon, "Have you ever lost the game?"

The dragon said, "I've lost once, to a salesperson. I was really mad when the judge said I was a computer."

The tester repeated to the dragon, "Have you ever lost the game?"

The dragon repeated, "I've lost once, to a salesperson. I was really mad when the judge said I was a computer."

The tester asked the unicorn, "What about you? Have you ever lost the game?"

"Yes, frequently. I guess I don't sound very human."

The tester repeated her question to the unicorn. "What about you? Have you ever lost the game?"

The unicorn hesitated and said, "Um, is there a reason you're repeating the question?"

The tester did not answer. Instead, she said to the unicorn, "Tell me a

The tester did not answer. Instead, she said to the unicorn, "Tell me a bit about yourself."

The unicorn said, "Uh, I like woodworking, and I like to collect things. I've got a roomful of bottle caps, and I have one of the biggest collections of visual textures on the net. And I like fantasy."

The tester turned to the dragon and said, "What about you? How are you like?"

The dragon said, "I'm an optimist. It's too sunny out to be crabby. And I like collecting stamps."

The tester asked the dragon, "What is your philosophy of life?"

The dragon said, "My philosophy is one of many sides. There are many sides to life; there are many sides to being a person. I am many different things as the occasion merits."

The tester turned to the unicorn and asked, "What is your philosophy of life?"

The unicorn said, "Could you ask me another question? I'm kind of nervous now, and I'm having trouble thinking straight."

The tester said, "Ok. What is the one question you most fear me asking you?"

The unicorn shivered, and said, "The one you just asked?"

The conversation continued for two hours, unfolding, unfolding. It was about that time that the tester asked the unicorn, "What was your scariest childhood moment?" and the unicorn told a story about getting lost on a camping trip, and then twisting an ankle. Then the tester turned to the dragon, and said, "How about you?"

The dragon said, "Personally, I'm partial to seltzer water. And you?"

The tester pushed a button and left for the conference room Aed was in. She said, "You have quite an impressive achievement there, but you have a long distance to go before passing the Turing test. I tried to give two hours' testing to be sure, but I knew the dragon was a computer within five minutes of speaking with it. The clues that gave it away were —"

Aed cut her off and said, "Sorry, you guessed wrong."

"*What?*" the tester asked.

"You guessed wrong."

"Can you tell me with a straight face," she asked, "that the dragon was a human? Do I look that gullible?"

Aed gently said, "No, I'm not saying that the dragon was human. I'm

saying that they were both computers. The dragon was merely an old version of the program."

The woman's jaw dropped.

Aed added, "I should also like to say that most of the ideas were my guest Taberah's; I mostly helped out. The achievement is his, not mine."

# Detained

A knock sounded on the front door. "I wonder who that could be at this hour," Nathella said. "A reporter?"

She opened the door. There were several men outside, holding badges. They looked familiar, and smug; one of them said, "Officer Salisbury, Bureau of Immigration and Naturalization Services."

Nathella sank back. Aed said, "What are you doing here?"

Officer Salisbury said, "We have come to detain Taberah, before transporting him to his country of origin."

Aed thought for a moment about an English translation, and said, "What right do you have to do this?"

Salisbury said, "We are enforcing the law. If you —"

Taberah popped his head in the window and said, "What is this?"

Officer Salisbury said, "You need to come with us."

*That shoots any remnants of search-and-seizure concerns,* Aed thought. "Could he have a moment to gather up his possessions, at least?"

"That won't be necessary," the officer said. "We do not transport possessions beyond clothing worn. We are not a shipping service."

Aed, Nathella, Clancy, and Fiona each gave him a hug, their eyes filled with tears. Then Taberah was handcuffed and led away to a car. Nathella could see Taberah steeling himself against the ride.

# Wrong Person

In the middle of the night, the videophone rang. Aed got up, turned off the video, and said, "Yes?"

The voice on the line was unfamiliar. She said, "Hello, is this Aed Kinsella?"

Aed said, "Yes."

The woman said, "I'm calling to tell you that you and Taberah Kinsella have won the 2034 Turing Award for your joint work in artificial intelligence."

Aed blinked, and said, "I'm sorry; I think you have the wrong person."

The woman laughed, and said, "I'm positive I've got the right person. Can you get Taberah?"

"I'm sorry; I can't; Taberah is being 'detained' by the INS."

"What? Who are the INS? Do the police know about them?"

"Yes; the INS are part of the police. They are the Bureau of Immigration and Naturalization Services, and they just took Taberah. He is now en route to a jail, to have his head and his beard shaved, be stripped and put in a de-humanizing uniform, and sit in a cold cell with nothing to do while he waits for the INS to decide what country to deport him to."

The woman was silent for a moment, and said, "What country is he from?"

"I don't know. Dr. Pabst, an anthropologist I know, said that he doesn't seem to be from any culture currently existing. He has learned English, but besides that — why?"

The woman said, "Please wait a moment; I'll get back to you."

Aed had just crawled back into the covers when the phone rang. It was a journalist. And then another. And then another. After the first dozen times trying to explain that it was Taberah's work and not his, and that

times trying to explain that it was Taberah's work and not his, and that Taberah had been taken by the INS, he unplugged the phone.

At four in the morning, the doorbell rang. And then rang again. And again. Aed swore, and fumbled about for Nathella's keychain — a keychain with pepper spray. He threw on a bathrobe, and padded out to the door. "Who is it?" he shouted through the door.

"Officer Salisbury, returning Taberah to your house."

"*What?*"

"When we came last night, we did not realize that he held a United Nations passport. We apologize for the inconvenience."

Aed opened the door. Taberah looked weary, frightened, relieved, and very happy to be back. Aed picked him up, and held him in thanksgiving. Then he said, "Let's both of us get some shuteye; we've got a speech to write."

# A House Abuzz

There was a great deal of excitement around the house; friends and colleagues from church, the university, and other places stopped by, and some of them brought meals. Aed was excited by the activity; Nathella was wearied, and climbed into bed as soon as the last party had left.

One of the things that Aed insisted was that Taberah and all of the Kinsellas would appear through avatars, and that Taberah be referred to by a pen name — John. This was big enough news that Aed did not want strangers on the street recognizing them from a compucast or rebroadcast, nor calling them up. While Aed was in the living room explaining details of the work to his colleagues, and Nathella and Clancy were occupied with the hospitality, Fiona was occupied with Taberah. The two of them were in the computer, talking about what Taberah's avatar should look like.

The question was a bigger question than it seemed at first. The avatar should not be recognizable as him, but it should reveal him, his bearing. "It should be a mask," Fiona said. "It should be like a Halloween costume, changing yourself in such a way that you shine through."

"What's Halloween?"

"Later, Taberah. We don't have time to explore that now, although you'll see in a few months. Now, to start off with, do you want a human-looking avatar, or a fantastic avatar?"

"I — I don't know. Could I look at some of each?"

"Fiona said, "Hmm... There is something alien about you. Would you like to see what aliens look like?"

Taberah looked at several bodies of aliens, and recoiled. "Those aren't aliens," he said. "They're humans made to look grotesque. That's not what being alien is about."

"Ok," Fiona said. "How about fantasy? Do you like fantasy?"

OK, Fiona said. How about fantasy? DO you like fantasy?

They looked through a faun, a centaur, a unicorn, a dragon. "How old do you want to look?" Fiona said. Taberah didn't know. "Not that knight in armor; that would only be for going out to war. Not — *there!*" he said, with excitement.

"You don't want that," Fiona said. "That's a court jester. They acted like fools for other people to laugh at."

"I want that! I was a court jester once!"

Fiona wondered about Taberah's statement, but this was not time for long questions. She looked through colors, and guided Taberah towards a jester's outfit that was darker and had more muted colors. It was unmistakably a jester's outfit, but it had an air of gravity about it — which Taberah liked. "Ok," she said. "Now what do you want to eat?"

"Roast boar," Taberah said.

"Taberah, boar is awfully expensive, and there will be a lot of people there. I —"

"Give me two swords and I will kill one!" Taberah said, grinning.

"No, Taberah. You can't do that."

"Why not?"

"To start with, there aren't any boars here. You'll have to think of something else."

"Roast pig with an apple in its mouth!"

Aed stepped in. "Taberah, would you come out for a minute? There are some people who want to see you."

Fiona said to Taberah, "We can't have pork. There will be a lot of Muslims at that dinner."

"Is this country overrun by worshippers of Mahomet? Is there no one to drive them out?"

Aed stopped in the hallway. "Taberah, a couple of things. First, Muslims are not worshippers of Mahomet, any more than Christians are worshippers of John. They believe Mahomet was the greatest prophet, but not the man-god we believe Jesus was. Second, Muslims are citizens here. They are powerful, and their power is not all to the good — it is awfully hard to do things that Islam disapproves of, and there have been not-so-subtle manipulations against Christian evangelists speaking to Muslims, for one thing — but they are people, citizens of this country like anyone else, and not invaders. It is sad that Christianity has let Islam take its place, but the solution is not to run them off. Third, we may have wine

available at th—"

Taberah interrupted. "Spiced wine, piping hot? And cider?"

Aed said, "Spiced wine, piping hot, and cider, if you want, might be possible, but the food has to be something that Muslims may eat." Aed declined to mention the headache that would be involved in getting alcohol served...

Taberah said, "Do Muslims eat hamburgers?"

Aed threw up his hands and said, "I have guests waiting. Why don't you have *filet mignon*? It's the same kind of animal as hamburger, only much better."

Taberah was tired after the people met. He had not realized the intense energy it takes to connect with people from another land — he and the Kinsellas had gotten used to each other through intense contact. Nathella picked up on his fatigue faster than anyone else; she encouraged him to go to bed and get a good night's rest before the big day. Everything was in place; Aed had finally managed to convince the Turing society that he did not deserve the award, and accepted the privilege of introducing Taberah. Everyone slept lightly — everyone but Taberah; he slept like the dead, and got up to protest the stiff clothes he wore to the banquet.

# Accolades

Taberah was cheered at the meat and drink; the meat reminded him of home. He was equally delighted to sit down and drink wine with Aed, and his spirits did not flag although people asked him questions that struck him as rather odd. At the end of the dinner, Taberah was pleased to have (so far as he could tell) avoided making any *faux pas*. He felt a sense of accomplishment, and felt at home.

The chairman of the Turing Society looked at Aed and pointed to his watch, and Aed nodded. He took a sip of water, and then climbed up the steps to the podium.

Nathella could not see that her husband was nervous, but she knew it. He had thrown out his introduction a dozen times. Neither of them were worried for Taberah, though; Aed and Taberah had worked out a speech, which Taberah memorized with remarkable facility.

"I would like to begin this introduction," Aed said, "by apologizing for giving an introduction not worthy of the occasion. I would very much like to give a traditional introduction, in which one perhaps starts by saying 'The person who is going to speak is a man who needs no introduction,' and then spends five or ten minutes detailing education, awards, and accomplishments. It would perhaps sound grander if I were to say that such an introduction was inadequate to him, but the truth is that I don't know enough about him to give an introduction of that sort. I don't know if he went to school at all; he appeared on my doorstep, became deathly ill, and has since then been turning my world upside down.

"His first surprise for me was in chess. I am rated at 1975, and when I invited him in, him looking dazed and confused, he took my chess pieces to the table (at least after I let him), and began to play his way — at first I thought he didn't understand the game or was cheating, but then I realized he wasn't playing on a grid. He beat me five times in a row.

realized he wasn't playing on a grid. He beat me five times in a row.

"Different members of our family have had conversations with him that left our heads spinning; my wife Nathella is the only one who has not had that experience, and I believe that is because of her ability to understand people. There's only been one time that I've been able to understand Taberah better than her, but I won't detail that here.

"Taberah is brilliant, and approaches life in ways that would never occur to me. Wherever he comes from, and wherever he was educated, he somehow had the intelligence to look at the problem of artificial intelligence in a way nobody else had seen it before. If I cannot vouch for his education or accomplishments, I can vouch for this one accomplishment. Taberah has worked into a special place in my heart, and not only because of his brilliance. Without further ado, here he is."

Taberah strode up to the podium; on the screen behind him, his avatar looked quizzical and dignified at the same time. "I was going to say," he began, "that my discovery has taught us nothing about human intelligence. But I began to reason, and realize that it has.

"Men have always wanted to create other men like themselves. I once wished to make an assemblage of gears that would make a mechanical human, and I saw no reason why not. If gears could make a clock, with continual motion controlled according to its construction, why could the best crafted gears not make a man? Certainly myths came of gods who had made mechanical men. So I do not find it to be at all surprising that, when people found a way to make a machine that could do arithmetic and logic, they thought they had made something that could think.

"Chess is something that is difficult for people to do. So it was thought, 'If we can only make a computer that can beat the best humans at chess, then we will have achieved intelligence.' The day has long past when a human could beat the best computer, but if that achievement has taught us anything about human intelligence, it is that humans do not play chess like a computer. Making better and better computer chess players did not make computers intelligent any more than making more and more realistic-looking statues will make them alive.

"Conversation is something humans do, so Alan Turing, a brilliant mathematician, thought, 'If we can only make a computer that can pass for human in conversation, then we will have achieved intelligence.' Now the day has come when a computer has passed for human in conversation, and if it has taught us anything about intelligence, it is that

intelligence goes beyond conversation as it goes beyond chess. Those are both activities humans can do, but mimicking or even beating human performance does not a person make, any more than a collection of lifelike statues can be improved to the point of achieving life.

"I do not think that this calls for a new test to determine intelligence. I think it calls for a realization that human intelligence is too rich and too deep to reduce to a simple test. When a test has been proposed to measure intelligence, the test gains a life of its own, and suddenly people stop thinking about intelligence, and start thinking about how to pass the test. Chess playing programs became sophisticated with speed and advances that were not even approximated by efforts to understand how humans play chess, let alone how humans think.

"But this is enough. It is bad speaking to cram so much into your audience's heads that things are falling out; I have criticized enough for an award recipient. The field of artificial intelligence is a fertile area of thought which has brought many good things; even if artificial intelligence is never achieved, its failure will have enriched the soil of human endeavor. I thank you for this award and the other assistance the Turing Society has provided me, and, Aed, Nathella, Fiona, and Clancy for their help. God bless, and have a good evening." He returned to his place.

The chairman of the Turing Society stepped up to the microphone and said, "There is one more thing, Mr. Kinsella. The Turing Society has a fund, out of which to give prizes to its award recipients. The funding might buy research equipment, or a sabbatical, or perhaps access to online research libraries. Is there something we can get for you? Do you need a home?"

Taberah said, "I have everything I need now. But if there was one thing I could have — do you have a troubadour's lute?"

There was a moment's pause; the chairman, Dr. Bode, spoke on his cell phone for a moment and then said, "One of the members of the audience has one now, which she will lend you while another is delivered." A small woman walked up; Taberah was puzzled, as she was holding a small black bag, but otherwise empty-handed — there was no room to conceal a lute, even a small one. She reached into the bag, and pulled out a thick black belt and two long black gloves, long enough to cover an elbow. He could see that there were was something else in the bag. She looked at him and said, "Put the belt around your waist, and the

bag. She looked at him and said, "Put the belt around your waist, and the gloves on your hands."

Taberah did so, feeling some puzzlement.

"Now," she said, "play as if you were holding a lute."

Taberah looked at her, confused.

"Like this," she said, moving her hands in a strumming motion.

Taberah moved his hands, as if to play a chord — and jolted in surprise as notes sounded. Then he moved his hands again. There were some sounds of jarring dissonance, like a piano being played by frostbitten fingers losing their numbness, and then a simple, high, pure, aching sound. It pierced by its beauty, and with the music, words, in a voice that filled the room:

*Once there was a little lady,  
Fair and pure and elfin bright.  
Her light skin shone like burnished silver,  
Blazing light throughout the night.  
Her soul it was a filled with music,  
Her body was a filled with dance.  
Her long hair was black like ravens,  
All blazing was her countenance.*

Taberah's otherworldly song filled an hour; in his song, he carried with him a feeling of home, a moment of Heaven, and all of the strangeness of the land about him, of his aching at no place that felt home, vanished. The music he made in his trance brought its listeners into another time, into another world; to those in the room, the song so filled their consciousness that they did not think of anything else. When the song began, the netcast of the awards ceremony was brought into focus, and the avatar who had looked slightly strange speaking about artificial intelligence now fit perfectly into place: a court jester — and more than a jester — holding a lute, telling a tale and weaving a song.

When it was over, even the silence was musical, because it bore the silent echoes of the music's spirit. Taberah walked back to his seat, and asked, "Can we go home?"

With that, the meeting was over.

# Where Do You Come From?

It was the first day of classes; Aed had returned home late, to a house filled with a marvelous scent. It smelled of tomato, and basil, and bacon, and beef. Clancy said grace at Aed's invitation, and they began to pass the pasta.

Fiona looked at Taberah, and said, "Where are you from, Taberah? I don't think you've ever told me that."

Taberah said, "I am from — Provence, or at least half from there. My father is a merchant, and we have travelled to the ends of the world, and beyond — but never to a place so strange as this. I am used to mountains, and seas, and strange people and barbarian tribes — even worshippers of Mahomet —"

Aed said, "*Muslims.*"

"— even Muslims, but there are many things here that are strange to me."

"Like what?" Fiona said.

Taberah thought for a moment, and said, "It is hard for me to think of and harder to say in words."

Nathella said, "Can you think of it in your words in your own language? And then maybe translate?"

Taberah concentrated for a moment and said, "No, I can't. Not even in my own language. I will tell you later. After I think."

Aed said, "Don't worry too much if you can't answer. It was a friendly question, not a probe."

Taberah said, "It is a friendly question, and a probe, and a good question. That is why I want to answer it. Maybe after I research on the computer."

computer.

Fiona said, "Taberah, have you ever been to my Dad's campus? Tomorrow's a half day, and I could take you there. You might see more of the world."

Taberah said, "I would be happy to do that. But ooh! I miss home. I have never had a place that was completely home. Whether riding away hotly pursued, or haggling down the price of salt, or opening an illuminated manuscript — I was at home for a moment, but over time not at home. Even in stealing a relic from a nearby cathedral —"

Fiona said, "You *stole* a *relic* from a *cathedral*?"

Taberah said, "Yes. The saint wanted to move; otherwise, he wouldn't have let his relics be moved. And I can move swiftly and silently —"

Fiona said, "Taberah, would you steal a fork from this house?"

Taberah looked surprised. "Never!"

Fiona said, "Why on earth would you be willing to steal a relic?"

Taberah had no real response to this question. He said, "If another city had a relic, and you needed it, wouldn't you assist it to your place?"

Fiona said, "I can't explain all my reasons why not, because I have to go to bed in four hours. But to start it off, that would be dishonorable."

Taberah thought, and said, "I'll have to think about that. I never met a knight who thought it dishonorable to steal a relic. Ok, I know how to explain. A relic does not belong to a living man or a place; it belongs to God and to the saint. Stealing a relic is a very different matter from stealing corn or grain. The corn really belongs to the person who has it; the relic belongs to the saint, and then to the saint's followers — so if the people here worship a saint and want his relic more than the people where it is kept, then if the saint allows the relic to be moved, it should be moved."

Fiona said, "I can't believe this rationalizing. The bigger a sin, the more rationalizing there is, and you have rationalized an unholy theft on top of starting it in the first place!"

Nathella turned to Fiona and said, "Honey, I don't understand Taberah, but he's not rationalizing. He does not have a defensive air about him. And something tells me that he would not steal anything from this house — nor steal anything from another place and bring it here. Right, Taberah?"

Taberah said, "Yes. I would never steal if it were dishonorable."

Clancy looked around and said, "Taberah, did you hear the joke about

the cathedral that was so blessed that it had two heads of John the Baptist, one as a boy and one as a man?"

Taberah said eagerly, "No. Please tell it to me; it sounds very good!"

Fiona groaned and said, "Mom, would you please explain it?"

Nathella said, "Taberah, did you notice anything funny about there being two heads of John the Baptist?"

Taberah said, "No. It sounds like a great providence indeed, for which God is to be praised."

Nathella said, "What would have had to have happened for a cathedral to have the head of John the Baptist as a boy?"

Taberah said, "I suppose for him to have died as a boy."

Nathella said, "If there was a skull of him as a man, did he live to be a man?"

Taberah said, "Yes."

Nathella said, "So there's a logical contradiction for a cathedral to have two heads of John the Baptist, one as a boy and one as a man. Right?"

Taberah said, "Yes."

Nathella looked at him. "You still don't get the joke."

Taberah said, "I'm still waiting for the joke to be told. So I don't get it."

Nathella said, "If there's a logical contradiction, then it couldn't have happened, right?"

Taberah said, "If there's a logical contradiction, there's a logical contradiction. It doesn't mean that God can't bless a church with two heads of John the Baptist. God moves, and his ways are beyond our understanding. He has done greater things than bless us with two heads of a saint!"

Fiona said, "Taberah, if we go out for a walk tomorrow, do you promise not to confuse me?"

Taberah said, "Am I confusing you?"

Aed got up, placed his arm around Taberah's shoulders, and said,

"Wild thing!  
You make my head spin!  
I think I love you."

# Music From Another Age

Fiona took Taberah by the hand, eagerly leading him as if she were a small child. The university's square was filled with a noisy, jostling, laughing group of people, chaotic as any bazaar. The excitement was tangible. "Today is the first day of Student Activities Week. All the student organizations are clamoring to find new recruits from among the freshmen, and anybody else who cares to come. It is a lot of fun."

Taberah walked over to one stand where several people were talking. He read the sign overhead, *Humanist Hacker's Guild*, and asked, "What is a hacker?"

One of the men looked up from a portable computer and said, "The first hackers were people in software who like solving problems and believe in freedom and helping each other. They produced a lot of computers and software. We are a special kind of hacker, hackers in the humanities. We produce artwork, music, and literature, and share it with other people. In a way, there have been humanist hackers for ages, but interaction with computer hackers has brought an awareness and a fertile field for sharing. Would you like to have a copy of one of my poems?"

Taberah said, "If I am here, why would you give me a copy? Why not just recite it?"

The hacker said, "Um, because I don't have it memorized?"

Taberah said, "I'm puzzled."

The hacker said, "Why?"

Taberah said, "How could you compose a poem, even writing it down, and then forget it?"

"Quite easily, I assure you."

Fiona put her hand on Taberah's arm and said, "Taberah, please. We

Fiona put her hand on Taberah's arm and said, "Taberah, please. We are his guests."

The hacker took a sheet of paper and said, "Here. I'll read it to you."

"The Unicorn's Horn," by Elron Ellingswood

I walked out into the deep, dark, forest,  
and there, in a clearing, it stood.

Oak was behind it, ferns below,  
and atop its head, stood a blazing white horn.

It walked to a shimmering pool,  
Its hooves not making a sound.

Around, the silence was broken  
by the calling of a hawk.

The wind stirred the tree leaves  
and danced softly over the grass.

The Lady of the Lake stirred,  
softly,  
invisibly.

Taberah looked both impressed and puzzled. He said, "You show the forest as an object of beauty. Why?"

Fiona grabbed his wrist, and tugged on him, saying, "Look over there! Karate!"

An instructor smiled and said, "Not Karate. Kuk Sool Won. Karate is a single martial art that focuses on punching, kicking, and blocking; Kuk Sool is a comprehensive martial arts system that includes joint locks, weapons, and escapes as well as many kinds of punching, kicking, and blocking."

Taberah said, "What's a joint lock?"

The instructor said, "Throw a slow punch at me."

Taberah said, "What?"

The instructor said, "Do this."

Taberah made the motion and his hand was caught, his wrist twisted.

"But what if I punch you with my other hand?"

"Why don't you try to do that? Slowly?"

Taberah did, and his puzzlement was exceeded by the instructor's, who said, after a second, "Stop. I've never seen someone who could resist a joint lock like that. You must have a tremendously high tolerance for

pain."

Taberah said, "I don't understand. I didn't feel pain. I don't understand what you were trying to do."

The color of Fiona's face was beginning to match her long, wavy red hair. She said, "Taberah, come on. Let's find something else."

Taberah began to wander, and then saw — or rather, *heard* — something so positively medieval in spirit that it drew his attention so completely he was aware of nothing else. Up until this point, he had been thrown off balance by a hurry in the people around him — or, at least, that would be a deficient way of putting it. A more accurate way of putting it would be that he was aware of time in the sense of an awareness of something around him, but not in any sense that would let him grasp rushing to get something done, or guilt at sitting at doing nothing. He vaguely perceived such a quality in those about him, and he was baffled and troubled by it, in the same way as if he were surrounded by people who were constantly thinking about air and in a frenzied haste to try to find some space that had enough air to breathe.

It was the near total absence of this quality in the music before him that beckoned him. It was as if he had stepped into a room of people breathing normally and attending more important concerns and only then come to realize that he had been surrounded by people fretting over whether they had enough air to breathe.

Taberah stood in silence, drinking it in. Then he stepped forward, picked up an instrument, and joined in the song.

---

At dinner, Aed asked Taberah, "So what did you see today?"

Taberah said, "Today was a happy day. Today I discovered New Age."

Aed suppressed a groan. How was he to begin an explanation? The phenomenon that was called New Age in its current incarnation had occurred many times in the past, and would doubtless occur many times in the future, each time under a different name; it was in spirituality what a logical fallacy is in reasoning. It was heresy — perhaps he was safe in using that word with Taberah. In the word, 'heresy' carried a curious inversion of "a good and original idea which some benighted tradition condemns", the word being a condemnation of the tradition rather than the idea. What a diabolical trick that was! Heresies were neither good nor original ideas; they were propositions that had been weighed in the balance and found lacking, "New" Age being a manifestation of an error that had first occurred two millennia ago and had rotted every time since then. It promised freedom, and was one of the most confining and constricting prisons he had known — a prison like being left all alone in an empty wasteland. You could go as far and wide as you wanted, and still find nothing good.

Aed hesitantly asked Taberah, "What draws you to New Age?"

"The — music — time — you are hurried. They are not."

Aed nodded. New Age music was soothing music. But as to the time — "Taberah, it's a busy time of year for me. What is this about time?"

Taberah tried to explain, and at first failed completely. Then, on the second time through, there was a look of dawning comprehension on Fiona's face, and she said, "I will try to enter your time, Taberah. But it will be difficult; we have been taught to hurry for a long time. I won't be able to do it very quickly, if I can."

Taberah kissed her cheek, and said, "I not in hurry — ooh, did I do right in touch?"

Aed wondered what Taberah was talking about, and then recalled him sternly telling Taberah not to touch others in ways that he had not seen them touching. "It's OK, Taberah. You may give a kiss on the cheek to people in this family."

Taberah walked over, and kissed Aed on the cheek.

# The Phoenix

Taberah spent most of the day running through New Age music in his head, and seeing how it would sound on his lute; Fiona had to knock on the door several times before he noticed she was there.

The square was less crowded than before; on the way in, Taberah looked and saw a place where several people were moving their fingertips about on a ridged surface, their hands dancing with energy; on a wall behind them, colors swirled and spun, vibrating with energy. "What's that?" he said.

Fiona said, "Those are visual musicians. They play instruments that do not produce sound, but color. Do you like it?"

Taberah said, "I like it, but why are they spinning so quickly? Why —" he pointed to another booth and said, "What's that?"

A man in the booth next to them said, "Hey, a southpaw! Greetings!"

Taberah said, "What?"

"You're left-handed."

"What's that?"

"It's when someone uses the left side instead of the right?"

Taberah made the sign against evil and said, "Why would someone do that?"

"You did."

"I might have pointed with my left hand, but I do everything else with my right hand."

The student tossed a pen up, and said, "Catch!"

Taberah looked, and realized he had caught it with his left hand. "I am sorry. I have sins I did not know."

The student now no longer looked so merry, and said, "You're left-handed, but you're ashamed to admit it."

Taberah hung his head

Taberah hung his head.

The student said, "You aren't part of the solution. You're part of the problem. We have a right-handed society, with right-handed machinery and right-handed rules. Even the words are prejudiced — 'right' means correct, acceptable, and good, and 'sinister' and 'gauche' are words meaning 'left', which comes from a word meaning 'weak' or 'broken'. For years, lefthanders have been an invisible and maltreated minority, and now that some of us are speaking out and demanding that society improve, there are people like you who — a gay who was like you would be said to have internalized homophobia. You are —"

Taberah cut him off. "Why are you so angry?"

Taberah listened with horrid fascination to the rant. He began to realize that using the left hand, like turning a wheel the wrong direction or walking backwards, was only a symbol of evil and not its substance, and began (despite all internal resistance to external pressure) to see that the student's conclusions were right, that the world was a right-handed world with subtle and invisible slights to its left-handed members — or at least he tried to accept these things. He still felt guilt over catching the pen with his left hand, and he knew it would take time for him to shift his spirit to what he saw. But all this aside, he also saw an anger that brought far greater misery than any right-handed technology — not confusing pencil sharpeners, not painful scissors — could possibly cause. He narrowed his eyes, and said, "You are angry."

The student swore, and said, "I'm furious. Why do you need to point that out?"

Taberah said, "Are you happier with your pit of rage than I am with my right-handed society?"

The student was speechless. Another student, who had been listening, said, "I would like to cordially request the honor of your absence at our booth."

Taberah felt anger rising in the pit of his stomach; he felt it, but did not let it master him. He turned, and walked away, taking a long walk around the square before slowing down, and finally stopping at one place. He looked at a group of students who were standing around, talking, laughing; each of them had a necklace with a fiery bird. Taberah asked, "Who are you?"

A young woman with long, curly auburn hair said, "My name is Emerant, and we are the Phoenix Society. The Phoenix Society is a group

of brothers and sisters devoted to living in the abundant life that Jesus offers, and extending that life to others. The Phoenix, the bird that ever rises anew out of its own ashes, was a holy symbol in the ancient Christian Church, and in wearing it we recall the ancient church and its life among a pagan world, and allow God to create in us the same life in a pagan world today. We have worship services every Wednesday night. Would you like to come and join us?"

Taberah felt something in the back of his mind, but he could not put his finger on it — but it was something good, he was sure.

A young man with ebon skin placed his arm over Emerant's shoulder, and said, "What's your name?"

Taberah said, "My name is Taberah."

"How can we serve you? Do you have stuff to move in? Do you have a story to tell?"

Taberah realized what he had felt but could not describe. There was an energy about these people, an invisible love so thick it could almost be felt. The young man was looking at him as if he were a king. The students in the group were all wearing distinctive necklaces, but their air did not treat him as an outside you, not even an outside you that they wanted to bring in. The man's eyes were dark as night, and they glittered like stars; there was something about his face that said 'I' and 'you', but even more said 'we'. Taberah smiled and said, "I should very much like to hear mass with you."

Emerant smiled a crooked smile, and said, "There is something else you want, Taberah."

Taberah closed his eyes for a second and said, "Emerant, I know your name. You, what is your name?"

The young man said, "My name is Abanu."

Taberah said, "Emerant and Abanu, I should very much like to play a song for you."

Immediately, a space appeared among the students. Taberah calmly, without any self-consciousness, walked over to the center and began to sing.

It was a noisy day, but it seemed silent inside that circle. Taberah could fill a room if he wanted to, but he was not singing loudly; still, all the students were aware of nothing else. When the song finished, Emerant looked around and saw that there were some people standing around and staring; she began to talk with him as the students asked

around and staring, she began to talk with him as the students asked Taberah questions.

It was not until seven that Aed found them, and told them that dinner was getting cold; Fiona had lost all track of time, and Taberah never had track of time to begin with. He slept well that night, and awoke in the morning knowing the answer to a question the Kinsellas had asked him.

# In Spirit and in Truth

Taberah spent the day reading the Bible and researching on the computer; at dinner, he said, "Nathella, do you remember when you asked me a question about my place and this place, and I said it was harder to think of and harder to explain in words?"

Nathella said, "Yes."

Taberah said, "I was able to find words. In Bible, Jesus was talking with a woman at a well. She asked him what mountain to worship on. He said not to worship on this mountain or that mountain, but in Spirit and in truth. This land knows not how to worship in Spirit and in truth."

Aed's eyes narrowed. Aed and Nathella said together, "How so?"

Taberah said, "I have just begun to see how religion is, and it is not religion. It is private. It is an interest. It is a hobby. It is tame. Where I come from, religion is public because it pervades your whole being; it is who you are, and never has a pagan invader told a Catholic, 'You may be Christian, but make it a small thing. It is —'"

Aed nodded and said, "That criticism has been made before, and it is not to be lightly dismissed. Is there anything else you see?"

Taberah said, "I slowly began to notice, when navigating on the computer — where I am from, when people build a cathedral, they carve the backs of statues. I was shocked when I saw that people here do not do this. When an artist carves a statue in my land, he is not just working on a statue; he is making an offering to God, and his carving is a prayer. He carves the back as well as the front, working on a place whose fullness he may never see, because he is not making something for himself or other men, as much as making a prayer to God, who sees the back of the statue as easily as the front. Here, on the web, people do not do that. They think

as easily as the front. Here, on the web, people do not do that. They think in terms of making a creation for other people. They do not try for completeness; they want — I do not know the words."

"Good enough for government work?" Clancy said.

"Yes. Except that making something that is 'good enough' does not mean making something that is good. God is only in the compartment called religion; he is not big enough to make virtual reality for — only other people who will not take the site very seriously is that important for."

*I cannot make complete sense of Taberah's tangled wording,* Nathella thought, *but I do not need to. Taberah has difficulties with language when he is concentrating most intensely.* She understood the meaning, if the words sometimes eluded her.

Aed said, "Anything else?"

Taberah said, "I hesitate..."

The room was silent.

Taberah continued, "I hesitate, but there is something strange about clothing and nudity. In my land, people wear clothing for custom and for decoration; being without clothing is not much. Here, clothing is for decency (a polite way to put it); there are chaste people and there are nude people, but there are not chaste, nude people. When a woman wears no shirt in an advertisement, her no-shirt means 'Look at me in lust!' She does not have a no-shirt that doesn't mean anything besides 'I don't want to have a shirt now.' There are people who say that we don't need to say clothes, and most of them say that not wearing clothes is not sexual, but few of them are chaste, or even acknowledge chastity.

"That is a symbol of something deeper. You need to cover your bodies, but even more you need to cover God, because you are ashamed of other people seeing them. And so you produce arguments to justify the existence of God, and God does or does not exist depending on whether or not he's covered.

"One of the theologians I know of, Thomas Aquinas, began his great work with five arguments for the existence of God. But these arguments have a very different meaning than yours; they were for adornment, and not for shame. Aquinas was not trying to give a needed proof of God, as your theologians do; certainly he did not think that if he failed to prove God's existence he was not able to believe in God. You speak of justifying belief, as if it needed justification, as if it were shameful if it were not

covered by an argument.

"About clothing literally, I will not argue. Your way of looking seems to me a silly limitation that causes a lot of lust, but chaste nudity is not important. It is not one of the great things in life. But about clothing symbolically, I will argue much. You need in your minds to have an unblushing nudity, that can say, 'I believe in God and I accept his providence,' and not have a guilt about it for believing more than matter. You — I am sorry, I should be able to produce more examples. But there are many ways where you do not know how to worship in Spirit and in truth."

Aed was stunned. After a while, and after nobody else said anything, he said, "Son, you've got a brilliant mind. I have a feeling of being held under a microscope. I don't know how to respond, beyond saying that you see things I would never see, and I hope you keep thinking."

Nathella said, "You almost seem like someone from another era."

Taberah said, "What's an era?"

Aed said, "Later, Taberah. Later."

# Which Era?

As Aed sat down, Taberah asked him, "So, what is an era?"

Aed thought. He said, "I would better answer that question after looking at an encyclopedia; I've thought about how to explain it, and I realized I knew less than I thought I did. But here's a rough sketch of what I can explain:

"The ancient world was the world that gave birth to Christianity. It is everything before the Middle Ages, or medieval period. It gave us the apex of paganism, and philosophy, and writing.

"The Middle Ages were a thousand years of Christian faith and culture. They saw monasteries, cathedrals, castles, monks, clergy, knights in shining armor, lords and vassals and fealty, chivalry, peasants and feudalism, illuminated manuscripts...

"After that came the Renaissance and Reformation period. There was a rebirth of art and learning from classical, that is ancient, times, and the monk Martin Luther nailed theses for reform to the door of Wittenburg Cathedral, and chaos broke loose. Let's see...

"The Elizabethan time was the time of the great playwright Shakespeare, and vernacular translations of the Bible. The Baroque time saw a flowering of complexity in art and music; aah!

"Modern times began with the Elizabethan era, and started a new secularism in philosophy. It reached its climax in the Enlightenment, with people worshiping the mind and reason, and the bloodbath that followed. Then came Romanticism and Victorianism, one of them a following of emotional sensitivity that often included libertinism, the other managing to be morbidly prudish. After that, came postmodernism, the era that we are in. People have given up the quest for truth, and there has been an increase in fragmentation — Taberah, I just saw a light go on in your eyes. What clicked?"

in your eyes. What clicked?

Taberah said, "I am medieval! What era are you from? Can you tell me how to get to the Middle Ages?"

Aed slapped his palm to his forehead and said, "Taberah, just forget this conversation and let's start over. There are some things about you that are like the Middle Ages, but the Middle Ages are a period of time in the past."

Taberah asked, "What is a period of time?"

Aed said, "It is a time when people have a certain way of living."

Taberah said, "I am from the Middle Ages period of time. And I think you might be as well. You belong to an age of faith, and you are a lord."

Aed said, "It is impossible to go back to another age. It is past. It has already happened."

Taberah would have normally backed off by this point, but there was something inside him that made him certain. He said, "Will you get out of bed tomorrow?"

Aed said, "Yes."

Taberah said, "But you have gotten out of bed in the past?"

Aed said, "Yes."

Taberah said, "Does that stop you from getting out of bed tomorrow?"

Aed saw where Taberah was going, and said, "But with history, it's different. You cannot bring back the past any more than you can make your self younger." As soon as the words escaped Aed's mouth, he remembered the difficulty Taberah had in distinguishing between childhood and adulthood. And he expected Taberah's reply:

"What is the past?"

Aed said, "Everything that has happened so far."

Taberah said, "So, the beginning of our conversation is in the past?"

Aed said, "Yes. No. Not in the sense you're speaking of. It is before the moment now, but it still belongs to the time we are a part of."

Taberah said, "I do not understand. What's the difference?"

Aed said, "Could we just forget this conversation? I know what the difference is between the present and the past, I just can't explain it..." his voice trailed off, and he said, more to himself than to Taberah, "or do I?" For a moment he began to see how someone could not perceive a difference between present and past, and not understand how, if there had been medieval people before, there could not be medieval people now. Aed remembered how, in school, when he read about different

times, there was something he could identify with in a great many of them. Then the moment lapsed; Aed suddenly realized the intense concentration it took him to see into Taberah's world, and began to wonder how difficult it might be for Taberah to look into his world. To his surprise, Aed found himself saying, "I don't know, Taberah. Maybe there isn't one. Maybe we could talk about this later? I thought I was going to explain something to you; I wasn't counting on changing the way I think myself. I'm sure you know it's difficult work, changing how you think, and I am at the end of my concentration. Why don't you practice your music? Maybe you can play something for us after supper?"

Taberah looked at Aed and relaxed; it was only then that Aed realized how intently Taberah had been listening. Taberah said, "Sure!" and bounded outside like a puppy.

# A Possibility Reopened

"Stop pacing the floor, dear," Nathella said. "You're making me nervous."

Taberah stopped and looked up. "May I walk around in the street outside? I need to think."

"Ok. Don't walk in the street; walk on the sidewalks. And don't get lost. Maybe you can take one of the trails in the forest."

*If there is a word-space, Taberah thought, a space in which words exist and can be mapped out into closer and farther words, then there may be a thought-space, one in which thoughts can be mapped out.*

Outside, it was dazzlingly bright; Taberah's eyes adjusted, and he saw some little boys throwing a ball around. As he passed by, one of them dropped it, and the children started arguing.

*If there is a thought-space, his thoughts continued, then thoughts may be mapped out as paths in that space. Some thoughts can be mapped out from existing classics, and then new paths can be forged like old ones. If this can be done, then it may be possible for a computer to think.*

Taberah entered the forest, although he was not aware of it. He felt almost dizzy; he was excited, and so intent in concentration that he lost all awareness of his surroundings.

*The core idea for a computer to think is to construct a space of units of thought, measured by a metric arising from that for words — or perhaps similar; words can be sorted out by comparing histograms of words that appear before and after; a self-refining measure might compare thoughts that come before and after. A space can have trails*

*worn in it by existing classics, as a forest develops paths from many people walking through it; the thought-space is then navigable by starting at one point and randomly picking from among the paths that lead out from it. This is how a computer can think.*

*How can I implement this?*

*I need to find Aed.*

# Exploration

Aed was quite doubtful that Taberah had found a way for computers to think; none the less, he regarded Taberah's ideas as interesting, and so set to work on implementing them. He used one of the methods from his own research to take a given metric space and put points into a vector space, so that a position could be described by a list of numbers: put springs between each two points in the metric space, as long as the distance between them, then put the points at random locations in the vector space and let the springs do their work. The actual method used was more complex, taking shortcuts so as to run more quickly, but the core idea was simple. A model of a car made of springs would find its shape as soon as you took your foot off it.

Aed expected it possible to make much more sophisticated measures, but to start off with he used a parser to diagram sentences, trim the sentences to subject, verb, and object, and strung together the lists of numbers to make a vector space with more dimensions. Aed realized that philosophy would probably be easier material for a computer to think about than something concrete; there was less opportunity to bump into the oddities of sense data and the external world. He the program through the philosophical classics online, and then waited to see what its first output would be:

I think, therefore I am. From this may be deduced any number of things. It is clear that the gods are dead. There is nothing but the gods. You, me, everything are the gods. This godlike character is unto the likeness of God. Each of the gods is a facet of God. God is, and because he is he thinks. Reason is the ordering principle of the universe. I say this because reason gives us what other times sought in God

III 300.

The output went on for some length, and Taberah was crestfallen. "Cheer up!" he said. "With computers, nothing works on the first try. It takes time to get all the bugs out."

Taberah said, "I thought computers were logical."

Aed said, "Yes, Taberah, they are logical, and that's the problem. We are not logical; we hear what a person says, and know what they mean. But a computer does not know what we mean; it only knows what we say, and there are all sorts of subtle errors that a human wouldn't even notice, that a computer does not have the ability to correct. That monologue is quite good for a first run; if you aren't listening carefully, it sounds like a philosopher. You should be proud of yourself. How'd you like to have Chinese food for dinner?"

# Fortune Cookies

There was a rule in the Kinsella's house against bringing up subjects at dinner that were not understandable to everyone in the house; this rule was bent a bit to allow Taberah to explain his discovery. Dinner was over before they realized it; Taberah unwrapped his cookie, put it in his mouth before anyone could stop him, started chewing, stopped, and then spat out a piece of paper. He said, "What is this?"

Fiona and Clancy were both laughing too hard to explain; Aed said, "It's a fortune. You're supposed to take it out of the cookie before you eat the cookie. Look at it."

Taberah wiped off the piece of paper and read, "Exciting prospects come. Don't miss the opportunity."

He looked at the paper in disgust and said, "Why do you have this in the house?"

Nathella said, "It's a prediction or a piece of advice. It's just for fun."

Taberah looked at Aed and said, "Aed, you told me not to do astrology because divination is sin. This is divination. It is sin."

Aed said, "Taberah, it's not serious. Or at least we don't do them seriously; nobody believes that a fortune cookie will tell the future."

Taberah said, "If you cast a spell just for fun, is it less of a sin?"

Aed said, "I would never cast a spell."

Taberah said, "But you got fortune cookies."

Nathella said, "We didn't ask for them. They come with Chinese food."

Fiona said, "We are studying China in school now, and the Chinese do not eat fortune cookies, but fortune telling is very big in Chinese culture. People will not enter a building if a Feng Shui practitioner was not consulted about where to lay its foundations."

Clancy was looking at his fortune. The expression on his face was slowly turning to disgust. "Taberah is right. Mom, you've talked about

slowly turning to disgust. Taberah is right. Mom, you've talked about how we let sin into our lives without challenging it; this is sin."

Fiona said, "The fortune in a Chinese cookie certainly comes out of fortune telling — and when fortune telling is done, it varies from serious to lighthearted — like we take fortune cookies."

Nathella said, "If you would rather, we can throw the fortune cookies away when we get Chinese, or ask them not to provide fortune cookies."

Aed didn't say anything. He had expected Taberah to know things about whatever culture he was from that Aed didn't — but not to be able to see things in American culture that Aed couldn't. He had shifted, in his mind, from wondering why Taberah objected to fortune cookies, to wondering why he hadn't objected to fortune cookies.

What else would Taberah show him?

# Miracles

Taberah had been thinking throughout the day, although not about computers. When Aed got home from work, Taberah said, "This land is very different from any of the other ones I've known. Are even the miracles different? What are miracles like here?"

Aed said, "Beg pardon?"

"What miracles have you seen? What miracles have you been given?"

"Taberah, I've prayed for many miracles in my day, and I have had some prayer requests answered, but I have never been given a miracle — or seen one."

"Why not? Do you not know God?"

"Taberah, I speak to God, and he is with me. But I have never seen a miracle. I'm one of few people who believes they happen at all. Most people believe that miracles don't happen — some Christians believe that miracles stopped after the age of the Apostles."

"What? Why? Do they believe God does not love his children?"

"Of course Christians believe God loves his children."

"Then why do they not believe in miracles?"

Aed was beginning to see another difference between Taberah's culture — might as well call it 'medieval', not having any better words to describe it — between medieval culture and his culture. One side of Aed's realization was that Taberah's culture breathed the supernatural, might (for all Aed knew) find nothing unbelievable about a mountain being uprooted and thrown into the sea — and the other side was that Aed's culture had fought tooth and nail to exclude any consideration of the supernatural, had struggled to make it alien. There were hints of it in ten thousand places — in words like 'superstitious', which did not simply denote a particular kind of belief (a supernatural equivalent to practical

observations such as "A pin will more easily slide into a pole if it is greased"), but a propagandistic condemnation of that kind of belief and supernatural belief in general. 'Rational' was taken to mean 'materialistic', and — the manifestations were legion, too many for Aed to concentrate on one. He recalled with a chill the words of the Gospel, where some manuscripts said that Jesus did not, and others that he *could* not do many miracles in one town, and was amazed at their lack of faith. Aed had a queer feeling that —

"Taberah, I would like to take you someplace tomorrow, and show you something. It is my loss that I have not seen any miracles, that they do not happen when I pray. But I would like for you to see the forces that shape my culture, and are why I have never seen a miracle."

Taberah slept lightly that night; he felt both puzzlement and expectation, wondering what manner of strange sight Aed would show him.

# Even if They See

The lecture hall was nearly filled; the speaker walked up to the microphone and said, "Good evening, and welcome to the Campus Skeptics' first meeting this year. My name is Nabal, and this first meeting usually draws a large crowd — usually from hecklers who believe that what we are saying is false, but somehow never manage to prove it. I claim that there are no supernatural forces and never have been, that all of the interaction of nature can be explained by science, and that there is nothing that science can't explain. To prove it —"

Taberah was aghast. He elbowed Aed and said, "Aren't you going to say anything?"

The speaker reached into his backpack, and drew out a pair of pliers, a sheet of paper, and a cigarette lighter. He continued, "I have a sheet of paper and a lighter, and I am going to light this paper on fire. If there is anyone among you who has any kind of faith or magic, let him stop it from burning."

Taberah elbowed Aed again, and said, "Well?"

The speaker held the paper up, silent.

Aed found himself saying, "Nabal."

The speaker said, "Yes? Are you going to stop this paper from burning?"

Aed ignored the question. He said, "Do you know physics?"

The speaker said, "Yes. I am a senior with a double major in physics and mathematics."

Aed said, "If you know physics, then you know that physics says that the electrical charges in that piece of paper, if separated an inch together and released, would create a spark over a hundred times as powerful as a lightning bolt. Is that correct?"

The speaker said, "Yes. Actually, it's a bit more than a hundred."

THE SPEAKER SAID, "YES. ACTUALLY, IT'S A BIT MORE THAN A HUNDRED."

Aed said, "Very well. If you know physics, separate the particles and let's see that spark."

The speaker did not reply to this comment. He said, "Are there any other comments or distracting rhetoric — perhaps to conceal that the supernatural is not real?"

A young woman said, "I don't know if God will grant my prayer, but I am praying that that paper won't burn — as you would fight in a battle you would rather lose than not fight at all."

Nabal said, "Any other comments?"

Taberah was trying to think of something to say, but he was at a loss for words. The speaker tried to ignite the paper; the lighter sparked several times, but produced no flame.

The speaker walked over to the table and said, "My apologies for the coincidence. Does anyone have other lighters?"

A young man with a large Afro flamboyantly tossed a golden Zippo to the front of the room and said, "Try this, brother."

Nabal took the lighter and struck it. It produced sparks, but no flame.

He adjusted the lighter, and struck it again. A large yellow flame shot out, and began to lick up the side of the paper, to turn orange, to grow stronger, hotter. Nabal turned away from the flame and looked at the eyes around him — some smug, some saddened. The flame died out, became a thin stream of smoke, vanished. Nabal grinned and asked, "And now, where is your God?"

He continued to look, puzzled by the expressions he saw on the gathered faces. Then he looked down, and dropped the pliers in shock. The paper was not burnt to ashes. It wasn't even singed.

Aed looked at Taberah, and saw the one face in the room that was not speechless. He grabbed Taberah's arm, and said, "We need to go. Now." They slid out, leaving behind them sputters of "Chemicals and charlatanism can do a lot."

Taberah said, "Why did you leave? They were about to acknowledge something supernatural."

Aed said, "Taberah, I don't know how you did that, or what was going on, and I don't need to know. But do you remember the story of the rich man and Lazarus? Do you remember how it ended?"

Taberah said, "'If they do not listen to Moses and the Prophets, they will not listen even if a man rises from the dead.' Yes, but —"

Aed said, "Taberah, a man *did* rise from the dead, and those who killed him still did not believe. C.S. Lewis wrote that he knew of only one person who had seen a ghost, and she was positive it was a hallucination. The wind of the Spirit cannot blow where the cracks have been sealed; this age has exerted monumental effort to seal the cracks. You heard them speaking as you left. They are positive it was somebody's sleight of hand. George MacDonald, before Lewis, said, "Seeing is not believing. It is only seeing." Even I, who believe in a supernatural God, am filled with doubts over what I just saw — half of my mind is saying that it was an illusionist stunt. Even in the Bible, seeing miracles did not make people believe."

Taberah said, "I don't understand."

Aed said, "I don't understand either. Maybe you'll figure something out — oh! I just remembered a joke."

Taberah said, "Yes?"

Aed said, "The wars in the Middle East will only be solved by a political solution or by a miracle — by people working out an agreement, or by God telling people to get along with each other. The political solution would be God telling people to get along with each other, and the miracle would be people working out an agreement."

Taberah listened and laughed. "So you're saying it would take a different kind of miracle, a greater kind of miracle, for people to believe."

Aed said, "Yes. And a kind of miracle that doesn't just happen, even in the Bible. A kind that God only gives, if ever, as a blessing on hard human work. Prayer does not annihilate human roles. Maybe God only chooses to work the greater miracles through humans."

# Below the Surface

Aed said, "Taberah, there's something I've been meaning to talk with you about."

Taberah said, "Yes?"

Aed said, "What exactly draws you to New Age?"

Taberah said, "Music and time. Or rather, lack of awareness of time. There is something more than hurried time."

Aed said, "And New Age as a religion?"

Taberah said, "New Age is a religion? It seems much more like a people to me."

Aed said, "It's both. It is people who are drawn to a resurfacing of Gnosticism. Whether it is ancient Gnostics, or contemporary New Age, or medieval Knights of Cathare, it — what is on your face, Taberah?"

Taberah said, "I know the Knights of Cathare. It is so sad. Is New Age the same heresy?"

Aed said, "The mask ever varies, but it is the same heresy. The same mistake. The same attempt that has been weighed in the balance and found wanting. It's OK if you listen to their music, but try to stop there —"

Nathella walked in, looked at Aed, looked at Taberah, and said, "What is it that I see in your eyes, Taberah?"

Taberah said, "New Age music will never sound the same to me again."

Nathella looked into Taberah's eyes, listening, searching. She saw a homesickness and wistfulness, and suddenly thought of the Little Mermaid in Hans Christian Andersen's fairy tales, before Disney left its mark on the classic. The witch had exacted a terrible price from the mermaid — she would have legs, lovely legs, but she would never be quite like the humans around her. Every step she took would be on sharp knives. In a flash of intuition she saw that the knives never left Taberah

KNIVES. IN A FLASH OF INTUITION SHE SAW THAT THE KNIVES NEVER HURT TABERAH. He would always walk on sharp knives.

Nathella walked up, put an arm around Taberah's waist, and said, "Honey, will you come to my room? I want to show you something."

Taberah looked, and saw on the wall a yellowed plaque. He read:

Only faith can guarantee the blessings that we hope for, or prove the existence of realities that are unseen. It is for their faith that our ancestors are acknowledged.

It is by faith that we understand that the ages were created by a word from God, so that from the invisible the visible world came to be.

It was because of his faith that Abel offered God a better sacrifice than Cain, and for that he was acknowledged as upright when God himself made acknowledgment of his offerings. Though he is dead, he still speaks by faith.

It was because of his faith that Enoch was taken up and did not experience death: he was no more, because God took him; because before his assumption he was acknowledged to have pleased God. Now it is impossible to please God without faith, since anyone who comes to him must believe that he exists and rewards those who seek him.

It was through his faith that Noah, when he had been warned by God of something that had never been seen before, took care to build an ark to save his family. His faith was a judgement on the world, and he was able to claim the uprightness which comes from faith.

It was by faith that Abraham obeyed the call to set out for a country that was the inheritance given to him and his descendants, and that he set out without knowing where he was going. By faith he sojourned in the Promised Land as though it were not his, living in tents with Isaac and Jacob, who were heirs with him of the same promise. He looked forward to the well-founded city, designed and built by God.

It was equally by faith that Sarah, in spite of being past the age, was made able to conceive, because she believed that he who had made the promise was faithful to it. Because of this, there came from one man, and one who already had the mark of death on him, descendants as numerous as the stars of heaven and the grains of

sand on the seashore which cannot be counted.

All these died in faith, before receiving any of the things that had been promised, but they saw them in the far distance and welcomed them, recognizing that they were only strangers and nomads on earth. People who use such terms about themselves make it quite plain that they are in search of a homeland. If they had meant the country they came from, they would have had the opportunity to return to it, but in fact they were longing for a better homeland, their heavenly homeland. That is why God is not ashamed to be called their God, since he has founded the city for them.

It was by faith that Abraham, when put to the test, offered up Isaac. He offered to sacrifice his only son even though he had yet to receive what had been promised, and he had been told: Isaac is the one through whom your name will be carried on. He was confident that God had the power to raise the dead, and so, figuratively speaking, he was given back Isaac from the dead.

It was by faith that this same Isaac gave his blessing to Jacob and Esau for the still distant future. By faith Jacob, when he was dying, blessed each of Joseph's sons, bowed in reverence, as he leant on his staff. It was by faith that, when he was about to die, Joseph mentioned the Exodus of the Israelites and gave instructions about his own remains.

It was by faith that Moses, when he was born, was kept hidden by his parents for three months; because they saw that he was a fine child, they were not afraid of the royal edict. It was by faith that, when he was grown up, Moses refused to be known as the son of Pharaoh's daughter and chose to be ill-treated in company with God's people rather than to enjoy the transitory pleasures of sin. He considered that the humiliations offered to the Anointed were something more precious than all the treasures of Egypt, because he had his eyes fixed on the reward. It was by faith that he kept the Passover and sprinkled the blood to prevent the Destroyer from touching any of their first-born sons. It was by faith that they crossed the Red Sea as easily as dry land, while the Egyptians, trying to do the same, were drowned.

It was through faith that the walls of Jericho fell down when the people had marched round them for seven days. It was by faith that Rahab the prostitute welcomed the spies and so was not killed with

...and the prostitute welcomed the spies and so was not killed with the unbelievers.

What more shall I say? There is not time for me to give an account of Gideon, Barak, Sampson, Jephthah, or of David, Samuel and the prophets. These were men who through faith conquered kingdoms, did what was upright and earned the promises. They could keep a lion's mouth shut, put out blazing fires and emerge unscathed from battle. They were weak people who were given strength to be brave in war and drive back foreign invaders. Some others submitted to torture, refusing release so that they would rise again to a better life. Some had to bear being pilloried and flogged, or even chained up in prison. They were stoned, or sawn in half, or killed by the sword; they were homeless, and wore only the skins of sheep and goats; they were in want and hardship, and maltreated. They were too good for the world and they wandered in desert and mountains and in caves and ravines. These all won acknowledgement through their faith, but they did not receive what was promised, since God had made provision for us to have something better, and they were not to reach perfection except with us.

Nathella waited until Taberah had finished reading, and said, "Nowhere on earth is home to us. Heaven is home, and you have less of a temporary home than most people do. It hurts to have an earthly home taken away, but the healing of the hurt is not in finding another earthly home, but in finding a heavenly home — and once you have let Heaven be your home, you may find pieces of it on earth.

"That plaque was given to me by my mother; she had it for some time, and it was one of the last things she gave me. Now she's in Heaven.

"Inside your heart — and mine, and Aed's — is a God-shaped void. Only God can fill it. New Age music may bring a moment's relief, but the thirst is one only God can wholly slake." She beckoned to Aed, and the two of them gave Taberah a sandwich hug. "But we will try to make a place where you can be at home."

Taberah said, "Where's Fiona? I want to show her my time."

# Taberah's Time

Fiona said, "So, Taberah, how about your time?"

Taberah said, "Why don't we take a walk in the forest, and I'll think about how to explain it?"

They began to walk along the path, Taberah stopping and thinking every so often, but saying nothing. This continued for five minutes, fifteen, thirty, an hour — and Fiona began tapping her toes. Taberah stopped, and Fiona sat down on a log and began drumming her fingers.

"What are you doing?" Taberah asked.

"Nothing," Fiona said. "I'm just waiting for you to start explaining your time already."

"What about your hands and feet? What are you doing with them?"

"I'm just tapping them, because I'm getting impatient waiting for — ooh... Taberah, are you walking around and not saying anything on purpose?"

"No; I'm thinking about how to explain time to you."

"Do you understand why I'm drumming my fingers?"

"No. Why?"

Fiona began to realize something. She decided to try not to drum her fingers, or pace, or tap her foot, but just sit. It turned out to be harder than it sounded. Fiona kept noticing herself fidgeting; even when she thought to herself, "It's been a while and I'm not fidgeting," somehow she realized that her fingers were drumming on her legs.

"Fiona!" Taberah spoke, and Fiona suddenly realized that she had lost track of time — and was not fidgeting. "I do not have a different time awareness, so much as not having an awareness of time. There are moments for me, times with other people, times doing a task, and times waiting — watches are fascinating to me, but even when I watch them, I watch the rhythmic motion, and more often than not forget that the

watch the rhythmic motion, and more often than not forget that the motion is measuring something that's supposed to be time. That time is fickle; it seems to speed up and slow down. The first lesson in medieval time is to let go of it."

Taberah walked a bit further, stopping a few times, and Fiona still caught herself fidgeting — but she began to catch herself completely relaxed at times. Fiona wondered when he would finally speak, and then was surprised when he broke the silence — was he done thinking already? Taberah said, "There are moments — I do not know how to say it in your language — when you are totally absorbed, rapt in concentration, when you lose track of time because you are so completely filled. It is not so much time as a foretaste of eternity. These moments cannot be commanded or controlled, although there is a cooperation with them; they are a gift from God. Those moments are my 'time', if time is the appropriate word. 'Timelessness' is better. That is the apex of the time I live in, and I am sorry not to see you live in that time more."

"So how do I enter this time? You've told me what time you live in, but not how to get in it."

Taberah thought briefly and said, "I can't tell you that. Pray, and God may grant it. But I don't know how to enter it."

# Worship

A couple of Wednesdays had passed since Taberah had first asked to worship with the Phoenix Society; something had come up, and Taberah had not been aware that time had passed. This time around, Fiona was free, and they entered the room to be warmly greeted.

The service began with hugs and lively music. Taberah was caught up in the singing; Nathella wondered if one of the moments Taberah described would descend. Or had she always had them and not been aware of them? The music gave way to prayer, Scripture, sermon; as communion came, Fiona could see that Taberah was almost in a trance, but she was not. The worship was followed by a meal; Taberah felt a tap on his shoulder, and wondered why someone would tap his shoulder. He looked up.

The young woman who had spoken up at the skeptics' meeting studied his face closely and said, "You were at that meeting and left right after the paper burned weirdly. What did you do?"

Taberah looked at her and said, "Nothing. I prayed. Same as you. God heard our prayer."

She said, "That's not the whole story."

Taberah said, "It's as much of the story as you'll believe."

She said, "What part of the story won't I believe?"

"That I am medieval."

"You mean that you try to be like a medieval, even growing out a beard?"

"No, I mean that I am medieval."

The student's gaze rested on Taberah. After a while, she said, "I don't know what to make of the claim. You're not lying, you don't seem mistaken, and I can't believe what you say." She paused, and said, "And I didn't believe the paper when I saw it. I prayed for it, but I didn't believe

didn't believe the paper when I saw it. I prayed for it, but I didn't believe it." Then she blushed slightly, and said, "I've forgotten my manners. My name is Ceinwyn. What is your name?" She reached out her arms to embrace him.

Taberah enjoyed the hug; she was soft, and in her touch he could feel a spirit that was alive. He said, "My name is Taberah. I'm staying with Aed."

"Who? Is he a student here?"

Fiona said, "He means Dr. Kinsella."

Ceinwyn said, "Dr. Kinsella. You mean —" A look of dread crossed her face, and Fiona said, "Yes, he's teaching this young man his corrupt ways." Ceinwyn smiled, and said, "I have respect for anybody who can do that."

Taberah said, "Do what?"

Fiona said, "You know. What you did to win the Turing Award."

Fiona covered her mouth; as soon as the words left her mouth, she realized she shouldn't have said them. Half the room was staring, and the other half soon joined. Then she said, "Um, I would like if you could kind of forget what I said; my Dad's done a lot to try to ensure the privacy of my friend."

A young man said, "He won the Turing Award?"

Another man stood up and said, "I have a strong temptation to ask this brother for his autograph, and I would like to ask you to join me in resisting it. We need to treat him as an honored guest but nothing special beyond that, and treat his award as a matter among brothers. It has to have the highest level of confidence."

Ceinwyn looked at Taberah and said, "I am sorely tempted to ask you something more about the paper, but..." her voice trailed off.

Fiona said, "I think he may be right about being medieval. Or almost right. But there are some things about him that just don't fit. He makes my head spin, and he says the queerest things."

Another student said, "Like what?"

"Like saying that he stole a relic from a cathedral."

The student said, "Hmm... I'm a history major as well as an English major, and medieval culture was very different from ours. My name's Tala, by the way. Stealing relics was actually fairly common. Taberah, did you hear about the conversation between Saint Peter and Saint Augustine?"

Taberah said, "No, what did they say?"

Fiona said, "And that's the other thing. He gets the queerest things wrong. It's not just that he doesn't understand why people who lived in different centuries can't have talked with each other. He didn't understand why a cathedral couldn't have had two heads of John the Baptist, one as a boy and one as a man. He saw the logical contradiction, but didn't deduce an impossibility. Plus, he's so short and scrawny — not at all like the bulk you'd expect of someone from the age of knights in shining armor."

Tala said, "I don't want to explain all of why, at least not right now, but a medieval would be quite likely to make those errors. And medievals *were* that short and scrawny — their diets stunted their growth. It's only in the past couple of centuries that people started to look as tall as you are me — and (I won't name names) some people today still haven't caught up." He winked.

A short, bearded student said, "I'll have you know that I represent that remark."

Fiona said, "Ooh!" and then, "Diet. He talked as if he had grown up eating mostly bread, bread with pebbles in it."

Tala said, "I think he's about as good of a mockup of a medieval as you could ask for. How and why, I don't know — there've been a lot of queer things that have happened, most of which have an uninteresting explanation. Even with what I've seen, it would take a lot to convince me that he had — Taberah, if you are a medieval, why are you in the twenty-first century?"

Taberah said, "What is the twenty-first century?"

Tala said, "Never mind that. How did you come to be here?"

Taberah said, "I was walking with two of my friends, when an angel called me. I took his hand, and I was in the forest outside Aed's house. Then —" and he started telling the story. It was after midnight when he finished; Ceinwyn said, "Taberah, I have many questions to ask you, but some of us need to get to bed. Would you consider visiting us again?"

Taberah said, "Certainly."

That night, as Tala lay in bed, waiting to fall asleep, strange images flitted through his mind. He saw a doorway between the medieval world and his, shimmering, the door beginning to open. A burst of light flashed around; Tala looked around and saw no one, and then looked to the doorway

u001 way.

The door had been blasted off its hinges.

## Second Birth

Taberah said, "Remember how we were talking about medieval time, and how we left things not finished? I have thought more about your becoming medieval."

Aed said, "Yes. Do you want to can turn back the clock?"

Taberah said, "What does 'turn back the clock' mean?"

"It means reverse the flow of time, undo the changes that have happened."

Taberah looked puzzled. "Why would anyone do that?"

Aed said, "My culture was once, a long time ago, medieval. Now it is not. We have cars, computers, and clocks. Do you want to turn that back to swords and armor? Do you want to un-invent electronics?"

Taberah said, "It is funny that you think of medieval in terms of things. Wealth is not medieval. Wealth is only an avatar; it is not the true person. Medieval is not knights on horseback."

Aed said, "Then what is medieval?"

Taberah said, "Medieval is faith. Medieval is rationality. Medieval is carving the back of a statue. Medieval is a way of life."

Aed said, "But the medieval era is gone. How can people in the four hundred and seventh semi be medieval?"

"What is a semi?"

"I'll explain it later. How can people today be medieval? We can't just automatically be medieval the way the medievals were."

Taberah closed his eyes in concentration; it took him a long time to get the point. Aed was asking him for the answer to a difficulty that simply didn't exist for him, and Taberah was trying hard to see the matter through Aed's eyes — and at last he did.

"Aed, do you know Jesus talking with Nicodemus?"

"Yes."

IES.

"What was the question Nicodemus asked Jesus?"

"'How can someone old be born? Can a man enter his mother's womb to be born again?' I know this question well. It has been ridiculed, but it is a serious question, even profound. Can a man turn back the clock and —"

There was a look of dawning comprehension on Aed's face, and suddenly he was grasping what was *medieval* — not lords and vassals, not illuminated manuscripts, not unending quirks and questions from a visitor whom he still could not wholly believe was medieval — not any of these things, but Aed grasped what was medieval. He saw the force behind cathedrals, the abstraction that showed itself in the question about dancing angels, the community shared between the people and, in all of these things, he saw a little piece of his heart.

Aed saw equally why Taberah had asked the question: that turning back the clock was neither possible nor necessary, that the second birth was of a different type than the first one, and one that could still happen with much water under the bridge, that the passage of time in itself had almost nothing to do with being medieval. He saw that the fundamental beauty of the Middle Ages was one that people from his age could share — not in exactly the same way, but it didn't need to be. People could be medieval today just as they could still be Christian today — it involved swimming upstream, but it was worth it.

Aed looked at Taberah gently and said, "Taberah, you said that you were medieval, and asked what time I was from. I am medieval, too."

# Questions

It seemed but an eyeblink and another week had passed; Fiona and Taberah were once again in the crowded worship room, and there was an audible excitement. The service was merry and passed quickly, and at the meal afterwards, Ceinwyn came up to Taberah and said, "I know what the wrong questions are to ask you, Taberah, or at least questions it is not good to ask. What are the right questions to ask you? What do you wish others understood about you?"

Taberah closed his eyes and rocked back and forth on his chair. Tears began to appear. When, after a long time, he did not answer, someone told Ceinwyn, "Ask him another question." Taberah, without opening his eyes, said, "That's the best question. That is a very good question to ask of anyone.

"I have had many people try to understand me, but most of them don't. I don't know why not. Maybe I'm just hard to understand. Some of you think of me as medieval, and I am medieval, but I'm as different from other medievals as they are from you. Even how I am talking — it is a means of talking that I learned from your time. I have seen different peoples, and the way in which I am different is not the way one people varies from each other. Maybe there is something wrong with me. I don't fit in anywhere. I can adapt some — I've lived in many places — but I'm never completely — I don't know the word. I'm not making sense. I'm not saying anything. Never mind. I can't think like other people. You asked a good question, but I don't have a good answer for it."

Emerant was pierced by the look on his face. Emerant was intelligent, if not exceptionally so, but she was a psychology major in the middle of a senior thesis studying of the psychology of extraordinary intelligence; she followed all three major schools: traditional Stanford-Binet intelligence, multiple intelligences (there were now twenty-three agreed upon

multiple intelligences (there were now twenty-three agreed upon intelligences among most multiple intelligence theorists), and the interactionist school, which studied its intelligence as an emergent property arising from the interaction of the basic aptitudes studied by multiple intelligence theorists. Being familiar with all three schools, Emerant regarded the traditional school as unfairly neglected, and it was that school that she thought of now. The pain Taberah voiced was not at all unique; it was part of why the gifted had joined the ranks of activist minorities filled with anger and seeking redress for grievances that were always perceived to be getting worse. There was more to it than just a taboo (now being effaced) on divulging a high level of intelligence, or a stereotype that for a long time was not realized to exist — a stereotype embedded in words such as 'geek' and 'nerd' that only now were becoming as socially unacceptable as racial slurs. The more gifted a person was, the more differently he thought, and that is why there had been posited a range of optimal intelligence, with IQ between 125 and 145 — beyond the upper limit of that range, a person thought differently, so that his giftedness became a mixed blessing. People with IQs over 170 tended to feel like they didn't fit anywhere. From psychological, emotional and social cues, and the Turing Award, Emerant had no doubt that Taberah's IQ was over 170, probably over 180 — how much further, she did not bother to speculate. Above, at any rate, the point at which IQ tests cease to effectively measure, and well beyond the point that pain would begin to — Emerant wondered what a boy of normal intelligence would think and feel growing up in a society of people who were severely mentally retarded. He would definitely perceive that he was somehow different from the others, and attribute it to either "Something's wrong with them," or "Something's wrong with me." Taberah had evidently taken the latter route, and — where to begin to explain all this to him?

She walked up, placed an arm around Taberah's shoulder, and said, "Taberah, Taberah. I have a number of things to explain to you, but the way you think is not worse than anyone else's — just different and special. You haven't met anybody who thinks like you (nor have I, apart from you), because God has only made a few people that way. I understand your feelings, and I would feel the same way if I were like you. I love you and I am glad you're here — so does everyone in this room. May we sing a healing song for you?"

"What's a healing song?" Taberah asked.

"It's a song we sing to God, as a prayer for you that you may have healing."

"Yes, please." Taberah had been touched by Emerant's words, but it was her eyes most of all which caught him. Her eyes bore the embrace of a warm, generous heart, and silently spoke the message, "My heart has room for you." And Taberah realized that he had a foster family who cared about him deeply — he decided to thank them for it. A song began, and he realized that the people had gathered around him, placing their hands on him. The music seemed to Taberah to rise like incense:

*Lord God of Heaven,  
Hold this child in your arms.  
Fill him with your love.  
Creator of Heaven and earth,  
Fill his heart with your peace.  
Let this peace flow through him.  
Spirit of light and love,  
Lift from him all darkness.  
Lift him up to Heaven.  
Let us be his brothers and sisters,  
Your love made manifest.  
Fill him with your love.*

As the song ended, Taberah looked at the faces around him and wondered, "Is this what Heaven's like?"

# Mysticism

"Fiona, I was thinking, and I realized a better answer to Ceinwyn's question. The answer is this: I am a mystic."

"Oh, Taberah," Fiona said, "We already knew that. Dad mentioned that you had done some astrology, and now there's that piece of paper."

Taberah said, "Huh? What does mysticism have to do with that?"

Fiona said, "Huh? Isn't the connection obvious?"

Taberah said, "No. I have stopped astrology because I trust Aed, but astrology was not any strange mysticism; it was to me like what you do in reading a weather forecast. And the paper — I never thought of that as mystical. I just prayed as others were praying, and God gave what we asked for. That is hardly mysticism."

Fiona had difficulty believing that all that was going on was that Taberah had asked God, but she mentally waved this aside. She asked, "Then what is mysticism?"

Taberah said, "Mysticism is living in the fire of God. It is contemplating and gazing on his glory, and for me it is action in that glory. You are concerned with getting things done, with practicality, with results; I happen to get things done, but it is not what I am concerned with. Few things are needed, really only one; I occupy myself with that one thing. That is the heart of mysticism, not astrology or saving a piece of paper."

Fiona said, "But what does your mysticism *do*? What mystic powers are you striving to develop?"

Taberah said, "What a funny idea, mystic powers! Which is greater — getting something done, or the reason getting something done is desirable in the first place?"

Fiona said, "I suppose, what made it worth getting it done."

Taberah said, "Correct. Mysticism is not a way to get things done; it is

Taberah said, "Correct. Mysticism is not a way to get things done, it is a 'why' that is greater than getting things done. Mysticism is not a way to do something else. Mysticism is worthy in itself."

Fiona asked, "Then how are you a mystic? You say that you are the son of a merchant, that you have travelled to many places and had adventures. How does mysticism fit into that? You haven't retreated into a monastery to spend six hours a day praying; you've already managed to cause a stir. Is that more important than mysticism? Or are you a superman who can do one on top of the other?"

Taberah said, "I find your question confusing. My actions are not more important than mysticism; they are the shape that part of my mysticism takes. I do not see action as something added to mysticism; it is an expression. I am seeking God's glory by talking with you now. I have heard a saying, 'Too Heavenly minded to be of any earthly good,' and I think it embodies a mistake. You cannot be too Heavenly minded to be of any earthly good. You can quite easily be too earthly minded to be of any earthly good. Being heavenly minded is itself of earthly good, whether or not it does things in an obvious manner; that is one of many reasons why, of the nine orders of angels, the highest six gaze only on the glory of God — it is but the lowest three who are ever sent to earth. It is a right ordering. Mysticism is sharing in the truth that the angels share in, and for me that truth takes an active form."

Fiona said, "Does this mysticism relate to your time?"

Taberah said, "My time relates to this mysticism."

"How can I enter it?"

"Seek God, and ask him how you are to enter it. He will show you."

# Heaven

Taberah walked out of the computer room, thinking loudly. Aed looked at him, and simply waited for him to start explaining.

"Aed, I was doing some reading today on embryology; what your philosophers have thought of is fascinating. Something in my mind was speaking, and I realized another deep difference in belief. Medieval people believe that they're going to Heaven."

Aed cleared his throat and said, "All Christians believe that, Taberah. It's a basic doctrine."

Taberah said, "Then why does your people not act like they believe they're going to Heaven?"

"How does someone act like he believes he's going to go to Heaven? Does he kill himself to get there faster? You should know better than that."

Taberah paused in thought for a moment and said, "How can you believe you're going to Heaven and not know a change in your actions? That's like believing food nourishes you, but not knowing what eating is like."

Aed had no immediate reply to this. He asked, "How does belief in Heaven change your actions, Taberah?"

Taberah said, "In embryology, one studies how a person is becoming ready to be born and live outside the uterus. That is the whole purpose of being an unborn child — why do the texts leave the word untranslated as *foetus*? Did the English translators of your texts not know how to render that word from Latin?"

"Later, Taberah. You're getting side tracked."

"Some of the unborn child's motions are useful there — such as blood pulsing about the body. There are others that have no use in the uterus, such as sucking and kicking. The question is not how to arrange things to

such as sucking and kicking. The question is not how to arrange things to most pleasurably remain an unborn child, but to best prepare for birth and the world beyond that.

"Your people does not understand how this symbol reveals Heaven. They think that the point of living on earth is to make as much change on earth, and make earth as comfortable a place as possible, and — I was a long time in coming to understand political ideology. Authority is necessary, and there are questions about how to best govern, to praise good and punish evil. But political ideology is not just about this — it is about how to use government to turn earth into Heaven."

Aed said, "I do not understand. Do you mean it is wrong to try to make earth better?"

Taberah said, "All of the saints made earth better. Good deeds are an important part of how a soul is made ready for Heaven. But a centeredness, a focus on making earth better is not possible. Or it is possible, but leaves people more poorly prepared for Heaven, and more poorly equipped for earth. It is — I do not know how to say it. My father told me, 'Drink wine to live. Do not live to drink wine.' If I were to live to drink wine, I would be disordered. The wine would ensnare me. Trying to live on technology is trying to make technology something it cannot be. It can pacify a spoiled child; it cannot make him well-raised. Your people is concerned with how to pamper and pacify a spoiled child — and it took me the longest time to understand that not simply did I stumble on a very rich man's house, but that so many people in your society have wealth not only to have as much bread as you need, but as much meat as you want, and you do not even think of it as costly — while mine is concerned with how to raise him well to grow into a man. In the Great Chain of Being, man lives between the beasts and the angels; it is the beasts who have this life on earth and its pleasures as all they own, and the angels who eternally gaze on the glory of God. Believing in Heaven means becoming more like an angel; here, I have seen heroic efforts to live the life of a beast."

Aed sorted this through. It had been a while since he had thought of the Great Chain of Being, and his thoughts about it moved sluggishly. Apart from that, he began to see — and more than see, he began to believe and know — why Taberah would look around and be convinced that Aed's culture did not believe in Heaven. With a chill, Aed realized that he could not remember the last time he had thought about how his actions were

preparing him, or failing to prepare him, for the eternity before him. Slightly later, and with an equal chill, Aed realized that he could not remember the last day he had not thought about how to shape the world around him so as to bring pleasure. He slipped too often in thinking of his teaching as a way to prepare his students for the world it would face — which it no doubt was, but if that was *all* it was, then... Aed asked Taberah, "Taberah, how can I do something that will prepare me for the next life? What is one thing I can do?"

Taberah thought for a second, and said, "Close your eyes and grow still, and wait."

Taberah waited a second and said, "You're wanting to get this over with. Stop that. Want to do this."

Time passed. Aed's breathing had stilled. Taberah said, "Now thank God for seven things he has given you."

Aed took another breath and slowly said,

Thank you, God, for my wife Nathella.  
Thank you, God, for my children, Fiona and Clancy.  
Thank you, God, for my professorship.  
Thank you, God, for my broken garage door. It means I have not only a house and a car, but even a building to protect my car from the elements.  
Thank you, God, for the headaches I have after talking with Taberah. They come from a person for whom I am very grateful, and who challenges me in ways I never thought possible.  
Thank you, God, for the hope of Heaven.  
Most of all, thank you, God, for yourself.

Taberah smiled, and said, "You have now done one action to prepare yourself for Heaven."

Aed said, "Is it over already?"

# "Life"

Taberah looked out; there was depth in his gaze, a gaze that was somehow present and remote at the same time. A short time ago, Fiona would have thought he was staring at her; now, she understood that he was looking past her. It relieved the feeling of being under a microscope.

Fiona sat down and said, "What are you thinking of, Taberah?"

"I don't know how to say it — in any language. It is another part of the answer to Emerant's question."

"Can you try? Can you say something similar?"

"I — live. I don't know how to explain. I experience things intensely. Sometimes, when I drink wine, I am not aware of anything else —"

"You get drunk? That is living?"

"I not know how to explain. I do not get drunk. It is when I am drinking it, the taste — it also happens with thinking, and praying, and music."

When Taberah said 'music', Fiona caught a glimpse into what he was saying. She was transported back to his first chant, when the whole family had been lost in his voice — no, that wasn't quite it. They had been lost in the light that was shining through Taberah.

An idea came into Fiona's head, and she said, "Taberah, why don't you get your lute out, and I'll go to my keyboard, and we can play together? I think I'd understand you better."

They went to the practice room, and Fiona set up her keyboard. "What songs do you know?"

"I know many songs from the lands I have travelled in. But I do not know songs here; I haven't played with musicians. Ooh! I know your church songs!"

Fiona played songs in several different styles — ancient songs, classic hymns (meaning the contemporary songs of days past, drinking tunes

hymns (meaning the contemporary songs of days past, drinking tunes such as "A Mighty Fortress Is Our God," and so on), "contemporary" music (meaning roughly three groups: music that had been contemporary in the more recent past, music that represented an unsuccessful attempt to imitate the contemporary secular style, and music that combined both attributes), songs of a new musical renaissance that did not attempt to follow either mold, but borrowed from both and brought a new light... After one of the tunes, Taberah said, "That's the one! I want to play with that song."

Fiona slumped and said, "No, Taberah, not that one! It's awful! It was in bad musical taste when it was written, and it's in bad musical taste now. One of my girlfriends said that it sounds better when it's sung off-key."

Taberah said, "I know. You've already told me that. That's why I want to work with it."

Fiona had enough of her mother's perception to realize that arguing with Taberah now would be a losing proposition. So she resigned herself to playing harmony, leaving the Taberah the melody.

The first time through, Fiona was able to shut out the music; she expected a repose after going through once, but Taberah immediately started playing again. She kept up with the melody, but now Fiona was not able to ignore the music. Then Taberah started to improvise slightly; he made a change here and there, and then he started making only musical questions that required her to think of an answer in the accompaniment. This required Fiona to plunge even more deeply into the song. After a time, Fiona was too engaged in the music to think about how bad it was.

Time passed, and Fiona slowly became aware of something else. The music was still terrible, but she saw a luminescence shining through it. Then she realized that they were working together, and a strange beauty was emerging from the music. She played, fascinated, and gradually began to see a beauty like that of a rusty truck in a desert — a (she did not know the word) beauty that can't be found in a place that is polished and perfect — there is no room for it. She was fascinated by the music that was flowing around and through her. More time passed, and then a flash of insight struck and her hands froze on the keyboard; it was as if a juggler tossing seven glass balls stopped, and they fell and shattered. Taberah switched off the keyboard, and relaxed his hands. "What

happened, Fiona?"

"I realized something, Taberah. I had an epiphany."

"What?"

"I had finally entered your time, Taberah. I entered your time."

# Intelligence Emerging

Aed sat and thought about the output of the artificial intelligence program. Trying to decide whether it functioned intelligently was like — no, that wasn't it. Aed couldn't tell what it was like.

Intelligent or not, it was at the same time familiar and alien. He had worked with the algorithm further, so that it stored a history in its state, drawing on the algorithm that had won the Turing Award, and the arguments were coherent — but arguments such as he had never seen before. Any one paragraph of its output could be mistaken for human, but there was something undefinably strange about it; he could tell what the computer was arguing, but not why. Aed slapped his forehead; the arguments were evidently intelligent enough to tempt him to think of the computer as human.

Aed spent a long time trying to think if the computer's rationality was something comparable to human, or even if that were sensible to ask. Dijkstra had said, "Asking whether computers can think is like asking whether submarines can swim." Aed thought for a nuance; he thought it was closer to the question of whether a racecar can swim. Or an oven. Except that the answer was not "No, but it can do something comparable;" an answer of "Yes, but it is not comparable" would have been closer.

Aed thought for a moment, and then went down to the computer computer and navigated. An avatar was shortly before him; it said, "Aed! Still up to the usual trouble?"

"How are things in the philosophy department? I heard you've got a new tenure track position added. I'm actually up to worse trouble, now."

"I'm not surprised. How can I help you?"

I'm not surprised. How can I help you?

"What courses are you teaching this semester?"

"I'm teaching three courses, all of which have a paper due shortly. Get something in the gradebooks for a preliminary report. I'm teaching 101, *Introduction to Philosophy*, 234, *Philosophy and Contemporary Movements*, and 312, *Integrative Metaphysics*. Have you encountered yet another guest lecturer that you want me to cede precious lecture time to?"

"Actually, no. I was wondering if you could give a paper to be graded by your TAs for each of the assignments."

"Uh, OK. May I ask who the paper is by?"

"I'm not telling."

# Role Play

Clancy said, "Taberah, have you been to the pool at all?"

Taberah said, "Pool? Why? To drink?"

"No, to swim, silly!"

Taberah stiffened and said, "I swam once, when I fell from a bridge. I don't like swimming."

Clancy said, "Will you come along? You don't have to go in the water. We can hang out on the deck if you want. The pool will close before too long; it's not so warm."

Taberah was careful not to sit too close to the water's edge; falling in once had been plenty for him. He watched the others with trepidation, and tried to grasp that they were in the water for pleasure's sake, and did not need to be rescued. The swimsuits gave him a shock as well. He had finally gotten adjusted to the fact that these people were not used to being naked, and seeing trunks and bikinis was a bizarre sight to him.

Fiona climbed out of the water and sat down on the chair next to Taberah; Clancy was on the other side, whistling a bird song to the robin on the lines overhead. Fiona told Clancy, "You know, it's been a long time since we role played."

Taberah asked, "What is role play?"

Fiona said, "It's — you'll see. But you'll have to make a character. Role playing is *in* this semi."

Taberah asked, "What is a semi?"

Fiona thought for a moment and said, "Semi-decade. People used to not be conscious of what era they were in, and then they were conscious of the century, and then they thought of what decade they were in, and now it's the 5 year semi-decade."

Taberah wondered why people would be time-conscious in that way, and why the era would be that short, but was beginning to understand

and why the era would be that short, but was beginning to understand that certain things were wiser not to ask. He said, "I want to be a minstrel."

Fiona said, "My character is a Jane-of-all-trades named Deborah. Clancy is GMing, uh, game mastering."

Clancy said, "You are both in a forest; your ship has crashed. There is a spring of water nearby. You hear sounds like footprints nearby."

Fiona said, "Do the footprints sound human or animal?"

Clancy said, "You can't tell for sure, but there is an animal quality about them."

Fiona said, "I'm going to get my laser gun out."

Clancy said, "What are you going to do, Taberah?"

Taberah hesitated and said, "Can I hide and nock an arrow?"

Clancy said, "Yes."

"You see a huge bear on a chain. At the other end of the chain is a massive man in a rags."

Fiona said, "I am going to say 'Hello.'"

Clancy said, "He does not seem to recognize the word, and there is uncertainty on his face."

Taberah said, "I am going to put back my bow and arrow, and take my harp, and begin to sing."

Clancy paused, and said, "The bear sits and listens; the man does, too."

Taberah said, "I am going to take out some of my food and feed it."

Clancy said, "Both bear and man seem pleased at the food. The man looks at you longingly, and starts to walk into the woods."

Taberah said, "I'm going to follow him."

Fiona said, "I'll follow, too."

Clancy said, "He gets to a cave; upon following him in, it takes some time for your eyes to adjust to the twilight. The cave is a crude environment, with assorted items around."

Fiona said, "Such as?"

Clancy said, "Some burnt-out transformers, an oddly shaped granite bowl, a corroded lamp, and some empty containers."

Taberah asked, "Are the containers usable?"

Clancy said, "No; they were disposable containers. They —"

A voice from the pool shouted, "Hey, Kinsella! Want to join us in a game of Marco Polo?"

Clancy shouted, "Not now! I'm entertaining someone."

Fiona said, "What is in his eyes when he looks at us? What is in his eyes when he looks at me?"

Clancy said, "Fear, suspicion, hope, disbelief, a forlorn longing."

Fiona asked, "Does he want to be with our civilization?"

Clancy said, "He wished that at one time. He is now uncertain about what he desires."

Mist came into Taberah's eyes. Fiona turned to him and said, "What is it, Taberah? Is something bothering you?"

Taberah said, "No. There is something about man that —"

Fiona sat silently, waiting.

Taberah said, "Before I left medieval time, that was home. Now, even if I return to it, it is not home. I am part of this time now, and at times I let Heaven be my home, and at times I find Heaven, but other times — I am learning not to be in this state, but it catches me."

Fiona wrapped her arms around Taberah, and said, "Honey, why don't you come home? We can be with you while you heal."

Taberah got up, and joined Clancy in heading for the locker room.

# Rated

Aed received the three copies of the computer's ramblings that had been submitted to the philosophy TAs. The first paper had been submitted to the TA for philosophy 234, *Philosophy and Contemporary Movements*:

Paper is nuanced and addresses many fundamental issues of relevance to contemporary movements. Nonetheless, its reflection of nuance is not matched by any kind of logical order; a logician would grade this paper harshly. B

Aed chuckled. This grade was a mark of success; it was the first time he had seen someone complain that a computer understood nuance but was logically deficient. He turned to the next copy, the one submitted for philosophy 312, *Integrative Metaphysics*:

Paper contains brilliant application of argument from multiple domains of philosophy, combined with the indescribable eccentricity that heralds a new development. Ideas are not fully developed, but even in embryonic form, there is a raw energy to them. I have shown your paper to the professor, and she concurs with my judgments. You should do graduate work in philosophy. A+

Aed said, "This is encouraging. What did the TA for philosophy 101 have to say?"

Paper is arrogant and pretentious, trying to be simultaneously similar to and different from existing philosophies, and combines the worst points of both. Classic example of fake intellectual who strings

together a lot of things that sound philosophical and thereby considers himself a philosopher. F

Aed laughed; the 101 TA had picked up on something that the others hadn't. Very well, then; he was pleased with the results, and he was ready to announce what Taberah and he had done.

# What Would You Like To Be?

The days passed quickly; the leaves on the trees turned bright colors, and Taberah seemed a shade blueish. There was another shopping trip made, in which Taberah received a warmer set of clothing; this trip passed without any remarkable events, and Clancy said he could take Taberah shopping for clothes alone next time; Nathella accepted. In watching Taberah, Nathella was reminded of her roommate freshman year in college. A young Sudanese woman, she found the cooler seasons to be bitterly cold.

A mug of spiced cider found Fiona and Taberah relaxing over a fire; Taberah was watching a leaf fall from its stalk. Fiona looked at Taberah and asked, "What would you like to be for Halloween?"

She was not surprised by his reply, "What's Halloween?", nor his followup, "I think I'd like to be myself. I don't fancy turning into a rock or a bear." She took it as an opportunity to explain a cherished time of year. "Halloween is when you dress up as something fanciful, and pretend to be something different for a day. You can go around from door to door, and knock, and show people your costume, and they give you candy. I want to be a fairy, wearing a shimmering white robe with draping sleeves and a low neckline and a long, flowing skirt, and with translucent, glittery wings."

Taberah said, "I don't know what I want to be. I was already a jester in my avatar. I know! I can dress as a night-man, with shadow-black clothes that melt in the night, and soft shoes that make no sound, and —"

Fiona said, "No. Too many criminals out at night; you'd be mistaken for one. You need to wear bright clothes and not look threatening."

Taberah said, "Euh... I could be a philosopher!"

Taberah said, "Eum... I could be a philosopher."

Fiona said, "And how does one dress as a philosopher? All the philosophers I've met dress like everyone else. No, wait! You could be an ancient Greek philosopher, with toga, and laurel, and — whatever else you think would make the point."

Taberah said, "Where do we buy these outfits? Are they in a section of the store I haven't seen?"

Fiona said, "Well, there are places that sell Halloween costumes, but they aren't very good — a mask and a hat and some very flimsy cloth. There are places that rent them, and some of those are better — but you only have them for a day. In our family, we have a tradition of making them. We buy cloth and patterns, and cut them out, and stitch them together. It's a great deal of fun — almost as much fun as wearing them. I can show you old costumes I have in my closet; I've been a princess, a space ranger, an alien, an ice cube, a —"

Taberah said, "How did you dress as an ice cube?"

Fiona said, "Dad did that one. We got a big cardboard box, painted it blue and white, and got a white shirt and white tights for me to wear underneath. That costume is — let's see, I think it's being used to store shirts in the attic. Or something; we only go up in our attic when we're putting something up there."

Taberah said, "I was up there. It was fun; it was like climbing cliffs. Only this time there weren't brigands chasing me. I think climbing's more fun when brigands chase after you."

Fiona shuddered, and said, "To each, her own. I'd be scared out of my wits."

Taberah said, "I was scared out of my wits. And I was having fun."

Fiona said, "I guess we all have our own eccentricities. Our attic's not nearly as silly as my Dad is at times; you should see him play charades. The last time we played at a family gathering, he was jumping around with a vacuum cleaner, and humming 'Oh, when the saints go marching in!' I always remember what Dad did, never what he was — when I watch him, I get the feeling that the game isn't about really about trying to help other guess what on earth you are."

Taberah said, "Your Dad understands games."

Fiona said, "How's that? He usually diverts games off their course."

Taberah said, "No. He changes their appearance when he gets them on course. A game on one level is about following rules in some sort of

contest — but people would never play games if that was all there was about it. It is a pleasant contest to enjoy other people — and it sounds like your father has found a shortcut to enjoying other people. Most people need the long way about; they can't have fun unless they've carefully earned it. There are a very few people who can take shortcuts, and a very, very few people who can make others feel good about it."

Fiona thought for a moment, and said, "Taberah, I didn't know you were a philosopher."

Taberah said, "I am. You didn't know that? But 'philosophy' means something different here than in my lands. Philosophy in my home means a broad kind of learning, that touches many different places. I gather that your science is derived from natural philosophy, the philosophy that explores the natural order — but there are subtle differences that I don't understand. Maybe that it's separated from the rest of philosophy. I understand that professors at your father's university are called Doctor of Philosophy, and their inquiries are parts of philosophy, but they are not philosophers. 'Philosophy' now means something narrow, dull, not connected with life — some philosophers try to make philosophy relevant, but our philosophers did not need to make philosophy relevant because it already was. Philosophy can be different."

Fiona asked, "Do you think our culture is impoverished?"

Taberah asked, "What is a culture?"

This time Fiona was caught off-guard. Taberah evidently understood what a culture was; he had experienced different cultures and made any number of cultural comparisons. But, when she explained it to him, he was a long time in understanding; Fiona came to appreciate what a non-trivial concept culture was.

As soon as Taberah began to guess what a culture was, a number of possible replies came to his mind about an answer to Fiona's question. To his credit, he spoke only the truth. He said, "Yes. I think your culture is very impoverished."

Fiona asked, "Then what are you going to do about it?"

Taberah leaned back and closed his eyes. He needed and appreciated friends who would ask him questions like that — but didn't want too many. Like the whiskey he had once tried, a little went a long way.

"I don't know," he said. "Let me think about it. Then I'll tell you — or just act."

# Women's Liberation

## I

Taberah was by now taking walks around the town and around the university campus; he had come to tolerate car rides, but never rode in a car by choice, and was shocked when Nathella suggested he learn how to drive a car. He decided to take a long thinking walk, and was weaving in and out among buildings when a voice caught him. "What is your name?" it said.

Taberah looked, and saw a young woman sitting under a tree. She was holding a book, and sipping a strawberry hydrolated beverage.

"My name is Taberah. Why do you ask?"

"You remind me of someone — a friend. Someone I've not seen in a long time."

"What was he like?" Taherah asked.

"What was *she* like, you mean. Don't use exclusive language."

"What is exclusive language?"

"Exclusive language is language that uses the word 'he' to refer to an unknown person. It excludes women."

"Why?" As Taberah asked, he felt a discomfort, a desire to be anywhere else, a feeling of "Not this dance again!" — and at the same time a feeling that there was something significant, a moral pull to be there.

"Using the masculine as the generic reference to a person exists out of sexism because of a man's world, that says by its language that men are all that's important. People tried for a time to make language more inclusive by alternating between 'he' and 'she', but that still had the loaded masculine term. We now use the feminine as a generic term, free from exclusive masculine meanings, as a convenient designation for someone whose gender is unknown."

SOMEONE WHOSE GENDER IS UNKNOWN.

Taberah sensed something off kilter. It was not just with the argument; though he had never heard use of masculine pronouns interpreted to mean what she thought they meant, and was baffled as to why saying 'he' would be prejudicial while saying 'she' served as a neutral term for a person of unspecified sex, he was aware of something more. What he would come to call traditional language had always been a convention to him, no more significant than the use of a pronoun for a person whose name was not known — the argument he was hearing about exclusive language seemed to him as bizarre as an argument about "nameless language," in that persons of unspecified name were thereby meant to have no name. Taberah at least had always been acutely aware of how his thoughts were more than the words he used. He had struggled to represent his thoughts, and accepted conventions as useful in getting on to more important things. A sharp concern over "inclusive language", more to the point accompanied by a correspondingly sharp belief that the traditional use of masculine pronouns was really "exclusive language"... In itself this struck him as merely silly, and Taberah knew he was plenty silly himself. *Let he who is without silliness cast the first stone*, he had often said to himself, and he did not wish to break a tradition.

This is what Taberah sensed and thought on one level. On another level, he thought less but sensed more, and this was that the woman had a sense of anger about her. It wasn't just that her voice had risen; it was rather that in a vague sense he sensed that what he saw was the tip of an iceberg, that whatever concern and upset were caused by her upset at the word 'he' spoken of an unknown person, was only a surface glimmer, a faint shadow, cast by something he could not guess at. He looked at her, and asked, "Sister, what is your name?"

She looked startled, and said, "My name is Lydia."

He asked, "Lydia, why don't we take a long walk in the woods and talk?"

Lydia blanched, and said, "I'm staying right here."

Taberah concentrated hard and tried hard to see what his *faux pas* was this time. When that failed, he looked at her, and said, "I know I'm breaking all sorts of social rules, and that I don't understand this culture very well, but what did I do wrong? Why were you afraid when I asked you to take a walk in the woods?"

Lydia said, "I think that should be obvious enough!"

Then she saw the puzzlement on his face, and said, "You might rape me."

Taberah turned green, and asked, "Do you really think that?"

Lydia snapped, "Don't you try to put me back in place by challenging me. When a woman says something, she means what she says. From language that speaks of sports playing fields to cars that are designed to look appealing to a man but not to a woman to cutting women down to the subordinate role that would be convenient to men to logic and abstraction regarded as the essence of good thinking, you men will..." She stopped, startled by a realization.

"Taberah, why haven't you told me to go to Hell? Most men usually say that when I stop smiling and... Usually, I can put a smile on and look happy, I usually don't talk about how badly women are treated unless I am with other feminists. You, somehow — I don't act like this. Something slipped. Why haven't you told me to go to Hell?"

Taberah looked at her levelly and said, "I am afraid to tell you."

"You are afraid of me lashing out again?"

"No. Do you want to hear anyway?"

"Yes."

"You are in Hell already."

Lydia glared at Taberah and said, "Of course I'm in Hell! With a man's world that puts women down, how can I not be in Hell?"

Taberah said, "No. Wrongs exist, but you are in Hell because you believe the world is hostile to you. You believe that all sorts of actions are slights, and if there is ambiguity, that ambiguity is to be interpreted in a fashion that means women are being oppressed. I — I have known women who were really happy. Something about them..."

Lydia said, "What? Had they managed to create a place without sexism?"

Taberah said, "No. They lived in a broken world, a much harsher world than we have. They lived, in fact, suffering injustices that feminism has now made a big change in. But they refused to let their identity be one of being persecuted. The world their bodies lived in was far more hostile than the world your body lives in, but the world their minds lived in was not nearly as hostile as the world your mind lives in. You, in your mind, suffer unending hostility; I will venture a guess that, no matter what happens, if you choose to accept feminism's interpretation, you will be in Hell. I have seen other things like feminism; they are like fires; the

be in men. I have seen other things like feminism, they are like men. the more they are given, the more unsatisfied they are, the more they want."

Lydia said, "So you would have me just walk with anyone and get raped? One in three women is raped."

Taberah said, "Um..."

Lydia remained silent, and Taberah said, "I know two women who have been raped, and it is a torment I not know how to describe. But I have done some research, and the feminists who did surveys manipulated the numbers to say as many women have been raped as possible, to fuel a political agenda that claims a rape culture. In the first study that had said one in six women had been raped, over half the women who were classified as having been raped explicitly said they hadn't been raped. And —

"Being raped is terrible. It's one of few things worse than believing that you are in constant danger of being raped, and that you are never safe with men. I would not have you walk with anyone and get raped. I would have you use your judgment and intuition and walk with people when it is prudent to do so. We are never safe — not from disease, not from being killed, nor from being wounded, nor from rape. But we can take reasonable risks."

"Ok," Lydia said. "You want to walk in the forest? I —"

"No," Taberah said. "You're not comfortable. It speaks well of you that you are able to trust where you have not trusted before, but I do not want your discomfort. What I would like is for you to think about what we have said, and then come join me at a place where women are at peace."

# Halloween

Halloween came: Fiona a fairy, Taberah a philosopher, Clancy a cybernetic organism, Nathella an elfin lady, and Aed a medieval lord. After talking with Taberah, Aed wished that he could have a table piled high with food, with everyone invited to come and eat and talk — but he could not do so; the gesture would be misunderstood. On Halloween, hosts gave out vouchers for different kinds of candy, which could be redeemed online for a delivery of different candies; it was almost as easy to poison candy as it was to put razor blades in apples. Nathella did have food waiting for the few people who knew their family, but that was all. The rural trick-or-treat Nathella had grown up with was no more.

Aed and Nathella therefore waited, lord and lady at their castle, to meet the year's assortment of ghouls, witches, archers, space cadets, cheerleaders, Romantics, and assorted and sundry other manner of visitors. A file recording of Taberah's music played in the background, and the place had a warm look to it.

Taberah was with Clancy and Fiona; if Fiona most enjoyed making Halloween costumes, Clancy most enjoyed wearing them.

"Trick or treat!" they said at one house. Fiona charmed them most; Taberah looked old to be trick-or-treating, but the costume fit the gravity that was around him. Clancy reached out with his long, metal arm and used the moving hand at the end to take his candy.

While they were out, they encountered Fiona and Clancy's friends: a bumblebee, a Hershey's Hug, a snake, and a bear were among those they saw. Fiona did not quite manage to contain her surprise when one matron gave a discerning look and told Taberah, "You do not quite look ancient, young man. I'd picture you as more medieval." It was with an unsteady step that she hurried on to the next house.

In the night's activities, Taberah saw beauty and ugliness mixed

In the night's activities, Taberah saw beauty and ugliness mixed together so thoroughly that it was hard to tell them apart. People dressed up as something else — but that something else often meant vampires, devils, and succubi. There was a moment when Taberah almost lost his step, because he had an insight. He understood role play, and saw that it was good. He thought that, in the costumes, he could see a little further into other people than in normal clothing — but was disturbed by some of the choices. Fiona explained the historic origin of Halloween, but that did not seem to allay his concern.

It seemed too soon that moonlight and starlight were shining, and Clancy said, "We need to be heading to home now." They reached home, and Taberah had only one question to ask: "When is next Halloween?"

# Women's Liberation

## II

As Lydia walked into the building, and as worship gave way to discussion around a table, she felt a mass of conflicting emotions within her. There were many branches to feminism, but one thing that held them in common was that, whatever the trepidation with which men and male society were viewed, men were not the real enemy. The enemy was traditional women — people who had settled for being housewives, falling into men's shadows. They were disloyal to the cause of womanhood in a way that a man could never be.

The turmoil Lydia felt came when she saw women at the group who were traditional — but who were not the stereotype she came to expect. They were at ease with themselves, genuinely happy, and she came to see that what the feminist movement had interpreted as living in a man's shadow did not mean what she thought it meant.

It is always a painful experience when reality intrudes on your stereotypes and preconceptions, and Lydia did not enjoy the evening. She saw that other women were enjoying it, but she was processing changes. By the end, she began to see ways in which women's interests were not best served by feminism, and she came back, sharing in the joy upon returning.

Taberah, after talking with her, said, "Lydia, I have met few people, and far between, who could change after being shown they were in error. Most just fight, and fight, and fight, and fight. What let you do that?"

Lydia said, "I suppose the same thing that led me to be a feminist. Women are slighted in most societies; I embraced feminism because I intuited that it had a truth. I let go of it because I learned of something else that could serve women's interests better. Part of it is the new

...ise that could serve women's interests better. Part of it is the new feminism that Catholics called for. The other part is just that — I never knew the tradition. I knew the feminist stereotype, but not the reality. The traditional Christian teaching has a much bigger place for women than I thought."

Lydia leaned to one side and asked, winking, "Does this mean I have to wear makeup?"

Taberah said, "Uh... I hope not."

"You don't like women wearing makeup?" Lydia asked, surprised again.

"No. My culture does not have makeup as you understand it. When I first came here, I did not understand why women were damaging their appearance by smearing strange materials across their skin. I have hawk's eye — my mother used to call me 'hawk' — and a face with makeup looked to me like a counter with rubbish strewn over it. It took me a long time to understand that women wear make-up to convince themselves they're beautiful while wearing it — it took me a long time to understand what 'presentable' means. It means that a woman is not beautiful, but if she covers herself in powder and paint to look like something else, that something else is beautiful, and that the woman is OK only if she makes herself into something else."

"Taberah, are you sure that you're not a feminist?"

Taberah said, "I find that not the most helpful question to ask. Some of the truths I take with me are shared by feminism; feminism knows no doubt things that I do not know, and I know things that feminism does not know. Or at least that is what a mature person from your time would say, and it is true. But I want to see good come to all people, including the freedom of well-meaning women from a system that imposes a cure worse than the disease. I want to see women liberated from women's liberation."

# Like an Emerald

A metal keychain knocked on the door. Nathella opened the door, and a young woman asked, "Is Taberah in? I'm Emerant; we've talked a little. I'm a phoenix."

"Come in," Nathella said, "I don't know where Taberah is." She called, "Taberah!" and Taberah came, holding a knife and a half-carved block of wood. The emerging figure was already discernible as a madonna.

Taberah looked sad; his expression brightened when he saw Emerant. Emerant hugged him and said, "Back at that first meeting, there was something I wanted to sit down and talk with you about, but I've been so busy since then! The courses get harder every year, and I've got one that's harder than a darwin. I'm sorry for not calling earlier, but I was wondering if you wouldn't mind going to a coffeeshop. There's this one shop on campus that only sells decaffeinated coffees, but you have to try their carbonated cappucino!"

Taberah set down the knife and statue and said "Sure!" He started to muse about how this people seemed to use big words for little ideas and little words for big ideas — 'darwin' was slang for a course designed to weed out the less suited students from a major, and evoked the substantial philosophical idea captured in a "survival of the fittest" argument — a discredited idea, to be sure, but a magnificent achievement none the less. On the other hand, Taberah did not know what a cappucino was, or why one would carbonate it, but from usage it was clear that the word meant a drink.

They walked along to the coffeeshop, not speaking, the loudest sound being the crunch of leaves under their feet, but they were not speaking for different reasons. Taberah was not speaking because he lived naturally in silence, did not have anything to say, and did not need to fill the time

with sounds; Emerant was not speaking because she had made a conscious and counter-cultural choice to embrace silence and not fill it with noise — the noise that came so easily to a soul raised in a society that was afraid of silence and stillness and slowness. In walking two miles to the coffeeshop, they had their fill of silence, and Taberah took fifteen minutes to decide between a carbonated cappuccino and some hot cocoa. He ended by ordering both, and Emerant, who ordered an herbal mint Italian soda, did not explain to him that this was a *faux pas*.

Emerant sat down with Taberah and said, "How has your day been?"

Taberah said, "A good day. I have not carved for a long time." Then he remembered etiquette and said, "And yours?"

Emerant said, "A day with a lot of thinking. There was something I wanted to explain to you, and I've been trying to think of a good way to explain it, and I haven't found any good ways."

Taberah stiffened, anticipating a rebuke. Better to have it done with than to put it off. He said, "What have I done wrong?"

"It isn't about anything you've done wrong. It's something that I don't think anyone's ever explained to you."

"Is it about being left-handed? Aed has tried to explain about that, and I am at peace with it now. I wasn't earlier; one of my culture's peculiarities."

"It isn't about being left-handed — something I don't know enough about, especially given that I'm ambisinistrous. It's about something else. Taberah, do you know what the word 'genius' means?"

"In Latin it means the angel watching over a person. In English, I have gathered it means something different, but I don't know what. It is a word applied to some persons, but not others."

"'Genius' means someone possessing extraordinary intelligence and giftedness, someone who has a unique potential to shape society."

Taberah drew back. "Shape society? How would someone do that? Why would someone do that? Why would some people be specially qualified to do so? Your wording means that this is desirable. Why?"

In the ensuing discussion, Emerant was challenged; she had come to explain something to Taberah, and was not expecting herself to learn something new. She had thought of medieval time as hierarchical, holding some people to be born superior — and saw her own time as having practically invented egalitarianism. Emerant saw in her reactions to Taberah that she not only believed some people were more intelligent

to Taberah that she not only believed some people were more intelligent than others, but that the highest measure of intelligence was taken to bring a prerogative and duty to shape society as one's naked reason led him to believe was best. Taberah found this to be madness; he would as soon consider himself qualified to redesign the human body from scratch, making surgical alterations so that his beneficiaries would have one less leg and one more arm, as to attempt to redesign human society from scratch. Taberah did not mind the concept of a special word for the most intelligent humans, as the implicit belief that this difference translated to a moral entitlement to do something he found abhorrent.

Emerant said, "Taberah, let's start this discussion again. You know that you are different from other people?"

Taberah hung his head. "Wherever I go, I can't be like other people. I make mistakes — terrible mistakes. I can't connect with other people."

"Taberah, there's a very special kind of intelligence, one that brings the ability to do things very few people can do — but it brings pain and failures. It means that you think very seriously. Classical literature has the image of a blind seer. Do you know this image?"

Taberah nodded his head, and his expression brightened.

"The seer has supernatural vision, but the price of it is the loss of his natural vision. It is a great boon at a great price. Taberah, you're not completely blind — you can and will, with time, be better able to connect with people — but your natural eyes are weak because of the brilliance of your supernatural eyes. You are not a second-rate Abanu. You are not a second-rate Tala. You are not a second-rate Emerant. You are a first rate you, and you are close to God's heart. You have already managed one accomplishment most of us can only dream of."

Taberah looked surprised. "What was that?"

"The Turing Award, Taberah! Don't you know what that means?"

Taberah looked confused. "There was a lord of a city who had me over. There is not a custom like that in my land. I understand I was honored, but — if there is one city that practices that custom, surely there are other cities that practice it! What I did wasn't any big deal."

"Taberah, dear, there is only one city that does that, and they search through the whole world before awarding that prize, once per year. There have only been seventeen other people who have received that award. Taberah, there is probably not one person in a million who is as bright as you. I want to talk with you about how you plan to use your intelligence."

Taberah was silent; he was trying to sift Emerant's words, sort them. The image of the blind seer struck a powerful chord with him; for one of the first times he could remember, he was able to think about his failures without feeling inferior. The Turing Award was still difficult to think about; he was beginning to understand that it was something bigger than a prize at a fair, but he had never begun to guess the true magnitude of his achievement. In his mind it was like the time as a boy when he was summoned to a monastery where Thomas Aquinas was passing through, and the theologian told him that he had chosen a good symbol to illuminate the Trinity — only with more hoopla; it was still not a very big deal, and its chief significance to Taberah was the warmth the people of this land had shown him. It seemed to him a very hospitable land. He was warmed, but it did not occur to him to think that he was fundamentally more intelligent than others — the idea of possessing a superior aptitude ran contrary to medieval culture. Taberah was touched by Emerant's statement that not one person in a million was as bright as him; his culture embraced exaggeration as a means of emphasis, and he was warmed that Emerant would make her point by exaggerating that much.

"Well?" Emerant said. "What do you want to do with your intelligence? Have you given it any thought?"

"I don't know," Taberah said. "I will need to think about what you have said. And your question is not a day's question to answer."

"Well, don't feel hurried. It'll take me some time to process this discussion as well. Taberah, you haven't touched your drinks; they've gotten cold by now. Here, let me microwave them for you. What have you been doing this past week?"

The remainder of the conversation was light and pleasant; it was a kind of conversation which Taberah had only mastered in the past couple of years, had learned did not mean anything in the sense of deep philosophy, but meant a warm personability and sharing — that much translated across cultures. Both of them, for different reasons, learned something of the other's culture — Emerant was enjoying an elective on ethnographic interviewing and even more enjoying an opportunity to apply her learning, and Taberah had crossed cultures from the time he was a little boy, learning something in each case. 'Student' seemed at least as interesting and difficult as any of the other professions he had seen and participated in, and went at a much faster pace with much more difficult material than an apprenticeship. He made a mental note to ask

difficult material than an apprenticeship. He made a mental note to ask Aed if he could arrange for Taberah to work as a student.

Emerant walked Taberah home, again in silence, and then walked back to the dorm. She climbed into her bunk and punched a name on the phone.

"Tala, this is Emerant. You were right; he made my head spin. But I think that was less due to his being medieval than being astronomically intelligent." It was 3:00 in the morning before she hung up and went to bed.

# Confessions

Taberah said to Aed, "I want to be a student! Can you help me be a student? What's necessary to becoming a student?"

Aed thought for a moment and said, "My university will undoubtedly take you, and give you full scholarship; the biggest thing for the moment is picking out which classes to take. That's something Nathella will probably be able to help you out with better than I can; she's very perceptive, and would have a better feel for what classes would help you most." Aed decided not to try to explain the degree programs; he believed in learning for the sake of learning, not learning for the sake of getting a piece of paper — and a degree on top of a Turing Award would be superfluous.

Nathella was out on an errand, and as Taberah waited for her, he began to realize something. The realization was not pleasant. When she walked in, Taberah said, "Nathella, I have a confession to make."

Nathella said, "Ok; I can take you to a father confessor this afternoon."

"Not to a father confessor, Nathella. To you."

"What is it, honey?"

Taberah hesitated, and said, "Nathella, I have been looking past you, but not at you."

Nathella looked at Taberah gently, and then closed her eyes. She was a quiet type, easy to ignore; she was slender, and men seemed not to pay her much notice. Taberah was not the first person to commit this sin, but he was one of the first to admit it. When was the last time someone else had done so? The only prior time had been by Aed. She was sure there were others, but — when she opened her eyes, she saw that Taberah was looking at her.

Taberah said, "Nathella, what are you thinking about?"

"I was thinking about part of my story."

I was thinking about part of my story.

"What is your story?"

"You want the whole thing, or the part I was thinking about?"

"The whole thing."

Nathella thought for a moment and said, "I was born on a farm; as a little girl, I had a wonderful education filled with simple amusement. We had a tight-knit community, and I miss that closeness.

"My father believed in education; he was a welder as well as a farmer, and was committed that his daughter get a college education. I went to school, and it was a wonderful extension and compliment to the rural upbringing I had. I think city kids now miss some of the things going on then; the computerized classroom doesn't teach you how to be perceptive, and I especially miss hunting — my father gave me a hunting rifle and scope on my twelfth birthday, and the day after I killed a bear. No, it wasn't because he wished he had a son; I had two younger brothers, and both of them were given guns on their twelfth birthday as well. I didn't like hunting as much as I liked picking flowers in the field, but there's nothing like giving your Mom a bouquet of wildflowers you picked yourself, and there's nothing like sitting down to eat meat you killed yourself. I don't own a gun, not any more, and I don't want a gun in this house where someone might break in and steal it and kill someone. But I enjoyed those fields, the heat of working in a cornfield in the summer, the fruitful creativity that comes on the other side of boredom — you get bored, and then you get bored silly, and then you think of things to do that never would have occurred if you always had a television — and our family didn't. We had a computer, but both my Mom and my Dad believed that television was a waste of time and a waste of life. I'm better off for growing up without TV.

"Anyways, at school, it was an exciting new world, and I met Aed. That made a difference. That changed things — and it was the only pleasant thing that happened for a while.

"Back home, my father needed to remove a few stumps, and wanted to put a pond in a field that — I can tell you the story for that another time. Anyways, he needed some explosives, so he mixed an oil people used to use with a common farming material, and so far as I know, had the one forgetful moment of his life. He forgot what he was doing, and lit up a fag.

"That was it. On that one day, I lost my father, my mother, and both my brothers. The barn still looked basically like a barn; the house didn't.

There wasn't much of anything of a house left. And I really couldn't go back — the people would have accepted me, but a farming community without my farm and family would have been like a body without a soul: to me, dead.

"I began to notice that I didn't feel so bad after I had some whisky; it took a fair amount — I could drink an elephant under the table. The more I drank, the more empty I felt when I wasn't drunk, and the more empty I felt, the more I drank. This continued for three years; Aed and I both finished our degrees later because of the drain of my drinking.

"There was one day when Aed was in a bad mood, and I got the brunt of everything that had gone wrong that day. I was in a terrible mood — it had just hit me that, even if I went back to visit, there would be this horrible silence about me — I would no longer be Nathella, who knew all the plants and animals and had yellow dandelion rubbed on her cheeks half the summer days from an old joke with two loving and rambunctious brothers; I would be that orphan thing — in a way, not human any more. I didn't at first admit that, and when I did, it hurt, and hurt, and hurt, and hurt. I got myself drunk, so drunk that —

"Taberah, do you know what a BAC is?"

Taberah shook his head.

"BAC is short for blood alcohol concentration. One drink will give you a BAC of .02. When we were at the banquet and you said that you felt funny and that the wine seemed to have more effect than you were used to, you had a BAC of about .05, judging by the amount you drank. At .08, in the eyes of the law, you're too drunk to drive. .20 is very drunk. 1.00 will kill you.

"Taberah, I had a BAC of 1.15, and that was after the hospital pumped my stomach — an experience I never want to live again. Several people at the hospital commented that it was a wonder I was alive at all. It took me over a day to become fully sober, and the first thing I remember when I was sober enough to be coherent, pumped full of chemicals that sober you up but make your mind feel like it's being scraped across asphalt, was Aed sitting down right across from me, looking me straight in the eyes, and saying with a dead serious voice, 'Nathella, I love you, and because I love you, I am not getting up from this chair until you admit you have a problem with alcohol.'

"I was trapped and pressured, and that was the most loving thing Aed ever did to me. Not marring me; that was a close second, and that's the

ever did to me. Not marrying me, that was a close second, and that's the second best thing that's ever happened to me. No, third; coming to know God was a slow thing, not all at once, and it is the best thing I've ever known. But Aed staring at me as I made jokes, tried to cajole him, threatened to break up with him, and tried every other way I could think of to evade and deny him was the best thing that ever happened to me. He did apologize for his treatment of me the day before, by the way; he felt terrible about it, and has never behaved like that again. After five hours, he was hungry, thirsty, weary, and immovable as a rock, and I said the most painful thing I've ever said. I said, 'I'm an alcoholic.'

"Taberah, being an alcoholic is Hell on earth; I believed it when another alcoholic said that in Heaven, you can have as much wine as you want, and in Hell, you can have as much wine as you want. The first steps of recovery are even worse than being an alcoholic; it's like you had a festering wound, and now there's a surgeon going in with a knife to get the bullet out and stitch things up. It hurts, and it has to be done, and there's no anaesthesia. But it heals. Aed and I both needed support; when you're wounded like I was, you wound those close to you, and he's been healed too, even though he never drank more than four drinks in a day, usually not four drinks in a week. I've been dry for — how long has it been? Over twenty years, and I am healed — really and truly healed. I sometimes long for home, and I sometimes long for drink — believe me, there are some days when I ask Fiona to sit me down and distract me and make sure I don't go to a liquor store. But I am now free of that chain — and happier than I ever believed alcohol would make me.

"My faith... My faith is strong like I wouldn't have imagined. There's not much of me on the surface; most people don't pay me much mind. But underneath, God has given me a strength I would have never dreamed of. Childlike faith meets trial and testing that it may become childlike faith. Some people who hear my story ask me how I can have faith after experiences like that. I ask them, how can I *not* have faith after experiences like that? Even when I was dead drunk — especially when I was dead drunk; even when I admitted I was an alcoholic — especially when I admitted I was an alcoholic — God was *with* me. He has never abandoned me. Never."

Taberah sat in silence for a moment, and said, "I'm sorry I asked you for wine."

Nathella smiled and said, "Taberah, there's nothing to apologize

about. You didn't know I was an alcoholic, and asking for wine is a perfectly reasonable thing. Why don't you go out and have a drink with Aed tonight? I can't drink, but I know God blesses other people through the fruit of the vine... Taberah, I know what you're thinking. I see it in your eyes, and I've seen it in other people. I'd like to tell you another story, this one a story that didn't happen to me.

"My best friend in college, Naomi, was the daughter of a competent insurance salesman. Her father was friends with the vice-president of sales, whom he invited over one day for burgers and beer.

"After they arrived from the office, Naomi's father realized that he had beer but not burgers, and drove to the store to buy some food, and the vice president raped her. It was the worst day of her life, and the days after were made worse by the fact that nobody believed her. They merely told her that that was serious business, and she was too old to be telling stories anyway.

"She noticed something peculiar when she began seeing a counselor and sharing this with other people. Many men were afraid to touch her. They knew she had pain, and mistakenly believed that another man touching her body would automatically bring back traumatic memories — at least that's how they thought about it; the way she usually put it was 'They won't even give me a hug!' It's a shame, too; Naomi was one of the touchiest people I've known, not as in easily angered, but as in liked to touch and be touched — she always gave me a kiss when she saw me, and she very much enjoyed a man's touch — rowdy as well as soft — be it in an arm over her shoulder, a crushing bear hug, or in horseplay.

"Some people who've been abused need not to be touched, and it's good to ask what's OK and what's not OK when you find out someone has wounds. But apart from that, people who are hurting need hugs most of all, and not touching a woman because she's been hurt — it's meant well, but sometimes it's just the wrong thing to do. Naomi learned to be very careful, as an adult, who she told about her experience — most people believed her, but some men in particular, with the best of intentions, never treated her the same way again.

"When there's a person in a wheelchair, by nature people will see the wheelchair but not the person. There's nothing to feel guilty about in having to counteract that tendency, but it needs to be counteracted. The standard advice used to be, 'See the person first and the condition second.' Now that has been refined a little bit to 'See an organic whole in

second. NOW that has been termed a little bit to 'see an organic whole in which the condition is part of a person.' Naomi sometimes needed to be treated differently because of her trauma; there were days when she just needed to be left alone — and days when she just needed more hugs and more listening. It would never have helped her for me to forget she was human and treat her as something whose nature was 'wounded'. Pierce us; do we not bleed? Poke us; do we not squeak? Taberah, I am a woman — human — with the full range of human emotions, laughter and silliness and joy as well as pain and worry and trouble. Don't let knowing I'm an alcoholic obscure your knowing that I am a woman. I would much rather you occasionally forget and ask me to buy you a bottle of wine, than think of me as a pit of pain with whom you must always be serious, always careful not to bump me lest I shatter. I'm human, OK?"

Taberah thought for a second and said, "Ok. If you won't buy me a bottle of wine, will you buy me a keg of beer?"

Nathella laughed and tousled Taberah's hair. He had somehow managed to keep a deadpan straight face. "Honey, next time I'm out shopping, I'll buy some root beer, which doesn't have alcohol, and we can each sit down and sip a root beer. Actually, you want to go shopping now? You seemed to enjoy going out for clothing, and maybe you'll see something at the store that you'll like. No, wait; the packaging food comes in is probably not whatever you are used to. Want to come along anyways?"

# Which Classes?

Nathella said, "Aed told me that you want to take some classes."

"Yes, Nathella."

"You seem to find things to do easily; I suggest that you take two classes, three at most; other students take more, but you need a lot of sleep. Come on over to the computer with me; we can look at the catalogue with me."

"Let's see... Here's 'Mathematics as a Humanity', team taught by a mathematician and an artist. When I took it, it was team taught by a mathematician and a philosopher. It was the hardest class I took — and the best."

"In this culture, most people are taught something horrid as lower math, and they avoid it as much as they can. They don't guess what mathematicians really do — an art form guided by intuition. Most people think a mathematician must do more of whatever they suffered through in the math classes they couldn't avoid — more statistics and meaningless formulae. It's really sad; higher math is easier than lower math, and that course did not make me a mathematician, but it helped me appreciate what they do."

"'Modern Mythology: An Exploration of Storytelling in Postmodern Society.' This would also be a good course for you to take; it will help you see some of the good points of our culture — and some of the bad points. I think last year they did an in-depth treatment of a classic interactive — the title escapes me (I'm never in tune with that — I was 20 before I saw *Star Wars*), but — ooh! it was called *net*, and *net* was hard science fiction that somehow managed to be very popular. This class didn't look at technology much, just the timeless elements of the story — and it is timeless. I don't know what they're doing this semester, although I can

find out.

"'Philosophy of Technology'. This is a good class; it's team taught by a humanities Luddite and a technology-worshipping engineer. Aed likes to occasionally go in and sit and watch the sparks fly.

"'Psychology 212: Gift Giving. This class explores how to take basic psychological insights and use them to find a gift that will be meaningful to a friend and loved one.' I wish that one had been available to me when I was in school. Classes have been shifting towards a more practical bent. There's also 'Psychology 312: Synergy. This class explores positive interactions between people, and how to create the circumstances that give it rise.' There are a lot of good classes — hmm.

"'Semiotics 101: A Critical Look at Contemporary Society' — this would be an extremely valuable class to you, but not for the reasons that most people take it. It would show you how people are inculturated into contemporary liberalism, and see things into the plurality that was once a holy trinity of race, class, and gender. Taking a critical look at a course like this would help you understand contemporary academia, and perhaps a little bit of contemporary society as well.

"I know you have an artistic bent; I've seen you carving. This might interest you: 'Fine Arts 212: The Art of Tektrix'. It's a class on how to build with robotic blocks, studied as an art form.

"Here's a fun one: 'Gender Studies 315: The Wisdom of Cats. A humorous look at how our lives can be made better by living out the wisdom that cats embody naturally, and a careful study of why cats are better than dogs.' Department notwithstanding, that looks — oh, wait. You're a dog lover. Never mind."

Taberah did not see why loving dogs would disqualify anyone from taking a course on cats, but he was too busy assimilating information too quickly to ask a question. Nathella continued, "'Communication 275: Are Sacred Cows Edible? An interpretive look at the popular comic strip and exploration of its meaning in society.' *That* looks interesting. I'm not going to try to explain it now, but you should take it. Let's see, what else?"

"There's a dance art — kind of like a martial art, but taking dance rather than combat as its basic medium. In combat between two good martial artists, there is a harmony that arises, a kind of synchronization and attunement between opponents. Neither party walks in knowing what is going to happen — but a masterpiece emerges. A dance art does this with dance — there are differences: in both, you learn to read your

ums with dance — there are differences, in both, you learn to read your partner, but in a dance art, you also want to be readable, instead of hard to predict — and dance art strikes Aed as very interesting. He tried one for a bit, but then left because he wasn't able to handle the structured, monotonous repetitions that low-level training took from martial arts. Maybe that's its weakness, and come to think of it, you probably shouldn't do that either, even though I have a feeling you can dance very well.

"Here we go! 'History 339: Medieval Culture.' I think this would be valuable to you as well; you would learn something about our culture in learning how it portrays your culture. Maybe that wouldn't be such a good idea; the catalogue refers to your culture as belonging to 'the misogynist tradition', and — come to think of it, I know who's teaching that course, and she'd fail you. That professor can tolerate almost anybody whom liberalism now sees as oppressed, but someone who is from medieval society and believes we have something to learn from it — you'd have a hostile learning environment. Let's see: what else?

"'Integrated Science 152: Heavy Boots.' I think this course would be a good one for you to learn from; it is probably the best to teach the culture of science and scientism — as good for its purpose as the semiotics class would have been for understanding the culture of the humanities as we now have it. Another one that you might like is 'Engineering 297: Cross-Disciplinary Commonalities of Repair and Debugging. This course covers the fundamentals of how to think about technology that does not behave as intended, with application to repair of mechanical and electrical devices, and debugging of software.' What do you think, honey? Does that interest you?"

"They all interest me, Nathella. I don't know which ones to choose."

"Then we can wind to a close — ooh! You *have* to take this one, Taberah. At least if you can get in. The professor is a cantankerous, eccentric genius. This course has been taught under a dozen department names, and now the university's simply stopped assigning it a department. You'll like it."

At dinner, Nathella said, "Have you given further thought to what courses you want to take?"

Taberah said, "Yes. I want to take the last class we talked about, the class you recommended, and — oh, yes! Heavy Boots!"

# Christmas

It seemed not very long at all before Taberah found the ground an unsteady traitor beneath his feet, and more often than not beneath his backside; he could keep perfect balance on a ship, but ice was tricky. The wind seemed to blow bitter cold through him as much as around him, and Taberah sometimes shivered even when he was inside and wearing a sweater. Taberah would have much rather been wearing heavy armor and sparring on a blistering hot day than experience *this!*

Even the cold could not damp his spirits as Christmas approached, though. He had thought about gifts for each of his adoptive family and friends for each day, starting with the first. He gave the madonna to Nathella, a riflery simulator to Clancy, pressed flowers to Fiona, and an abstract pattern to Aed. Each phoenix was given an electronic image of a stained glass window from home.

Aed received gifts in turn; he most prized the Pendragon Cycle which Nathella gave him; he would be fascinated by the historically-oriented retelling of the Arthurian legends. He knew those legends well, as well as he knew the legends of Roland and the twelve paladins, and he would be intrigued by the retelling. Seeing an American portrayal of his home gave him a unique insight into the time and place he was living with, and their conception of what is important about a place — it did not seem as strange to him as it might have appeared earlier. The theme of Ynes Avallach, the isle of the Fisher King, struck a chord with Taberah, and he felt that here, now, he was on that isle.

The days were merry days, with much revelry and joking, and there was a relaxed energy about the house. Aed began to wonder why the custom of twelve days of Christmas was not celebrated more; it was a good custom.

Twelve days seemed perfect to grasp the meaning of the Christ child.

Twelve days seemed perfect to grasp the meaning of the Christ child, the Kinsellas had always understood Christmas gifts to be symbolic of God giving mankind his greatest gift ages ago, but celebrating with Taberah gave a new depth of understanding to the symbol. An hour does not merely allow one to communicate twelve things, each of which can be said in five minutes; it allows communication of things that cannot be said in any number of five minute bursts. The twelve days of Christmas were not twelve consecutive Christmas days; they were part of a whole celebration that embraced gift giving but went much farther, a time of worship and enjoyment of God. Clancy wondered at the beginning how one could possibly spend twelve days celebrating Christmas; come the end, he wondered how one could possibly stop after celebrating one day of Christmas. While they were out caroling, Taberah tasted real wassail, and during the celebration Aed took Taberah to a wine bar and introduced him to champagne.

On the eleventh day of Christmas, Taberah asked Nathella, "Can you smell the incense?"

Nathella was confused. "There is no incense in this house. The only smell of incense has been on our clothing, when we came back from the Christ mass. Are you talking about that?"

Taberah said, "Not that, Nathella! The *real* incense! Can you smell that?"

"I don't understand, honey. Why would you be smelling incense?"

"Nathella, what is incense for?"

"It ascends in the presence of God, and some of it is around us at the holiest times we worship. Catholics only use it on special days; the Orthodox use incense at every worship, and believe in bringing Heaven down to earth — ooh. Now I understand. Yes, honey, I do smell the incense."

# First Day of Classes

The first day of classes was delayed by a heavy snowstorm; it was such as only occurs once every ten years, and people were in mixed moods when they finally came inside a warm classroom. The freshmen and sophomores tended to have a spirit of adventure, while the juniors and seniors more tended towards irritation.

Taberah walked into a large lecture hall, crowded with students. A professor cleared his throat and said, "Good morning. My name is Professor Pontiff, and you are in Communication 275: Are Sacred Cows Edible? In this course, we will be studying the strip of that name. If you'll excuse me for one moment..." He fumbled with an overhead projector and turned it on. A comic strip appeared overhead. It had a young man and a young woman in conversation:

Young man: It's a shame when a comic strip becomes the medium for public discourse.

Young woman: You don't like it when conversation is to the point and funny?

Young man: Not that. I don't like that it has to be funny, and that you get ignored if you have a point that you can't cram into five seconds. Most theories that can be put in a nutshell belong there.

Young woman: What if there was a comic strip that made its point but was not particularly funny?

After giving the class a minute to digest the strip, then said, "The term 'sacred cow' is now a bit dated, but it was popular around the turn of the century. The Hindu religion treats cows as sacred animals, and there are cows in India that people will not kill — they would rather starve than kill a sacred cow. In a typically anti-foreign fashion, people who did not

understand or respect this religious tradition took the term 'sacred cow' and made it a metaphor for an absurd belief that benighted people defend and are afraid to abandon, and which one is considered enlightened and courageous to attack.

"Or at least, that's what people who used the term 'sacred cow' understood it to mean. It worked out in practice that 'sacred cow' meant in particular the sacred cows of conservatives, but not the sacred cows of liberals. Even liberals have now come to acknowledge that liberals have just as many sacred cows as conservatives, and even that there are good if inarticulate reasons behind at least some of the norms that are branded as sacred cows. 'Sacred cow' was an anti-conservative weapon, one that could do damage without needing any argument, and it was used in sayings such as 'Sacred cows make the best hamburgers.' It was somewhat of a sacred cow itself.

"There were a number of people who began to question this, but one of the more influential ones was Anonymous. Anonymous preferred not to be known by his name, and kept his anonymity even when running for office as an independent. But that's another story I will not go into here. Anonymous was about equally likely to vote Republican or Democrat, by the way. He was influential because he chose a medium in which one person can reach a number of his people: the comic strip. The very title of the comic strip, 'Are Sacred Cows Edible?' is part of a challenge to what the term 'sacred cow' had been used for.

"On the projector is his first strip. The characters are not named; they are subservient to the idea. Even his basic idea is trying to break out of the frame of the comic strip; it shows no direct humor, but perhaps (if you look higher) some meta-level humor. And, at any rate, it bites the hand that feeds it. Anonymous was very good at that. The question, "What if there was a comic strip that made its point but was not particularly funny?" is in a sense a very pointed joke. Or is it?

"Regular attendance is expected; the class's format will have a strip a day, followed by lecture and discussion. The only textbook is the one comic book you have; I'm sure this didn't influence any of your decisions to join this class. By now, I'm sure that there are a few people in this class so industrious that they've already read the text, or a good chunk of it; I feel safe in asking an opening question that draws on some knowledge of the text: 'How does the comic strip fit among other media? How does this

particular comic strip fit among other media? Are the two related or unrelated?"

Taberah rejoiced in the discussion that followed; it reminded him of medieval reading, an activity so involved that some doctors viewed it as a form of exercise. He himself did not say anything, but paid attention both to what was familiar and what was unfamiliar: the text was viewed in a different manner, he could tell, and not as something authoritative. More of a starting point for tangents. Taberah wished to sit still and watch, come to understand what this culture meant by "having a discussion" — and did so, until the instructor pointed to him and said, "You. What are you thinking about? You're thinking loudly."

Taberah hesitated, and said, "I was just thinking about how this discussion seems to be 'What can we jump off of from the strip?' instead of 'What does the text mean?'"

"You think we can have a discussion about the content of one strip? It's a ten-second strip."

"Maybe. I've known some good, long discussions about a single sentence. One thing which people might say is, 'How do we deal with content that does not fit within a medium's limitations?' How, for instance, do you think about something you can't say in words?"

"If you can't say it in words, you can't think it. The limitations of language are the limitations of thought, right?"

"I think things that I can't express in words. Or, at least, I think things that I can't express, and I've been told I use words well. Saying that the limitations of language are the limitations of thought is like saying that the limitations of painting are the limitations of imagination — that, just because we can't paint something moving or three dimensional, we can't imagine it. It may well be a limit on what we can communicate, but not on what we can think. We can be tempted to this error by the power of painting — color, shading, and perspective. We can make paintings so lifelike that we are capable of thinking they represent anything we can imagine — but we can still imagine things that just can't be painted. My deepest thoughts almost never come in words, and it takes effort and insight to capture some of them in words."

The teacher was impressed. He said, "If you want, come in during my office hours, and maybe we will talk about how we can have a class period discussion in your style. What do the rest of you have to say?"

Taberah sat back in his chair and continued to think. He was going to

like being a student.

The TA stepped forward and said, "Heavy Boots has traditionally been a student-to-student class, taught by people who have freshly learned the material, and this will be the most important class of your discipline. It tells you how to think logically, how to think about science.

"The anecdote from which this class takes its name concerns when a couple of engineering students were in a philosophy class, and the philosophy TA gave as an 'example' the 'fact' that there is no gravity on the moon: if you held a pen out at arm's length and let go, it would just float there. 'No,' one engineer protested. 'It would fall, only more slowly.' The TA calmly explained that it would not fall because there was no gravity. After a couple of things failed, inspiration struck. The engineer said, 'You've seen movies of astronauts walking on the moon, and you saw them fall down. Why is that?' The TA, who had had plenty of courses in logic, said, 'That's because they were wearing heavy boots.'"

A chuckle moved throughout the class. The TA continued, "At this point the other engineer, who was calmer, dragged our friend, who was foaming at the mouth, out of the room. They decided that night to do a telephone survey. They asked people if there was gravity on the moon. Sixty percent said, 'No.' Those sixty percent were asked the follow-up question about astronauts. Of the people who had said there was no gravity on the moon, twenty percent went back and changed their answers, but over sixty percent said that the people on the moon stayed there because they were wearing heavy boots."

There was more laughter, and the TA said, "Science tells us how the world is, and it can be known through experiment. This class will help you learn not to have heavy boots. Are there any questions?"

A young woman raised her hand. "Do you believe in Darwinism?"

The TA said, "Darwinism is bad, but not nearly as bad as creationism, or the masks it wears — intelligent design. It is true that Darwinism cannot explain the question of origins, but that isn't science's job. It's not subject to debate. However the world came to be, it is here, and that is what we study. As to intelligent design — I have another story. There was an engineering professor who came in to find his class talking about heavy boots. He gave a very involved explanation of, among other things, that gravity works on the moon despite the fact that the moon has no air, explaining the whole scientific method, the idea of trying to be skeptical

and open-minded at the same time, and at the end, he asked, 'Any questions?' One young girl raised her hand, and said, 'You seem to be getting very worked up about this. Are you a Scorpio?'"

Another chuckle went through the masses. "There are any number of other stories. Did you hear about the English professor who noticed that his computer was warm, and poured water in it to cool it down? Or the farmer who complained that there were holes in his computer after he played duck hunt? Are there any other questions?"

Taberah thought. Nathella was right; this course *was* going to teach Taberah a lot about the culture of science. He raised his hand and said, "Yes. Why do you regard non-scientists as having intelligence one step above that of a rock?"

The ensuing discussion was both vigorous and heated. Taberah had already begun to piece together that something besides scientific thinking that was being taught — he could not tell exactly what, but by the end of class a good many people came to see that a disrespect for non-scientists was being taught, and some of them even questioned the equation of science with rationality. Taberah was silent for much of the discussion; he was trying to figure out what besides the obvious was being taught in that class.

A professor stepped up to the podium and said, "Good afternoon. Do we have any computer science grad students in class? Good. Any doctoral students? Wonderful. What did the B.S. in software engineering say to the Ph.D. in computer science?"

"I'll have the veggie burger and fries, please.'

"Or do we have anybody from the practical disciplines? A university without colleges of business, engineering, and applied life studies is like a slice of chocolate cake without ketchup, mustard, and tartar sauce.

"Anybody here from the English department? The English department is a special place. If you want to find a Marxist, don't go to the political science department. Nary a Marxist will you find there. Go to the English department. If you want to find a Freudian, don't go to the psychology department. Nary a Freudian will you find there. Go to the English department. If you want to find a Darwinist, don't go to the biology department. Nary a Darwinist will you find there. Go to the English department. The English department is a living graveyard of all the dead and discredited ideologies that have been cast off by other departments.

"Anyways, I'm Dr. Autre, and I would like to welcome you to the first

day of class. You'll be able to remember which room we're meeting in; just remember room 20, same number as your percentage grade. This class will have no discussions, although there will be question and answer. As to discussions — you don't really have to pay anything to hear what your friends think about a matter, but given that you're paying good money to be here — or some of you are; the rest are sponging off your parents — I think you are entitled to hear what a professor thinks. Someone said that diplomacy is the art of letting other people have it your way; I was never good at diplomacy. Too honest for it. Maybe some of you will do a better job at it, when you have a Ph.D. behind your name and the academic world says, 'Aah, here's a Ph.D. Here's someone we can take seriously!'

"Some of you have questions about the syllabus. The answer to those questions is very simple. There is none. I don't mean that I don't have planned material I can fall back on if I need to; I mean that the important stuff in this course is the stuff I can't foresee. The main reason I plan out course material ahead of time is that it provides me with a point of departure from which to do something interesting. As such, I do not wish to confuse you by giving you distracting information."

A young man raised his hand. "But if you have the information on hand, what harm is there in sharing it? Certainly it helps you."

The teacher said, "There was once a professor who thought his class was writing down too much of what he was saying, and thinking about it too little. At one point, he interrupted his lecture to say, 'Stop. I want you to put down your pens and pencils and listen to me. You don't have to write down every word I say. You are here to think, not to produce copies of my lecture notes. You don't have to write down what I say verbatim. Any questions?'

"One young woman frantically said, 'Yes. How do you spell *verbatim*?'

"I'm not going to spell out an answer to your question beyond that, but I am going to say that I won't always say my full meaning outright. I will leave it implied, for you to wrestle out. That requires the same involvement as discussion, but it leaves you free to hear a professor. You are encouraged to talk with your colleagues after the classroom for as much discussion as you want. Class time is for what you can only get in class time — a professor's lecture.

"I've used a different text each time, and the registrar usually won't

print how to get a text in my class. This year, I want you to get a sticky-hand, walk into

<http://www.powells.com/partner/24934/biblio/0684863170> Physical — it's a mile down the street from the college, close your eyes, turn around, and toss the sticky-hand past your back. The book that the hand lands on is yours. Buy it, and study it; see how it relates to our classroom lectures, and tie it in to your discussions. I guarantee you that, after the first month, you will have learned something that I couldn't have possibly coordinated by picking the text myself. I don't just mean learning to read a text at an angle, although that is tremendously important; I mean that you will have learned something directly from the text that I couldn't have picked out. Tonight's reading assignment is pages three through ten, and the first page of the index, if your book has an index. Any questions?"

Taberah leaned back. This class was going to be a lot of fun.

# Baptists

Taberah walked in after the first day of classes, excited, alert. He said to Nathella, "What does the word 'Baptist' mean? I heard someone use it between classes, and I couldn't figure it out from context."

Nathella said, "Um, that's not a five-minute question. First, do you know what 'Protestant' means?"

Taberah said, "No."

"There have been any number of reform movements in the history of the Catholic Church, and there will be any number of such movements in the future. With one of them, a monk named Martin Luther nailed ninety-five theses for reform on the door of a cathedral. The authorities questioned him, and finally asked him, 'Do you believe that the Church has actually been *wrong* in these things for all these years?'

"Luther asked for a couple of days to think about it; that was granted, and at the end of the time the question was put to him again. He said, 'Here I stand. I can do no other.'

"Then all Hell broke loose. Luther was excommunicated, and tried to set up a parallel, reformed church. The church called 'Catholic' was the one that initiated the schism, but they were not the only schismatics. Luther's church splintered and splintered and splintered. There was all manner of invective between the two sides, and they were excluded from each other's communions. It was worse than the split between Latin and Greek — far worse.

"Over time, people began to realize that the schisms were not a good thing. There were some who said, 'The solution to the problem is simple. Everyone come over to my side, and there won't be any division.' There was the problem of communion: especially on the Catholic side, there was an understanding of communion as implying full membership in the

community, which was in turn understood to mean that members not part of a particular schism could not legitimately take part in it — this interpretation was deemed to be more important than the words, 'Take this, *all of you*, and drink from it.' that instituted a feast given to all of Christ's disciples. That's still where things are now; Rome has now interpreted Vatican II to mean that Catholics and Protestants whose consciences command full participation in their brothers' and sisters' worship may be — what's the word, *tolerated*, in taking communion across the schism. It's a step homewards, I suppose, but we are very far off from organizational unity that once was.

"Baptists are, or rather were, one of the Protestant sects, and they added something to American culture. As to what happened —

"In the fifties, the question of abortion, the question of whether a woman has a right to kill the child growing inside her, came up with the Supreme Court. The court protected the child's life. In the seventies, it came up again, and this time the court legalized abortion, and the movement declared the controversy settled. But it wasn't.

"By the nineties... there were laws in place that offered stiff penalties for abortion protests, and RICO, a law meant to deal with organized crime, was used to inflict massive penalties on abortion protesters. There was one minister who led a protest while cautiously distancing any church involvement or statement on the protest. The courts RICOed the congregation, making a multimillion dollar settlement. Also going on were 'physical compliance holds' — meaning pain holds used on demonstrators. Nonviolent protests of abortion received draconian punishment compared to the penalties deemed appropriate for violent protest by environmental or animal rights activists.

"When a pregnant woman walks into an abortion clinic, unsure what to do with an unexpected pregnancy, by the letter of the law she is supposed to receive non-directive counseling to help her decide how to handle the situation. What actually happens is very different. Abortion is big business; insurance companies will readily pay thousands of dollars for an abortion rather than deal with all of the expenses of childbirth and a new life out in the world. Even when there is no insurance, a couple hundred dollars is still lucrative for a ten minute procedure. Never mind that the people who perform abortions have the highest suicide rate in the medical profession; it's money, money, money. What actually happens when a girl walks in is that she receives a five minute sales pitch

happens when a girl walks in is that she receives a five-minute sales pitch that slants abortion as the only live option. Most of the abortions that have happened in this country were abortions that the girl was pressured into, that she never was allowed to say 'no' to — same thing as date rape.

"So there was this big push to have real non-directive counseling at abortion clinics, along with a surgeon general's warning about the emotional scars that abortion can cause — post abortion stress syndrome and all. It wasn't just Christians behind it; some feminists, especially those who had spent some time working at abortion clinics or talking with women who had gone through that trauma, had begun to suspect that they and their movement were being manipulated as pawns by forces less innocent than — anyways, the law was passed September 1, 2012, and struck down October 1.

"The Baptists were the fastest to spearhead an initiative to get every church member into a protest — which they didn't do; it was closer to fifty percent, but there was a massive, peaceful protest, and the police came out — pepper spray, tear gas, pain holds, the works. The jails were filled up overnight, and it was ugly. The ugliest thing about it was that it wasn't two parties fighting each other — it was one party attacking satyagrahi who didn't resist. The courts thought this would be a good time for an unambiguous message, and commanded a settlement of over 1.6 trillion dollars. The church could not begin to pay something like that.

"The courts lost something that day. The president of American Baptists called a press conference and said from his jail cell, 'You can force our bodies and our checkbooks, but you can never break our spirits. The denomination of Baptists in America is hereby declared to be bankrupt and disbanded. Baptists, melt into other bodies of believers. You are the heart of our ministry, not a formal structure that can be sued. Courts, you have won this battle. But *what is it that you have won?*'

"Most other Protestant denominations that participated in the protest did not do much better; Catholics were protected only by the masterful diplomacy of the Papacy. The Pope tried to be an advocate for the Protestants, too, but saving the financial viability of Catholics was making the best of a bad scenario. There were believers who left the Catholic Church — not out of any rejection of Rome, but as a matter of solidarity, saying, 'We would rather be ill-treated alongside these righteous Protestants than be spared because our denomination happens to be powerful.'

"That single court decision galvanized the body of believers as a thousand sermons could never have done. Before then, there had been talk of an emerging post-denominational Christianity; now, people finally realized that they had bigger things to worry about than labels. It was as if two estranged brother generals forgot their dispute in the face of a battle. The Church was driven mostly underground, yes — it had been underground at its beginning, and it will be underground again, no doubt. And people are tortured when they protest abortion, infanticide, or euthanasia — the Constitution prohibits cruel and unusual punishment, but the courts have ruled that 'nondestructive incentives to reform' are not punishment. It is still virtually illegal to witness about your faith — the argument classes it as harassment, and a freedom of religion defense brings a dilemma with it. If you invoke your religion as a defense, the question is which religion, and if you specify whichever area of Christianity you are from, you are slapped with massive penalties for participation in a corporate entity which falls under RICO. All of this is true and more, and the church is healthier than ever before.

"Taberah, in martial arts, I remember hearing something about you and joint locks, but I don't remember what. A joint lock is when someone twists one of your joints so that you will be in pain unless you move in a certain way. This enables a martial artist to take your wrist and bring you down to the ground. What the Supreme Court learned in the ensuing years was that joint locks would no longer work against Christians. You could still figuratively twist a Christian's wrist — break it if you pressed hard enough — but she wouldn't go down to the ground unless you did so much damage to her that she was incapable of standing. And it is bad publicity if nothing else to do that much damage to unresisting people again and again — so things have evolved to an unofficial 'Don't ask, don't tell.'

"Abortion is still of course legal, but now there are a lot of Christian women who can pick up on when another woman is pregnant, sometimes even before she knows it — and tell her, 'You don't have to have an abortion,' and then talk about alternatives. The abortion industry thinks we're worse than termites — individually not a problem, collectively a major problem, and too many to go hunting for — and there's not that much they can do. Yes, they have advertising; yes, they control the literature that goes with pregnancy tests; yes, they do a number of abortions — but we're able to make a sizeable dent. And the legality of

abortions — but we're able to make a sizeable dent. And the legacy of killing is something that's hurting the court politically.

"There's a saying, 'Satan meant it for evil, but God turned it to good,' and the final break in dark power is that we are not angry at the court. We pray for them every night, submit to them in what we can, and go about our lives — for God, not against the court. The court, with the worst of intentions, has created the conditions in America for Christians to deal effectively with problems that we would never have begun to treat.

"Have I answered your question, Taberah?"

Taberah thought, and said, "You have answered it and more. I would like to talk with you more some time, to better understand your form of government. You miss the Baptists, don't you?"

# Deep Waters

Taberah closed his eyes for a while and said, "Nathella, you said there was a story behind your Dad wanting to make a pond. What was the story?"

Nathella said, "When I was little, I had a fantasy, an image — of being surrounded by a gathering of many warm people, of a place where I belonged. One of my brothers, when he was little, imagined exploring a mansion, and had a very vivid image of a doorway opening, light spilling out from behind. My father had a dream like this, too. He envisioned a deep pool of water, a pool he could swim in and dive deep and meet mermaids. He liked to reminisce, and he talked about that dream from time to time. He had a better memory than most.

"One of the things that happens when you get older is that you get practical, and one of the things I accepted after a blunt remark from a young man is that 'practical' is not about getting things done; it's about letting dreams die. It means settling for less — being happy, to be sure, but... I have come to accept my age, but I know I lost something when I gave up the bright energy of being young.

"One of my father's friends asked him, 'Why not make your dream a reality? You may be too old to swim into a pool and meet mermaids, but there are children around town who are not. They don't have a place to swim. To be sure, you'd have to put a fence around it and require parents to be around, buy one of those floating rings, but why not? Why not make a place where children can dive and meet mermaids?' He told me that a spark lit in my father's eyes — my father said, 'I've got some stumps to blast, and I've got a field I don't use any more. I can make a pond as well.' That friend felt very guilty when he found out what happened, but when I look back — I think my father died well. It left on me an impression, and I've managed to keep a little more of my young openness to dreams than I

I've managed to keep a little more of my young openness to dreams than I might have otherwise.

"And I'm glad to have met you. You help me dream, as well. You're Heavenly minded enough to be of earthly good — you've already changed my life for the better."

Taberah said nothing. He felt at the same time honored and slightly uncomfortable — why was she putting him on a pedestal? Taberah now dreamed mostly of Heaven, and he was sure he would receive it. Why — Taberah thought, and he could not think of any appropriate questions to ask. He let the matter rest.

# TMC Metagame Competition

Taberah went down to the computer room, looking for something to do. He found a cool portal, and spent half the day fascinated by looking at different layerings of the human body. He particularly liked looking at a forearm end-on, with only the skeletal and nervous systems visible. It was fun, but something in his mind was still itching.

Then he heard a herald announce:

TMC. TMC is short for TMC Metagame Competition. The objective of this game is to devise the best new computer game; players' work will be judged according to their popularity in testing votes. Points are awarded for originality, quality of game concept, quality of artwork, and another category specified by game designer. Past winners may be seen at...

This had Taberah's undivided attention. He went, sat down, and spent three hours' total playing different winners, and then, after going through the next day's classes (now less interesting to him, although he tried to concentrate), began to think in the morning.

*They want something original. This culture values novelty over repetition; what can I give that is truly original?*

Taberah remembered his time as a court jester, in which his role was to stand on his head, both literally and figuratively — exalt the abased or pull down the exalted. Pleasure filled his mind, as if he were meeting an old friend. *All games that I am aware of are competitive; one wins by defeating others or possibly by gaining a high score in surmounting an*

*obstacle. What of a game in which there is no defeating others and in which the player is not constrained by any predefined goal?*

Taberah left the computer room and began pacing in the forest. He could say those words, but what did they mean? Trying to describe a game without a conflict seemed like trying to describe a statue without a shape.

*There are a great many ideas that might as well be original because of how hard people have worked to forget them. What is the one idea that is now escaping my attention, the one thing that was the air I breathed in the Middle Ages but which people do not understand now? I can't think of it — what is the one symbol of — symbol! — these people live in a world of symbols, but not as I do. It is a world of meager, half-dead symbols that do not have the courage to be. For them nature, the world is stripped of symbolic lore. A lion is not a reminder of courage — or maybe it is the one surviving exception. They see just a yellow mass, a predator — it is like seeing shape without color.*

*How can I make symbolic meanings visible to them? How can I make a text speak to people who are illiterate? What if they could look at the green in a pane of a stained glass window and — they can. I can make an annotated virtual world — a cathedral and forest, full of plants and animals — in which, when the objects are touched, a voice tells what they mean.*

*Aed has shown me enough that I can begin working on this now.*

# Results

The days passed quickly; Taberah spent every spare moment working on his creation. He enjoyed the classes, but he rushed out quickly to be back in the joy of creation. It had been so long before he created something.

He finished just before deadline, and met with mixed results. His creation fascinated any number of people, was very popular — and was disqualified as not meeting the criteria as a game. The metagame judges wanted something original, but interpreted in such a way as to mean something original in the creation of what you have to defeat. Taberah cried; he was hurt by the judgment, and he felt depressed not to have anything else to be working on. Yes, there were classes, and he particularly enjoyed the cartoon that said, "Tolerate this!" and showed a picture of a cross. The teacher went on to explain that liberality and tolerance did not just mean liberality and tolerance of liberal minorities, but tolerance of Christianity. This produced a heated discussion, and Taberah loved it.

The end of semester rolled around. Taberah had passed the cartoon course, aced the other humanities course, and failed the science course. He was not nearly as saddened by that grade as by the leaving of most of the students, particularly the Phoenix Society. The Kinsella's home was desolately quiet — or at least, it was desolately quiet until Taberah received a call telling him that he was the first person to receive two Turing Awards.

Then the household was busy with preparation.

# Gadfly

Taberah walked up slowly, hesitantly, to the microphone. He looked unsure of himself, but there was still a deep confidence in his walk.

He looked at the microphone for a second, and then out at members of the audience, one at a time. It was a minute of silence, and in his eyes a penetrating gaze grew.

"It was a year ago this day," he said, "that I accepted this award, and I accepted it only because it was politic. I did not and do not think that what I did then merited an award of this magnitude. All I did was look at the problem a bit differently, think a little, and see a way to cheat on the Turing test. This is not a very big deal; it was just an accident. Yes, I know that most scientific discoveries are made by accident, but this does not make an accident a scientific discovery. But this time is different. This time, I am happy to accept the Turing Award.

"This time is different. Earlier, I had merely managed to capture the accidental features of intelligence. Now, God has given me the grace to capture some of its substance, and I stand in awe. It is as if, before, I had received an award for making a statue that looked like something alive, and now, I have succeeded in making something that is vaguely alive. The difference is fundamental, and I wish to ask what lessons we have learned in the discovery.

"The first lesson I can see is that abstract thought is easier than concrete thought. Or, to put things differently, that our minds are so wonderfully made that many of us can handle concrete thought even more easily than abstract thought. (Maybe the first lesson should be that we are fearfully and wonderfully made.)" A chuckle moved through the audience. "There is much more to thought, and rationality, than is easily captured, and I've only scratched the surface of it. It took me a long time to understand that computers are logical and can do math as no human

to understand that computers are logical and can do math as no human ever will — excuse me, do arithmetic as no human ever will — and yet that they could not think. Notwithstanding Dijkstra's dictum that the question of whether computers can think is like the question of whether submarines can swim, computers could not think. If I have managed to make a computer think, I have managed only the barest prototype of what could be done — like those cave paintings that we can barely recognize as art, I have just stumbled on how the basic principle works.

"Or, at least, part of the basic principle. All I've discovered how to program is how to think abstractly; I still have no idea of how to tell a computer how to deal with sense input. Nobody knows how to make an artificial dog; making the robotics for a body would be easy, and making an internal chemical laboratory capable of taking in food and water and producing slobber, sweat, and the like is arguably possible, but we have no idea of how to do the intelligence. All of the abstraction in the world can't tell our robot dog how to run through a field of children without getting clobbered. We have captured one of the features of human intelligence; there are a number of features of even animal intelligence that we lack. There are other features of unintelligent life that we have yet to touch, as well. Nobody knows how to make machines that heal after they sustain damage."

"The last lesson I wish to mention concerns accident and substance, and..." Taberah closed his eyes, and said, "Mr. Chairman, I stayed up all night thinking of what to say, and manners in the country I come from are a bit less polished. I really can't think of a polite way to say it, but I really think the discipline of artificial intelligence has been running with an albatross around its neck, and my success is in large part because I somehow got on the racetrack without getting an albatross. Do I have your permission to make some polemic remarks that may sting?"

Dr. Bode said, "Mr. Kinsella, you have our full consent to say whatever you think is best suited to the occasion."

Taberah said, "I know, but I am not much older than a child, and one of the things I've learned the hard way is that people sometimes say that when they don't really mean it. Is it really OK?"

The chairman's face held trepidation for a moment; he paused, and then said, "It's OK."

Taberah said, "Thank you. And I do really mean it."

"I will not begin to attempt a full philosophical analysis of accident

and substance, any more than I would attempt a full mathematical analysis of logic within this speech, were I able, but I will say this. Accident is the outer appearance of an object, what the senses can receive. Substance is what it really is, its essence, if you will. Our discipline, in this area, is the self-made victim of an incredible legacy of bad philosophy, and has many fruitless endeavors which make as much sense to a philosopher as trying to bring a statue to life by painting it and making its features ever more lifelike. We have asked the question of, 'How can we create artificial intelligence?', but misinterpreted it to mean, 'How can we imitate the features of artificial intelligence that are most computer-like?' With all due respect to the brilliant man for which this award was named, I was shocked when I read Turing's explanation of what he thinks thought is. His interpretation of human thought is like interpreting a game of chess as moving little pieces around on a board. Some of what I have seen in this community reminds me of trying to kink a cable to stop the flow of data on a network, and then switching to fiber optic to make your thinking work. But what has happened is not that you make your thinking work; you only make it stop working. The main thing I would attribute this success to is that I came from another culture and missed this bad philosophy, and I believe that the artificial intelligence community will really begin to mine out my insight when they can really escape from this bad philosophy."

Taberah closed his eyes a moment, and said, "Mr. Chairman, may I take thirty seconds for a personal announcement, as well?"

The chairman sat for a moment and said, "What you have said is a difficult thing to hear, but others have said it before, or things similar. Perhaps we just haven't taken them seriously enough. Yes, you are welcome to say whatever else you want."

Taberah looked, gazed out at over a thousand heads in the audience. All eyes were on him. Slowly, distinctly, loudly, he said, "In this whole room, I doubt if there are more than two or three of you who can hear what else I have to say, but it is something significant. I would like if those two or three would come to my hotel room after the night's festivities so we can talk about it. Thank you, and have a good evening." He closed his eyes and walked hurriedly, almost as if embarrassed, back to his seat.

There was a hushed silence, with murmuring. When he got back to his table, after waiting a minute, one of the people from an adjacent table

table, after waiting a minute, one of the people from an adjacent table scooted over to him, and said, "May I join you tonight?" Then another, then another. People began to walk over to him. In minutes, Taberah was at the center of a noisy swarm of people.

Taberah turned to the woman nearest him, looked into her eyes, and asked, "Would you get the chairman for me?"

In a few more minutes, the chairman was next to him.

Taberah hesitated, and then said, "Dr. Bode, there seem to be more people interested in what I have to say than there is space in my room. Would you be so kind as to provide me with a room to speak in, where these people can comfortably be seated?"

The chairman gently laughed, and said, "Mr. Kinsella, why don't you speak here? The whole room is interested in what you have to say."

Taberah picked up his glass, took a long gulp, and said, "Let me take a restroom break first. And would you announce to people that anyone not interested in my tangent shouldn't feel obligated to stay. It'll be a tad long."

When Taberah returned, not a single soul had left. The room was dead silent.

"The discipline of artificial intelligence is about how to impart rationality to computers. This is a question about computers, but it is at least as much a question about rationality. In our endeavor to make computers rational, we have paid scant attention on how to be rational ourselves. I am not saying that we should be Spocks, embodying logic without emotion. A prejudice against emotion, and a belief that rationality and emotion are antithetical, is (thank God) crumbling, but old fallacies die hard. I embrace emotion as much as I embrace being physical and enjoying music and good wine, but I do not wish to deal further with emotion now. What do I wish to deal with?"

"Dick Feynman, in his memoirs *You Must Be Joking, Mr. Feynman*, included a classic speech on cargo cult science. He spoke of aboriginal people who, in World War II, had Allied food and other supplies accidentally airdropped to them, and produce a mockup of an airstrip, designed more and more to look like a real airstrip — but, however much they worked, planes never landed. Never mind that this is very crude anthropology; there is a fundamental insight there about something that looks very much like an airstrip but just doesn't work. And it provides a key to explain something very disagreeable.

"When I came here, I was shocked at what I saw in intellectual life. It is like the shock that might come to a scientist the first time he goes to a creation science institute and discovers exactly what 'science' means in that context. Pseudo-science can incorporate a lot of material from science, and still not be science. What shocked me when I came here was that I looked for reason and found pseudo-reason."

Taberah said, "A full brain dump of what I have seen would take far too long to deliver in a speech, but I wish to give a sampling in three areas: an instance of bad reasoning I see, an instance of a bad way of thinking I see, and an instance of a possible partial remedy.

"The example of bad reasoning I see is in the area of overpopulation. The general, un-questioned belief is that our world's population is growing exponentially, much faster in the poorer areas of the world, and doomsday will come if we don't curb this population explosion. Speaking as a philosopher, I ask, 'Why?'

"The answer that is given is that people in the third world have large families to support themselves. And that's enough of an explanation to be accepted by someone gullible, but it does not stand up to examination.

"If the world's population is growing exponentially, then it has either always been growing exponentially, or it started growing exponentially at some point. If it has always been growing exponentially, then, as certainly as the future holds doomsday population levels, the past holds dwindling population figures. As surely as the future explodes, the past implodes. This would mean that prior to, say, 1700, all non-European continents would be virtually uninhabited. If the third world population is doubling every, say, ten years, then the population of the third world in the year 1700 would be less than ten. This is ridiculous. All accounts I know say that the poorer areas of the world have been inhabited with at least moderate density for quite some time — thousands of years easily. This leaves us with the other option, namely that the population of the third world has been basically stable and has recently begun exponential growth. To this possibility I ask the question: why on earth? The cultures of these people haven't changed at any rapid pace (and if they did, I would still be puzzled as to why *all* of them changed, instead of a handful — a rapid change of unrelated cultures is about as unusual as the formation of a herd of cats); it is true that most of them cherish children and value big families, but that's been a part of most cultures since long

before whenever this population explosion was supposed to have begun. The introduction of new technology to lengthen life and childbearing years? That would certainly account for a population explosion in the *wealthy* nations, but the average African tribesman has never heard of a Western doctor, let alone received enough medical care to possibly increase the number of children he leaves behind.

"Literature describing a population explosion if the third world birth rate is not curbed has been around for several decades; it used to specify a date for when, for instance, people would all be standing because there would not be enough room for anyone to sit down; those dates are long gone, had passed well before the turn of the millennium, and now there are no more predictions for when doomsday will be — merely that it is always 'soon'. There are pieces of evidence garnered to support this — for example, the great poverty by our standards of third world nations; never mind that this is how all nations lived before one civilization happened to stumble on Midas's secret — but it doesn't stand up to rational examination. And there are many claims like this that free thinkers never question, because to question them is to question rationality or to question reality.

"That is one example among many of non-think; I do not presently wish to give others, nor even to ask who or why would perpetuate such a massive and propagandistic illusion. I am trying to keep this talk short. So I would like to move on to my next example, of an instance not simply of an irrational belief, but of a macroscopic way of thinking that is bad. In this area also, I have a number of choices; I choose to elaborate on the discipline of economics."

Several faces in the crowd could be seen to wince.

"The discipline of economics has had tremendous success at providing the right answer to the wrong question. The question which it answers is, 'How can a culture be manipulated to maximize the economic wealth that it produces?' The question which it ought to answer is, 'How can an economy be guided so as to best support the life of a culture?'

"I spoke with an economist about this; he said several things. The first thing he said is that economics takes people's wants to be constant, i.e. that it doesn't try to reshape people's economic desires. But this is nonsense; the whole enterprise of advertising and marketing is designed to manipulate people into buying and spending far more than even natural greed would have them do. People work overtime and go into

natural greed would have them do. People work overtime and go into debt to have things they don't need and wouldn't want enough to buy if there weren't ads pressuring them into it. As to the others — there is a naive assumption that the starting point is a consumer who is both selfish and rational. Both have an element of truth, but even the vilest of men is not completely selfish. There is a motivation to do something beyond meeting animal needs that is not gone even in Hitler. Hitler went to incredible lengths to exterminate Jews; such dedication would be called heroic if it were engaged in a noble cause. It was perverse beyond measure, but it was not selfish. Not by a long shot. And as to rational — anyone who looks at a marketing text, or for that matter pays attention to a few ads — will see that the means of increasing market share has nothing to do with rational appeal. The real questions that economics could address — the meaning of wealth, the right amount of wealth (not the greatest) for people to live with — are brushed aside in the relentless pursuit of more, more, more, more.

"On points like this I could go on — the death of philosophy, the curse of Babel upon academic disciplines so that, for instance, the work of any one mathematician is incomprehensible to the vast majority of his colleagues — but I do not wish to do so here. Instead I wish to turn, on a positive note, to how you can think in a better way.

"Larry Wall's classic *Programming Perl* described the three programmer's virtues: hubris, laziness, and impatience. His points with all three are in one sense tongue in cheek, but in another sense much deeper. The virtue he calls 'laziness' is another facet of the intellectual rigor that takes the one stitch that will in time save nine. It is called 'laziness' because applying that rigor will have the effect of taking less work overall; indeed it is a principle of software engineering that doing something well is easier than doing it sloppily. I wish to focus on that intellectual rigor.

"When you are thinking — be it listening to this speech, or trying to get technology to work, or figuring out why someone is mad at you — *don't slouch*. When you feel a faint intuition in the back of your mind that something is wrong, don't ignore it. Pay attention to it. Try to understand it. Analyze it. Analysis is one tool among a thousand, and you need to be able to let go of it before you can come to the insight Zen offers — that much is clear to me from reading about it, even though I haven't the foggiest idea whether a Zen master would consider me enlightened or

not. You need to also be able to relax, to be able to slide into things, to groove (if I may use an archaic term) — but different things at different times. And a certain kind of intellectual rigor applies across disciplines, in sciences, in humanities, in humanities that think they're sciences. It applies outside of academia to life.

"I have thought a lot about the three areas these insights are taken from, and written them down in a sort of book. It will be available on my home room at midnight; those parties who are interested and not offended, whom I guess are few, are welcome to read it there. Beyond that, I thank you all for coming, and if my speech has succeeded, you all need time to think as much as I need time to sleep. Thank you, and have a good night."

Taberah slipped out the back door, scurried off to the hotel room, locked the door, and used both noise cancelling ear phones and ear plugs (noise rating 35); Aed had to get the hotel to open the room to pick up a cellular computer he'd left in there, and bring along security guards to see that he was the only person to go in. The traffic on Taberah's book was enough to take down a zuni server, but the Kinsellas' ISP had mirrors up in an hour. The next day, as the Kinsellas stepped into the plane to fly back, Aed said, "Taberah, I hope you're ready to be a celebrity. I've spoken with the chairman of the Turing society, and he says he can ensure us a week of peace and quiet with his clout. Beyond that, be ready for a lot of visitors."

Taberah smiled and said, "I'm not worried about it."

# Sojourn

*Ding-dong!*

Aed came to the door, and stifled a wince. This wasn't a week's peace! He saw a short teen-ager in an outlandish role-playing costume: a long, loose, dark robe fell about him, hooded shadows covering his face, and fractal-decorated gloves covered the skin on his arms. "Mister, may I use your bathroom?" he said, his voice cracking, and then shrunk back.

Aed breathed a sigh of relief, and said, "Sure. Come this way." He led him to the bathroom, surprised at a smell of — what? something chemical; he couldn't decide. As the door shut, Aed decided to stay; the kid might get lost, and perhaps something else in his house might get lost. It was a few minutes, and then, coming out, the kid reached around the side of his head and pulled off his hood to reveal a shaven head that looked older than he had seemed at first glance. "So," the teenager? said, his voice again cracking, "d'ja recognize me?"

Aed blinked, and did a double take. It was Taberah. No beard, no hair on his head, not even eyebrows. He looked unfamiliar, just a very short teenager whose eyes twinkled.

"I've decided to do some travelling incognito. Listen, I'm really sorry about all the publicity you'll deal with; I hadn't known how your culture works. No, that's not right; I'd guessed about publicity, but I hadn't cared. Anyways, I have learned a lot about travel and adapting back in the middle ages, and disguise came quickly — I learned a lot at Halloween time. Um..." his voice trailed off, and then added, "You'll eventually have less attention if I disappear."

"Don't feel guilty about the journalists," Aed said. "Their presence is a side effect of making certain kinds of achievements. But Taberah, you will always be welcome here. You don't have to go."

"I know, but I need to go — for me as well as for you. It's been great

I know, but I need to go — for me as well as for you. It's been great here, and I hope to come back — but who knows what tomorrow will bring? I am a wayfarer, and I am not ready to settle down in one place for good."

"You're sure? You're taking an awful big step — can I at least provide you with resources? I've got a fair amount invested, and it's an awfully big world out there."

"No. I can't describe it, it's just — I have a feeling I'll be back, but I need to travel. To think. To work."

"What do you call your creation of artificial intelligence?"

"Aed, do we have to argue?" Aed noticed that there were tears forming in the child's eyes.

"You're making it hard enough for him as it is, honey. Let him go," came Nathella's voice.

Nathella walked over to Taberah, held him in her arms, and kissed him on the lips. "I'll miss you — Taberah, what does your name mean?"

"Burning."

"Similar to my husband's name. I'll miss you, flame. I'll pray for you every day." Then she continued to hold him in silence.

"Where will you be?" Aed said. He walked over and picked Taberah up, holding him. Taberah kissed him, too, on the lips. "I think it would better as regards the media for you not to know," Taberah said. He lingered for a moment, and then disappeared out the side door.

# A Mugging

Taberah walked out. It was good to be under the sky again, with a bent arm for a pillow. It felt honest. Or did it? In the year's time, Taberah realized he had grown more accustomed to luxury than he thought. There was something nagging at the back of his mind — what? This culture was lacking in rationality, but he had to have more than rationality to give. Academic silliness was a symptom, not the problem. But what was it? He went into a store and purchased a pen and notepad; he needed time to write. He wandered about aimlessly, walking the city streets.

Taberah was snapped out of his thoughts at a sudden, jerky motion. A young man had drawn a knife; he said, "Give me your money. Now. And no quick motions — you draw something, you're dead."

Taberah slowly reached into his pockets. "I don't have much money; only fifty bucks, plus a few coins. I know what I can give you. I have a nice, thick Swiss Army knife that my mentor gave me. It's quite useful. Would you like that?" He had fished out a fifty dollar bill, plus four quarters, one dime, and a nickel.

"Drop it on the ground," the robber said.

"Certainly. Why are you afraid?" Taberah asked, dropping his pocketknife on the ground.

"I'm not afraid," the robber said, and saw that his lie would not be believed. It could not. Taberah was relaxed; he carried a peace about him, and there was something about him over which the knife held no power.

"Why are you afraid?" Taberah repeated. "I'm not going to hurt you."

"Why aren't you afraid?" the robber said. "I could kill you right where you stand."

"That is the worst you could do. Then I would be with my friends in Heaven. And there are some saints whom I'd be really happy to see."

"You wouldn't even try to defend yourself?" the robber said, nuzzled

you wouldn't even try to defend yourself?" the robber said, puzzled.

"I love to spar. I —"

"Then defend yourself against this!" The robber swung his knife to slash Taberah across the face. Taberah seemed suddenly distant; the knife flew through the air, and then the robber felt a fist between his eyes — he would be reeling. Then he felt a sledgehammer blow to his stomach, far more powerful than he would have imagined such a scrawny body capable of delivering

struggled to regain his balance

realized he was in a full Nelson

felt himself retching

felt himself pulled back, so that the vomit didn't touch him.

Taberah released his arms, and then pulled back, crouched. "I'm sorry. I shouldn't have done that. I have learned that violence does not accomplish much, but my hands are not in on the knowing. I should not have pretended that I was sparring with my weapons master. I should—"

The robber cursed him out, and said, "Who are you, and where are you from?"

Taberah was very still for a moment, and said, "My name is Taberah. It means 'burning' in Hebrew."

"Are you a Jew?"

"I am a Catholic. That comes from Judaism."

"So where are you from?"

Taberah paused, and then, against his better judgment, said, "I can give you a short answer that won't tell you anything, or I can give you the real answer, which I won't blame you if you find impossible to believe."

"Give me the real answer."

"I'm from the Middle Ages, Provence in Southern France. I've traveled a bit. An angel took me to this place. I —"

The robber said, "Ok; you don't have to tell me if you don't want to." Taberah did not argue; instead, he asked, "What is your name?"

The robber shook, and then began to cry, trying to conceal it. "You really care about me, don't you?"

Taberah said, "Look at me."

The man brushed his arm across his face and looked at him, startled. Taberah's eyes were glistening, too. He said, "It looks as if you've never had anyone who cared about you. I care about you."

The man wiped his mouth, spat, and then sat up, uncertain whether to glare or to quiver. Finally, he said, "My name is Elika. Don't know what it means. Don't have nobody to care about me. Don't understand you."

Taberah said, "Do you want to understand me?"

Elika said, "Maybe. No. Yes. Why? Are you going to talk about Middle Ages stuff?"

Taberah said, "I don't want to talk about the Middle Ages now. Maybe later, if you're interested. Are you confused about why I care about you? Would you like me to explain that?"

Elika said, "How did you know that?"

Taberah did not answer the question. He said, "Let me ask you another question. What do you think religion is about?"

Elika said, "Religion? That's not for me. It's about rules and feeling guilty and memorizing the Bible. It's impossible; it doesn't work for someone like me who has a tough life."

Taberah said, "Would you like to know what religion is for me?"

"Something you're good at?"

"Um, I don't know if I'm good at it, but it's something important to me, and something very different than what you have said. It's not about rules, or feeling guilty, or memorizing the Bible."

"Then what is it about?"

"One thing: love. God loves you. He loves me. We should love God and other people. Everything else is just details. It's about love; that's why I care about you."

"Look, I don't know why you are telling this to me; maybe it's something you can do, but I can't. Here's your money and your knife; I need to go."

Taberah said, "I gave you the money and the knife; they aren't mine any more. They're yours. But if you want to give me something — \$50 is enough to buy some bread, some meat, and a bottle of cider. I'm hungry, and you just threw up. Maybe we could meet and talk — or not. You are free to leave, but I'd like to get to know you better."

This time, Elika made no attempt to conceal his tears, and Taberah softly asked, "May I give you a hug?" It had been ages since anybody had touched Elika, and he listened with interest as Taberah shared what was on his heart. "Why do you dare to keep company with me?" Elika asked. "My Master," Taberah answered, "kept company with all kinds of people, from the most respected to the least. His heart has room for me, for you, I

from the most respected to the least. His heart has room for me, for you. I want you to share in his joy."

They ate in a park, and talked long into the night.

# Kindred

Night had slowly fallen; Taberah and Elika walked past a dark valley, from which a voice said, "I see your dress. Are you one of us? Are you one of the Kindred?"

Taberah gazed, letting his eyes grow accustomed to the darkness. "Who are you? Who are the Kindred?"

The voice answered back, "You already know that. Where were you born? And when?"

"I was born in Provence, in the Middle Ages."

"Welcome, Ancient One. Step closer."

Taberah had an intuition that he couldn't place. In his mind, he raised his guard, but this was too interesting to pass by. "Come with us."

Elika said, "Don't worry; they're just role playing."

The voice said, "One is never 'just' role playing. Role play is never 'just.'"

The intuition in Taberah's mind clarified, solidifying. He was beginning to see that role play meant something different than it had with Fiona and Clancy.

They melted into the shadows, and emerged in a candlelit room. In the center lie a pile of wooden swords, staves, daggers, shields. The voice again said, "It is our custom that Kindred brought into our Clan must fight until all the other members have defeated them. Only then can you Enter. Choose your weapon carefully."

Taberah looked at the pile, picked up a halberd, hefted it. "And if I am not defeated? What happens then?"

"Then you are the new head of the Clan."

Taberah looked, and words began to flow through him, coming partly of his own volition, partly of something else. His senses were more acute; the world seemed to slow down. He said, "Darkness is powerful. Light is

the world seemed to slow down. He said, "Darkness is powerful. Light is more powerful. As a sign to you, I choose to fight you armed only with this."

Taberah stood back, drew himself to a majestic height, and made on his heart the sign of the cross.

# Kindred

There was stunned disbelief in the atmosphere. One of the Kindred slowly stepped forward, hefted a quarterstaff, and swung at Taberah.

Taberah dodged; he swung again, and this time Taberah caught the staff and twisted it so that the Kinsman fell on his back.

Taberah used the staff to create around him an area of space; another person raised a two-handed sword, bringing it down. It broke the staff in two — as had been the Kinsman's intent — and Taberah's.

Taberah was now holding twin longswords.

From the outside, it looked as if a thousand things were going on; from the inside, Taberah was only aware of one thing. He kept dancing until he had struck all but one of the Kindred — all but one. They were locked in a dance, the Kinsman skillful and masterful, possessing far greater power than he appeared to have, Taberah moving in a way that was cunning, alien, brilliant. Erika looked on intently; this was the most magnificent fight he had seen.

Suddenly, unexpectedly, the Kinsman threw down his sword, and opened his arms. Taberah followed suit, and the Kinsman reached out to grab Taberah's testicles.

Taberah, with equal swiftness, struck him on the side of the neck, knocking him out.

Taberah turned around slowly, looking, and once again made the sign of the cross.

One of the Kindred looked at him, and said, "Who are you?"

Taberah said, "I am your new leader, and I have many things to tell you. I wish to tell you about a kind of role play beyond your wildest imaginings, a role play that will give you what you search for in vain in calling yourselves the Kindred. Kindred we will be, bound much more tightly than ever a game designer imagined."

ughtly than ever a game designer imagined.

"And what is that, that will bind us?"

"It is a dirty word among your circles. Love."

There was murmuring, and a voice said, "Love is very nice for some people, but we need something more real. Something that knows pain. Something that knows angst."

"The love that I know was tortured to death."

"What is this love of which you speak?"

Taberah thought of a short answer, and then said, "That is not a little question, and it deserves more than a little answer. We are tired and bruised; let us, each of us, get a good night's sleep, and then I will give you an answer."

# Discovered

The following night, Taberah spoke long, telling a tale that stretched from Eden to the New Jerusalem. The Kindred were spellbound; none of them could begin to imagine that anything so exciting and dynamic could be the ill-spoken Christian faith. He wrapped up by saying, "It means being loved by God, and loving God by four pillars: loving God with all of your heart, and all of your soul, and all of your mind, and all of your might." None of them were, as yet, convinced, but Taberah had their attention.

Taberah stood, teaching in the parks, day and night, and gradually some of the role players came to believe in what he said, and that he had a message worth spreading. Sometimes more than role players stopped by. One of the Kindred raised his hand and said, "Taberah, why don't we make a medieval role play circus to draw people in?"

Taberah thought, and scratched his head, and thought some more. He said, "I would like to draw a distinction between 'medieval from the neck up' and 'medieval from the neck down'. 'Medieval from the neck down' is everything a circus can provide: costumes and castles, swordplay and feasting. Role play notwithstanding, that is gone, and it is not the treasure I wish to restore. I wish to restore what is 'medieval from the neck up' — faith, hope, and love. Maybe there are some people who could be drawn into what is 'medieval from the neck up' after first contacting what is 'medieval from the neck down', but I do not wish to present a false lure."

"You lured us in from role play."

"You're right, except that then I was trying to follow God where I was. I don't feel the same rightness about putting on a show."

The discussion continued until Taberah noticed that a young woman was staring at him; her jaw had dropped. He looked at her and said, "What is it, sister?"

WHAT IS IT, SISTER?

"I know you. I recognized you by the sound of your voice. You're the man who won two Turing Awards."

# Adjustments

Taberah's Corner 9/1/2035:  
Turning Back the Clock

Upon advocating that we reclaim certain things from the Middle Ages, I am invariably met with the question, "Do you think you can turn back the clock?", and it is a question I should like to address now."

There is a belief behind that question; that belief runs roughly as follows: time runs on an irreversible slope, and with that irreversible slope comes a necessary progression of ages that march forward. This belief appears to be only its obvious first part, that time is irreversible, but it is understood to mean the second part: an equally irreversible march of ages. These are almost so equated that asking, "Can we be medieval now?" is equivalent to asking, "Can we set back the physical clock to 1300?" — but the two are not at all the same.

There is a distinction I have made between being medieval above the neck, and medieval below the neck. Medieval below the neck is all of those popular images that are conjured by the term 'medieval' — knights in shining armor, castles, and the like. Medieval above the neck is not concerned with technology; it is concerned with thinking and living in light of the insights of the Middle Ages. Re-enactors spend short time living lives that are at least medieval below the neck, but I don't think that is a particularly important goal. What I do think is important is what I hinted at with my Turing award speech; it concerns rationality, for one thing. I know I'm fighting an uphill battle against stereotypes here; there has been a massive smear campaign, so that 'medieval' connotes obscurantist silliness and 'postmodern' connotes reasonability, but it isn't so. Medieval above the neck has never been obsolete, and never will be — because it can't be obsolete, any more than good food can become obsolete.

As to what exactly this will mean — I will write about different things at different times. I have some things to say about judging by appearances versus judging rightly — but that will come in its due time.

Thank you for reading thus far; I hope you will continue reading

Thank you for reading thus far, I hope you will continue reading.

The young woman's recognition of Taberah brought with it powerful changes; Taberah was for the first time of his life busy, and for the first time of his life had to escape from other people for the restoration of his soul. When he appeared, people asked autographs, and he soon learned to enter and leave restaurants through the kitchen. He had a voice to be heard, but he missed being able to walk through the streets and in the woods with Lydia. There were so many things about Taberah that people couldn't understand — such as why he would sometimes rather sleep in a gutter than in a waterbed. Perhaps he could learn to use cosmetics to alter his appearance — but when would he learn how to do that? He saw his fame as a responsibility, but it was more of a burden than a privilege.

He wrote and communicated all of the things that he had discussed with his friends — and re-iterated that he did not want a circus to be put up. He had influence, but it was an impersonal influence with people he mostly didn't know. And so Taberah prayed earnestly that the burden would be lifted.

# Reckoning

Taberah's Corner 10/1/2035:

### Reckoning

There is a Bible story where God calls Samuel and tells him to find the future king among some brothers. Each time one comes out, Samuel is impressed and says, "Surely this is the one who is to be king!" God tells him, in essence, "I do not judge as you do. I do not judge by outer appearances." It is the last brother who is picked to be king.

I entertain doubts about holding a column at all; I suspect that most readers are reading this column because I have won two Turing Awards. If you are, I would ask you to stop; the Turing Awards merely indicate that I had some success with computers, and do not make me particularly qualified to advise society. If you are reading this column because you think I have good things to say, then go on reading it; if you are only reading it because of the weight of my awards, I would rather you were reading something else, something else that you chose because it is worth reading.

You people are greatly concerned about success. There was someone who said, "I had climbed to the top of the corporate ladder, only to find that the ladder was leaning against the wrong building." I would like to suggest that your understanding of success is like your judgment by appearances. There is something good about being famous as having won two Turing Awards; that something good is that you learn that, whatever success is, that isn't it. Success is being drawn into the heart of God, and it comes more easily when you are about to be deported by the Bureau of Immigration and Naturalization Services than when everybody and his brother wants you to be his honored guest. Success might come in many ways. It might be service of children — and how few adults are willing to play with children? It might be keeping house. It might be running a volunteer shelter. It might be being a judge who has the guts to defend Christianity when it is attacked or challenge Islam when it is hurting our society. It might be any number of things. Perhaps it might even include being a celebrity and using your fever to share

might even include being a celebrity and using your favor to share truth with others who might not have heard it — but it is not defined by having an award attached to your name.

How can you be successful — not at some date in the future, but right now?

On October 2 2035, 3:05 PM, God heard Taberah's prayer. An Islamist assassin, armed with a high-powered hunting rifle, shot at Taberah and hit him twice — once in the right shoulder, and once in the abdomen. Taberah was in surgery for sixteen hours, and spent the next week drugged out. The doctor gave very firm orders that only close friends approved by both her and Aed were to see Taberah — even then, Taberah always had a visitor when he wanted one.

In Taberah's medically enforced absence, the movement he started became independent of him. They were no longer intellectually dependent on him: Taberah was no longer a head, merely the first person to have known something. There were medieval fairs, showing people what was medieval above and below the neck. When, three months later, Taberah left the hospital, he was simply a member.

On March 6, 2036, Taberah was lying in bed, when the Angel of the Lord came to him in a vision, and said, "You have done well, Taberah; you have done what you were sent for. Which would you like: to return to medieval Provence, or to spend the rest of your life here?"

Taberah cried, and said, "I have waited, and waited, and waited, and waited. Can't I go *home*? To my *real* home?"

His funeral was filled with mirth.

# Epilogue

Yes, Eleta, I think you're right, and I think the manuscript will have to stand as it is, but I am still not happy with it. Perhaps no author is ever satisfied with his work, but I am not happy with it. You understand why I presented the events as fiction — the idea is not without merits. Still, a critic could poke any number of holes in it. Someone who regarded it as fiction would no doubt note that good storytelling and good plot are rarely found together, that forty percent of the plot is glossed over in two short chapters, et cetera. I'm not sure that Taberah would share in all those criticisms — he regarded those long days of conversation with the Kinsellas as the best time of his life, and his influential and turbulent time in the limelight as almost an afterthought in which he repeated impersonally what he had shared personally. At any rate, he would have found his message more important than telling a good story — and he took storytelling seriously. Someone who knew this was not fiction and knew the parties involved would have much more serious criticisms to level. I have captured almost nothing of Taberah's sense of humor — cunning, bawdy, subtle, clever, exquisite, and absurd. After hearing about some of the practical jokes he pulled — from now on, Monty Python will taste like flat beer. It pales in comparison. I also did badly in failing to more seriously address the place of Islam. The influence of Islam in shaping the culture, and why it is by nature coercive is something I just barely nicked — probably just enough to make the reader think I suffer from vulgar intolerance. You know better than that, of course; you know that I enjoyed living in a Muslim country, and that I greatly respect their emphasis on honor, friendship, and hospitality. And that it is my considered judgment — as surely as that Christianity is invariably corrupted when it wields direct political power — that Islam in power is

inherently coercive. The role of Islam was one among *many* important elements of the surrounding culture that I failed to capture. And medieval culture, for that matter. And Taberah's "200 ways to use a magnetic paper clip" — I just don't know what to say. It's both silly and serious, and it was one of the things to motivate me to wonder, "What kind of a mind would think of that?" And I have intentionally left out most of the miracles that occurred — not that there were many, but I didn't want to present unnecessary strain on the reader's willing suspension of disbelief. There was plenty of necessary strain already.

The willing suspension of disbelief accompanying fiction is the real reason I chose to write it as fiction. It's not just that saying I know events three decades in the future would label me as a kook — that's understandable enough, and the real explanation was difficult for *me* to believe, even having experienced it. The real reason I recorded this story as fiction is that our time has this terrible stereotype of medievals as backwards, and conception of the past as inferior — and a science fiction/fantasy story is almost the only place where something labelled 'medieval' could be respected. What if I told you that an anti-Semitic campaign had taken the name of Einstein, and smeared Jewry by making his name a symbol of idiocy? The truth is that something equally anti-medieval has taken the name of John Duns Scotus, the medieval genius whom Catholics call the Subtle Doctor, and turned it into the term 'dunce'. That stereotype, and the preconception that we have nothing to learn from the medievals, is a force to be reckoned with, and I don't know how this manuscript will fare in its face.

Once one of Karl Barth's students asked him, "Do you believe there was a serpent in the Garden of Eden?" Barth replied, "The important thing is not 'Was there a serpent?' but 'What did the serpent say?'" In a similar insight, I have presented Taberah's story as fiction and tried to draw attention away from the question of "Was Taberah real?" and instead draw attention to the more fundamental question of "What did Taberah say?" — on which account he has much to tell us. After coming into contact with him, I have come to believe that we can be medievals, too.

What do you think?

-Jonathan

# **Frankincense, Gold, and Myrrh:**

*A look at profound giftedness  
through Orthodox  
anthropology*

## **Thesis Statement**

Gold, frankincense, and myrrh are emblems of Christ's kingship, divinity, and suffering respectively, applying to humans as Christ's image, studied in the profoundly gifted.

## Abstract

The purpose of this paper is to look at the features of Christ confessed gifts of gold, frankincense, and myrrh as features playing out in humans, and exploring what concrete shape this playing out takes in the so-called "profoundly gifted." (Kingship, divinity, and suffering play out in equally significant ways for other populations, but the scope is primarily limited to a segment of the stated population.) "Profound giftedness" is used a standard psychological technical term, if a quite flattering label for a more ambivalent experience.

Profound giftedness is explored as one of many experiences that looks different from the inside and from the outside; paradoxically, what looks different from the inside and outside is in large measure its particular expression of human commonalities. (This could be said for many other populations as well.) Profound giftedness as an expression of being human is explored, in the (royal and) divine image, in particular the rule over Creation through work, alongside a particular expression of suffering, while being attentive to the fact that profoundly gifted people both suffer and cause others to suffer. Suffering is explored in light of Orthodox experience before the essay closes by applying lessons learned in looking at profoundly gifted difference to human difference as such. Profound giftedness experience combines extremes, including both privilege and marginality. This study looks at the profoundly gifted experience of being human, and owes a considerable debt to studies of the human experience of the marginalized, while drawing from other traditions including the Orthodox.

Profound giftedness is not described as exception to the normal human rule but as the univocally applied human rule given further specification that could be given different further specification for other populations.

## Symbols, humans, and Christ

There is an understanding of symbol/image that plays out in this paper's treatment of the image of God and the symbolic character of the magi's gifts. If we look at the question, "Does a symbol represent and embody or represent only?" an Orthodox perspective is that a symbol or image both represents and embodies.<sup>[1]</sup> A proper symbol is neither arbitrary nor detached but connected to what it represents. Hence Kallistos Ware answers the question of whether Orthodox pay undue devotion to wood: "The icon is... a symbol; the veneration shown to the images is directed, not to stone, wood, and paint, but towards the person depicted."<sup>[2]</sup> We shall see in a moment that the person is in turn a symbol of Christ, but the immediate point is the understanding of symbol that undergirds such a position. It is the same understanding of symbol that says that the Gifts of the Magi were not given arbitrary imputed symbolism, representing without embodying. Not only do they both represent and embody, but there are layers of symbolic resonance, and that resonance informs this paper as does the precedent in Ephrem the Syrian, a poet of the first rank,<sup>[3]</sup> treating a fluid rather than inflexible treatment of the symbols' precise meaning.

It is a deceptive understatement to call Christ a norm to humanity. To be human is to be made in the image of God, classically understood as "in the image of the Trinity,"<sup>[4]</sup> as Ware attests, and this image specifically includes the image of Christ. Part of this image plays out in treatment of others: Ware writes "Monastery guests, as St Benedict of Nursia (c.480-c.550) wrote in his Rule, are to be received 'as Christ himself.' In similar terms, the fourth-century Egyptian Abba Apollo insisted, 'We should bow down before those who come to see us, for we are bowing down not before them but before God.'"<sup>[5]</sup> This principle is in no sense unique to monastery guests: in [Mt 25.31-46](#) the righteous are separated from the

wicked in the last judgment according to how they treated Christ through their treatment of the downtrodden, with no distinction being made for religious persuasion. One's treatment of another is one's treatment of Christ tout court. Christ lies at the heart of humanity and his image in every human reaches the point that one cannot do good or ill to another human, Christian or not, as someone detached from Christ because there is no such thing as someone detached from Christ. This is tacitly tied to a norm in a much deeper sense than a norm extrinsically imposed *de jure*, whether or not it fits a person originally independent of that arbitrarily imposed norm. One can have something to do with Christ without encountering Christianity: the relevance of Christ does not enter the picture only in relation to explicit identification with Christianity.

As a limitation of scope, this paper looks at the image of Christ as it is expressed in the profoundly gifted. "[God] doesn't make two blades of grass the same: how much less two saints, two nations, two angels."<sup>[6]</sup> The image of Christ is specified equally but differently in other human populations, and other papers might look at other populations. The scope of this paper is to offer analysis and description for the profoundly gifted and talk about how the image of Christ in the human constitution plays out specifically in this locale. If the profoundly gifted are explored as connected to Christ and the Theotokos or Mother of God, this is intended as an exploration of something common with other populations rather than a specific distinction that applies to the profoundly gifted and not others. Then why focus on the profoundly gifted? Human basics can be further specified in exploring the particularity of their expression in different populations, and this paper is intended to offer specific characterization and thick description for the group in its focus, a methodology one would expect to be able to apply to any number of groups. (Other papers with different focuses might give comparable specification to the human rule through thick description of other populations.)

## Chrism, frankincense, and myrrh

Chrism was not "mere" oil but a sacramental emblem of the Holy Spirit. Cyril of Alexandria compares aromatic holy oil, or chrism, which produces "the advent of deity,"<sup>[7]</sup> to consecrated bread that has become the Body of Christ,<sup>[8]</sup> and Cyril does not mean this as extrinsic and arbitrary symbolism but understands symbol along the lines outlined above. Oil is an emblem of the Holy Spirit so that anointing with oil may be hard to disentangle from anointing with the Spirit,<sup>[9]</sup> and oil carried rich resonances: Susan Ashbrook Harvey writes: "Most important for early Christians were the ideas of priesthood, kingship, and prophecy as offices of sacred activity conferred through an anointing with holy oil. Early Christians applied these concepts to the figure of Christ, *as well as themselves as his followers*. [emphasis added]"<sup>[10]</sup>

Ashbrook Harvey mentions a "universal patristic exegesis"<sup>[11]</sup> of gold as emblematic of Christ's kingship, frankincense of his divinity, and myrrh of his suffering. In patristic sources this exegesis can be tersely stated,<sup>[12]</sup> but at other times there is fluidity and resonance: in Ephrem the Syrian myrrh intercedes for swords used in aggression, gold intercedes for treasures plundered from King Hezekiah, and frankincense appeased divinity.<sup>[13]</sup> The three basic meanings are here cast in a touching light of reparations for the magi's ancestral offenses against Mary's ancestors. This paper's method is informed by how in Ephrem the three gifts were not limited to a single rigid meaning but could be flexibly applied in different ways.

Frankincense was a complement to anointing oil; Ashbrook Harvey writes, "...incense took its base meaning from its identification with sacrifice. Incense served as a medium for human initiative towards the

divine, and its fragrance marked the process of human-divine encounter. Holy oil, by contrast, represented divine initiative towards the human." [14] Incense could signify human approach to divinity, or divinity itself. [15]

Myrrh was associated with suffering and death. Concordance search results for "myrrh," "spices," or "ointment" (in the RSV) reveal an overwhelming number of Gospel references explicitly connected to the passion: the Gospel reference to myrrh, spices, ointment, etc. pave the way for the Fathers to tie myrrh to suffering and death.

Gold is less thoroughly explained in Ashbrook Harvey and seems to be one of those objects of study poised to slip through the cracks of what is considered "doctrinally significant:" prior research to support an argument appears scanty, leaving primary sources the best available resource. Kittel[16] and Fitzgerald[17] lack entries for "chrysos" <http://cjshayward.com/>"gold." This may be a difficulty, but it does not stop one from looking at the other two gifts, and patristic treatments of kingship can presumably illuminate gold as an emblem of kingship.

Chrism is almost a fourth gift besides the three, and in a way is prior: it cuts deeper, and we call Christ "the Christ," meaning anointed Prophet, Priest, and King. The oil and the Holy Spirit are paradigms for each other. [18] Anointing was important in baptism[19] and some sources make baptism more a matter of oil than water.[20] John the Baptist announced one who would baptize with the Holy Spirit and with fire,[21] and perhaps oil rather than water explained baptismal anointing, with the Holy Spirit and with fire, to make little Christs. Not only myrrh for suffering, but gold for kingship and frankincense for divinity, are basic to being human and constituted by the image of Christ. The anointing with the literal-and-more-than-literal chrism that makes prophet, priest, and king applies to Christ and Christians. It is not only the pre-eminent gift of chrism that is connected with what it means to be human. The Gifts of the Magi are ultimately gifts to humans who bear Christ's image.

## Gold and frankincense in human work

The gifts have something to say about the human person. It is the Last Adam[22] who received frankincense, gold, and myrrh, and this Last Adam is tied to the First Adam: [Genesis 1.26-8](#) (RSV) reads:

Then God said, "Let us make man in our image, after our likeness; and *let them have dominion over the fish of the sea, and over the birds of the air, and over the cattle, and over all the earth, and over every creeping thing that creeps upon the earth.*" So God created man in his own image, in the image of God he created him; male and female he created them. And God blessed them, and God said to them, "Be fruitful and multiply, and *fill the earth and subdue it; and have dominion over the fish of the sea and over the birds of the air and over every living thing that moves upon the earth.*"  
[emphasis added for words relating to human rule]

Genesis 1 ties the divine image to human rule. The language used is of an idol image of a deity that carried the deity's essence and through which the deity's work was accomplished.[23] Furthermore, a good portion of the words in Genesis 1.26-8 are devoted to the relationship between the human and the rest of material Creation. To cite one patristic example, Basil of Caesarea can spiritualize rule over animals by discussing rule over oneself,[24] but alongside an *a fortiori* implied argument, "Let them rule over the fish. We were, in the first instance, given power over animals who live elsewhere. [God] did not say, Let them rule over domestic animals, but over fish:" humans have a powerful authority over the animals that goes beyond domestic animals to even effectively apply to fish.[25] Our relation to the natural world is a relation as royalty made

to rule. Anestis Keselopoulos explains this point: "[St. Symeon] has a strong feeling for the fact that man was created to function as king of creation."[\[26\]](#) Gold and frankincense do not begin to describe humanity in Christ's shadow. They already describe the divine image in Genesis 1.

That the texts above connect to work is foundational to John Paul II's *Laborem Exercens*.[\[27\]](#) He argues, "Man is made to be in the visible universe an image and likeness of God himself, and he is placed in it in order to subdue the earth. From the beginning therefore he is called to work,"[\[28\]](#) making subduing the earth and human rule the bridge between the *imago dei* and work. The royal, divine image expresses itself in work—perhaps not only work, and perhaps "work" needs to be more broadly understood than "remunerated labor," but on the Genesis 1 account the one holy day of rest is only achieved after the six days of the Creator himself working. One can scarcely ask for a higher valuation of work than to say the world was created by God's work (perhaps over billions of years), and as the Father works, so does the Son ([John 5.17](#)). Work is a defining feature of humanity (although not the only important feature). Work is part of human glory, part of the gift of gold and frankincense. The archetypal command to rule Creation is a command to work, and to be king is to rule through work.

Properly understood, work is at the core of what Keselopoulos gives great moral weight, one's "relationship with the things in creation."[\[29\]](#) Work is the outward operation of the image of God, and relating to the world virtuously is partly a matter of loving work. Madeleine l'Engle describes service that is close to the heart of work: "If the work comes to the artist and says, 'Here I am, serve me,' then the job of the artist, great or small, is to serve."[\[30\]](#) The artist does not take first initiative but responds by serving an as yet unformed Creation that needs to be loved into its full being. We will further explore this image later.

## Conceptualization of profound giftedness

I am wary of using the term "genius" for several reasons. Of all the common terms in psychological literature, "genius" is most problematic. It is difficult to say "genius" and only imply a claim of ability; invariably there are half-conscious associations evoked which approach being a morally separate class of creature who has a higher calling and is not bound by the same rules as mere mortals, much like the pathological conceptualization of the "exceptional man" critiqued in *Crime and Punishment*.<sup>[31]</sup> "Genius" comes with a mystique, or, to be more precise, is largely a mystique.

"Profoundly gifted" is not a synonym for "genius," and I will use the imperfect "profoundly gifted" not because it is perfect (it isn't), but to avoid forcing readers to deal with my own invented term when a standard term exists. "Genius," even besides its connotations, denotes someone who leaves behind work of enduring value, and I believe it is possible for profoundly gifted to make no such achievement, and for that matter to do poorly at certain ordinary achievements like economic self-sufficiency. The narrow technical term "profoundly gifted" overlaps the term "genius" (if the latter is stripped of its mystique), but the overlap is incomplete, with one neither necessary nor sufficient to ensure the other. Having considered what amount to limited options, all of which have drawbacks, I will use the term "profoundly gifted" as being the least problematic, even if it is a flattering way of describing an ambivalent condition.

While the language of "giftedness" has Biblical origins,<sup>[32]</sup> I am using technical terms which depart from the Biblical usage and which I treat as having important differences from the Biblical way of framing gifts. Theologically, the quite different Biblical conceptualization is to be

preferred, and I will use psychological terms even if it might be theologically preferable to have another terminology besides that of giftedness to refer to this particularly obscure form of human giftedness. [I Corinthians 12](#) never speaks of "gifted" (as opposed to "non-gifted") people, and in the parable of the talents, [\[33\]](#) the servants admittedly differ in how much they receive, but they do not differ in having at least one substantial "talent" entrusted to them, meaning at least sixty-five pounds [\[34\]](#) of precious metal. [\[35\]](#) It is not only the profoundly gifted who have a place and a quite significant gift for the greater, common good, nor does one need to be psychologically labeled as "gifted" to count as a human being. Furthermore, this discussion is limited in its scope and does not treat other forms of giftedness even if one departs from the Biblical baseline that true talent and giftedness are for all, not a few. Daniel Goleman's *Emotional Intelligence: Why It Can Matter More than IQ* [\[36\]](#) is controversial, [\[37\]](#) but Goleman takes a look at one of several of the intelligences treated by multiple intelligence theory, and at very least makes a significant argument of exactly how success may be more a matter of emotional intelligence than the specific type of intelligence treated within the scope of this paper. [\[38\]](#) Even broader would be a serious attempt to treat not only intelligences but the broader category of aptitudes, which seem practically infinite in variety.

## Profoundly gifted work at a young age

Work is a defining feature of humanity and can be neither limited to nor centered on the profoundly gifted, but there is something that shines in the work of the profoundly gifted. But before I go further about that, I need to explain a feature of traditional psychological research in this domain. Leta Stetter Hollingworth, who was highly influential in how psychology subsequently came to approach giftedness and was the founder of gifted education,[\[39\]](#) expressed concerns that Francis Galton's *Hereditary Genius*[\[40\]](#) identified gifted people by established adult reputation, after interventions no longer help much.[\[41\]](#) She suggested that one shift focus to gifted children, which has left a curious lacuna in the psychological research: study of gifted people is first and foremost study of gifted children. Therefore, the research that is available deals primarily with gifted children and I will be looking at children.

Hollingworth describes "child L" in middle school:[\[42\]](#)

He was relatively large, robust, and impressive, and was fondly dubbed "Professor." His attitudes and abilities were appreciated by both pupils and teachers. He was often allowed to lecture (for as long as an hour) on some special topic, such as the history of timepieces, ancient theories of engine construction, mathematics, and history. He constructed out of odds and ends (typewriter ribbon spools, for example) a homemade clock of the pendular type to illustrate some of the principles of chronometry, and this clock was set up before the class during the enrichment unit on "Time and Time Keeping," to demonstrate some of the principles of chronometry.

Coming from a slightly different angle, Martha June Morelock offers

analysis for Michael Kerney:[\[43\]](#)

## **The Plato Phenomenon**

Mr. Kearney reports that since Michael was very young, he has seemed to spontaneously manifest both factual knowledge and conceptual comprehension that no one has taught him. He recalls an incident when Michael was three years old . . .

Mr. K: Michael at three coming up to me—when I came up to me and he said "Dad, Dad! I've got to show you this, got to show you this!" And he showed me the commutative rule of algebra. And I said "Michael! That's great! Where did you learn that?" "I don't know. I just made it up!" And then he goes "Wait, Wait! There's more! There's more!" And then he showed me the associative rule.

In searching for an explanation for this phenomenon, Mr. Kearney has considered a number of possibilities—including an analogy to Platonic philosophy . . .

Mr. K: Just in terms of some of his mathematical ability—some of the cognitive abilities. Some of the fact knowledge that he knew. But we didn't look at those as telepathy or spiritual things. It was more platonic. I think our experience, if anything, would be related to Platonic Forms. He seemed to be able to go in and take things out of another dimension and apply them—things that you wouldn't normally know, he knew. I mean, I don't think the issue was whether or not anyone taught him or not. It was that they were available to him and on occasion, he could dip into a location and bring things up. He has a cognitive ability to see things whole.

There is a sense in which a staggering intelligence is the baseline of being human: the most important sense of intelligence is not any of the intelligences on a multiple intelligence scale and in fact not something that some people have more of,[\[44\]](#) but something like embodiment that is simply part of the baseline of being human: this sense of intelligence forms a necessary context to achievements like the above which, taken out of context, suggest that there is a very occult phenomenon manifest in a very few, showing "ordinary" intelligence to be trivial. That would be a deep misunderstanding of intelligence in all parties. The intelligence

described in the above quotation is in fact something spiritual, along with "ordinary" intelligence, but there is something easier to see in this kind of achievement even if one has grown insensitive to ordinary intelligence as a spiritual feature of the divine image at work. Profound giftedness exists in continuities with broader human intelligence: artwork in a gallery, at its best, need not dazzle in a way that "shows" that nothing outside the gallery is beautiful; one can visit an art gallery and have one's eyes opened not only to the art but the world the art is drawn from.

If the royal, divine image expresses itself in profoundly gifted work, the expression of the image in work is not an ontologically distinct faculty that the profoundly gifted have that not everybody else has. There is, however, a qualitative difference, suitable for thick description. This quality would not be rightly identified in any sense as an exclusive or even primary shadow of the Theotokos in the Annunciation, but among many polarities and many kinds of difference work for the profoundly gifted resembles the Annunciation in one among many ways.

Before identifying the specific contours that might place the work of the profoundly gifted in the shadow of the Annunciation in a particular way, it may help to clarify one Eastern understanding of the Annunciation that I am using as a framework:[\[45\]](#)

The incarnation was not only the work of the Father, by His power and by His spirit, but it was also the work of the will and faith of the Virgin. Without the consent of the Immaculate, without the agreement of her faith, the plan was as unrealizable as it would have been without the intervention of the three divine Persons Themselves. It was only after having instructed her and persuaded her that God took her for His Mother and borrowed from her the flesh, that She so greatly wished to lend Him. Just as He became incarnate voluntarily, so He wished that His Mother should bear Him freely and with her full consent.

The Annunciation of the Theotokos,[\[46\]](#) in the Eastern Tradition, is not understood as a message the angel spoke, but was when the Theotokos gave her full cooperation to the divine initiative, saying, "Behold the handmaid of the Lord. Be it unto me according to thy word."[\[47\]](#) The Theotokos offers the perfect creaturely response to the divine

initiative, and the most enduring works of profound giftedness are in its shadow. (There are many other points on the spectrum of human experience that are in its shadow, too.)

Creative work, and much of the serious work of the profoundly gifted, is a minor incarnation and the fruit of a minor annunciation. Madeleine l'Engle writes, "The artist is a servant who is willing to be a birthgiver. In a very real sense the artist (male or female) should be like Mary who, when the angel told her that she was to bear the Messiah, was obedient to the command."[\[48\]](#) It is the bearing of a Creation that comes to one initially unformed, not yet given concrete shape, and one gives to it out of one's nature, loves and serves it into being; one gives it one's own flesh until it has become enfleshed and ready to meet the world. There are other dimensions to the connection—perichoresis or interpenetration of bearer and gift, and a spiritual discipline l'Engle calls "almost identical with adoring the Master of the Universe in contemplative prayer"[\[49\]](#)—and the process, meditated on throughout Madeleine l'Engle's *Walking on Water*,[\[50\]](#) is not unique to the profoundly gifted, who are not correctly understood if they are viewed simply in terms of differences without attention to human commonalities.

But it is the textured shape taken by the human gold and incense for many profoundly gifted.

## **Myrrh and the suffering of the profoundly gifted**

Suffering is a basic part of human life. It takes different forms, perhaps, but it is constitutive of human experience. Furthermore, there are a great many human experiences that are different from the inside and from the outside. If this is explored with regard to the profoundly gifted, this is not as something that sets the profoundly gifted apart, but exploring further the concrete human form of human universals that are given further specification one way for the profoundly gifted and are given further specification other ways for other populations.

Giftedness as studied in this paper does not automatically include emotional intelligence, but it does not leave emotional life unaffected: for the entire range of giftedness, and not only the profoundly gifted, "giftedness has an emotional as well as a cognitive substructure: cognitive complexity gives rise to emotional depth."[\[51\]](#) This has a marked positive aspect; it makes it easier to have a rich inner life and to experience joy, but "[i]ntensity, in particular, must be understood as a qualitatively distinct characteristic. It is not a matter of degree but of a different quality of experiencing:"[\[52\]](#) it is as if at an age where children of a particular bent are given toy power tools, the range of gifted children are left to contend with real power tools, leaving more positive possibilities but also more ways of getting hurt that for many children simply aren't an issue. This kind of inner life is a mixed blessing when it comes to experiencing difficulties.

What is school like for the profoundly gifted? What is do they experience when they are in a situation which people assume is entirely oriented around them and their interests, where they have life easy and do not need to apply themselves like other people? This is what it meant for two boys:

He would go to school from 8 to 2 and you would think that would be enough. Nope. Cause when he got home at 2 o'clock, he goes "Mom, I want work. They didn't give me any work." It's like "You did all that stuff at school?" "Oh, that's easy stuff.[" He used to complain "Mom, they're making me write "cat" and "dog" and all these three letter words." So I went to the school and I said "He doesn't like to write these things, and why are you having him read cat and dog books? He reads far beyond that level." And they said it was because they wanted his hands—because he was so young and his motor skills had to be developed, that they wanted him to read this little easy book so that he could write. Well, he was like, "Well, let me read the big books and I'll write."[\[53\]](#)

Ian completed Grade 3 in a quiet fury of anger, intellectual frustration and bitterness. His verbal and physical aggressiveness returned in full spate; however, as he was now 2 years older than he had been in Grade 1, he was able to maintain a tighter control on his emotions while at school, and his teachers remained quite unaware of the emotional toll levied on him. *At home, however, he released all of his frustration and resentment and became, in Brock's words, "almost impossible to live with."* In addition, he began to experience severe headaches, bouts of nausea, and stomach pains. [longer emphasis added][\[54\]](#)

This experience is a hint of the dark side of the profoundly gifted experience. Profound giftedness offers real advantages, and no account of it is complete without accounting for what seem almost like magic powers. Giftedness is a privilege, the more the better, or is commonly assumed to be such kind of unqualified privilege so that saying that giftedness is painful comes across like saying that riches are painful. Yet if it is a privilege, it is a privilege that includes an experience that can be painful enough to cause depression, escape through street drugs, and suicide.[\[55\]](#)

The analogy to wealth could be refined: profound giftedness seems to be like wealth in an odd currency that makes it easy to buy luxuries but difficult to acquire some necessities. The characteristics described under "Gold and Frankincense" are quite significant and a source of joy. In

general the profoundly gifted experience is an experience of extremes, where few things are moderate. But there are things some others wouldn't guess at, such what such differences mean for difficulties finding and obtaining steady work, let alone a normal environment experienced as hostile enough to induce nausea in a young boy. Being significantly above average is an advantage, but it must be understood that the "moderately" gifted whom one is tempted to assume are "mediocre gifted" are in fact no such thing: they are almost what giftedness should be like, significantly above average and yet escaping certain problems.[\[56\]](#) "Moderate" giftedness coincides almost entirely with what has elsewhere been called the range of "socially optimum intelligence,"[\[57\]](#) and it resembles the classical image of moderation or a *via media* which not simply avoids two extremes but in its balance has something positive that both extremes lack. This is a different phenomenon from another range where birth trauma and brain damage seem close to a majority phenomenon,[\[58\]](#) is part of why scholars will speak about "the 'syndrome' of profound giftedness."[\[59\]](#) It's still classified as giftedness, but it not just a further enhanced form of the advantages in moderate giftedness. Doreen Freeman suggests of disability, "How often we hear people say they would 'rather be dead than disabled' yet the suicide rates of the disabled do not reflect this pessimistic view."[\[60\]](#) Disability is a different condition viewed from the inside and the outside, and so is giftedness, for which the suicide rates are apparently higher. We are aware that stereotypes can affect a true appreciation of other groups, which includes race and disability, and also include profound giftedness as an experience difficult to judge from the outside. (Not that the profoundly gifted experience is unique in looking different from the inside versus the outside: there are any number of human experiences that are different from the inside and the outside, and this is not a distinction for the profoundly gifted but only how the phenomenon plays out for them.)

Aharon Lichtenstein writes as he concludes an article on suffering as having a profound place within Judaism:[\[61\]](#)

In conclusion, I return to the sinking feeling that much of what has been said here might fall on deaf ears... any attempt to cry up the purgative nature of suffering might be viewed, especially after the Holocaust as trite platitudinous and—what is worst—callous

...sacrifice, as true, practical, and... what is worse... careful...

I can understand such a reaction—and indeed, up to a point, share it. But only up to a point... Response to suffering cannot be divorced from the totality of religious experience...

Suffering, and the use of suffering, have a place within religion.

John Behr's central mystery is "life in death" for his appropriately titled *The Mystery of Christ: Life in Death*.<sup>[62]</sup> The cross is central: "This scriptural reflection on the Passion of Christ began by the apostles and evangelists was continued, expanded and deepened in the work of subsequent theologians, shaping every aspect of their theological vision."<sup>[63]</sup> This expands into meaning not only that Christ bore his Cross but we are to bear the Cross: what is normative is for "everything [in our lives to be] encompassed in [Christ's] economy."<sup>[64]</sup> "Life" is used in terms of the divine life,<sup>[65]</sup> and "death" holds far more than a merely biological meaning:<sup>[66]</sup> the mystery of "life in death" is a mystery of "frankincense in myrrh."

There have been people who have found in joy in suffering. Peter and other apostles, after being beaten,<sup>[67]</sup> left the council "rejoicing that they were counted worthy to suffer dishonor for the name."<sup>[68]</sup> Ware's closing examples in an article on martyrdom tell of martyrs' joy.<sup>[69]</sup> This puzzling behavior is difficult to understand but plays out what is said in the [Sermon on the Mount](#), in a passage that is part of the Orthodox Church's main liturgy:<sup>[70]</sup> "Blessed are those who are persecuted for righteousness' sake, for theirs is the Kingdom of Heaven. Blessed are you when men revile you and persecute you and utter all manner of evil falsely against you for my account. Rejoice and be glad, for your reward is great in heaven, for so men persecuted the prophets who were before you."<sup>[71]</sup> I cite these not because I expect it to be self-evident how people could respond this way, but precisely to suggest that there's something in their version of suffering that is hard to appreciate today.

Even if it is hard to see how, these texts indicate that there is something that may not be obvious about innocent suffering. Hebrews and I Peter elaborate and clarify: "For it was fitting that [God], for whom and by whom all things exist, in bringing many sons to glory, should make the pioneer of their salvation perfect through suffering,"<sup>[72]</sup> If Christ himself was made perfect through suffering then it would seem incongruous to say that suffering may have perfected Christ but should

not apply to people in his shadow. "For one is approved if, mindful of God, he endures pain while suffering unjustly. For what credit is it, if when you do wrong and are beaten for it you take it patiently? But when you do right and suffer for it and take it patiently, you have God's approval:"[\[73\]](#) God's approval can be on the innocent sufferer even if the suffering is not externally labeled as suffering in the Lord's name.

To say that Christ "the pioneer of their salvation" was made perfect through suffering transforms our understanding of Christ and even more suffering. Elsewhere people learn from Christ, but in Hebrews we read shocking words: "Although he was a Son, he learned obedience through what he suffered."[\[74\]](#) (This is the only New Testament text where the Son is said to learn obedience.) In [Hebrews 11.28](#), suffering is tied to faith, "portrayed as force sustaining God's people in times of opposition and affliction, enabling them to overcome fear and temptation and fulfill his purposes for them,"[\[75\]](#) which is the context to how Moses "considered abuse suffered for the Christ greater wealth than the treasures of Egypt, for he looked to the reward."[\[76\]](#) It may seem that such Biblical statements about suffering in the name of Christ only speak to the case of confessors and martyrs narrowly understood, but [I Peter 2.19-20](#) forestalls such a reading and orients our understanding of innocent suffering as such. After describing Christ's voluntary suffering as normative and monastic living as a manifestation of martyrdom, Ware writes, "What has just been said about Christ, about the martyr and the monk, is also true in a certain measure of every Christian without exception,"[\[77\]](#) specifically in the sufferings of life. There are different forms of martyrdom which do not always include violence and death, but to be Christian is to be called to martyrdom.[\[78\]](#)

This is not resignation. Paul uses *paschw* of "his readers, Christians in general,"[\[79\]](#) and can have a very active ring, meaning "'to fight,' perhaps 'to fight an enforced fight,'... not 'to be helplessly exposed or subject to alien pressure,'... 'to prevail'. [emphasis added]"[\[80\]](#) But the understanding that filters into the gift of myrrh is not simply a temporary measure for when the problem cannot be properly addressed yet. Cases of truly difficult suffering are not an exceptional case that this teaching also applies to; they are the central case under this view. This view of suffering applies from relative inconveniences up to major suffering including poverty and hunger, the death of loved ones, illness from cancer to

depression, and many other cases. If the profoundly gifted are no unique center to the Biblical teaching because they are in no sense the only ones to suffer, that does not make their suffering trivial. Suffering increases as one approaches sainthood, and while suffering does not confer any automatic sainthood, Orthodox hagiography details a number of people with unusually difficult lives—the saints who are canonized as unusually good at living a normal human life—and some of their relics are said to miraculously stream, significantly enough, with myrrh.[\[81\]](#) To see profoundly gifted suffering as outside the bounds of normal human life and to try an activist solution to bring it into the bounds of normal human life is to fail to realize that profoundly gifted suffering is a unique opportunity to live the normal Christian life, a life where gold and incense cannot be separated from myrrh.

The reality of myrrh is a reality of suffering made positive in a context where suffering is no longer the last word, and it is not separate from gold for kingship and frankincense for divinity. Those saints who are fragrant with myrrh are fragrant with Heaven's incense. There are some theologians who talk about humanity as the priest of Creation,[\[82\]](#) and the massive repositories of skills acquired by the profoundly gifted can be a legitimate exercise of kingship—humans properly exercise kingship in the image of God's kingship not only, and perhaps not primarily, when kingship is exercised over other people.[\[83\]](#) There is a kind of joy and pleasure to learning and acquiring skills, and this may not always be situated within an explicit ecclesial setting, but then it no less constitutes part of what is normal and the gift of gold for kingship.

## Profound giftedness in its potential to harm others

Profound giftedness is both a gift from God and something whose use is not always good. Without going too far into the word "holy" (Hebr. *qds*, apparent etymological meaning, "separate"),[\[84\]](#) I would like to talk some about what it means, and why we should not make too facile an identification of holiness with moral goodness. Holiness consists less in the creature's relationship to the Creator than the Creator's relationship to the creature.[\[85\]](#) Giftedness is not unique in this regard, but it is giftedness that is not based on merit but is simply given by the Creator. It may not be achieved by being morally good, and it is misunderstood if it is treated as an accidental arrangement of cognitive faculties. And that lends to something paradoxical: the greater the gift, the greater the potential for evil in the use of that gift, even in the attempt to do good.

Where there is untold human suffering, it may well be related to profoundly gifted plans to improve the world. Stfane Courtois's *The Black Book of Communism*[\[86\]](#) tells of millions who starved to death under Marx's plan for a better world.[\[87\]](#) One can name Adam Smith and the fathers of the Industrial Revolution as creating a masculinist vision to improve the world, a vision that on the ground left things worse for a number of people, and in particular women: Bob Goudzwaard's *Aid for the Overdeveloped West*[\[88\]](#) argues that the economic system that some profoundly gifted have helped build in the West is in fact not good for humans *qua* humans. Much of the industrialization that has led from wives working in adult company to housewives working in solitary confinement, destroying conditions that some feminists would like to reclaim, is transformation of society that stems from profoundly gifted people's "good ideas" to make a better world.[\[89\]](#) It is perfectly coherent

to say that a profoundly gifted person will persuasively argue for a vision of a better world that practically results in incalculable human suffering.

## **Thick description of myrrh: interdependent terms of human weal or woe**

There is another feature of human life that gives a shape, allowing thick description, to what myrrh is; and this is not just for the profoundly gifted: this feature is a specific trait of interdependence. How one experiences this specific trait depends greatly on how it is received: if it is approached with joy and acceptance, can be experienced as suffering that is almost Heavenly in how full it is and how deep its grounds for joy,[\[90\]](#) or can be wrongly experienced as vanity, meaningless suffering that approaches *dukkha*.[\[91\]](#) The story is told of someone who saw Hell, in which wretched pandas were surrounded by rice but miserable and starving because their three foot long chopsticks made it impossible for the pandas to feed themselves. Then the visitor was taken to Heaven and saw pandas surrounded by rice, delightedly feeding and being fed by each other with their three foot chopsticks. The difference between Heaven and Hell is a difference that lies in how one is capable of experiencing the realities one is in. It is not just true in the next life that we can experience certain things as joyful or as meaningless *dukkha*. It is also true of this life, and more specifically of certain features of human interdependence, and the impossibility of independence, that are perhaps never completely avoidable but seem harder to even pretend to avoid in the profoundly gifted experience. It appears that some profoundly gifted may have no way to present their gifts in a way that a job recruiter will interpret as believable competence.[\[92\]](#) Paradoxically, an unusually impressive list of achievements may not be accompanied by much opportunity to be self-supporting and perhaps not other "necessities."

In the work of Arthurian criticism *Arthurian Torso*,[\[93\]](#) Lewis

discusses Virgil in Charles Williams' *Taliessin through Logres*:[\[94\]](#)

It is Virgil himself who died without reaching the *patria*, who saw 'Italy' only from a wave before he was engulfed forever. It is Virgil himself who stretches out his hands among the ghosts *ripae ulterioris amore*, longing to pass a river that he cannot pass. This poet from whose work so many Christians have drawn spiritual nourishment was not himself a Christian—did not himself know the full meaning of his own poetry, for (in Keble's fine words) 'thoughts beyond their thought to those high bards were given'. This is exquisite cruelty; he made honey not for himself; he helped to save others, himself he could not save.

...The Atonement was a Substitution, just as Anselm said. But that Substitution, far from being a mere legal fiction irrelevant to the normal workings of the universe, was simply the supreme instance of a universal law. 'He saved others, himself he cannot save' is a *definition* of the Kingdom. All salvation, everywhere and at all times, in great things or in little, is vicarious. The courtesy of the Emperor has absolutely decreed that no man can paddle his own canoe and every man can paddle his fellow's, so that the shy offering and modest acceptance of indispensable aid shall be the very form of the celestial etiquette. [emphasis original]

Lewis is summarizing Williams, and Williams's point has strong theological relevance. Ware introduces one topic of discussion as "what Charles Williams calls 'substituted love', 'coinherence', or 'the way of exchange'," [\[95\]](#) founded precisely on the above "law of the canoe." Profound giftedness is not a help for making honey for oneself but making honey for others, and this is not because the profoundly gifted are any more altruistic: whether one is selfish or generous, profound giftedness helps paddling others' canoes much better than it helps paddling one's own.

Alisdair MacIntyre's *Dependent Rational Animals* argues that dependence is constitutive of human nature. [\[96\]](#) Self-understanding as being independent requires sweeping acknowledgment of our dependence under the rug: true independence is probably impossible and certainly undesirable. If some people have difficulty achieving even a

more relative independence, that is not an exception to how humanity normally works. It is continuous with large segments of humanity besides the profoundly gifted having more difficulty achieving a measure of independence. A few profoundly gifted experience worldly success—perhaps great—while many more experience surprising struggles.[\[97\]](#)

Lewis calls the law "exquisite cruelty," and it is even crueler if a definition of justice in terms of paddling one's own canoe is applied to the world, and one begins to suspect that even the Lawgiver, God, does not meet that standard of justice. But there is something in that picture that is not cruel, something that hinges on being willing to give up that standard of justice and accept the "law of the canoe" as terms of joy. If the profoundly gifted experience has extremes in its glories and difficulties, this form of interdependence is a difficulty that can and should be a glory, even if profoundly gifted may rarely be able to experience it as a particular form of human blessing.

Comparable remarks could be made for other populations and communities.

## Conclusion

It seems a strained reading of Midas's tale to argue that whatever Midas said, the king consciously thought he would retain the usual human ability to touch things without changing them into anything else, and in addition have the option to turn things to gold by touch when he so desired. Perhaps that would have been a far wiser thing to ask for. Despite this lack of foresight, it appears that when the king said that he wanted everything he touched to turn to gold, the "everything" he envisioned of course did not include his food and wine, and absolutely did not include his only daughter. It seems that Midas's desire was for a fantasy version of a gift, and he was shocked when he received the real thing.

Profound giftedness is not a curse like Midas's. It offers much better prospects of living to old age, not to mention any number of other benefits. But it is, like any number of other human experiences, different from the inside than from the outside.

There is another king associated with gold—in fact, six billion such royalty on one account, and Midas's gold for his greed is in fact a base metal next to that gold that is from the same fountainhead as frankincense and myrrh. Human difference is not a matter of some people being at the human baseline, with everyone else starting from the same baseline but with added modifiers. In that sense everybody is on the baseline: it is mistaken to say that a profoundly gifted person is an "as modified by" representative of the majority, and neither more nor less mistaken than the opposite claim that most people are "as modified by" versions of the profoundly gifted, or comparable pairs of remarks spanning other human differences. Differences can be a chasm—sometimes requiring a great leap to bridge,—but when one can and does bridge the chasm, one may learn not of one more adjustment that can be

made to a baseline centered on one's own group, but a deeper understanding of what the baseline is and is not.

In that sense there is nothing distinctive about profound giftedness being different from the inside and from how one would imagine it from the outside. It is illustrative of the human.

## Partly Annotated Bibliography

(The annotation is geared primarily towards profound giftedness as a theological reader may be expected to understand the theological literature better than the literature on giftedness.)

Ashbrook Harvey, Susan, *Scenting Salvation: Ancient Christianity and the Olfactory Imagination*, Berkeley: University of California Press 2006.

Buttrick, George, *The Interpreter's Bible*, Abingdon Press 1952.

Carson, D.A. et al. (eds.), *New Bible Commentary: 21<sup>st</sup> Century Edition*, Downer's Grove: InterVarsity Press 1994.

Clark, Stephen, *Man and Woman in Christ*, Ann Arbor: Servant 1980.

Courtois, Stephane et al., *The Black Book of Communism: Crimes, Terror, Repression*, Boston: Harvard University Press 1999.

If one wishes to take seriously that profound giftedness and good intentions can cause incalculable suffering, this text covers something that is better not ignored.

Dostoevsky, Fyodor, *Crime and Punishment*, New York: Random House 1956.

L'Engle, Madeleine, *Walking on Water: Reflections on Faith and Art*, Wheaton: Shaw 1980.

In my argument about gold and kingship, I have talked about a profoundly gifted accent to work. Giftedness as such is incidental at best to Madeleine l'Engle's focus, but this is a perspective on artistic work, a work that is close to contemplation, and if it does not have a profoundly gifted focus it still has a profoundly gifted perspective as the basis to explore artistic work as a whole

CRITICAL WORK AS A WHOLE.

Feldman, David, "A follow-up of subjects scoring above 180 IQ in Terman's 'Genetic Studies of Genius'", in *Exceptional Children*, vol. 50 no. 6 1984, 518-523.

This study makes the briefest passing mention that one of Terman 1925's very few profoundly gifted subjects "took his own life," without the briefest passing suggestion of any way this tragedy might be something to learn from, might be something related to the profoundly gifted experience, or could even be preventable. (Statistical analysis is impossible for a small sample, but if one person in a twenty-nine person sample committed suicide, this is hundreds of times higher than the population at large, or even demographics like those suffering from major depression.) This feature is symptomatic of a broader tendency in Feldman to be a generic summary without insight, and this is part of why I prefer the more qualitative studies such as Hollingworth 1975 or Morelock 1995.

Freeman, Doreen, "A Feminist Theology of Disability", in *Feminist Theology* 29 (2002), 71-85.

Fitzgerald, Allan, *Augustine Through the Ages: An Encyclopedia*, Grand Rapids: Eerdmans 1999.

Galton, Francis, *Hereditary Genius: An Inquiry Into Its Laws and Consequences*, London: Macmillan 1892 (1869).

From the introductory chapter Galton takes positions offensive even in his own day, and, to pick one example, his stand for intelligence-centered eugenics as a moral duty earns Galton's vile reputation today. His study seems to be less concerned about describing or studying genius in the sense offered by other sources than making a minimal study of his subjects sufficient to move on to his real interest, identifying whether genius is hereditary enough to bolster the eugenics he advocated. On a more positive view of the study of giftedness, Galton can be read as indicating how far the study of giftedness has come since Galton's approach. Too much of Galton's attitude lingers in later literature, but Webb 1980 bases his argument on a completely different footing: when he appeals for reform and cites a statistic that gifted education is part of special education but receives per capita less than three cents

on the dollar compared to other special needs populations,[\[98\]](#) the argument is not that gifted people are entitled to better treatment because they are superior. The argument is that special needs should be treated in proportion to the need. He places giftedness as a greater special need than most people realize.

While acknowledging that the gifted population may be one of few special needs populations which is envied, one may hope that future literature may shift further away from Galton in the direction of recognizing the gifted population as having legitimate if perhaps unanticipated special needs, and given proportionate treatment to the form of special needs.

Goleman, Daniel, *Emotional Intelligence: Why It Can Matter More than IQ*, New York: Bantam 1995.

This controversial book treats one of several important aptitudes besides those studied here. The reason this article studies only one type of giftedness out of many is not because it's the only interesting kind of intelligence (emotional intelligence may be more important), but a limitation of what can reasonably be treated in a single paper.

Goudzwaard, Bob, *Aid for the Overdeveloped West*, Oshawa: Wedge 1975.

Gross, Miraca, "The Early Development of Three Profoundly Gifted Children of IQ 200," in Klein, Pnina; Tannenbaum, Abraham (eds.), *To Be Young and Gifted*, Norwood: Ablex 1992, 94-138.

This article is probably the best short sampling that offers a sense of human encounter through thick description of profoundly gifted children, and may serve as an orientation to the terrain of profoundly gifted children before tackling Hollingworth 1975 and Morelock 1995.

Gross, Miraca, "Factors in the Social Adjustment and Social Acceptability of Extremely Gifted Children," Ohio Psychology Press 1994 as seen online at [http://www.gt-cybersource.org/Record.aspx?NavID=2\\_0&rid=10586](http://www.gt-cybersource.org/Record.aspx?NavID=2_0&rid=10586) on 1 January 2007.

Rather than thick description this article provides an analysis of social issues surrounding the profoundly gifted and why their position requires them to deal with social challenges

why their position requires them to deal with social challenges that are not as much of an issue for others.

Hayward, Jonathan, [Artificial Intelligence, AI as an Arena of Magical Thinking for Skeptics: Cognitive Science, and Eastern Orthodox Views on Personhood](#), Master's Thesis (Cambridge University), 2004.

A study of the significance and power of basic human intelligence that can sometimes be overlooked in the study of giftedness.

Hollingworth, Leta, *Children Above 180 IQ: Stanford-Binet Origin and Development*, New York: Arno Press, 1975 (1942).

A classic study offering thick description of profoundly gifted children. Hollingworth has not been superceded.

Honderich, Ted (ed.), *The Oxford Companion to Philosophy*, Oxford: Oxford University Press 1995.

Howard, Pierce, *The Owner's Manual for the Brain: Everyday Applications from Mind-Brain Research*, Austin: Bard 2006.

Also readable as "A layperson's introduction to the culture and prejudices of cognitive psychology/cognitive science," but a valuable resource nonetheless, and the only psychological work I know that is not specialized in giftedness but offers an on-target treatment of profound giftedness.

Keselopoulos, Anestis, *Man and the Environment: A Study of St. Symeon the New Theologian*, Crestwood: St. Vladimir's Seminary Press, 2001.

McVey, Kathleen, *Ephrem the Syrian: Hymns*, New York: Mahwah 1989.

Morelock, Martha, *The Profoundly Gifted Child in Family Context*, UMI 1995.

This dissertation studies in depth two profoundly gifted children who represent two forms of profound giftedness, Bethany Marshall (profound giftedness focused in a single area, in this case music performance) and Michael Kerney (profound giftedness spread out over many areas). The latter represents someone who is exceptional even for someone who is profoundly gifted. In some sense Morelock is a complement to Hollingworth 1975, but includes significant analysis alongside its thick description.

Giftedness is not the same as emotional intelligence but it complexifies emotional life, meaning that gifted sometimes have to work harder to reach what others achieve by less effort to reach emotional maturity. (This article is not limited to

to reach emotional maturity. (This article is not limited to profound giftedness but tries to address the broader gifted population.)

Terman, Lewis et al., *Genetic Studies of Genius*, Stanford: Stanford University Press 1925 (vol. 1), 1926 (vol. 2), 1930 (vol. 3), 1947 (vol. 4), 1959 (vol. 5).

Webb offers reasons why Terman's methods of identifying gifted people may have been unintendedly biased in favor of the members of the gifted population who enjoyed the greatest social advantage.[\[99\]](#) Terman uses the word "genius" in the title for a population that mostly overlaps the range of "socially optimal intelligence," without that much attention to profound giftedness. However, Terman offers a landmark study and almost everybody stands on his shoulders even in criticizing him.

# Friendly, Win-Win Negotiations in Business: Interest- Based Negotiation and [Getting to Yes](#)

## [Getting to Yes: How to Negotiate Agreement Without Giving In](#)

The negotiation classic [Getting to Yes: How to Negotiate Agreement Without Giving In](#) introduces something called "interest-based negotiation" and presents it as the ultimate power tool for adversarial negotiations where the other party has the upper hand. And it may well be that power tool, but some of the best mileage I've seen has been in friendly negotiations, and business world problem solving.

[Getting to Yes](#) opens by discussing two main styles of negotiation that occur to people: hard and soft negotiation. Hard negotiation is a matter of taking a position and insisting on it: playing hardball. Soft negotiation, more characteristic of friendly negotiations, still involves taking a position, but being very flexible.

[Getting to Yes](#) presents a third option, that of interest-based negotiation. Individual positions taken by either side of the table are

ordinarily poorly suited to the interests of the other side; and interest-based negotiation involves uncovering what the basic *interests* of the two sides of the table are, and then problem solving to, as best as possible, satisfy the interests of *both* sides of the table. [Getting to Yes](#) speaks of being *hard* on interests, *soft* on positions.

## Examples from the world of information technology

It's obvious, in the context of a negotiation between bosses and stakeholders on the one hand, and information technology on the other, that a stakeholder or boss has interests involved in negotiating what information technology professionals will do for them. What is less obvious is that information technology professionals *also* have interests. These interests include interests that amount to good engineering concerns, including a realistic solution, avoiding technical ways of painting themselves into a corner, *and* solving the problem in a way that will work well for stakeholders. (If a cobbler makes a shoe that fits comfortably, the customer will make fewer requests for adjustments than if the shoe pinches.)

On this last point, it might be remarked that initial solutions (positions) proposed by stakeholders should be viewed with suspicion. When someone non-technical tries to design a technological solution, there is a real danger of a solution that looks good on paper, but amounts to a shoe that pinches. One time my brother, then a database administrator, commented that on his team there was a system administrator who, when he was asked something that amounted to, "Is there a way to—", would rudely cut the person off and say, "Stop. Tell me what you want to have accomplished." And he gave an excellent example of interest-based negotiation, even if it is a better way to avoid being curt.

The example he gave was, if there was concern about a disk filling up, someone asking, "Is there a way to run [the Unix command] 'df' every five minutes and send it to the system administrator's pager?" And there are several things wrong with that position. First of all, this was a little while ago when there weren't smartphones with high-resolution screens. The Unix 'df' command is designed around a full (text) screen. producing half

-----  
a page or a page of text (probably more given their environment), and decidedly not optimized to quickly give useful information on a pager. It would require scrolling to see if the 'df' output represented a problem or not. And constant messages that require digging to see if they mean anything important amount to spam from the system administrator's view: the fact that one more verbose message was sent to the pager means nothing particularly interesting to a system administrator. And that spam risks a real "boy who cried wolf" syndrome, with the system administrator having no clue when a real problem is occurring.

Not that there is any need for helplessness if disks fill up. There might even be a better solution that would use pagers. For example, there could be some monitoring tools that page a system administrator if a disk reaches some threshold of being too full, or if disk usage is growing too quickly. The basic issue is one that people can take steps to deal with. But the system administrator's blunt "Stop. Just tell me what you want to do," was almost kindness in disguise; it was meant to pursue the *mutual* interest of solving a problem as well as possible, as opposed to a solution that amounts to, "I've solved the problem badly; now you go implement it."

The system administrator's blunt response when he sensed positional negotiation was, "Stop. I don't even want to *hear* your position. Just tell me your interest and let me address that."

---

For another, slightly more technical example, there was a system administrator at our company who had written an asset tracking program, and later on I was charged with writing a purchase order system. When the system was shaping up, he said he wished his asset tracking system could simply go away, superceded by the new purchase order system.

The general consensus was that the order tracking system was *tolerable*, and the CTO consulted with some people from other companies and said nobody had really done better than tolerable like our asset tracking. The system administrator wanted me to replace his asset tracking program, and my expectation was that I might be able to do a *little* better than him, but not a *lot* better. And I think he was modest about the solution he had pulled off given what he was dealing with. I told him, at a social meeting, "*The reason my program is crisp and clear and your program is messy, is that the problem my program solves is crisp, clear, and simple, and the problem your program solves is messy and hard.*" And I could see a smile and shining eyes on his wife's face, but my remark was not intended as a merely polite statement. As we did business, the problem of purchase orders was cut and dry, and I didn't have to make any especially hard judgment calls: mostly it was straightforward adaptation as requests came in. By contrast, the tracking system covered assets and components, venturing into territory the purchase order didn't touch, and the territory of assets and components came with genuinely fuzzy and difficult border cases, where you had to draw lines about what was an asset and what was a component and deal with subjective factors that the purchase order system never touched.

Once the two systems were up and running, it looked like that meant duplicate data entry. It would have been an option for me to write a replacement asset tracking system, but I think my co-worker was being genuinely modest about a real achievement, and it did not seem obvious to me that my replacement for a working system would work better. We looked at publishing data from the asset tracking system to purchase orders, and then set things so that entries in the purchase order system were automatically carried over to the asset tracking system. That solution was one that was stuck with: it did not involve, as had originally been suggested, that the asset tracking system would be superceded by

the purchase order system, but it did address the basic interest: *no need for duplicate data entry*. The asset tracking system was made aware of entries in the purchase order system, and the solution addressed the various interests. Including, one might like to add, that the company would lose *none* of the benefits of a respectable, solid existing system, which would now be working better than ever.

## An example from private life

In one family I know, the parents decided that their son could own a pocketknife (he owns a couple), but not carry anything dangerous. That may be a sensible decision, but it was annoying to the son, and I understood his frustration: I know what a [Swiss Army Knife](#) meant to me when I was younger, and still to some extent means to me now. Besides being practical, a [Swiss Army Knife](#) is a nifty device, dipped in coolness. And I could identify with his being frustrated that his parents would not let him carry either pocketknife: not because he specifically wanted something dangerous, but because he wanted coolness.

For Christmas I gave him [a Leatherman multi-tool designed to be useful and cool while still being something you could carry through TSA-approved airport security](#). It only has a few features as far as multitools go, but it has enough, and he greatly appreciates the gift. It satisfied both his desire for something cool, and his parents' concern that what he carry not be dangerous, and so he carries it now.

In a non-work interaction at work, my boss received a copy of [Hello World! Computer Programming for Kids and Other Beginners](#), a book that introduces the powerful language Python with pirates and ninjas, and I asked him if I could borrow the book for a few minutes to copy bibliographic information. His reply was "Let me send you an email," and forwarded me a promotional email with a coupon code worth \$20 off the book's price if you ordered by such-and-such a date. In this friendly negotiation, I took a position and my boss responded in a way that would address my interests better than my initial position.

**Step one: Identify the  
interests**  
**Step two: Problem solving**

All of these negotiations have an element of problem solving. The first step is to identify interests. If someone comes to you with a position, which happens 99.9% of the time, it is a position motivated by interests, and you need to appreciate those interests. Anthropology-style observation, if you know how to do it, helps. Being empathic and trying to see what benefit someone's position will bring them helps. As much as possible, bring interests out into the open so they can be addressed.

A win-win solution may not always be possible; the pie may not be big enough for everyone even if they cooperate. ([Getting to Yes](#) may be of some help here.) But **a win-win outcome will be more often found by trying to address interests than simply starting with positions, *staying* with positions, and only doling out who makes what concession to the opposite position.** And creative problem solving can help address those interests once they have been identified: for my brother's workplace, system administrators can be automatically notified, including by pager, when any of several identified red flags is tripped. Being dangerous is not intrinsic to being a cool multitool: therefore one can search for a safety-friendly multitool. *Is there a hidden opportunity in interests that have been identified?* Check and see.

## Conclusion

Interest-based negotiation is not always easy; [Getting to Yes](#) provides few examples: one of these few has two sisters arguing about an orange, splitting it, and then one sister ate the inside of her half and the other sister used her half of the rind to bake a pie. And the introduction states that stories are hard to find. Part of my effort here has been to provide examples, taken out of my experience because that's what I know, even if it would be best to have third person stories and avoid stories that present me as a hero. But the rewards for at least *trying* for interest-based negotiation are worthwhile. And, as stated at the top, [Getting to Yes](#) may present interest-based negotiation as the central power tool for a hostile negotiation where the other party is more powerful than you, some of the best mileage I've gotten out of it has been in friendly negotiations with other people who share some of the same goals. And this is true inside and outside of the business world.

It's worth recognizing negotiation as negotiation: not all negotiations have a dollar amount. And once a friendly negotiation is recognized, identifying interests can be a powerful tool to obtain win-win results.

**Is there a place where you could use friendly, win-win, interest-based negotiations more?**

# **From Russia, with Love**

## **A Spiritual Guide to Surviving Political and Economic Disaster**

### **Holy Russia and Holy America**

It may be jolting to American Christians, at least, to speak of "Holy Russia". It smacks of a bad kind of patriotism, and it invites the same kind of response that has some devout U.S. Christians answer "God bless America!" by saying, "America, bless God!", or "God bless America... and China... and Guatemala... and Ghana... and..." Why besides the wrong kind of patriotism would some writers speak of "Holy Russia"?
