And an angel of the Lord appeared to him in flaming fire out of the bush, and he sees that the bush burns with fire,— but the bush was not consumed. And Moses said, I will go near and see this great sight, why the bush is not consumed. And when the Lord saw that he drew nigh to see, the Lord called him out of the bush, saying, Moses, Moses, and he said, What is it? And he said, Draw not high hither: **loose thy sandals from thy feet, for the place whereon thou standest is holy ground.** And he said, I am the God of thy father, the God of Abraam, and the God of Isaac, and the God of Jacob; and Moses turned away his face, for he was afraid to gaze at God...

And Moses said to God, Behold, I shall go forth to the children of Israel, and shall say to them, The God of our fathers has sent me to you; and they will ask me, What is his name? What shall I say to them? And God spoke to Moses, saying, I am THE BEING, and he said, Thus shall ye say to the children of Israel, THE BEING has sent me unto you.

(Exodus 3:2-5, 13-14, Sir Lancelot Brenton's translation of the LXX)

(For the weapons of our warfare are not carnal, but mighty through God to the pulling down of strongholds.)

Casting down imaginations, and every high thing that exalteth itself against the knowledge of God, and bring into captivity every thought to the obedience of Christ: And having in a readiness to revenge all disobedience, when your obedience is fulfilled.

[I Corinthians 10:4-6, KJV](#)

The Fathers bid us, in approaching holiness, to take away the dead thoughts of the passions. In their day, and in Righteous Abraham's day, and for that matter often in ours, shoes are made of leather, the dead skin of animals, and the Fathers bid us cast away the dead thoughts of the passions as we approach God.

I would like to look at this further, but first pause to look at two distractions and say, "That is understandable, but it is fundamentally inadequate."

The term 'passion' is used here as the Orthodox use the term, which differs from mainstream English. If you are not familiar with it, you might think of a passion as a sinful habit that has become and is becoming morally/spiritually a disease/handicap.

**The first distraction:**  
*Tinkering to straighten out  
our worldview*

On reading "bringing into captivity every thought", a natural reading today is "bring into captivity our worldview and every part of it," and steadily working on our worldview to make it Christian.

But the idea of thinking worldviewishly, and classifying religions (with philosophies and political ideologies) as worldviews is of recent vintage in the history of religions; it would have been as alien to Calvin and Luther as to St. Athanasios or St. John Chrysostom. A worldview appears to stand on its own, but entirely neglected is the thought that a worldview may come into existence as almost a by-product of the Way one walks.

I spoke with one person and quoted G.K. Chesterton saying, "Buddhism is not a creed. It is a doubt." I pronounced the final 't' rather silently, and he asked me if I had said, "Buddhism is not a creed. It is a Tao," meaning a Way that one walks. The conversation included his mention of a book written by a Christian missionary to Japan, [Zen Way, Jesus Way](#), and while my intended point was something else, that Buddhism is skeptical and perhaps in stronger form than most Western skepticism, the point he anticipated is also true: Buddhism is not about what you believe but the Way that you walk. And on this point we may

saliently point out that the oldest name for Christianity, the name used in the New Testament itself, is not "the Creed," but "the Way."

My godfather knew rather astutely what kinds of temptations I would face, and when I asked him a question about building an Orthodox worldview, he pointedly insisted that I had not been invited to work out an Orthodox worldview, but to walk the Orthodox Way. There may be an Orthodox worldview, but it emerges out of walking the Orthodox Way, and the suggestion that it takes seven to ten years to become Orthodox, this does not mean that it takes seven to ten years of worldview tinkering to develop the right worldview, but it takes seven to ten years for a whole person's transformation to occur. And even then, a number of Orthodox saints, described as being baptized in their own blood because they were martyred before they could manage to get baptized at all, are canonized saints who had pagan worldviews while they lived on earth, and canonized saints who did not spend their brief time confessing Christ on straightening out their worldviews.

There is something seductive about seeing things in terms of worldview; it is a hammer that soon makes everything appear to be a nail, so that "taking every thought captive" seems to mean "installing a piece of your worldview" and not, for instance, taking a lustful thought captive, and breaking it apart. But leave that for later. For now, I would note that the idea of thinking worldviewishly is of recent vintage, and mention that in Islam the term for 'heresy' is 'innovation.' Not that I am endorsing Islam; but [What the West Doesn't Get About Islam](#) is largely about the Muslim Way and only to a lesser degree about delving into the Islamic worldview.

## **The second distraction:** *The refinement of desire*

Show me what a person desires, and I will show you his heart.

To the right is a pair of antique opera glasses; I mention it partly to show my temptations. They are a valued gift from a valued friend, but in a way they are also like [the Dr. Who sonic screwdriver a team lead got for Christmas](#): they seem like a touch of another world here: [the realms of the Urvanovestilli](#), or [The Steel Orb](#). And what seems to be a piece of an unreal world brings real pleasure, but on a deeper, spiritual level, is something of a non sequitur: I should only value the opera glasses, not as a token of worlds I have as an author imagined, but as a valued gift from a valued friend.

Reading the saints' lives has something to do with this. It may be said that the saints' lives, "biography as theology", are an important spiritual staple food for neophytes and an important spiritual staple sought out by the more advanced. My own desires have been sought out and something I wanted fulfilled: first of all by my favorite children's book, Madeleine l'Engle's [A Wind in the Door](#), which left me desiring kything, Teachers, and giftedness, and much later writing [Within the Steel Orb](#): I went to mail Madeleine l'Engle a copy but found out that she had just passed away. After a different spiritual struggle I made [The Minstrel's Song](#) with [its cultures](#), and I pined for that world.

Then later I read medieval sources for the Arthurian legends, and I pined for knighthood and the Holy Grail and wrote [The Sign of the Grail](#). And the same, I believe, holds for Star Wars, Star Trek, Harry Potter, romance novels of being swept off one's feet, and quite a lot of TV, literature, and movies.

We are made to desire, and there is nothing wrong with that. But our desires often point in the wrong directions, and the saints' lives in particular help reorient and refine our desires so that we heed the Apostle's precept, [Finally, brethren, whatsoever things are true, whatsoever things are honest, whatsoever things are just, whatsoever things are pure, whatsoever things are lovely, whatsoever things are of good report; if there be any virtue, and if there be any praise, think on these things](#). We are to desire things that are real—and good.

This, however, is limited in scope; it is one point among others, and I have not read worldviewish-style attempts to tinker with one's desires in the Fathers. The verse I cited is beautiful enough, but I have not read any of the Fathers make it a leitmotif. I don't want to downplay the saints' lives, but there is more benefit to reading them than just the shaping and reshaping of our desires. But there is something of our thoughts that the Fathers make central. But let us pause for one moment before moving on.

When the ink was still drying on the medieval versions of the Arthurian legends, they told of a Never-Never Land that was long ago and far away. Such things as commerce and peasant's work never intrude on the scene; the pseudohistory in the "Brut" which first captivated the hearts and minds of Europe outside of Celtic circles, already placed King Arthur at six centuries in its past, in a past that never existed. There is a common thread in these desires for the unreal; we are better off desiring what is

real (see [Exotic Golden Ages and Restoring Harmony With Nature: Anatomy of a Passion](#) for further discussion), and at least one saint has found happiness and said, "Whatever happens to you, desire it." Again, we are to desire what is real and desire what is good.

**Not a distraction:**  
*Taking the shoes of  
passionate thoughts off our  
feet*

It has been said, "Nothing but a metaphysic ever replaces a metaphysic." Nothing Western, at least. But a true metaphysic can be replaced by an ersatz metaphysic; unlike 'weak agnosticism', which says in essence "I do not yet know whether God, or gods, or angels exist," 'strong agnosticism' says "We can never know if God, or gods, or angels exist," and that rules out any deity capable of decisive revelation, ruling out the Christian God quickly. And that provides an ersatz metaphysic in continuity with the ersatz metaphysics implied by continental epistemology.

However, it is possible to have a metaphysic replaced by something else: Zen replaces a metaphysic with silence, and Orthodox Christianity, which has a metaphysic, also has silence, and beyond Buddhism having been influenced by Christianity and Zen resembling Orthodox hesychasm, the silence of Orthodox hesychasm is on par with the silence that replaces a metaphysic.

"You have more power than you think," an alcoholic or addict is told. Once temptation is in full swing, it's a difficult and often losing fight for the upper hand. But there is a brief, easy-to-look moment, when the temptation comes, very small.

If your house is burning down, it may take fire hoses to stop; when the fire is in a room, pouring out a bucket and running for another may stop it; easiest of all is to smush out a smouldering spark as it hits the curtains. If you blot out the spark, with it you blot out all the remaining process of damage. In a monastic setting, men were warned that if a mental image of a man's face appears, temptation to anger is close at hand, and if a woman's face appears, temptation to lust is close at hand, and they say "[In Christ there is no male nor female](#)": neither temptation need have dominion over us.

In its beginning, the temptation is not yet a temptation. A passionate image, what the Fathers saw in the dead leather shoes Moses was commanded to remove, is not the very first part of temptation. The very first part of temptation is a simple image not mixed with passion: perhaps not a face, but an image of gold, which will soon be mixed with a temptation to covet.

Then if we dally with the thought, it becomes mixed with passion, and the longer you go the harder the fight becomes. Confession is always available and it is a second baptism and a clean slate, but the Orthodox filled with hesychastic silence does not have or develop thick, strong arms from dousing buckets of water onto burning furniture, but attentiveness and quick reflexes from putting out sparks. Now this needs to be put alongside the monk who was asked, "What do you do?" and said, "We fall and get up; fall and get up; fall and get up." But hesychasm is mindful, mindful of one's thoughts, observing and mentally separating thoughts and mental images from the passions mixed in them.

**Lent, the central season of  
the Church year:  
*A Lenten Psalm***

Great Lent is hard, but it is the central season in the Church calendar. During Great Lent, the choir chants what may be the most politically incorrect part of Scripture:

For David, a Psalm of Jeremias  
By the rivers of Babylon, there we sat;  
And wept when we remembered Sion.

We hung our harps on the willows in the midst of it.  
For there they that had taken us captive asked of us the  
words of a song;

And they that had carried us away asked a hymn, saying,  
Sing us one of the songs of Sion.

How should we sing the Lord's song in a strange land?  
If I forget thee, O Jerusalem, may my right hand forget its  
skill.

May my tongue cleave to my throat, if I do not remember  
thee;

If I do not prefer Jerusalem as the chief of my joy.  
Remember, O Lord, the children of Edom in the day of  
Jerusalem;

Who said, Rase it, rase it, even to its foundations.

Wretched daughter of babylon!  
Blessed shall he be who shall reward thee as thou hast  
rewarded us.  
Blessed shall he be who shall sieze and dash thine infants  
against the rock.  
(Psalm 136/137, Sir Lancelot Brenton's translation of the  
LXX)

"Blessed shall what?!@!?! This is sung in church in Lent?"  
Yes: the entire Psalm speaks to our spiritual condition. We  
were made for Jerusalem, the city of peace, which is ultimately  
Heaven, but we have allowed ourselves, every one, to be taken  
captive to the foreign land of sin and passion. How can we sing  
the Lord's song when we are exiled to the land of passion? As to  
the last words, the Fathers say that the rock is Christ: infant  
Babylonians grow into adult Babylonians, and tiny and seemingly  
insignificant passions, tiny sparks, grow into full-grown passions,  
a fire burning up our house. And it is against Christ that we must  
extinguish sparks. The vilest of sins is a smouldering ember  
thrown into the ocean of God's love, but still, the earlier we dash  
passions against Christ, the better. If we have allowed to a spark  
to set a chair on fire, douse it with Christ. And in all things  
remember the holy city, the city of peace which is ultimately  
Heaven. And strive for it.

**An unwelcome, unsought  
blessing:  
*"Ask better!"***

Lent seems to be the sort of thing one would not want. We are to cut back on pleasures, and give more to others. And it is supposed to be a struggle; if we're cruising through Lent and having no worries, something is wrong, and we need to work with our priest to make it a better struggle. But monks say, "Have a good struggle."

But this much is a blessing in disguise, and is part of why devout, seasoned Orthodox often look forward to the challenge.

The rules forbidding things in the Orthodox life all tell a pet, "[Don't drink out of the toilet](#)," which really means, "Ask better."

Lent is about letting go of things we believe will satisfy us and accepting the things which really will satisfy us.

In my repentance implied in "[The refinement of desire](#)" above, every thing I let go of was so I could grasp something better. Perhaps my growth is more stunted than most; perhaps it is less. No matter; God has summoned me to ask better and [open my hand wide to receive blessings](#). And I mention this not to make a big deal of my own struggle, but because these are one form of the struggles we all face, because (I hope) they could serve as Everyman's struggles, and I could concretely name something we all must face to ask better.

Ask better. And have a good struggle.

# Technonomicon: Technology, Nature, Asceticism

1. Many people are concerned today with harmony with nature. And indeed there is quite a lot to living according to nature.
2. But you will not find something that is missing by looking twice as hard in the wrong place, and it matters where one seeks harmony with nature. In monasticism, the man of virtue is the quintessential natural man. And there is something in monasticism that is behind stories of the monk who can approach boar or bear.
3. Being out of harmony with nature is not predominantly a lack of time in forests. There is a deeper root.
4. Exercising is better than living a life without exercise. But there is something missing in a sedentary life with artificially added exercise, after, for centuries, we have worked to avoid the strenuous labor that most people have had to do.
5. It is as if people had worked for centuries to make the perfect picnic and finally found a way to have perfectly green grass at an even height, a climate controlled environment with sunlight and just the right amount of

cloud, and many other things. Then people find that something is missing in the perfect picnic, and say that there might be wisdom in the saying, "No picnic is complete without ants." So they carefully engineer a colony of ants to add to the picnic.

6. An exercise program may be sought in terms of harmony with nature: by walking, running, or biking out of doors. Or it may be pursued for physical health for people who do not connect exercise with harmony of nature. But and without concern for "asceticism" (spiritual discipline) or harmony with nature, many people know that complete deliverance from physical effort has some very bad physical effects. Vigorous exercise is part and parcel to the natural condition of man.
7. Here are two different ways of seeking harmony with nature. The second might never consciously ask if life without physical toil is natural, nor whether our natural condition is how we should live, but still recognizes a problem—a little like a child who knows nothing of the medical theory of how burns are bad, but quickly withdraws his hand from a hot stove.
8. But there is a third kind of approach to harmony with nature, besides a sense that we are incomplete without a better connection to the natural world, and a knowledge that our bodies are less healthy if we live sedentary lives, lives without reintroducing physical exertion because the perfectly engineered picnic is more satisfying if a colony of ants is engineered in.
9. This third way is asceticism, and asceticism, which is spiritual discipline or spiritual exercise, moral struggle, and mystical toil, is the natural condition of man.
10. The disciples were joyous because the demons submitted to

them in Christ's name, and Christ's answer was: "Do not rejoice that the demons submit to you in my name. Rejoice instead that your names are written in Heaven." The reality of the disciples' names being written in Heaven dwarfed the reality of their power over demons, and in like manner the reality that monks can be so much in harmony with nature that they can safely approach wild bears is dwarfed by the reality that the royal road of asceticism can bring so much harmony with nature that by God's grace people work out their salvation with fear and trembling.

11. The list of spiritual disciplines is open-ended, much like the list of sacraments, but one such list of spiritual disciplines might be prayer, worship, sacrament, service, silence, living simply, fasting, and the spiritual use of hardship. If these do not seem exotic enough for what we expect of spiritual discipline, we might learn that the spiritual disciplines can free us from seeking the exotic in too shallow of a fashion.
12. The Bible was written in an age before our newest technologies, but it says much to the human use of technology, because it says much to the human use of property. If the Sermon on the Mount says, "No man can serve two masters... you cannot serve both God and money," it is strange at best to assume that these words applied when money could buy food, clothing, and livestock but have no relevance to an age when money can also buy the computers and consumer electronics we are infatuated with. If anything, our interest in technology makes the timeless words, "No man can serve two masters" all the more needed in our day.
13. Money can buy everything money can buy and nothing money cannot buy. To seek true glory, or community, or control over

all risk from money is a fundamental error, like trying to make a marble statue so lifelike that it actually comes to life. What is so often sought in money is something living, while money itself is something dead, a stone that can appear deceptively lifelike but can never hold the breath of life.

14. In the end, those who look to money to be their servant make it their master. "No man can serve two masters" is much the same truth as one Calvin and Hobbes strip:

**Calvin:** I had the scariest dream last night. I dreamed that machines took over and made us do their bidding.

**Hobbes:** That must have been scary!

**Calvin:** It wa—holy, would you look at the time? My TV show is on!

But this problem with technology has been a problem with property and wealth for ages, and it is foolish to believe that all the Scriptural skepticism and unbelief about whether wealth is really all that beneficial to us, are simply irrelevant to modern technology.

15. There was great excitement in the past millenium when, it was believed, the Age of Pisces would draw to a close, and the Age of Aquarius would begin, and this New Age would be an exciting dawn when all we find dreary about the here and now would melt away. Then the Age of Aquarius started, at least officially, but the New Age failed to rescue us from finding the here and now to be dreary. Then there was great excitement as something like 97% of children born after a certain date were born indigo children: children whose auras

are indigo rather than a more mundane color. But, unfortunately, this celebrated watershed did not stop the here and now from being miserable. Now there is great hope that in 2012, according to the Mayan "astrological" calendar, another momentous event will take place, perhaps finally delivering us from the here and now. And, presumably, when December 21, 2012 fails to satisfy us, subsequent momentous events will promise to deliver us from a here and now we find unbearable.

16. If we do not try to sate this urge with New Age, we can try to satisfy it with technology: in what seems like aeons past, the advent of radio and movies seemed to change everything and provide an escape from the here and now, an escape into a totally different world. Then, more recently, surfing the net became the ultimate drug-free trip, only it turns out that the web isn't able to save us from finding the here and now miserable after all. For that, apparently, we need SecondLife, or maybe some exciting development down the pike... or, perhaps, we are trying to work out a way to succeed by barking up the wrong lamppost.
17. No technology is permanently exotic.
18. When a Utopian vision dreams of turning the oceans to lemonade, then we have what has been called "a Utopia of spoiled children." It is not a Utopian vision of people being supported in the difficult ascetical pursuit of virtue and ultimately God, but an aid to arrested development that forever panders to childish desires.
19. Technology need not have the faintest conscious connection with Utopianism, but it can pursue one of the same ends. More specifically, it can be a means to stay in arrested development. What most technology offers is, in the end, a

practical way to circumvent asceticism. Technological "progress" often means that up until now, people have lived with a difficult struggle—a struggle that ultimately amounts to asceticism—but now we can simply do without the struggle.

20. Through the wonders of modern technology, we can eat and eat and eat candy all day and not have the candy show up on our waistline: but this does not make us any better, nobler, or wiser than if we could turn the oceans to lemonade. This is an invention from a Utopia of spoiled children.
21. Sweetness is a gift from God, and the sweeter fruit and honey taste, the better the nourishment they give. But there is something amiss in tearing the sweetness away from healthy food, and, not being content with this, to say, "We think that eating is a good thing, and we wish to celebrate everything that is good about it. But, unfortunately, there is biological survival, a holdover from other days: food acts as a nutrient whether you want it or not. But through the wonders of modern science, we can celebrate the goodness of eating while making any effect on the body strictly optional. This is progress!"
22. Statistically, people who switch to artificial sweeteners gain more weight. Splenda accomplishes two things: it makes things sweeter without adding calories, and it offers people a way to sever the cord between enjoying sweet taste, and calories entering the body. On spiritual grounds, this is a disturbing idea of how to "support" weight loss. It is like trying to stop people from getting hurt in traffic accidents by adding special "safety" features to some roads so people can drive however they please with impunity, even if they develop habits that will get them killed on any other road. What is spiritually unhealthy overflows into poorer health

for the body. People gain more weight eating Splenda, and there are more ways than one that Splenda is unfit for human consumption.

23. The ascesis of fasting is not intended as an ultimate extreme measure for weight loss. That may follow—or may not—but there is something fundamentally deeper going on: Man does not live by bread alone, and if we let go of certain foods or other pleasures for a time, we are in a better position to grasp what more man lives on than mere food. When we rein in the nourishing food of the body and its delights, we may find ourselves in a better position to take in the nourishing food of the spirit and much deeper spiritual delights.

Fasting pursued wrongly can do us no good, and it is the wisdom of the Orthodox Church to undergo such ascesis under the direction of one's priest or spiritual father. But the core issue in fasting is one that matters some for the body and much more for the spirit.

24. Splenda and contraception are both body-conquering technologies that allow us to conquer part of our embodied nature: that the body takes nourishment from food, and that the greatest natural pleasure has deep fertile potential. And indeed, the technologies we call "space-conquering technologies" might more aptly be titled, "body-conquering technologies," because they are used to conquer our embodied and embedded state as God made it.

25. Today, "everybody knows" that the Orthodox Church, not exactly like the Catholic Church allowing contraceptive timing, allows contraception under certain guidelines, and the Orthodox Church has never defined a formal position on contraception above the level of one's spiritual father. This

is due, among other factors, to some influential scholarly spin-doctoring, the academic equivalent of the NBC Dateline episode that "proved" that a certain truck had a fire hazard in a 20mph collision by filming a 30mph collision (presented as a 20mph collision) and making sure there was a fiery spectacle by also detonating explosives planted above the truck's gas tank ([see analysis](#)).

26. St. John Chrysostom wrote,

Where is there murder before birth? You do not even let a prostitute remain only a prostitute, but you make her a murderer as well... Do you see that from drunkenness comes fornication, from fornication adultery, and from adultery murder? Indeed, it is something worse than murder and do not know what to call it; for she does not kill what is formed but prevents its formation. What then? Do you despise the gift of God, and fight with his laws? What is a curse, do you seek it as though it were a blessing?... Do you teach the woman who is given to you for the procreation of offspring to perpetrate killing? In this indifference of the married men there is greater evil filth; for then poisons are prepared, not against the womb of a prostitute, but against your injured wife.

27. The Blessed Augustine devastatingly condemned Natural Family Banning: if procreation is sliced away from marital relations, Augustine says point blank, then true marriage is forbidden. There is no wife, but only a mistress, and if this is not enough, he holds that those who enjoin contraception fall under the full freight of St. Paul's blistering words

about forbidding marriage:

Now, the Spirit expressly says that in the last days some will renounce the faith by paying attention to deceitful spirits and the teachings of demons, through the hypocrisy of liars whose consciences have been seared with a hot iron: for they forbid marriage and demand avoidance of foods, which God created to be received with thanksgiving by those who believe and know the truth.

Augustine absolutely did not believe that one can enjoy the good of marriage and treat the blessing of marriage's fertility as a burden and a curse. Such an idea is strange, like trying to celebrate the good of medical care while taking measures to prevent it from improving one's health.

28. Such condemnations stem from the unanimous position of the Church Fathers on contraception.
29. Such words seem strange today, and English Bible translations seem to only refer to contraception once: when God struck Onan dead for "pull and pray." (There are also some condemnations of pharmakeia and pharmakoi—"medicine men" one would approach for a contraceptive—something that is lost in translation, unfortunately giving the impression that occult sin alone was the issue at stake.)
30. Contraception allows a marriage à la carte: it offers some control over pursuing a couple's hopes, together, on terms that they choose without relinquishing control altogether. And the root of this is a deeper answer to St. John Chrysostom's admonition to leave other brothers and sisters to their children as their inheritance rather than mere

earthly possessions.

(This was under what would today be considered a third world standard of living, not the first world lifestyle of many people who claim today that they "simply cannot afford any more children"—which reflects not only that they cannot afford to have more children and retain their expected (entitled?) standard of living for them and their children, but their priorities once they realize that they may be unable to have both.)

31. Contraception is chosen because it serves a certain way of life: it is not an accident in any way, shape, or form that Planned Parenthood advertises, for both contraception, "Take control of your life!" For whether one plans two children, or four, or none, Planned Parenthood sings the siren song of having your life under your control, or at least as much under control as you can make it, where you choose the terms where you will deal with your children, if and when you want.
32. Marriage and monasticism both help people grow up by helping them to learn being out of control. Marriage may provide the asceticism of minding children and monasticism that of obedience to one's elder, but these different-sounding activities are aimed at building the same kind of spiritual virtue and power.
33. Counselors offer people, not the help that many of them seek in controlling those they struggle with, but something that is rarely asked: learning to be at peace with letting go of being in control of others, and the unexpected freedom that that brings. Marriage and monasticism, at their best, do not provide a minor adjustment that one manages and is then on top of, but an arena, a spiritual struggle, a training ground

in which people live the grace and beauty of the Sermon on the Mount, and are freed from the prison chamber of seeking control and the dank dungeon of living for themselves.

34. "Do not worry about your life, what you will eat or drink, nor about your body, what you will wear. Isn't there more to life than food, and the body more than clothing? Look at the birds of the air. They neither sow nor reap nor gather into barns, and yet your heavenly Father feeds them. Are you not much more valuable than them? And why do you worry about the lilies of the field: how they grow. They neither toil nor spin;" they have joy and peace. The height of technological progress in having pleasure without losing control—in artificial sweeteners, contraceptives and anything else—utterly pales in comparison.
35. Technology is not evil. Many technologies have a right use, but that use is a use to pursue maturity and asceticism, not an aid to living childishly.
36. Wine was created by God as good, and it has a right use. But the man who seeks in wine a way to be happy or a way to drive away his problems has already lost.
37. One classic attitude to wine was not "We forbid drinking wine," or even "It would be better not to drink wine at all, but a little bit does not do too much damage," but goes beyond saying, "The pleasure of wine was given by God as good" to saying: "Wine is an important training ground to learn the asceticism of moderation, and learn a lesson that cannot be escaped: we are not obligated to learn moderation in wine, but if we do not drink wine, we still need moderation in work, play, eating, and everything else, and many of us would do well to grow up in asceticism in the training arena of

enjoying wine and be better prepared for other areas of life where the need for the asceticism of moderation, of saying 'when' and drawing limits, is not only something we should not dodge: it is something we can never escape."

38. The ascetical use of technology is like the ascetical use of wine. It is pursued out of maturity, and as a support to maturity. It is not pursued out of childishness, nor as a support to childishness. And it should never be the center of gravity in our lives. (Drinking becomes a problem more or less when it becomes the focus of a person's life and pursuits.)
39. The Harvard business study behind [Good to Great](#) found that the most effective companies often made pioneering use of technology, but technology was never the center of the picture: however many news stories might be printed about how they used technologies, few of the CEOs mentioned technology at all when they discussed their company's success, and none of them ascribed all that much importance to even their best technology. Transformed companies—companies selected in a study of all publicly traded U.S. companies whose astonishing stock history began to improve and then outperformed the market by something like a factor of three, sustained for fifteen years straight—didn't think technology was all that important, not even technologies their people pioneered. They focused on something more significant.
40. [Good to Great](#) leadership saw their companies' success in terms of people.
41. There were other finds, including that the most effective CEOs were not celebrity rockstars in the limelight, but humble servant leaders living for something beyond

- themselves. In a study about what best achieves what greed wants, not even one of the top executives followed a mercenary creed of ruthless greed and self-advancement.
42. If people, not technology, make businesses tremendously profitable, then perhaps people who want more than profit also need something beyond technology in order to reach the spiritual riches and treasures in Heaven that we were made for.
  43. The right use of technology comes out of asceticism and is therefore according to nature.
  44. In Robert Heinlein's science fiction classic [Stranger in a Strange Land](#), a "man" with human genes who starts with an entirely Martian heritage as his culture and tradition, comes to say, "Happiness is a matter of functioning the way a human being was organized to function... but the words in English are a mere tautology, empty. In Martian they are a complete set of working instructions." The insight is true, but takes shape in a way that completely cuts against the grain of [Stranger in a Strange Land](#).
  45. One most immediate example is that the science fiction vision is of an ideal of a community of "water brothers" who painstakingly root out natural jealousy and modesty, and establish free love within their circle: such, the story would have it, provides optimal human happiness. As compellingly as it may be written into the story, one may bring up studies which sought to find out which of the sexualities they wished to promote provided the greatest pleasure and satisfaction, and found to their astonishment and chagrin that the greatest satisfaction comes, not from any creative quest for the ultimate thrill, but from something they despised as a completely unacceptable perversion: a husband

and wife, chaste before the wedding and faithful after, working to become one for as long as they both shall live, and perhaps even grateful for the fruitfulness of their love. Perhaps such an arrangement offers greater satisfaction than trying to "push the envelope" of adventuresome arrangements precisely because it is "functioning the way a human being was organized to function."

46. People only seek the ultimate exotic thrill when they are unhappy. Gnosticism is a spiritual porn whose sizzle entices people who despair: its "good news" of an escape from the miserable here and now is "good news" as misery would want it. Today's Gnosticism may rarely teach, as did earlier Gnostic honesty, that our world could not be the good creation of the ultimately good God, but holding that we need to escape our miserable world was as deep in ancient Gnostics' bones as an alcoholic experiences that our miserable world needs to be medicated by drunkenness. Baudelaire said, in the nineteenth century: "Keep getting drunk! Whether with wine, or with poetry, or with virtue, as you please, keep getting drunk," in a poem about medicating what might be a miserable existence. Today he might have said, "Keep getting drunk! Whether with New Age, or with the endless virtual realities of SecondWife, or with the ultimate Viagra-powered thrill, as you please, keep getting drunk!"
47. What SecondLife—or rather SecondWife—offers is the apparent opportunity to have an alternative to a here and now one is not satisfied with. Presumably there are merits to this alternate reality: some uses are no more a means to escape the here and now than a mainstream business's website, or phoning ahead to make a reservation at a

restaurant. But SecondWife draws people with an alternative to the here and now they feel stuck in.

48. It is one thing to get drunk to blot out the misery of another's death. It is another altogether to keep getting drunk to blot out the misery of one's own life.
49. An old story from African-American lore tells of how a master and one of his slaves would compete by telling dreams they claimed they had. One time, the master said that he had a dream of African-American people's Heaven, and everything was dingy and broken—and there were lots of dirty African-Americans everywhere. His slave answered that he had dreamed of white people's Heaven, and everything was silver and gold, beautiful and in perfect order—but there wasn't a soul in the place!
50. Much of what technology seems to offer is to let people of all races enter a Heaven where there are luxuries the witty slave could never dream of, but in the end there is nothing much better than a Heaven full of gold and empty of people.
51. "Social networking" is indeed about people, but there is something about social networking's promise that is like an ambitious program to provide a tofu "virtual chicken" in every pot: there is something unambiguously social about social media, but there is also something as different from what "social" has meant for well over 99% of people as a chunk of tofu is from real chicken's meat.
52. There is a timeless way of relating to other people, and this timeless way is a large part of asceticism. This is a way of relating to people in which one learns to relate primarily to people one did not choose, in friendship had more permanency than many today now give marriage, in which one was dependent on others (that is, interdependent with others),

in which people did not by choice say goodbye to everyone they knew at once, as one does by moving in America, and a social interaction was largely through giving one's immediate presence.

53. "Social networking" is a very different beast. You choose whom to relate to, and you can set the terms; it is both easy and common to block users, nor is this considered a drastic measure. Anonymity is possible and largely encouraged; relationships can be transactional, which is one step beyond disposable, and many people never meet others they communicate with face-to-face, and for that matter arranging such a meeting is special because of its exceptional character.
54. Social networking can have a place. Tofu can have a place. However, we would do well to take a cue to attend to cultures that have found a proper traditional place for tofu. Asian cuisines may be unashamed about using tofu, but they consume it in moderation—and never use it to replace meat.
55. We need traditional social "meat." The members of the youngest generation who have the most tofu in their diet may need meat the most.
56. Today the older generation seems to grouse about our younger generation. Some years ago, someone in the AARP magazine quipped about young people, "Those tight pants! Those frilly hairdos! And you should see what the girls are wearing!" Less witty complaints about the younger generation's immodest style of dress, and their rude disrespect for their elders can just as well be found from the time of Mozart, for instance, or Socrates; and it seems that today's older generation is as apt to criticize the younger generation as their elders presumably were. But

here something really is to be said about the younger generation.

57. The older generation kvetching about how the younger generation today has it so easy with toys their elders never dreamed of, never seem to connect their sardonic remarks with how they went to school with discipline problems like spitwads and the spoiled younger generation faced easily available street drugs, or how a well-behaved boy with an e-mail address may receive X-rated spam. "The youth these days" have luxuries their parents never even dreamed of—and temptations and dangers their parents never conceived, not in their worst nightmares.
58. Elders have traditionally complained about the young people being rude, much of which amounts to mental inattention. Part of politeless is being present in body and mind to others, and when the older generation was young, their elders assuredly corrected them from not paying attention in the presence of other people and themselves.
59. When they were young, the older generation's ways of being rude included zoning out and daydreaming, making faces when adults turned their back, and in class throwing paper airplanes and passing notes—and growing up meant, in part, learning to turn their back on that arsenal of temptations, much like previous generations. And many of the older generation genuinely turned their backs on those temptations, and would genuinely like to help the younger generation learn to honor those around with more of their physical and mental presence.
60. Consumer electronics like the smartphone, aimed to offer something to youth, often advertise to the younger generation precisely a far better way to avoid a spiritual

lesson that was hard enough for previous generations to learn without nearly the same degree of temptation. Few explains to them that a smartphone is not only very useful, but it is designed and sold as an enticing ultra-portable temptation.

61. Literature can be used to escape. But the dividing line between great and not-so-great literature is less a matter of theme, talent, or style than the question of whether the story serves to help the reader escape the world, or engage it.
62. In technology, the question of the virtuous use of technology is less a matter of how fancy the technology is, or how recent, than whether it is used to escape the world or engage it. Two friends who use cell phones to help them meet face-to-face are using technology to support, in some form, the timeless way of relating to other people. Family members who IM to ask prayer for someone who is sick also incorporate technology into the timeless way of relating to other people. This use of technology is quiet and unobtrusive, and supports a focus on something greater than technology: the life God gave us.
63. Was technology made for man, or man for technology?
64. Much of the economy holds the premise that a culture should be optimized to produce wealth: man was made for the economy. The discipline of advertising is a discipline of influencing people without respecting them as people: the customer, apparently, exists for the benefit of the business.
65. Advertising encourages us to take shopping as a sacrament, and the best response we can give is not activism as such, but a refusal of consent.
66. Shopping is permissible, but not sacramental shopping,

because sacramental shopping is an ersatz sacrament and identifying with brands an ersatz spiritual discipline. At best sacramental shopping is a distraction; more likely it is a lure and the bait for a spiritual trap.

67. We may buy a product which carries a mystique, but not the mystique itself: and buying a cool product without buying into its "cool" is hard, harder than not buying. But if we buy into the cool, we forfeit great spiritual treasure.
68. Love the Lord your God with all of your heart and all of your life and all of your mind and all of your might, love your neighbor as yourself, and use things: do not love things while using people.
69. Things can do the greatest good when we stop being infatuated with them and put first things first. The most powerful uses of technology, and the best, come from loving those whom you should love and using what you should use. We do not benefit from being infatuated with technology, nor from acting on such infatuation.
70. The Liturgy prays, "Pierce our souls with longing for Thee." Our longing for transcendence is a glory, and the deepest thing that draws us in advertisements for luxury goods, does so because of the glory we were made to seek.
71. But let us attend to living in accordance with nature. Ordinarily when a technology is hailed as "space-conquering," it is on a deep level body-conquering, defeating part of the limitations of our embodied nature—which is to say, defeating part of our embodied nature that is in a particular place in a particular way.
72. Technologies to pass great distance quickly, or make it easy to communicate without being near, unravel what from ancient times was an ancient social fabric. They offer

something of a line-item veto on the limits of our embodied state: if they do not change our bodies directly, they make our embodied limitations less relevant.

73. A technology can conquer how the body takes nourishment from food, for instance, and therefore be body-conquering without being space-conquering. But whether celebrated or taken for granted, space-conquering technologies are called space-conquering because they make part of the limitations of our embodied nature less relevant.
74. There is almost a parody of asceticism in space-conquering technologies. Asceticism works to transcend the limited body, and space-conquering technologies seem a way to do the same. But they are opposites.
75. "The demons always fast:" such people are told to instill that fasting has a place and a genuine use, but anyone who focuses too much on fasting, or fasts too rigidly, is well-advised to remember that every single demon outfasts every single saint. But there is something human about fasting: only a being made to eat can benefit from refraining from eating. Fasting is useful because, unlike the angels and demons, a man is not created purely a spirit, but created both spirit and body, and they are linked together. Asceticism knows better, and is more deeply attuned to nature, to attempt to work on the spirit with the body detached and ignored.
76. Even as asceticism subdues the comforts and the body, the work is not only to transfigure the spirit, and transform the body.
77. In a saint the transfiguration means that when the person has died, the body is not what horror movies see in dead bodies: it is glorified into relics.

78. This is a fundamentally different matter from circumventing the body's limitations. There may be good, ascetical uses for space-conquering technologies: but the good part of it comes from the ascesis shining through the technology.
79. The limitations of our embodied existence—aging, bodily aches and pains, betrayal, having doors closed in our face—have been recognized as spiritual stepping stones, and the mature wonder, not whether they have too many spiritual stepping stones, but whether they might need more. Many impoverished saints were concerned, not with whether their life was too hard, but whether it was too easy. Some saints have been tremendously wealthy, but they used their wealth for other purposes than simply pandering to themselves.
80. Some might ask today, for instance, whether there might be something symbolic to the burning bush that remained unconsumed which St. Moses the Lawgiver saw. And there are many layers of spiritual meaning to the miracle—an emblem of the Theotokos's virgin birthgiving—but it is not the proper use of symbolic layers to avoid the literal layer, without which the symbolic layers do not stand. If the question is, "Isn't there something symbolic about the story of the miracle of the burning bush?", the answer is, "Yes, but it is a fundamental error to use the symbolic layers to dodge the difficulty of literally believing the miracle." In like fashion, there are many virtuous uses of technology, but it is a fundamental error to expect those uses to include using technology to avoid the difficult lessons of spiritual ascesis.
81. Living according to nature is not a luxury we add once we have taken care of necessities: part of harmony with nature is built into necessities. Our ancestors gathered from the

natural world, not to seek harmony with nature, but to meet their basic needs—often with far fewer luxuries than we have—and part of living according to nature has usually meant few, if any, luxuries. Perhaps there is more harmony with nature today in driving around a city to run errands for other people, than a luxurious day out in the countryside.

82. Some of the promise the Internet seems to offer is the dream a mind-based society: a world of the human spirit where there is no distraction of external appearance because you have no appearance save that of a handle or avatar, for instance, or a world where people need not appear male or female except as they choose. But the important question is not whether technology through the internet can deliver such a dream, but whether the dream is a dream or a nightmare.
83. To say that the Internet is much more mind-based than face-to-face interactions is partly true. But to say that a mind-based society is more fit for the human spirit than the timeless way of relating, in old-fashioned [meatspace](#), is to correct the Creator on His mistaken notions regarding His creatures' best interests.
84. People still use the internet all the time as an adjunct to the timeless way of relating. Harmony with nature is not disrupted by technology's use as an adjunct nearly so much as when it serves as a replacement. Pushing for a mind-based society, and harmony with nature, may appeal to the same people, especially when they are considered as mystiques. But pushing for a mind-based society is pushing for a greater breach of living according to nature, widening the gulf between modern society and the ancient human of human life. There is a contradiction in pushing for our life to

be both more and less according to nature.

85. There is an indirect concern for asceticism in companies and bosses that disapprove of clock watching. The concern is not an aversion to technology, or that periodically glancing at one's watch takes away all that much time from real work. The practical concern is of a spiritual state that hinders work: the employee's attention and interest are divided, and a bad spiritual state overflows into bad work.
86. In terms of asceticism, the scattered state that cannot enjoy the present is the opposite of a spiritual condition called nepsis or, loosely, "watchfulness."
87. The problem that manifests itself in needing to keep getting drunk, with New Age and its hopes for, at the moment, 2012 delivering us from a miserable here and now, or needing a more and more exotic drugged-up sexual thrill, or fleeing to SecondWife, is essentially a lack of nepsis.
88. To be delivered by such misery is not a matter of a more radical escape. In a room filled with eye-stinging smoke, what is needed is not a more heroic way to push away the smoke, but a way of quenching the fire. Once the fire is quenched, the smoke dissipates, and with it the problem of escaping the smoke.
89. Nepsis is a watchfulness over one's heart, including the mind.
90. Nepsis is both like and unlike metacognition. It observes oneself, but it is not thinking about one's thinking, or taking analysis to the next level: analysis of normal analysis. It is more like coming to one's senses, getting back on course, and then trying to stay on course. It starts with a mindfulness of how one has not been mindful, which then flows to other areas of life.

91. The man who steps back and observes that he is seeking ways to escape the here and now, has an edge. The same goes with worrying or other passions by which the soul is disturbed: for many of the things that trouble our soul, seduce us to answer the wrong question. This is almost invariably more pedestrian than brilliant metacognition, and does not look comfortable.
92. Metanoia, or repentance, is both unconditional surrender and waking up and smelling the coffee. It is among the most terrifying of experiences, but afterwards, one realizes, "I was holding on to a piece of Hell!"
93. Once one is past that uncomfortable recognition, one is free to grasp something better.
94. That "something better" is ultimately Christ, and there is a big difference between a mind filled with Christ and a mind filled with material things as one is trying to flee malaise.
95. The attempt to escape a miserable here and now is doomed. We cannot escape into Eden. But we can find the joy of Eden, and the joy of Heaven, precisely in the here and now we are seduced to seek to escape.
96. Living the divine life in Christ, is a spiritual well out of which many treasures pour forth: harmony with nature, the joy of Eden and all the other things that we are given if we seek first the Kingdom of God and His perfect righteousness.
97. It was a real achievement when people pushing the envelope of technology and, with national effort and billions of dollars of resources, NASA succeeded in lifting a man to the moon.
98. But, as a monk pointed out, the Orthodox Church has known for aeons how to use no resources beyond a little bread and water, and succeed in lifting a man up to God.

99. And we miss the greatest treasures if we think that asceticism or its fruits are only for monks.
100. And there is something that lies beyond even asceticism: contemplation of [the glory of God](#).

# That Beautiful Strength

## That Hideous Strength

The Shadow of that hideous strength  
Six miles and more it is of length.  
The shadow of that hideous strength  
Six miles and more it is of length.

Opening quotation to C.S. Lewis, [That Hideous Strength](#)

[That Hideous Strength](#) is the third book in C.S. Lewis's space trilogy, the other two being [Out of the Silent Planet](#) and [Perelandra](#). [Out of the Silent Planet](#) is the first science fiction book that featured aliens in which the aliens were not a vile monstrosity, but I am not concerned with the science fiction here. [That Hideous Strength](#) has an important Arthurian element, and [while I've written my own take on the Arthurian legends](#), I am not concerned with that here either. And there are other things about [That Hideous Strength](#) that I am also not

concerned with.

Then what am I concerned with?

Among programmers there is a slang term "hhos", an abbreviation for "Ha ha, only serious!" It describes, not exactly jokes that aren't really funny, but jokes that aren't really jokes at their core: three of my own examples might be [Pope Makes Historic Ecumenical Bid to Woo Eastern Rite Catholics](#), [Devotees of Fr. Cherubim \(Thorn\) Demand his Immediate Canonization and Full Recognition as "Equal to the Heirophants"](#), and [Unvera Announces New Kool-Aid Line](#). These pieces fall on to the more "serious" end of "Ha ha, only serious!" And something like "Ha ha, only serious!" is found in [That Hideous Strength](#).

[That Hideous Strength](#) is darker and harder to appreciate than [Out of the Silent Planet](#) or [Perelandra](#), but I've heard people say they appreciate it most of all when they have got into it. The book, as Lewis clearly introduces it in some editions, is "a fairy-tale for grown-ups", and he makes an opening pre-emptive move to explain that the traditional fairy tale begins with once-common themes before moving to the magical: "We do not always notice [the traditional fairy-tale's] method, because the cottages, castles, woodcutters, and petty kings with which a fairy-tale opens have become for us as remote as the witches and ogres to which it progresses." But the traditional fairy-tale begins with the pedestrian John Q. Public and only then moves on to the magical. And Lewis's book begins with "such hum-drum scenes and persons" before moving on to "magicians, devils, pantomime animals, and planetary angels."

But C.S. Lewis's tale is, if not exactly "ha ha, only serious," a prime example of "**ha ha, only realistic.**" I do not mean exactly that the figure of Merlin or a Pendragon who has visited other planets is realism; what I do mean is that [That Hideous Strength](#)

is a tale of a hideous strength and **that hideous strength is realistic and real in our world today.**

Today that hideous strength has bared its power, and I would be very wary of saying the worst is past.

The poem Lewis quotes, "The shadow of that hideous strength / Six miles and more it is of length," is about the Tower of Babel ([Genesis 11:1-13, RSV](#)):

Now the whole earth had one language and few words.

And as men migrated from the east, they found a plain in the land of Shinar and settled there. And they said to one another, "Come, let us make bricks, and burn them thoroughly." And they had brick for stone, and bitumen for mortar. Then they said, "Come, let us build ourselves a city, and a tower with its top in the heavens, and let us make a name for ourselves, lest we be scattered abroad upon the face of the whole earth."

And the LORD came down to see the city and the tower, which the sons of men had built. And the LORD said, "Behold, they are one people, and they have all one language; and this is only the beginning of what they will do; and nothing that they propose to do will now be impossible for them. Come, let us go down, and there confuse their language, that they may not understand one another's speech."

So the LORD scattered them abroad from there over the face of all the earth, and they left off building the city.

Therefore its name was called Ba'bel, because there the LORD confused the language of all the earth; and from there the LORD scattered them abroad over the face of all the earth.

I spent a long time trying to think of how to put this, and perhaps this is one way of explaining. Those of us who [used to play Dungeons & Dragons](#) heard of, and perhaps wanted to play, a race of elves called Drow. The earliest AD&D sources denied or were ambiguous about whether Drow even existed, and then more and more became known about them. They were a Machiavellian society living deep in caverns beneath the earth; they kept fearsome "mind flayers" (Illithid) as slaves; they possessed weapons and armor of adamantite alloy that was on par with some of the most powerful magical items those on the surface of the earth could have. And these enchanted adamantite armaments were dependent on the magical energies of the Underdark; they needed to spend one week in four immersed in the magical energies flowing around the Underdark, and their enchanted properties would be destroyed completely if they saw the light of the sun. I believe this adamantite gear was what military buffs would call a "capture-proof weapon": weapons and armor that would soon cease to be useful if captured by enemy forces.

I am one of many who succumbed to the temptation to have a really cool watch; the watch I have is a dark green [Casio Pathfinder by Casio](#) and features a barometer/altimeter and compass, and I've used it to navigate. And it features "tough solar" power; I should never need to replace its batteries because it draws power from the sun, making it the opposite of Drow gear... or maybe not. I purchased it after a botched battery replacement broke the waterproof seal on an earlier model Pathfinder; I wanted something cooler, so I chose a forest green watch rather than a blue watch, and one that was "atomic", meaning not exactly that it contained a super-exact atomic clock, but that its time would be set to well under one second accuracy

by a nightly radio signal in various parts of the world. But my point is not exactly about this magical attunement to energies of the Underdark, but that my watch is a capture-proof weapon. I purchased it to replace a watch I was annoyed at having broke down, and the company that gave me an earlier watch that broke down also gave me a newer watch that will also break down. It would probably take a few years to break down, but I do not imagine I have purchased a watch that I can wear for the rest of a long life.

My newly upgraded iPhone 4 is also capture-proof, dependent on the energies of the Underdark in more ways than one. It needs to be kept charged, and will quickly become useless without a source of power. But 90% of its functionality is lost immediately if it loses network functionality. People can and do make iPhone apps that work without network access, but the overall current is to fetch things fresh from the network in a way that is completely useless if network access is not available. And, as a Popular Mechanics cover article stated, "Your gadgets spy on you;" my iPhone's GPS is what older science fiction referred to as a tracking device, if it were not enough to have the NSA monitoring phone calls and network usage.

This is just the tip of an iceberg, the outer ornament of a Tower of Babel that is at its heart not about technology any more than astronomy is about telescopes or love letters or about ink. This Tower of Babel permeates life and culture. A political ideology is by definition a Tower of Babel. But something is odd even in the technology. Advances of technology in practice mean technologies that are more dependent on Underdark energy, and ultimately more fragile, than "obsolete" technologies they replace. This fragility, this vulnerability is the outer shell in shifts in life and culture that are at the essence of [that hideous](#)

[strength](#). Only I'm not sure how to untangle the whole of it. Perhaps I don't need to. Perhaps it is enough to say that trouble has been brewing for centuries and it takes a global political and economic meltdown for people to see how hideous it is.

I'm uneasy about some of the things that seem to come with Fr. Seraphim (Rose)'s followers. However, [interest in Taoism and the Tao Te Ching](#) was also part of how I found my way to Holy Orthodoxy, and a very brief look at [Christ the Eternal Tao](#) made it clear that Fr. Seraphim (as a monastic, he does not need to have 'Rose' repeated) grasped Taoism and the Tao Te Ching at a deeper level than I did, and in a more organic way. And one of the points I believe Fr. Seraphim nailed is that people were less tangled in Lao Tzu's world than ours, that in some sense Lao Tzu can be placed with Plato as (anonymous) Christians before Christ, and that however fallen Lao Tzu's China may have been, we have fallen further. One head of this hydra is marketing, cognate to manipulation, propaganda, and porn, that basically relates to people as things to be manipulated and not related to as human. One American visited (our day's) China and wondered how the Chinese could stand to be bombarded by such ludicrous propaganda: and then came home with fresh eyes to messages informing her that she would be cooler if she drank Pepsi. Some people have said that branding has taken the place of spiritual discipline in today's world—a professor asked students a question, "Imagine your successful future self," and continued, "With what brands do you imagine yourself associating?" And he received no puzzled stares or social cues that anybody found this a strange question. Branding is powerful; I've mentioned a couple of brands and regard my name-dropping of Casio Pathfinder and the iPhone 4 as ultimately shameful. And this is one tentacle among a thousand; I could elsewhere review some of [Exotic](#)

[Golden Ages and Restoring Harmony with Nature: Anatomy of a Passion](#), or make a deeper cut and say, "Feminism is anti-woman.

No, really. Never mind the marketing image; if you really want to see sparks fly, ask a good, devoted feminist if feminism and gender studies give us human flourishing, and then smile and say,

'You know, I think Phyllis Schlafly is a beautiful example of human flourishing.'" And when you're done ducking for cover, look at another of the many tentacles of today's Tower of Babel (or perhaps many Towers of Babel). Perhaps look at the premise that relationships are a disposable commodity and marriages fall apart at the drop of a hat next to not-particularly-close friendships in bygone ages: and if that is not enough, the next installment is that relationships are not disposable if someone wants out, but transactional, intended to be dropped fairly quickly even if there is nothing like a falling-out.

Perhaps we do not need to spend too much more time looking into that abyss.

## That Beautiful Strength

Fyodor Dostoevsky's [The Brothers Karamazov](#) answers C.S. Lewis's [That Hideous Strength](#).

[The Brothers Karamazov](#) does not discuss anything apocalyptic and predicts no Russian Revolution, but it is eminently concerned with the problem of evil, and two chapters provide two of the most powerful statements of the problem of evil in literature. But after evil has full reign, something good follows in its wake. There is a superficial happy ending when an escape is planned for a man who wounded but did not kill his father, and is convicted of parricide. But that is almost superficial. On a deeper level there is something good that follows the Christlike Alyosha, and evil at the death of a young boy does not have the last word. The book as a whole is painful to read, or I found it such. But its ending is fragrant. It has the fragrance of the resurrection.

The mystery of the resurrection is not only for the consummation of time in the Last Judgment. Heaven is for now, and the mystery of the resurrection is for now.

This year, on Holy Saturday, I finally got something that I hadn't gotten before, thick as I am. I had begun studying theology and against what seemed insurmountable odds (including studying during treatment for cancer), I earned a master's degree in theology. Then I entered a Ph.D. program at another

school to be able to teach at a seminary. I did not complete the program; [you can read my author bio if you want to see what I've accomplished in other settings](#), but I washed out of this program in a very painful way. (As in, it was so rough that I found chemotherapy an easier experience.)

What I realized this Sunday was that what prevented me from getting a Ph.D. did not stop God's purposes; it may well enough have thwarted what I thought was God's intent, but right now I have a great many blessings to count and am profoundly grateful to God that I am not still working on a Ph.D. program that would have on the average taken eight years to complete and would still not have gotten me a Ph.D. by now. My regrets now are the right and proper regrets that I was angry and I failed to use hardship in an ascetical, spiritually disciplined manner. And I recognize God's wonderful, severe mercy in all of this: I failed to recognize the words of Christ the True Vine: [Every branch of mine that bears no fruit, he takes away, and every branch that does bear fruit he prunes, that it may bear more fruit.](#) God's hand was powerful enough when several good things that never happen fell into place for me to go a certain distance into academic theology. And it was even more powerful in several bad things that never happen fell into place to keep me from completing my program.

Most of the theology covered was queer, or gender studies, or Marxist, or what have you; but on this point I would recall the words of one flaming liberal theologian who said that Christ's resurrection was not on the same level as his death; it wasn't simply reversing his death so that with Lazarus he was alive in the same way as before. Instead Christ remained, in a certain sense, dead; the marks of death remained with him, but God had the last word. The East does not really have a tradition of saints

bearing the stigmata but instead saints who shine with the radiant uncreated Light of Heaven, but even in the East it is clear that the marks of the crucifixion on St. Francis of Assisi are a treasure beyond pearls. Christ was crucified, but this did not annihilate Christ: instead it annihilated crucifixion. Christ would become the firstborn of the dead: "Christ is risen from the dead, trampling down death by death!" And others have pointed out that Christ did not return to the level of things in his passion and have a petty triumph: he did not return to Pilate and say, "You said, 'What is truth?'" , nor return to the Sanhedrin and say, "Are you sure that I am a mere man who blasphemed when you asked me if I was the Christ, the Son of the Blessed One?" It's not just that Christ wasn't being petty; he was working on another level. The only exception seems to be St. Thomas, who said, "[Unless I see in his hands the print of the nails, and place my finger in the mark of the nails, and place my hand in his side, I will not believe.](#)" and when Christ took him up on his claim, St. Thomas answered, "[My Lord and my God!](#)", confessing infinitely more than Christ's resurrection. Christ triumphed in his fruitful unbelief.

[That Hideous Strength](#) describes something that is real and active, but for all the hideous strength of Hell, [when evil triumphs, God the changes the game.](#)

**That beautiful strength** has the last word. The resurrection is not a fundamental exception to how God works; it is the supreme example of a law that plays out on a much smaller scale. An unintended pregnancy can be the gateway for two people to move past living for themselves, and live for something bigger than an egotism of two. And in some ways that is like how, despite all my best efforts to become an official theologian, God has introduced me to theology—the real kind. Not that he

doesn't mean others to be a scholar, but to Orthodox scholar and nonscholar alike theology is life; it is for all Orthodox Christians; it is a Heaven that begins on earth, a practice of the virtues and a spiritual walk, and something much bigger than an academic discipline. Even if some Orthodox can and should be practitioners in academic theology. And even if I'm thick enough that it took me years to see this.

**That beautiful strength** is unconstrained no matter how many cards **that hideous strength** plays off the side of the deck. **That beautiful strength** brings Heaven wherever God's saints may be, even in a concentration camp. **That beautiful strength** thrives in losses we consider catastrophic, losses of things we think we need. **That beautiful strength** takes tragedy as the canvas for a masterpiece of beauty, glory, and wonder. **That beautiful strength** fixes the root problems despite all our efforts to fix things ourselves. **That beautiful strength**, however deep the magic of that hideous strength may be, is of a deeper magic from beyond the bounds of time. **That beautiful strength** took the marks of the lowest death, the crucifixion of a disobedient slave, and made them more precious than rubies and pearls. **That beautiful strength** takes sinners and makes them saints. **That beautiful strength** will someday hear the praises of the mute, be heard by the deaf, and be seen by the blind, but it is a strength that is alive and well and works its power and wonder today.

**That Hideous Strength** is alive and powerful, but it need never be the last word.

# Theology of Play

Most of Christianity that I've come into contact with has a well developed theology of work; sometimes called the Protestant Work Ethic, it is summarized in the verse, "Whatever you do, do it heartily, as if unto the Lord." (Col. 3:23). A mature Christian is characterized by hard work, and I do not wish to detract from that, but there is a counterpart to theology of work: theology of play.

It would probably be easier to defend a point of doctrine involving great self sacrifice - that a Christian should be so loyal to Christ that the prospect of being tortured and killed for this devotion is regarded as an honor, that a Christian should be willing to serve in boring and humiliating ways, that a Christian should resist temptation that takes the form of an apparent opportunity for great pleasure - but I will still state and explain this point: a Christian should be joyful, and furthermore that this joy should express itself in play and celebration.

When Paul describes the fruit of the Spirit, the first word he uses is love. Love will certainly apply itself by hard work. He goes on to describe it as patience, faithfulness, self-control. Patience, faithfulness, and self-control all have important application to hard work. But the second word is joy. If the fruit of the Spirit will yield hard work, it will also yield expressions of joy.

C.S. Lewis said that the greatest thing that the Psalms did

for him was express the joy that made David dance. Doctrinal development is one of the reasons that God gave us the Bible, but it is not the sole reason. I would not by any means suggest that omitting Paul's epistles would improve the Bible, but there is a lot of the Bible that I read for the sheer joy and beauty as much as anything else. Psalm 148, one of my favorite, beautifully embellishes the word, "Halleluyah!" That alone is reason sufficient to merit its placement in the Bible. When the Psalms tell us that we should sing unto Yahweh, it is not telling us of a dreadful and terrible duty that we must endure because God says so. By contrast, it is encouraging an expression of joy. I try to show myself to the world primarily as a person of love, but I have also had a strong witness among the unbelievers as a person of joy; one of the stereotypes of a Christian that I have been glad to shatter is that of a repressed and repressive person. The stereotype says that a person who tries to live by the Bible's moral standards will have a somber life devoid of joy; I thus try to let the deep and inner joy "I've got a river of life flowing out of me..." that the Holy Spirit has placed in my heart show itself to them. Satan likes to take and twist pleasure into enticement for his evils; that does not make pleasure an evil thing. Yahweh made pleasure - the idea that Satan could imagine such a thing on his own is risible (for Satan cannot create; he can only mock) - and pleasure is intended for Christians to partake.

Celebration is something that can certainly come from things going well, but it is not a grave evil that is justified only by exceptional cause; it is a way of life. Some of celebration, some expressions of joy and thanksgiving, are in response to an event we are pleased at and thankful for, and rightly so, but celebration is not something to be reserved for rare occasions. I may be celebratina an event. but Christ is reason well sufficient

---

for celebration; consequently, it is appropriate to celebrate, even when you can't point to an exceptional event. There is a time to mourn, but a Christian does not need extenuating circumstances as reason to celebrate.

I am not going to attempt to provide an exhaustive list of expressions of joy, and most definitely do not wish to provide commands which must be successively fulfilled to the letter and verified in triplicate, but I think that a few suggested variants of "stop and smell the roses" are in order:

Call a friend you haven't talked to in a while.

Read a children's book.

When it's warm, take off your shoes, close your eyes, and feel the grass under your feet.

Stop and remember five things you are glad for; thank God for them.

Drink a mug of hot cocoa. Slowly.

Go to a local art museum.

Hug a friend.

Climb a tree.

Close your eyes and imagine yourself somewhere else.

Sneak up behind a friend who is ticklish...

In addition to these that I've pulled off the top of my head, I'd like to look at three recurring, decidedly Biblical expressions of joy, and how many Christians have reacted to them.

- Singing. The Christian understanding of music is summed up in the words, "Make a joyful noise unto Yahweh." While it can also be solemn, music was created as a beautiful expression of joy. When Paul encourages the believers to sing to one another, he is not really appealing to a sense of duty, but rather encouraging a celebratory and joyful

pleasure in this good gift of God. The jail warden was astounded to find that Paul was happily singing when he was imprisoned; this joy expressed itself in so powerful of a manner that it opened the warden's ears so that he, too, would gain this welling up of life, flowing into joy. Most Christians sing (even if some of the music has room for improvement); this is good. believe that Yahweh is pleased when he listens. This is Biblical.

- Dance. One of the expressions of celebration recorded in the Bible, as well as song, is dance.

In Exodus, after Israel passed through the red sea and Egypt didn't, Moses's song is followed after a couple of verses with the words, "Then the prophet Miriam, Aaron's sister, took a tambourine in her hand; and all the women went out after with tambourines and with dancing." In Samuel, it is asked, "Is this not David the king of the land? Did they not sing to one another of him in dances, 'Saul has killed his thousands, and David his ten thousands?'" and recorded, "David danced before Yahweh with all his might." The psalms jubilantly sing, "Let them praise his name with dancing, making melody to him with tambourine and lyre." and "Praise him with tambourine and dance; praise him with strings and pipe!" In Ecclesiastes, dancing is identified with joy: "...a time to weep, and a time to laugh; a time to mourn, and a time to dance..." Jeremiah issues words of comfort, saying, "Again I will build you, and you shall be built, O virgin Israel! Again you shall take your tambourines, and go forth in the dance of merrymakers." In Lamentation he also identifies dancing with joy, saying, "The joy of our hearts has ceased; our dancing has been turned to mourning." It is not without reason that dance is a part of the worship

services of Messianic Jews. It is not without reason that a song that has come to us from Africa states, "If the Spirit of the Lord moves in my soul, like David the victor I dance."

The shaker hymn very beautifully states, "Dance, then, wherever you may be, for I am the Lord of the Dance, said he." Throughout, the hymn describes the walk of faith as a dance. Dancing is a good thing, an act of joy, that has been given to us by Yahweh himself for our good.

There are a few forms of dance that are essentially sex with clothes in the way, and should be avoided outside of a marital context. Because of the existence of these dances, some Christians have attacked dance as demonic; "Dance before Yahweh" necessitates an interpretation of "Dance alone before Yahweh."

This is silly. Celebration is meant to be enjoyed in community; its nature is not a selfish "I like this and I'm going to keep it all to myself," but a generous, "This is so good that I have to share it with you as well." This is the mark of a child fully enjoying a lollipop. When holidays and other times of celebration come, people want to be with friends and family, and it would be only a slight exaggeration to say that this is the whole reason that believers come together for worship services.

Dance, also, should be enjoyed in community.

- Proper use of wine.

In Judges, the vine refuses an offer to be the king over all trees, saying, "Shall I stop producing my wine that cheers gods and mortals, and go to sway over the trees?" The Psalms likewise describe material blessings by saying, "You cause grass to grow for the cattle, and plants for people to use, to bring forth food from the earth, and wine to gladden

the human heart, oil to make the face shine, and bread to strengthen the human heart.", and Ecclesiastes, "Feasts are made for laughter; wine gladdens life..." The Song of Songs, in its description of the erotic, says, "Let him kiss me with the kisses of his mouth! For your love is better than wine..."

How sweet is your love, my sister, my bride! how much better is your love than wine..." , comparisons that would mean little if wine were not understood to be a good thing. Isaiah accuses Israel of apostasy in the words, "Your silver has become dross, your wine is mixed with water." He Israel to a vineyard created so its master may enjoy its wine; elsewhere appear the words, "On this mountain Yahweh Sabaoth will make for all peoples a feast of rich food, a feast of well-aged wines, of rich food filled with marrow, of well-aged wines strained clear." Jeremiah contains Psalmlike words of celebration: "They shall come and sing aloud on the height of Zion, and they shall be radiant over the goodness of Yahweh, over the grain, the wine, and the oil, and over the young of the flock and the herd; their life shall become like a watered garden, and they shall never languish again."

Hosea, in sadness at apostasy, makes it clear that wine is a gift from above: "She did not know that it was I who gave her the grain, the wine, and the oil, and who lavished upon her silver and gold that they used for Baal."

Going from the Old Testament to the New, it is seen that Jesus was accused of being a drunkard; for his first miracle, he turned water to wine, thus permitting a celebration to continue.

Now, it should be mentioned that alcohol is something that merits an appropriate respect and caution; consumed in excess, it is a deadly poison. It has been said that we should

thank God for beer and burgundy by not drinking too much of them. Our culture has largely cast aside the virtue of moderation and the belief that a sin could be sin because it takes a good thing to excess (gluttony is not mentioned as a sin very often, and a great many people would be healthier to lose some weight). Not everybody thought this way. The ancient Greeks accorded moderation a place as one of the four cardinal virtues, and Paul named temperance and self-control as the final of the virtues listed as the fruit of the Spirit. Liquor, like most good things, should be consumed in a temperate, controlled, and balanced manner. And, like most good things, it becomes a bane if it is taken out of proper context. It was not without reason that Solomon wrote that wine is a mocker and beer a brawler. This country has age related laws pertaining to alcohol, and they should not be violated. Granted that those laws be obeyed, it would be wise to consider to the advice to Jesus ben Sirach, who in his writing said, "Do not try to prove your strength by wine drinking, for wine has destroyed many. As the furnace tests the work of the smith, so wine tests hearts when the insolent quarrel. Wine is very life to human beings if taken in moderation. What is life to one who is without wine? It has been created to make people happy. Wine drunk at the proper time and in moderation is rejoicing of heart and gladness of soul." Elsewhere comparing wine to music, he regards wine as a good part of celebration.

There are many things that should be made manifest in the life of Christians; community, freedom, and celebration are important. Paul writes in Galatians, "For freedom Christ has set us free. Stand firm, therefore, and do not submit again to a yoke of slavery." In Galatians "Therefore do not let anyone condemn

OT slavery.", in Colossians, "Therefore do not let anyone condemn you in matters of food and drink... If with Christ you died to the elemental spirits of the universe, why do you live as if you still belonged to the world? Why do you submit to regulations, 'Do not handle, Do not taste, Do not touch'?", and in I Timothy, "Now the Spirit expressly says that in later times some will renounce the faith by paying attention to the teachings of demons, through the hypocrisy of liars whose consciences are seared with a hot iron. They forbid marriage and demand abstinence from foods, which God created to be received with thanksgiving by those who believe and know the truth. For everything created by God is good, and nothing is to be rejected, provided it is received with thanksgiving; for it is sanctified by God's word and by prayer."

So let us enjoy the gifts that God has bestowed.

(scripture quotations generally NRSV)

# **Theory of Alien Minds: A UX Copernican Shift (and Gifted!)**

There was one moment of brilliance, I was told, when a North American missionary visiting in Latin America was asked if clothing and sheets lasted longer in her first-world home. The question was not surprising and it reflected cross-cultural understanding: bedsheets and clothing in the U.S. can last for quite some time, while bedsheets and clothing in the host country wear out quickly, perhaps in a few weeks, and it is nickle-and-dime drain on none-too-deep pockets to keep replacing them. The question, perceptive enough, was a question about privilege and easy living.

The missionary's response was astute. She thought for a minute, and then said that yes, sheets in her home area lasted much longer than several weeks if properly cared for... and continued to explain, in addition, what people wore when they were all bundled up for bitter cold. Winter clothing is not mainly for modesty, and gloves, hats, and scarves (or, today, ninja masks) exist because on the very worst days every square inch

of exposed skin will be brutally assaulted. The conversation ended with a slight degree of pity from people who only wore clothes for modesty realized that yes, as they had heard, bedsheets and normal clothing lasted much longer than several weeks, but there were some other price tags to pay. The missionary's communication was in all sympathetic, human, and graceful.

Something similar may be said of the degree of IQ where you learn firsthand that being making other people envious is not a good thing, and where it happens more than once that you need to involve authorities or send a C&D letter for harassment to stop, and where others' insecurities leave you socially skating on thin ice surprisingly often. Nonetheless, what may be the most interesting social lesson may have every relevance to "UX," or **User eXperience**, and it has to do with what is called "**theory of other minds**". The normal conditions for developing "theory of other minds" can run into difficulties, but there is something very valuable that can happen.

**Theory of other minds,  
Split into “theory of like  
minds”, and:  
“theory of alien minds”:  
A Copernican shift**

One classic developmental step in communication is developing a “theory of other minds”, meaning that you relate to people as also having minds, rather than as some sort of thing that emits what may be inexplicable behaviors instead of acting out of human motives and beliefs.

Part of how the normal “theory of minds” develops is that children tend to give adults gifts they would like to receive themselves, such as colorful toys rather than books. At a greater stage of maturity, people can go from giving gifts they would themselves like to receive, to giving gifts they would not want as much themselves, but another person would. However, in normal development this is an advanced lesson. For most people, the baseline is assuming that most people think like them most of the time.

For outliers in some dimensions, this simple picture does not work. People start with the same simple assumption: that you can relate to people as basically thinking like you. But if you’re different enough, you’ll break your shins with this approach. Perhaps outliers communicate markedly better if they know one.

Perhaps we're communicating that really better if they know one person who starts on the same page, but communication is harder.

The crucial distinction I would draw is between **theory of like minds** and **theory of alien minds**. Both theory of like minds and theory of alien minds relate to others as having minds. But theory of like minds is based on the assumption that other people think as you do. Theory of alien minds also really and truly relates to others as having minds, but it is based on a realization that you are not the center of the universe, others often do not think like you, and you need to build bridges.

"Theory of like minds" says, "Other people have minds that are basically just like mine."

**"Theory of alien minds" takes a step back, saying, "Other people have minds, and they have minds whether or not they're basically just like mine.**

This Copernican shift has every relevance to "Let's not forget the user" disciplines in UX.

## **So what does a “theory of alien minds” really look like?**

Let me provide several examples, before getting into what it has to do with UX:

Hayward has worked long and hard to communicate well.

Many people might guess that the features of his [giftedness] would bring benefits...

...but few guess how much.

The same kind of thing goes with excellent communication. When a friend came from out of town to live in a local apartment, quite a few friends gathered to help unload the moving van.

Hayward, asked for an assignment, expecting to be asked to carry something. Instead, for reasons that are still not clear, she handed him a leash and asked him to look after a dog she has introduced as not at all comfortable around men.

And the dog very quickly moved as far away as his leash would allow. But Hayward worked his magic... and half an hour later, he was petting the dog's head in his lap, and when he stood up, the dog bounded over to meet the other men in the group.

In another setting, Hayward was waiting for labwork at a

convenient care center, when a mother came in, with a four-year-old daughter in tow. The girl was crying bitterly, with a face showing that she was in more pain than she knew how to cope with, and an ugly bulging purple bloodblister under her thumbnail. Hayward understood very well what was going on; his own experience as a child who smashed a thumbnail badly enough to get a bloodblister underneath, was the most pain he had experienced yet in his life.

When the convenient care staff threw the mother a wad of paper to fill out before treatment (as opposed, for instance, to first just administering anaesthesia and only after that detain the mother with paperwork), she left the child crying alone in a chair. Hayward walked over, wanting to engage the girl in conversation in the hopes of lessening her pain. He crouched down to be at eye level, and began to slowly, gently, and calmly speak to the child.

Some time later, Hayward realized two things.

First of all, his attempt to get the girl to talk were a near-total failure. He had started by asking her favorite color, and she was able to answer that question. But essentially every other age-appropriate prompt was met with silence: "Q: What kind of instrument does a dog play?" "A: A trom-bone." (But maybe her pain was too great to allow regular conversation.)

Second of all, she had stopped crying. Completely. And her face no longer showed pain. He had, partly by his nonverbal communication, entirely absorbed her attention, and she was unaware of pain that had her bawling her eyes out some minutes before. Hayward realized this with a start, and tried to keep up the conversation such as it was, regardless of whether he had anything to say. A rather

startled Hayward did his best not to break the illusion, and did so smoothly enough that she seemed not to notice.

Some time later, Hayward was called for his blood draw. He returned to find the mother comforting her daughter, as she had not done before. The little girl was crying again, but it was a comforted crying, a world of difference from when she was alone with really quite vile pain. The mother seemed awestruck, and kept saying, "You have a very gentle way about you."

Another time, Hayward was asked to substitute-teach a class for parents of English as a Second Language students. He was provided an interpreter who spoke Spanish and English, and the class met all objectives...

And Hayward didn't really use the interpreter. He adapted to language and culture to bring an enjoyable class for everyone.

When studying abroad, Hayward was quite pleasantly surprised (and very much surprised) when a Ghanain housemate said Hayward had challenged some assumptions, saying Hayward was "like a white American, and like a black African, closer than an African brother..." and from that point on he enjoyed insider status among Ghanian friends. He has perhaps never received a greater compliment.

Hayward thinks at a fundamentally different level, and he needs to build bridges. But the good news is that he has been working on bridge-building for years and built bridges that span great differences. Being in a situation where he has to orient himself and bridge a chasm doesn't really slow him down that much.

In addition, these "super powers" can have every relevance to business work. No employer particularly cares if

he can read ancient and medieval languages: but one employer cared that he could easily read bureaucratic documentation that was incomprehensible to everyone else. No employer really cares that at the age of 13 Hayward crafted [crafted a four-dimensional maze](#), worked on visualizing a 4-cube passing through 3-space, and looked at a data visualization in his calculus book and (re)invented iterated integration...

But some employers care a great deal that he can take a visualization project, start work along the lines suggested by Tufte's corpus of written work, and start to take steps beyond Tufte.

No employer really seems to care that he has studied at the Sorbonne, UIUC, and Cambridge (England) in three very different fields: but co-workers have been puzzled enough that he so effortlessly shifts his communication and cultural behavior to have a colleague and immigrant ask him why he relates to Little Russia's culture so well.

But some employers appreciate his efforts to listen and understand corporate culture. In serving like a consultant for a travel subsidiary, Hayward's contacts within the organization that picked up he was trying to understand their language on their terms, and the Director of Sales and Marketing half-jokingly asked, "Do you want to be a travel agent?" Hayward perhaps would not be an obvious fit for personality factors, but she picked up a crystal-clear metamessage: "I want to understand what you are saying, and I want to understand it on your terms."

Furthermore, while no employer has yet to care about Hayward's interest in writing, one employer cared a great deal that he took a high-value document concerning disaster

recovery and business continuity, valuable enough that it would be significant for the employer to file with e.g. their bank, and took it from being precise but awkward and puzzling to read, to being precise, accessible, simple, and clear.

What does this communication across barriers have to do with UX?

**Everything.**

I've had postgraduate training in anthropology, cognitive science, computer science, philosophy, and psychology, and I consider "theory of other minds" communication to be out-and-out the central skill in UX. Perhaps the most structural of these disciplines is anthropology, and a training in anthropology is a training in understanding across differences.

Once anthropologists found difference by crossing the Pacific and finding aboriginal people untainted by modern technology. **Now anthropologists find difference by crossing the street.**

But the theory of alien minds is almost **unchanged**.

Jakob Nielsen has been beating for essentially forever the drum of "You are not a user". Perhaps his most persistent beating of his drum is:

One of usability's most hard-earned lessons is that '**you are not the user.**' If you work on a development project, you're atypical by definition. Design to optimize the experience for outsiders, not insiders.

What this means, in competency, is "Communicate out of a theory of alien minds." Or, if you prefer, a theory of "outsiders", but don't assume that deep down inside "outsiders" are really just like "insides." **Exercise a theory of alien minds.**

What Nielsen is telling people not to do is coast on a "theory of like minds," and assume that if a user interface is intuitive and makes sense to the people who built it, it will just as much make sense to the audience it was built for. It won't. You have to think a bit differently to build technology, and that means you need a theory of alien minds. Assuming that you are the center of the universe, even if it's unintentional, is a recipe for failed UX. We all want better than that.

# Tinkering with Perl

## Table of Contents

Most books you will find on Perl or any other programming language, are books intended to be a one-size-fits-all — or, at least, that's how they're advertised. This book does not attempt or pretend to be appropriate to most users; instead, I am trying to do one thing well.

Well, what am I trying to do? Let me first tell what I am not trying to do:

- I am not trying to make a book that will be helpful to experienced programmers who want to pick up Perl.
- I am not trying to make a book that will treat Perl in depth, or for that matter even touch many of the language's strongest points.
- I am not trying to make a book that will make a novice programmer into an expert programmer overnight.
- I am not trying to introduce most principles of good software engineering.
- I am not trying to make a book that promises quick results

overnight; I am not trying to make a book that will quickly tell you how to get such-and-such done.

Well, if I am not trying to do all of that, then what am I trying to do?

I wrote this because trying to do this: create a book that would help my brothers learn to tinker.

I first tried to start my brothers straight off with Java. And Java is a good language — it might have been better for them to know than Perl, and I think it would be a good second language to teach, when they are ready to mature, so that they can produce high quality software. But to learn all of those principles all at once is a heavy load, and one which can be confusing. I was telling them very good things, but I was boring them.

Then I began to think about how I first began to program. I first began to tinker in middle school with BASIC, on Apple II series computers. I wrote spaghetti code laced with gotos and all sorts of other things I would shudder to do now. I did not then learn to be a good programmer — at all. But I did learn to be a tinkerer, to play around and explore and put things together. It has been said that education is not the filling of a pail, but the lighting of a fire. That experience lit my fire; it started the curiosity and enjoyment that later caused me to become a more serious programmer.

This book is not an attempt to immediately achieve the end result of a good programmer. It has a goal which might be called more modest, but which might be called much more ambitious: lighting a fire. Once the fire is lit, it can be tended and carefully pruned; there will be plenty of time for the channeling and discipline necessary to let the fire achieve truly great things. I am not trying to do everything; I am trying, for now, to do just

one thing. And do it reasonably well.

## Preface

This book has two prefaces: one for a [guiding adult](#), and one for a [sharp child](#) who will be exploring the language.

## Preface (for children)

When you were younger — perhaps even now — you played or play with Legos, or some other similar building toy. When I was a boy, I played with Legos a lot, and I was very sad when my elaborate collection was destroyed.

Growing up means changing in some ways, but there are also ways in which an adult remains forever a child. It is a truly sad thing when the child inside of a grown-up dies; something important has gone out.

I am a grown-up now, and I still play with Legos. Only now, I play with them in a different form. Instead of using Legos that you can see, I use Legos that you can only see with your mind — I have to use my imagination. I play with these Legos when I program.

When you are holding Legos in your hand, you have in your head an idea of what you want to build. And you start putting the little bricks together, piece by piece, until you have built the thing you've imagined in your head. One little brick is very small and very simple — but there are ways to put them together, and if you put things together the right way, you can do some amazing things.

It is the same way with programming. This book will show you some of the little bricks we have, and then look at ways to put them together. It is my hope that you will begin to tinker — see

how you can put things together, see what works, what doesn't work. Then maybe you will imagine things, and see if you can build them out of these programming bricks.

There are many things to learn in programming, and this is only a beginning. But I hope that I may be able to help you begin to explore, and discover what it can be like to program.

## Preface (for adults)

Most books you will find on Perl or any other programming language, are books intended to be a one-size-fits-all — or, at least, that's how they're advertised. This book does not attempt or pretend to be appropriate to most users; instead, I am trying to do one thing well.

Well, what am I trying to do? Let me first tell what I am not trying to do:

- I am not trying to make a book that will be helpful to experienced programmers who want to pick up Perl.
- I am not trying to make a book that will treat Perl in depth, or for that matter even touch many of the language's strongest points.
- I am not trying to make a book that will make a novice programmer into an expert programmer overnight.
- I am not trying to introduce most principles of good software engineering.
- I am not trying to make a book that promises quick results overnight; I am not trying to make a book that will quickly tell you how to get such-and-such done.

Well, if I am not trying to do all of that, then what am I trying to do?

I am trying to do this: create a book that will help my twelve

year old twin brothers learn to tinker.

I first tried to start my little brothers straight off with Java. And Java is a good language — it will probably be better for them to know than Perl, and I think it would be a good second language to teach, when they are ready to mature, so that they can produce high quality software. But to learn all of those principles all at once is a heavy load, and one which can be confusing. I was telling them very good things, but I was boring them.

Then I began to think about how I first began to program. I first began to tinker in middle school with BASIC, on Apple ][ series computers. I wrote spaghetti code laced with gotos and all sorts of other things I would shudder to do now. I did not then learn to be a good programmer — at all. But I did learn to be a tinkerer, to play around and explore and put things together. It has been said that education is not the filling of a pail, but the lighting of a fire. That experience lit my fire; it started the curiosity and enjoyment that later caused me to become a real programmer.

This book is not an attempt to immediately achieve the end result of a good programmer in all regards. It has a goal which might be called more modest, but which I believe is ultimately more important: that of lighting the child's fire. Once the fire is lit, it can be tended and carefully pruned; there will be plenty of time for the channeling and discipline necessary to let the fire achieve truly great things. I am not trying to do everything; I am trying, for now, to do one thing well.

Jonathan Hayward, 7-16-98

P.S. There are some intentional inaccuracies. This is because a fully technical treatment of the issues involved would, I believe, needlessly confuse children. Some parts are oversimplified; I

intend them to be overridden by more nuanced treatments when an appropriate level of intellectual maturity is reached.

## Some preliminaries

Here, we aren't (for the most part) really talking about Perl; we're talking about some basics that need to be done in order to use Perl. I will restrict my attention to [unix](#) machines. If you use another machine, you will have to read the documentation on your machine.

**See also:**

[Unix preliminaries](#)

# Unix preliminaries

Here we will discuss [directories](#), [files](#), [editors](#), [permissions](#), and the famous [shebang notation](#).

## **See also:**

[Preliminaries in general](#) - [Directories](#) - [Files](#) - [Editors](#) -  
[Shebang](#) - [Permissions](#)

# Directories

Directories in Unix are the same as folders on other machines. They're a place to keep [files](#).

There are four basic commands you need to know about directories: [pwd](#), [cd](#), [mkdir](#), and [ls](#).

Directories are stored hierarchically. This means that there's a top level directory, which contains some directories, and each of those directories may contain some files and some directories, and so on. The full name of a directory is something like this:

```
/home/jhayward/perl_guide/text/chapter_0/unix
```

The slashes ('/') tell where we are. The beginning slash indicates the root directory, the top directory of all; home indicates that I'm in the home directory in the root directory, jhayward indicates that I am in the directory called jhayward in the home directory (which is my directory to do stuff in), and so on and so forth.

You may refer to a file or directory by its absolute or relative pathname. If you specify its absolute pathname, you give the full path, all the way from the root directory down to where you are now. If you give a relative path, you tell where it is relative to where you are now. The file I am now editing has absolute pathname:

`/home/jhayward/perl_guide/text/chapter_0/unix/directories.html`

**and relative pathname:**

`directories.html`

**from where I am now.**

**The directory `..`, in a given directory, is the directory one level up. So the directory**

`/home/jhayward/perl_guide/text/chapter_0/unix/..`

**is the same as the directory**

`/home/jhayward/perl_guide/text/chapter_0/`

## **See also:**

[pwd](#) - [cd](#) - [mkdir](#) - [ls](#) - [Files](#)

## **pwd**

pwd is a Unix command that means **print working directory**. It prints the directory you're in now. If you're logged in to a Unix machine, why don't you type pwd (and hit return) to see what happens?

You can use pwd to see where you are; make sure you're in the right directory.

## **See also:**

[Unix preliminaries - Directories - cd - mkdir](#)

## cd

cd is a Unix command which means **change directory**. It changes the directory you are in to another one.

In general, you can type:

```
cd pathname
```

where *pathname* is the absolute or relative pathname (as discussed [before](#)) of the directory. For example, to go to the parent directory (the directory one level above) for your current working directory, you can type:

```
cd ..
```

What do you think will be the result of typing in the following commands:

```
pwd  
cd ..  
pwd
```

Why don't you type them in, and see what happens?

Finally, as a special case, if you type

```
cd
```

without anything else after it, it will take you to your home directory. Your home directory is the directory you are given on the computer to do things in.

## **See also:**

[Unix preliminaries](#) - [Directories](#) - [pwd](#) - [mkdir](#)

## **mkdir**

mkdir is the command to make a directory. We will probably be making files as we tinker; let's create a directory for those files.

First, go to your home directory:

```
cd
```

Then make a directory — say, one called tinkering.

```
mkdir tinkering
```

Now, we should go into that directory before doing most of the other things suggested in this book. So go into that directory:

```
cd tinkering
```

Remember to go to that directory before each time you start reading this book. If you're not sure what directory you're in, you can always type

```
pwd
```

to find out what directory you're in. From any place in the system, you can type in the following to go to your tinkering directory:

```
cd  
cd tinkering
```

Now we're ready to talk about files and editors.

## **See also:**

[Unix preliminaries](#) - [Directories](#) - [pwd](#) - [cd](#) - [ls](#)

## **ls**

ls is the Unix command to list the files in a directory. To see what files and directories are in your current directory, type:

```
ls
```

You may not see anything — if you are following this book in order, you should be in an empty directory. Keep this command in mind, though; it should come in handy in the future.

## **See also:**

[Unix preliminaries](#) - [Directories](#) - [pwd](#) - [cd](#) - [mkdir](#) - [Files](#) -  
[Editors](#)

# Files

A [directory](#) is a place to keep things on a computer; a file is what sort of thing you actually keep. We are going to be interested in creating, and modifying, Perl programs.

A file should have a name consisting of letters, numbers, and/or underscores. Perl programs should end by having ".pl" added to the end. Here are some examples of good filenames:

```
hello_world.pl  
test.pl  
list_pets.pl
```

Each file (of the sort we're working with) will hold one program, and (for now) each program will be stored in one file.

So a file is where you store a program. You will create these programs with [editors](#), and then make them usable by setting the [permissions](#).

## **See also:**

[Unix preliminaries](#) - [Directories](#) - [ls](#) - [Editors](#) - [Permissions](#)

## Editors

Editors are programs that can be used to create and change files. In our case, we are interested in text editors, which are specifically for editing files that contain text.

There are a number of different editors, each of which has its own strengths and weaknesses. For now, I will have you use an easy-to-use editor called [joe](#).

## **See also:**

[Unix preliminaries - Files - joe](#)

## joe

joe is the name of an easy to use [editor](#) for Unix systems. To use joe to create a file called hello\_world.pl, type:

```
joe hello_world.pl
```

You will now see a screen that is mostly blank. Type control-K and then 'H' to get a help screen. That will bring up on the screen most of the commands you need to know to edit files.

We are going to create our very own program. Type in the following, exactly as you see it on the screen:

```
#!/usr/local/bin/perl  
  
print "Hello world!\n";
```

Then type control-K and X to save the file. It will ask you what file to save it as; type:

```
hello_world.pl
```

Keep reading to find out how to run the program.

## **See also:**

[Unix preliminaries](#) - [Files](#) - [Editors](#) - [Shebang](#) - [Permissions](#)

# Shebang

In Unix, the characters "#!" at the beginning of a file tell the computer what program to use to figure out what to do with it.

This is referred to as the shebang notation.

In order to tell the computer that your files are Perl programs, you should put the following line at the beginning of every Perl program, exactly as it is typed here:

```
#!/usr/local/bin/perl -w
```

or

```
#!/usr/bin/perl -w
```

(Which one should you use? One of them will work, and the other won't. Try it.)

If you don't do that, the computer will be very confused when you tell it to run your programs.

## **See also:**

[Unix preliminaries](#) - [Files](#) - [Editors](#) - [Permissions](#)

## Permissions

When you create a text file, Unix doesn't normally expect that you're going to run it like a program. So, you have to tell it that you're giving yourself and perhaps others permission to run them as programs.

This is accomplished with the `chmod` command.

## **See also:**

[Unix preliminaries - Files - chmod](#)

## chmod

chmod is the Unix command used to set [permissions](#), including telling the computer that a file can be run as a program.

To make it so that everybody can use a program, type:

```
chmod 755 filename
```

where filename is the name of the file, which should be something like "hello\_world.pl".

Alternately, to make it so that only you can use the program, type:

```
chmod 700 filename
```

You must do this before you can run a program. If you've been following along this book in order, please type:

```
chmod 755 hello_world.pl
```

And now, you're ready to [run it!](#)

**See also:**

[Preliminaries - Files - Permissions](#)

## Running your programs

If you've been following along the text in order, you have **created** a program, and **made it executable** (runnable). Now, you can run it:

```
hello_world.pl
```

What happened? Did it print out, "Hello, world?" If so, great! If not, you probably made a little mistake somewhere — as has every programmer, great or small — and you need to go back and see what happened.

## **See also:**

[Unix preliminaries](#) - [Files](#) - [Shebang](#) - [Permissions](#)

# **Fundamentals**

This chapter introduces the basic building blocks you will combine and fit together to make programs.

## Comments

When you are writing a program, you are writing for people as well as computers. Most of the time, after a program is written, you or someone else will want to make changes — to add new **features**, or to fix **bugs**. There is a joke which my father likes to tell:

A construction worker, at lunch break, opens his lunchbox, and says, "Salami again! I hate bologna!"

Then, the next day, he says, "I wonder what I have today." He opens his lunchbox, and says, "Bologna again? I hate bologna!"

This continues for a week. Finally, one of his coworkers says, "Why don't you ask your wife to give you something else for lunch? That way, you wouldn't have to have bologna all the time."

The construction worker says, "Oh, I don't have a wife. I make my own lunches!"

In this joke, the construction worker eats the sandwiches he hates because that's what he made earlier. This joke is a lot like programming. The construction worker is like a programmer, and the yucky bologna sandwiches are programs that don't have very many little notes, in English, to explain things. It can be very difficult, even for experienced programmers, to figure out or remember what a program is doing if it doesn't have notes to explain things. These little notes are called comments, and you can say anything you like in a comment. (But we generally use

comments to explain programs.)

Comments are done differently in different **computer languages**, but there is some feature that tells the computer what is a comment and what is the rest of the program. In perl, a comment begins with a **hash mark ('#')**, and continues to the end of the line. If you want to make a comment that uses more than one line, put a hash mark on a second line. Here are some examples of what is and is not a comment:

```
# This is a comment.
```

```
# This is a comment, which  
# uses more than one line.
```

```
                                #  
# This is a comment, too.  It uses blank lines to make  
# things better to look at.  
                                #
```

```
# This is a comment which begins in the  
# middle of a line.  You can put a  
# comment to the right of something  
# else, to explain what it does.
```

```
This is not a comment.
```

```
The comment begins #here.
```

[Statements](#)

## Variables

In school, you may have used variables to refer to different numbers. The variables  $x$  could be 3, or 4, or 0, or -9.5. One variable can mean any of several different numbers. (But it can only mean one thing at a time.)

In computer programming, we use variables to represent all sorts of different things. In Perl, there are three different types of variables we will use: [scalars](#), [lists](#), and [hashes](#). The names sound a little funny, but don't let that scare you.

## **See also:**

[Scalars](#) - [Lists](#) - [Hashes](#) - [Assignment of variables in general](#)

## Scalars

A scalar is a variable that can either refer to a number, or some text, which is called a **string**. A string is usually enclosed in quotes, like this:

```
"This is a string."
```

Note that the quotes are not actually part of the string; they are put around the string to tell when the string begins and ends.

You can give a variable almost any name that you can make from letters, numbers, and **underscores** ('\_'). Furthermore, you must put a **dollar sign** ('\$') before a scalar to tell Perl that it is a scalar.

In general, it is a good idea to have a variable name consist of a few words that describe what the variable tells you. There are a couple of ways people have of putting words together. (You have to do something to tell when one word ends and the next begins, because it is hard to read when you can't separate words.) One way is to capitalize the first letter of each word; another is to separate words using **underscores** ('\_'). It doesn't matter which way you do it, but you should pick one way and stick with it. It is very important that you spell a variable exactly the same way every time you use it; otherwise, the computer will think you are using different variables. Here are some examples of good variable names:

```
$NumberOfTrucks  
$AverageHeight  
$PlayerName
```

Or, if you prefer underscores, then you can do it this way:

```
$number_of_trucks  
$average_height  
$player_name
```

In this book, I will always do it the first way.

## **See also:**

[Variables](#) - [Lists](#) - [Hashes](#) - [Assignment of variables in general](#)  
- [Assignment of scalars](#) - [Arithmetic](#)

## Lists

A list is a variable that lets you keep track of several things. If you were shopping for groceries, you'd keep a list: apples, ketchup, bread, sausage, and so on. A list is a variable that keeps track of several things, instead of just one. A list is named like a [scalar](#), but instead of having a [dollar sign \('\\$'\)](#) in front of the name, we place an [atgry \('@'\)](#). A good name for a list would be something like:

```
@GroceriesToBuy
```

## **See also:**

[Variables in general](#) - [Scalars](#) - [Hashes](#) - [Assignment of variables in general](#) - [Assignment of lists](#)

## Hashes

Hashes are a little more complicated than either lists or scalars, but they are very useful.

Let's say that you know some people, and you want to keep track of what kind of pets they have. Suppose that you know John, Sue, and Mary. Let's also suppose that John has a dog, Sue has a cat, and Mary has a goldfish. What would be good would be a single variable, called `Pet`: if you plugged in John, you would get dog; if you plugged in Sue, you would get cat; if you plugged in Mary, you would get goldfish.

A hash is a variable that can do that. We refer to a hash in slightly different ways, depending on what you want to do. If you refer to the whole hash, you put a **percent sign** (`'%'`) in front of the hash. So the hash with the pets might be:

```
%pet
```

But if you want to refer to a specific pet — say, you want to find out what pet Mary has — you would do it like this:

```
$pet{"Mary"}
```

(We put the "Mary" in quotes, because it is a **string**, and the computer will get confused if it sees the letters M, a, r, and y all by themselves.)

The expression

```
$pet{"Mary"}
```

```
$pet{"Mary" }
```

should be read as, "Mary's pet".

## **See also:**

[Variables in general](#) - [Scalars](#) - [Lists](#) - [Assignment of variables](#) - [Assignment of hashes](#)

## Statements

Let's say that you are going to play at a friend's house. What you might do, could be explained as a list of activities:

Ask your parents for permission to visit your friend.

Call your friend's house, and ask permission to come over.

Finish getting dressed.

Walk over to your friend's house.

Take chewing gum off of your shoe.

Greet your friend.

Play with your friend.

Eat a snack.

Play some more.

Say goodbye.

Walk home.

Take off your shoes.

What we have done here, is to break one bigger activity (visiting your activity) into a sequence of smaller activities. Another way of putting it is that we are explaining how to visit your friend by saying what smaller things are necessary to visit your friend.

When you are programming a computer, you do the same thing. The little commands are called statements. A statement is

a command that tells a computer to do something small, as a part of doing something larger. (Saying to walk to your friend's house, when you are explaining how to visit your friend, is like a statement.)

As we work further, we will learn more about different kinds of statements. But first, let's make sure that we understand what a statement is: a statement is an individual command you give to the computer, as part of telling it how to do something. In the description of how to visit a friend's house, each line, like "Greet your friend," or "Remove chewing gum from your shoe," is like a statement. The whole list, all together, is like a program.

One final note about statements: In English, you usually end a sentence with a period ( '. ' ). In Perl and many other computer languages, you end most statements with a **semicolon ( ' ; ' )**. For example:

```
This sentence ends like a statement;
```

## **See also:**

[Assignment of variables](#) - [Input and output](#) - [Blocks](#) - [If-then](#)  
- [Loops](#) - [Subroutines](#)

# Assignment of variables

In math class, with a story problem, your teacher might have said something like this: "Suppose we have five cats..." What is going on here is that we have some number of cats, and we are saying that the number of cats is specifically equal to five.

Another way of saying what the teacher said is,

Let the number of cats be five.

We can use a variable for the number of cats. Let's put a variable in there:

Let NumberOfCats be five.

Or, to say it a little differently,

Let NumberOfCats equal five.

With computers, we drop the 'let', even though it's understood.

NumberOfCats equals five.

(Now, we are not simply claiming that the number of cats equals five. We are commanding that it be so.)

Finally, in Perl, we use an **equals sign ('=')** when we mean "equals", and we use numerals: we write '5' instead of "five". And remember — most statements end with a semicolon, and we put a **dollar sign ('\$')** in front of **scalars**. So let's change the period into a semicolon, and put a dollar sign in front of the variable:

```
$NumberOfCats = 5;
```

And that's how we do it in Perl. We have just assigned the variable `NumberOfCats` a [value](#) of five.

We can also assign a variable to other things. For example, if we know the number of cats, and we know the total number of cats and dogs, we can find out the number of dogs by subtracting. If we have thirteen cats and dogs total, and five cats, then here is how we can get the number of dogs:

```
$NumberOfCats = 5;  
$NumberOfCatsAndDogs = 13;  
$NumberOfDogs = $NumberOfCatsAndDogs - $NumberOfCats;
```

The computer has done the subtracting for you, and figured out the answer.

Note: In an assignment, there is one variable on the left side of the equals sign, which is changed. Nothing on the right side (unless it is also on the left side, which will be discussed [later](#)) is changed.

## **See also:**

[Statements](#) - [Assignment of scalars](#) - [Assignment of lists](#) -  
[Arithmetic](#) - [Functions](#)

## Assignment of scalars

There are a few ways to **assign** a **scalar**. You can assign a scalar to a given **value**:

```
$NumberOfCats = 5;  
$MyCatsName = "Zappy";
```

Or you can assign one variable using another:

```
$NumberOfNoses = $NumberOfPeople;
```

This tells the computer that the number of noses is the same as the number of people. Or, to put it another way, it takes the **value** stored in the variable `NumberOfPeople`, and stores a copy of it in `$NumberOfNoses`.

There are several things that you can do with a **string**. One useful thing you can do is **concatenate** two strings. For example, if you concatenate the strings "My cat's name" and " is Zappy.", you get, "My cat's name is Zappy."

Did you notice the space between the quotation mark and the "is"? That space is important. Computers don't know when you should add a space to separate words. If you concatenate "My cat's name" and "is Zappy." without the extra space, it would come out, "My cat's nameis Zappy."

In Perl, you can concatenate two strings by putting a period ('.') between them. For example, you could get the whole sentence like so:

```
$WholeSentence = "My cat's name" . " is Zappy.";
```

Or, to do it differently,

```
$FirstPartOfSentence = "My cat's name";  
$SecondPartOfSentence = "is Zappy.";  
$WholeSentence = $FirstPartOfSentence . " " . $SecondPartOfSentence;
```

Do you see what I did here? I didn't have a space before "is" in `SecondPartOfSentence`, but I put another space in between the two parts. There were three strings here: `$FirstPartOfSentence`, " " (a string consisting of only a space), and `$SecondPartOfSentence`. I concatenated all of them together, just as you add  $3 + 1 + 2$  to get 6. Putting in an extra space can come in handy, when you want to make text look good. There are other ways to assign scalars, and they will be covered when we discuss [arithmetic](#) and [functions](#).

## **See also:**

[Variables in general](#) - [Scalars](#) - [Statements](#) - [Assignment of variables in general](#) - [Arithmetic](#) - [Assignment of lists](#) - [Assignment of hashes](#) - [Functions](#)

## Arithmetic

Perl, like many languages, lets you do arithmetic with numbers.  
You can have a statement like

```
$Average = ($FirstNumber + $SecondNumber + $ThirdNumber) / 3;
```

and the computer will do the arithmetic for you. It will add the three numbers, and divide the result by three. The result is stored in *Average*.

You may have noticed that I had parentheses — why are they necessary? This has to do with something called order of operations. Let's say we want to figure out what  $3 * 4 + 5$  equals. Well, what do you do first — multiply 3 by four, or add 4 and 5? If you multiply first, then  $3 * 4 = 12$ , so you have  $12 + 5$ , or 17. So the expression equals 17. But what if you add first? Then  $4 + 5 = 9$ , and  $3 * 9 = 27$ , so we have 27. The number you get depends what you do first.

Parentheses are a way to tell the computer what to do first. Everything inside a pair of parentheses is calculated before everything outside of the pair of parentheses. Everything on an inside pair of parentheses is calculated before things on an outside pair of parentheses. So, for example, if we have  $((3 * 4) + 6) / 9$ , that means that we first multiply  $3 * 4 = 12$ , to get  $(12 + 6) / 9$ ; then we add  $12 + 6 = 18$ , so we get  $(18 / 9)$ , and then we divide  $18 / 9 = 2$ , so we get a result of 2.

At least for now, you should always use parentheses to tell

At least for now, you should always use parentheses to tell the computer what it should do first. Use parentheses, so that the computer knows exactly what order you want it to do things in.

Two notes:

First, if you ask it to do something that's going to give a fraction (like "What is five divided by three?"), it will give a decimal for an answer. Usually, if there is a decimal involved in a calculation, the result will be a decimal. (With decimals, an answer will usually be a little more or a little less than it should be. That is a kind of error that happens with computers.)

Second, you can't divide by zero. If you try to divide by zero, your program will stop running. It is good practice, before dividing by a variable, to make sure that it is not zero (see [if-then](#)).

It is generally good, when doing arithmetic calculations, to break them into as many small steps as possible. It is better to have several simple calculations than one really long and confusing one.

## **See also:**

[Scalars](#) - [Assignment of scalars](#) - [Conditional clauses](#) - [If-then](#)

## Assignment of lists

There are a few ways to **assign** a **list**. One way is like this:

```
@MyFriends = ("John", "Susan", "Mary");
```

The list is assigned to something described by a **left parenthesis** ('('), some **scalars** separated by **commas** (','), a **right parenthesis** (')'), and then the **semicolon** (;). You can use variables and numbers as well as just strings, like this:

```
@Numbers = ($LastNumber, 9);
```

You can also put everything that's in one list, into another list. For example, you might write:

```
@PeopleIKnow = (@MyFamily, @MyFriends, "Jane", "Bob");
```

Then the list of people you know includes everybody in the lists of your family and friends, plus Jane and Bob.

One thing you will do often is to add one element to a list. Suppose you have a new friend named Fred, and you want to add him to your list of friends. You could do it this way:

```
@MyFriends = (@MyFriends, "Fred");
```

Now, I would like to answer a question you may have == how can MyFriends be equal to itself plus "Fred" added on to the end? That is like saying that a number equals itself plus one.

The answer is that the statement should be read like this:

"Let the new value of MyFriends equal the old value of MyFriends, with "Fred" added at the end. It is possible, and useful at times, to use one variable on both sides of the equals sign ('=') in this way.

## **See also:**

[Variables in general](#) - [Lists](#) - [Statements](#) - [Assignment of variables in general](#) - [Assignment of scalars](#) - [Assignment of hashes](#) - [Functions](#)

## Assignment of hashes

**Hashes** may be **assigned** one of two ways: one of which resembles a scalar, and the other of which is like the assignment of a list.

Recall the **earlier example** where John, Sue, and Mary have a dog, a cat, and a goldfish respectively. The easiest way, and the one you should probably use most of the time (until you've outgrown this book), is to say, "John's pet is a dog. Sue's pet is a cat. Mary's pet is a goldfish." In Perl, we write it this way:

```
$Pet{"John"} = "dog";  
$Pet{"Sue"} = "cat";  
$Pet{"Mary"} = "goldfish";
```

Remember that `$Pet{"John"}` should be read as "John's pet."

This means that the whole statement should be read, "Let John's pet be a dog." Even though the computer statement looks rather funny, it really says something that is fairly close to English.

The second way makes a bunch of assignments at once — it is useful when you want to create a hash from scratch. Creating the same hash this way would look like this:

```
%Pet = ("John" => "dog",  
        "Sue"   => "cat",  
        "Mary"  => "goldfish");
```

Now, did you notice that the statement was broken over a

few lines? It's OK to split a statement over several lines and put spaces in to format it; indeed, it is good to do so. It makes the `code` more readable. This is called spacing.

## **See also:**

[Variables in general](#) - [Hashes](#) - [Statements](#) - [Assignment of variables in general](#) - [Assignment of scalars](#) - [Assignment of lists](#)  
- [Functions](#)

## **Input and output**

One important thing for programs to be able to do, is to be able to pay attention to what people say to them, and say things to people.

There are varying ways that programs do this; here, I will address a couple of the simpler ways. They both involve the keyboard. One reads a line in from the keyboard to a variable — that is, it reads in everything the user types, until he hits return — and the other prints out some specific text.

**See also:**

[Statements - Input - Output](#)

# Input

The way I'm going to teach to do input, is as follows: Say that you want to input some line of text from the user, and store the result in the variable `$UserResponse`. The following two lines will accomplish that:

```
$UserResponse = <>;  
chomp $UserResponse;
```

The first line reads a line into `$UserResponse`. But that includes the return character at the end of the line, which we generally don't need. The second line takes the extra character off.

In general, you should use something like these two lines when you want to input a line from the user.

**See also:**

[Statements](#) - [Scalars](#) - [Input and Output](#) - [Output](#)

# Output

The print statement is useful for output. Let me give an example of a very famous program:

```
#!/usr/local/bin/perl  
print "Hello, world!\n";
```

The first line is a line you should put at the beginning of every Perl program you write. The second line prints, "Hello, world!" It is the second line we are studying.

What's that funny "\n"? What does it mean? Well, Perl doesn't know by itself when a line should end. So, we put "\n" at the end of each line, to tell it to go to the next line.

Here is another example of some [code](#) using print:

```
print "The average is " . $Average . ".\n";
```

Now, what does that all mean?

Remember that, earlier, when we talked about [scalars](#), we could [concatenate](#) two [strings](#) by putting a period ('.') between them. This takes three strings: "The average is ", \$Average, and ".\n", and sticks them all together. Let's say that \$Average is 4.5. Then the result will look like:

```
The average is 4.5.
```

The "." in ".\n" is just a period for the end of the sentence, and "\n" means the end of line.

## Flow control

In many programming languages, there is a very powerful kind of statement called the goto statement. Quite often in programming, you are at one part of your code, the list of instructions, and you need to be somewhere else. So programmers would just put a goto in, and voila! you were at that other part of the program.

Well, gotos are very powerful, but they have a bit of a problem with them. If you just use gotos in the way that comes most naturally, the result is something called spaghetti code: the program just goes in and out in one tangled mess that's impossible to understand, just like spaghetti. This results in code that's full of [bugs](#), that's impossible to fix.

Therefore, it is in most cases strongly discouraged to use gotos. Gotos are considered hazardous to your health, and many programmers consider 'goto' to almost be a dirty word.

But wait. A goto is very powerful. If we're going to say "no gotos", shouldn't there be something else to replace them?

And the answer, fortunately, is "Yes." There are other ways to do almost anything that you would do with a goto — but do it better, and more cleanly. These ways make things much easier to understand, and have less bugs. The bugs that do get in are easier to fix.

There are two basic kinds of structures, that can do almost

all of the work done with gotos — but do it much better. These two structures are called **conditionals** and **loops**, and we will explore them. There are also **subroutines** and **functions**, which will be covered later, and are also very powerful.

## **See also:**

[Statements](#) - [Blocks](#) - [If-then](#) - [If-then-else](#) - [If-then-else chains](#) - [Loops](#) - [Foreach loops](#) - [While loops](#) - [For loops](#)

# Blocks

For both [conditionals](#) and [loops](#), it is useful to think of a cluster of [statements](#) taken together. A block of code begins with a [left curly brace](#) ('{'), and ends with a [right curly brace](#) ('}). It should also be indented (have a margin on the left) by two to four spaces. It doesn't matter how far you indent, but you should indent to the same depth most of the time. Here are a few statements by themselves:

```
print "Type something in: "; # The lack of a \n is intentional, so
                           # cursor stays on the same line.
    $UserInput = <>;
    chomp $UserInput;
    print "You typed in " . $UserInput . ".\n";
```

Here is that same group of statements in a block:

```
    {
print "Type something in: "; # The lack of a \n is intentional
                           # the cursor stays on the same li
    $UserInput = <>;
    chomp $UserInput;
    print "You typed in " . $UserInput . ".\n";
    }
```

In short, to make a block, you put a left curly brace before it, type in the statements in the block, and close with a right curly brace. The whole thing should be indented four spaces.

## **See also:**

[Statements](#) - [Flow control](#) - [If-then](#) - [If-then-else](#) - [If-then-else chains](#) - [Loops](#) - [Foreach loops](#) - [While loops](#) - [For loops](#) - [Functions](#)

## Conditional clauses

A conditional clause is something that is either true or false. The computer needs to be able to decide if something is true or false.

There are a number of different types of conditional clauses. The one which I will cover here, to get started with, is equals. An expression like:

```
($UserResponse == "y")
```

is an example of a conditional clause.

You can build up conditional clauses by using and, or, and not, as well as parentheses. Here is an example of a more complicated clause:

```
(( $MyPet == "dog" ) || ( $MyPet == "cat" ))
```

You should always use lots of parentheses with conditionals, just like you should use parentheses in [arithmetic](#). Furthermore, the parentheses have more or less the same meaning.

Now, I can see a question. Why did I use two equals signs instead of one? The answer is that Perl uses one equals sign for [assignment](#), and two equals signs for conditionals. If you use one equals sign, Perl will think you are doing an assignment. For example, if you type:

```
($UserResponse = "y")
```

what that will do is assign `$UserResponse` the **value** "y", instead of checking to see if `$UserResponse` is already "y". This is a very easy mistake to make; check for this when your program seems not to work.

If-then clauses, and loops, do different things depending on whether something is true. A conditional clause is something that can be true or false, which Perl can use to decide if something is true, and therefore run **if-thens** and **loops**.

**Scalars** can also serve as conditional clauses. A scalar that has a value of 0, or that is an empty **string** (i.e. a string that doesn't contain any characters, not even spaces — it would be represented as ""), is considered false. Any other scalar is considered true. In general, we use a 1 to represent true, and a 0 to represent false.

Note: Conditional clauses don't have semicolons after them.

[Statements](#) - [Arithmetic](#) - [Flow control](#) - [Blocks](#) - [If-then](#) -  
[If-then-else](#) - [If-then-else chains](#)

## If-then

Remember, back when we introduced **statements**, how we talked about going to a friend's house? Let me reproduce the list of what to do:

Ask your parents for permission to visit your friend.  
Call your friend's house, and ask permission to come over.  
Finish getting dressed.  
Walk over to your friend's house.  
Take chewing gumm off of your shoe.  
Greet your friend.  
Play with your friend.  
Eat a snack.  
Play some more.  
Say goodbye.  
Walk home.  
Take off your shoes.

Well, this list didn't involve any decisions — and there are decisions involved. For example, you only continue over to your friend's house if you get permission, right?

Let's rewrite the list using if-then logic:

```
Ask your parents for permission to visit your friend.  
If your parents give permission to visit your friend:  
    {  
Call your friend's house and ask permission to come over
```

```

call your friend's house, and ask permission to come over.
  If your friend's parents give permission to come over:
    {
      Finish getting dressed.
      Walk over to your friend's house.
      If you stepped on some chewing gum:
        {
          Take chewing gumm off of your shoe.
        }
      Greet your friend.
      Play with your friend.
      Eat a snack.
      Play some more.
      Say goodbye.
      Walk home.
      Take off your shoes.
    }
  }

```

What we have here is a modified list of how to visit your friend, that only does things if they are appropriate — for example, it only goes over to your friend's house if you have permission to go over.

The **syntax** in Perl for this sort of thing is as follows:

```

    if (condition)
    {
      code to execute if condition is true
    }

```

"if" must be spelled exactly that way, with a lowercase 'i', and the curly braces put around the code to be executed. What Perl will do when it sees that, is see if the **conditional clause** is true, and if so, execute the **block** that's inside the braces.

## **See also:**

[Statements](#) - [Flow control](#) - [Blocks](#) - [Conditional clauses](#) - [If-then-else](#) - [If-then-else chains](#)

# If-then-else

Suppose that I want to do something in a programming language. Some pseudocode might be as follows:

```
if (I know how to do it)
    {
    do it;
    }
else
    {
    try to find out how to do it;
    }
```

There is one thing I want to do if the **conditional clause** is true, and another thing to do if the conditional clause is false.

And that is done with this exact syntax:

```
if (conditional clause)
    {
    block of code to execute if the conditional clause is true
    }
else
    {
    block of code to execute if the conditional clause is false
    }
```

## **See also:**

[Statements](#) - [Arithmetic](#) - [Flow control](#) - [Blocks](#) - [Conditional clauses](#) - [If-then](#) - [If-then-else chains](#)

# If-then-else chains

There is one more step to be taken with if-then-else. That is demonstrated by the following segment of code:

```
if ($Pet == "dog")
{
    print "Arf, arf!\n";
}
elseif ($Pet == "cat")
{
    print "Purr, purr!\n";
}
elseif ($Pet == "goldfish")
{
    print "Splish, splash!\n";
}
else
{
    print "I don't know what sound the pet makes.\n";
}
```

Sometimes, you have more than two choices to deal with — there are more than two (or three) possibilities for a pet. An if-then-else chain is ideal for the following; the program checks if the first condition is true, and if the first condition is false, it checks if the second condition is true, and so on and so forth.

The general **syntax** is:

```
if (first conditional clause)
{
    code to be executed
}
if first conditional clause is true
```

```
    }  
elseif (second conditional clause)  
    {  
        code to be executed if first  
        conditional clause is false, but  
        second conditional clause is true  
    }  
    ...  
elseif (last conditional clause)  
    {  
        code to be executed if all but the  
        last conditional clauses are false, but  
        the last conditional clause is true  
    }  
    else  
    {  
        code to be executed if none of the  
        conditional clauses are true.  
    }
```

The final else is optional, but recommended.

[Statements](#) - [Arithmetic](#) - [Flow control](#) - [Blocks](#) - [Conditional clauses](#) - [If-then](#) - [If-then-else](#)

# Loops

A loop is what is executed when you want to run the same code for several different things. For example, here is some pseudocode to get bundled up in the winter:

```
while (there is more clothing to put on)
{
  Select another item of clothing to put on.
  Pick it up.
  Put it on.
}
```

There are different types of loops for different purposes.

## **See also:**

[Statements](#) - [Flow control](#) - [Conditional clauses](#) - [Foreach loops](#) - [While loops](#) - [For loops](#)

## Foreach loops

One useful kind of loop, does something to each element of a list. For example, here is how might might code getting bundled up to go outside in the winter to go sledding:

```
@WinterClothing = ("coat", "snowpants", "boots", "gloves", "scarf")
  foreach $ArticleOfClothing (@WinterClothing)
  {
    print "I'm putting on my $ArticleOfClothing.\n";
  }
```

Before dissecting exactly how this loop works, let me show you what it does. It prints out:

```
I'm putting on my coat.
I'm putting on my snowpants.
I'm putting on my boots.
I'm putting on my gloves.
I'm putting on my scarf.
I'm putting on my hat.
```

There are a couple of things going on here.

First, we [assign a list](#).

Then we go through the loop several times — each time, the variable `$ArticleOfClothing` is set to equal a different element of `@WinterClothing`, and the block of code is executed.

In that code, when Perl sees `$ArticleOfClothing`, it substitutes the [value](#) of `$ArticleOfClothing` (which may be "coat", "snowpants", etc.) for the name of the variable. So, the

first time through, "I'm putting on my \$ArticleOfClothing.\n" becomes "I'm putting on my coat.\n", where "\n" tells Perl that that's the end of the line.

Foreach loops should be used when you want to do something with every element of a list.

## **See also:**

[Statements](#) - [Lists](#) - [Flow control](#) - [Blocks](#) - [Loops](#) - [While loops](#) - [For loops](#)

# While loops

A while loop is a loop used to run a block of code while a condition is true. For example:

```
$ShouldContinue = "y";
$NumberOfTimesThroughLoop = 0;
while (not($ShouldContinue == "n"))
{
    ++$NumberOfTimesThroughLoop;
    if ($NumberOfTimesThroughLoop == 1)
    {
        print "This loop has been executed $NumberOfTimesThroughLo
    }
    else
    {
        print "This loop has been executed $NumberOfTimesThroughLo
    }
    print "Go through the loop again(y/n)? ";
    $ShouldContinue = <>;
    chomp $ShouldContinue;
}
```

Now, let's look at what this code does.

`$ShouldContinue` tells if the loop should continue. "n", for no, means to stop; anything else means to continue. So the loop says, "While we should continue".

The variable `$NumberOfTimesThroughLoop` is initialized to 0 (set up to be equal to 0) before the loop begins. Then the first thing inside the loop, "`++$NumberOfTimesThroughLoop;`", means to increase the **value** of `$NumberOfTimesThroughLoop` by one.

In general, the expression:

```
++$variable name;
```

where variable name is the name of a "scalar" variable, means "Increase the value of variable name by one."

Then we have a conditional. This conditional sees if it's the first time through the loop. Why do we do that?

The statements inside the if clause (the **block** immediately following the if) and the else clause are almost identical — but there is an 's' after "time" in the else clause. This is so that, on the first time through, the program will print out:

```
This loop has been executed 1 time.
```

but on the second (third, fourth, etc.) time through, it will say something like:

```
This loop has been executed 2 times.
```

Then, after that, it asks the user if he wants to run through the loop again. After doing that, it reads a line of input into the variable `$ShouldContinue` — if the user types "y", `$ShouldContinue` will contain a "y", and if the user types "n", `$ShouldContinue` will contain a "n".

Then, after that, it checks if it should continue (the **conditional clause** right after the word "while"), and if it should, it executes the loop again.

## **See also:**

[Statements](#) - [Flow control](#) - [Blocks](#) - [Conditional clauses](#) - [If-then-else](#) - [Loops](#) - [Foreach loops](#) - [For loops](#)

## For loops

A for loop is a special case of a [while loop](#), which is commonly used for doing something a certain number of times.

Let's suppose that I wanted to print "Hello, world!" ten times.

I could just have ten lines like so:

```
print "Hello, world!\n";
```

But what if I wanted to change the number — to five or to fifty? It would take a lot of editing.

There's a better way to do it, though. I could have the computer count up to ten, and each time print out "Hello, world!".

If I did that, then changing it to five or fifty would only mean changing the number I have to count to.

Let me give some code to do that, and explain what it does.

```
for($CurrentLine = 0; $CurrentLine 10; ++$CurrentLine)
{
    print "Hello, world!\n";
}
```

That's all the code that it takes. And what if I wanted to print "Hello, world!" a thousand times? A very easy change — only

change the 10 to 1000:

```
for($CurrentLine = 0; $CurrentLine 1000; ++$CurrentLine)
{
    print "Hello, world!\n";
}
```

Now, let me explain what it does. Let's look at the first line.  
It has the following format:

```
for(part one; part two; part three)
```

It has three parts, separated by **semicolons** (`;`). Each part does something different.

The first part is run exactly once. It is used to set things up — in this case, to **assign** the **scalar variable** the **value** of zero.

For reasons that you will understand later when you program, you should have computers start counting at 0. So, instead of counting from 1 to 10, this counts from 0 to 9 — and still does it ten times.

The second part is the **conditional clause** that is tested each time you run through the **loop**. In this case, it makes an **arithmetic** assertion: that `CurrentLine` is less than 10. After running through the loop, the computer checks to see if the second part is still true — if it's true, the computer runs through the loop one more time.

The third part is something the computer does each time, after running through the loop and before checking the conditional clause. In this case, it increments (adds one to) the value of `$CurrentLine`.

So, all together, we have the computer counting from 0 to 9, and each time printing out a "Hello world!" message.

## Subroutines and functions

When you learned to walk, it was a bit tough to learn — but once you had learned once, you learned a way of walking that would take you anywhere (within certain bounds), on any kind of surface (within other bounds). You had learned walking in general, and so you didn't need to learn to walk each time you met something new.

For computers, there are many things you'll want to do a number of different times, in a number of different places — but it's really only one thing. With **subroutines** and **functions**, you can write miniature programs that do one thing — and then you have a new command that is available to you, taking only one line, whenever you want to do something.

Subroutines are powerful. Subroutines are good. Whenever you find yourself doing the same thing in more than one place, it is probably good to put it in its own subroutine.

## **See also:**

[Variables](#) - [Statements](#) - [Flow control](#) - [Blocks](#) - [Arguments](#) -  
[Subroutines](#) - [Functions](#)

# Arguments

Some [subroutines](#) and [functions](#) need information to do their job. For example, you might have a subroutine to tell the price for so many apples, so many oranges, and so many bananas — but first you need to tell it how many apples, oranges, and bananas there are, so it can calculate them!

That is done by giving the subroutine or function some arguments. The way you use a subroutine/function is to give an ampersand ('&') before the name of the subroutine/function, then its name, and then a [list](#) of arguments. For example, if we used the subroutine I mentioned, you might invoke it like this:

```
&TellPrice($NumberOfApples, $NumberOfOranges, $NumberOfBananas);
```

We'll see exactly how to write such a subroutine [here](#).

## **See also:**

[Variables](#) - [Scalars](#) - [Lists](#) - [Flow control](#) - [Subroutines and functions](#) - [Subroutines](#) - [Functions](#)

## Subroutines

A subroutine is a miniature program that you can run from within your program. [Earlier](#), we talked about a procedure that would tell a price for an amount of fruit. Here is how we write such a procedure. Before the procedure is used, we assume that there is some code that tells the price of the different kinds of fruit:

```
$PricePerApple = .25;  
$PricePerOrange = .30;  
$PricePerBanana = .20;
```

And here is the subroutine itself:

```
sub TellPrice()  
{  
    $NumberOfApples = shift(@_);  
    $NumberOfOranges = shift(@_);  
    $NumberOfBananas = shift(@_);  
    @RemainingArguments = @_;  
    $PriceForApples = $NumberOfApples * $PricePerApple;  
    $PriceForOranges = $NumberOfOranges * $PricePerOrange;  
    $PriceForBananas = $NumberOfBananas * $PricePerBanana;  
    $TotalPrice = $PriceForApples + $PriceForOranges + $PriceForBananas;  
    print "The total price for the fruit is $TotalPrice.\n";  
}
```

Well, let's look at it piece by piece:

```
$NumberOfApples = shift(@_);  
$NumberOfOranges = shift(@_);  
$NumberOfBananas = shift(@_);  
@RemainingArguments = @_;
```

This part finds out what the **arguments** to the procedure are, and stores them in the appropriate variables. This should go at the beginning of the subroutine; the **syntax** for using the subroutine is:

```
&TellPrice($NumberOfApples, $NumberOfOranges, $NumberOfBananas);
```

The part of the subroutine that gets the arguments should be of the following form:

```
$first argument = shift(@_);  
$second argument = shift(@_);  
$third argument = shift(@_);  
    .  
    .  
    .  
@RemainingArguments = @_;
```

where *first argument*, *second argument*, and so on are the names of the arguments in order.

After figuring out what the arguments are, the subroutine then does some **arithmetic** to figure out the total price, and **prints it out**.

One more thing... At the beginning of the program, you need to declare your subroutine, by having a line like this:

```
sub &TellPrice();
```

## **See also:**

[Statements](#) - [Flow control](#) - [Blocks](#) - [Subroutines and functions](#) - [Arguments](#) - [Functions](#)

# Functions

One kind of useful subroutine is one that does some calculations, or something like that, and gives a value as an answer. For example, suppose we wanted to be able to assign the total price to a variable in our [fruit market](#) example. This is what functions are for.

To use a function, we would do something like this:

```
$TotalPrice = &CalculatePrice($NumberOfApples, $NumberOfOranges,  
                             $NumberOfBananas);
```

And the `CalculatePrice` function is almost exactly the same as the `TellPrice` procedure. Here is its listing, with all of the changes in **bold**:

```
sub CalculatePrice()  
  {  
    $NumberOfApples = shift(@_);  
    $NumberOfOranges = shift(@_);  
    $NumberOfBananas = shift(@_);  
    @RemainingArguments = @_;  
    $PriceForApples = $NumberOfApples * $PricePerApple;  
    $PriceForOranges = $NumberOfOranges * $PricePerOrange;  
    $PriceForBananas = $NumberOfBananas * $PricePerBanana;  
    $TotalPrice = $PriceForApples + $PriceForOranges + $PriceForBa  
    return $TotalPrice;  
  }
```

Now, instead of printing out the result, the subroutine returns it. Now the part of the program that called it (above)

will have the result plugged in where it was given.

Another very useful function can be used to get a yes or no answer from the user. This subroutine doesn't itself tell the user what he's supposed to answer yes or no about; that would be done just before calling this subroutine.

```
sub confirm()
{
    $UserAnswer = <>; # Read in the user's answer.
    chomp $UserAnswer;
    if ((not($UserAnswer eq "n")) and # If it's not a yes or a no,
        (not($UserAnswer eq "y")) and
        (not($UserAnswer eq "N")) and
        (not($UserAnswer eq "Y")))
    {
        while ((not($UserAnswer eq "n")) and # Keep going until we
            (not($UserAnswer eq "y")) and # or a no.
            (not($UserAnswer eq "N")) and
            (not($UserAnswer eq "Y")))
        {
            print "Please answer \"y\", for yes, or \"n\", for no.
                $UserAnswer = <>;
                chomp $UserAnswer;
            }
        }
    # If we've gotten here, the user has given a yes or a no answer
    return (($UserAnswer eq "Y") or ($UserAnswer eq "y"));
}
```

This procedure makes sure that the user types a y or n, then returns a conditional that says that the user said yes. So, for example, one could have the following segment of code:

```
print "Do you wish to continue (y/n)? ";
if (&confirm())
{
    print "Continuing...\n";
}
else
{
    print "Bye!\n";
    exit 0;
}
```

That segment of code asks the user if he wants to continue. If he says yes, then the program says "Continuing...", and continues. If he says no, the program says "Bye!", and exits.

That's all of the bare bones rudiments of programming. Now we can move [onward](#) to looking at a few sample programs, and then begin tinkering!

## **See also:**

[Statements](#) - [Variables](#) - [Flow control](#) - [Blocks](#) - [Subroutines and functions](#) - [Arguments](#) - [Subroutines](#)

## Sample programs

Here, we will look at a couple of sample programs, to get an idea of how they tick — how one might put the pieces together to make something. What I have done is a lot like showing you a number of Lego blocks all by themselves — here is a hint on how you might put them together.

We will look at two programs — **one** that keeps track of your friends and their pets, and **another** that keeps a running average of numbers it is given.

I would like for you to read over them, see the explanations, understand them — and then see what you can do with them. Can you modify them? Can you build something else from scratch?

Try it!

## **See also:**

[Friends and pets - Running average](#)

## Friends and pets

Here, we will have a program that asks you about your friends and pets, and remembers them for as long as it's running. Let me give a listing. I am trying to document it well by putting in [comments](#). Can you tell what it does? If you can't, look up the parts you can't understand.

```
#!/usr/bin/perl -w
#
# Friends and pets – a program to keep track of your friends and t
#
# Last modified 12-29-01, by Jonathan Hayward
#
# While you say you want to continue, it asks you for another frie
# and then asks for the pet's name. Then, it tells you all of the
# been told, and what their pets are.
#
# This is done with a while loop.
# The friends are stored in a list, and
# the pets are stored in a hash.
#
# We also use a couple of functions.
#
#
# The stuff it does in the beginning, called initialization.
#
# List the subroutines and functions.
sub Confirm();
#
# Confirm is a function that gets a yes or no answer from the user
#
```

```
# Note that this function uses another function – ReadLine. It is
# possible, and indeed very useful, to have one subroutine or func
# other subroutines or functions.
```

```
#
```

```
sub Confirm()
```

```
{
```

```
    $UserAnswer = &ReadLine();
```

```
    if ((not($UserAnswer eq "n")) and # If it's not a yes or a no,
        (not($UserAnswer eq "y")) and
        (not($UserAnswer eq "N")) and
        (not($UserAnswer eq "Y")))
```

```
    {
```

```
        while ((not($UserAnswer eq "n")) and # Keep going until we
            (not($UserAnswer eq "y")) and # or a no.
            (not($UserAnswer eq "N")) and
            (not($UserAnswer eq "Y")))
```

```
        {
```

```
            print "Please answer \"y\", for yes, or \"n\", for no.
                $UserAnswer = &ReadLine();
```

```
        }
```

```
    }
```

```
    # If we've gotten here, the user has given a yes or a no answe
    return (($UserAnswer eq "Y") or ($UserAnswer eq "y"));
```

```
}
```

```
# Make the list of friends and hash of pets empty, so that they do
# anything.
```

```
@Friends = ();
```

```
%Pets = ();
```

```
# Have scalars that we can use for true and false conditional clau
```

```
$True = 1;
```

```
$False = 0;
```

```
    # Welcome the user to the program.
```

```
    print "Welcome to the friends and pets program.\n";
```

```
        $ShouldContinue = $True;
```

```
        #
```

```
# The main loop. This is where the meat of the program is.
```

```
#
```

```
        while ($ShouldContinue)
```

```
        {
```

```
            # Read in the friend's name
```

```

        # Read in the friend's name.
print "Please enter the name of your friend:\n";
    $NewFriend = &ReadLine();

    # Add the new friend to the list.
    @Friends = (@Friends, $NewFriend);

    # Read in the friend's pet.
print "Please enter the kind of pet $NewFriend has:\n";
    $NewPet = &ReadLine();

    # Add the new friend's pet to the list of hashes.
    $Pets{$NewFriend} = $NewPet;

# Print a blank line, so that the output doesn't look too crow
    print "\n";

    # Now, recite the friends and their pets.
    foreach $CurrentFriend (@Friends)
        {
            $CurrentPet = $Pets{$CurrentFriend};
print $CurrentFriend "'s pet is a $CurrentPet.\n";
        }

# Finally, ask the user if he wants to continue.
    print "Do you want to continue (y/n)?\n";
    $ShouldContinue = &Confirm();

    # And we reach the end of the loop.
    }

# If we get here in the program, the user does not want to continu
    # So, we say "Bye!", and leave.

        print "Bye!\n";
        exit 0;

        #

# The program will never get here by itself, because it is after t
# statement. But we can still put procedures and functions here.
    # two functions here:
    #

    #

# ReadLine is a function that reads a line in, and gets rid of the
    # newline. This does input exactly as specified earlier.
    #

```

```
sub ReadLine()  
    {  
        $UserInput = >;  
        chomp $Userinput;  
        return $Userinput;  
    }
```

**A sample output for this program might be:**

Welcome to the friends and pets program.

Please enter the name of your friend:

Fred

Please enter the kind of pet Fred has:

furball

Fred's pet is a furball.

Do you want to continue (y/n)?

y

Please enter the name of your friend:

David

Please enter the kind of pet David has:

dog

Fred's pet is a furball.

David's pet is a dog.

Do you want to continue (y/n)?

n

Bye!

[Sample programs - Running average](#)

## Running average

This program reads numbers and tells their running average:

```
#!/usr/bin/perl -w
    $total = 0;
    $number_of_items = 0;
    $result = 0;
while(1) # 1 is always true.
    {
    print "Next item: ";
    $input_line = <>;
    chomp $input_line;
    $total = $total + $input_line;
    ++$number_of_items;
    $result = $total / $number_of_items;
print "The average so far is " + $result + ".\n";
    }
```

## Debugging

Do you have a little brother or sister? If you don't, pretend you do—a brother, Fred, who's just barely old enough to walk.

Imagine that your mother tells your brother to go to the bathroom. So your brother walks to the bathroom, stands there a while, and then asks why he was sent there. Or imagine that you have a potted plant in the house, and your parents come home and find that your brother dug out dirt from the tree and is playing in the dirt. They clean up the mess and explain, very plainly, that he is not to play in dirt. So your brother tries to find something better, and pulls all the leaves off the plant and plays in the leaves.

Computers are like that. They don't understand what you mean—only the literal sense of what you said. If you say almost exactly what you mean, the computer will almost do what you mean, and the 'almost' can be very annoying. In this chapter, I'll explain how to fix common bugs, and close with how science can help you debug.

# Common Bugs

Many common bugs come from one of two sources:

1. Accidentally typing the wrong thing.
2. Logical errors.

Logical and mathematical errors are things like being off by one. Subsequent sections will tell you something about typing errors.

## Syntax errors

If a programming book tells you to write something a certain way, you should do exactly what you're told. If you're told to write:

```
@a=(1,2);
foreach $b (@a)
{
    print $b;
}
```

and you write:

```
@a=(1,2);
foreach b (@a)
{
    print $b;
}
```

What will happen?

Something different, and not what you want.

One **dollar sign** is missing, so the computer will do something different, and not what you want.

Can't the computer just do what you mean?

No. Knowing what you mean shows human intelligence, and the computer can't do it.

What happens quite often is that you write something a little different than what you thought—something a person wouldn't notice—but the computer can't correct. If you're having trouble,

read your code closely to see that you typed exactly what you thought you typed.

## Misspelling

What happens if you type:

```
$pizzas = 12;  
print "$pizzzas\n";
```

What you'd like to happen is that it prints out the number 12. However, I put an extra 'z' in, so it prints out 0. Why? The variable \$pizzas may be 12, but \$pizzzas is a different variable, and it is not twelve.

If you're having trouble, make sure that every variable and function is spelled exactly the same way every time it appears.

## Forgotten semicolon

What happens if you type the following line of code:

```
print "Hello, world!\n"
```

What you'd like is for it to print "Hello, world!". However, the program will crash. It's waiting for a semicolon, and if it's not there it'll get confused. Make sure that every line, unless you've been told it doesn't need a semicolon, has a semicolon.

## Single and Double Equals

What happens if you run the following code:

```
$a = 1;
$b = 2;
if ($a = $b)
{
    print "They're equal!";
}
else
{
    print "They're not equal.";
}
```

What would you like to happen? It compares 1 and 2 and says that they're not equal. However, if you run this, it says that they're equal. Why? ( $\$a = \$b$ ) says to make a equal to b. What we wanted was ( $\$a == \$b$ ), which would compare them. Use '=' to assign a value and '==' to compare. It's easy to use the wrong one and introduce bugs to your program.

## Scientific Debugging

How does the scientific method work?

In a nutshell, there's something a scientist doesn't understand, so he makes a guess, and then makes a way to show if the guess is wrong. After a lot of testing, a guess that hasn't been shown wrong may become part of science.

When you don't understand something, making guesses and then testing them ("If my program's miscalculating, then the variables before this part will have the right values, but the variables after will have wrong values. I know! I'll put print statements before and after to tell me the variables' values") can help you see why your program's not functioning.

If you have a science teacher who programs computers, it would be very helpful to approach him sometime when he's not busy and ask, "How can the scientific method help me debug computer programs?"

## Conclusion

I hope this has helped you to begin to tinker and play, exploring what your computer can do when you speak one of its languages. When you're ready to learn more, read good programming books, continue asking questions, and by all means, keep tinkering!

Would you like another book that will tell you more? [O'Reilly](#) publishes excellent titles. [Learning Perl](#) is an excellent next step. When you've outgrown that, [Programming Perl](#), affectionately named [the camel book](#) by Perl programmers, will take you far. And if you enjoyed this, would you like to see some of [what else I've written](#)? You might find some of it interesting.

-Jonathan

Subroutine  
Underscore  
Value  
Variable

[Certain terms are defined in the text; those remaining are:]

## **Definition: Atgry**

An atgry (the plural of atgry is atgrynge) looks like this:

*@*

Atgrynge are used before **variables** that are **lists**. They are also known as 'at signs'.

## Definition: Bug

A bug is a mistake in a program that makes the program act differently than it was supposed to.

Bugs are one of the facts of life in computer programming; we all make mistakes, and figuring out and fixing bugs is an important part of creating programs.

The term 'bug' comes a story that, way back in the middle bronze age when computers were made with physical relays, a computer wasn't doing something properly, and (after investigation) the people discovered that there was an insect which had gotten into the computer and was making it malfunction: the computer had a bug in it. Since then, we use the word 'bug' to refer to malfunctions that are caused by human mistakes as well as funny things like insects crawling into a computer.

Even when it seems like you've done everything right, sometimes the computer still won't do what you want it to. One of the points of maturity for a programmer is not to blame other things, but to realize that it's probably a mistake you've made, and to see what you need to do to fix it.

## Definition: Code

Code is a word we use to refer to the "stuff" a program is made out of, just as 'wood' is a word we use to refer to the "stuff" a board is made out of. Here is an example of code:

```
#!/usr/local/bin/perl
#
# Print out the phrase "Hello, world!"
#
print "Hello, world!\n";
```

In this case, this code is all of a program; code can also be some of a program.

Can you identify the different parts of this program?

## **Definition: Comma**

A comma looks like this:

,

## Definition: Concatenate

When you concatenate two **strings**, you stick them both together, one after the other. For example:

If you concatenate:

"Old MacDonald had a farm. "

and

"On that farm, there was a cat. "

the result is,

"Old MacDonald had a farm. On that farm, there was a cat."

In Perl, you can concatenate strings by placing a period ('.') in between them. The following code assigns `$first_part` the value "Old MacDonald had a farm.", `$second_part` the value "On that farm, there was a cat. " before assigning the concatenated value to `$combined`:

```
$first_part = "Old MacDonald had a farm. ";  
$second_part = "On that farm, there was a cat. ";  
$combined = $first_part . $second_part;
```

## **Definition: Dollar sign**

A dollar sign looks like this:

\$

It is used before the names of some [variables](#) — specifically, [scalars](#), and (in some cases) [hashes](#).

## **Definition: Equals sign**

*An equals sign looks like this:*

=

It is used for [assignment](#).

## Definition: Feature

A feature is some capability of a program, something that it can do. For example, most word processors can have **bold** or italic text, and print things out. Some time spent working on programs is adding new features.

There is a running joke among computer people, that when there's a **bug** that a customer discovers, the technical support people say, "Oh, you've discovered our new feature!" — they pretend the bug is really a special feature.

## **Definition: Hash**

A hash looks like this:

#

Hashes are used in Perl to begin [comments](#), and are also known as pound signs.

## Definition: Language

There are different languages that humans use to communicate with each other — English, French, German, Italian, and so on. There are also languages for humans to tell computers to do things. Perl is one of many such languages.

Different computer languages have different strengths and weaknesses. Each one has a slightly different function — just like the tools in a tool chest (hammer, pliers, screwdriver, etc.) have different functions.

There is a difference between computer and human languages, which is this: Human languages are difficult to learn, at least for adults. Even if you can communicate well in English, you will have to work hard to be able to communicate even badly in French or German (if you have not already had experience with them). But with computer languages, once you have really learned to program, learning a new language is fairly easy.

This is part of why I am using Perl as the language for this book, instead of using the language I know best (C). Perl is a good, easy language to begin with, and I hope both that you can learn Perl, and move on to other languages that will teach you other things that Perl doesn't teach you very well. I think, for example, that Java is a good second language. After Perl and Java, you should be able to use almost any language.

## **Definition: Left curly brace**

A left curly brace looks like this:

{

Left and [right curly braces](#) are used to enclose [blocks](#) of code, as well as designate an element of a [hash](#).

## Definition: Left Parenthesis

A left parenthesis (the plural of parenthesis is parentheses)  
looks like this:

(

Left and **right parentheses** are used to clarify what you mean  
in certain **arithmetic** expressions, as well as telling where the  
members of a **list** and the **arguments** to a **function** begin and end.

## **Definition: Percent sign**

A percent sign looks like this:

**%**

Percent signs, among other things, are used to refer to [hashes](#).

## **Definition: Period**

A period looks like this:

.

Periods are used, among other things, to [concatenate](#) two [strings](#), as explained in the [section of the text on scalars](#).

## **Definition: Right curly brace**

A right curly brace looks like this:

}

Right and [left curly braces](#) are used to enclose [blocks](#) of code, as well as designate an element of a [hash](#).

## Definition: Right parenthesis

A right parenthesis (the plural of parenthesis is parentheses) looks like this:

)

Right and **left parentheses** are used to clarify what you mean in certain **arithmetic** expressions, as well as telling where the members of a **list** and the **arguments** to a **function** begin and end.

## **Definition: Semicolon**

A semicolon looks like this:

;

Semicolons are used at the end of most [statements](#).

## Definition: String

A string is some amount of text. Examples of strings are:

"My left foot"

"436"

"A man without eyes,  
saw plums in a tree.  
He neither ate them nor left them;  
now, how could this be?"

We enclose a string in quotation marks, to indicate where the string begins and ends. The quotation marks are not actually part of the string. (Strings can contain almost anything, including line breaks and even quotation marks — although you have to be careful with quotation marks so you don't confuse the computer.)

# **Definition: Underscore**

An underscore looks like this:

—

Note that it is lower than a hyphen: here is a hyphen,  
followed by an underscore: -\_.  
Underscores, as well as letters and numbers, may be used in  
the names of **variables** and **functions**.

## Definition: Value

A value is a specific meaning that a [variable](#) may have at once. For example, the [scalar](#) `$NumberOfCats` could have the value 1, 2, or 5. A variable may only have one value at a time; when it is given a new value, the new value replaces the old value. Here are some examples of values that a scalar may have:

"five of spades"

1

-2.5

[Tinkering with Perl](#) is a free book that provides an introduction to programming in Perl, as well as a basic reference for things like [foreach in Perl](#), [if-then](#), and [if-then-else](#), in addition to providing a [glossary](#) where you can find definitions for [concatenate](#) and other terms.

[Tinkering with Perl](#) may be one of the most popular offerings on this site, but it's not the only attraction. You can read a tongue-in-cheek [Game Review: Meatspace](#), read an even more offbeat [customer service survey](#) (whether or not you actually fill it out), and spend a few minutes wishing your boss would read, [The Administrator Who Cried, "Important!"](#) (Not to mention that there are [other things you can read here besides tech stuff](#), from [Janra Ball: The Headache](#) to [The Spectacles](#).)

**Tong Fioi  
Blackbelt: The  
Martial Art of  
Joyous Conflict**

## One brief comment

I was not happy with this when it was new, and think that something in it still isn't quite right. However, I still think there is much in it that's worth reading.

As a child of perhaps ten, I told friends that I was going to make a martial art, made up a name that sounded Asian to me ("Tong Fior"), and got into an argument about it with a classmate (nowhere near physical blows). The preferred term for this in the academy is the highly abrasive term "Orientalism," although the better tempered anthropologists would regard it as the normal and natural contact when any one culture starts to meet another, and is really the same Orientalism by which the nationalistic Independence Day movie enjoyed tremendous popularity well outside of U.S. political borders. In the one kind of Orientalism, there are people in the West who want to be some romanticized image of the East; in the other there are people in the East who want to be some romanticized image of the West. I have difficulty finding much of any real difference between these instances of "diffusion" as the term is understood in an anthropology department.

And as is illustrated below, as Proverbs says, "Trust in the Lord with all your heart" is mysteriously tied to the Lord granting the desires of your heart, and sometimes in the oddest ways.

## Obligatory quotation from G.K. Chesterton

G.K. Chesterton, in a passage that is politically incorrect enough today, wrote,

I am told that the Japanese method of wrestling consists not suddenly of pressing, but of suddenly giving way. This consists not of suddenly pressing, but that of suddenly giving way. This is one of my many reasons for disliking the Japanese civilization. To use surrender as a weapon is in the very worst spirit of the East. But there is no force so hard to defeat as the force which is easy enough for conquer; the force that always yields and then returns.

But hold that thought for a second, and I speak as a fan of the Land of the Rising Sun for ages. (And not just for that one single Google AdWords ad impression that changed eBay's AdWords presence forever: "Buy Japanese sushi on eBay! New and Used.")

Someone said, in response to a Quora question about whether anyone had regretted getting a PhD, and one of few PhD's to say "yes" said basically that you don't get a doctorate to get a superhuman high social status and be addressed as "Doctor"; he said "a PhD is just a paper that comes along the way as you are doing something you love."

being something, for ever.

## The personalities of martial arts

Something very much like that related to what what we now understand as a belt system. A martial artist wouldn't be awarded a blackbelt (or anything else besides a white belt) on the grounds of a formalized test. When you started, you got a white belt that would be slowly blackened by the practice involved in developing expertise for years and years and years.

And I believe that most of the better martial artists today would say that the older approach is still foundational in better practices today; it's just obscured and harder to discern, and certain entirely justified concessions to societal needs have been made.

I remember being offended when I saw how parts of Aikido in Aiki Ninjutsu work; it brought up memories of very frustrating matters of conversation, where a friend (and I do really mean friend) gave infuriating claims of agreement where he would say "I agree with you that [fill in the blank]", and the beginning, middle, and end of every such "agreement" was to wrench some belief of my mine out of context, placing himself as someone in a position to understand, interpret and explain my beliefs far better than I could, and use it as a sledgehammer against something else that were just as foundational to those beliefs. During those years, he never claimed agreement except as the

presentation of an attack. And that is specifically what I saw in physical form in how to respond to an opponent's punch. You grabbed your opponent's arm, and so to speak "corrected" the direction it was moving, and add exaggerated force to what your revision of the punch has become. This was disappointing enough to be offensive after reading the tale of a martial art founded by a legendary, great O Sensei who stood unarmed and kept dodging a master swordsman until the attacking swordsman collapsed from fatigue.

I'd be a little cautious about glibly identifying this as "Aikido," which etymology means something close to "Way with harmony and energy," as Aiki Ninjutsu represents a new fusion that draws on several older sources and has modern elements. The fusion may not particularly Western elements, but it has a Creed (with an apparently deliberate uppercase 'C' as in "Craptastic"), with the Creed beginning with "I believe in myself. I am confident. I can accomplish my goals," and when I started to give a thinking Christian's objections to believing in oneself (see Chesterton's take below), I saw in verbal form the foundational lesson of "Become the center." What I never heard was so much as lip service to "harmony between opponents" that is a leitmotif in so many genuine martial arts. The technique associated with "Become the center" forces all else to resolve around oneself, and the teacher seemed a bit "become the center" in that he spoke with decisive authority and I was not allowed to even contribute anything to the conversation beyond accepting decisive authority.

G.K. Chesterton incidentally has something to say about "become the center" or rather just believing in yourself. The sting with which he opens [chapter 2 of his book Heretics](#) make the stinging remarks of Sumo wrestling quoted above almost

sound like praise:

THOROUGHLY worldly people never understand even the world; they rely altogether on a few cynical maxims which are not true. Once I remember walking with a prosperous publisher, who made a remark which I had often heard before; it is, indeed, almost a motto of the modern world. Yet I had heard it once too often, and I saw suddenly that there was nothing in it. The publisher said of somebody, "That man will get on; he believes in himself." And I remember that as I lifted my head to listen, my eye caught an omnibus on which was written [the name of the lunatic asylum] "Hanwell." I said to him, "Shall I tell you where the men are who believe most in themselves? For I can tell you. I know of men who believe in themselves more colossally than Napoleon or Caesar. I know where flames the fixed star of certainty and success. I can guide you to the thrones of the Super-men. The men who really believe in themselves are all in lunatic asylums." He said mildly that there were a good many men after all who believed in themselves and who were not in lunatic asylums. "Yes, there are," I retorted, "and you of all men ought to know them. That drunken poet from whom you would not take a dreary tragedy, he believed in himself. That elderly minister with an epic from whom you were hiding in a back room, he believed in himself. If you consulted your business experience instead of your ugly individualistic philosophy, you would know that believing in himself is one of the commonest signs of a rotter. Actors who can't act believe in themselves; and debtors who won't pay. It would be much truer to say that a man will certainly fail,

because he believes in himself. Complete self-confidence is not merely a sin; complete self-confidence is a weakness.

Believing utterly in one's self is a hysterical and superstitious belief like believing in Joanna Southcote: the man who has it has "Hanwell" written on his face as plain as it is written on that omnibus. And to all this my friend the publisher made this very deep and effective reply, "Well, if a man is not to believe in himself, in what is he to believe?" After a long pause I replied, "I will go home and write a book in answer to that question." This is the book that I have written in answer to it.

Enough of Chesterton; like The Onion, he has something to offend every palate. (He was beyond being dismissive of the thought of his joining the Orthodox Church.

Some people might be surprised by remarks above; my memberships in 3-4 martial arts lasted for a few months, and while I have had some successes (Kuk Sool Won and the local Shokotan paired me with blackbelts or blackbelt candidates by the end, and one fellow Karate student was getting very infuriated when I responded to him about a quarter second earlier than expected; I moved to meet him as he was moving, not after, without the faintest interval between the two), I found that spirituality was very dry until I repented of it as sin (a mistake I should have made once, if even that). And just to be clear, everyone I've heard of in any martial art at all says that you improve after a couple of months, but real mastery takes years and years and years. (I think my case was simply not how things work normally.)

## **God practices Ju-Jutsu, and we should too, as an act of submission**

Perhaps the single greatest illustration of Jiu-Jutsu in the Bible is where a Saul burning with wrath and destruction, trying in overweening pride to annihilate the Church, was stopped cold by the uncreated Light of Heaven, the Light who strikes terror in those not indwelt by It, and provides what may be the only place in the Bible where the Lord quotes a pagan Greek source:

**"Saul, Saul, why do you persecute me? ... It hurts you to kick against the goads."** The action of an Orthodox Christian is not, on the balance, to invade another's mind and straighten it out. It

is not, on the balance, either our place to really defend ourselves. It is to, in the words of a Protestant hymn, "Keep your eyes on Jesus / Look full in his wonderful face / And the things of this world will grow strangely dim / In the light of his glory and grace," and remember that you too are a sinner and try to be merciful and forgiving as others join you as you continue kicking against the goads.

Furthermore, the more you are in trouble, the more stress you are in, the more conflict or worse, the more more essential that you grow beyond any abilities you know in deiform love to forgive, to have mercy, to pray, to turn the other cheek. The [Sermon on the Mount](#) is not an ornament for the beings of some

mythical world more perfect than Star Trash. It is a battleplan for those of us who live in a world of conflict and violence.

The Orthodox martial art is living the Sermon on the Mount.

## De-mythologizing done right

Bultmann is a foundational character in the academy, enough so to have provoked C.S. Lewis to write [The Elephant and the Fern-Seed](#). Bultmann came up with a new way of moving beyond mythological trappings found in the Bible and theology. Or at least that is how his progressive circles understood their stance;

I'm not completely sure how an Orthodox might best respond, whether "You have a valid enough point, but why does it loom so suffocatingly large to you?" or, "Um, you ARE aware that your fresh and new discovery is a recycled version of a topic that an Orthodox Christian worked out with power, well over a millennium earlier than you, and by a canonized saint at that, and the saint did a profoundly better job than you?", or extending an invitation for the distinguished scholar to simply become a catechumen!

However, I would like to take up Bultmann's point, or rather that of the canonized saint of over a thousand years before (Pseudo-Dionysius), or rather God's point. A standard illustration is, as [we repeatedly read in Exodus](#), "God hardened Pharoah's heart." This claim should not be taken literally; I've yet to read even someone very wrong read the text as meaning that God stiffened Pharoah's cardiac muscle (heart) the same way an arm or leg or back muscle stiffens with a cramp. But it goes deeper. The claim that God changed Pharoah at all is too crude. Pharoah

hardened his own heart with Satan's help. God (and the image of Jiu-jitsu must eventually be dropped as well) exercised Jiu-jitsu and let Pharaoh reach destruction by the only way that Hell can ever be reached: by his own steam.

I now remember once feeling particularly squeamish about a mailing list conversation where one Orthodox sympathizer clarified, in perfect sincerity, that where Genesis 1 repeats, "And God said," that was such a human way of speaking that it meant that God spoke, in her words, "with lips and a tongue" as one would expect of mortal man. And I made no effort to assume command of the situation and straighten out her mind for a couple of reasons. First of all, even if her assertion was analytically wrong enough to fill me with squeamishness, unless she is troubling others (in which case someone well above my pay grade should be laying down the law), it is not my place to use my book-learning to take away the little that is held by someone who is not even a member of the Orthodox Church. But that is just for practice. The beam in my eye has to do with believing I need to have my way, that I should be in power or in control, or anything else. She might have thought it helpful to give Pharaoh an intake appointment at a cardiologist's. I do much worse.

### **How?**

Perhaps one way of putting that is this: we are inclined to believe that God violated the free will of Satan and Judas, because they killed the Son of Man and He came back to life triumphant. But a slightly closer image is that he was on higher ground, he let their free will be as sordid as they chose, and in a way beyond Jiu-jitsu the God who is beyond motion met them fully and attentively, with a heart full of love, and the evil that

cannot grasp love tried to give its strongest and most venomous strike, they struck where the everywhere-present God is not and the full force of their blow slammed into a brick wall and their sting was inflicted only on themselves.

But be careful:

One subtle note to those who find alluring the image of Satan slamming his horns full force into an adamant wall next to which diamond is as as a crumbling dust: if you find the image attractive, **beware of adopting Satan's ever-seductive, ever-destructive pride.**

One joke good or bad that I heard many, many times as a child ran:

There were two morons working in a hot pit enduring the heat while their boss sat in a cool air-conditioned building outside of the pit on the ground above, not doing much of anything.

One day the morons got to talking and said, "How come we do all the work and our boss gets to sit in an air conditioned building? So the first moron got up from the pit and asked, "How come we work in a hot messy pit all day, and you're in this office getting nearly all the money?"

The boss said, "Because I'm smarter than you."

The moron asked, "Why?"

The boss walked over to a thick tree and held his hand in front of the trunk. "Hit my hand as hard as you can!"

The moron swung his best, and the boss deftly pulled his hand away, leaving the moron to slam the full force of his punch into the rugged trunk of the tree.

After he had stopped crying, the first moron climbed back into the pit.

The second moron said, "What did you find out?"

The first moron said, "I'm smarter than you."

The second moron said, "Why?"

The first moron put his hand in front of his face and said,

"Hit my hand as hard as you can!"

There are two, and no more than two, essential options to us. One is to join hands in the Church and dance with the Lord not only of men but of angels and eagles, cultures and corporate worlds, a vast universe held in the heart of a God so small as to be without parts, and join in the unfolding mystery of the Lord of the Dance in whom alone the Divine Providence unfurls. The other option is to help Satan rearrange your face. There is no inconsistent option which lets you remain impenitent in pride and yet remain impossibly free from Satan's clutches. And more could be said than that: as Fr. Thomas Hopko famously crystallized, [Have no expectations except to be fiercely tempted until your last breath.](#)

This is also the point expressed in what may be the most piercingly beautiful of St. Nicolas' [Prayers by the Lake](#) in which, as I would offer images Hope is praised, the Hope Who is eternal, the Hope which glimmers in young children who race out of bed on Christmas morning in all the pageantry of the Great Dance and can't wait to open the first present but hasn't the faintest idea of what the first present may be. But there also hopes, with an 's' as in "Shit", hopes that have certainly plagued me enough hopes really that God will obey the plan that you have worked out to him, and set expectations that God is to jump to your plan, and in the event of any problems, he should contact you immediately for further orders or instructions. It is, on reflection, an act of mercy that God sometimes says, "No" to

people who give the most meticulously drafted orders, and perhaps work with people who order him around for decades to teach them, just a little, how to live a life that is dancing the Great Dance.

## Gandhi and *satyagraha*

Having tried to underscore the absolute necessity of humility, I would like to move on to the next order of business and compare myself to Gandhi.

Gandhi was a Hindu, in one of three world religions that took its genesis in India. It is my considered judgment that Gandhi's achievements could have been made solely within resources directly provided by his native Hinduism. However, that sounds like an outsider's guess to anyone who understands this figure in history; however rich Hinduism may be, Gandhi through whatever reason chose to draw on outside sources.

The most shame I have ever felt about being a Christian was when a pastor in church explained that Gandhi wanted with his whole heart to become a Christian, and when he sought out a Christian evangelist, the racist evangelist rejected him for the color of his skin alone. That experience soured Gandhi enough that he was never again open to being a Christian, but please look at this closely.

I would draw out four decisive influences on Gandhi:

1. **Gandhi's native Hinduism** about which I will now only say that it is deep as an ocean.
2. **The "purer than the pure" Jainism** from which he took profound inspiration without also membership (we

proverbially say that someone "wouldn't hurt a fly", while to this day Jain monastics sweep the ground in front of them with peacock feathers to avoid accidentally stepping on a bug, as Jainism is also a world religion that came from India.

3. **Christianity:** this was the religion of the British colonists, and Gandhi spoke and acted warmly towards his sharpest critics. Gandhi also said things that would astonish people for a speaker who wasn't Christian: "Jesus, a man who was completely innocent, offered himself as a sacrifice for the good of others, including his enemies, and became the ransom of the world. It was a perfect act." He elsewhere states that his three heroes are Jesus, Daniel, and Socrates, all of whom saw their lives as nothing next to the salvation of their souls. And finally:
4. **Western-style political activism:** (Well, I suppose we all have to be wrong about something.)

I do not know how to explain Gandhi's spatula stature in actively trying to adopt the strengths of Christianity and activism. True, he was soured by personally rejected by a Christian evangelist who was beyond moronic, but what I would ordinarily expect is for Gandhi to grind an axe against the English and Christians for the rest of his life, with an anger transparently visible to everyone else besides him, all the way icily insisting, "I am not angry!" As it was, he kept reaching out in love to English and other people who met him with total hatred, and by what is called "satyagraha" purchased the freedom of the one nation in history that achieved its from colonial domination by nonviolence rather than war, and remains the one nation in the

world that I am aware of where rah-rah nationalism express itself by the study of nonviolence rather than by celebrating victory through warriors' killing of others. And this is in a religion where the crowning jewel, the [Sermon on the Mount](#), is a tale of epic heroism where God appears in human semblance and encourages and exhorts a prince who is so devoid of laziness that perhaps he doesn't even sleep, to rise up in full power and annihilate all those marked for destruction. And Gandhi does nothing to downplay the text; he instead contributed yet one more commentary to the vast collection (and the Hindu preference, at least today, seems to be never give this crowning jewel without opening it up by commentary). And now we are in a position to drill down slightly.

Gandhi said very emphatically, "Truth and nonviolence are as old as the hills." And I would take this as entirely without sloppiness or guile. However, I would like to delve into a word he used. For the purpose of this section, I will treat Gandhi's use of "nonviolence" and "satyagraha" as two sides of the same coin, or even closer. The term "satyagraha" is not taken from Hindi (which is, along with English, India's modern national language), but from the classical Sanskrit, classical in India as Latin and Greek are European classical languages. My best understanding both as a historian and also as an author is that Gandhi went on a word hunt, searching to find the perfect word to crystallize the consuming quest, as Madeleine l'Engle found a word "kythe", a Scottish word if I remember correctly, that originally meant something like "to truly come to be", and became the central term in her classic [A Wind in the Door](#). Madeleine l'Engle did not use the word as anyone before her did, and Gandhi seized on a word that had previously not been a term about violence or its absence, a term that meant something like "steadfastly holding

on to the Truth no matter what."

And there is no either-or between Gandhi's embarking on a quest that ended with a deep term from classical Sanskrit, and his full and direct assertion that truth and nonviolence are as old as the hills. The key to this is found in Christ's words:

"Therefore every scribe which is instructed unto the kingdom of heaven is like unto a man that is an householder, which bringeth forth out of his treasure things new and old." A study of Gandhi's use of the term "satyagraha" is a study of bringing forth out of a treasure things new and old which are one on the same.

I freely enough compare myself to Gandhi as an author. I do not feel the need to compare myself to Gandhi on forgiveness or anything else truly important besides that we are both made in the image of God, and both sinners.

## What is pain? What is yielding?

Here I will not discuss what the image of God is at length, nor dissect that the highest command is to love God with one's whole being and the second which is like it is to love your neighbor as yourself. However, I will say that the God who defines health is the model for healthily function and life, and Jujutsu is not just how God acts, it's how we act if we're doing right. It means that even in the most intense conflict or combat one is looking up for light. The U.S. in World War II referred to the Japanese Jiu-jutsu as "chop-socky", and for all their following the universal wartime rules of due diligence in demonizing the enemy, the most patriotic U.S. foot soldiers learned very, very quickly that their Western boxing completely fell to pieces when it ran into "chop-socky."

It is said by at least some martial artists and athletes that "Pain is weakness exiting the body." It should equally be said by Orthodox Christians not only that repentance is sin exiting the soul, but that repentance is misery exiting the soul, if there is any difference at all: [repentance is Heaven's best-kept secret](#). And the struggle with anger that is called forgiveness, when we reach victory, is also misery exiting the soul.

Jiu-jutsu is a word meaning "yielding", and comparisons with Jiu-jutsu should not be pushed too far, as may be admitted. It is

one image among others and one not present in Scripture. But there is a distinction in Asian martial arts (and perhaps Capoeira, for instance), between "-jutsu" and "-do" that is well understood.

"Jutsu" means a technique or skill, like woodworking, and "do" means a philosophical or spiritual path. The Western tradition (apart from when Asian martial arts came to be a substantial influence) is entirely "-jutsu". This is true with a couple of bumps, as Jiu-jutsu is of an ancient provenance, the art of Samurai who had not even their weapons, while Judo may be seen as a modern attempt to simplify and cleanse Jiu-Jutsu into a simpler art that would be effective self-defense while eliminating locks and other destructive features. And all of the martial arts have their own personalities and characteristics, some better than others, but none yet let the stillness of Orthodox hesychasm or silence eclipse the meditation that is structural to internal martial arts.

## Dojos

So when am I going to start opening dojos? The answer I am hoping for is, "Never." The one possible exception I see is that if the Church is really, really scraping the bottom of the barrel and makes me some kind of bishop, or even worse a **real** bishop charged with fully competent administration, love, and care of a diocese, instead of the nominal formality, the "How do you solve a problem like Maria?" concession of being honored on paper as the more-than-a-bishop of some long-lost city without a second living representative. If I bear the heavy cross and heavy crown of thorns of a real bishop, **then I would have the right to start opening dojos**, except that wouldn't be the right way of thinking of it at all: most people would call it "the responsibility to continue opening parishes."

## Color

I winced when I heard Exodus International was closing its doors... until I found out why, and it was a concern that I held since I first heard of it, no matter how much I respected its mission. Exodus International was trying alone to shoulder a responsibility that belonged to the entire ecosystem of the Church. And one question I had already been asking before I saw the Gay Nineties taking over was why on earth that class of sin was its own world, a separate detached from the rainbow fragments forgiven by Christ at Sinners Anonymous, or as it is more often called, the Church. The reason for the coming of the Son of God was to destroy the Devil's work, and then to keep on pushing for bonus points well past when people can go Heaven: but for starters, let us to say to take each broken fragment of a fractured rainbow, whether pride or envy or the occult or drunkenness or any shard of lust whether gay or straight, and take these broken fragments and restore them to the to the pure, whole, white, bright, radiant, scintillating Light beyond beauty of the uncreated Son.

## The Void

The martial arts classic *A Book of Five Rings*, in a brevity comparable to the [Sermon on the Mount](#), covers five elements: earth, air, fire, water, and the void. The chapter about the void is by far the most terse: all else is summarized and transcended.

I have come to nearly the end of writing what I wanted to write, and I have covered almost everything on topic to cover except one thing: the original, central point that motivated the construction of the work. It would not be strange to call the topic "œsatyagraha:â€ I do not complain that others may do so, but I would rather look at hagiography.

The canonized saints trample on the rules of nature again, and again, and again. Saints walk on water; one monk, the only one on a monastic coast worthy to retrieve an icon miraculously floating on water, when he absolutely **had** to do so, crawled on top of the surface of the water on all fours like a dog, because in his great humility he considered himself utterly unworthy to stand up normally and walk on top of the water like Christ did. Saints pass through fire unharmed, although not every time. Many saints have been burned to death as martyrs, but it seems to happen that when the fire went out the martyrs looked as if they were merely sleeping, with a smile on their faces, and without a thread of their clothes or a hair on their heads singed or the faintest scent of smoke. In the lives, it seems that the only way that

persecutors can get certain saints to die and stay dead is to behead them (hello, ISIS?), and even then, the saints occasionally pick up their heads, walk over to their preferred resting place, and there set down their severed heads and only then give their consent to really die.

Furthermore the God who works in the heart of hearts to giants among the saints is also works in the hearts of the faithful. Monastic giants trample on scorpions with bare feet; many more faithful trample on pride. Majestic saints open the eyes of the blind; and men reject lust and find their sight truly opened. St. Paul the Apostle raised the dead more than once, and innumerable more among the faithful, across many centuries, have fed the hungry; and furthermore, in a point that many, many officially canonized saints have driven home across the centuries, feeding the hungry is greater work than raising the dead. The term "saint" referred originally to every member of the Church without exception, and one and the same God works in every stripe of saint to ultimately transcend the chasm between what is created, and what is uncreated. The wall between God and we who are merely created is there so that we may rise above it.

And in all this, the inner struggle of the [Philokalia](#) is vibrant in its nature. Its watchfulness or inner "nipsis" acts in moral and ascetical character like an author searching from just the perfect word, ever attentive, never hurrying, never impatient, always expecting. It is like the great Noah, who followed God's command to build a huge boat in the middle of the desert, and was then the sole survivor from a deluge. It is like a diligent martial artist, who lives by the words, "The more you bleed in the dojo, the less you will bleed in the street." It claims no exemption from suffering, nor entitlement to wishes

fulfilled: if the Measure by whom all saints are measured was the great King who only wore a crown once, and then only a crown of twisted thorns, then we are advised to properly take up our crosses in this earthly vale while we can still repent, because once our life has gone, the opportunity to repent will vanish forevermore. But sometimes there is an inner struggle of building a boat in the desert, and trusting the Lord of the Dance to know that he knows what is the right order and that if your next step is to leap before you look and only find out why after you have leapt. For those of us who are children at least, God shows us the reason why just after we have leapt because he knows that out of our weakness we will not exercise faith if he presents us with the reason beforehand, and identically knows that out of our weakness we will not maintain faith if too great a delay comes between the obedience and reward: in all things he meets our weakness that we might meet his strength. And all of this has every connection to how we can be entangled in our world's conflicts, get hurt again and again, and meet a joy that is beyond any of the conflicts and hurts.

Robert Pirsig's Zen and the Art of Destroying Asian Philosophy talks about "ægo-reading"; reading to push through a text, or as the problem appears among hiking, rushing to get to a point as forcefully and as quickly as possible. He points out that paradoxically those who rush to just get something done tend to not arrive at the intended destination at all. People who make progress in one activity or the other are, although I do not recall if they are stated in these terms, are people who have something in mind other than forcing their way to an external goal. Had the book been written later, it might have used the term "æauto-telic", which describes an activity that is its own goal. Where martial arts like Aikido are

called "goalless" by practitioners, it would be more literal, at some loss of striking contrast, to use a presently preferred term of auto-telic and say that an Aikidoko is not worrying about if he as a student will reach black belt, or on a much lower scale how interminably long it will take to master what should be a simple technique, or whether there will be enough progress in managing anger or weight, or anything else. A proper practitioner of Aikido's attention is fixed on Aikido itself, rather than paralysis by analysis over whether Aikido can be successfully used as a bridge to something external. You practice Aikido in order to practice Aikido.

The [Philokalia](#) offers something that seems much less but ends by being much more. The basic framing of work is different, and quite at odds with today's conception of interesting work. The usual physical craft of self-supporting monks in the ancient world was basket weaving, cynically understood by some in academia today as a legal fiction to let high-value football players keep the alumni without needing to perform proper academic work. The most common craft of self-supporting monasteries today is crafting incense, which at least supplies something elevated to Orthodox parishes. But this way of thinking misses the point for both the ancient and the modern arrangement, which I personally only understood when watching my brother's Mythbusters show and hear Adam gush at how "meditative" the repeated monotonous physical action of weaving a braided kangaroo leather bullwhip was. The chief merit of basket weaving and incense making alike is that they are repetitive motions that occupy the hands, and it is not clear to me that it is particularly helpful to think of incense as a high-status thing. The ancient and modern monasticism alike the preferred obedience is something that engages the hands while

the heart pursues purity. That is the center of gravity. And in modern monasteries, there may be some non-meditative work that needs to be done, but the general pattern is to have most monks heavily engaged in meditative labors for the benefit of the monks themselves in a setting where people do not distinguish sacred from secular or work from prayer. The work is there to help prayer reach perfection. And really, cleaning toilets is more often mentioned as the standard example of honorable obediences than making incense.

But the same center of gravity applies outside of the monastery; it can just be frustratingly more difficult. One monk commented to a cleaning lady that she had a more fortunate position, and I as a programmer and knowledge worker had a less fortunate position, because it is entirely possible to be engaged in prayer while scrubbing tables, but significantly harder to be absorbed in prayer while your mind is chasing bugs in a computer program. And no, this was not a matter of the monk being gracious to someone with lower status and knowing that I would not be hurt or offended by the suggestion. It was unvarnished candor.

What is necessary for people is the same in or outside of the monastery; it's just that with all the modern inconveniences and interesting and entertaining work the near-identical needs are not met to the same degree. Monks say to each other, "Have a good struggle," and struggle is expected and normal; people who approach monasteries to loaf around or have some romanticized image of their life may succeed, but not without considerable growth. And to the point of struggle, it is the norm and it is necessary for salvation in or out of Heaven.

Those scientifically minded know that when physicists have examined how different the physical constants could and support

life as we know it, the invariable conclusion is that life as we know it could not be possible unless the universe were tuned, not to put too fine a point on it, but with mind-boggling precision as if there were a God creating a universe universe that was incredibly fine-tuned, just to support life. And with a similar question among those who have any idea of the dimensions of the earth and the incomparable dimensions of the universe, "Why is the universe so vast, and the earth smaller than a grain of sand when held next to its grandeur? How much legroom does the human race need?" the answer is, "A universe's worth: no less!" And if we ask, "How much legroom does the Church require for salvation, that the saved may have eternal joy and shine with the uncreated Light in Heaven?" the answer is to me my least favorite part of this book and one that brings me to tears. The answer is, "Hell," or possibly more strongly and chillingly, **Every single soul from among the innumerable multitude of those who will be eternally damned to Hell!**

One pastor tried to say this without a laugh, and failed, that he was one place in the American South during a heat wave, and just before elevator doors closed, a jogger stepped in, sweating bullets, and said, "It's hotter than Hell out there!" The pastor said, slowly, "No. It isn't," and crept out everyone else in the elevator. But the damned exist, there is always at least possibility of salvation, God does ever better than they observe, and the damned do one thing that is essential. They provide other people with conflicts that can be part of a saving struggle. And when the Crack of Doom comes those who treat you abusively you will partly answer for your sins in your place. This is first a cause to feel relieved, then giddy, then at least for a moment when the full implications begin to unfold,

pure terror. **Christ** died **for your sins**, and so did Judas, Arius, Marx, Jung, and Hitler.

But God has ordained things, and monastic and non-monastic alike need struggle, which often takes the form of conflicts, of things that we don't think belong in our lives but God knows they do. And joy does not consist in being exempt from struggle. It consists of growing in struggle. It consists of having a good struggle. And if you earnestly engage your struggle you may experience the power in the final crescendo of Fr. Thomas's crystallization:

Have no expectations except to be fiercely tempted to your last breath.

Focus exclusively on God and light, and never on darkness, temptation and sin.

Endure the trial of yourself and your faults serenely, under God's mercy.

When you fall, get up immediately and start over.

Get help when you need it, without fear or shame.

In all these things and more, the [Sermon on the Mount](#) as it unfolds including the [Philokalia](#), like as the Mishnah and Talmud, acts as a stone from Heaven of inexhaustible wealth:

Blessed are ye, when men shall revile you, and persecute you, and shall say all manner of evil against you falsely, for my sake.

Rejoice, and be exceeding glad: for great is your reward in heaven: for so persecuted they the prophets which were before you.

Therefore if thou bring thy gift to the altar, and there rememberest that thy brother hath ought against thee;

Leave there thy gift before the altar, and go thy way; first be reconciled to thy brother, and then come and offer thy gift.

Ye have heard that it hath been said, Thou shalt love thy neighbour, and hate thine enemy.

But I say unto you, Love your enemies, bless them that curse you, do good to them that hate you, and pray for them which despitefully use you, and persecute you;

That ye may be the children of your Father which is in heaven: for he maketh his sun to rise on the evil and on the good, and sendeth rain on the just and on the unjust.

For if ye love them which love you, what reward have ye? do not even the publicans the same?

And if ye salute your brethren only, what do ye more than others? do not even the publicans so?

Be ye therefore perfect, even as your Father which is in heaven is perfect.

If ye then, being evil, know how to give good gifts unto your children, how much more shall your Father which is in heaven give good things to them that ask him?

These things slip through our fingers. They are simple, simpler than breathing, and we in our weakened state need some

great systematic theology with slippery concepts we can pin down to grasp. So God meets in our weakness and gives the [Philokalia](#) to meticulously assess every detail of internal struggle and the eight demons that became the seven deadly sins in the West.

“Do not store up treasures on earth” is a simple commandment; it does not only tell us we do not need Rolls-Royces to experience true blessedness, nor do we need our health (saints have lived to great spiritual heights amidst great illness, and not just because they were extraordinarily good), nor do we need our thoughts, or plans for our future in days or minutes, or an identity such as we try to have in the West, or “My Opinions”. We are to chase instead of the treasures that we can eat from today and forever, and come to that place where every drop of blood we bleed in the dojo eclipses a galaxy of diamond in its worth on the streets of Heaven.

## Cooldown: *The Alchemist*

The *Alchemist*, like many favorite picks on Oprah, is the sort of thing that makes me nostalgic for when my brother still had a beautiful tropical bird as a pet, and moreover makes me positively yearn for the days the house still had a birdcage that still needed lining. None the less, there is a vignette that I would like to draw out.

The teacher-figure in the course is the towering alchemical figure of Melchizedek, who is immortal, can turn lead into gold, can already turn himself into wind, and presumably has numerous and extraordinary other cosmic powers not explored in the text, and teaches the student-figure after making a sweeping dismissal of all the other traditions in all the world's other religions, and even a Western scholar whose heart was in the wrong place along with alchemy being dismissed for rhetorical weight.

The student figure never becomes immortal, never gains abilities to change metals personally, has no idea how to turn himself into wind (at least to start off with; the quest where he learns to make this self-transformation is core to the book's plot), and ends up after a long heroic journey to and back finds out that there had been an enormous quantity of gold lying buried under his back yard right where he started.

But a major point is this: both Master and student are equally

alchemists, or at very least at the end. The student does not have all the master's cosmic powers, and even after he has turned himself to wind it is debatable whether he has any cosmic powers, but the question of whether they have identical arsenals of cosmic powers matters no more than whether their eyes are of the same color. Both are equally alchemists; the student follows his teacher in delving deeper into a pride that destroys all capacity for any joy, and an occult mindset that destroys the sanity of all those who practice it in the real world. They are both alchemists, master and pupil, and both participate fully in the tradition, on their own paths. That the teacher's path includes having the Philosopher's Stone and the Elixir of Life, and the student does not, and the teacher can transmute lead to gold and the student cannot, is neither here nor there. Teacher and student both follow their personal paths within alchemy.

Perhaps it would have been fundamentally humbler for the student to keep on asking that the teacher give him a sole drop of the Elixir of Life and induct him into turning lead to gold.

(By the way, did I mention that [there is a way to obtain gold that is purer than 24 karats, such as alchemists did not reach high enough to quest for?](#))

With all of the above efforts to rip *The Alchemist* to shreds, and others I've held my tongue on, I still wish to make one point clear: The book's way of looking at difference is less than you think. The further you reach the Kingdom of Heaven, the less it matters that you have precious little money or gold. In fact wealth properly understood is a liability and a handicap more than really being much of any asset that puts you in a better position. Peter Kreeft, a Catholic philosopher and apologist who helped me along the way to Orthodoxy, found one great spiritual advantage to money: it doesn't make you happy. If you are

perennially struggling financially, and you see Break My Window around you on the street when your beater breaks down frequently, it's awfully, awfully hard to avoid thinking that so many things would be better if you had a good bit of money. If, on the other hand, you have a top-notch chauffeur for a Rolls-Royce, and you're still miserable, a great deal of the sting has been taken away from the temptation that just having more money is all you need. You can still be greedy and covet things, but it becomes a far weaker temptation to think that your spiritual emptiness actually comes from the fact that you are not in a position to have Michelangelo's David in your garden and the Mona Lisa in your living room.

The martial artist I respect most was asked in class how many times he had had to use his martial arts skills. And he slowly, gently, humbly said, that he had really been fortunate and hadn't needed to use his his martial art, even though there were a couple of awfully close calls [during years and years of study].

And I submit that his answer, as stated, is wrong, or at least his wording was deceptive and misleading.

He was at the time a third-degree blackbelt. I don't know what he is now. For non-martial artists, as far as sparring goes, a first-degree blackbelt is a third-degree blackbelt's chewtoy. He is past the point where people are said to be able to kill a tiger with their bare hands. I am all but certain that in every one of those close calls, he could have killed the other person immediately. His teacher, at a martial arts show, stood holding two beautiful, ornamental-looking fans, looking quaint, and picturesque, and exotic, and then the teacher was simultaneously attacked by five blackbelts with swords, and an instant later the teacher stood holding two beautiful, ornamental-looking fans, looking quaint, and picturesque, and exotic, and all around him

were five blackbelts, on the ground, crying.

The martial artist I most respect said, humbly, gently, modestly, that even in the close calls, he had said, "You're the tough guy," and backed down, or run away, or almost anything possible (whatever it took), coming out the loser in every social confrontation, and he went on to say, "Most people who think they want to fight don't really want to fight." And I submit that the proof of his profound mastery of his art was this: he has passed through minefield after minefield after minefield such as I almost certainly could not, without stepping on a mine even once. The point is not that he happened to be carrying a first aid kit in case he did step on a mine. The point is not that he was carrying a very, very good first aid kit in case he did step on a mine. The proof of his mastery is that, as of my last knowledge, he had never needed to open his first aid kit, not even once. And indeed martial artists often defuse a potential fight before most outsiders would recognize there was anything going out of the ordinary going on.

Incidentally, though there was no question of my ever wanting to give a physical attack when I was in his class, I was quite the jackass and quite the belligerent student, and he only ever answered me with humility and gentleness. In the end, his gentleness conquered me.

What about what I have somewhat whimsically called "Tong Fior"? In my own opinion, my credentials make for an pretty impressive parody of martial arts, unless you want to go through the *ha, ha, only serious* route. I've lifted weights (and lifted weight machines, and broken weight machines by applying too much force), climbed with devotion, in riflery went from no rank to Sharpshooter, Bar VIII in one week, punched at bags, dipped a finger in a few martial arts, made my own approximation of

ninjutsu stealth (and unintentionally got a stunned "Whaaaaa?" when these skills came out in campers' response to games in nature with me as their camp counselor, asking, "Did you go to some special Daniel Boone school [to be able to move so silently and be sensitive to sounds that were apparently around 0 dB]?"), and am gifted to the degree that professionals say "You're smarter than most geniuses" or "The average Harvard Ph.D. has never met someone as talented as you" (the gifts are not magic powers but for some purposes they might as well be), and other things which should be preferably viewed as ornamental at best. One question outsiders ask of martial artists is how well they'd do in a real fight; the question comes perhaps with hope at a training that would make the asker all but invincible, the basic response to that question is "HTTP Error 404: Missing Page": if you're not already the one and only Miyamoto Musashi, Japan's "sword-saint", no martial art can change that at all. I would show respect for Kuk Sool Won by saying that one second degree black belt said, "I would give myself one chance in two. But the more chances you give yourself, the less you have." I've had experienced the martial arts practicality, as one martial artist's parody ad said, "Get beat up by people twice your age and half your size!" There is one point where I expect victory would come, and that is if the Spirit of the Lord comes on me. Orthodox priests should not employ physical violence, and in the profound story of [Father Arseny: Priest, Prisoner, Spiritual Father](#), people are flabbergasted when the weakened and aged monk Fr. Arseny steps where a fight has broken out and strikes a forceful blow. Possibly if the Spirit of the Lord falls on me, I might blast through a 9th kyu, or possibly for that matter a 9th dan. In all other cases it is not my concern.

[The Orthodox martial art is living the Sermon on the Mount,](#)

and the struggles I now wrestle with are not flesh and blood, though they have brought me through mortal danger more than once. Kuk Sool Won in every school but one says, "We need more practice!" The Kuk Sa Bo Nim (Grandmaster)'s headquarters school says, "You need more practice!" I'll go with "We need more practice!", please, or better "I need more practice!", or if I can bring it even closer to my true needs, "Lord, give me more time to repent."

(And a true monk leaves us both in the dust. Though extraordinarily many married Orthodox perfectly well without any of the structure by which God condescends to meet monks.)

(This article is dedicated to [the great warrior-martyr St. Mercurius](#), who destroyed the impious emperor Julian the Apostate from beyond the grave.)

# The Transcendent God Who Approaches Us Through Our Neighbor

The temperature of Heaven can be rather accurately computed from available data. Our authority is the Bible: Isaiah 30:26 reads, Moreover the light of the Moon shall be as the light of the Sun and the light of the Sun shall be sevenfold, as the light of seven days. Thus Heaven receives from the Moon as much radiation as we do from the Sun and in addition seven times seven (forty-nine) times as much as the Earth does from the Sun, or fifty times in all. The light we receive from the Moon is a ten-thousandth of the light we receive from the sun, so we can ignore that. With these data we can compute the temperature of Heaven. The radiation falling on Heaven will heat it to the point where the heat lost by radiation is just equal to the heat lost by radiation. Using the Stefan-Boltzmann fourth power law for radiation and where  $H$  is the temperature of Heaven,  $E$  that of the Earth - 300 K - we have

$$(H/E)^4 = 50.$$

This gives H as 798 K or 525°C.

The exact temperature of Hell cannot be computed but it must be less than 444.6°C, the temperature at which brimstone or sulphur changes from a liquid to a gas.

Revelations 21:8: But the fearful, and unbelieving . . . shall have their part in the lake which burneth with fire and brimstone. A lake of molten brimstone means that its temperature must be below the boiling point, which is 444.6°C.

We have, then, temperature of Heaven, 525°C.  
Temperature of Hell, less than 445°C. Therefore, Heaven is hotter than Hell.

Applied Optics, 11, A14 (1972)

One brief remark before continuing: one man I knew was in an elevator on a sweltering hot day, when a profusely sweating jogger stepped into the elevator and said, "It's hotter 'n Hell out there!" and he replied, slowly, "No, it isn't." There is something amiss with the humorous quote above, and Mark Twain, the great humorist, wrote, "The secret source of humor itself is not joy but sorrow. There is no humor in Heaven." There is a sense in Orthodoxy that humor does not belong in the holiest places, and devout Orthodox I know have a deep joy but laugh little. The connotations of "humorless" do not describe them; they are not sour, nor joyless, nor rigid, nor quick to take offense, but they are luminous with the Light of a Heaven that needs no humor.

But the physicist quoted above underscores something: words are inadequate to capture Heaven. There are situations in life where words fail us: people say, "Words cannot express how

where words fail us. people say, "words cannot express how grateful I am." And if words fail us for expressing gratitude, for instance, or romantic love, they fail all the more in describing Heaven and God. "Eye has not seen, ear has not heard, heart has not conceived, what God has prepared for them that love him:" words cannot express Heaven, nor God.

In classical theology this is spoken of as God's transcendence: God is infinitely far beyond any created thing. He is reflected in a million ways in our created world, but the hidden transcendent God is beyond all of them. In a book of profound influence but only a few pages long, *The Mystical Theology*, St. Dionysius writes of ascending towards God:

The fact is that the more we take flight upward, the more our words are confined to the ideas we are capable of forming; so that now as we plunge into that darkness which is beyond intellect, we shall find ourselves not simply running short of words but actually speechless and unknowing...

So this is what we say. The Cause of all is above all and is not inexistent, lifeless, speechless, mindless. He is not a material body, and hence has neither shape nor form, quality, quantity, or weight. He is not in any place and can neither be seen nor be touched. He is neither perceived nor is he perceptible. He suffers neither disorder nor disturbance and is overwhelmed by no earthly passion. He is not powerless and subject to the disturbances caused by sense perception. He endures no deprivation of light. He passes through no change, decay, division, loss, no ebb and flow, nothing of which the senses may be aware. None of all this can either be identified with it nor attributed to it.

Again, as we climb higher we say this. He is not soul or

mind, nor does he possess imagination, conviction, speech, or understanding. Nor is he speech per se, understanding per se. He cannot be spoken of and he cannot be grasped by understanding. He is not number or order, greatness or smallness, equality or inequality, similarity or dissimilarity. He is not immovable, moving, or at rest. He has no power, he is not power, nor is he light. He does not live nor is he life. He is not a substance, nor is he eternity or time. He cannot be grasped by the understanding since he is neither knowledge nor truth. He is not kingship. He is not wisdom. He is neither one nor oneness, divinity nor goodness. Nor is he a spirit, in the sense in which we understand that term. He is not sonship or fatherhood and he is nothing known to us or to any other being. He falls neither within the predicate of nonbeing nor of being. Existing beings do not know him as he actually is and he does not know them as they are. There is no speaking of him, nor name nor knowledge of him. Darkness and light, error and truth—he is none of these. He is beyond assertion and denial. We make assertions and denials of what is next to him, but never of him, for he is both beyond every assertion, being the perfect and unique cause of all things, and, by virtue of his preeminently simple and absolute nature, free of every limitation, beyond every limitation; he is also beyond every denial.

Over a millenium before a Bultmann would go on a program of saying that the images we have in Scripture are inadequate, the Orthodox Church would do one better. Her saints would tell of the hidden transcendent God who transcends everything we might say of him. And better than this can be said. God transcends his own transcendence, and transcends

transcendence itself. And here we must leave Bultmann completely behind as not having gone far enough.

God transcends his own transcendence, and the transcendent God so far transcends his own transcendence that not only is he infinitesimally close to the Creation, immanent to all Creation, but he entered his Creation: God became man. And the reason God became man is that man might become divine. And there is never a sharp separation between Christ coming to save mankind and Christ coming to save the whole Creation: the transcendent God so far transcends his own incomparable transcendence that he is at work to deify men, and ultimately the whole Creation. In Christ there is no male nor female, paradise nor inhabited world, heaven nor earth, spiritual nor material, uncreated nor created, but Christ is all, and in all, and transcends all, and in him all these differences are to be transcended. The transcendent Christ God transcends his Creation and transcends his own transcendence, and he returns to his Father in victory, bearing deified men and Creation as trophies who share in his transcendent victory. There is no distinction between male and female, paradise and the inhabited world, heaven and earth, spiritual and material, uncreated God and created creation, for the same transcendent Lord is Lord of all and bestows riches upon all who call him, and makes all one in Christ Jesus.

And this Lord who infinitely transcends his creation shouts through it. He shouts through icons, through every human love, through music, through storm and star. He is a God who so far transcends his Creation that he can enter into it, and a failure to love our neighbor is a failure to love God. Consider [the parable of the sheep and the goats](#):

When the Son of man comes in his glory, and all the

angels with him, then he will sit on his glorious throne.

Before him will be gathered all the nations, and he will separate them one from another as a shepherd separates the sheep from the goats, and he will place the sheep at his right hand, but the goats at the left.

Then the King will say to those at his right hand, "Come, O blessed of my Father, inherit the kingdom prepared for you from the foundation of the world; for I was hungry and you gave me food, I was thirsty and you gave me drink, I was a stranger and you welcomed me, I was naked and you clothed me, I was sick and you visited me, I was in prison and you came to me."

Then the righteous will answer him, "Lord, when did we see thee hungry and feed thee, or thirsty and give thee drink? And when did we see thee a stranger and welcome thee, or naked and clothe thee? And when did we see thee sick or in prison and visit thee?"

And the King will answer them, "Truly, I say to you, as you did it to one of the least of these my brethren, you did it to me."

Then he will say to those at his left hand, "Depart from me, you cursed, into the eternal fire prepared for the devil and his angels; for I was hungry and you gave me no food, I was thirsty and you gave me no drink, I was a stranger and you did not welcome me, naked and you did not clothe me, sick and in prison and you did not visit me."

Then they also will answer, "Lord, when did we see thee hungry or thirsty or a stranger or naked or sick or in prison, and did not minister to thee?"

Then he will answer them, "Truly, I say to you, as you did it not to one of the least of these, you did it not to me."

.....

And they will go away into eternal punishment, but the righteous into eternal life.

This transcendent God transcends his own Creation and transcends his own transcendence that his image is imprinted in every man, woman, and child, and we cannot fail to love our neighbor without failing to love Christ God; we cannot mistreat our neighbor without mistreating Christ God. Christ so far transcends his own transcendence that there is not the faintest gap between our treatment of our least neighbors and our treatment of Christ God himself. The Pope is not Christ's vicar on earth; our neighbor is Christ's vicar on earth, and how we treat our neighbor is vicariously how we treat the Christ we will answer to on Judgment Day.

And who is our neighbor? Let's have a slightly updated answer with disturbing clarity:

A certain religious scholar stood up and tested Jesus, saying, "Teacher, what shall I do to inherit eternal Life?"

He said to him, "What is written in the heart of the Bible? How do you read it?"

He answered, "You shall love the Lord your God with all your inward being, with all your soul, with all your strength, and with all your mind; and your neighbor as yourself."

He said to him, "You have answered correctly. Do this, and you will live."

But he, desiring to justify himself, asked Jesus, "Who is my neighbor?"

Jesus answered, "A certain man, an American, went into the worst part of town at night and was held up by thugs who took not only took his valuables but beat him and left him for dead, throwing him deep into a dark alley.

"By chance a police officer was walking down that way. When he saw the man, he gave the alley a wide berth and ran along.

"In the same way a boy scout passed through the place and gave the alley a wide berth.

"But when it got to the wee hours of the morning, he heard footsteps and a terrorist came along, and the man called out 'Help me!' from the dark alley in the worst part of town. And the terrorist was viscerally moved with compassion, came to him, and bandaged his wounds, using some of his clothing, and carried him to an emergency room.

"When the terrorist left, he took all of the money that he had with him, and gave it to the hospital, and said, 'Take care of him. Whatever you spend beyond what I have given you, I will repay.'

"Now which of these three do you think seemed to be a neighbor to him who fell among the robbers?"

He said, "He who showed mercy on him." Then Jesus said to him, "Go and do likewise."

Do you believe God is transcendent? Go and do likewise to the transcendent Christ who approaches you in you neighbor.

# Treasure

## Treasure is not measured in dollars

I would like to begin by telling a story. I was in a medical waiting room for a medical test, when a mother came in, pulling along a little girl by the hand, and taking care of the paperwork. The child had, by the looks of it, slammed her thumb in a door or something similar: there was a dark purple bulge under her thumbnail. I remembered when that had happened to me, and I was **not** a happy camper. No wonder the little girl was bawling her eyes out!

She was sitting in a chair, and I thought things might be better if she were engaged in a conversation. So, gently and softly, I told her a joke: "What kind of musical instrument does a dog play?" and answered, "A trombone." She didn't get it. So I tried to talk about several other things, trying and failing to engage her in conversation. After a few minutes, I had still managed an absolute zero percent success rate at making age-appropriate conversation that would allow her to contribute her half of the conversation. But I realized something: she was looking at me, and she was not crying. I had obtained her rapt attention. and for the moment she had completely stopped

crying.

I was called and politely took my leave; a few minutes later, after my blood draw, I came out and the mother was giving TLC and comforting her daughter. The mother said, "You have a very gentle way about you." I thanked her, shook the daughter's hand, and told her, "I have to leave now, but I'm glad I met you." The mother repeated once or twice, "You have a very gentle way about you." And she caressed her little one.

This is a tale of treasure, and it arose in my heart, perhaps, because none of it is measured with dollars. My blood test cost money, of course, and the treatment of the child's thumb presumably also cost money, of course, but the treasure is not measured in dollars. If the treasure were of gold, or some other material item, one could equate treasure with a high dollar value, but for the mother to pay me money, or for me to ask for it, would have been a crass way of defacing a treasure. There was joy and a lesson in it for me, and pain relief and a pleasant meeting for the child, but this, this treasure, falls under the heading of "The best things in life are free."

By contrast, I would tell a joke:

I was trying to help a friend's son look into colleges, and yesterday he handed me the phone, really excited, and said, "You have got to speak with these guys." I fumbled the phone, picked it up, and heard, "—online. We offer perhaps the best-rounded of degrees, and from day one our students are equipped with a top-of-the-line Dell running up-to-the-minute Vista. We address back-end issues, giving students a grounding in Visual Basic .NET, striking the right balance between 'reach' and 'rich,' and a thorough groundings in Flash-based design and web design optimized for the latest

version of Internet Explorer. Throw in an MCSE, and marketing-based communication instruction that harnesses the full power of PowerPoint and covers the most effective ways to make use of animated pop-ups, opt-in subscriber lists, and—"

I interrupted. "Excuse me, but what is your institution called?"

"The Aristocrats."

For those of you who have been spared the joke, there is a classic off-color joke where a group of performers approach a theatre owner or the like, are asked what they do and describe an X-rated show that is grosser than gross (bestiality, necrophilia, ...), and when asked what they are called, say, "The Aristocrats."

The fork off that joke above is that all of these mostly technological items, however expensive, are false treasure at best. The original "The Aristocrats" is plain in advertising anti-treasure; the latter take, in a Unix chauvinist's way, has things that appear to be treasure but are really false treasure, anti-treasure that calls for the grosser-than-gross punch line. *And perhaps more than one of those jokes is false treasure, but we won't go into that.*

My reason for mentioning treasure that is free, like the best things in life, and expensive anti-treasure, is to say that while many treasures may be worth money, and bigger treasures can be worth more money, real treasure is beyond money. *The best things in life are free*, as the saying goes.

## Living for treasure

I live to create treasure. Actually I live to contemplate God, and worship his glory, but there are a million concrete ways one can contemplate God, and one of them is creating treasure. [My website at cjshayward.com](http://cjshayward.com) is created to be a treasure, or a treasurehouse of treasures, and while there are pieces you could look at and say, "You botched this and that," my intent is still to create a treasure. There are other areas where I try to create treasure (a picturebook of loved ones for a hospitalized child), but the greatest success I receive is to finish something and find it has been a treasure to the person who has received it.

In [Doxology](#), God the Father is called,

The Treasure for whom all treasures are named,

And if ever there is treasure, he is God. Mankind and angels are treasures; there is a discussion in the Gospel where Christ is asked if it is lawful to pay a tax or not, asks to see the coin used to pay the tax, and asked whose image and superscription it was. "Give what is Caesar's to Caesar, and what is God's to God;" thus

Jesus Christ appealed to a principle that whoever coins money has the authority to tax that money. Augustine picks up on this:

["Caesar seeketh his image; render it; God seeketh his image; render it. Let not Caesar lose from you his coin: let not God lose](#)

in you His coin." He explores it, and there is the suggestion at least that we are God's coins: first and foremost by being struck with his image, but it cannot be too far from mind that coins could be struck on precious metal, that a coin is treasure. Augustine attends to the minor point, that the mere earthly coin with Caesar's image is due to Caesar, but all the much more the coin imprinted in the image of God and nothing less, is due to God: a parish of faithful followers is much more a treasury than a room with chests of silver coins.

The Lord God Almighty and the Uncreated Light reigns over all; the Uncreated Light illumines the cherubim, seraphim, thrones, dominions, powers, authorities, principalities, archangels, and angels: the glory and treasure of the Lord thunder through rank on rank of angel host. The Mother of God bore God in her womb and exchanged with her Son: she gave him his humanity, and he gave to her from his divinity, leaving her as a treasure eclipsing all the angels. The treasure unfurls and unfolds on earth: the sacramental priesthood and the spiritual priesthood, songs, liturgy, angels, and ten thousand other treasures. And treasure is close to the heart of the treasure of the Church: a Church saying says, "If you have two small coins, you use one to buy bread for the altar, and the other to buy flowers for the icons."

## Hard treasure

There are some hard lessons in [The Best Things In Life Are Free](#), and hard lessons in [Maximum Christ](#), [Maximum Ambition](#), [Maximum Repentance](#). But both of these give up false treasure for true treasure, true treasure for greater treasure. Christ commanded something great: "[Lay not up for yourselves treasures upon earth, where moth and rust doth corrupt, and where thieves break through and steal: But lay up for yourselves treasures in heaven, where neither moth nor rust doth corrupt, and where thieves do not break through nor steal: For where your treasure is, there will your heart be also.](#)" Some of us are to hold earthly treasure with detachment; others are to get rid of it altogether, but in any case we are called to reach far beyond earthly treasure for treasures in Heaven, such as good works, virtues, and graces. The call is a Narnian [Further up and further in!](#)

We live in a time where treasures seem to be evaporating, or at least money. Once a rising standard of living was taken for granted; now employment is not taken for granted. We are urged to sell gold for cash. But treasure is still here. [The best things in life are free](#), even now, [even if we are in an arena, a cosmic coliseum](#). False treasures abound; for treacherous technology, see [the Technomicon](#). And there is a great deal in technologies that can be treacherous, [with a right grievous backswing](#). But

that is not all.

The authors John Calvin and Thomas Hobbes were authors with a very pessimistic view of mankind. But in the comic strip named after them, *Calvin and Hobbes*, we meet a claim well worth heeding:

There's treasure everywhere!

# A Treatise on Touch

Touch is something deep which is lightly explored in my culture. I wish to explore it here.

It is characteristic of Western thought, probably in a tradition reaching back to the Greeks, to pay a strong degree of attention to sight when studying perception, to the exclusion of the other five senses. (The sixth sense is not ESP; it is the internal, kinesthetic sense, commonly called the sense of balance, which enables us to tell up from down; when this sense fails (after, for example, spinning around or drinking too much alcohol), we feel dizzy and become disoriented as to how to keep from falling over.) For example, in the Myers [Psychology](#) text, the vast majority of the space devoted to perception studied how we extract information from what our eyes report, so much so that ESP (which the authors did not believe in) received more attention and space than hearing, smell, taste, touch, and balance put together!

(I might incidentally comment that psychology, for all but the most recent times, has been explored as a part of philosophy, and in some ways has suffered more than any of the hard sciences from the separation. A lot of what goes on in psychology is truly bad philosophy, and would improve greatly if its theories

were grounded in good philosophy. Behaviorism is a prime example of this.)

In speaking about touch, I intend not to generally talk about sex, for a couple of reasons. The first is that sexual technique, along with massage, is perhaps the one (two) narrow and restricted area of touch that people are taking seriously; manuals on sexual technique exist in droves. And I might incidentally mention that I do not know sexual technique — that will come if and when I get married. But even to if I were expert in sexual technique, and were writing to an audience of married couples, I do not think that I would write about sex. It is not because I despise sex — I believe it right and good that an entire book of Scripture, the *Greatest of Songs*, is pure erotica.

It is for another reason, a reason that lies deeper.

The conception of romance and relationships in American thought is not nearly so universal as might be thought by someone who is from our time. At this point, I might shock the reader to drawing attention to how, in a great many cultures across much of time, people were happily married, sexually satisfied, and enjoying life, without ever having occur to them what modern America understands by romance. Romantic love was one of the great discoveries of the middle ages — a genuine discovery, because it was not really known.

If we exclude the supernatural love of agape, and the love-beyond-love of worship that is due to Jesus Christ, then we are left with four natural loves between human beings. There is the love of all other human beings, which applies even to strangers and even to enemies. Then there is the love of friends — a friend is both to be loved as a human being, and in a special way as a friend. There is next the love of one's own family — family are to be loved as human beings, in a special way as friends, and in a

more special way as family. Finally, there is the last love, a love which is romantic and sexual. A spouse is to be loved as a human being, in a special way as a friend, in a more special way as kin, and finally in the most special way as a lover, a lifelong partner and mate.

This fourth love does not stand on its own, and was never meant to in the first place. If we look in the Song of Songs, we see that the lover calls the beloved a woman, that the two are addressed as friends, and in particular he calls her his sister and then his bride. Even in a book all about sex, we see not sexual love in isolation, but sexual love as the crowning jewel, united with the other loves to make a rich and full marriage.

Romance, its delightful intoxication, is a wonderful and God-given thing. But it is transient, and when it wanes, there is (or at least should be) something far deeper than sex alone; that deeper, companionate love is what God intended as the basis for marriage, as thrilling as romance may be.

God created us as his image, and the particular way he in his goodness chose to do so was as a unity of spirit, soul, and body. The spirit, with its ability to love, is the greatest part, and love is greater than even rationality. But it is not the only part, or the only good. And even the word 'part' is deceptive; it suggests a collection of compartmental modules, when in fact there is a unity.

And in that unity, there is a spiritual way of drawing near and embracing by love; this is what Aquinas (for example) described as the will, seen not in the modern Nietzschean sense of iron determination, but rather as a recognition of good that inclines towards something. And in the spirit-soul-body unity by which God has blessed us, there is a physical way of drawing near and embracing by love. It is called touch.

If nothing else, by analogy at least, we should be able to look and see that among human loves there is a highest and superlative form of love in marriage, and yet the romantic love does not and should not stand in isolation, then sexual touch may be the highest, holiest, and most exciting form of touch by which God has blessed our race, but it probably wasn't created in isolation to be the only touch — even in marriage.

And if I may push the analogy even further, I would say that that touch is absolutely wonderful while it lasts, but it is not the fundamental or foundational touch of physical love, even in marriage. Something else is.

What I am saying here may be more transparently obvious to women than to men. Women tend to feel more the need for physical affection, men the sexual drive. And many men, especially those who grew up in households with little physical affection, may not only not see the need for physical affection, but be uncomfortable with it. Even then, I would ask you to bear with me.

Our society has inherited the disastrous wake of Victorianism, and is a post-Victorian culture; I will include here an appendix an essay which I wrote on Victorianism as the death knell to sexual purity in Western culture. Apart from referring the reader to that, I will simply say that we've inherited a mess.

The essay:

**Victorianism**, n. The death knell to sexual purity in Western culture.

Victorianism held sexual purity to be extremely important. All well and good, but it did not stop there. Victorianism believed sexual purity to be best approached via a Pharisaic guard around the Law. And, like every other guard around the Law, it did a tremendous amount of

guard around the Law, it did a tremendous amount of damage to numerous other things before destroying the very object it was meant to preserve.

Touch and community are vital elements of human health. This is witnessed in Scriptures that tell of John reclining in Jesus's bosom and in the hands quickly extended to pets, one of the few situations where our society will allow an innocent touch to be an innocent touch. An infant who is not held will wither and die, and psychologists have a bluntly accurate term for the failure of parents to hold and cuddle their children a great deal: abuse. And of course the special kind of community that exists between a husband and wife is given a special kind of touch.

Victorianism looked at sex and did not quite see something which is fundamentally good within a certain context. It saw something which was essentially evil (but tolerable at best within a certain context). And, in progressively widening circles, encompassing different forms of touch further and further from what is necessarily foreplay, saw that there exists at least some possibility for that touch to be sexual (at least from the perspective of the younger monk), and placed on each one a label of "This is dirty. Avoid it." Word such as "Greet one another with a kiss of love." cease to be acknowledged as a divine command which was given for human good, and instead look like, um, an odd cultural thing which, um, shows, um, um, um...

The aim, it appears, was to end up with nothing that was sexual. The result was to make everything sexual, and create a major unanticipated problem.

God created people with certain needs, and when those needs are not met, Satan comes in with counterfeit substitutes. These things are hard enough to resist to

substitutes. These things are hard enough to resist to someone whose needs are met with the genuine article; when there is an immense sucking vacuum coming from unmet needs, pushing away the counterfeits acquires a difficulty which is unbelievable. A little girl who is deprived of a father's hugs and kisses will grow into a young woman who has a tremendously difficult time avoiding sexual promiscuity, unsuccessfully searching in a series of abusive boyfriends' embraces for enough love to fill the emptiness inside.

Fortunately, most of Victorianism did not quite leave a stain that dark and deep, but there is still a major problem with a culture that refuses to wholeheartedly say, "It's OK.

You may enjoy an innocent touch as an innocent touch."

There is still a failure to meet a need that God created people to have filled, and still an uphill battle to fight off the counterfeit substitutes.

In this century, Victorianism has crumbled, but, like every other evil, it fails to crumble in the ways that a sane person would want it to crumble. What disappeared was not the prohibition on friendly touch, but the belief that sexual sin is a deadly poison which should be fought tooth and nail.

What appeared and took the place meant to be filled by innocent touch is something which is not innocent. Thus, Victorianism did a perfect job of making room and clearing the way for a great deal of lewdness.

Current Western culture is saturated with sexual sin, not despite, but because of the fact that it is the continuation of Victorian culture.

(There is one note I should like to mention before I forget.

The careful reader may ask why I am undertaking to write about touch and have other people read it; the practice does not involve touch as thinking about logical reasoning involves reasoning. My response is threefold: (1) You have a point to an extent; reading or writing this is not an act of touch. (2) There is a place for thinking and theory in a way that is never intended to be complete or self-sufficient. Christian theology is not an insular system of ideas, but an integrated part of the walk of faith in which one loves and is loved by God. (3) Theory strengthens and furthers practice, as physics furthers engineering. The invention of devices is far older than any empirically accurate knowledge of physics — but that doesn't mean that physics didn't add a whole new dimension to engineering.)

Having talked about the philosophy and theology surrounding touch, the reader may well be wondering if I am going to say anything about touch itself. And the answer is 'yes'. What I have been doing, or attempting to do at any rate, is to establish a framework that will make it possible to do so.

The first thing I will say about touch (perhaps belaboring the obvious, but remember George Orwell's words, "It is the first duty of intellectuals to state the obvious."), is that it is an immediate, proximal mode of perception. Sight, hearing, and smell, all work at a distance; touch only works when you are right with someone or something. This has rich potential for analogy — for instance, as you can only feel something if you draw near to it, so also there are ways in which you can only know something if you love it.

The second thing is that it is a baby's primary sense — not sight. Only later does sight come to dominate. The baby is continually engaged in a tactile exploration of the world. He puts

things into his mouth, not because plastic, cloth, wood, and stone taste wonderful, but because the tongue is the most sensitive part of the human body to touch — more sensitive than even the fingertips. And, long before the words "I love you." have any meaning to a child, touch constitutes the baby's awareness of his mother's love. He is enfolded by her body for nine months as she carries him, and when born he is held, and hugged and kissed. He is fed, not in some abstract way, but by nursing — a very special and intimate touch. It is presumably not coincidental that the focus of a baby's eyes is not twenty feet to infinity as with an adult, but eighteen inches — the distance between a mother's breast and her nose.

The third thing I would like to say is that, though touching is a surface to surface contact, it is anything but superficial. This is why doctors touch their patients when they want to know what is happening inside the body. In a few cases, exploratory surgery is necessary — they need to cut a person open to find out what's inside. But most of the time, they can probe and find out what's happening just by touching.

And, medicine aside, touch can communicate a wealth of information about a person's emotions. Muscle tension, skin temperature, sweat, rate and quality of pulse — all have a story to tell about what's going on inside a person's heart.

The fourth thing is that touch is deep. I am not sure exactly how to convey this, as I am trying to express something greater than what I myself know. But, in the absence of perfect knowledge, I'll give an analogy.

I have some training in martial arts. I have just enough knowledge to begin to appreciate the wealth of knowledge I do not know. I have seen the basics of pressure points, joint locks, and hip throws. I have seen enough to recognize that there are

subtleties which elude me, and rich veins to explore. If I were to devote the rest of my life to the study of martial arts, I would not lament with Alexander, "Alas! I have no more worlds to conquer." There would always be more there, always be more to explore.

For two specific kinds of touch — sex, and massage — there has been considerable exploration, and (though everybody can do them at least minimally) there are great books from which most people have a lot to learn.

Given what I know about God and his creation, I would be very surprised to learn that the rest of touch is shallow — that you learn a certain amount, and then there is nothing left to explore.

The fifth thing, in relation to the fourth, consists of a couple of analogies concerning what we may find in exploring touch. I believe that we find something like a language, but a language, a communication, that is alogical and non-symbolic. (This may, indeed, be a lot like one of the things feminism is searching for. I'll have to run this by a women's studies professor.) I believe it also to be like art and music — in an act that is creative, and an expression of beauty. I believe it also to be qualitative rather than quantitative by nature — returning to the theme of an alogical language, this would communicate not the rule-based formal manipulations computers are capable of, but the qualities, the experience, of which computers are incapable.

I would now like to engage in a thought experiment. I will ask you to imagine three times that you put your hand into a dark hole in a wall, through which you cannot see.

The first time, you almost hurt yourself touching a sharp corner. As you feel inside, you recognize the shape of a box — a hard metal box. It is cold, unresponsive, and unyielding; it does not acknowledge your presence.

The second time, you meet no resistance; you have plunged your hand into a bucket of water. The water is too responsive and too yielding; there is nothing there but an acknowledgement of your presence. It has no shape but the shape of your hand; there is nothing there. So you pull your hand out and dry it off.

The third time you stick your hand in, you meet something that is yielding and yet solid, something that responds not out of what your hand is alone, but what it is. You meet something that is warm. You touch another human hand. As you touch, it wraps around, clasps, embraces your hand. You have finally found something very good.

Human touch is, or at least should be, like the third experience. It is not just a moderate between two extremes; it is something more. It is warm.

---

In the Vietnam War, the Viet Cong understood very well that warfare is won, not by destroying soldiers, but by destroying soldiers' morale. That is why they had a very poor kill ratio, and were fighting a modern war against an enemy that vastly outranked them in resources, and still were never defeated.

One of the many weapons in that arsenal was called a 'ballbuster'. It was a non-lethal anti-personnel land mine with a three foot blast radius.

Of the U.S. soldiers hit by such mines, there were some that still had male hormones produced by their bodies afterwards. And investigations showed that they were the men who had been involved in real, intimate relationships beforehand. Not, presumably, the common soldier's visit to the brothel, or the rape of local women that has been a part of warfare since time immemorial. That is a dismal rule whose exceptions are few and far between. But real relationships. Those men still had testosterone.

The most sexual organ in the human body is not the genital organ, nor even the gonads. It is the brain.

Sex goes much further than just a physical act. It unites souls. It was created as such.

And again seeing as God has created us as spirit-soul-body unities, isn't there every reason to believe that this is not isolated to sex? That when we touch other people, it need not be only with our bodies, but can also be with spirit and soul?

Madeleine L'Engle wrote of kything in [A Wind in the Door](#). In one way, it is a colorful and fantastic picture of prayer, that shows its beauty. In another way, it seems to capture, not so much the literal fact, as the way of the best touching.

---

Individualism is a very impoverished notion of personhood, and touch is not a thin bridge between two essential islands, nor an act that one person (subject) does to another person as to an inanimate object; the latter, if a picture of any kind of "touch", is a picture of rape.

Aquinas viewed teacher teaching and learner learning as part of the same activity; another helpful notion is that of intersubjectivity — it is not between isolated subject and object, but between two connected subjects. This doesn't mean that there is uniformity and absolute symmetry; nursing mother and child cannot simply swap places. But it is intersubjective.

This may be an interesting way to view what constitutes the difference between making love and rape. Physically, the two are not very different — they have much, much more in common than making love and nursing a baby do, or than rape and murder (or even two kinds of murder) do. But spiritually, they are leagues apart. Making love is between two connected subjects, and rape is done by a subject to an object; spiritually and philosophically, these are two very different things. And it might be that the way rape crushes a woman's psyche has much less to do with the physical event than the fact that a subject, an 'I', is reduced to an object, an 'it'.

(Of course, another aspect is that the greatest evils come from twisting the greatest goods; Hitler could not have done one tenth the damage he did unless he were the legendary leader that he was.)

Something like this is related to why the mystics refer to God as 'I' without blaspheming. If a person must be understood as a subject, as an 'I' and not an 'it', how much moreso the Lord

## God of Hosts?

I would like to now talk about different forms of touch. I will not attempt here to begin in a logical order, first things first, because I am taken by a whimsy, a quality. I will begin talking about one of my favorite touches, tickling.

In a lighthearted mood, I coined the following beatitude:

Blessed are the ticklish,

For the touch of a friend shall fill them with laughter.

Tickling is light. It is a tactile tease. It is carefree, spontaneous, and whimsical. It is trusting. It is the least solemn of all the touches; it is serious and intimate, but in a completely silly and nonsensical way — thank God! Its very seriousness and intimacy is ruined if it becomes heavy and what most people think of when they hear 'serious'. There is something special about it, something so special that both tickling and other things are ruined if, for example, someone tickles a person whose friend just died. Tickling can greatly enrich and deepen our understanding of what it means to be serious, if we let it.

There is an infinite difference between a friend's playful teasing, and a cynic's sneering. Neither is solemn or formal, but they lack solemnity and formality for very opposite reasons, just as a baby and an old man can lack hair, not because they are of the same age, but because they lie at opposite extremes.

A friend's teasing is infinitely respectful. It is a respect which lies far too deep to confine to being somber, a respect which must bubble up into exuberance and say, "I take you far too seriously not to take you lightly."

At this point, I will treat a certain aspect that may run the risk of offending feminists; I will ask for a suspended judgment until at least I have made my case. I am going to say this:

sometimes 'no' means 'no', and sometimes 'no' means 'yes'.

I am not here justifying the claim that "Her lips said 'no', but her eyes said 'yes'." That is stated chiefly by men who lack the honesty to admit, perhaps even to themselves, that "Her lips and her eyes said 'no', but my lust said 'yes'." I will damn that alongside any feminist.

What I am rather saying is that tickling exemplifies a pattern, a pattern of love and community that does not reduce to words. Consent is an important principle, but using explicit verbal words to inquire is a last resort, usually only necessary when two people do not know each other very well. And there is something deep enough about consent that it, and furthermore its recognition, are entirely compatible with saying 'no' or 'stop', or offering physical resistance.

As a paradigm example of this, I would point to a parent chasing around a little child in a back yard. The child is trying to escape, and in a sense doesn't want to be caught. But in a deeper sense, he does want to be caught. (I at this point remember one woman, who, disappointed that I had stopped tickling her when she pushed my hands away, told me, "I am blocking you because I want you to push past.") This is why it is good for a child's psyche to be chased by a parent, even (especially) if he is caught, and it is very bad for a woman's psyche to be chased by a rapist, even if she gets away.

Chasing, or tickling, is or at least should be an intersubjective act of love. What fundamentally distinguishes it from rape is not so much what lies on the surface as that deep below the surface, the one is done between two subjects, while the other is done by a subject to an object. The deep connection between two subjects is what enables 'no' to mean 'yes'.

And tickling is not so much for the tickling as for the other

person. It is not an act in isolation; it is a part of love. This provides another distinction between tickling and rape. The rapist does not truly desire the woman, even as just an object, an 'it'; he desires the rape, the action, an action that exists self-sufficient, by itself and without any need of a larger context. Perhaps the rapist is to be greatly pitied alongside the victim; it does not cause consciously realized unending torment as being raped does, but it is a single act within oneself, an act of masturbation that involves an unfortunate woman, rather than an intersubjective act of love that transcends self. Even if rape did not violate a woman's personhood and were not morally wrong, it would still be greatly be desired for his own sake that a rapist could let go of rape and give-receive a real hug.

---

The next touch I'll mention is holding hands.

Someone once said, "If all other arguments failed, the thumb alone would convince me of God's existence." The hand is one of the most beautiful parts of the body; it contains the glory of the whole body in miniature. If you haven't done so already, at least once in your life, I would encourage you to notice hands, to look at someone's hands (yours or somebody else's) as you would an Impressionist nude. I don't think it is quite an accident that Michelangelo's David, the single greatest male nude in Western sculpture, has hands that are just a little bit larger than they are proportioned in real life. The David's hands are exquisite.

The hand is in a sense the most useful tool we have. It is amazing, strong, dextrous, sensitive, and versatile. It is uniquely adapted both to manipulate, and to feel and explore. And so it is not a surprise that one of the touches God has given us is holding hands — an equal touch between two sensitive areas of the body, which can last.

Our culture understands holding hands primarily in a romantic context — which it certainly can be, but need not be. At least a hint of this is seen in that parents hold little children's hands. I still hold my twelve year old brothers' hands, and I am happy to do so.

In many Islamic nations, men hold hands in public. This is not a sexual act (and, unfortunately, is not extended to women — even wives), and the fact that it may take some effort to really realize by many of us is reflective of a fundamental problem in how many of us view sex and morality.

Dorothy Sayers, in her essay, "The other six deadly sins," points out that a man could be a liar and a drunkard, greedy and

avaricious, wrathful, prideful, and dead to every noble instinct, and still we would not call him immoral, because we reserve the term 'immorality' to talk about — well, you know, immorality. Thus a term that was meant to cover the whole range of vices is reduced to referring to just one, because we are two embarrassed to call that one vice by its name, lust. Lust is one of the seven deadly sins; it is not the deadly sin. And the Church has always recognized that the cold-hearted sins, the sins of mind and spirit such as pride and greed, are infinitely worse than the disreputable sins of the flesh, such as lust. In the [Inferno](#), the incontinent occupy the very least and outermost circle of Hell proper; it is only far deeper that we find sins like pride, the sin by which the highest and holiest being in all creation became the Satan, the Accuser who stands before God accusing the saints day and night.

(One thing that I beg of you here — do not flatter me by saying that I am original in claiming this; do not credit me with this innovation. Christianity has taught this for ages; it has just become a bit obscured recently.)

Homosexual lust, in this scheme, is in a sense worse than heterosexual lust; it is a perversion of nature in a way that even adultery is not. But it is not the vice beyond all vices, and it does not compare even to pride. And it is really paid a far-reaching and very undue tribute when it is held in the fear that it is, in how (for example) many men in our culture fear touching each other. All sin is serious, but in most cases the possibility of homosexual lust is not that serious of a threat that men need to be afraid of each other. Therefore, the Islamic world has it right in the level of touchiness and contact that it has between men.

Holding hands is a touch that can be deepened by pressure,

variations in pressure, and responsiveness; one of the most common and basic letters in this alphabet is in giving a squeeze or answering a squeeze with another squeeze; it is a theme which has infinite variations. And this provides a lot of depth to a touch, making a touch more touchy, the very opposite of holding hands like a dead fish.

---

I would like to make a brief interlude to talk about the question of what touches are sexual — and to refuse to give a Pharisaic catalogue.

The Pharisees attempted the doomed project of an exacting guard of rules, more specifically the wrong type of rules. By contrast, I would like to draw an analogy with what C.S. Lewis said in [Mere Christianity](#) about modesty in dress across cultures.

Different cultures vary greatly in what social rules they have concerning covering and showing different parts of the body. But having a principle of modesty does not, even in cultures that do not wear any clothing. It is like language; what sounds bear what meaning is highly variable. But having sounds that bear meaning, and parts of speech and grammar, is not. That is universal — and the deaf subculture is the exception that proves the rule; even when they can't hear to be able to naturally converse as everyone else does, they use their eyes and hands in a language of hand signs.

Another analogy might be found in comparing the U.S. borders with Canada and Mexico. Much (not all) of the Canadian border lies at a single latitude; there is a near-universal rule that tells, "One mile north of this latitude, you are in Canada; one mile south, you are in the U.S.A." But no such rule exists between the U.S. and Mexico; there are some latitudes that (given that one is on land in North America) tell you that you're in the U.S., and some latitudes that tell you that you are in Mexico, but a great many latitudes that could be either in the U.S. or Mexico.

However, the U.S.-Mexican border is just as sharply defined as that between the U.S. and Canada; the latitudinal rules fail in many cases, but there is still a razor sharp distinction to be

made.

That distinction is made in the Holy Spirit; it is the Spirit who is the structure of obedience revealed in the New Testament, and that gives the believer the power to obey. Any kind of touch can be sexual, and a good many can be non-sexual as well. And the power to be pure, the power to reserve sexual touch for its proper and special place, comes to the believer through the Holy Spirit.

---

I would like to say something more about tickling: it is dependent, not only on body, but also on mind. I will not belabor the obvious point that certain touches tickle some people, but rather point out something else: whether something tickles, depends on how it is perceived. A thin cotton shirt touches very lightly — but it does not tickle. And conversely, some vivid use of language can tickle from far away.

---

The kiss seems to receive the most attention in Scripture. The second verse of the Song of Songs says, "Let him kiss me with the kisses of his mouth." And half the New Testament epistles say, in their closing exhortations, "Greet one another with a holy kiss." In a sense, the kiss is a symbol of all contact in Scripture. And it is significant that the prophets record Elijah being told when he is desperate, "I have reserved for myself seven thousand who have not bowed the knee to Ba'al, nor have their mouths kissed him." It is so great of a touch that it cannot be bestowed on an idol.

To those who have seen it, I would recall the movie *The Last Temptation of Christ*. The kisses in even a seriously flawed movie stand out; the emotional charge bristles, and the final kiss between Christ and Judas stands as a tribute to how even a non-sexual kiss can be intense and passionate. And the kisses recorded in *Genesis* stand as a hallmark of that book's sensitivity to emotion.

Someone writing about music talked about how, as a person's experience with music grows, the keys gain different and distinct emotional residues, different moods, different qualities. And the same is true of touch, only moreso. There are twelve major and twelve minor keys, and that is fixed; but with each of the basic touches, there are variants, and variants of variants. A kiss may be on the lips or not on the lips, just a peck or longer, and so on, and these allow not just discrete combinations, but a continuum. And this provides room for great subtleties in emotional significance.

---

I just got back from my cognitive science class, and I believe that touch provides a good illustration of what is lacking in the classical model of cognition.

The classical model of cognition describes human thought as an essentially rule-based manipulation of symbols, ideally manifested in a formal game such as chess. Of one area where it is lacking — that of simulation, where people manipulate in their heads models or representations of things — I will not treat here. But there is another area which I *will* treat; I am not contesting that there are parts of the human mind that are well described in that manner, but rather that it is a description of a part, and not, by a long stretch of imagination, the whole. And so I will outline seven differences.

The first is that chess is manifestation-independent, while touch is fundamentally qualitative. Perhaps the best way I can put it is this. Humans happen to refer to chess pieces by poetic names, such as 'knight' and 'castle'. But that is entirely irrelevant to the game; Deep Blue beat Kasparov without having the faintest inkling of the romance we know, of knights in shining armor and fair maidens in distress. And chess would be the same if Bill Gates played it with helicopters on rooftops; that is, the real game of chess can be separated from the physical objects which happen to be used in its play.

But this is not true of touch — at all. Chess is still chess without a chessboard; and it happens in blindfolded masters' games. But a kiss would not still be a kiss without bodies, and I could not touch in anything remotely resembling the way I do now, if my soul were transplanted to the body of a steel robot.

There is a formal sense in which the numbers 1297 and 1348 are different, and in which we can recognize them as such, but

there is a much deeper way in which red and green affect us differently; there is a fundamental qualitative difference in looking at two objects of different colors that we cannot experience in simply thinking about two different numbers. This kind of quality, which occurs incidentally (if at all) in chess, is fundamental to touch.

And in some way, this touches on a problem in Western thought, an occurrence of the ancient Gnostic heresy which recognizes us as spirits and minds, but refuses to give any recognition to us as animals whom God created to be fundamentally physical as well as fundamentally spiritual. Our bodies are not a merely coincidental attachment to our minds; God created us to be a certain way physically as well as a certain way spiritually, and body is not to be dispensed with or altered as we please. Touching is an act of the body, involving mind and spirit as it may, and it is (God be praised) not something we can simply assign the way we assign a particular shirt to cover us. Seeing everything as chess makes us pure minds who have the misfortune to be encumbered by some (possibly mutable) matter; seeing some things as touch recognizes us as blessed with some particular bodies, which are a part of us as much as reason is a part of us. God has given us a very earthy spirituality.

The second difference is that chess is driven by a single objective in the future, to which any particular action is a mere instrument, while touch embraces now and recognizes things as intrinsically good. (Now the truth is not either alone but both, and if I do not talk much about our ultimate future goal, it will only be by a restriction of attention.) In chess, there is one objective — checkmating your opponent before he can checkmate you — and nothing else is done because it is good in and of itself, but only because it can function as a means to that

end. A checkmate is never made by a single move, except between two terrible players; it is carefully prepared in anticipation. Now goals, ends, and sacrifices are very important, probably more important than what I am concerned with here. But touch doesn't work that way. A touch is not given because of what it will enable at some later moment, as a mere means to an end; it is given as valuable in and of itself. And we do not touch in the future, but touch now; the now (as well as the future) is given by God's hand.

The third difference, which is probably more restricted to chess and other games than formal systems in general, but which I will mention, is that chess is oppositional, while touch is synergistic. What is good for your opponent in chess is bad for you, and vice versa. The success of one person necessitates the failure of another. Now there are principles of good sportsmanship, but these come because people are better than chess, and not from chess itself. Chess sets people at odds with each other, in and of itself. Touch, on the other hand, is of a cooperative and synergistic nature; for one person to benefit means in general the benefit and not the detriment of another. You will fare badly with someone who plays chess well; you will fare well with someone whose touch is good.

The fourth difference is that chess is digital and discrete, while touch is continuous. Touch moves not simply from black and white to a greyscale, but even further — to colors, where there are many different ways of being bright. I have talked about this before, so I will not treat it in detail here beyond saying that it ties into the qualitative aspect.

The fifth difference is that chess is abstract, while touch is concrete. Abstraction extracts certain key features, and then leaves the specific instances behind, which is a powerful thing to

do, and good, but not the only kind of thinking which people do, and not the kind of thinking that most people are best at. The concrete takes a specific instance and explores it in detail, in specific things that abstraction leaves out. Touch is concrete, and can push one specific contact much deeper than is possible abstractly with every contact at once. Touch has the depth of concreteness rather than that of abstraction.

The sixth difference is that chess is logical and rational, while touch is emotional and perceptive. The chess type of thinking is best done by someone who can retreat into himself, and carry out cool, logical operations without regard for the outside world. Emotions are irrelevant. Touch, on the other hand, is something which emotions and the external world matter a great deal for; touch should be moved and moving, and it depends far less on isolated calculation than a sensitivity to other people.

It is perceptive, connected, and interactive.

The seventh and final difference I will mention here is that chess is self-contained, while touch resonates of something greater. Once you know the rules of chess, you have no need to refer to anything outside of it, but touch is part of something far greater. It is a part of love, of the very highest potential of the *imago dei*. To understand the profound difference between making love and rape, you need to go past the touch alone and look at far greater things — to see how one is part of the sacred one-flesh union which God has given us, and the other is one of the most crushing and dehumanizing blows that one person can inflict on another.

Another facet of what something greater there is, may be found in the older and somewhat broader conception of Romance.

I am not only referring to the romance that goes on between a man and a woman, but a broader sense of — poetry. It is related

to the innocent and childlike wonder that looks and sees the real beauty in so many things, that is obscured so often by jaded eyes.

There is something haunting and elusive, something which we can chase but cannot catch, something beautiful. This something is why so many people have looked at woods and believed that there might be fairies dancing, or looked at a pool of water and seen that there might be a nymph. There is a sense of poetry, a sense of something beautiful. You cannot pin it down and hold a gun to its head, but it will surprise you.

This Romance is something which makes itself manifest in touch, or to put it another way, touch is laced with Romance; it is one of those beautiful things by which beauty surprises us.

---

Having lived in France, I rather miss the custom of friends giving kisses on alternate cheeks when they meet; there is something about a kiss that is delicate and embodies a tiny beauty. We do not give each other kisses in consolation; hugs are more fitting to those times. Of all the different touches, I think that the kiss is (to me, at least — there is a good subjective element here) the one most laced with Romance.

---

The handshake originated as a means of occupying someone's weapon hand so as to afford some protection when he was within striking range. That is, it was a gesture of mistrust.

To see what it has become, is in my estimation a tribute to the nature of touch, and a tribute to the better side of humanness. Touching hands upon a meeting has become a greeting, a welcome, and I have received some warm handshakes that felt like hugs.

---

Hugging is perhaps the most equitable and universal of touches (at least in our culture; I acknowledge and understand that much of what I am writing may be culture bound, but even a non-universal cultural perspective can have great merit). It is the one touch I can think of that is fitting both after something very good has happened and after something very bad has happened; when someone is at a low point especially, a hug is one of the most simple and human actions of love and support, from one person to another.

In the book of Job, we read before any of the lengthy speeches, that Job's three friends came, and sat with him in silence for a week because they saw his misery was so great. And this is the one thing which they did for which they were not reprimanded. There is a time when sorrow and agony are great, and even the best of words are too much of a burden to bear. In that time, it is a tremendous comfort to have a friend who will come, forgo the usual bad habits about always having to do something, and sit in silence, sharing in your pain, sharing with you his presence. And a hug, moreso than any other touch, is very appropriate then.

But hugs are far more than that. They can also be soft hugs, bear hugs, gentle hugs, pick-me-up hugs, and all sorts of other possibilities.

---

There was a man by the name of Bob Sklar at one of the places I worked, who would give all manner of friendly insults; the only time he didn't insult you was if he was angry with you, and then you were in trouble.

Something like this is descriptive of banter; it is a sign that everything is going well. As an example of how that can fail, I would point to its absence in the situation concerning racial humor.

If my guess is correct, at least some readers had a significant jump in tension level — am I going to advocate racism in the form of jokes? There are substantial racial tensions, so that people in many situations are walking on eggshells, afraid to tell jokes involving race because it might be taken as a sign of racism — nobody seems to consider the revolutionary idea that some people might tell jokes involving race for the same reason they tell jokes not involving race — because they find them funny, and want to share a bit of good-natured mirth.

The one major exception is the exception that proves the rule. It is acceptable to joke about your own race — we are not too completely thick-skulled to think that (for example) a Jew might have reasons besides anti-Semitism for telling jokes about Jews. The fact that an exception be of such nature is a testament to the strength of the rule.

If nothing else, I must regard such a state of affairs as unfortunate for the sake of humor. If you have had the good fortune to know a few Jews as I have, you will no doubt know that the Jewish consciousness has produced a number of jokes which are subtle, clever, and extremely funny. I will quote two of my favorite ones here:

At a Jewish wedding, how do you tell which branch it is?  
If it's an orthodox wedding, the bride's mother is pregnant. If it's a conservative wedding, the bride is pregnant. If it's a reformed wedding, the rabbi is pregnant.

I take this one to be a good meta-joke as well as a joke. There are four branches of something called Judaism; the fourth, reconstructionism, is far out in loonie land, a sort of Jewish PC-USA. And it is both fitting and amusing that the joke doesn't mention them.

A Jewish man named Jacob has fallen on hard times; he has lost his job, and goes to the synagogue to pray.

"God? Could I please win the lottery?"

He doesn't win the lottery, and not too much later his house is broken into, and everything of value is stolen.

Visibly upset, he goes to the synagogue again.

"God, I have done a lot for you, and I don't ask for too much. Please, I beg you, please let me win the lottery."

This week, not only does he not win the lottery, but his house burns down and his car is destroyed by a hit and run driver. Again he goes and prays.

"God, I have served you my whole life, and I don't ask for too much at all. I have taken good care of my wife and children, and I want this money for them and not just for myself. I do so much and ask for so little. Please, God, please, can't you let me win the lottery just this once?"

The voice of God booms forth, and fills the synagogue, saying,

"Jacob, meet me half way on this one. Buy a stupid ticket!"

One more:

Q: What do you say to a Puerto Rican in a three piece suit?

A: "Will the defendant please rise?"

I mention these jokes specifically because they disturb how we are trying to have races live together peaceably. That such jokes are not often told may be slightly sad from a humor perspective, but it is also a sign of a much deeper problem, and for this problem I will again go to Jews for a treasure, an even greater treasure this time. I hope you might see why I would tell offensive jokes.

This treasure is the word 'shalom', which means peace — a rich and full peace, a peace which is not merely characterized by what is absent — physical, violent strife — but goes much further. Shalom as understood by Jews is a positive state of well-being, a state of justice and equity — "Let justice roll down like waters, and righteousness like ever-flowing streams." In my view, the best way to characterize this peace is to say that it is the manifest presence of love.

What we now have between races is not shalom; it is only a whitewashed wall. And it does not really help matters to put on another coat of whitewash, and proscribe racial humor because of how dangerously it threatens to reveal the racial tensions we pretend aren't there, and how dangerously it threatens something even more terrifying — to make a human to human contact in mirth, to separate us from our separateness and let us see each other as brothers and sisters, the sons and daughters of one man and one woman.

Roughhousing is very dear to my heart, in part because it can only exist where there is shalom. It is too energetic, too real, not to destroy a whitewashed wall. and therefore if roughhousing

can be enjoyed, there is a real shalom there, a shalom deep enough to take a bit of mock conflict on the surface and still be the strong flow of love between real people. In its own way, its obnoxious roughness achieves what a thousand polite and distant handshakes can never accomplish.

---

Touch is not simply a tame thing in a box, and — while there are certain patterns of touch that are hit on more often than others — there is always more. I, for instance, am quite fond of grabbing my little brothers' noses, and tugging on their ears, and so on and so forth. These silly — or sometimes not so silly — little touches we make up have their place, their niche, as well. And other cultures, while almost certainly sharing foundational elements such as hugs and kisses, will have their own touches and their own variations on themes. What exactly this may be is variable, as the exact sounds of a language are variable. Having a language capable of communication is not. What I am writing in these pages is only one of a legion of possibilities on the topic; others can and should address other things that I omit.

---

Another aspect of touch is that it is free and voluntary. The Christian understanding is not quite the same as the overblown (or underinterpreted) American notion, but that doesn't mean that there aren't substantial freedoms.

"If you love something, set it free; if it doesn't come back, it was never yours to begin with."

Another critical aspect of touch is that it is voluntary, that saying 'no' is an option. A part of what makes a touch enjoyable is the knowledge that it is not forced on you, that it comes from a love not only great enough to touch, but also and furthermore great enough not to touch. Another part of what makes rape is that the victim has no choice in the matter — that she is in fact in one of the most utterly powerless and defenseless situations, both physically and psychologically, that a person can be in. Then what should be one of the greatest goods becomes one of the greatest evils. The only other comparable situation I can think of is abortion, especially a partial birth abortion in which a child begins to receive that great and unique embrace called 'birth', and then his head is cut open and his brains are sucked out, live and unanaesthetized.

The nature of this freedom means, in particular, the freedom to become bound, the absence of which is an unnatural and constricting shackle. <<La liberté totale est la pire des prisons.>>

— total liberty is the very worst of prisons. The poetic, the romantic, the true freedom is the freedom which can choose a good, not merely for a moment, but permanently. This freedom, rather than having to re-evaluate all of the time and have no solid basis to rely on, is truly free, infinitely more free than if every decision and commitment is in danger of being revoked at

any time. This freedom is the basis for marriage and parenthood,  
a freedom that chooses permanently to be available to another  
person in touch and love.

---

There is one last specific touch I would like to mention, and that is massage. I do not mean to give an account of how to massage, as there are good books on it. But I will say this: that it is the touch of a healer, that it goes past the surface to work inside the body. It is perhaps the most involved and giving of non-sexual touches, and I regard it as not entirely unfortunate that it is the one non-sexual touch that it is easy to come by books on.

---

Touch is one of the blessings that lies far beyond Mammon.  
It's free.

---

To begin what may well be the last section of this treatise, I will talk about something that is not so much a specific touch, as a topic relevant to touch. That is the difference between contract and covenant.

The contract is a very modern and very impoverished notion of the covenant. A contract is an external artifice which binds a person's actions. A covenant is an internal reality which binds persons themselves. A contract is shallow. A covenant is profound.

The contract, especially the social contract, is the impoverished notion of community that corresponds to a view of people as isolated and essential individuals and islands, between which thin strands of bridges are erected as a minimal concession to our inability to function as absolute islands. It is a superficial modification to a basis of individualism.

Christianity is not an individualistic religion, and it has a much more rich, complex, and multifaceted view of personhood — for example, the insistence that we are both as much spirit as any angel, and as much animal as any beast. And it claims both that we have a profound individual side, and a profound corporate side — and that these two truths are not only not exclusive, but complementary. The individual side, which I have not treated here only due to a restriction of attention, is one which (for example) solitude figures in deeply. Many things are a part of both facets. Our uniqueness and difference, for example, is perhaps most visibly related to our individual natures, but Paul's talk about the body — which needs not thirty-two ears but a great variety of different, equal, and necessary body parts, each in its proper place — shows how our differences can and should

contribute to community as well.

The view of touch as a specific action defined by the consent of two individuals, with no intrinsic meaning in and of itself, is to the Christian view of touch as the concept of contract is to the Christian understanding of covenant — an impoverished and woefully inadequate simplification and truncation. Touch is not something accidental, which means whatever we decide that it means; it is part and parcel of who we are, with a meaning ordained by God. It is a part of love and community; it is a physical aspect of the very highest and holiest in the *imago dei*.

John wrote at the end of his account of the Gospel that he did not record everything which Jesus said and did, and that he supposed that if everything which Jesus said and did were written down, the whole world would not have room for all the books which would be written. Christ's life is inexhaustible; even the four brief accounts which have come down to us from the apostles are themselves inexhaustible. It is one of the marks of what is great and profound.

I am drawing this work to a close rather arbitrarily — not because there is no more to be said, but because I decided that I would write for the length of the notebook I had chosen, and draw a line of moderation there. Instead of just writing forever, I am stopping to type it up, print it out, share the copies with other people, and what is most important of all, touch them.

I would ask you to do the same. I hope that you have enjoyed this; I hope that I have stimulated you to think; I hope that I have shared with you some good insights. Don't cut this work short by stopping there. Go out and touch someone.

## Epilogue, 21 June 03

Since I first wrote this, about six years have elapsed. I have since let it simmer inside me, and I have a couple of things to mention.

The first has been that what I wrote is incomplete. It's not quite in a mature state. One caring, touch-y friend observed that there was something forced in my touch.

The second has been a realisation which crystallised after two comments. The first comment when one friend said, "You and Robin hug differently from most people." I was surprised and asked, "How?" He said, "You hug with the whole of yourself."

The other comment came when I asked a close friend, Yussif, when a hug was appropriate in Ghanaian culture. He said that in England he learned to value hugs, and in Ghana he gives a handshake to close male friends. In retrospect, I realize that when Ghanaian men have shaken my hand, it has never been distant, or a perfunctory greeting. Something Yussif said about "palm against palm" made me realise how unappreciative I had been about handshakes.

I tried to apply this treatise by seeking out hugs and kisses. I thought in terms of what kind of touch to seek, and I was basically barking up the wrong tree when I did so. I hesitate to say that I would never ask, "May I give you a hug?" or, "May I give you a kiss?" but that sort of thing occupies a far less

central role than I assumed.

What would I put in its place? Go with the flow of the social situation rather than against it. Don't force it. Be careful about when you muster courage—sometimes trying to muster courage is the wrong thing. And, when it is fitting to give a touch, be able to do so with your whole person. Don't go overboard and try to give your total presence when you've just met someone and are shaking hands...

...but all these restrictions are but the shadow cast by a great light.

Good touch is a way that love shows itself. Embodied love, from one whole person to another, can appear in many different forms of touch, and what makes it deep is less dependent on technique or form than being given from the whole person. It is at least as much spiritual as physical, and is therefore to be sought in whole person love, given by God, which moves through the spirit to embrace the body. Things such as loving God and the other person, trying as much as possible to give your attention now rather than diverting it to other things (past or future), and meeting the other—whole person to whole person—are much deeper to pin down than any kind of minutia, and have a much deeper yield.

Perhaps after I have let this simmer for a few more years, there is something else I will be able to share.

# Treasures in Heaven: The Inner Meaning of "Do Not Store Up Treasures on Earth"

## The ground floor

I would like to begin and end with two C.S. Lewis quotes that fairly bracket the Biblical and Orthodox views on wealth. The plain sense of some painful passages in the Gospel and New Testament is an extraordinarily powerful door to important spiritual meadows. The first quote is about the [the Sermon on the Mount](#), but applies to some other passages. Lewis said, "As to 'caring for' the Sermon on the Mount, if 'caring for' here means 'liking' or enjoying, I suppose no one 'cares for' it. Who can like being knocked flat on his face by a sledge-hammer?"

A look at all the New Testament teaching on wealth, in its plain sense, clears things up. The [Parable of the Dishonest Steward](#) takes quite a mercenary view of wealth. It is to be squandered in the process of getting onto more important things.

Elsewhere, Christ is dismissive of many showy and lavish gifts given out of rich people's excess, and holds up the gift of [the widow's two mites](#), a gift of the only two practically worthless coins she had, as the paradigm example of right giving. God cares in giving, not what the number is on a cheque, but what they represent, what the spiritual act is that lies at the very heart of the gift. And in the case of the widow in this story, she would have been poor if she had kept both coins, much poorer than any of the wealthy donors after they gave their gift, and she would have been giving sacrificially if she had given "just" one coin. She gave both. Some people have said that she gave too much, but Christ held up the widow giving both her nearly worthless coins as the model of generosity, not moneybags.

The Old Testament passages are too long to quote and perhaps too long to summarize; the appropriate use of wealth is as basic a theme in the Prophets as sexual purity and worshipping God alone. But to pick one passage, and keeping in mind that the Old Testament ultimate insult is a comparison to Sodom as much as today's ultimate insult is a comparison to Hitler, [Ezekiel](#) is quite blunt at times and verse 16:49 says, "Moreover this was the sin of thy sister Sodom, pride: she and her daughters lived in pleasure, in fullness of bread and in abundance: this belonged to her and her daughters, and they helped not the hand of the poor and needy." And if this seems a twisting of [the Genesis passage telling Sodom's story](#), consider this: if the story of multiple horrors had at one stroke combined sexual perversion ("unnatural lust", Jude 7), and obscene inhospitality, how would

the people of Sodom have treated the poor? It may seem extreme to indict the whole city, and extreme to say that [when Abraham bargained with the Lord over Sodom](#) the Lord God of hosts could not find fifty righteous in the city, or even ten, but consider this: who else besides the Lot offered the visiting angels a night's shelter under a roof? Who in the whole society besides Lot offered the angels even a night's shelter?

There is much that could be said of this; an Orthodox monastic reader might see gluttony and failure to care for the poor as the bedrock sin that undergirded the obscene inhospitality of Sodom. And the Orthodox monastic tradition as well finds a tight tie between what lies above the belt, and what lies below; the wandering sexual curiosity shown by the men of Sodom is what happens when the reins are laid on the horse's neck as far as the belly goes. But let us waive this aside and return to the Biblical texts.

One passage in the New Testament that people wince and squirm at is [Matthew 25:31-46](#):

When the Son of man comes in his glory, and all the angels with him, then he will sit on his glorious throne. Before him will be gathered all the nations, and he will separate them one from another as a shepherd separates the sheep from the goats, and he will place the sheep at his right hand, but the goats at the left. Then the King will say to those at his right hand, 'Come, O blessed of my Father, inherit the kingdom prepared for you from the foundation of the world; for I was hungry and you gave me food, I was thirsty and you gave me drink, I was a stranger and you welcomed me, I was naked and you clothed me, I was sick and you visited me, I was in prison and you came to me.'

Then the righteous will answer him, 'Lord, when did we see thee hungry and feed thee, or thirsty and give thee drink? And when did we see thee a stranger and welcome thee, or naked and clothe thee? And when did we see thee sick or in prison and visit thee?' And the King will answer them, 'Truly, I say to you, as you did it to one of the least of these my brethren, you did it to me.'

Then he will say to those at his left hand, 'Depart from me, you cursed, into the eternal fire prepared for the devil and his angels; for I was hungry and you gave me no food, I was thirsty and you gave me no drink, I was a stranger and you did not welcome me, naked and you did not clothe me, sick and in prison and you did not visit me.'

Then they also will answer, 'Lord, when did we see thee hungry or thirsty or a stranger or naked or sick or in prison, and did not minister to thee?' Then he will answer them, 'Truly, I say to you, as you did it not to one of the least of these, you did it not to me.' And they will go away into eternal punishment, but the righteous into eternal life.

Some Jewish readers have said that the point of the Creation story in [Genesis 1](#) is that the human race, including beggars, is one single family. And how we treat beggars is treatment of our brothers and sisters. Now this does not automatically mean in itself that we should give money to beggars: one mother on YouTube put out a plea to stop giving beggars change because her two sons were homeless drug addicts and were using people's generosity for their addictions. But it does mean out-and-out, in full, that come the Crack of Doom, when we can no longer repent, how we have treated our neighbor, including beggars, is tout court how we have treated Christ, and if we regard beggars as

being like vermin, we have regarded Christ himself as being like vermin.

The Orthodox Christian tradition is clear that we should give something to beggars, at least those of us who have not made the monastic renunciation of all claim to property and become above alms. None of the priests I've heard say that you should give very much; one Orthodox priest I've heard specifically suggested not giving very much. If we have nothing with us, we can at least give a warm greeting. But we are told to give money, those of us that have something, and we are not guilty if a beggar uses your free gift to feed an addiction ("they may be sponging—that's not for you to judge") any more than God is guilty when he gives us gifts, times, and opportunities that we use in an unworthy manner. I don't know exactly how far Jewish exegesis goes with the image of God, but in Orthodox Christian understanding that is as basic and fundamental to our understanding of personhood gets, and every person we meet, and in particular the low man on the totem pole, is more than our brother or sister. Every man, and not just every Orthodox, is a proxy for Christ. Christ in his own person is in Heaven and does not need anything we can give. But the question that will separate the sheep from the goats at the Last Judgment is "How did you treat me when I came to you in the least of these?" And the righteous and the damned will alike be astonished that everything they have done for the least of their neighbors is how we treated the Judge who comes again in glory to judge the living and the dead.

Another passage, cut from the same cloth, is [The Parable of the Rich Man and Lazarus](#) and reads:

There was a certain rich man, which was clothed in purple

and fine linen, and tared sumptuously every day: And there was a certain beggar named Lazarus, which was laid at his gate, full of sores, And desiring to be fed with the crumbs which fell from the rich man's table: moreover the dogs came and licked his sores. And it came to pass, that the beggar died, and was carried by the angels into Abraham's bosom: the rich man also died, and was buried;

And in hell he lift up his eyes, being in torments, and seeth Abraham afar off, and Lazarus in his bosom. And he cried and said, â€˜Father Abraham, have mercy on me, and send Lazarus, that he may dip the tip of his finger in water, and cool my tongue; for I am tormented in this flame.â€™™

But Abraham said, â€˜Son, remember that thou in thy lifetime receivedst thy good things, and likewise Lazarus evil things: but now he is comforted, and thou art tormented. And beside all this, between us and you there is a great gulf fixed: so that they which would pass from hence to you cannot; neither can they pass to us, that would come from thence.â€™™

Then he said, â€˜I pray thee therefore, father, that thou wouldest send him to my father's house: For I have five brethren; that he may testify unto them, lest they also come into this place of torment.â€™™ Abraham saith unto him, â€˜They have Moses and the prophets; let them hear them.â€™™ And he said, â€˜Nay, father Abraham: but if one went unto them from the dead, they will repent.â€™™ And he said unto him, â€˜If they hear not Moses and the prophets, neither will they be persuaded, though one rose from the dead.â€™™

I will briefly pause to note that the rich man ate sumptuously every day. Slightly more to the point is that the rich man who

every day. Oughtn't more to the point is that the rich man, who never "got it"—even in torment he treated Lazarus as a servant and seemed not to care for him—did not care for the beggar who was at his doorstep. The rich man is not faulted because he failed to feed every beggar in the world, but that he failed to feed the beggar at his doorstep.

And this brings me to a point that I'd rather not mention, that some of us meet requests for money etc. coming from Africa or the Third World, and that in my experience and those I've consulted with these requests are "little better than a con." There may be a real need; but that real need can take a gift of \$12, more than one usually gives a beggar at one's doorstep, and persist in calling it small. Some of these requests for money are probably legitimate; it has not been my knowledge that they ever stop asking for more: [The leech has two daughters; "Give, give," they cry](#). We can and perhaps should give some non-local gifts, and while charity is one of many things that finds its a natural place in the home, this is a case where organizations like [International Orthodox Christian Charities](#) can best connect gifts with needs.

But enough of this for now, which should be a footnote after one has decided to show mercy and treat all neighbors as a face of Christ himself. The whole parable is meant to hit us flat on the chest with a sledgehammer. The heart of the parable says something very sharp and stark about being in luxury and failing to care for the beggar at our doorstep. There is a classic story about how millions of starfish had washed ashore, and a man was throwing them away from the sand, where they would die, back into the sea. Someone came to him and said, "What are you doing? There are so many that you can't make a difference!" and the man threw another starfish and said, "It made a difference to that one!"

We cannot address every face of Christ in our neighbor ("And who is my neighbor?"—yet another question Christ answered with a sledgehammer; see at least part of the footnote on verse 35). It's not just that we can't make things 100% better; perhaps we cannot make things right for 1% of the population, and most likely, if we can write just one cheque that will neatly solve a problem, odds are good that Christ is not working through us. But we would do well to buy one family a bag of groceries, or [buy a cheap refurbished Lenovo Thinkpad \(a line of notebooks that is cheap and good\)](#) and [ask the local professional or teen to install Linux Mint](#). If God is working with us, there probably isn't any way we can make everything better, but that isn't the point. We may be given the opportunity to make something better, and that is the point.

This discussion would not be complete without a discussion of the rich young ruler, [Matthew 19:16-26](#):

And, behold, one came and said unto him, "Good Master, what good thing shall I do, that I may have eternal life?" And he said unto him, "Why callest thou me good? there is none good but one, that is, God: but if thou wilt enter into life, keep the commandments." He saith unto him, "Which?" Jesus said, "Thou shalt do no murder, Thou shalt not commit adultery, Thou shalt not steal, Thou shalt not bear false witness, Honour thy father and thy mother: and, Thou shalt love thy neighbour as thyself."

The young man saith unto him, "All these things have I kept from my youth up: what lack I yet?" Jesus said unto him, "If thou wilt be perfect, go and sell that thou hast, and give to the poor, and thou shalt have treasure in heaven: and come and follow me." But when the young man heard

that saying, he went away sorrowful: for he had great possessions. Then said Jesus unto his disciples, "Verily I say unto you, That a rich man shall hardly enter into the kingdom of heaven. And again I say unto you, It is easier for a camel to go through the eye of a needle, than for a rich man to enter into the kingdom of God."

The young man said, "All of these I have kept from my youth," but this was not true. Christ quoted the commandments dealing with love of neighbor, and underscored the Law of Love. But the Ten Commandments deal first with the love of God, and in fact the young man had an idol: money. He broke "Thou shalt have no other gods before me."

Christ goes on to say that all things are possible with God: in fact St. Philaret the Merciful, discussed below, is a shining example of a man who was rich and who entered the Kingdom of Heaven. And "Go and sell all that thou hast" has been taken to be not just spiritual medicine for the one man, but part of the counsels of perfection of poverty, obedience, and chastity. But those of us who are not monastics are called to be poor in spirit, to be detached from our possessions and observe spiritually what monastics observe literally.

Some people have taken the passage to mean that whatever idol is more important to you than God, that must be sacrificed, and in this case the idol happened to be money. And indeed it is good to recognize that we can have other idols besides Money in our heart, and that spiritually speaking we should tear out our right hand and our right eye if that is the cost of spiritual freedom. But it is not the case that this passage is a passage about letting go of whatever idol you have, and it so happened that in this random sampling the idol was money. This passage is

about money as well as whatever may happen to be an idol, and it is cut from the same cloth as St. Paul writing, "greed, which is idolatry" (Colossians 3:5). Any inordinate attachment is idolatry, and there are a great many things besides money that one may be attached to. But money is an easy-to-reach hazard, and it is not random that the Bible fills out the contours of an idol in the young man's heart with "great possessions."

On to a saint who handled money well:

I would like to give one extra-Biblical source in the life of a saint. Perhaps the saints are athletes and do not represent the threshold of what is barely adequate, but people are more quickly recognized from caricatures than from merely accurate portraits, and [St. Philaret the Merciful](#) provides, if you will, a diamond-sharp outline of one caring for the poor:

Righteous Philaret the Merciful, son of George and Anna, was raised in piety and the fear of God. He lived during the eighth century in the village of Amneia in the Paphlagonian district of Asia Minor. His wife, Theoseba, was from a rich and illustrious family, and they had three children: a son John, and daughters Hypatia and Evanthia.

Philaret was a rich and illustrious dignitary, but he did not hoard his wealth. Knowing that many people suffered from poverty, he remembered the words of the Savior about the dread Last Judgment and about "these least ones" (Mt. 25:40); the the Apostle Paul's reminder that we will take nothing with us from this world (1 Tim 6:7); and the assertion of King David that the righteous would not be forsaken (Ps 36/37:25). Philaret, whose name means "lover of virtue," was famed for his love for the poor.

One day Ishmaelites [Arabs] attacked Paphlagonia,

devastating the land and plundering the estate of Philaret. There remained only two oxen, a donkey, a cow with her calf, some beehives, and the house. But he also shared them with the poor. His wife reproached him for being heartless and unconcerned for his own family. Mildly, yet firmly he endured the reproaches of his wife and the jeers of his children. "I have hidden away riches and treasure," he told his family, "so much that it would be enough for you to feed and clothe yourselves, even if you lived a hundred years without working."

The saint's gifts always brought good to the recipient. Whoever received anything from him found that the gift would multiply, and that person would become rich. Knowing this, a certain man came to St Philaret asking for a calf so that he could start a herd. The cow missed its calf and began to bellow. Theoseba said to her husband, "You have no pity on us, you merciless man, but don't you feel sorry for the cow? You have separated her from her calf." The saint praised his wife, and agreed that it was not right to separate the cow and the calf. Therefore, he called the poor man to whom he had given the calf and told him to take the cow as well.

That year there was a famine, so St Philaret took the donkey and went to borrow six bushels of wheat from a friend of his. When he returned home, a poor man asked him for a little wheat, so he told his wife to give the man a bushel. Theoseba said, "First you must give a bushel to each of us in the family, then you can give away the rest as you choose." Philaretos then gave the man two bushels of wheat. Theoseba said sarcastically, "Give him half the load so you can share it." The saint measured out a third

bushel and gave it to the man. Then Theoseba said, "Why don't you give him the bag, too, so he can carry it?" He gave him the bag. The exasperated wife said, "Just to spite me, why not give him all the wheat." St Philaret did so.

Now the man was unable to lift the six bushels of wheat, so Theoseba told her husband to give him the donkey so he could carry the wheat home. Blessing his wife, Philaret gave the donkey to the man, who went home rejoicing. Theoseba and the children wept because they were hungry.

The Lord rewarded Philaret for his generosity: when the last measure of wheat was given away, a old friend sent him forty bushels. Theoseba kept most of the wheat for herself and the children, and the saint gave away his share to the poor and had nothing left. When his wife and children were eating, he would go to them and they gave him some food. Theoseba grumbled saying, "How long are you going to keep that treasure of yours hidden? Take it out so we can buy food with it."

During this time the Byzantine empress Irene (797-802) was seeking a bride for her son, the future emperor Constantine Porphyrogenitos (780-797). Therefore, emissaries were sent throughout all the Empire to find a suitable girl, and the envoys came to Amneia.

When Philaret and Theoseba learned that these most illustrious guests were to visit their house, Philaret was very happy, but Theoseba was sad, for they did not have enough food. But Philaret told his wife to light the fire and to decorate their home. Their neighbors, knowing that imperial envoys were expected, brought everything required for a rich feast.

The envoys were impressed by the saint's daughters and granddaughters. Seeing their beauty, their deportment, their clothing, and their admirable qualities, the envoys agreed that Philaret's granddaughter, Maria was exactly what they were looking for. This Maria exceeded all her rivals in quality and modesty and indeed became Constantine's wife, and the emperor rewarded Philaret.

Thus fame and riches returned to Philaret. But just as before, this holy lover of the poor generously distributed alms and provided a feast for the poor. He and his family served them at the meal. Everyone was astonished at his humility and said: "This is a man of God, a true disciple of Christ."

He ordered a servant to take three bags and fill one with gold, one with silver, and one with copper coins. When a beggar approached, Philaret ordered his servant to bring forth one of the bags, whichever God's providence would ordain. Then he would reach into the bag and give to each person, as much as God willed.

St Philaret refused to wear fine clothes, nor would he accept any imperial rank. He said it was enough for him to be called the grandfather of the Empress. The saint reached ninety years of age and knew his end was approaching. He went to the Rodolpheia ("The Judgment") monastery in Constantinople. He gave some gold to the Abbess and asked her to allow him to be buried there, saying that he would depart this life in ten days.

He returned home and became ill. On the tenth day he summoned his family, he exhorted them to imitate his love for the poor if they desired salvation. Then he fell asleep in the Lord. He died in the year 792 and was buried in the

Rodolpheia Judgment monastery in Constantinople.

The appearance of a miracle after his death confirmed the sainthood of Righteous Philaret. As they bore the body of the saint to the cemetery, a certain man, possessed by the devil, followed the funeral procession and tried to overturn the coffin. When they reached the grave, the devil threw the man down on the ground and went out of him. Many other miracles and healings also took place at the grave of the saint.

After the death of the righteous Philaret, his wife Theoseba worked at restoring monasteries and churches devastated during a barbarian invasion.

And for a last quote from the Gospels, I will turn to the [Sermon on the Mount](#), and more specifically [Matthew 6:19-34](#):

Lay not up for yourselves treasures upon earth, where moth and rust doth corrupt, and where thieves break through and steal: But lay up for yourselves treasures in heaven, where neither moth nor rust doth corrupt, and where thieves do not break through nor steal: For where your treasure is, there will your heart be also. The light of the body is the eye: if therefore thine eye be single, thy whole body shall be full of light.

But if thine eye be evil, thy whole body shall be full of darkness. If therefore the light that is in thee be darkness, how great is that darkness! No man can serve two masters: for either he will hate the one, and love the other; or else he will hold to the one, and despise the other. Ye cannot serve God and mammon. Therefore I say unto you, Take no thought for your life, what ye shall eat, or what ye shall drink; nor yet for your body what ye shall put on. Is not the life more

for your body, what ye shall put on. Is not the life more  
than meat, and the body than raiment? Behold the fowls of  
the air: for they sow not, neither do they reap, nor gather  
into barns; yet your heavenly Father feedeth them. Are ye  
not much better than they? Do you think you can add one  
single hour to your life by taking thought? You might as well  
try by taking thought to work your way into being a foot  
taller!

And why take ye thought for raiment? Consider the lilies  
of the field, how they grow; they toil not, neither do they  
spin: And yet I say unto you, Even Solomon in all his glory  
was not arrayed like one of these. Wherefore, if God so  
clothe the grass of the field, which to day is, and to morrow  
is cast into the oven, shall he not much more clothe you, O ye  
of little faith? Therefore take no thought, saying, "What  
shall we eat?" or, "What shall we drink?" or,  
"Wherewithal shall we be clothed?" (For after all  
these things do the Gentiles seek:) for your heavenly Father  
knoweth that ye have need of all these things. But seek ye  
first the kingdom of God, and his righteousness; and all  
these things shall be added unto you.

Take therefore no thought for the morrow: for the  
morrow shall take thought for the things of itself.

Sufficient unto the day is the evil thereof.

"If thine eye be single:" a casual observer might think that  
this is a bit of something else tucked into a passage on a  
different topic, and most modern translations try to provide an  
equivalent rendering of "If thine eye be sound / whole", perhaps  
with a footnote clarifying that the word has connotations of  
generosity. This much is of course true, but it is beside the  
point. "If thine eye be single" means "If your eye looks on God

with an undiluted, unmixed gaze rather than trying to serve two masters." And there is more to be said, but I am getting ahead of myself slightly. Let it be enough now to say that "If thine eye be single" is cut from the same cloth as the verses that surround it. But I am about to get ahead of myself.

Let me pick up another thread. There are a number of threads in this seamless tapestry, and they're all interconnected. To pick up another thread, Christ says, "No man can serve two masters." We may relate to money, and the things it can buy, like a servant that washes our clothes and dishes, builds a fire in the winter and cools the air in the summer, and so on and so forth. But Christ in the [Sermon on the Mount](#) does not call Money a servant, but a master. Treasures on earth may do two things: they can bring pleasure and luxury (a point which the [Sermon on the Mount](#) does not really discuss), and they can be looked for for security. And Christ unconditionally forbids us to look to money for our security, because the security we are to have is God's providence and nothing less. My commentary on the [Sermon on the Mount](#) is called [The Most Politically Incorrect Sermon in History](#), and for good reason. To pick up one thread, the whole concept of American money management, that you treat almsgiving like a luxury in that you get your ducks in order and then give a portion to others, is simply not present in the [Sermon on the Mount](#). The [Sermon on the Mount](#) bids us to be like the birds of the air and the grass of the field, whom even Solomon with his yearly tribute of 666 seventy-five pound "talents" of gold never came close to. The [Sermon on the Mount](#) bids us trust in the providence of God. Money may have legitimate use; property may have legitimate use, and I am not poor like a monastic: I own both money and property. But the question is not whether trusting in God's providence is really a

secure alternative to financial planning; the question is whether financial planning is a valid substitute for trust in the Lord's providence that leaves one as naked as Adam before the threats of the world, and the answer is no. People try to trust in financial planning because they don't trust the most superficial sense of the [Sermon on the Mount](#) here: I can remember one Protestant pastor preaching, "Don't spend your life protecting the center of things," and he was right. We do have things we legitimately need, and our Creator out of all knows our needs better than we do. We are to pray for our daily bread, an exceedingly modest request and a formality in much of the first world, and trust that the Lord who guides us is the Lord who will provide us, and not because we have a financial plan that atheist and Christian alike could see as square and sound. We are to pray, but we do not need to inform God of our needs or how important our needs are; we are to trust in ways the atheist might find strange. And the entire [Sermon on the Mount](#) is an invitation to live the divine life as sons of God.

In [A Pet Owner's Rules](#), I described God as being like a pet owner who has two rules:

- I am your owner. Receive freely of the food and drink I have provided.
- Don't drink out of the toilet!

And all the imposing "Thou shalt not"s in the Bible really boil down to "Don't drink out of the toilet." Drunkenness—not getting drunk once or twice but drunkenness being the new normal—is drinking out of the toilet, and any recovering alcoholic will tell you that bondage to alcohol is suffering you wouldn't wish on your worst enemy. It takes humility to enjoy even pride,

as G.K. Chesterton observed, and the further you sink in pride the more miserable things look: pride is drinking out of the toilet, as is lust. Lust is the disenchantment of the entire universe; it disenchants everything else and then disenchants itself. All sin is drinking out of the toilet, including seeking providence in things you own, but the second rule is a footnote to the first. "Don't drink out of the toilet" is a footnote to "I am your owner. Receive freely of the food and drink I have provided you." The [Sermon on the Mount's](#) "Do not store up for yourselves treasures on earth, where moth and rust doth corrupt, and where thieves break through and steal" is a footnote to "But lay up for yourselves treasures in Heaven, where neither moth nor rust doth corrupt, and thieves do not break through and steal," the words about "No man can serve two masters" is an invitation to serve the one Master whose yoke is easy and whose burden is light, and the dismissive rebuke to those who would seek a second-rate, fake, ersatz providence in something that is less than man, in cold, soulless gold or stock shares, is so that we may seek the providence of a Heavenly Father who knows and loves us better than we can ask and who can care and provide for us, in needs he himself created in us, better than all the shares of stock that the world will ever know.

## The Ladder to Heaven

I will give perhaps one last long quote, if indeed anything can be given after these Gospel passages. The intent is not to transcend them further, but rather to open them up, and transcend their outer meaning to open up their inner heart. The quotes as I have treated them are a look at the literal plain sense of Scripture, which is perfectly legitimate, and is something like Dr. Who's TARDIS: once you open them up, they are larger on the inside than on the outside.

[Fr. Damascene in an Ancient Faith Radio interview:](#)

We will begin at the beginning. The holy fathers of the Orthodox Church say that man was created in a state of pristine simplicity—“pure awareness. In the beginning, his thoughts and memories were not diversified and fragmented as they are today, but were simple and one-pointed. He knew no mental distraction. While being wiser than any human being today, he was in a state of innocence, like a child, and in this state he lived in deep personal communion with God, and in harmony with the rest of creation.

Being in such close communion with God, primordial man participated directly in God’s™ grace, which he experienced as a divine and ineffable light dwelling within his very being. Here I am referring to the Orthodox Christian understanding of Grace as the unexpected energy

Christian understanding of grace, as the uncreated energy or power of God, in which God, Himself, is fully present. The holy fathers of the Church say that we can never know God's essence, but we can know and experience God through His uncreated energy. Through God's uncreated energy, or grace, we can participate in the divine life of God, Himself.

So in the beginning man had this grace dwelling with him, united with his soul. He was created in grace, and he possessed it as his own personal strength or power, but through the wrong use of his free will, he fell from the state of grace. Before, he had had communion with God. He had acted in accordance with the Way, the Tao, in accordance with the divine Logos. His fall was a departure from the Way, and this departure resulted in a corruption of his nature. Now grace was foreign to his nature, and he no longer had it living within him. He became spiritually dead, and this spiritual death made him subject to physical death.

With man's departure from the Way, he lost the primal simplicity and became fragmented. His awareness was no longer single and one-pointed. As St. Macarius the Great wrote in the 4th century, "After his transgression, man's thoughts became base and material, and the simplicity and goodness of his mind were intertwined with evil, worldly concerns."

Also with his departure from the Way, man fell under the illusion of his self-sufficiency. Before, when he had lived in communion with God, he did not regard himself as self-sufficient. Living in harmony with the Way, he had acted spontaneously, without striving and without self-interest. When he stepped away from God, he fell to the lie that he could exist of himself. This is a lie, because without God

could exist of himself. This is a lie, because without God willing him into existence, he would be nothing at all. Now man acted with calculation, no longer spontaneously, striving for the sake of personal gain, and pitting himself against others.

Man had been made to desire and to seek God, to rise ever higher toward God in the communion of love. But when he departed from the Way, he fell to love of himself, and to desire for created things. Since the desire for created things is against man's original nature, it leads to suffering. It can never bring true, complete, and lasting happiness.

I referred to being "naked as Adam" earlier, but I was not in a position to unlock things from "Do not store up for yourselves treasures on earth." To have treasures on earth is not a matter of having possessions, but of wrongful attachment; the problem is in us, not in the possession, and even monks who have taken a vow of poverty may have certain property in a relative sense that may be taken away at any time that is really not much different from how non-monks may own property without falling into the trap of the rich young ruler. Many warnings are given about a world we are to avoid, but the term is occasionally made exceedingly clear: what is evil is not the rest of our Lord's Creation, but our own passionate and wrongful attachment to it. It is like alcoholism: it doesn't exist in bottles, but inside our heart.

I will now speak plainly of one rung on the Ladder to Heaven, and leave others to go further. It is wrong to hold grudges. Now that may seem a strange, if true, thing to say, but there is a real and direct connection. It is wrong for us to be attached to gold, and if getting rid of gold is the price of freedom, good riddance

to the gold! (And this again is not because the gold is diseased but because we are diseased.) And if we are unable to let go of gold because we fear what we may lose if we loosen our grip on it, what is to be said for holding onto, and being afraid to let go of, festering wounds? For a grudge is in fact a festering wound that we cling to as if it were gold. And the state of blessedness is to hold every creation loosely, whether visible or invisible, and let go of passion. And we are to let go of grudges, which are a perverse treasure for us, and be as naked as Adam.

But there is more that we hold to our hurt that Adam didn't. The unfallen Adam did not have plans as we have plans and did not have a modern identity as we have identity. Now we may have identity in the anthropological sense, meaning little more than that we speak a particular language a particular way and wear particular clothes a particular way, and that marks us as members of one community and not another. And we must wear some clothing and speak some language. But modern identity is much more, and much less, than its mere anthropological sense: no one, having ponderings about "Who am I?", resolves those ponderings by saying "I dress and talk like other people I know."

That is not enough. That is nowhere near enough for such ponderings. The difference between identity in the merely anthropological sense is like the difference between the painter who paints a portrait intended to resemble someone, and the occultist who seeks to create an image just as imbued with life as the person portrayed, in a sense like the Pygmalion legend would have it. Making a picture that is like the person it represents is a feasible project to someone with basic artistic skills. Making a picture that is not merely lifelike, but fully living and alive, is God's prerogative, and modern identity is an effort to make an identity that is much too alive.

And regarding our plans, I remember one priest talking about our having "godly ambitions." There are some contexts where people add the word "godly" when they expect a person to sense that it is something other than "godly." There is no saying in the Gospel that we shall not have plans at all, but there is at least a piecemeal condemnation of trying to plan things out under circumstances when one would think that carefully planning your words is most appropriate: *But when they shall lead you, and deliver you up, take no thought beforehand what ye shall speak, neither do ye premeditate: but whatsoever shall be given you in that hour, that speak ye: for it is not ye that speak, but the Holy Ghost.* On a large scale and small, it is my experience that having and acting on big-P (P)lans is a recipe for not appreciating the here and now that God gives. Perhaps there is room for little-p (p)lans, perhaps we cannot do without planning of some sort, as we cannot do without identity in the anthropological sense. But all these things—grudges, modern identity, plans—bear the spiritual imprint of treasures on earth. Perhaps what is wrong with them may be seen in Fr. Damascene's picture of Adam. It may be beside the point that Adam wore no clothes and

A good part of the suffering that I've caused others to suffer, and that I've suffered from others myself, has to do with forming plans before you meet a person or a situation, and then trying to impose the plan and to change the situation and people when they don't follow your expectations. It's a golden way to have an unhappy romance, as I have given and received. But the same is true on much smaller scales too. Trying to get things "back on track" when they don't follow your plans is a way not to enjoy life.

did not know any language not common to all mankind. Could the unfallen Adam bear a grudge and hold on to a festering wound?

Could he have plans that existed in his head that would in his mind trump God's will unfolding around him? Could he have some curated collection of individual attributes he used to construct a

"me, myself, and I"? In fact all of this would have been immeasurably foreign to him. The unfallen Adam and Eve may have had Paradise for a home, but they did not grasp it in a stranglehold; neither would they have tried to tighten a grip around plans, identity in the modern sense, or grudges. All these things that seem inescapable to us would be a jarring note in Eden, and in fact "Do not store up treasures on earth" in its inner chamber unfolds that we are not to hold physical things as treasures on earth, and we are not to hold invisible, mental things as treasures on earth either: the festering wound of a grudge, or plans, or identity is not to have our fingers close around it. If we climb this ladder that has the literal sense of the Gospel as its base, the higher rungs reach for something incomparably better than grasping at either visible or invisible things; "Do not store up for yourself treasures on earth" is a command to not grasp anything in our hands, but open them up to receive the hand of God and then hold his hand, not choke it with a death grip. It is "Don't drink out of the toilet" all over again.

This is not the top, not near the top, of the ladder that reaches to Heaven. If it reaches above the ground level of the plain sense of the Gospel's teaching about money, it does not yet rise too many steps higher: it simply recognizes that there are more things than treasure on earth we can hold with a deathgrip, and the treasures on earth we can wrongly store up are not only possessions but anything the heart can grasp. Our hands are not made for grasping, even in love. We can hold God's hand, but not

compel or grasp it; we can hold our neighbor's hand, and perhaps we can grasp that—but only to our neighbor's harm, and our own.

But the higher one climbs the ladder, the more one is free to store up treasures in Heaven.

Would you like to climb higher on the Ladder to Heaven? Read [The Ladder of Divine Ascent](#) and the [Philokalia](#) for the science of spiritual struggle and some of the finest literature outside the Bible for spiritual growth.

And as promised, one last C.S. Lewis quote. The portion I have been able to track down is from the introduction to [The Great Divorce](#): "You cannot take all luggage with you on all journeys; on one journey even your right hand and your right eye may be among the things you have to leave behind." But the introduction itself also states: "I believe, to be sure, that any man who reaches Heaven will find that what he abandoned (even in plucking out his right eye) was precisely nothing: that the kernel of what he was really seeking even in his most depraved wishes will be there, beyond expectation, waiting for him in 'the High Countries.'"

Have a blessed Lent.

# Twelve Quotes on Orthodoxy, Ecumenism, and Catholicism

1. Ecumenism: Invented by Protestants. Adapted by Catholics. Foisted on Orthodox. Won't you agree it smells fishy?
2. Many Protestants see Catholics generously, looking at them as basically equivalent to a Protestant. Catholics extend the same spirit of generosity to see Orthodox as essentially Catholic. But the differences are fundamentally deeper.
3. What Orthodox, Catholic, and Protestant share is genuinely significant. There is really a lot in common. But there is also remarkably much in common between Christian, Hindu, and classical Taoist, even if there is less in common than what Christians hold in common. The commonalities are significant, but beyond the differences also being significant, Orthodox communion makes a profound difference. Looking at theological similarities and ignoring the point of communion is a way to strain out a gnat and swallow a camel.
4. The Church must breathe with both lungs. (And the sooner she starts breathing with the Western lung, the better.)

5. I've seen the shirts that say, "Orthodox Christian in communion with Rome" and wished to make, among other things, a shirt that says "Catholic Christian in communion with the [Archdruid of Canterbury](#)." Trying to be Orthodox without being in communion with the Orthodox Church is like trying to be married without a spouse.
6. The Orthodox Church shares common ground. It has common ground in one dimension with Catholics and Protestants, and it has common ground in another dimension with Hindus and Buddhists, and you are missing the point if you say, "Yes, but other Christians share the true common ground." For all of this, the Orthodox Church is capable of sharing common ground and recognizing differences that exist. And there is a way for Catholics and Protestants, and Hindus and Buddhists as well, to receive full communion with Orthodoxy: they can become Orthodox.
7. In matters of ecumenism and especially intercommunion, Rome is Orthodox in her dealings with Protestants, and Protestant in her dealings with Orthodox. If you want to know why Orthodoxy refuses intercommunion with Rome, you might find a hint of the answer in why Rome refuses Protestant intercommunion. And if your immediate reaction is, "But our theology is equivalent," ponder this: that is also what ecumenist Protestants say to you. (And they say it in perfectly good faith.)
8. It would be strange for every pope from here on to be like Pope Benedict XVI and not Pope John XXIII. And under Pope John XXIII, the question, "Is the Pope Catholic?" might have best been answered, "Well, from a certain point of view..."
9. In the history that is common to Catholics and Orthodox,

every time someone proposed a solution like ecumenism, the Church soundly rejected it. If we have reached a state where we can reject the ancient wisdom in these decisions, this is another reason why we have departed from Orthodoxy and another reason Orthodoxy should spurn our advances.

10. Christ prayed that we all may be one. But hearing "ecumenism" in that prayer is a bit like hearing a prayer that a room may be cleaned and pushing all the clutter under a bed. Christ's prayer that his disciples may be one transcends the mere whitewash that ecumenism can only offer. (Christ's prayer that we may all be one is solid gold. Ecumenism is a rich vein, but only of fool's gold.)
11. In Catholic ecumenical advances, I have never heard anyone mention any of the concerns about things Rome has done that may be obstacles to restoring communion. What kind of healthy advance bowls over and ignores the other's reservations?
12. Good fences make good neighbors. Ecumenism tramples down fences and invites itself into others' homes. Orthodox can be good neighbors, but when they reject ecumenical advances, it is part of keeping good fences for good neighbors.

# Two Decisive Moments

In the name of the Father, and of the Son, and of the Holy Ghost. Amen.

There is a classic Monty Python "game show": the moderator asks one of the contestants the second question: "In what year did Coventry City last win the English Cup?" The contestant looks at him with a blank stare, and then he opens the question up to the other contestants: "Anyone? In what year did Coventry City last win the English Cup?" And there is dead silence, until the moderator says, "Now, I'm not surprised that none of you got that. It is in fact a trick question. Coventry City has never won the English Cup."

I'd like to dig into another trick question: "When was the world created: 13.7 billion years ago, or about six thousand years ago?" The answer in fact is "Neither," but it takes some explaining to get to the point of realizing that the world was created 3:00 PM, March 25, 28 AD.

Adam fell and dragged down the whole realm of nature. God had and has every authority to repudiate Adam, to destroy him, but in fact God did something different. He called Noah, Abraham, Moses, and Elijah, and in the fullness of time he didn't just call a prophet; he sent his Son to become a prophet and

more.

It's possible to say something that means more than you realize. Caiaphas, the high priest, did this when he said, "It is better that one man be killed than that the whole nation perish." (John 11:50) This also happened when Pilate sent Christ out, flogged, clothed in a purple robe, and said, "Behold the man!"

What does this mean? It means more than Pilate could have possibly dreamed of, and "Adam" means "man": Behold the man!

Behold Adam, but not the Adam who sinned against God and dragged down the Creation in his rebellion, but the second Adam, the new Adam, the last Adam, who obeyed God and exalted the whole Creation in his rising. Behold the man, Adam as he was meant to be. Behold the New Adam who is even now transforming the Old Adam's failure into glory!

Behold the man! Behold the first-born of the dead. Behold, as in the icon of the Resurrection, the man who descends to reach Adam and Eve and raise them up in his ascent. Behold the man who will enter the realm of the dead and forever crush death's power to keep people down.

Behold the man and behold the firstborn of many brothers! You may know the great chapter on faith, chapter 11 of the book of Hebrews, and it is with good reason one of the most-loved chapters in the Bible, but it is not the only thing in Hebrews. The book of Hebrews looks at things people were caught up in, from the glory of angels to sacrifices and the Mosaic Law, and underscores how much more the Son excels above them. A little before the passage we read above, we see, "To which of the angels did he ever say, 'You are my son; today I have begotten you'?" (Hebrews 1:5) And yet in John's prologue we read, "To those who received him and believed in his name, he gave the authority to become the children of God." (John 1:9) We also

read today, "To which of the angels did he ever say, 'Sit at my right hand until I have made your enemies a footstool under your feet?'" (Hebrews 1:13) And yet Paul encourages us: "The God of peace will shortly crush Satan under your feet," (Romans 16:20) and elsewhere asks bickering Christians, "Do you not know that we will judge angels?" (I Corinthians 6:3) Behold the man! Behold the firstborn of many brothers, the Son of God who became a man so that men might become the Sons of God. Behold the One who became what we are that we might by grace become what he is. Behold the supreme exemplar of what it means to be Christian.

Behold the man and behold the first-born of all Creation, through whom and by whom all things were made! Behold the Uncreated Son of God who has entered the Creation and forever transformed what it means to be a creature! Behold the Saviour of the whole Creation, the Victor who will return to Heaven bearing as trophies not merely his transfigured saints but the whole Creation! Behold the One by whom and through whom all things were created! Behold the man!

Pontius Pilate spoke words that were deeper than he could have **possibly** imagined. And Christ continued walking the fateful journey before him, continued walking to the place of the Skull, Golgotha, and finally struggled to breathe, his arms stretched out as far as love would go, and barely gasped out, "It is finished."

Then and there, the entire work of Creation, which we read about from *Genesis* onwards, was complete. There and no other place the world was created, at 3:00 PM, March 25, 28 AD. Then the world was created.

That is a decisive moment, but decisive moments are not some kind of special exception to Christian life. Christian history and

the Christian spiritual walk alike take their pace from decisive moments. I would like to look at the decisive moment in the Gospel reading.

In that reading, the people who have gathered to listen to Jesus went beyond a "standing room only" crowd to being so packed you couldn't get near the door. Some very faithful friends of a paralytic did the only thing they could have done.

They climbed on the roof and started digging through it. I suspect that the homeowner didn't like the idea. But they dug in, and lowered him, hoping this teacher will heal him.

Jesus saw their faith and said, "Your sins are forgiven." And people were shocked—there was a very good reason for this! If I have two friends, and one owes the other money, I can't tell the first one, "Your debt is forgiven. It's wiped clean." That's not my place. Sin is not a debt, or a crime, or even a disease. It's worse. And Christ told a man who owed an infinite debt to God that his slate was wiped clean and his sins were forgiven. And the

reason people were saying, "This man blasphemes! Who can forgive sins but God alone?" was that they understood exactly how significant it was for Jesus to say, "Your sins are forgiven."

Maybe they failed to recognize Christ as God (it is very rare that anyone but the demons identified him as the Son of God), but they were absolutely right when they said that Jesus was saying something that only God had the authority to say.

They were murmuring, and Christ knew why. So he asked them, "Which is easier: to say, 'Your sins are forgiven,' or to say, 'Arise. Take up your mat and walk.'" Everybody knew the answer, that forgiving sins was an infinitely weightier matter, but Jesus was about to give a lesser demonstration of the exact same authority by which he said, "Your sins are forgiven." He said to the paralytic, "Arise. Take up your mat and walk." And the

paralytic did exactly that.

That is authority. That is the authority that commands the blind to gaze on the light of the Transfiguration, the deaf to listen to the song of angels, the mute to sing with God's angels, the lame to dance for joy, and what is greater than all of these, command you and me, sinners, to be freed from our sins.

Great and rare as the restoration of one paralytic may be, everybody knew that that was less important than the forgiveness of his sins. The story of that healing is a decisive moment.

But it's not the only decisive moment, and there is another decisive moment that may be much less rare, much less something we want to write home about, but is profoundly important, especially in Lent. I am talking about repentance.

When the Holy Spirit convicts me of my sin, there are two responses I give, both of which I ought to be ashamed of. The first response is to tell God that he doesn't know what he's talking about. Now of course I am not blunt enough to tell God, "You don't know what you're doing." (Perhaps it would be better if I did.) What I say instead is something like, "I can see where you're coming from, and I can see that you have a point. But I've given it a little thought and I'd like you to consider a suggestion that is much better for everyone involved. Would you consider this consolation prize?" Now again, perhaps it would be better if I were honest enough to simply tell God, "You don't know what you're doing." Not only is it not good that I do that, but it is spurning the grace of God.

When a mother takes a knife or a sharp pair of scissors from a little boy, this is not because the mother wants a pair of scissors and is too lazy or inconsiderate to go get her own pair: her motivation is entirely for the child's welfare. God doesn't

need our repentance or our sin. When he commands us through his Spirit to let go of our sin, is this for our sake or for his need? It is entirely for our own benefit, and not something God was lacking, that we are commanded to repent from sin. And this has a deeper implication. If God convicts us from our sin and asks our surrender to him in the unconditional surrender for repentance, then that is how we will be healed from our sin: it is the best medicine chosen by the Great Physician, and it is out of his mercy that the Great Physician refuses all of our consolation prizes that will cut us off from his healing love. Repentance is terrifying at times; it is letting go of the one thing we least want to give over to God, and it is only once we have let go that our eyes are opened and we realize, "I was holding on to a piece of Hell!" The more we understand repentance the more we understand that it is a decisive moment when God is at work.

The second response I give to the Holy Spirit is even more an affront to the decisive now in which the Lord meets me. I say, "Well, I think you're right, and I need to repent of it, only now isn't the best time for me. I'd like to deal with it at another time." Here, also, things might be better if I were at least honest enough to acknowledge I was telling God, "Your timing is far from perfect." God lives outside of time, and yet he has all the time there is. There is never reason for him to say with a sheepish grin, "I know this really isn't the best time for you, but I only have two minutes right now, and I'm going to ask for you to deal with this now even though this isn't the best time." When he comes and tells us to repent, now, the reason for that is not that some point later on we may feel more like repenting and that is a better time; the reason is that by the time I am struggling against God's Spirit I have already entered the decisive moment when I can choose either to be cleansed and

freed of my sin, or keep on fumbling for the snooze button while  
God tells me, "Enough sleep! It is time for you to arise!"  
Let us repent, in the name of the Father, and of the Son, and  
of the Holy Ghost. Amen.

# Unashamed

The day his daughter Abigail was born was the best day of Abraham's life. Like father, like daughter, they said in the village, and especially of them. He was an accomplished musician, and she breathed music.

He taught her a music that was simple, pure, powerful. It had only one voice; it needed only one voice. It moved slowly, unhurriedly, and had a force that was spellbinding. Abraham taught Abigail many songs, and as she grew, she began to make songs of her own. Abigail knew nothing of polyphony, nor of hurried technical complexity; her songs needed nothing of them. Her songs came from an unhurried time out of time, gentle as lapping waves, and mighty as an ocean.

One day a visitor came, a young man in a white suit. He said, "Before your father comes, I would like you to see what you have been missing." He took out a music player, and began to play.

Abby at first covered her ears; she was in turn stunned, shocked, and intrigued. The music had many voices, weaving in and out of each other quickly, intricately. She heard wheels within wheels within wheels within wheels of complexity. She began to try, began to think in polyphony — and the man said, "I will come to you later. It is time for your music with your father."

Every time in her life sitting down at a keyboard with her

...  
father was the highlight of her day. Every day but this day. This day, she could only think about how simple and plain the music was, how lacking in complexity. Abraham stopped his song and looked at his daughter. "Who have you been listening to, Abigail?"

Something had been gnawing at Abby's heart; the music seemed bleak, grey. It was as if she had beheld the world in fair moonlight, and then a blast of eerie light assaulted her eyes — and now she could see nothing. She felt embarrassed by her music, ashamed to have dared to approach her father with anything so terribly unsophisticated. Crying, she gathered up her skirts and ran as if there were no tomorrow.

Tomorrow came, and the day after; it was a miserable day, after sleeping in a gutter. Abigail began to beg, and it was over a year before another beggar let her play on his keyboard. Abby learned to play in many voices; she was so successful that she forgot that she was missing something. She occupied herself so fully with intricate music that in another year she was asked to give concerts and performances. Her music was rich and full, and her heart was poor and empty.

Years passed, and Abigail gave the performance of her career. It was before a sold-out audience, and it was written about in the papers. She walked out after the performance and the reception, with moonlight falling over soft grass and fireflies dancing, and something happened.

Abby heard the wind blowing in the trees.

In the wind, Abigail heard music, and in the wind and the music Abigail heard all the things she had lost in her childhood. It was as if she had looked in an image and asked, "What is that wretched thing?" — and realized she was looking into a mirror. No. it was not quite that: it was as if in an instant her whole

world was turned upside down, and her musical complexity she could not bear. She heard all over again the words, "Who have you been listening to?" — only, this time, she did not think them the words of a jealous monster, but words of concern, words of "Who has struck a blow against you?" She saw that she was blind and heard that she was deaf: that the hearing of complexity had not simply been an opening of her ears, but a wounding, a smiting, after which she could not know the concentrated presence a child had known, no matter how complex — or how simple — the music became. The sword cut deeper when she tried to sing songs from her childhood, at first could remember none, then could remember one — and it sounded empty — and she knew that the song was not empty. It was her. She lay down and wailed.

Suddenly, she realized she was not alone. An old man was watching her. Abigail looked around in fright; there was nowhere to run to hide. "What do you want?" she said.

"There is music even in your wail."

"I loathe music."

There was a time of silence, a time that drew uncomfortably long, and Abigail asked, "What is your name?"

The man said, "Look into my eyes. You know my name."

Abigail stood, poised like a man balancing on the edge of a sword, a chasm to either side. She did not — Abigail shrieked with joy. "Daddy!"

"It has been a long time since we've sat down at music, sweet daughter."

"You don't want to hear my music. I was ashamed of what we used to play, and I am now ashamed of it all."

"Oh, child! Yes, I do. I will never be ashamed of you. Will you

come and walk with me? I have a keyboard."

As Abby's fingers began to dance, she first felt as if she were being weighed in the balance and found wanting. The self-consciousness she had finally managed to banish in her playing was now there — ugly, repulsive — and then she was through it.

She made a horrible mistake, and then another, and then laughed, and Abraham laughed with her. Abby began to play and then sing, serious, inconsequential, silly, and delightful in the presence of her father. It was as if shackles fell from her wrists, her tongue loosed — she thought for a moment that she was like a little girl again, playing at her father's side, and then knew that it was better. What could she compare it to? She couldn't. She was at a simplicity beyond complexity, and her father called forth from her music that she could never have done without her trouble. The music seemed like dance, like laughter; it was under and around and through her, connecting her with her father, a moment out of time.

After they had both sung and laughed and cried, Abraham said, "Abby, will you come home with me? My house has never been the same without you."

# Unvera Announces New Kool-Aid Line

Unvera has announced a new line of poison Kool-Aid supplements intended to bring its distributors unique extracts of the most powerful plant toxins available to its research.

"So what makes your offering different from other MLM's?" our reporter asked. "Relational marketing," the Unvera distributor insisted, "Unvera puts things in the most flattering terms possible. We have a **team** approach that really sets us apart. And with us, you're not just a cog in the wheel fueling profits for Unvera. You are the Jim Jones of your own cult, as we repeatedly insist, and we teach you to talk about "my cult". You have the privilege to choose just what you want your cult's very own cult-ure to be. And we will push you along every step of the way unless you have excellent boundaries and know how to say 'No' and put your foot down. At Unvera, we are your religion!"

The reporter asked, "I've heard your nutraceutical supplements are really something. But are the health effects worth a putting yourself in the hands of a pushy MLM, even with your new line of Kool-Aid?"

The Unvera distributor said, "At Unvera we believe strongly

The Unvera distributor said, "AT Unvera, we believe strongly in having multiple trickles of income, and it's good financial sense. If you are good at sales, good enough that you can get a regular job, we're talking three figures, maybe four. Do you have time for a quick online presentation tonight? I'd love to recruit you for my cult. And here, have a sample of our Kool-Aid!"

The reporter said, "There is an old mandate in the business world, 'Revenue must exceed expenses' and it seems that your multi-level marketing system is like most multi-level marketing jobs: it makes its money from its 'distributors' and is designed so that revenue exceeds expenses for the company and not for its, um, 'sales' distributors."

The Unvera distributor said, "But you could be, just like every other Unvera distributor, the Jim Jones of your own cult."

Our reporter said, "But I don't **want** to be the Jim Jones of my own cult!"

The distributor's jaw dropped, flabbergasted.

# Usability for Hackers

## Usability begins with anthropology

### **... and hackers have a good start on anthropology**

If you're reading this text, there's a good chance that you are already halfway to being an anthropologist. Note: for the purposes of this chapter, 'anthropology' is used to refer to cultural anthropology. Other anthropological disciplines exist, but it is cultural anthropology and its techniques which are most directly relevant here.

How could an author know that you are probably at least half an anthropologist? Let's turn the question around, and suppose you are a Python hacker. Why are you reading this article? Visual Basic .NET has enormous marketing muscle behind it, possibly eclipsing the marketing budgets for all open source technologies put together. Guido van Rossum holds a dim view of marketing, as does much of the Python community. Monster.com lists three thousand Visual Basic positions, almost five thousand .NET positions, but only one thousand Python positions. Why are you

reading a "usability for hackers" article when you could be reading a title like [Completely Master Visual Basic in Thirty Seconds or Less?](#)

You are probably a hacker. It does not matter if you were mortified when you found out the preferred JavaScript technique to create an object with fields that aren't globally accessible variables, or if you wince when you hear of a devious way to get technology to do things that shouldn't be possible, or if you have no desire to be considered a 133t hax0r. You're probably a hacker. The classic "[How to Become a Hacker](#)" for the most part outlines things that have a very obvious relationship to being a hacker: attitudes towards technical problem solving, or learning an open source Unix, learning to program and contribute to the web, and so on and so forth. Towards the end there is a particularly interesting section because on the surface it looks completely beside the point. The section is titled "Points for Style," and mentions learning to write well, reading in science fiction, training in martial arts, meditation, music (preferably obscure), and wordplay. Other things could be added: avoiding mainstream TV or having arcane hobbies and interests, for instance, so that in a social context hackers may ask each other questions about obscure hobbies as a rough social equivalent to, "What's your favorite TV show?"

Not that any of these is necessary to be a hacker, but together these common trends point to a personality profile that can learn the anthropological style of observation relevant to usability work much more easily than the general public, or even Joe Professional Programmer who regards learning new technologies as a necessary evil rather than a joy, works in Visual Basic .NET after being swayed by advertising, goes home and watches TV after work, has probably never heard of ThinkGeek,

and would probably rather do gift shopping at Walmart even if he does know of ThinkGeek.

All of this is to say that the culture surrounding you is not like water to a fish. It is a basic fact of life that you don't automatically share the perspective of others. Cross-cultural experience or ethnic minority status may accentuate this, but this is true even if you're not (regarded as) a minority. And this kind of experience provides a very good foundation for anthropological ways of understanding exactly how you are not a user and users don't think like you.

# **Anthropological usability techniques**

## **An introductory example: Card sorting**

One basic challenge for organizing a site's information architecture is the taxonomy, or way of breaking things down. If one is asked what an example of a good taxonomy, one example of a taxonomy par excellence is the biological taxonomy that organizes all the way from kingdoms down to species or subspecies and varieties. And indeed that is one kind of taxonomy, but it is not the only possibility. If one is asked to break down a list of a fork, spoon, plate, bowl, soup, and macaroni and cheese, one obvious way is to put the fork and spoon together as cutlery, the plate and bowl together as dishware, and the soup and macaroni and cheese together as food. But this is not the only basic way, and it can make sense to put the fork, plate, and macaroni and cheese together as representing one complete option, and the spoon, bowl, and soup together as representing another basic option. Stores and websites that have adopted the latter approach, such as a gardening store or website that organizes its products according to the type of garden a customer is trying to make and what the customer is trying to do, see a significant increase in sales. Even biology could use other complementary technologies: a taxonomy that

classified organisms according to both ecosystems and their roles within their ecosystems and ecological subsystems could say something very valuable that the eighteenth century classification wouldn't.

In terms of websites, an information architecture that corresponds to the organization's org chart is never a helpful choice. Even when we are talking about an intranet intended only for organizational insiders, one section or subsite for each department is not the right choice: one better option would be to support workflow and design around the tasks that employees will be doing with the intranet.

What is the best information architecture? That's not a question to answer by looking something in a book or even thinking it out; it is something that we should work out based on what we observe doing research, even if we also read and need to do a bit of thinking. And this is the best practice across the board for usability.

One valuable exercise to help guide information architecture design is called card sorting. In this exercise, we get a stack of index cards, perhaps 3x5", and write the individual names of different pieces of functionality the website should offer, trying to name things neutrally so that the names do not have common terms suggesting how certain parts belong together.

Then we shuffle and lay out the cards, and individually ask subjects (people who will participate in an experiment and who are not insiders, whether employees of your organization for an external website, or information technology professionals) to organize them so that cards that belong together are put in the same stack.

Then we note which cards have been placed together, thank the subject, and move on to the next person.

On looking through the notes you may see something. First

On looking through the notes, we may see a few things. First, not all people think the same. We will likely see some breakdowns that are very similar, but there will likely be two or more breakdowns as fundamentally divergent as our breakdowns of the fork, spoon, plate, bowl, soup, and macaroni and cheese. Second, there will probably be a breakdown that simply catches us off guard. And this is good; it means the exercise is working.

After doing this, we can go about looking for a preferably standard information architecture that will gracefully serve the major ways we observed of breaking things down.

### **Focus groups: Cargo cult research for usability**

With an eye to how to best approach observation, we would like to take a moment to talk about Coca-Cola's blunder with "New Coke" and explain why focus groups, bringing in a group of people and asking them what they want, are deprecated as a recipe to make products that look good on paper but don't wear well in normal use. For those of you who don't remember the uproar some years back, the Coca-Cola company announced that it was switching to a new and improved formula, and there was massive public outlash from people who wanted the old Coke back. (Now the company sells both the old formula as Coke Classic and the new formula as Coke II, and Coke Classic is vastly more popular.)

Why would the Coca-Cola company announce it was terminating its cash cow? The answer is that it did naïve marketing research, ran taste tests, and asked members of the public which they would choose: the formula today sold as Coke Classic, or the formula today sold as Coke II. The rather clear answer from the taste tests was that people said they would rather have the new formula, and it was a clear enough answer

that it looked like a sensible course of action to simply drop the second-best formula. It wasn't until everybody could see that the Coca-Cola company had given itself a PR black eye that the company woke up to a baseline observation in anthropology: the horse's mouth is a vastly overrated source of information. Most anthropological observation, including the kinds relevant to usability, are about paying close attention to what people do, and not be too distracted by their good faith efforts to explain things that are very hard to get right.

## **Anthropological observation: The bedrock of usability**

### **There is more than one way to see the same situation**

The kind of observation needed is probably closest to the anthropological technique of participant observation, except that instead of participating in using software or a website, we are observing others as they use software. Half the goal is to understand how the same thing can be observed differently. To quote from James Spradley's Participant Observation, which is an excellent resource:

One afternoon in 1973 I came across the following news item in the Minneapolis Tribune:

Nov. 23, 1973. Hartford, Connecticut. Three policemen giving a heart massage and oxygen to a heart attack victim Friday were attacked by a crowd of 75 to 100 people who apparently did not realize what the policemen were doing. Other policemen fended off the crowd of mostly Spanish-speaking residents until an ambulance arrived. Police said they tried to explain to the crowd what they were doing, but the crowd apparently thought they were beating the woman.

Despite the policemen's efforts the victim,  
Evangelica Echevacria, 59, died.

Here we see people using their culture. Members of two different groups observed the same event but their interpretations were drastically different. The crowd used their cultural knowledge (a) to interpret the behavior of the policemen as cruel and (b) to act on the woman's behalf to put a stop to what they perceived as brutality. They had acquired the cultural principles for acting and interpreting things this way through a particular shared experience.

The policemen, on the other hand, used their cultural knowledge (a) to interpret the woman's condition as heart failure and their own behavior as life-saving effort and (b) to give her cardiac massage and oxygen. They used artifacts like an oxygen mask and ambulance. Furthermore, they interpreted the actions of the crowd in an entirely different manner from how the crowd saw their own behavior. The two groups of people each had elaborate cultural rules for interpreting their experience and for acting in emergency situations, and the conflict arose, at least in part, because these cultural rules were so different.

Before making my main point, I would simply like to comment that the Spanish-speaking crowd's response makes a lot more sense than it would first seem. It makes a lot of sense even on the assumption that the crowd did in fact understand the police officer's explanation that they "apparently did not understand."

What the article explicitly states is that the police officers were using an oxygen mask, and that is a device that needs to be pressed against a person's face and necessarily cover the same

parts of a person's face one would cover to try to cause suffocation. If you're not expecting something like that, it looks awfully strange. Furthermore, although I do not know whether this actually happened, it is standard operating procedure to many emergency medical technicians and paramedics who perform CPR to cut off the person's top completely, palpate to the best place to place one's hands, and mark the spot with a ball-point pen. This may or may not have happened, but if it did, it is appropriate enough for neighbors to view it as an extreme indignity. Lastly, although today's best practices in CPR are more forceful than was recommended in the past, "heart massage" is a technical term that does not refer to anything like softly kneading a friend's shoulder. The people I have met who do CPR regularly say they crack ribs all the time: cracking ribs may not be desirable on its own, but if a responder is doing good CPR with enough force to be effective, breaking a patient's ribs is considered entirely normal and not a red flag that CPR is being done inappropriately. Furthermore, the woman's age of 59 raises the question of osteoporosis. Racism is almost certainly a factor in the community's memories; the community had quite probable stories circulating of bad treatment by police officers and possible police brutality. I know that the police tried to explain what they were doing, but if I saw police apparently trying to suffocate a member of our community, possibly saw an offensive indignity in that a senior's shirt and underwear had been cut away, and saw an officer keep on forcefully shoving down on her chest and probably heard ribs crackling with every shove, it would take quite some believing, almost a reprehensible gullibility, to believe the other officers who tried to explain, "No, really, we're trying to help her!" (And, for reasons below, I would be very wary of saying that

she probably would have survived if only the crowd hadn't intervened.)

I may pause to note that neither group, nor apparently the authors of the newspaper article or anthropology text, appears to grasp how the situation would be viewed by a doctor. "Heart massage" is now more commonly known as "Cardio-pulmonary resuscitation," or CPR, resuscitation being an otherwise obscure synonym for resurrection or returning from the dead: in French religious language, for instance, resuscitation is the term one uses for Christ returning to life after death on a cross. There is, to the purist, some fundamental confusion in the marketing-style slogan, "CPR saves lives." Clinically and legally, death occurs when a person's heart stops beating. If a person is still alive, and if there is any chance of saving the person's life, then CPR is both premature and inappropriate.

Once a person enters a state of "cardiac arrest," meaning death, then there might be a possibility of getting that person back by cardio-pulmonary resuscitation, even if that is a long shot. CPR at its very best is a third as effective as a heart beating normally, and even under ideal conditions can slow deterioration to give the emergency room perhaps a 5% to 10% chance of getting the person back. And that is assuming that ideal conditions are possible: in reality ideal conditions don't happen. Though most people giving CPR do not have to deal with a crowd interpreting their efforts as assault, hoping to deliver perfect CPR is like hoping to become a good enough coder that one need not contend with debugging: Eric Raymond implicitly showed great maturity as a programmer by saying he was dumbfounded when his first attempt at Python metaprogramming worked without debugging. The person who does CPR in a public setting will contend not only with the difficulties of CPR itself,

but an "uh-oh squad," bystanders who second-guess one's efforts and create a social dynamic like that of giving a speech to an audience of hecklers.

Now there is no question of blows or physical restraint when it comes to the idea of CPR or cardiac massage as a way to save lives that is apparently shared by the newspaper article author, the anthropology author, and possibly the police, and the medical view that CPR is "only indicated in the case of cardiac arrest," meaning that it is premature and inappropriate unless a person has already died, but can preserve a remote chance of getting a patient back after the patient has crossed the threshold of clinical death. Emergency room doctors who view CPR as slowing deterioration and holding onto a slender chance of getting someone back will be quite grateful for CPR performed by police officers and other members of the general public who view CPR as a skill which saves lives. But the understanding is still fundamentally different, and differences like this come up in how computer interfaces are understood: differences you will want and need to appreciate.

### **Applying this foundation to usability**

The core of usability testing is designing some sample tasks, asking users to do them, and observe, as a fly on the wall, without helping. If you can record sessions, great; if not, a notepad, notebook, or netbook works well. (The advantage of recording sessions is that almost invariably people will say, "There's no way the user could have that much trouble with our design," and a five-minute video of a user looking everywhere on the page but where users are intended to look, is worth a thousand arguments.) Usually studying five users is sufficient.

There is a saying in customer service of "The customer is

There is a saying in customer service of, "The customer is always right." One may read the cautionary tale of a salesperson who kept on winning arguments with customers and somehow never closed a sale. And the principle is very simple. A customer who is wrong is to be treated as a valued customer as well as a customer who is right, and whether your customer is right or wrong, you treat each customer as a valued customer. Unless you are talking about an abusive customer, in which case it is appropriate to draw a line in the sand, you don't send a message of "I'm right, you're wrong."

That's not what I am talking about when I say, "The user is always right." Anyone who teaches programmers or remembers what it was like to begin programming remembers hearing, "There's no way the computer can be right! The computer has to be running my code wrong, or the compiler isn't working right!" And it is a slow and at times painful lesson that the computer is in fact (almost) always right, that no matter how right your code seems, or how certain you are, if your code is not working, it is because you did something you did not intend, and your code will begin working when you find out how your code does not obviously say what you think it does, and adjust that part of your code. Bugs in libraries and (more rarely) compilers and interpreters do exist, but one important threshold has been crossed when a programmer stops blaming the tool for confusing bugs and begins to take responsibility personally.

And in the same sense that the computer is always right, and not the sense that the customer is always right, the user is always right about how users behave. If the user interacts with the user interface and does something counterproductive, this means the same sort of thing as code doing something counterproductive if it's been compiled. The user, who is always right, has identified an area where the interface needs

right, has identified an area where the interface needs improvement. The user should be regarded as "always right" just as the computer should be regarded as "always right," and when the user is wrong, that's good information about where the user interface has problems.

I could say that the only thing we really need to do at all is observe the user. But observing the user includes a major challenge: it includes the major task of grasping things that violate our assumptions. The task is something like first encountering how JavaScript's support for object-oriented programming includes objects and inheritance, but without classes, first coming to a scripting language and asking, "When does integer overflow occur?" and being told, "Your question does have an answer, but it matters less than you might think," or the experience of a novice programmer who posted to a forum, "How do I turn off all the annoying compiler warnings I'm getting?" and was extremely frustrated to have more than one guru say, "You want to beg your compiler to give you as many warnings as you can get, and treat all warnings as errors."

It was a deft move for Google to give Chrome a single search and URL bar, but the main reason may not be the one you think. Searching was heavily enough used that Firefox made life easier for many users by adding a second bar to the right of the search bar so that we could search without first pulling up the Google homepage; for heavy users, simplifying the URL bar and the search bar into one full-width piece is the next refinement. But this is not the main reason why it was deft for Google to give Chrome a unified search/URL bar, or at very least not the only reason.

My own experience helping others out with their computers has revealed that something obvious to us has been absolutely nonexistent in their minds. Perhaps you have had the experience

nonexistent in their minds. Perhaps you have had the experience, too, of telling someone to enter something in a page's text field, and they start typing it in the URL bar, or vice versa typing a URL into a page's search field. What this unearths is that something that is patently obvious to web designers is not obvious to many web users: "Here is an important, impenetrable dividing line, and all the chrome above that line belongs to the browser, and everything below that line (above the bottom chrome, and excluding any scrollbars) belongs to the website." This division of labor is obvious enough to most web designers that only experience could teach them that there are some people who don't understand it. But the real world has many users who do not have any such concept, and behaviors like typing search terms in the URL bar (years before Chrome was available) are clues to "This is something that's out there."

And if you think, "Ok, but users are more sophisticated now," you might go through your website's search logs and see how many website addresses you can see. It won't be nearly as many as ordinary search terms, but have you ever wondered where the addresses to MySpace and porn sites in your search logs come from?

Culture shock is a fundamental reality of when things go contrary to your expectations; most of us experience small amounts of culture shock in our day-to-day living and much greater amounts if we travel to another country or do something else. The three examples given above, of classless objects in JavaScript, integer overflow in scripting languages as not terribly important, and asking for a more draconian handling of warnings are examples of culture shock in relation to technologies. As a rule of thumb, if you aren't experiencing culture shock from your user observations, you're not deriving full benefit from them and you don't understand your users well

can benefit from them, and you don't understand your users well enough to make the fullest improvements to the design. As a rule of thumb, if you aren't experiencing culture shock from your user observations, that's because you're taking a shower with your raincoat on.

### **It's just like (hard) debugging**

I would like to make one closing parallel to debugging. There are several types of debugging I am not talking about: for instance, a missing close parenthesis causes an immediate error that makes it fairly quick work to find out what is wrong and what line of code it is. A traceback can also provide an excellent starting point for quick and effective debugging. Although debugging a failed unit test may not be quite so easy, a unit test is not just a tool to say that something is wrong, somewhere; it is a tool that should point a finger, and usually narrow the search field significantly. And many other bugs that are neither syntax errors nor resolved with the help of unit tests are still easy enough to fix that we need not be terribly aware of them; when we think of debugging we may only think of the few hard bugs rather than the majority of bugs which better programmers resolve without really thinking about it, like we turn on light switches on entering a darkened room, or unzip a coat outdoors when the day warms up, without giving the matter too much conscious thought or vividly remembering that we do this. (This is, incidentally, somewhat of an ethnographic observation of good programmers.)

What I am talking about, as hard bugs, are bugs where you go through every investigative tool you can think of, and still cannot pin down what is going on. (This may include a relatively small proportion of bugs that also generate tracebacks or unit test

failures.) Observing the bug seems like observing, not a miniature ship in a bottle, but a ship in a seamless glass sphere: there's no way you can tell that the ship could have gotten in there, but it is quite clear that the ship in fact is in a glass container that has no openings that you can imagine the ship getting in through.

Isaac Asimov said, "The most exciting sound in science is not, 'Eureka!' [I've found it!], but 'That's funny,'" and the history of science bears him out. Today, X-rays are widely known among scientifically literate people to be a very high-energy, short-wavelength radiation belonging to the same spectrum as visible light, but it was not always so; the name 'X-rays' is itself a holdover from when they were a fascinating and mysterious mystery, with the 'X' in 'X'-rays referring to something unknown. It was known that they were radiation of some sort, but they passed through some opaque material and in general did not fit into anything people had a conceptual place for.

In the middle of efforts to understand this mystery, there was one physicist who stumbled upon a golden clue that X-rays might be something like light: he left unexposed photographic plates near a source of X-rays, and upon using and developing them, observed that they had all been partially exposed. His response, however, was to contact the photographic supply company and demand that they replace the photographic plates as defective. As Winston Churchill observed, "Man will occasionally stumble over the truth, but most of the time he will pick himself up and continue on."

In debugging, hard bugs, the kind that remain unresolved after we have investigated all the usual suspects, are rarely solved because we go looking for the right error and find exactly what we expected to find. With the analogy of the ship in the

sphere, it is more like deciding there has to be some kind of concealed seam from gluing or otherwise sealing an aperture big enough to allow the ship to enter, at least in pieces, and after looking the glasswork over, using magnifying glasses and lights, and still finding no trace of a seam, you stop ignoring something you had noticed along the way: the ship itself appeared surprisingly glossy. When you stop to look at the ship for a second, you realize that it is not made of the wood and cloth you expected (and that it appears to be at first glance), but as far as you can tell is shaped out of colored glass. And, after doing a little more research, you learn of a glassblower who makes colored glass ships and forms seamless glass spheres around them. In this case, you were not wrong in saying there was no seam; there is still no way that such a thing could have been crafted at room temperature, and there is in fact no ultra-subtle seam that you failed to notice in our efforts to find the seam to an aperture through which the ship could have been inserted at room temperature, even in pieces. But that's not the point. The ship in a globe was made at glassblower's temperatures, and there it is possible to create a seamless sphere around a colored glass ship.

Hard bugs are debugged successfully when you learn to stop when you stumble over the truth. And the same is true in the anthropological side of usability techniques: some things you can know to look for, and find, but the much more important competency is to recognize when you have stumbled over the truth, and stop and pay attention to something you don't know to look for.

Almost all of the difference between doing user observation badly and doing it well hinges on learning to recognize when you have stumbled over the truth.

## **Lessons from Other Areas**

### **Live cross-cultural encounters**

Learning and observing in cross-cultural encounters is an excellent way to learn how to pick up cues the way a user interface developer needs to. There are two basic cross-cultural encounters I recommend as particularly valuable. The first of these, as it takes shape in the U.S., is to spend time volunteering with an English as a Second Language program and tutor on computer basics. Or find out if you can tutor in classes at your local library. (If possible, work in an adult computer class that has seniors and not too many young people.) This may or may not be the most pleasant experience, but it is some of the most valuable. I remember one experience where I was working with a Sudanese refugee, quite possibly an escapee of the genocide against Christians, who had just had his life uprooted under presumably traumatic circumstances and was learning to deal with living in the U.S. all at once, which would presumably be trauma in itself. I remember in particular one moment when we had very slowly typed a word or two in a word processor, and ticked the button to close a document, and were staring at a dialog box asking if we wanted to save the document before closing. And I remember a slow dawning realization that not only did he not know the quite substantial cultural concepts involved

in recognizing that this was how culturally one asks a question, expecting an answer in the form of a click on one of two areas of the screen to answer "Yes," "No," or "Mu" ("Cancel"), but the question itself, "Do you want to save this document before closing?" was a question that did not exist at all in his culture, and even if I spoke his native language I would probably not be able to explain the question on terms that would make any sense to him. That was probably my most difficult teaching experience, and the one where I have the most doubts about whether I succeeded in teaching anything at all. But it was a profoundly valuable experience to me, and helped me see how things could "go without saying" to me but be baffling to others.

The second of these two cross-cultural encounters is whatever you already have. Few if any of us have no cross-cultural encounters; whether one is ethnically or (a)religiously a majority or a minority, an immigrant or a native citizen of one's country, or considering face-to-face encounters or Internet connections, most of us have at least some experience in cross-cultural encounter. The differences are there; if you have learned something from cross-cultural encounter, the experience can help us more readily recognize the cues you need to recognize.

## History

While I am wary of reducing history to merely an apparatus to understand the cultures of previous times, most historians arrive at a fairly deep understanding of a culture that is not their own, and may arrive at a sensitivity to the ways, all too easy to ignore, in which historical texts veto modern assumptions. There was an experiment in which a question concerning Abraham Lincoln and a number of historical primary sources were given to

Lincoln and a number of historical primary sources were given to a number of elementary school teachers, plus one historian of Lincoln, and a historian whose specialties were unrelated. During the time of the experiment, the elementary school teachers started with a wrong conceptual framework that imposed today's basic categories on the texts, and did not progress to anything better. The historian of Lincoln started with a highly accurate conceptual framework and very quickly arrived at the answer. But what is particularly interesting is the other historian, who was trained as a historian but had little directly relevant knowledge to Lincoln. He started with the same conceptual framework as the non-historians, but by the end he had corrected his framework to the point of reaching where the Lincoln historian had started.

This latter historian is perhaps the most interesting, not because he was initially right, but because he was self-correcting: even though his starting framework was no better than the schoolteachers, he was able enough to adjust his perspective from cues based on the text so that he reached the framework the Lincoln historian started with. And, one would imagine, the Lincoln historian would have had a similar self-correcting sensitivity to the texts had he been asked the same kind of question about a historical setting he did not initially understand.

Getting history right is relevant to us in two ways. First, one understands one, or perhaps many, other cultures more or less well. Second, when one trips over a clue that one is wrong, one stops and learns from it, instead of hoping it will go away. Both of these strengths are a powerful foundation to usability.

## **Old Books and Literature**

Books can be a very good place to sharpen anthropological competencies through meeting other cultures. However, I might clear the ground of some distractions if it is tempting to say, "But I meet other cultures in all my favorite books! I'm an avid reader of science fiction and fantasy."

All science fiction is not created equal in terms of cultural encounter. There is a marked difference between reading Heinlein's *Stranger in a Strange Land* and watching *Star Trek*. Heinlein understood both culture and culture shock, and though his book only treats one alien culture, it is written to create culture shock in the reader, and challenge us in assumptions we didn't know we had. "Whaaa—? They can't do that!" is a normal and intended reaction to several parts of the book. In *Star Trek*, there are many races, but culture shock in the viewer is almost nonexistent even when the plot is intended to surprise. To put it more pointedly, the average American's culture shock from watching years of *Star Trek* is probably much less than the average American student's culture shock from a few months' experience in a foreign exchange program, perhaps less than the culture shock in the first month of that program. By comparison with a live encounter with another human culture, the alien races in *Star Trek* have less their own alien cultures than a shared personality profile we can already relate to even when we don't like it.

Likewise, not all fantasy is created equal. J.R.R. Tolkien and C.S. Lewis were both Oxford-educated medievalists who knew medieval literature intimately. The genre of fantasy that appeared in their wake, if you have seriously read medieval literature, seems by comparison like the opening rant in the movie *Dungeons & Dragons*, where a supposedly medieval character gives an impassioned "Miss America" speech about how

horrible it is that the realm's government is unlike a U.S.-style democracy. Today's genre fantasy reads like the story of Westerners from our time who happen to be wearing armor; by contrast, in *The Chronicles of Narnia* some of the characters are indeed from the twentieth century, but in terms of how the story is put together there is something a bit medieval, and not individualist, about their characterization.

If our cultures' science fiction and fantasy are not the best place to be challenged by another encounter, and to develop that kind of sensitivity, where can we go? One obvious response is to look to be challenged by books like the *Dao De Jing* and the *Bhagavad-Gita*. Those are both excellent places to look to be challenged, but if we assume that we can be challenged by the *Bhagavad-Gita* but not Plato, we are selling both of them short. The image in Plato of climbing out of the cave with its shadows and looking at the sun is something that a Hindu commentator on the *Bhagavad-Gita* can quite easily relate to, and in a certain sense Plato has more in common with that kind of Hinduism than with his disciple Aristotle.

What does it look like to read a text to see what one can pick up culturally? Consider the following text:

**QUANTUM THEORY, THE.** As recently as the opening years of the present century the vast majority of physicists still regarded Newton's dynamical laws as something established for all time. And they were not without solid grounds for this faith. Many phenomena were indeed known, chiefly those which may be classed under the heading radiation, e.g. black body radiation and line spectra, which refused to accommodate themselves to any sort of theory founded on Newtonian principles; but it was generally

believed that such phenomena would, sooner or later, be completely accounted for without any departure from the classical principles of physics. Even the theory of relativity developed by Lorentz, Einstein, Minkowski and their successors was regarded only as a widening or generalization of the Newtonian basis of physics. It was the culmination of classical physical theory. These phenomena we now believe, cannot be accounted for on the basis of classical physical theory, whether Newtonian or Einsteinian. The first act of sacrilege was committed by Max Planck, until recently professor of theoretical physics at the University of Berlin, about the end of the year 1900, when he initiated the quantum theory. One of the problems engaging the attention of physicists during the closing years of the last century was that of the radiation from a black body...

The reconciliation of these two aspects of the phenomenon, namely the independence of the energy of the ejected photo-electrons and the intensity, on the one hand, and the wave character of the radiation on the other, constitutes one of the most formidable problems which physical science has ever encountered...

Now I would like to make a couple of points. I could, for instance, have chosen an interminable fight narrative from a medieval Arthurian legend to say, "We look on Arthurian legends as mysterious tales of wonder. Did you know that a large portion of those legends is actually quite dull to the modern reader?" Some readers may be wondering, "This is a scientific article, not a cultural area where anything goes." But, even if science is not a domain where anything goes, there are cultural issues here, and it may be possible to date the article by cultural markers as well

as by values given for physical constants (Avogadro's number appears to be given as  $6.06 \times 10^{23}$ , not today's  $6.022 \times 10^{23}$ , and the unit of electrical charge is reported to have current values consistent with initial measurements, despite the fact that the initial reported experimental value was erroneous and subsequent experimenters fudged until it was found acceptable to report what is now believed to be the correct value.)

In the quoted text, there are two significant markers that date the text as showing significant cultural difference from how things are viewed today.

A physicist or philosopher today would say that Newtonian physics, Einsteinian physics, quantum physics, and for that matter superstring theory are fundamentally irreconcilable on an ontological plane but happen to predict the same behaviors for the kind of experiments one would expect of a high school physics lab: the predicted results for each of these theories are vastly smaller than even a top-notch experimental physicist doing high school experiments could possibly observe. But the reasons behind those differences are irreconcilable, like the difference between saying "You see this OS behavior because it is running natively on your computer" and "You see this OS behavior because it is being emulated under virtualization with several levels of indirection that are extremely slippery to understand."

The behavior predicted is interchangeable, but the reasons proposed for the behavior are fundamentally irreconcilable. Furthermore, this is not just true if one compares quantum physics with Einsteinian or Newtonian physics; it is also true if one compares Einsteinian with Newtonian physics: to today's take on things, it is a bit astonishing to say, "on the basis of classical physical theory, whether Newtonian or Einsteinian." The usual way of presenting things in a physics class today is to

present Einstein's theory of relativity as the first in a stream of foundational upsets after Newton reigned unchallenged and apparently eternally established for centuries. Today we would expect to need to dig a bit to find more examples of Einstein's theory referred to as a further expansion developing Newton, which should still be considered "classical physical theory."

The second quoted paragraph refers to how light (and, it may be mentioned, practically everything else as seen in quantum theory) behaves as a particle when treated in some ways and as a wave as treated in others. This duality has since hit the rumor mill well enough that a favorite illustration from science in theology programs is how light exists as both a particle and a wave, which reflects the extent to which the duality of light as particle and wave remains unresolved but is no longer regarded as, "one of the most formidable problems which physical science has ever encountered."

Our point is not to deride the article, which is written at a higher level of sophistication and detail than, for instance, the Wikipedia. Apart from its certitude in the existence of an "aether," slightly surprising in light of the fact that the Michelson-Morley experiment dates to 1887 and the article refers to 1900 as a past year, its picture of quantum physics portrays the same core science one would expect of a physics text today. But, even in physics, which is not in any sense a field where just anything goes, culture is present, and for that matter in this article the cultural cues alone are most likely sufficient for an historian of 20th century physics to closely date it.

This kind of cue is what you can practice learning in reading old books, and this kind of cue is what you need to be able to pick up in observing for good user interface development.

The way you observe that a user doesn't share an

understanding that is obvious to you is by the same kind of cue that can clue you in that a text doesn't share an understanding that is obvious to you.

### **The last other area: Whatever you have**

Whatever else you have is probably a resource you can draw on. Do you love birding? Birding is a hobby of observation. Do you do martial arts, for instance? A common theme in martial arts is harmony between opponents, and if you can attune yourself to a sparring partner, you should be able to attune yourself to a user.

Comedy or performing arts? You're not a good comedian if you're insensitive to your audience. Have you made a lot of mistakes, and learned from them, or at least started to learn?

Wonderful news! (Are you an amateur or professional anthropologist? That one doesn't need explaining!) There is some connection between any two areas of life; let other skill support and strengthen your usability work.

# Understanding the User

## A lesson from optimization

Knuth said, for the novice programmer, "Don't optimize," and to experts only, "Optimize later." Always writing for optimization is a recipe for bad, unreadable code, and for that matter slow code, compared to code written for clarity that is later optimized using that clarity. And Knuth also said, "Premature optimization is the root of all evil."

In one production system I was working on, I wrote one search with the realization that the implementation I was using was extremely inefficient, and had to deliberately refrain from optimizing it, to leave for later. When the whole system was put together, it took a couple of seconds longer than was acceptable, and I began mentally gearing up to optimize the inefficient search. Before doing so, I did some testing, and found to my surprise that my inefficient search implementation took very little time to run, and when I began mapping things out, found the root problem. I had called a poorly chosen method, and with it made a purely preventable network call, and that network call took a few seconds. When that problem was fixed, the remaining code ran at acceptably fast times for even the largest accounts.

This story is my own version of something that keeps on being retold in the programming literature: "Our system was running slowly, and we had reasonable ideas about what was going on

slowly, and we had reasonable ideas about what was going on here, but our reasonable ideas were wrong. We didn't know what the real problem was until we dug into some observation."

This basic lesson in optimization is a fundamental phenomenon in usability as well. We will have reasonable ideas about what the usability issues are, and our reasonable ideas will be wrong. We won't know what the real issues are until we dig into some observation.

### **What's wrong with scratching an itch, *or*, you are not your user**

The open source community is largely driven by scratching itches, but scratching a programmer's itch is a terrible way to approach user interface design.

The story is told of a program used in an office where a popup window appeared and said, "Type mismatch." And the secretary obediently typed M-I-S-M-A-T-C-H, a perfectly appropriate user response to an inappropriate error message. (This kind of thing shows up in many more subtle ways, some of which are not so obviously wrong.)

Designing a user interface that makes sense to someone who understands its inner workings, and designing a user interface that makes sense to its intended audience, are not the same thing. A mechanic's understanding of how a car starts is very elaborate and detailed, but a user should be able to get by thinking, "I turn the key and press the gas, and the car starts" without necessarily thinking anything about what's under the hood. If users need to understand what's under the hood to operate the car, the car needs improvement.

### **Worst practices from the jargon file**

The jargon file defines the extremely pejorative "PEBKAC" as:

[Abbrev., "Problem Exists Between Keyboard And Chair"]  
Used by support people, particularly at call centers and help desks. Not used with the public. Denotes pilot error as the cause of the crash, especially stupid errors that even a luser could figure out. Very derogatory. Usage: 'Did you ever figure out why that guy couldn't print?' 'Yeah, he kept cancelling the operation before it could finish. PEBKAC'. See also ID10T. Compare pilot error, UBD.

And the particular example is unfortunately revealing of an attitude user interface people need to avoid like the plague.

It is common enough in computer programs to have modal dialog boxes; the humble JavaScript `alert("Hello, world!");` is one of innumerable ways to get them. And what they mean from an ordinary nontechnical user perspective is, "A box popped up, probably one that you don't want and may not understand. What is even more annoying is that it is blocking your work; you can't continue what you are doing until you get rid of it." And so an entirely appropriate way to deal with these annoyances is get rid of them as quickly as possible.

The example given in the jargon file's definition of "PEBKAC" is, "'Did you ever figure out why that guy couldn't print?' 'Yeah, he kept canceling the operation before it could finish. PEBKAC.'" For a long time, at least, attempting to print from a GUI gave something that looked like a modal dialog box, but for this "modal dialog lookalike", there is one important difference in behavior. When you click on the button to make it go away, it destroys your print job.

*This is not a case of a problem existing between the user's*

This is not a case of a problem existing between the user's  
keyboard and chair.

It is a case of a problem existing between the user interface  
designer's keyboard and chair. PEBKAC.

To pick on the jargon file a little more, "Drool-proof paper" is  
defined as:

Documentation that has been obsessively dumbed down,  
to the point where only a cretin could bear to read it, is said  
to have succumbed to the "drool-proof paper syndrome" or  
to have been "written on drool-proof paper". For example,  
this is an actual quote from Apple Computer's LaserWriter  
manual: "Do not expose your LaserWriter to open fire or  
flame."

Let's ignore the fact that this sounds less like a technical  
writer trying to be easy to understand, than corporate legal  
counsel trying to ward off ambulance chasers.

There is a very user-hostile attitude here, the basic idea that  
if your system is too difficult for your users to understand, the  
users must be too stupid, and making something user-friendly is  
a matter of stretching to meet people you shouldn't have to  
cater to. Stories and terms like this circulate among  
programmers. I might suggest that terms like these, for your  
software's audience, are little, if any, better than a racial slur.  
They reflect an attitude we don't need.

## Python and usability

You do not really understand Python until you understand something about usability as it appears in Python. Usability is the soul of 'Pythonic'.

### **It's not all about the computer!**

There is something genuinely different about Python, and to explain it I would like to discuss the advantages of *C*.

If you want to nano-optimize every ounce of performance you can get, there is little serious competition to *C*. You can write assembler for different platforms, or write in a *C++* that is multiparadigm like Python and have some parts of your program use high-level features like objects, templates, and operator overloading, while still writing almost unadulterated *C* for parts that are performance-critical. And the group of programmers that "vote with their keyboards" for using *C* this way, includes Guido van Rossum, who created Python. The first and canonical Python implementation is written in *C*, and a Pythonista underscoring the point that Python's switch statement is a very efficient dictionary will explain that Python's dictionary is implemented in tightly optimized *C*.

But this kind of advantage comes at a price. In the canonical list of ways to shoot yourself in the foot in different programming languages, *C* is "for people who want to load their

own rounds before shooting themselves in the foot." In one Python forum, a wannabe 133t hax0r asked how to write a buffer overflow in Python, and a wry Pythonista replied apologetically: "We're sorry, but Python doesn't support that feature." But C does support the "feature" of buffer overflows; its default string handling never leaves home without it. With manual memory management and manual handling of pointers, C also supports "features" including all kinds of memory leaks and subtle pointer errors that can be extremely difficult to debug. Python closes this Pandora's box, although Python is hardly the only language with the wisdom to do so. Python, PHP, Ruby, Perl, Tcl, and Java all close the Pandora's box that must be wide open if you are to have tightly optimized C.

C has been called a language that combines the power of using assembler with the ease of using assembler, and I know of no compiled language that surpasses C for power over bare metal, or for corresponding possibilities for tight optimization. However, this is not the only way to keep score. Python keeps score by another metric: programmer productivity.

The one overriding concern motivating decisions in Python is not how you can get the tightest control over the computer's productivity. It's how to let the programmer be most productive, and it has been said of this relentless pursuit of programmer productivity that capital sentences are passed with less thorough deliberation than obscure Python features. And if you've used Python, the difference you have experienced is precisely because of this one overriding concern, this relentless pursuit. The people in charge of Python have decided that Python isn't about what to do to optimize the computer; it's about what you do to empower the programmer.

If you're interested in usability, you have a good working

example of usability to look at. To put Python's strength a little differently, Python is a language where the one overriding concern and relentless pursuit is usability for you, the programmer. If you are working on usability, you are working to give end-users the same kind of thing that Python gives you. You are making a product more Pythonic to use, as opposed to giving the more C-like experience of an interface that lets users load their own rounds before shooting themselves in the foot. Usability is about how to go from giving C user interfaces, to giving Pythonic user interfaces.

# Usability, the Soul of Python

## *An Introduction to Programming Python Through the Eyes of Usability*

[cjshayward.com/python](http://cjshayward.com/python)

I would like to begin discussing Python with a feature that causes puzzlement to good programmers first meeting Python: significant whitespace.

Few features in Python are absolutely unique, and Python did not pioneer the concept of significant whitespace. The basic concept in significant whitespace is that how you use spaces, tabs, line breaks, etc. necessarily communicates certain basic aspects of your program, like how individual statements should be grouped together (or not). Previous influential languages to use significant whitespace include Cobol and Fortran, which are known by reputation, a reputation that survives in sayings like, "A computer without Cobol and Fortran is like a slice of chocolate cake without ketchup and mustard," "The teaching of Cobol cripples the mind. Its teaching should therefore be regarded as a criminal offence," or "You can tell how advanced of a society we live in when Fortran is the language of supercomputers." Early exposure to Fortran left an undeniably foul taste in Eric

Raymond's mouth, and when he learned that Python had significant whitespace, he repeatedly described Python's first impression on him as "a steaming pile of dinosaur dung."

Since the days of fixed formatting as in Cobol and Fortran, there was the invention of what is called freeform formatting, which means that as long as you follow a few basic rules, you can use whitespace to format your code however you please. The list of languages that have embraced this feature include C, C++, Java, C#, Perl, PHP, and SQL, and that's really just naming a few of the bigger players. Freeform formatting means that the compiler will accept all of the variations of the "internet user's drinking song" below as equivalent:

```
    for(i = 99; i > 0; ++i) {
        printf("%d slabs of spam in my mail!\n", i);
        printf("%d slabs of spam,\n", i);
    printf("Send one to abuse and Just Hit Delete,\n");
    printf("%d slabs of spam in my mail!\n\n", i + 1);
    }
```

```
        for(i = 99; i > 0; ++i)
        {
            printf("%d slabs of spam in my mail!\n", i);
            printf("%d slabs of spam,\n", i);
        printf("Send one to abuse and Just Hit Delete,\n");
        printf("%d slabs of spam in my mail!\n\n", i + 1);
        }
```

```
            for(i = 99; i > 0; ++i)
            {
                printf("%d slabs of spam in my mail!\n", i);
                printf("%d slabs of spam,\n", i);
            printf("Send one to abuse and Just Hit Delete,\n");
            printf("%d slabs of spam in my mail!\n\n", i + 1);
            }
```

```
                for(i = 99; i > 0; ++i)
                {
                    printf("%d slabs of spam in my mail!\n", i);
                    printf("%d slabs of spam,\n", i);
                printf("Send one to abuse and Just Hit Delete,\n");
                printf("%d slabs of spam in my mail!\n\n", i + 1);
                }
```

```

printf("%d slabs of spam in my mail!\n", i + 1),
    }

```

Which is best? From a usability standpoint, the braces go with the lines to print out the stanza rather than the for statement or the code after, so the following is best:

```

for(i = 99; i > 0; ++i)
    {
    printf("%d slabs of spam in my mail!\n", i);
    printf("%d slabs of spam,\n", i);
    printf("Send one to abuse and Just Hit Delete,\n");
    printf("%d slabs of spam in my mail!\n\n", i + 1);
    }

```

The One True Brace Style did a good job of being thrifty with lines of screen space when monitors were small, but it is confusing now: the close curly brace is visually grouped with lines that follow: if I add a line:

```

for(i = 99; i > 0; ++i) {
    printf("%d slabs of spam in my mail!\n", i);
    printf("%d slabs of spam,\n", i);
    printf("Send one to abuse and Just Hit Delete,\n");
    printf("%d slabs of spam in my mail!\n\n", i + 1);
    }
printf("I suppose even integer overflow has its uses...\n");

```

the close curly brace is visually grouped with the subsequent exclamation, and not, what would be better, visually grouped with the drinking song's stanza.

But the issue goes beyond the fact that the common style bold enough to proclaim itself as the One True Brace Style may not be the top usability pick now that we have larger monitors. The styles I mentioned are some of the styles that significant numbers of programmers who care about well-formatted code advocate for; freeform allows for laziness, and for that matter paved the way for one of the first contests elevating bad programming to a refined art form: the International

Obfuscated C Code Contest, where C code submitted was code that worked, but top-notch C programmers look at the code and have no idea how it works. (In the Computer Bowl one year, Bill Gates as moderator asked contestants, "What contest, held annually via UseNet, is devoted to examples of obscure, bizarre, incomprehensible, and really bad programming?" An ex-Apple honcho slapped the buzzer and said, "Windows!" The look on Bill Gates's face was classic, but this answer was not accepted as correct.) But deliberately lazy or inappropriately clever formatting isn't the real problem here either.

The problem with the fact that people can format freeform code however they want is that people do format freeform however they want. Not only do programmers grow attached to a formatting style, but this is the subject of holy wars; to go through another programmer's code and change all the formatting to another brace style is quite rude, like a direct invasion of personal space. And no matter what choice you make, it's not the only choice out there, and sooner or later you will run into code that is formatted differently. And worse than the flaws of any one brace style are the flaws of a mix of brace styles and the fact that they seem to be tied to personal investment for programmers who care about writing code well. Even if there are not ego issues involved, it's distracting. Like. What. Things. Would. Be. Like. If. Some. English. Text. Had. Every. Word. Capitalized. With. A. Period. Afterwards.

One way of writing the same code in Python would be:

```
count = 99
while count > 0:
    print u'%d slabs of spam in my mail!' % count
    print u'%d slabs of spam,' % count
    print u'Send one to abuse and Just Hit Delete,'
        count += 1
    print u'%d slabs of spam in my mail!' % count
```

```
print u''
```

The braces are gone, and with them the holy wars. Whatever brace styles Python programmers may happen to use in languages with braces, all the Python code looks the same, and while the major brace styles illustrated above are a few of many ways the C code could be laid out, there's only one real way to do it. It would not in principle be very difficult to write a program that would transform freeform syntax to Python, "compiling to Python" so to speak and allowing a freeform variant on Python, but so far as I know it's never been done; people who have gotten into Python seem to find this unusual feature, shared with some ridiculed predecessors, to be a decision that was done right. And in fact the essay "Why Python?" in which Eric Raymond said that Python's significant whitespace made the first impression of a "steaming pile of dinosaur dung", goes on to give Python some singular compliments, saying of one particular good experience with Python, "To say I was astonished would have been positively wallowing in understatement."

Another point about usability may be made by looking at "natural" languages, meaning the kinds of languages people speak (such as English), as opposed to computer languages and other languages that have been artificially created. Perl is very unusual among computer languages in terms of having been created by a linguist who understood natural languages well; it may be the only well-known programming language where questions like "How would this work if it were someone's native language?" are a major consideration that shaped the language. But there is a point to be made here about two different types of spoken languages, trade languages and languages that are native languages, that have everything to do with usability.

If you were born in the U.S. and grew up speaking English, you

could presumably not just travel around your state but travel thousands of miles, traveling from state to state coast to coast all the while being able to buy food, fuel, lodging, and the like without language being an issue. For that matter, you could probably strike up a meandering chat with locals you meet in obtaining food, fuel, and lodging without language being an issue. Even if their faraway English sounded a little different, you have pretty complete coverage if you know just one language, English.

For many people you meet, English would be their native language, too. Spanish is widely spoken and there are large groups with other native languages, but this does not really change the fact that you can travel from coast to coast, buy basic travel necessities, and for that matter chat if you want and only need English.

This is not something universal across the world. Nigeria in Africa is a country about the size of Texas, and it doesn't have a native language; it has hundreds of them. It is not at all something to be taken for granted that you can travel twenty miles and order food and basic necessities in your native language. (Depending on where you live, if you are a Nigerian, you may regularly walk by people on the street who may be just as Nigerian as you, but neither of you knows the other's native language.) And in the cultures and peoples of Africa, there is a basic phenomenon of a trade language. A trade language, such as Hausa in Nigeria and much of West Africa, or Swahili in much of East Africa, may or may not have any native speakers at all, but it is an easy-to-learn language that you can use for basic needs with people who do not speak your native language. If you are from the U.S. and were to need a trade language to get along with traveling, perhaps neither you nor the other party would

know a trade language like Swahili well enough to have a long and meandering chat, but you would be able to handle basic exchanges like buying things you need. One of the key features of a good trade language's job description is to be gentle to people who do not eat, sleep, and breathe it.

With that stated, it might be suggested that Perl is the creation of a linguist, but a linguist who seemed not to be thinking about why a language like English is hard for adults to learn and, in its native form, is a terrible trade language. English may be a powerful language and an object of beauty, but what it is not is easy for beginners the way Swahili is. English is considered an almost notoriously difficult language for an adult learner, and even English as a Second Language teachers may need a few sensitivity experiences to understand why the English pronunciation that they find second nature is so tricky and confusing for adult speakers of other languages to pin down. The enormous English vocabulary with so many ways to say things, and the broad collection of idioms, are tremendous tools for the skilled English communicator. It is also a daunting obstacle to adults who need to learn the many ways English speakers may say something to them. English has many things to appreciate as a native language, but these strengths are the opposite of what makes for a good trade language that adults can learn. Perl, designed by a linguist, is a bit like English in this regard. If you've given it years and years of hard work, Perl breathes very attractively, a native language to love. But if you're starting out, it's needlessly cryptic and confusing: the reasons people love the Pathologically Eclectic Rubbish Lister (as Perl as called by its biggest fans) are reasons it would make a painful trade language. A language like Visual Basic may be said to be the opposite on both counts, as making a very gentle start to programming, but

not a good place to grow to be an expert programmer: the sort of place where you'll be constricted by the language's ceiling. But Python pulls off the delicate balancing act of working well as a trade language where a programmer can be productive very quickly after starting, and having room to grow for those programmers who are able to experience it more like a native language. Visual Basic is an easy trade language but a limited native language. Perl is a vast native language and painfully vast as a trade language. Python is both an easy trade language for those beginning and a deep native language for gurus.

Perl users have an acronym, TMTOWTDI, pronounced "tim-towdy," standing for "There's more than one way to do it." It has been suggested that top-notch Perl programmers are slightly more productive than top-notch Python programmers, and if you were to speak a computer language natively, Perl would be an excellent choice. But it is not entirely easy to learn or read Perl, and this is not just something that affects novices. A classic joke reads:

**EXTERIOR:** DAGOBAH--DAY With Yoda strapped to his back, Luke climbs up one of the many thick vines that grow in the swamp until he reaches the Dagobah statistics lab.

Panting heavily, he continues his exercises--grepping, installing new packages, logging in as root, and writing replacements for two-year-old shell scripts in Python.

**YODA:** Code! Yes. A programmer's strength flows from code maintainability. But beware of Perl. Terse syntax... more than one way to do it... default variables. The dark side of code maintainability are they. Easily they flow, quick to join you when code you write. If once you start down the dark path, forever will it dominate your destiny, consume you

it will.

**LUKE:** Is Perl better than Python?

**YODA:** No... no... no. Quicker, easier, more seductive.

**LUKE:** But how will I know why Python is better than Perl?

**YODA:** You will know. When your code you try to read six months from now.

This difference boils down to usability. It is a truism that code is read many more times than it is written, and write-only code is very much "the dark side of code maintainability."

Someone said, "Computer scientists stand on each other's shoulders. Programmers stand on one another's toes. Software engineers dig one another's graves," and write-only code is code with bad programmer usability, and a way of digging your own grave.

Perl carries on a tradition of one-liners, a program that has only one clever line, like:

```
perl -lne '(1x$_) !~ /^1?$|^(11+?)\1+$/ && print "$_ is prime"'
```

There is a tradition of writing programs like these that show off your cleverness. The Python community does not favor shows of cleverness in quite the same way; in fact, saying, "This code is clever," is a respectful and diplomatic way of saying, "You blew it." There is a well-known Easter egg in Python; normally one uses the import statement to let code access an existing module for a specific task, but if you start the Python interpreter interactively (in itself a powerful learning tool to try things out and learn some things quickly) and type import this, you get:

```
>>> import this  
The Zen of Python, by Tim Peters
```

Beautiful is better than ugly.  
Explicit is better than implicit.  
Simple is better than complex.  
Complex is better than complicated.  
Flat is better than nested.  
Sparse is better than dense.  
Readability counts.  
Special cases aren't special enough to break the rules.  
Although practicality beats purity.  
Errors should never pass silently.  
Unless explicitly silenced.  
In the face of ambiguity, refuse the temptation to guess.  
There should be one-- and preferably only one --obvious way to do  
Although that way may not be obvious at first unless you're Dutch.  
Now is better than never.  
Although never is often better than \*right\* now.  
If the implementation is hard to explain, it's a bad idea.  
If the implementation is easy to explain, it may be a good idea.  
Namespaces are one honking great idea -- let's do more of those!

This little poem speaks against trying to be as clever as you  
can, and this is something deep in Python's veins.

While simplicity is important in Python, Python is a  
multiparadigm language (like many others, including Ocaml and  
JavaScript as well as Perl) and directly supports procedural,  
object-oriented, and (in part) functional programming, letting  
the programmer choose what works best for a situation. On this  
point I may point out that object oriented programming is not a  
better way of solving problems than procedural programming; it  
is one that scales better for larger projects. I would choose  
object oriented methodology over procedural for large projects,  
and procedural over object oriented for small to intermediate  
sized projects, with some tiny projects not even needing  
procedural structure. (If I have enough cargo to fill the trailer  
on an eighteen wheel truck, then the most efficient use of  
resources is to pay for that way of transporting the payload, but  
if the cargo fits neatly inside an envelope, a postage stamp is  
enough.)

Let's look at some of the core language features that are likely to come up.

Python is a scripting language, along with such languages as Perl, PHP, Ruby, Tcl, and shell scripting like bash. As opposed to C and C++ which are compiled to a standalone executable (or library, etc.), Python is interpreted from a script's source file, or more precisely compiled to a bytecode. To simplify slightly, "the thing you run" is usually not a separate executable that is derived from the source code; "the thing you run" is effectively the source code. Now Python does have compiled bytecode, and it is possible to get an implementation of Python that runs on a Java VM or creates a standalone executable, but distributing a Python program or library usually means distributing the source code. Because in Python we are effectively "running the source code," this usually means a faster feedback cycle than the edit-compile-test process one uses in working with a C application. For some Python software such as CherryPy, if you make a change in one of your source files, the application immediately reloads it without needing separately quit and restart, making the feedback cycle even shorter and more responsive.

The "significant whitespace" mentioned earlier means that a statement usually ends with a line break rather than a semicolon. You are allowed to add a semicolon at the end of a statement or use semicolons to separate more than one statement on a single line; hence both of the following are legal:

```
print u'Hello, world!';  
print u'Ping!'; print u'Pong!'
```

However, the standard practice is to let line breaks end your statements:

```
print u'Hello, world!'
```

Note that this differs from JavaScript, where the final semicolon on a line is treated as optional but it is usually considered best practice to explicitly include the semicolon. In Python, it is uncommon to end a statement with a semicolon.

If you want to break a statement over multiple lines, usually because it would be a very long line otherwise, you can end a line with a backslash, and then continue after whitespace, which I suggest you indent to two spaces more than the beginning of the line:

```
print \  
u'Hello, world!'
```

There are some cases where the backslash is optional and discouraged: in particular, if you have open parentheses or square/curly braces, Python expects you to complete the statement with more lines:

```
stooges = [  
    u'Larry',  
    u'Moe',  
    u'Curly',  
]  
  
opposites = {  
    True: False,  
    False: True,  
}  
  
falsy = (  
    False,  
    0,  
    0.0,  
    '',  
    u'',  
    {},  
    [],  
    (),  
    None,  
)
```

The three statements above represent three basic types: the list, the dictionary, also called the hash, dict, or occasionally associative array, and also the tuple. The list, denoted by square braces ("[]") and tuple, which is often surrounded by parentheses ("()") even though it is not strictly denoted by them unless a tuple is empty, both contain an ordered list of anything. The difference between them is that a tuple is immutable, meaning that the list of elements cannot be changed, and a list is mutable, meaning that it can be changed, and more specifically elements can be rearranged, added, and deleted, none of which can be done to a tuple. Lists and tuples are both indexed, with counting beginning at zero, so that the declaration of stooges above could have been replaced by creating an empty list and assigning members:

```
stooges = []
stooges[0] = u'Larry'
stooges[1] = u'Moe'
stooges[2] = u'Curly'
```

I will comment briefly that zero-based indices, while they are a common feature to most major languages, confuse newcomers: it takes a while for beginning programmers to gain the ingrained habit of "You don't start counting at 1; you start counting at 0."

The dictionary is a like a list, but instead of the index automatically being a whole number, the index can be anything that is immutable. Part of my first introduction to Perl was the statement, "You're not really thinking Perl until you're thinking associative arrays," meaning what in Perl does the same job as Python's dictionary, and lists and dictionaries in particular are powerful structures that can do a lot of useful work.

The example of a tuple provided above are some of the few values that evaluate to false. In code like:

```
if condition:
    run_function()
else:
    run_other_function()
while condition:
    run_function()
```

The if and while statements test if condition is true, and the variable condition can be anything a variable can hold. Not only boolean variables but numbers, strings, lists, dictionaries, tuples, and objects can be used as a condition. The rule is basically similar to Perl. A very small number of objects, meaning the boolean False, numeric variables that are zero, containers like lists and dictionaries that are empty, and a few objects that have a method like `__nonzero__()`, `__bool__()`, or `__len__()` defined a certain way, are treated as being falsy, meaning that an if statement will skip the if clause and execute the else clause if one is provided; and a while statement will stop running (or not run in the first place). Essentially everything else is treated as being truthy, meaning that an if statement will run the if clause and skip any else clause, and a while loop will run for one complete iteration and then check its condition again to see if it should continue or stop. (Note that there is a behavior that is shared with other programming languages but surprising to people learning to program: if the condition becomes false after some of the statements in the loop has run, the loop does not stop immediately; it continues until all of the statements in that iteration have run, and then the condition is checked to see if the loop should run for another iteration.) Additionally, if, else, while, and the like end with a colon and do not require parentheses. In C/C++/Java, one might write:

```
if (remaining > 0)
```

In Python, the equivalent code is:

```
if remaining > 0:
```

If-then-else chains in Python use the `elif` statement:

```
if first_condition:
    first_function()
elif second_condition:
    second_function()
elif third_condition:
    third_function()
else:
    default_function()
```

Any of the example indented statements could be replaced by several statements, indented to the same level; this is also the case with other constructs like `while`. In addition to `if/else/elif` and `while`, Python has a `for` loop. In *C*, the following idiom is used to do something to each element in array, with *C++* and *Java* following a similar pattern:

```
sum = 0;
for(i = 0; i < LENGTH; ++i)
{
    sum += numbers[i];
}
```

In Python one still uses `for`, but manually counting through indices is not such an important idiom:

```
sum = 0
for number in numbers:
    sum += number
```

The `for` statement can also be used when the data in question isn't something you handle by an integer index. For example:

```
phone_numbers = {
    u'Alice Jones': u'(800) 555-1212',
    u'Bob Smith': u'(888) 555-1212',
}
```

In this case the dictionary is a telephone directory mapping

In this case the dictionary is a telephone directory, mapping names to telephone numbers. The key "Alice Jones" can be used to look up the value "(800) 555-1212", her formatted telephone number: if in the code you write, `print phone_numbers[u' Alice Jones']`, Python will do a lookup and print her number, "(800) 555-1212". If you use `for` to go through a dictionary, Python will loop through the keys, which you can use to find the values and know which key goes with which value. To print out the phone list, you could write:

```
for name in phone_numbers:
    print name + u': ' + phone_numbers[name]
```

This will print out an easy-to-read directory:

```
Alice Jones: (800) 555-1212
Bob Smith: (888) 555-1212
```

Now let us look at strings. In the examples above, we have looked at Unicode strings, and this is for a reason. If you are in the U.S., you may have seen signs saying, "Se habla español," Spanish for "We speak Spanish here," or "Hablamos español," Spanish for "We don't speak Spanish very well." The difference is something like the difference in Python between:

```
sum = 0
for number in numbers:
    sum += number
```

and:

```
sum = 0
index = 0
while index < len(numbers):
    sum += numbers[index]
    index += 1
```

Now if one is sticking large block letters on a sign in front of a store, it is acceptable to state, "SE HABLA ESPANOL"; it's

appropriate to use an "N" because you don't have any "ñ"s, a bit like how it doesn't bother people to use a "1" because you've run out of "I"s or an upside-down "W" because you've run out of "M"s. And to pick another language, Greeks often seem willing to write in Greek using the same alphabet as English; this is the equivalent of writing "Hi, how are you?" in English but written with Greek letters: "ai ou ap iu:" it works pretty well once you get used to it, but it's really nice to have your own alphabet.

There is one concern people may have: "So how many translations do I have to provide?" I would suggest this way of looking at it. The people in charge of major software projects often try to produce fully internationalized and localized versions of their software that appears native for dozens of languages, but even they can't cover every single language: if you support several dozen languages, that may be full support for 1% of the languages that exist. Even the really big players can't afford an "all-or-nothing" victory. But the good news is that we don't need to take an "all-or-nothing" approach. Russians, for instance, are often content to use forum software that has an interface and a few other things in English, and most of the discussion material in Russian. Perhaps the best thing to offer is a fully translated and localized Russian version of the forum, but many Russians will really do quite well if there is a good interface in English, and if the forum displays Russian discussions without garbling the text or giving errors.

The most basic of the best practices for internationalization and localization is to choose Unicode over ASCII strings. ASCII lets you handle text in a way that works for American English; Unicode lets you handle text in a way that works for pretty much everybody. Working with Unicode strings is similar to working with ASCII strings, but once you use Unicode, you can store

information people enter in other languages for free.

In Python code, an ASCII string looks like 'foo' or "foo", and a Unicode string has a 'u' before the opening quote, like u'foo' or u"foo". Strings may be marked off by either double or single quotes, and a triple double quote or triple single quote can be used to mark a multiline string (which can contain double or single quotes anywhere except for possibly the last character):

```
print u'''Content-type: text/html

        <!DOCTYPE html>
<html xmlns="http://www.w3.org/1999/xhtml" xml:lang="en">
    '''
```

The only gotchas are that you cannot include the same triple quotation mark delimiter, and if the last character of the string is the same kind of character, it needs to be escaped with a backslash, like: u'''This string ends with an apostrophe: \'''.

Probably the next step to internationalization after using Unicode strings is, instead of storing the interface language in your code like:

```
print u'Please enter your email address below:'
```

you would instead do string look-ups that would pull the appropriate translation:

```
print translate(messages.PLEASE_ENTER_YOUR_EMAIL_ADDRESS_BELOW)
```

If you do this, the only language that needs to initially be supported is your own, perhaps tested by a second language, but then you don't need to do major rewrites to support a second language, or a third, fourth, or twelfth. Maybe that wouldn't be a perfect localization, but it's another major step, and it's not too hard.

Having looked at that, let's look at another topic: exceptions and errors. Exceptions are thrown when something doesn't work

and errors. Exceptions are thrown when something doesn't work ideally, and usually you want to catch them. The basic idea is that plan A didn't work and you should have a plan B.

For example, suppose that you have a string value that's supposed to be an integer displayed as a string, like `u'1'`. Suppose further that you want to get the integer out of the string, but default to 0 if parsing fails (for instance, `u'one'` will not be parsed as an integer). Then you can write:

```
try:
    result = int(input)
except ValueError:
    result = 0
```

This code says that plan A is to get an appropriate integer value out of the input, and plan B is to set a default of 0. This kind of thing is very appropriate in dealing with the web, where you should assume that input is inappropriate and possibly malicious until proven otherwise. If you write a web script that asks people to enter their age, and someone hits two keys at once and enters an age of `u'22w'`, you need to be able to roll with it-and this is nothing next to what might happen if someone is acting maliciously. In working on the web, there may be ideal input that you intend, but both from a usability and a security perspective you need to be able to respond appropriately to input that was not what you intended. If you only type:

```
result = int(input)
```

your whole program will break on even an innocent typo like entering `u'22w'` when asked for their age.

Exceptions are important in Python. In Java and some other languages, recommended best practices say, "Exceptions should not be used for regular flow control." In other words, an exception is only appropriate for a very rare case when

something very unusual has happened. That is not how Python works, and exceptions are a commonly used way of saying "the ideal case didn't happen." Perhaps you have seen the famous "Mom's Brownie Recipe" on the web:

- Remove teddy bear from oven and preheat oven to 375.
- Melt 1-cup margarine in saucepan.
- Remove teddy bear from oven and tell JR. "no, no."
- Add margarine to 2 cups sugar.
- Take shortening can away from JR. and clean cupboards.
- Measure 1/3-cup cocoa.
- Take shortening can away from JR. again and bathe cat.
- Apply antiseptic and bandages to scratches sustained while removing shortening from cat's tail.
- Assemble 4 eggs, 2-tsp. vanilla, and 1-1/2 cups sifted flour. Take smoldering teddy bear from oven and open all doors and windows for ventilation.
- Take telephone away from Billy and assure party on the line the call was a mistake.
- Call operator and attempt to have direct dialed call removed from bill.
- Measure 1-tsp. salt & a cup nuts and beat all ingredients well.
- Let cat out of refrigerator.
- Pour mixture into well-greased 9x13-inch pan.
- Bake 25 minutes.
- Rescue cat and take razor away from Billy.
- Explain to kids that you have no idea if shaved cats will sunburn.
- Throw cat outside while there's still time and he's still able to run away.
- Mix the following in saucepan: 1 cup sugar, 1 oz unsweetened

chocolate, 1 cup margarine.

- Take the teddy bear out of the broiler and throw it away—  
far away.
- Answer the door and meekly explain to nice police officer  
that you didn't know JR. had slipped out of the house and  
was heading for the street.
- Put JR. in playpen.
- Add 1/3-cup milk, dash of salt, and boil, stirring constantly  
for 2 minutes.
- Answer the door and apologize to neighbor for Billy having  
stuck a garden hose in man's front door mail slot. Promise to  
pay for ruined carpet.
- Tie Billy to clothesline.
- Remove burned brownies from oven.
- Start on dinner!

Because people are intelligent, you can write a recipe book and describe only the ideal case. When you're programming, you need to be able to say, "This is plan A; this is plan B if plan A doesn't work; this is plan C if plan B doesn't work." You can't just say, "Gather these ingredients, mix, and bake;" you need all the except clauses like, "Remove teddy bear from oven..."

In addition to try and except, there is a finally clause which follows the try clause and any except clauses, and is to be executed whether or not an exception was caught. It can appear:

```
try:  
output_message(warning)  
finally:  
log_message(warning)
```

or:

```
try:  
result = items[0]
```

```

    result = 0
except IndexError:
    result = 0
finally:
    return result

```

One note to be given: it can be appropriate to put `pass` in an `except` clause, so we have:

```

    total = 0
for input in inputs:
    try:
        total += int(input)
    except ValueError:
        pass

```

If you are making a running sum, it may be appropriate to ignore a specific error like this. But it is begging trouble to do:

```

    try:
        first_method()
        second_method()
        third_method()
    except:
        pass

```

This use of `except:` is a bit like the `goto` statement; it offers convenience at the beginning and can bring headaches down the road. What it says is, "Try to run these three methods; if anything goes wrong, just ignore it and move on." And this is a recipe to bake JR's teddy bear at 375 and then be left wondering why the house is so full of foul-smelling smoke: proper exception handling removes the teddy bear from the oven, repeatedly if need be, instead of just boldly ignoring problems that need to be addressed properly.

This can mean that, even if we expect we will mainly just write code for the ideal case, we may have to write a significant amount of code for non-ideal cases.

How do you create functions, procedures, and methods in Python? The function/procedure distinction that exists in C

Python? The function/procedure distinction that exists in C, where a function returns a value and a procedure does not, is not as prominent and Python programmers do not usually speak of "procedures." If a function completes without returning a value, or returns without specifying a value, it returns the special value None, which is like an SQL NULL value. (Or a function can explicitly return None). The following three functions are equivalent; they take no arguments and return None:

```
def first():
    pass
def second():
    return
def third():
    return None
```

A function's required arguments are named; their type is not specified.

```
def ternary(condition, first_option, second_option):
    if condition:
        return first_option
    else:
        return second_option
```

I might note that in Python, the common ternary operator that appears in C/C++/Java like  $a > b ? a : b$ , is not a built-in structure in Python. There are some somewhat hackish ways Pythonistas use to fake it, notably  $a > b$  and  $a$  or  $b$ , but besides reading somewhat strangely, they run into problems a bit like C macros, where the C macro  $MAX(a, b)$  defined to  $a > b ? a : b$  will double-increment the selected argument if invoked as  $MAX(++c, ++d)$ . In Python, a ternary operator like  $a > b$  and  $a$  or  $b$  can malfunction if its middle argument is falsy; it is more robust to write  $(a > b$  and  $[a]$  or  $[b])[0]$ , at a significant cost to Pythonic ease in reading and understanding.

Returning to functions, it is possible to specify default values,

as in:

```
def parse(input, default = 0):
    try:
        return int(input)
    except ValueError:
        return default
```

This code somewhat flexibly parses string/unicode input for an integer value, returning a default if it cannot be parsed. If invoked like `parse(text)`, it will default to 0 in the case of a parse failure; if invoked like `parse(text, 1)`, it will default to another value, such as 1, and if invoked like `parse(text, None)`, the result can be examined for a parse failure: it will hold an integer if parsing was successful and the (non-integer) value `None` in the case of failure.

If a function has two or more arguments with default values, unnamed arguments are specified from left to right. Hence a function of:

```
def name_pets(dog = None, cat = None, bunny = None):
    result = []
    if dog:
        result.append(u'I have a dog named ' + dog + u'.')
    if cat:
        result.append(u'I have a cat named ' + cat + u'.')
    if bunny:
        result.append(u'I have a bunny named ' + bunny + u'.')
    return u'\n'.join(result)
```

Now there are a couple of things going on.

`name_pets(u'Goldie')` will return, `u'I have a dog named Goldie.'`

That is, the first argument will be assigned to `dog`, and `name_pets(u'Jazz', u'Zappy')` will correspondingly name the dog "Jazz" and the cat "Zappy." But what if you want to name a cat but not a dog? Then you can explicitly name the argument: `name_pets(cat=u'Guybrush')` will specify the value of the cat argument while leaving `dog` and `bunny` to have their default

values.

That is one thing going on; there is something else going on with strings. If you have more than one pet, this method will place a line break between each sentence. It is common practice to build up a long string by creating an initially empty list, and then bit by bit build up the contents of the string in the list. Usually you can just stick them all together by `u''.join(buffer)`, but if you choose another string, like `u'\n'` here, then that other string is the glue that joins the pieces, and you get a line break between each sentence here.

You can specify an open-ended number of arguments, with a single asterisk before the last argument name, like:

```
def teach(teacher, course_name = None, *students):
    result = []
    result.append(u'This class is being taught by ' + teacher + u'
        if course_name != None:
            result.append(u'The name of the course is "' + course_name
                for student in students:
                    result.append(student + u' is a student in this course.')
    return u'\n'.join(result)
```

If invoked just as `teach(u'Prof. Jones')`, the result will be one line: `u'This class is being taught by Prof. Jones.'`. But if invoked as `print teach(u'Prof. Jones', u'Archaeology 101', u'Alice', u'Bob', u'Charlie')`, the output will be:

```
This class is being taught by Prof. Jones.
The name of the course is "Archaeology 101."
Alice is a student in this course.
Bob is a student in this course.
Charlie is a student in this course.
```

The last way arguments can be specified is by keyword arguments, where any arguments given by keyword that have not been otherwise claimed in the argument list are passed into a dictionary. So if we define a function:

```
def listing(**keywords):
    for key in keywords:
        print key + u': ' + keywords[key]
```

If we then call `listing(name='Alice', phone='(800) 555-1212', email='alice@example.com')`, it should print out something like:

```
phone: (800) 555-1212
name: Alice
email: alice@example.com
```

As an aside, note that the arguments appear in a different order than they were given. Unlike a normal list where you should be able to get things in a fixed order, elements in a dictionary should not be expected to be in any particular order: nothing in the dictionary's job description says that it should give back first the name, then the phone number, then the email. You are welcome to sort the keys where appropriate if you want them in alphabetical order:

```
def alphabetical_listing(**keywords):
    keys = keywords.keys()
    keys.sort()
    for key in keys:
        print key + u': ' + keywords[key]
```

If you then call `alphabetical_listing(name='Alice', phone='(800) 555-1212', email='alice@example.com')`, you should then get the keys in fixed alphabetical order:

```
email: alice@example.com
name: Alice
phone: (800) 555-1212
```

You can have any combination, or none, of these ways of accepting an argument. If you use all of them, it should be like:

```
def example(required, default = u'default value', *arguments, **ke
```

Before leaving the topic of functions, I would like to mention

that there are a couple of ways in which you can speak of a function returning more than one value, both of which are useful, and both of which are supported in Python. One way, which happens to be implemented by a tuple, is useful if you want to return (for instance) both a status code and a text description of the status. Let's return to the task of parsing integers. We can write:

```
def parse(input, default = 0):
    try:
        return int(input), 1, u'Parsed successfully.'
    except ValueError:
        return default, 0, u'Parsing failed.'
```

There are a couple of ways these multiple results could be unpacked; one is:

```
value, status, explanation = parse(input)
```

But there is another sense in which you may want a generator that can keep on returning values. There is a classic story in mathematics in which one famous mathematician, as a boy, was in class and the teacher wanted some time and so decided to give the students a time-consuming task to keep them busy. And so the teacher told the students to add up the numbers from 1 to 100. And the future mathematician tried to figure out how to do things the smart way, realizing that if you add 1 and 100 you get 101; if you add 2 and 99 you also get 101, if you add 3 and 98 you get the exact same thing. If you pair the numbers like that, you have 50 pairs that have the same sum, 101, and so the grand total has to be  $50 * 101 = 5050$ . And this is the number he gave the teacher. (The teacher, seeing that he had the correct answer so quickly, assumed that the boy must have cheated and gave him a spanking as his just reward.)

Based on this realization, there is a simple mathematical

formula to calculate the sum of the first n positive integers: the sum is equal to  $n * (n + 1) / 2$ . But let us suppose we did not know that, and we wished to manually check what the result was. It turns out that there is a better and a worse way to calculate the sum of the numbers from 1 to 10,000,000,000. The bad way is:

```
sum = 0
for number in range(1, 10000000001):
    sum += number
```

And the good way is:

```
sum = 0
for number in xrange(1, 10000000001):
    sum += number
```

What's the difference? The only surface difference is the letter 'x'. But there is a major difference. It's not primarily about speed; both are painfully slow, especially if you compare them to calculating  $10000000000 * (10000000000 + 1) / 2$ , which is lightning fast. But the first one, the one with `range()`, creates a list with a staggering ten billion integers; a workstation with eight gigs of RAM doesn't have nearly enough memory to hold the list, and if you try to run it, you may well observe your computer slow to a crawl as more and more memory is used just to create that one array. But the one with `xrange()` uses very little memory because it is a generator that produces the numbers as needed but never creates an enormous list. Something like `xrange()` can be implemented for our purposes as:

```
def xrange(first_number, second_number = None):
    if second_number == None:
        bottom = 0
        top = first_number
    else:
        bottom = first_number
        top = second_number
    current = bottom
    while current < top:
```

```
while current < top:
    yield current
    current += 1
```

The yield statement is like a return statement, except that the function yielding a value keeps on going. What `xrange(1, 10000000001)` does is keep on yielding the next counting number until it reaches its limit and it has nothing more to yield, but it doesn't use very much memory itself, and using it like for number in `xrange(1, 101)` also doesn't take that much memory. Using `xrange()` to calculate a very large sum may be very slow, but it won't make everything else running on your whole computer grind to a halt by exhausting all available memory, and then crash without giving you a result.

There is one point we would like to stop on: depending on some prior language, some experienced programmers may be thinking, "Wait, did you try this? Isn't that going to overflow?" And in fact it does give the correct result if we do it in Python:

```
>>> print 10000000000 * (10000000000 + 1) / 2
500000000005000000000
```

This result is correct, but C programmers, as well as C++ and Java programmers, may have a conditioned reflex: in C, for instance, just as a string buffer is an array of characters with a fixed length, integer types have a maximum and minimum possible value, and you may be able to choose an integer type with a bigger range, but there is always an arbitrary line, and if you cross it you get an overflow error that causes incorrect results.

If we write in C:

```
#include <stdio.h>

int main()
{
    long top;
    scanf("%ld", &top);
```

The logic behind this rule is that there are often situations where it makes clear sense to allow one of something instead of none. However, if one decides to go further and allow  $N$  (for  $N > 1$ ), then why not  $N+1$ ? And if  $N+1$ , then why not  $N+2$ , and so on? Once above 1, there's no excuse not to allow any  $N$ ; hence, infinity.

Many hackers recall in this connection Isaac Asimov's SF novel *The Gods Themselves* in which a character announces that the number 2 is impossible - if you're going to believe in more than one universe, you might as well believe in an infinite number of them.

Here Python observes a principle that you should observe in what you pass on to your users. In terms of user interface design, for the iPhone to allow exactly one application at a time and for the Droid to allow multiple applications are both sensible approaches: perhaps the Droid marketing campaign insists that we need to run multiple apps, but for a long time the iPhone, designed to run one app at a time, was an uncontested darling.

But what was not a correct decision was for the iPhone web browser to be able to have up to eight windows open, but not nine or more. If you are going to make a web interface that allows the user to upload files, you don't want to say, "I don't know exactly how many the user will want, so I'm deciding five is probably enough;" you start with one file upload input and add a button that creates another file upload input, and lets the user keep adding as many files as are wanted. Or, depending on context, you may create an interface that allows the user to upload at most one file as an avatar, or you may write an opinion survey in which uploading files does not make sense as part of the design.

Zero, one, and infinity each have their places.

Python does not require you to do object-oriented

programming, but in Python everything is an object. Functions are first-class objects and can be treated as such. Unlike Java, the humble integer is an object. `dir()` is a function that lists all of the methods of an object: if at the interpreter you call `dir()` on the integer 1, you get:

```
>>> dir(1)
['__abs__', '__add__', '__and__', '__class__', '__cmp__', '__coerc',
 '__delattr__', '__div__', '__divmod__', '__doc__', '__float__', '_
__format__', '__getattr__', '__getnewargs__', '__hash__', '_
__index__', '__init__', '__int__', '__invert__', '__long__', '__l
__mod__', '__mul__', '__neg__', '__new__', '__nonzero__', '__oct_
__pos__', '__pow__', '__radd__', '__rand__', '__rdiv__', '__rdivm
__reduce__', '__reduce_ex__', '__repr__', '__rfloordiv__', '__rls
__rmod__', '__rmul__', '__ror__', '__rpow__', '__rrshift__', '__r
__rsub__', '__rtruediv__', '__rxor__', '__setattr__', '__sizeof__
__sub__', '__subclasshook__', '__truediv__', '__trunc__', '__xor_
'conjugate', 'denominator', 'imag', 'numerator', 'real']
```

Methods with names like `__add__()` are methods you can create or override for operator overloading; without attempting to explain all of these methods, I will briefly observe that not only is an integer like 1 an object, it is an object that supports quite a number of methods.

Python's objects are in some ways like Java and in some ways like JavaScript: Python objects come from full-fledged classes like Java, but are more dynamic: fields and methods can be deleted from a Python object on the fly, like JavaScript, even though inheritance is classical and not prototypal. The typing is so-called "duck typing": if it walks like a duck and it quacks like a duck, it's a duck, and we have already seen one instance of duck typing at work: if an integer computation overflows, Python deftly substitutes another class that walks like the basic integer class and quacks like the basic integer class, but can handle millions of digits or more as long as you have enough memory and processor time. In Java, it is usually preferred practice to

choose object composition over multiple inheritance; in Python, it is usually preferred practice to choose multiple inheritance over object composition.

The simplest example of a class is:

```
class simple:
    pass
```

An instance of this class can be created as:

```
instance = simple()
```

A somewhat more ornate example would be:

```
class counter(object):
    def __init__(self):
        self.value = 0
    def increment(self):
        self.value += 1
    def reset(self):
        self.value = 0
```

This is a working, if not necessarily advisable, counter class. The first argument to each of its methods is `self` (N.B. `self`, rather than `this`), and the class has one instance variable, defined in the `__init__()` method called in initialization, although it could just as well have many or none. What if we wanted to make the member field private? The short answer is, we can't, and we don't really want to. We could legitimately follow a convention that a member with a leading underscore in its name, `_like_this` instead of `like_this`, is a part of the present private implementation, does not represent in any sense the public API, and is subject to change or removal at any time. Rewritten that way, our class would look like this:

```
class counter(object):
    def __init__(self):
        self._value = 0
    def get_value(self):
```

```

        return self._value
    def increment(self):
        self._value += 1
    def reset(self):
        self._value = 0

```

But this way of solving things makes more sense in Java than Python; in Java it is recommended practice to make most or all instance variables private and then define corresponding getters and setters, and perhaps build a counter class that let you guarantee it could only be incremented, read, and optionally reset. It's not just that the solution we have built works a bit more like Java than Python, but the problem we were addressing in the first place works more like Java than Python. Truer to the spirit of Python would be to use an integer and avoid the work of creating a class, let alone accessor methods.

A more Pythonic example might be a simple way to list tags in a webpage. It's longer than our counter class, but not all that much longer:

```

#!/usr/bin/python

import re
import urllib2

class webpage(object):
    def __init__(self, url = None):
        self.initialized = False
        if url:
            self.load_url(url)

    def __nonzero__(self):
        return self.initialized

    def list_tags(self):
        if self.initialized:
            result = []
            for tag in re.findall(ur'<(\w+)', self.text, re.DOTALL):
                if tag.lower() not in result:
                    result.append(tag.lower())
            result.sort()

```

```

        return result
    else:
        raise Exception(u'No webpage is loaded.')

    def load_url(self, url):
        try:
            text = urllib2.urlopen(url).read()
            self.url = url
            self.text = text
            self.initialized = True
            return True
        except URLError:
            return False

if __name__ == u'__main__':
    page = webpage(u'http://cjshayward.com/')
    if page:
        print page.list_tags()
    else:
        print u'The page could not be loaded.'

```

A few remarks about the very top: the top line, "#!/usr/bin/python", tells Unix, Linux, and OS X systems that this is to be run as a Python program; if you intend at all to distribute your scripts, you should put this at the top. (It won't do anything bad on a Windows system.)

At the beginning a couple of modules from the standard library are imported. urllib2 can fetch web and other URL's, and re provides regular expressions.

This class can be initialized or uninitialized; if you ask for an analysis when it is not initialized, it raises an exception. Note that it considers itself fully initialized and set up, not necessarily when its `__init__()` method has been called, but when it has loaded a URL successfully.

There are a couple of conditions where a webpage object might not be initialized once the `__init__()` constructor has returned. The URL is an optional parameter, so it might not have passed through initialization. Or any of a number of transient or

permanent network errors could have prevented the URL from loading successfully. The code to load a URL has:

```
def load_url(self, url):
    try:
        text = urllib2.urlopen(url).read()
        self.url = url
        self.text = text
        self.initialized = True
        return True
    except URLError:
        return False
```

Note the first real line of the method, `text = urllib2.urlopen(url).read()`. This will do one of two things: either load the URL's contents successfully, or throw a `URLError`. If it throws an error, none of the next three lines is called. This means that an instance of this class is only fully set up with URL etc. stored after a successful read, and if you have an initialized class and try to load another URL and fail, previous data is not clobbered. This is something that can fail, but it is transactional, like a database transaction. Either all of the data is updated or none of it is updated, and in particular the object won't be left in an inconsistent state.

It uses Perl-style regular expressions, which are powerful and popular but can be a bit cryptic. The one regular expression used is `ur'<(\w+)'`, with an 'r' after the initial 'u' to specify a raw string without Python doing things with backslashes that we don't want when we're doing regular expressions. What the core of the regular expression says in essence is, "a less than sign, followed by one or more word characters, and save the one or more word characters." This will find more or less the HTML tags in a webpage.

And the last thing I will say, besides saying that you can use this class by giving,

```
page = webpage("http://cjshayward.com/")
print page.list_tags()
```

is that its present functionality is a foot in the door compared to the analysis that is possible. Right now the webpage class can load a webpage and do one thing with it, list the tags.

From that starting point, it is not hard to copy and adapt `list_tags()` to make another method that will count the tags:

```
def count_tags(self):
    if self.initialized:
        result = {}
    for tag in re.findall(ur'<(\w+)', self.text, re.DOTALL):
        if tag.lower() in result:
            result[tag.lower()] += 1
        else:
            result[tag.lower()] = 1
    return result
    else:
        raise Exception(u'No webpage is loaded.')
```

There are any number of ways this class could be extended; listing and even counting the tags in a page are something like a "Hello, world!" program: they show the very beginning of the possibilities, not where they end.

Lastly, the portion of the file at the end, beginning with `if __name__ == u'__main__':`, is part of a Python pattern of writing for reusability. The basic idea is that you write portions of a program you might want to reuse, such as objects and classes, in the main body of a program, and then material you want to run if you run the script directly, but not if you import it, beneath. If the script above is run directly, it will try to create a webpage and list its tags; but it can also be imported as a module, by something like:

```
import webpage_inspector
```

if the file is named `webpage_inspector.py`. If it is imported as

a module, any classes and functions will be available, as `webpage_inspector.webpage` for instance, but the demo code at the bottom will be skipped.

(If you are interested in parsing webpages, I might suggest that you look at existing tools for Python, such as Beautiful Soup at <http://www.crummy.com/software/BeautifulSoup/>, that put even more power at your fingertips.)

Finally, this class takes advantage of one of the special methods, in this case `__nonzero__()`. What that means is that, while works well enough to write:

```
page = webpage(u'http://cjshayward.com/')
if page.initialized:
    print page.count_tags()
```

you could also write:

```
page = webpage(u'http://cjshayward.com/') if page: print
page.count_tags()
```

That is, you can treat a `webpage` instance like a boolean variable; if you wanted to keep trying to load a page when your network is flaky, you could try:

```
import time
page = webpage(u'http://cjshayward.com/')
while not page:
    time.sleep(30)
page.load_url(u'http://cjshayward.com/')
```

Or, using another feature of the method, you could more concisely write:

```
import time
page = webpage()
while not page.load_url(u'http://cjshayward.com/'):
    time.sleep(30)
```

This will keep on trying to load the page, and if necessary keep on trying, waiting 30 seconds between attempts so as not to

engage in busy waiting. Busy waiting on a resource (network, filesystem, etc.) is the practice of trying to access a resource without interruption, which can be a way to be a very bad neighbor who drains resources heavily compared to someone who delays. Note that this will keep on trying forever if the error is permanent, such as a nonexistent domain.)

Python partially supports functional programming; here I will attempt, not to explain functional programming to the interested newcomer, but to orient the functional programmer who would like to know what features of functional programming Python supports. I have mentioned one feature of functional programming, (lazy) generators. Python also supports list comprehensions: if you have numbers, a list of integers and/or floating point numbers and want only the positive values, you can do:

```
positives = [x for x in numbers where x > 0]
```

lambdas, anonymous functions close to the lambdas of functional programming, are commonly used with filter, map, and reduce:

```
>>> numbers = [1, 2, 3]
>>> filter(lambda x: x > 1, numbers)
      [2, 3]
>>> map(lambda x: x * 2, numbers)
      [2, 4, 6]
>>> reduce(lambda x, y: x + y, numbers)
      6
```

Python's support of functional programming has not always been the best, and functional programmers may be dismayed to learn that Guido was hoping at one point to remove lambda altogether. This may be unfortunate, but to the reader interested in functional programming in Python, I may suggest

downloading, reading, and using [the Xoltar Toolkit](#). The Xoltar toolkit provides a module, `functional`, which is written in pure Python, is largely self-documenting code, and provides tools and/or reference implementations for currying and other favorites.

Now I will be discussing "usability for programmers." Normally people who discuss usability discuss making a system usable for nontechnical end users, but there is such a thing as usability for programmers; a good chunk of Python's attraction is that it shows meticulous attention to detail in the usability it provides to programmers.

There are a couple of ways in Python programming that we can provide good usability for other programmers. One is, in choosing names (for variables, methods, objects, classes, and so on), use `whole_words_with_underscores`, not `camelCase`. Emacs is perfectly willing to insert spaces in displayed `camelCase` words, but this is a compensation for `camelCase`'s weakness, and not everyone uses Emacs: or either of vim or Emacs, for that matter:

GUI editors are not going to go away, even if our beloved command line editors might go away. The best thing of all would be to just use spaces in variable names, but so far the language designers have not supported that route. For a consolation prize, underscores are a little bit better than `camelCase` for native English speakers and significantly better than `camelCase` for programmers struggling with English's alphabet. (At a glance, `aFewWordsInCamelCase` look a bit more like a block of

undifferentiated text than

`a_few_words_separated_by_underscores` if you live and breathe English's alphabet, but if you have worked hard on English but its alphabet is still not your own, `aFewWordsInCamelCase` looks absolutely like a block of undifferentiated text next to

a\_few\_words\_separated\_by\_underscores. Remember reading "Hi, how are you?" written in Greek letters as "αι &omicron;υ αρ ιυ:" sometimes just using another language's alphabet is a challenge.

Python has comments, but I would like to make a point. In Python, comments are not there to make code understandable.

Python has been called "executable pseudocode," and is your code's job to be understandable itself. Comments have a place, but if you need to add comments to make your code understandable, that's a sign you need to rewrite your code.

A Python comment, like Perl and Tcl (and one option in PHP), begins with a hash mark and continues to the end of the line.

Adding a comment to one of the more cryptic lines of the example we have:

```
for tag in re.findall(ur'<(\w+)', self.text, re.DOTALL): # For each
```

Classes and functions have what are called "docstrings," basically a short summary that is programmatically accessible, written as a (usually) triple quoted string immediately after the class/function definition:

```
class empty:
    u'''This class does nothing.'''
    def __init__(self):
    u'''This initializer does nothing.'''
        pass
```

In terms of indentation, you should always indent by four spaces. Emacs handles this gracefully; vim's autoindent by default will substitute a tab for eight spaces where it can, leaving code that looks right in your editor but breaks when you run it in Python. If you use vim for Python, you should edit your ~/.vimrc, creating it if need be, and include the following:

```
set autoindent smartindent tabstop=4 shiftwidth=4 expandtab shift
```

Now we will look at a basic issue of problem solving, the Python way. Usually "encryption" refers to strong encryption, which refers to serious attempts to protect data; when you shop at a responsible merchant and your credit card information is transferred at a URI that begins with "https," that's strong encryption in use. There is also something called weak encryption, which includes such things as codes written as puzzles for children to break. If strong encryption is meant to resist prying, weak encryption is at times intended to be pried open. One classic use of weak encryption is rot-13, which moves each letter forward or back by thirteen places and has the convenient feature that running rot-13 again on encrypted text decrypts it. Historically, on UseNet, some offensive material was posted in rot-13 as a matter of common courtesy, so that people were warned and did not need to unintentionally read things that would offend them, and many old newsreaders included a single keystroke command to decrypt rot-13 text. For an example, if you rot-13 "The quick brown dog jumps over the lazy red fox.", you get, "Gur dhvpx oebja qbt whzcf bire gur ynml erq sbk.", and if you rot-13 "Gur dhvpx oebja qbt whzcf bire gur ynml erq sbk.", you get the original "The quick brown dog jumps over the lazy red fox.", restored perfectly.

Now suppose we want to be able to rot-13 encrypt text from Python. Rot-13 represents an extremely simple algorithm, and for the most part there is a perfectly obvious way to do it:

```
def rot13(text):
    result = []
    for character in unicode(text):
        if character == u'a':
            result.append(u'n')
        elif character == u'b':
            result.append(u'o')
```

```
elif character == u'c':
    result.append(u'p')
elif character == u'd':
    result.append(u'q')
elif character == u'e':
    result.append(u'r')
elif character == u'f':
    result.append(u's')
elif character == u'g':
    result.append(u't')
elif character == u'h':
    result.append(u'u')
elif character == u'i':
    result.append(u'v')
elif character == u'j':
    result.append(u'w')
elif character == u'k':
    result.append(u'x')
elif character == u'l':
    result.append(u'y')
elif character == u'm':
    result.append(u'z')
elif character == u'n':
    result.append(u'a')
elif character == u'o':
    result.append(u'b')
elif character == u'p':
    result.append(u'c')
elif character == u'q':
    result.append(u'd')
elif character == u'r':
    result.append(u'e')
elif character == u's':
    result.append(u'f')
elif character == u't':
    result.append(u'g')
elif character == u'u':
    result.append(u'h')
elif character == u'v':
    result.append(u'i')
elif character == u'w':
    result.append(u'j')
elif character == u'x':
    result.append(u'k')
elif character == u'y':
    result.append(u'l')
elif character == u'z':
    result.append(u'm')
```

```
    result.append(u'm')
elif character == u'A':
    result.append(u'N')
elif character == u'B':
    result.append(u'O')
elif character == u'C':
    result.append(u'P')
elif character == u'D':
    result.append(u'Q')
elif character == u'E':
    result.append(u'R')
elif character == u'F':
    result.append(u'S')
elif character == u'G':
    result.append(u'T')
elif character == u'H':
    result.append(u'U')
elif character == u'I':
    result.append(u'V')
elif character == u'J':
    result.append(u'W')
elif character == u'K':
    result.append(u'X')
elif character == u'L':
    result.append(u'Y')
elif character == u'M':
    result.append(u'Z')
elif character == u'N':
    result.append(u'A')
elif character == u'O':
    result.append(u'B')
elif character == u'P':
    result.append(u'C')
elif character == u'Q':
    result.append(u'D')
elif character == u'R':
    result.append(u'E')
elif character == u'S':
    result.append(u'F')
elif character == u'T':
    result.append(u'G')
elif character == u'U':
    result.append(u'H')
elif character == u'V':
    result.append(u'I')
elif character == u'W':
    result.append(u'J')
elif character == u'X':
```

```
        result.append(u'K')
    elif character == u'Y':
        result.append(u'L')
    elif character == u'Z':
        result.append(u'M')
    return u''.join(result)
```

This is a perfectly effective way of solving the problem, but you may wince at the thought of all that typing, and that is a good sign that this solution is not very Pythonic. Some readers may perhaps be disappointed with me (or, perhaps, not disappointed with me in the slightest) to learn that I cheated: I wrote three lines of code so Python would generate for me the long and tedious part of the routine so I could get out of such a chore, and then pasted the output into the page. We need a better solution in this.

One of the paradoxes in the programming world is that solving a problem in a more general sense may actually be less work. What we basically need is to do some translations of characters, so how can we do that? Remembering that Python's switch statement is the dictionary, we could try:

```
def translate(text, translation):
    result = []
    for character in unicode(text):
        if character in translation:
            result.append(translation[character])
        else:
            result.append(character)
    return u''.join(result)
```

This is a big improvement: cleaner, simpler, much shorter, and much more powerful. So if we are dealing with strings used to store genetic data, we can also get the complement of a string.

So to get the complement of u'ATTAGCGACT', we can do:

```
original = u'ATTAGCGACT'
complement = translate(original, {u'A': u'T', u'T': u'A', u'C': u'
```

And we've improved things, or at least it seems we've improved until we get around to the chore of typing out the dictionary contents for every uppercase and lowercase letter. We could write another Python snippet to autogenerate that, as the chore is not only tedious but an invitation to error, but is there a better way?

In fact there is. We can import the string library and take advantage of something that is already there, and here is a solution that is not daunting to type out, only slightly tedious, although here we must use a little ASCII:

```
import string
translation = string.maketrans('ABCDEFGHIJKLMNOPQRSTUVWXYZabcdefghijklmnopqrstuvwxyz',
translated = 'The quick brown dog jumps over the lazy red fox.'.tr
```

And with that, instead of solving the problem of translation ourselves, we have the problem already solved for us, for the most part. The variable translated is now u'Gur dhvpx oebja qbt whzcf bire gur ynml erq sbk.'

Those versed in Python's character, though, might possibly not stop here. You can make up your own forms of weak encryption, but rot-13 encoding is not the world's most obscure thing to do. Is this really the easiest and most Pythonic way to rot-13 a string? Let us fire up our Python interpreter:

```
>>> print u'The quick brown dog jumps over the lazy red fox.'.encod
Gur dhvpx oebja qbt whzcf bire gur ynml erq sbk.
```

The problem is already solved for us.

A famous blog post called [Python Is Not Java](#) addresses Java programmers rather bluntly on why doing everything you'd do in Java is not getting the most out of Python:

Essentially, if you've been using Java for a while and are

new to Python, **do not trust your instincts**. Your instincts are tuned to Java, not Python. Take a step back, and above all, **stop writing so much code**.

To do this, become more demanding of Python. Pretend that Python is a magic wand that will miraculously do whatever you want without you needing to lifting a finger.

Ask, "how does Python already solve my problem?" and "What Python language feature most resembles my problem?" You will be absolutely astonished at how often it happens that thing you need is already there in some form.

In fact, this phenomenon is so common, even among experienced Python programmers, that the Python community has a name for it. We call it "Guido's time machine", because sometimes it seems as though that's the only way he could've known what we needed, before we knew it ourselves.

Python's core library is documented extensively, searchably, and well at <http://docs.python.org/library/> (be advised that [python.com](http://python.com), besides being easy to type when you really mean [python.org](http://python.org), is a famous porn site), and Python's core library is your best friend. The code samples peppering this chapter are intended to simply illustrate basic features of the language; once you get up to speed, it's not so much that you'll have better ways of doing what that code does, as that you'll have better ways of avoiding doing that, using Python more like a magic wand.

I will not be attempting to provide select highlights from the core library because that would easily be a book in its own right. But we are saying that [the Python core library](#) is among a good Python programmer's most heavily used bookmarks.

I advocate, when possible, moving from unadorned, "bare

metal" Python to what might be called "Python++." Let me explain what I mean by this and why it is more Pythonic.

The move from C to C++ is a move made by extending the core language to directly support objects, templates, and other features. There have been some efforts to extend the Python core language: `easy_extend` is intended to make it Pythonically easy to tinker with and extend the language syntax. However, I have never heard of production use of these extensions Pythonically saving time and effort while making programmers more productive.

What I have heard consistently is that using a good library really does qualify as a move from "unadorned Python" to "Python++". A StackOverflow user asked, "Have you considered using Django and found good reasons not to?" And people listed legitimate flaws with Django and legitimate reasons they use other alternatives, but one developer got over thirty upvotes with a response of, "Yeah, I am an honest guy, and the client wanted to charge by the hour. There was no way Django was going to allow me to make enough money." For the web, frameworks like Django, TurboGears, and web2py offer significantly greater power with less work in more truly Pythonic fashion. Python's standard library does come with its `cgi` module, and it is possible to write webapps with it, but using the `cgi` module and the standard library to implement a social networking site with all the common bells and whistles would take months or years. With Python + Django + Pinax the time is more like hours. If you use Python, you don't have to reinvent the wheel. If you want a social network and you use Django and Pinax, you don't have to reinvent the internal combustion engine either, or power steering, or antilock brakes, because they are all included in standard packages for a car or truck. If your goal is an online

store instead of a social network Pinax will not likely be of much help, but Django + Satchmo will. Both of them provide ready-made solution to routine tasks, whether user avatars with gravatar support, or a shopping cart with that works with any of several payment gateways.

This is true if you are developing for the web; if you are in another domain, similar remarks could be made for NumPy or SciPy.

I do not wish to discourage anyone from using different frameworks than I have mentioned, or suggest that there is something wrong with thinking things out and choosing TurboGears over Django. Web2py in particular cuts out one very daunting hurdle to new programmers: a command line with a steep learning curve. However, I do advocate the use of a serious, noteworthy "Python++" framework and not the standard library alone: the cgi module works entirely as advertised, but the difference between Python + Django + Pinax and just Python with the cgi module is comparable to the difference between Python with the cgi module and programming on bare metal in C.

I may further comment that fundamental usability is the same whether the implementation is Django, TurboGears, web2py, or for that matter Python with the cgi module or C working with bare metal. It would not be a surprise if Ruby on Rails or PHP developers were to look through this and find it speaks to how they can create a better user interface.

## Summary

What is it that is attractive about Python?

Perl has been rightly called "Unix's Swiss Army Chainsaw," and perhaps nothing else so well concisely describes what it is that Perl has to offer. Java might be compared to the equipment

owned by a construction company, equipment that allows large organizations and a well-organized army to erect something monumental. C would be a scientific scalpel, molecular sharp: the most exacting precision you can get unless you go subatomic with assembler or machine language, but treacherously slippery and easy to cut yourself with, something like the scientific-use razor blades which came in a package labelled: "WARNING: Knife is extremely sharp. Keep out of children."

It is my suggestion that Python is a lightsabre, and wielding it well makes a graceful foundation for usability.

# A Variation on the Toastmasters >"Icebreaker" Speech

html

I am trying, before leaving for Mount Athos, God willing, October 16, 2017, to complete the Toastmasters Competent Communicator badge. This means a documented path towards ten speeches developing progressive competency. After a gentle reminder from my home club's leadership, I am bringing the book used to record results and feedback, and I am now usually keeping it in the car.

That book didn't have records of the usual "Icebreaker" speech, the first speech and a speech of self-introduction, and so I gave one today, visiting at a second club that gives more, and more direct, feedback, and what I was told about the speech was different from usual: people usually talked about themselves and things they had done, and I talked about things other people had done and my aspiration. The feedback was polite, but the gently given point was that my speech was off-topic for an introduction in Toastmasters's "Icebreaker."

I thought about that a bit. and decided that the speech really

did introduce me, and that it really was worth repeating. I present it here, slightly changed, as follows:

The theme of fatherhood is one that is important to me. The time that I most felt like a man was after I had been away for schooling, and I went to say hello to our neighbors across the street. I chatted with the wife briefly, and their little boy didn't remember me at first, which is not surprising. (Please keep in mind that the absence represented a much greater proportion of his life than any adult in the picture.)

About an hour later, I wanted to fix a flat on my van, and by that point he was starting to more than remember me. He came over and wanted to help. And I did my delighted best to accommodate him. In each step of the process I was looking for where I could slice off a little-boy-sized increment of work, and work with him while giving him bite-sized assignments. It took more time and more effort to work with his help, but I wouldn't have exchanged it for anything in the world.

This is something I believe I picked up from my parents. When I was a kid, they seemed to almost never want to say "No" to "Can I help you?" Once in a while they did say "No;" I was upset when I came as a little boy to help my father work with the garbageman to heave an unusually large item into the garbage truck. But events like these were rare enough, and my parents' strong preference was to try to honor any child's offer of help.

One process where help was invited was carrying things when a group of friends would help one of their members move house. One of my brothers, at one point, was a little

boy holding a tiny load, and said, perhaps feeling rather small, that he wasn't carrying very much. My Dad gave him a big smile, and said, "You're helping!" It really didn't seem that long before that little boy holding a smaller item was a bigger boy holding a bigger item, and then a youth or young man carrying an adult load.

On this point I thoroughly hold to what my parents practiced. I've been helping people move on various occasions, and I've seen little children ask to help and be told, "You can't help." That's been about the only situation where I've openly challenged a friend's parenting decision in front of a young child. At at least one point, I gave the parents an explanation, but not before reaching in the top of an open box, finding some small item, and asking the child to carry that item.

More recently I have been noticing that I have been behaving in a slightly more fatherly way to those who are college aged. When I went in for some labwork, a supervisor was helping guide a young trainee through the multi-step paperwork to check me in, and early on I commented, "It's so nice to see a young person going into the medical professions." When I walked out from my labs not much later, the supervisor was glowing.

My heart's desire and everything I am trying to do now is enter Orthodox monasticism, which is entering into receiving the deepest fatherhood the Orthodox Church offers. I'm counting the days. In the famed vows of "poverty", "obedience", "chastity", the absolute "obedience" is the greatest fatherly healing that is available, and my only real regret in seeking monasticism now is that I didn't do it twenty years ago.

There are other things I have already done that are fatherly. Not long after my first nephew was born, people were commenting that he wanted to be using a phone; he seemed to me to be playing in a way that suggested he wanted to be in on an adult game. So I began calling my brother, who worked a slightly early shift and was home by late afternoon, and initially just talked to my nephew nonstop for a few minutes, just telling him that I loved him. Then he started talking, and things shifted quickly to my spending maybe ten percent of the time asking him social questions, and the rest listening as he talked about his day. The relationship didn't really change with this change in behavior.

There have been other things. I was at one point visiting with some friends, and the parents repeatedly told a slightly older little boy to play catch with his slightly younger brother. After I heard "I don't want to play catch with [Name]" enough times, I stood up, said, "I want to play catch with [Name]," scooped him up, and said, "What I'm going to do is I'm going to count to three, and when I get to three, I'll throw you to your Daddy!" Then I swung him around in the air while counting to three, and after swing number three, lifted him high up in the air, and set him with feather gentleness in his father's outstretched arms. That event pretty much changed what it meant to the adults in that family to play catch with someone.

Right now I stand at an open door. It is time to be receiving again fatherly care, entering the Kingdom of Heaven as a little child. I have seen great generosity from people, and I pray that God will repay them, as I cannot.

The speech is perhaps imperfect and not a usual

The speech is perhaps imperfect and not a usual Toastmasters "Icebreaker" speech, but I do not count among its imperfections that I speak of contact with others whom I am connected to, nor that I look ahead out my windshield as well as my rear-view mirror. Monasticism is the biggest thing in site, and I look forward to that help in repenting of my sins, and working in obedience to an Elder's spiritual fatherhood to reach the one freedom that matters.

**Veni, Vidi, Vomi:  
A Look at "Do  
You Want to Date  
my Avatar?"**

*Awake, O  
north wind;  
and come,  
thou south;  
blow upon  
my garden,  
that the  
spices  
thereof may  
flow out. Let  
my beloved  
come into  
his garden,  
and eat his  
pleasant*

*fruits.  
I am come  
into my  
garden, my  
sister, my  
spouse: I  
have  
gathered my  
myrrh with  
my spice; I  
have eaten  
my  
honeycomb  
with my  
honey; I  
have drunk  
my wine with  
my milk: eat,*

*O friends;  
drink, yea,  
drink  
abundantly,  
O beloved.*

**The Song of  
Songs, 4:16-5:1,  
King James  
Version**

**A Socratic dialogue  
triggered by [The  
Labyrinth](#)**

Trimmed slightly, but "minimally processed" from an email  
conversation following [The Labyrinth](#):

**Author:** P.S. My brother showed me the following video as  
cool. He didn't see why I found it a bit of a horror: "Do

You Want to Date My Avatar?"

**Visitor:** Oh gosh, that's just layers and layers of sad. It's all about the experience, but the message is kept just this side of tolerable ("nerds are the new sexy" - the reversal of a supposed stigmatization) so it can function as an excuse for the experience. At least that's my analysis.

**Author:** Thanks. I just hotlinked a line of Labyrinth to Avatar...

...and added a tooltip of, "Veni, vidi, vom!".

**Visitor:** (Laughs) You have me completely mystified on this one, sorry.

However, you are welcome. And I'm glad to see that you're cracking jokes. (I think.)

No seriously, laughing out loud. Even though I don't exactly know why.

Is 'vomi' a made-up word? Men... when it comes right down to it you all have the same basic sense of humor.

(I think.)

**Author:** Veni, vidi, vici: I came, I saw, I conquered.

Veni, vidi, vom!: I came, I saw, I puked.

**Visitor:** Yep... the basic masculine sense of humor, cloaked in Latin. I'm ever so honored you let me in on this. If the world were completely fair, someone would be there right now to punch your shoulder for me... this is my favorite form of discipline for my brother in law when he gets out of line.

But what's Avatar... and hotlink and tooltip?

**Author:** The link to "Do you want to date my Avatar?"

Hotlink is a synonym for link; tooltip, what displays if you leave your mouse hovering over it.

**Visitor:** Oh dear, I really didn't understand what you were telling me; I was just in good spirits.

OK, I find that funny - and appropriate.

**Author:** Which do you think works better (i.e. [The Labyrinth](#) with or without images):

**Visitor:** I have some doubts about the video showing up in the text.

**Author:** Ok; I'll leave it out. Thanks.

**Visitor:** Welcome.

I did like the Christ image where you had it. It encouraged a sober pause at the right place in the meditation.

**Author:** Thank you; I've put it in slightly differently.

**Visitor:** I like that.

**Author:** Thank you.

I've also put the video (link) in a slightly different place than originally. I think it also works better there.

**Visitor:** Taking a risk of butting in... Would this be a more apropos place?

The true raison d'Ãatre was known to desert  
monks,  
Ancient and today,  
And by these fathers is called,  
Temptation, passion, demon,  
Of **escaping the world**.

Unless I've misunderstood some things and that's always possible. (laughs) I never did ask you your analysis of what, in particular, horrified you about the video. But it seems like a perfect illustration not of pornography simple but of the

underlying identity between the particular kind of lust expressed in pornography (not the same as wanting a person) and escapism, and that's the place in the poem where you are talking about that identification.

**Author::** Thank you. I've moved it.

In [That Hideous Strength](#), towards the end, Lewis writes:

"Who is called Sulva? What road does she walk?  
Why is the womb barren on one side? Where are  
the cold marriages?"

Ransom replied, "Sulva is she whom mortals call the Moon. She walks in the lowest sphere. The rim of the world that was wasted goes through her. Half of her orb is turned towards us and shares our curse. Her other half looks to Deep Heaven; happy would he be who could cross that frontier and see the fields on her further side. On this side, the womb is barren and the marriages cold. There dwell an accursed people, full of pride and lust. There when a young man takes a maiden in marriage, they do not lie together, but each lies with a cunningly fashioned image of the other, made to move and to be warm by devilish arts, for real flesh will not please them, they are so dainty (*delicati*) in their dreams of lust. Their real children they fabricate by vile arts in a secret place.

Pp. 270/271 are in fantasy imagery what has become quite literally true decades later.

**Visitor:** Yes, that would be what I was missing... that

fantasy banquet at the end of the video feels particularly creepy now.

However the girl I was telling you about had among other things watched a show where a "doctor" talked about giving seminars where women learn to experience the full physical effects of intercourse, using their minds only. (Gets into feminism, no?)

That's why I was trying to tell her that "richter scale" measurements aren't everything...

In this hatred of the body, in putting unhealthy barriers between genders, and in seeing the body as basically a tool for sexual experience, fundamentalist Christianity and cutting edge worldliness are really alike. (I had a pastor once who forbade the girls in the church school to wear sandals because they might tempt the boys with their "toe cleavage.")

**Author:** I would be wary of discounting monastic experience; I as a single man, prudish by American standards, probably have more interaction with women than most married men in the patristic era.

But in the image... "eating" is not just eating. In the initial still image in the embedded version of "Do You Want to Date My Avatar?", I made a connection. The sword is meant as a phallic symbol, and not just as half of a large category of items are a phallic symbol in some very elastic sense. It's very direct. Queer sex and orgy are implied, even though everything directly portrayed seems "straight", or at least straight as defined against the gender rainbow (as opposed, perhaps, to a "technology rainbow").

**Visitor:** Yes, I see what you are saying. I suppose the

opening shots in the video would also imply self-abuse. I was seeing those images and the ones you mention as just icky in themselves without thinking about them implying something else.

**Author:** P.S. My brother who introduced it to me, as something cool, explained to me that this is part of the main performer's effort to work her way into mainstream television. She demonstrates, in terms of a prospect for work in television, that she can look beautiful, act, sing, dance, and be enticing while in a video that is demure in its surface effect as far as music videos go. (And she has carefully chosen a viral video to prove herself as talent.)

Not sure if that makes it even more disturbing; I didn't mention it with any conscious intent to be as disturbing as I could, just wanted to give you a concrete snapshot of the culture and context for why I put what I put in [The Labyrinth](#).

**Visitor:** It's making a lot more sense now.

I'm not remembering the significance of the technology rainbow.

**Author:** As far as "technology rainbow":

In contrast to "hetero-centrism" is advocated a gender rainbow where one live person may have any kind of arrangement with other live people, as long as everyone's of age, and a binary "male and female" is replaced by a rainbow of variety that is beyond shades of gray.

I was speaking by analogy: a "technology rainbow", in contrast to "face-to-face-centrism", would seek as normative any creative possibility, again excluding child

pornography, where face-to-face relationships are only one part of a "technology rainbow".

It might also help make the point that internet-enabled expressions of sexuality, for most of the men, aren't exactly straight. They do not involve same-sex attraction, nor animals or anything like that, but they depart from being straight in a slightly different trajectory from face-to-face relationships where heterosexuality is only one option.

Neither member of this conversation had anything more to say.

# The Voyage

## I

He kicked the can, which skittered across the sidewalk. Shards of glass bounced off, their razor sharp edges gleaming in the light. Jason sat down on a park bench, and glared at the old man sitting on the other end. He looked decrepit and stupid, with a moronic smile. The man was feeding pigeons. The geezer probably didn't even own a TV. A boring man doing a boring thing in a boring place on a boring day.

Jason liked to verbally spar with people. He liked to free them from their deceptions, their illusions. "The unexamined life is not worth living," and he would rather be hated as a gadfly than loved as a demagogue.

As Jason sat thinking, the old man said, "It's a beautiful, sunny day, isn't it?"

"The Poet Wordsworth aptly called it 'the dreary light of common day.' It is a dull surface, under which ferments a world of evil. Did you know, for instance, that Hitler's Holocaust was only one of many massive genocides this century that killed over a million people? Did you know that even Hitler's Jews are dwarfed by the fifty million who died in Stalin's purges?"

The smile disappeared from the old man's face. "No, I did

not."

"You who say that it's a beautiful day — what do you know about suffering?"

The old man's face quivered, ever so slightly, for a moment. "My best friend, when I was a boy, was named Abraham. He died at Auschwitz. My eldest brother, on the other hand, was swept up by the Nazi propaganda and became a concentration camp guard. He was never convicted of war crimes, but he hanged himself a week after I was married. I am now a widower."

Jason was silent for a moment. He was struck with respect at this man's suffering — and watched as a tear gathered in his eyes, and slowly trickled down his wrinkled cheek. As he looked, he saw part of why the old man looked so ugly to him — his face bore scars of chemical burns.

A sense of discomfort and unease began to fill the young man. He shifted slightly, and began to talk about something else.

"I have read many books about knights and ladies, about wizards and dragons. In those stories, there is magic and wonder; there are fairies who grant wishes. The hero wins, and the story is beautiful. This world is so bleak and desolate and gray next to those worlds. If only there were another world. If only there were a way to get in."

"How do you know that there isn't?"

The young man looked with puzzlement. "What do you mean?"

"How do you know that this fantasy isn't true?"

"I have never had any reason to believe in it."

"When you were a little boy, did you believe in the Holocaust?"

"I hadn't even heard of it, let alone having reason to believe in it."

"But was it true?"

The young man looked as if he was about to answer, and then said, "Do you really believe in another world, in magic and wonder?"

"I might."

"Tell me about it."

"I cannot now explain it in any words that would make sense to you. I could try, but it would sound like complete nonsense."

"Try."

"Pretend that I am blind. Explain to me the colors."

Jason opened his mouth, paused for a second, and then closed it.

"Am I to believe that you are some sort of great wizard, and that you have a gift of seeing into and travelling to another world?"

"Maybe."

The old man spoke in enigmas and riddles, and yet there was something about him... He did not seem to be lying — and if he was, he was a far better liar than most. He was a puzzle, and Jason liked puzzles. He had been tricked and manipulated many times, and it might at least break the tedium to be tricked and manipulated by someone who was more interesting than he looked. So he decided to play along.

"Do you think that I could make my way into another world?"

"Maybe."

"Is it hard?"

"It is very hard, and very easy. How much do you want to do it?"

"Very much."

"If I send you on great and difficult tests, to meet many trials, will you do it?"

"I will."

"If I tell you to spend long hours studying spell books and grimoires, finding potions and amulets, are you ready for that?"

"I am."

"And if I set before you tasks more difficult and strange, and send you to do battles against monsters more evil than assassins and more deadly than dragons, can you do that?"

"I will try."

"Can you trust me?"

For a moment, Jason's mask slipped. He stalled. A minute passed — a minute that seemed like a year. Finally, he croaked,

"I don't know."

The old man nodded, and said, "I understand." He looked at the young man; there was something in his eyes that the young man could not identify.

"The way is difficult, with many trials, and the last one is the most difficult of them all. I cannot tell you what they will all be like, or even their number. When we next meet, I will be ready to give you the first."

"When do you want to meet next?"

"No matter when; we will meet."

"Can you help me?"

"I cannot do your tasks for you. But I give you this."

The old man placed his hand on the young man's head, his palm atop the skull, fingers and thumb spreading out across his scalp. He closed his eyes — and Jason felt that it would be proper to do the same. He sat in absolute silence and stillness. A moment passed.

Finally the old man removed his hand. Picking up his cane, he stood up, and slowly began to walk away, leaving Jason sitting and pondering.

## II

The next day, doubts filled Jason's mind. Had he dreamed the encounter? Why would there be such a bizarre old man? If he really had the powers and knew the wonders he hinted at, why on earth would he be sitting in a park and feeding pigeons? Each city had its share of eccentrics, but still...

As he went about his studies and activities for the next few days, he was nagged by thoughts about the man. He loved fantasy, from childhood games of make-believe to reading books and watching movies — but all of his yearning would not make it come true. He felt that he could neither believe nor trust the old man. Yet their interaction had excited, not quite a hope, but at least a desire that it could be true. He believed in fairies as a child, and he wondered if there might be a time to believe in fairies again.

He didn't talk with anyone about it; others would probably think him a fool. He was sitting in a diner, sipping a cup of coffee and pondering, when a familiar voice said, "May I join you?" He looked up, startled, and then said, "Please." As the old man sat down, Jason asked, "I forgot to ask your name."

"Senex. And yours?"

"Jason."

"The name of a hero, if I am remembering my mythology correctly," Senex said.

Jason had been thinking of how dull and common his name sounded next to 'Senex', and was again slightly startled. The man still looked old, wrinkled, and ugly — and yet there now seemed to be the faintest hint of something regal about his appearance. After a time, Jason asked, "Do you really have quests for me?"

"Yes, I do. They will help prepare you to enter, and receive the gift and the power."

"And what is the first?"

Senex reached, with both hands, into his pocket. He moved his hands for a little while, as if grasping something slippery, and then brought forth a loosely closed hand. He held his hand over the table, and opened it.

"What do you see?"

"I see nothing. Your hand is empty."

"Do you really see nothing in my hand?"

"Nothing."

"Look closer."

"I still see nothing."

"Wait."

Senex turned his hand, slowly, slightly, from side to side. At last, a tiny gleam of light caught Jason's eye. He immediately bent over to look more closely.

"What do you see?"

"I see a tiny grain of sand."

"Take it."

Jason picked up the grain of sand, and looked at it for a second. "What is my first quest?"

"You have already embarked on your first quest."

"When will I be done?"

"I don't know."

The old man stood up, and walked out of the diner.

### III

Back in his room, Jason took the grain of sand out of the napkin he had wrapped it in, and placed it on a white handkerchief on his desk.

It was small, and barely visible. It did not quite look the yellow of beaches — more like a tiny, oddly shaped pebble.

He pulled out a pin, and began to push it about. It rolled irregularly, like a tiny football. As it turned about, it gleamed every now and then. He pulled out a magnifying glass through which to look at it. Magnified, it appeared a small, bulbous crystal, which turned light and dark as it rolled over the fibers of the cloth.

"I wonder if..." He wrapped it up and went to a jeweler, to see if it might be a diamond or some other precious stone.

He came back, disappointed. It was sand, the same as untold numbers of other grains on beaches and in children's sand boxes.

It puzzled him. Was it more precious than diamond, a key to a magical portal? It did not scream out, "I am magical!"; it did not glow in the dark, or levitate in the air, or shock him as he touched it. If there was something special about it, it was more subtle than that. But how would Jason unlock the secret? Time passed, and he began to doubt that there was any secret at all — that it was anything more than a common grain of sand.

It was in one of these moments of doubt that he again

encountered Senex in the diner, drinking a cup of coffee.

"I don't get it," Jason said, sitting down. Senex still looked into his coffee, sipping it. "What don't you get?"

"You hint at a world of wonders, and then give me a common grain of sand. Are you playing games with me?"

Senex set down his coffee, and looked into Jason's eyes.

"What do you think?"

Jason looked at the old man. He began to open his mouth, and then swallowed. "I cannot say that you seem cruel, but neither can I say that your words and actions make any sense to me."

"And?"

After Jason said nothing, the old man said, "What were you looking for?"

"Something great. Something awesome. Something mysterious. A storm of light, maybe. Turgid forces. Ritual magic."

"And what did you find?"

"A common grain of sand."

"Is that all?"

Jason pulled the napkin from his pocket, and unfolded the grain of sand. "All I see is a common grain of sand. Maybe there is something else, but it is invisible to me." He looked at the old man in puzzlement, and saw a look of knowledge in Senex's eyes.

"Can you see something else, something that is invisible to me?"

"I can."

"What?"

"Tell me everything that you know about it. What is it?"

"It is something that is found on beaches."

"That is where it is found. What is it?"

"It is an odd-shaped, bulbous thing, very tiny."

"That is its size and shape. What is it?"

"The jeweler said that it is not diamond, or quartz, or

anything else like that."

"That is what it is not. What is it?"

"The jeweler said that it is a crystal of silicon and oxygen atoms."

"That is its scientific structure and constituency. What is it?"

"Is it all of these things?"

"All of these things are true of it. What is it?"

Jason drew a deep breath and said, "I don't know."

"Make it into a rabbit."

"How am I supposed to do that?"

"If you can't do that, make it into something else. A fish, perhaps."

"I can't."

"Destroy it."

Jason placed the grain of sand between a knife and a spoon, and crushed it to dust.

"You have broken it into smaller pieces. Now destroy it."

Jason dropped the spoon and knife; the fragments that were the grain of sand, settled on the table. "I can't."

"What is it?"

"I don't know." Jason looked into the old man's eyes, expecting to see a look of sadistic pleasure. Instead, he saw the look of greatest compassion.

Jason said, "It is a mystery."

The old man smiled.

Jason gathered the fragments into his napkin, and walked away.

## IV

Jason began to think about stones and crystals. The exquisitely rare crystals, the diamond as their queen, were prized, not only because they were beautiful, but because they were rare. Quartz and other crystals, in their luminous beauty, were no surprise to be said to be magical. So it was not too surprising that there should also be a hidden, tiny beauty to the stone and crystal commonly called a grain of sand. Few people owned these gems, not because they were hidden deep within the earth, but because they were hidden from people's notice. When entering another world, Jason would like to be ready to appreciate its beauty — and who knows? Perhaps sand was a treasure imported en masse from that world. In the mean time, he would enjoy his newfound crystalline treasure.

## V

Jason asked Senex, "Am I prepared to enter another world,  
the world from which crystals come?"

Senex answered, "You have begun to begin."

Jason asked, "Are there wonders which make sand pale in  
comparison?"

Senex answered, "There are wonders which make sand look  
very bright by the light they shine on it."

## VI

Senex lit a candle. Jason watched, waiting for an explanation.

The flame danced and spun. It filled the white column of wax beneath it with a soft glow that melted into the darkness. The flame itself, divided into tongues, danced and jumped again and again into the air, looking as if it just might fly. All around, it illuminated the surrounding forms with a golden light; shadows loomed on the walls and melted into the surroundings.

As Jason watched, a thin layer of clear, molten wax began to form atop the candle. As the flame burned, the heat began to seep into the wax, and the tiny pool grew deeper. A drop, like a tear, began to form on one side of the pool. The molten wax flowed, the stream carrying an indentation in the top of the wax column. The flame jumped and blazed, then settled down as, one by one, drops of molten wax trickled down the side.

The candle was tapered and thin, and it seemed to Jason only a minute until it burned all the way down, and a tiny red glow in the wick rested at the base of an ascending, twisting, turning stream of wispy smoke. Jason sat in peace, enjoying a sense of calm and fullness, digesting the beauty he had watched.

Senex's voice broke the silence. "You have passed your second test, Jason."

## VII

The old man had helped Jason open his eyes to one part of the natural world, and he began to explore, with the wonder of a child, the magic all around him.

He discovered that there was one type of item which was the easiest thing in the world to cut with a knife — but, as soon as you had cut it, the cut would instantly heal; there it would be, as whole as ever! It would shape itself around whatever you put it in, and could squeeze through even the tiny holes in cloth — but he had to be careful, because it would also climb the cloth like a ladder. It was quite mischievous — there were some things, which resembled grains of sand, which it would take and make completely invisible.

There were other things that would hide behind, and yet mimic the people and the trees. They were like marionettes, except that they exaggerated and distorted the profiles of whatever they were making fun of. They also played hide and seek with the light, and were very quick — whenever the light would peek to see if it would find them, they would already be hidden somewhere else.

He saw great, massive citadels with vaults beneath, storing hoards of gold and gems deep within, under protections that a dragon's fire could not scratch. Those citadels were decorated, so that even those who dare not break in, would yet come and

visit, seeing the gay streamers and the skittish sentinels.

There was another creature that Jason could not see, but was forever sneaking up and tackling him. It never knocked him over, but always wanted to play — it would tousle people's hair, and tickle the little children. It played with the other creatures, too — it jumped around on the grass, and danced and spun with the leaves.

There were other strange creatures that skittered around timidly — some jumped along the ground; some climbed trees and buildings; some swam like fish through the air. Most fled at his approach, but a few would let him touch them — and they were soft and warm.

Even greater than his joy at this beauty was a sense that, beautiful as these things were, they also hinted at something else, a deeper magic. Jason tried to see what it might be, but it always eluded him.

## VIII

Enthralled as he was, Jason could not shut out a sense that the beauty was not alone — that there was also something dark and perverse as well. With such beauty, Jason thought in his most enthralled moments that this surely must be the best of all possible worlds. But then he was shocked by ugly realities that forced themselves upon his consciousness: robberies and rapes, children being treated cruelly, and children treating others cruelly. The beauty made him feel as if, somehow, if he opened his eyes wide enough to see all the beauty there was, everything would be perfect — but, try as he might, it didn't work. It was like smelling the softest lilac fragrance on the breeze — and then being punched in the stomach.

It was sinking into a darker mood that he again met Senex, this time on a street littered with garbage. He greeted the old man harshly: "Wave your magic wand, old man, and make this refuse turn into flowers. Open my eyes, so that I may see that all suffering is an illusion, that we live in the best of all possible worlds."

"Suffering is not an illusion, and we do not live in the best of all possible worlds."

"What of the world you said I had begun preparing to enter? Is it not an escape from suffering?"

"Do you not remember the very first question you asked me?"

Do you not remember the answer?" Tears began to gather in Senex's eyes.

Jason savored a thrill of pleasure at watching the old man suffer, and knowing that the same darkness tormented them both. Then he realized what he was doing, and felt a sense of shame and revulsion at himself. He hated himself and the old man for what he felt.

"If you were going to attack a dragon," the old man finally began, "would you rush at it with neither weapon nor armor nor training? Or would you take at least a little preparation before setting out to attack a leviathan that has slain many heroes far greater than yourself?"

Jason said nothing.

"The questions you ask are big questions, and they must be faced. I wrestle with them, too. And I fear. I do not blame you at all for asking them, though your attitude in asking pierces me." A tear trickled down Senex's cheek.

Jason felt a black hole of shame inside his heart. The darkness he saw, and hated in the world around him — Jason now realized that it was inside him, too. It was like a worm, attacking from outside, and gnawing from within.

He wanted to die.

"Jason," the old man's voice said. "Jason, look at me."

Jason stared at the ground.

"Please."

Jason looked up and cringed, expecting a storm of fury. He looked up, waiting for his punishment. But his gaze was met by teary eyes — and compassion.

"I forgive you."

## IX

It was with a certain heaviness that Jason awaited the coming lessons. Not that they doubted that they were good — he was sure of that. But up ahead loomed a fierce battle. The worst part of it was that he knew that the enemy, the worm, was not only lurking at large. It was also inside his heart.

Yet dark as the darkness was, it could never put the light out.

And Senex was showing him new things at each meeting.

Senex had with him a book. He said, "Close your eyes and imagine." He opened its dusty leaves, and began to read:

"You pull your arms to your side and glide through the water. On your left is a fountain of bubbles, upside down, beneath a waterfall; the bubbles shoot down and then cascade out and to the surface. To your right swims a school of colorful fish, red and blue with thin black stripes. The water is cool, and you can feel the currents gently pushing and pulling on your body. Ahead of you, seaweed above and long, bright green leaves below wave back and forth, flowing and bending. You pull your arms, again, with a powerful stroke which shoots you forward under the seaweed; your back feels cool in the shade. You kick, and you feel the warmth of the sun again, soaking in and through your skin and muscles. Bands of light dance on the sand beneath you, as the light is bent and turned by the waves."

Senex began to lead Jason through mathematics, history,

philosophy, literature — and Jason began to behind a new and different beauty, a beauty that cannot be seen with the eye, nor touched with the hand, but only grasped with the mind. He began to explore imagination, and ideas, and metaphors. He saw light dance in the poetry Senex read; he saw the beauty of order and reason in the philosophers Senex cited. The connections, the play, the dance of ideas was wonderful. Together they explored ideas, and it was an awesome beauty. Jason had a razor sharp mind, and he began to make connections that surprised even Senex.

## X

"I still wish that I were a fairy," Jason said, "or that I could become one."

"What do you think you are?"

A searing pain, a pain of dark memory, flashed through Jason's soul. "I don't know," he said. "I hate myself."

"Do you believe that there are some things for everyone to enjoy?"

"Of course. You have shown me what I was blind to — that, outside of us, there are rocks, and stars, and the sky, and trees, and blades of grass, and snails, and stags, and chipmunks, and fish, and eagles, and logs, and mountains, and clouds, and wind, and rain, and the moon, and silence, and music, and beauty, and artwork, and poetry, and stories, and theorems, and arguments, and logic, and intuition, and laughter, and happiness, and books, and subtlety, and metaphors, and words, and st—"

Senex cut him off. "Do you believe that any of it has been given specifically to you?"

Jason looked down at his feet.

"What are you looking at, Jason?"

Jason mumbled, "My feet."

"What are your feet?"

"I don't know," he said, pausing for a moment. Then he continued, "I don't know where they are from, but they move

about at my command, like two strange servants, carrying me  
wherever I want to go."

"What do they carry?"

"A house that has eyes to see, and hands to let me touch and  
move things, and innards that support and let me live." He paused  
for a second, and then said, "It is a clockwork masterpiece."

"What lives in this house."

"Well, there is at least a mind that can learn, and think, and  
explore, and feel."

"Is that rubbish?"

Jason begrudgingly admitted, "No."

"Jason, why are you so downcast?"

"Because that is not all. Because there is a worm. It roams  
the world, and it lives deep inside of me."

"I know."

Jason drew back in fear. "What are you going to do to me?"

"What do you think?"

"You must hate me."

"I hate the worm inside of you with all my heart. But I do not  
hate you."

"You don't?"

"Jason, I love you."

Jason looked up. His face quivered, and tears began to slide  
down his cheeks. "You do?"

"Jason, may I give you a hug?"

Jason nodded his head.

The tears flowed from deep within. They were tears of  
sorrow, but yet they were different from the bitter tears he  
had fought before. They were painful, yet also tears of cleansing  
and healing.

## XI

"In the stories I read, I believe that there are people like us, and also strange and wonderful people like fairies, and elves, and dwarves, and gnomes. I wish I could know them."

"I believe that there are people like us, and also strange and wonderful people like blacks and Hispanics and Asians and Native Americans. And I count myself the richer for the friendships I have shared with such people."

Senex paused, and then continued. "I believe that you have seen much of the beauty that can be perceived with the body and with the mind, and also that you are beginning to appreciate your body and mind — yes, I know that you still wonder why they were given you. You are close to being ready to enter the other world now."

Jason suddenly looked up. "There's more?"

"There is much more, my friend. I think that you are ready for the last trial before entering. The challenge is this: that you must make a friend."

"So I can enter after I make a friend?"

"Yes, but you can't make a friend in order to get in. You must make a friend for the sake of making a friend."

"Does it matter which race?"

"It matters a great deal, but not in the way that you are thinking. You will be blessed by a friend of any race; the

difference is not the amount of blessing, but what kind."

## XII

Jason was walking along a sidewalk, and saw some children playing in the street, kicking a ball around. Then he watched in horror

a truck comes along  
a child kicks the ball  
a little girl runs after it  
in front of the car  
girl trips  
brakes screech

Time seemed to slow down; Jason watched everything in horrible slowness.

Then Jason realized he was lying on his side, on the opposite sidewalk. The little girl was in his arms, screaming and holding her knee. The ball was still in the street — flat as a pancake.

Adults began to come out of the building. A young woman ran over to the girl, yelling, "My baby!"

An older woman, with wrinkled walnut skin and silvery skin, walked up to him and said, "Son, you wanna come in? You bleedin'."

Jason looked down. There was a rough abrasion on his elbow, and his shoulder hurt.

Inside the apartment, he was in the same room as the little girl. Her mother was gently wiping her skinned knee with a warm,

wet washcloth; the girl was screaming bloody murder. He also had a cloth washing over his elbow; it stung sharply. The children had come in, and were simultaneously and very quickly trying to explain what happened.

The chaos subsided; the children were calmed, and (the children speaking more slowly, and one at a time) the adults understood what happened. "You gonna be soah t'marrah" — and he was.

The family invited Jason for dinner, and told him that he was welcome any time. They were very warm and friendly; at first Jason thought this was because he had saved their little girl.

The family was grateful, extremely so, but...

He started to visit from time to time, and he saw the same warm welcome extend to anybody who came in. The family was warm, and emotional, and playful, and as time passed, Jason began to know the specific people —

Emma, the matron who had first invited in, was wise, gentle, and motherly. She was a big woman with an even bigger heart, that seemed to have ample room for anybody who came into the house. She was the person most in charge.

Harold, her younger brother, was full of stories and jokes. He was the life of gatherings, and often had people laughing. He was the person who had travelled the most throughout the United States, and seemed to have his finger on the pulse of the nation — how it had changed, how it had stayed the same, throughout the years.

Jane was Edna's eldest daughter, and the mother of the little girl whom Jason saved. All of the people in the family had an easy-going, warm, welcoming manner — it really was not long before Jason felt as if he were one of the family — but the welcome seemed to crystallize in Jane. She took the most effort

to include Jason, and asked him the most questions.

Alfred was Jane's husband. He worked at a factory, and was quite the musician; he played several instruments, and often managed to get the whole family singing and dancing.

Anne was Edna's second daughter, and was perhaps most actively involved in race relations and the womanist movement. Through him, Jason saw a kind of feminism which was completely different; what most struck Jason was that, in its adamant advocacy of womanhood and motherhood, neither Anne nor any of her other womanist friends found any need for abortion, or regarded children as an inconvenience.

Erica, the little girl whom Jason saved, was a little ball of life. She was insatiably curious and inquisitive; more than once, she managed to put Jason somewhat on the spot: "Why you a comin' heah? Da other white folk doan come heah much, like they afraid of us, o' sumthin'." — but she asked in perfect innocence and sincerity, and the open warmth of the others (especially Jane) defused the tension. She was also quite a cuddlebug, and (Jason eventually discovered) more than a little bit ticklish.

Steve, Alfred and Edna's second child, wanted to be a scientist; he was somewhat quiet, and a bookworm. Jason was sometimes amazed by his intelligence, and was able to talk with him about some of the things he had learned from Senex.

Ronald, the baby of Alfred and Edna's family, was full of energy, and energy, and energy, and energy. He would run around the house all day long, and it did not take long for Jason to learn what was Ron's favorite word: "Again!" He seemed to have a tireless enjoyment of the things he knew.

Monica had been adopted by the family, and (in a sense) was Anne's baby. The two of them were quite close, and she seemed to be able to learn very quickly anything Anne told her.

There were also a number of neighborhood children going in and out of the house; the family treasured them, and seemed to welcome them as if they were their own. James wanted to be a pilot; Michael was very much interested in fire, and loved the Fourth of July; Desiree loved to dance with anyone and everyone; Edward chased the other children around.

Jason cherished his moments visiting the apartment, and grew especially fond of Erica. She would often sit on his lap and try to understand the things Jason was talking about (though Jason tended to too often talk about things that were rather complex to reasonably expect a child to understand), and would often playfully tell him how funny he was. Jason came to love the music, the dancing, the laughter, the emotion. He was struck by how different the family was — and how human.

As he came out of the apartment, he saw Senex walking towards him, and tipping his hat. "I am pleased," Senex said, "and I think that you are ready to enter."

## XIII

Senex said, "Are you ready to hear a story?"

Jason said, "I think I am."

Senex said, "This is the most important story that I will ever tell you."

Jason said, "I am listening."

Senex began, "Once upon a time, there was a coruscating Light, a surge of power, a rock greater than a mountain. And from this Light was begotten... another facet of the same eternal Eternal essence. Father and Son. Between them shot a fire of love and energy. In and among and from them were glory, majesty, light, power, love, goodness.

"And the Light spoke, and star upon star upon star upon star poured fourth, pulsing with life. They all joined in the great Dance, and spun and turned in wheel within wheel within wheel within wheel. As they danced the great Dance and sung the great Song, the Light and all of the stars revelled in the glory and beauty.

"The first and most glorious of the stars that were formed, held a place in the dance that was second only to the Light itself. The very least of the stars held a place of glory to contemplate for a lifetime, and this was the greatest.

"Then the first star turned, and stepped out of the harmony of the dance, and spoke to the Light. He demanded to be placed

above the Light, to lead the Dance himself. 'I am the greatest of the stars; I am greater and wiser and more glorious than you. Cede to me my rightful place.'

There was something about the demand that jarred Jason, filling him with revulsion to the very core. In it, he saw the essence of everything that is perverse and vile and impure. He wondered why the Light did not blast the star out of existence right there.

"The Light paused, and then said, 'You believe that you are better than me.

"'You believe that you are wiser than me.

"'Prove it.

"'You and your glory were the beginning of my plan; you are not the end of it. I have a plan deep within my heart. You may form whatever plan your wisdom may find for you. And we will let the plans play out, and we will see whose plan is the wiser - yours or mine.'

"And then the star screamed out his blasphemous accord, screamed a scream that tore the very fabric of space. And a third of the stars joined him in his rebellion, and became dragons, and serpents, and worms.

"Thus began a cosmic war.

"The Light again created, a creation that was vivid and new and detailed and wondrous. Slowly, with the patience of an artist, he formed rocks, mountains, and trees. The smallest blade of grass was perfect. He formed a great rock surrounded by lights, then plants which live, then animals which move, then finally men in his own image, likeness, and glory. When he stopped to rest, all of the stars stood watching in awe.

"Then the darkened star came, in the form of a serpent, and beguiled man, to do the one thing that is accursed. And the man

and woman, created as immortal gods, bore in them a curse, and began to die from the inside out. They, also, stepped out of the harmony of the dance and out of the source of health; their spirits rotted in vice and evil, and the worm began to infest and grow inside their hearts. There was perversity after perversity after perversity after perversity. One generation after the first sin, came the first murder: brother murdered brother. And the people were quick to embrace evil and forget what is good, even the Light himself.

"And all of the dragons, and serpents, and worms, cackled and screeched with unholy laughter, and the stars winced in pain. The first of Dragons taunted the Light: 'Your plan? Your glorious and wise plan? You have indeed made a fine creation for me to soil. Thank you; I very much enjoy watching the curses grow and multiply.'

"And the men grow wicked, so that they all deserved to die.

"All but one.

"One man walked in the Light.

"And the Light called out to the one man. 'You. You there in the desert, where neither rain nor mist dampen the earth.'

"And the man answered, 'Yes?'

"And the Light commanded, 'Build an immense boat.'

"And the dragons and worms cackled and jeered.

"And the man, ridiculed and cursed by even his friends, built an immense boat.

"And the great Dragon said, 'One candle? You hope by lighting one single candle to vanquish a whole world of darkness? Come, old fool; it doesn't work that way.'

"And the Light remained silent.

"Then the Light called to a man, and told him, 'Leave your kin, your land, your family, everything that is dear to you, and I will

give you a son, and make you into a great nation.'

"And the man took up his belongings and left.

"And the Light gave the man a son, and the son grew and matured.

"Then the Light told the man, 'Take your son, whom you love, and sacrifice him to me.'

"And the man obeyed, taking the son up on the mountain to sacrifice. He raises his arm, knife in hand, to strike the child dead.

"And the Light, quick as lightning, sent a star to say, 'Stop. Because you have not withheld from me even your son, I will bless you richly.'

"And the Dragon says, 'What's the point of this? Do you call one or two righteous men to help us see how evil all the rest are? Or could it just be that you are unwilling to admit defeat?'

"And the Light remained silent.

"And in the great Dragon, was the faintest tremor of fear.

"Then the Light called another man, and told him to forsake riches and luxury to free his people from slavery. The man hesitated, shied away from the task before him - and ultimately obeyed.

"Then the great dragon said, 'Can't you just end it now? I know that you've lost, but I'm beginning to feel uncomfortable.'

"And the Light continues his work.

"Through the man, the Light gave a law, showing what is right and what is wrong. And the people - staggeringly, and with many misgivings - started to obey.

"Then the Dragon came to the Light, and the Light said of another man, 'Have you seen this servant of mine? He is upright and blameless.'

"The Dragon scoffed and said, 'Well, of course! Look at all

the prosperity you have given him. That is why he worships you.

Take it away, and he will curse you to your face.'

"The Light said, 'Prove it. I give you permission to take away everything that he holds dear to him - only do not touch his body.'

"The Dragon breathed fire, and destroys the man's livestock, his possessions, his children. And the man wept in misery. He was told to curse the Light and die. In agony, he screamed in pain and cursed even the day of his birth - but refuses to curse the Light.

"Then the Dragon said, "You know, a man will give everything he owns for his health. You have given this man abundant health - and he is still healthy. Only take that away, and he will curse you to your face.'

"And again, the Light gave permission, only requiring that the dragon not slay him. And the man was covered in painful sores from head to toe, his body wracked with pain, tortured. He was in agony. When three of his friends came, they sat with him for a week in silence because his pain is so great. And still, the man refused to curse the Light.

"The friends then talked, insisting that the man had done wrong, yet he does not even accept their claim. Finally the Light came and spoke through a storm, healing the man and restoring what was lost twice over.

"And the stars rejoiced.

"Then the Light pulled another corner of the veil off of his plan. The Light begotten was sent, and became a man himself, suffering and walking the dust of the fallen world. He called people, telling them to abandon net and boat to follow him - and they obeyed. He healed the sick, diseased, and injured; he casts out fallen stars who have taken possession of people. The dragon attacked again again, trying to have him killed, and tempting him

in every way. And yet the Light in earth remained pure and blameless. He began to call people about him, and teach them.

"Then one of the Light's closest friends betrayed him, and the Light himself was hung out and exposed to die. And when the Light died, darkness reigned.

"And the dragons, and serpents, and worms, jeered and cackled. And the great Dragon taunts, 'Your great and wise plan gave me an even greater victory than I had hoped for. I set about to destroy your creation - and now I have destroyed your uncreated Son.'

"And tears flowed.

"Then a surge of light and power flowed, and the begotten Light was alive, transformed, coursing with the power of an indestructible life, and bearing with him the cure for the curse. And the fire of love and energy flowing among and in and from the Light flowed into his followers, too. The Light ascends back into Heaven from whence he came - and dwelt inside them.

"And in the community of those who believe and accept his cure, heroes and martyrs stand for the truth and fought, alongside the stars, against the darkness. And as all were watching — the Light, the stars, and also the dead, that is those who walked before, and now stood cheering those who walk now as they continue in the battle — the wisdom of the plan formed by the Light was revealed in the community of those who believe. In this community, in those whom the Light again draws into the great Dance, was

"A large family of many children for the Light  
Mother, and brother, and sister for the begotten Light  
A body for the begotten Light to live in  
A dwelling place and temple for the eternal fire of love and  
enerav

A witness to the world  
A moral preserver and purifier to the world  
A servant to the world  
A warrior against the great Dragon

"With all of its faults and foibles, the community reached out, and invited others also to step into the Dance.

"Then, as the begotten Light left the world, he returned - in full, unveiled glory and majesty, with all of the stars with him. The dead and the living members of the community were imbued with the same life as he has, their bodies transformed, and shared in the divine nature. The earth was destroyed in a great apocalypse, then remade even better than before. All — the living and the dead alike — were brought forth, and brought to account for their life and deeds; those who had chosen a curse were accursed, and those who had chosen were imbued with life beyond intense. And it was before the renewed, regenerated, transformed community of believers that the Dragon stood, and saw the wisdom of the plan. And it was below their feet that the Light crushed the Dragon, before casting it and all of its minions into a lake of fire. And all of those watching saw in full, not only that the Light is more powerful, but also the immeasurably greater wisdom."

After a time, Jason said, "That is the most beautiful story I have ever heard."

Senex said, "Would you like to have slain the worm that is inside your heart? Would you like to dance the great Dance?"

Jason said, "Yes, I would."

Senex said, "The story is true, and we are now living between the first and second comings of the Light. And he bears with him the cure for the curse — and, if you ask him, he will help you slay

the worm that is inside your heart, and let you join his forces to fight the darkness that is in the world."

"How do I do that?"

Senex said, "You must pray a prayer, something like,

"Lord Jesus, come into my heart.

Forgive my sins.

Draw me into your Light.

Fill me with your Life.

Make me your own.

I give myself to you,

And accept you giving yourself to me."

A look of surprise crossed Jason's face. "Is this Christianity?"

"Yes."

Jason's surprise turned to disgust. "But Christianity is narrow-minded and intolerant and repressive and archaic and — You deceived me, and tricked me into thinking it was something beautiful!"

"Jason, have you ever heard Plato's allegory of the cave?"

"No."

"Plato made an allegory, which was more or less as follows:

"Imagine that there is a cave. In this cave are prisoners who have been there from birth. They are shackled, and held in place.

"Behind the prisoners is a wall, and behind the wall a fire.

"People carry things back and forth, above the wall, so that they cast great, flickering shadows on the wall. And as these prisoners grow up, they will never see what a chair, or a book, or a sword looks like. They will only see the shadows on the wall.

"And they will become very good at identifying and recognizing the shadows and think that they are the realities

...recognizing the shadows, and think that they are the realities themselves. They won't think that a pot is a pot. They will think that the shadow is a pot.

"Now imagine that one of these prisoners is brought out of the cave, into the world. He will first be blinded by the light, and then only slowly be able to see. He will see nothing he will recognize, and he will curse those who brought him out.

"But, eventually, he will learn to see — and he will see things infinitely fuller, and richer, and more real than ever before. He will see the realities that cast the shadows.

"Now imagine that he is taken back in the cave again. At first, he won't be able to see anything in the darkness; the others in the cave will believe that he is blind. When he does adjust, he will begin to speak of realities beyond the shadows, which are far greater than what is seen — and the other people will think him mad as well as blind. They will vow to kill anyone who should take anyone else up out of what they believe is reality, into the light."

Senex paused a moment, and then continued.

"There are two things which I would like to say.

"The first is that there are a lot of evil Christians, and Christians have done a lot of bad things. I have been bored by a lot of dull Christians, and hurt by a lot of hypocritical Christians. And I am ashamed of a great deal of what has been done in the name of Christ."

"The second is that what you have seen called 'Christianity' is only a shadow cast in bad light. What I have been doing is helping you to see the reality itself, in the light of the sun."

"But why didn't you tell me it was Christianity to begin with? Wasn't that deceptive?"

"I did not tell you for a reason. I wanted to un-deceive you, and show you the reality itself. If I told you that I wanted to show you Christianity, you would have thought I meant the usual

shadow that is called Christianity — and would you have wanted to know anything about it?"

Jason begrudgingly said, "No."

After a time, Senex said, "I can see by your face that you have more questions. What are they?"

"They are questions you won't like."

"Ask them."

"What about the Inquisition? What about the intolerance? What about saying that all those other people's religions are wrong? What about saying that everyone else is damned to Hell?"

"The Inquisition was one of the darkest moments in Christian history, and it has done damage that hurts people down to this day. It, along with the Crusades has fractured the relationships Christians have with Muslims and Jews to this day. And it does another, even deeper damage. It makes people believe that standing for the truth is evil."

"But what about not accepting other religions? What about Hell?"

"Jason, do you know the worm inside your heart?"

"Yes."

"The worm is inside my heart, too. It is in everybody's heart. And it needs to be killed again and again and again. And, if you do not fight it to the death, it will kill you."

"But... I still don't see why you have to be so intolerant."

"Jason, if I am shot in the arm, can a doctor help me?"

"Yes. He can help stitch you up, so your body can heal."

"What if I refuse to be stitched up? What if I shoot myself again and again, and insist that the doctor heal me without stitching me up or stopping me from shooting myself?"

"But... the doctor can't help you because you won't let him."

"That's right. Jason. A doctor can't help you if you choose

injury over medicine. And Jesus is a doctor with the only medicine that works.

"I don't believe in Hell because I want to think about people dying. I believe in Hell for the same reason I believe that shooting yourself is bad for your health — because that's the way it is. I know that other religions are things people put a lot of work into, and take very seriously. But they are not the doctor's medicine, and the cold, harsh reality is that taking the medicine — all of it — is the only way to be healed."

"What about homosexuals? Can't they be Christians like everyone else?"

"Homosexuals can be Christians just like everyone else, the exact same way that everyone else is a Christian. Namely, by letting the doctor heal all of their injuries. All of us have different wounds, and they all need to be healed. I have wounds that most homosexuals don't. I am a recovering alcoholic. I haven't had a drink for sixteen years now, but I spent twenty years of my life as a drunkard. Whatever wounds we have, be they homosexual lust, or drinking too much alcohol, or pride, or any of ten thousand other sins, we need to have them to be healed. All of them."

Jason thought for a while, and then said, "This is the most difficult thing that anyone has ever asked me. I don't know if I can do it."

Senex said, "I know it's difficult, and I can't do it by myself. But there is help. It is a difficult path, but the Light will give you the strength, and give me the strength. And remember the community in the story? They will help you, as they help me."

Jason leaned back, and thought for a time. Then he closed his eyes, trembled, and prayed,

"Lord Jesus, come into my heart.  
Forgive my sins.  
Draw me into your Light.  
Fill me with your Life.  
Make me your own.  
I give myself to you,  
And accept you giving yourself to me."

And angels rejoiced.  
And Jason entered another world.

# The Wagon, the Blackbird, and the Saab

Before I get further, I'd like to say a few words about what I drive.

I drive an Oldsmobile F-85 station wagon. What's the color? When people are being nice, they talk about a classic, subdued camouflage color. Sometimes the more candid remarks end up saying something like, "The Seventies called. They want their paint job back," although my station wagon is a 1965 model. All in all, I think I had the worst car of anyone I knew. Or at least that's what I used to think.

Then I changed my mind. Or maybe it would be better to say that I had my mind changed for me.

I was sitting at the cafeteria, when I saw someone looking for a place to sit. He was new, and I motioned for him to come over. He sat down, quietly, and ate in silence. There was a pretty loud conversation at the table, and when people started talking about cars, his eyes seemed to widen. I asked him what kind of car he drove.

After hesitating, he mumbled something hard to understand, and looked like he was getting smaller. Someone said, "Maybe he

doesn't drive a car at all, and whatever he mumbled was forgotten in raucous laughter.

I caught him in the hallway later, and he asked if I could help him move several large boxes that were not in the city. When we made the trip, he again seemed to be looking around with round eyes, almost enchanted by my rustbucket.

I began to feel sorry for the chap, and I gave him rides. Even if I didn't understand.

He still managed to dodge any concrete hint of whatever it was that got him around—and I had a hunch that he hadn't just walked. My other friends may have given me some ribbing about my bucket of bolts, but really it was just ribbing. I tried to impress on him that he would be welcome even if he just got around on a derelict moped—but still not a single peep.

By the time it was becoming old to joke about whatever he drove, I accepted a dare and shadowed him as he walked along a couple of abandoned streets, got to the nearest airstrip...

and got into an SR-71 Blackbird. The man took off in an SR-71 Blackbird. An SR-71 Blackbird! Words failed me. Polite ones, at any rate. The SR-71 Blackbird may be the coolest looking reconnaissance plane ever; as far as looks go, it beats the pants off the spacecraft in a few science fiction movies. But the engineers weren't really trying to look cool; that was a side effect of trying to make an aircraft that was cool. It has those sleek lines because it's a bit of a stealth aircraft; it can be detected by radar, but it's somewhat harder. And suppose you're in an SR-71 Blackbird and you are picked up by radar, and enemy soldiers launch a surface-to-air missile at you—or two, or ten? Just speed up and you'll outrun it; the SR-71 Blackbird is the fastest aircraft ever built. Some SR-71 Blackbirds have been shot at. Ain't never got one shot down. One of the better

surface-to-air rockets has about the same odds of hitting an SR-71 Blackbird doing Mach 3.2 as a turtle trying to catch up with a cheetah and ram it. An SR-71 Blackbird is a different kind of rare. It's not just that it's not a common electronic device that you can pick up at any decent department store; it isn't even like something very expensive and rare that has a waiting list is almost never on store shelves. The SR-71 Blackbird is more like, if anything, an invention that the inventor can't sell—perhaps, some years back, one of the first, handmade electric light bulbs—because it is so far from how people think and do things that they can't see anyone would want to use them. The SR-71 Blackbird is rare enough that few pilots have even seen it. And I saw, or thought I saw, my friend get into one.

and got into an SR-71 Blackbird. The man took off in an SR-71 Blackbird. An SR-71 Blackbird! Words failed me. Polite ones, at any rate. And probably the impolite ones, too. The SR-71 Blackbird may be the coolest looking reconnaissance plane ever; as far as looks go, it beats the pants off the spacecraft in a few science fiction movies. But the engineers weren't really trying to look cool; that was a side effect of trying to make an aircraft that was cool. It has those sleek lines because it's a bit of a stealth aircraft; it can be detected by radar, but it's somewhat harder. And suppose you're in an SR-71 Blackbird and you are picked up by radar, and enemy soldiers launch a surface-to-air missile at you—or two, or ten? Just speed up and you'll outrun it; the SR-71 Blackbird is the fastest aircraft ever built. Some SR-71 Blackbirds have been shot at. Ain't never got one shot down. One of the better surface-to-air rockets has about the same odds of hitting an SR-71 Blackbird doing Mach 3.2 as a turtle trying to catch up with a cheetah and ram it. An SR-71 Blackbird is a different kind of rare. It's not just that it's not a common

electronic device that you can pick up at any decent department store; it isn't even like something very expensive and rare that has a waiting list is almost never on store shelves. The SR-71 Blackbird is more like, if anything, an invention that the inventor can't sell—perhaps, some years back, one of the first, handmade electric light bulbs—because it is so far from how people think and do things that they can't see anyone would want to use them. The SR-71 Blackbird is rare enough that few pilots have even seen it. And I saw, or thought I saw, my friend get into one.

I walked back in a daze, sat down, decided not to take any drinks just then, and cornered the joker, who couldn't keep his mouth shut. I told him to fess up about whatever he slipped me, but he was clueless—and when I couldn't keep my mouth shut and blabbed why, he didn't believe me. (Not that I blame him; I didn't believe it myself.)

I ate by myself, later, and followed him. The third time, I caught him in the act.

I was red with anger, and almost saw red. He blanched whiter than at the wisecrack about him maybe not driving a car.

What I would have said then, if I were calmer, was, "Do you think it's right for a billionaire, to go around begging? You have things that none of us even dream of, and you—?"

After I had yelled at him, he looked at me and said, "How can I fuel up?"

I glared at him. "I don't know, but it's got to be much cooler than waiting in line at a gas station."

"Maybe it is cooler, but I don't think so, and that's not what I asked. Suppose I want to fly in my airplane. What do I do to be fueled up?"

"Um, a fuel truck drives out and fills you up?"

"And then I'm good to go because I have a full tank, just like you?"

"I don't see what you're getting at."

"Ok, let me ask you. What do you do if you want to make a long trip? Can you fill your tank, maybe a day or two before your trip, and leave?"

"Yes. And that would be true if you had a moped, or a motorcycle, or a luxury car, or even something exotic like an ATV or a hovercraft."

"But not an SR-71 Blackbird."

"What do you mean, not an SR-71 Blackbird? Did you get a good deal because your aircraft is broken?"

"Um, just because you can assume something in a good car, or even a bad car, doesn't mean that it's true across the board. When it's sitting on the ground, my aircraft leaks fuel."

"It leaks fuel? Why are you flying an aircraft that's not broken?"

"There's a difference between designing a passenger car and what I deal with. With a passenger car, if the manufacturers are any good, the car can sit with little to no fuel leak even if it's badly maintained."

"But this does not apply to what the rest of us can only dream of?"

"No."

"Why not?"

"A passenger car heats up a little, at top speeds, due to air friction. One and the same part works for the fuel line when it's been in the garage for an hour, and when it's driving as fast as you've driven it. Not so with my aircraft. The SR-71 Blackbird is exposed to one set of temperatures in the hangar, and then there is air friction for moving at Mach 3.2, and there's a basic

principle of physics that says that what gets hotter, gets bigger."

"What's your point?"

"The parts that make up an SR-71 Blackbird are one size in the hangar and other sizes when the aircraft is flying at high speeds. The engineers could have sized the parts so that you could keep an aircraft in the hangar without losing any fuel... or they could make an airplane that leaks fuel on the ground, but it works when it was flying. But they could not make an airplane that would work at Mach 3.2 and have a sealed fuel line in the hangar... and that means that, when I go anywhere worth mentioning in my hot, exciting airplane, even I get fueled up on the ground, and I lose quite a lot of fuel getting airborne and more or less need an immediate air-to-air refueling... This is besides the obvious fact that I can't run on any fuel an ordinary gas station would carry. For that matter, the JP-7, a strange beast of a 'fuel' that must also serve as hydraulic fluid and engine coolant, is about as exotic compared to most jet fuel as it is compared to the 'boring' gasoline which you take for granted—you can't get fuel for an SR-71 Blackbird at a regular airport any more than you can buy 'ordinary' jet fuel at a regular gas station... and you think me strange when I get excited about the fact that you can drive up to any normal gas station and fill-er-up!"

I hesitated, and then asked, "But besides one or two details like—"

He cut me off. "It's not 'one or two details,' any more than—than filling out paperwork and dealing with bureaucracy amounts to 'one or two details' of a police officer's life. Sure, on television, something exciting happens to police officers every hour, but a real police officer's life is extremely different from

police shows. It's not just paperwork. Perhaps there is lots of paperwork—a police officer deals with at least as much paperwork and bureaucracy as an employee who's a cog in a big office—but there are other things. Police officers get in firefights all the time on TV. But this is another area where TV's image is not the reality. I've known police officers who wouldn't trade their work for anything in the world. Doesn't mean that their work is like a cop show. When police officers aren't being filmed on those videos that make dramatic shows, and they aren't training, the average police officer starts firing maybe once every three or four years. There are many, many seasoned veterans who have never fired a gun on the street. And having an SR-71 Blackbird is no more what you'd imagine it was like to have a cool, neat, super-duper reconnaissance plane instead of your unsatisfying, meagre, second-rate, dull car than... than... than being a police officer has all the excitement of surviving a shootout every day, but only having to fill paperwork once every three or four years if at all!"

"Um, what else is there?"

"Um, what's a typical trip for you? I mean, with your car?"

"My wife's family is at the other side of the state, and—"

"So that's an example of a common trip? More common than shopping or driving to meet someone?"

"Ok; often I'm just running some errands."

"Such a boring thing to do with a station wagon. If you want things to get interesting, try something I wouldn't brave."

"What?"

"Go for the gusto. Borrow my vehicle! First, you can fuel up at home, as any fuel that had been in your tank is now a slippery puddle underneath the vehicle you wish you had. Then start the vehicle. You'll have something to deal with later, after the hot

exhaust sets your trees on fire. And maybe a building or two.

Then lurch around, and try to taxi along the streets. (Let's assume you don't set any trees on fire, which is not likely.) Now you're used to be able to see most of the things on the road, at least the ones you don't want to hit? And—"

"Ok, ok, I get the idea! The SR-71 Blackbird is the worst, most pitiable—"

"Perhaps I have misspoken. Or at least wasn't clear enough. I wasn't trying to say that it's simple torture flying an SR-71 Blackbird. There are few things as joyful as flying. And do you know what kind of possibilities exist (in everything from friendship to work to hobbies) when the list of things you can easily make a day trip to the other side of the globe? When—"

"Then why the big deal you just made before?"

"An SR-71 Blackbird is many things, but it is not what you imagine if you fantasize about everything you imagine my vehicle to be, and assume almost everything you take for granted in yours. There are a great many nice things that go without saying in your vehicle, that aren't part of mine. You know, a boring old station wagon with its dull room for a driver plus a few passengers and some cargo, that runs on the most mundane petroleum-based fuel you can get, and of course is familiar to most mechanics and can be maintained by almost any real automotive shop, and—if this is even worth mentioning—can be driven safely across a major network of roads, and—of course this can be taken for granted in any real vehicle—has a frame that gives you a fighting chance of surviving a full-speed collision with—"

"Ok, ok, I get the picture. But wouldn't it have helped matters if you would tell people these things up front? You know, maybe something about avoiding these confrontations, or maybe

something about 'Honesty is the best policy'?"

He said, "Ok. So when I meet people, I should say, 'Hi. My vehicle leaves Formula One racecars in the dust. It also flies, can slip through radar, and does several things you can't even imagine. But don't worry, I haven't let any of this go to my head. I'm not full of myself. I promise I won't look down on you or whatever car you drive. And you can promise not to feel the least bit envious, inferior, or intimidated. Deal?' It seems to come across that way no matter how I try to make that point. And really, why shouldn't it?"

I paused. "Do our vehicles have anything in common at all?"

"Yes—more than either of us can understand."

"But what on earth, if we're so different? My vehicle is a 1965 model; your vehicle sounds so new you'd need a time machine to get one—"

"My vehicle is a 1965 model too."

"If you want to lie and make me feel better, you could have told me that your vehicle was years older than mine."

"I meant it. There is something about our vehicles that is cut from the same cloth."

"How can you say that? I mean, without stretching? Is what they have in common that they're both in the same universe? Or that they're both bigger than an atom but smaller than a galaxy? Or some other way of really stretching?"

"If you want to dig deeper, have you read, '[I, Pencil](#)'? Where an economist speaks on behalf of a common, humble pencil?"

"A speech from a pencil? What does that have to do with our vehicles? Are you going to compare our vehicles to a pencil?"

"Yes."

"So you're stretching."

"No."

"In [I, Pencil](#), a cheap wooden pencil explains what it took to make it. It talks about how a diamond in the rough—I mean, graphite in the rough—crosses land and sea and is combined with clay, and a bit of this and that to make the exquisite slender shaft we call pencil 'lead'. The wood comes from the majestic cedar—do you know what it takes to make a successful logging operation—and then a mind-boggling number of steps transform a hundred feet of tree into something that's a little hard to explain, but machined to very precise specifications, and snapped together before six coats of laquer—oh, I forgot, before the cedar wraps around the slender graphite wand, it's also adorned by being tinted a darker color, 'for the same reason women put rouge on their faces' or something like that. Its parts come through a transportation network from all over the world, and the rubber eraser—which wouldn't erase at all well if were just rubber; it needs to be a cocktail of ingredients that perform at least three major tasks if it will work as an eraser. Try erasing pencil with a rubber ball sometime; it will erase terribly if it erases at all. Your erases is not mere rubber, but a rubber alloy, the way airplanes are made, not with mere aluminum, but with an aluminum alloy, and—"

"So the parts of a pencil have an interesting story?"

"Yes. And the quite impressive way they are put together—pencils don't assemble themselves, and a good machine—for some steps—costs a king's ransom. And the way they're distributed, and any number of things necessary for business to run the whole process, and—"

"Then should I start offering my daughter's pencils to a museum?"

"I wouldn't exactly offer one of her pencils to a museum. Museums do not have room for every wonder this world has. But

I will say this. The next pencil you forget somewhere wouldn't have been yours to lose without more work, talent, skill, knowledge, venture capital, and a thousand other things than it took to make a wonder like the Rosetta Stone or the Mona Lisa."

---

As usual, she was dressed to kill. Her outfit was modest—I can almost say, ostentatiously modest—but, somehow, demurely made the point that she might be a model.

I had a bad feeling about something. During our conversation on the way over, I said, "You have an issue with Saab drivers." He replied, "No. Or yes, but it's beside the point. Saab drivers tend to have issues with me." I was caught off-guard: "That sounds as arrogant as anything I've—"

He asked me to forget what he had said. For the rest of the conversation, he seemed to be trying to change the subject.

She greeted us, shook his hand warmly, and turned back. "—absolutely brilliant. Not, in any way, like the British Comet, which never should have been flown in the first place, and was part of why jumbo jetliners were dangerous in the public's eye. The training for people who were going to be in that jumbo jetliner—the Comet—included being in a vacuum so that soldiers would know what to do if they were flying in a sparse layer of the atmosphere and the airplane simply disintegrated around them and left them in what might as well have been a vacuum. This sort of thing happened with enough jumbo jetliners that the public was very leery of them. For good reason, they were considered a disaster looking for a place to happen.

"And so, when Boeing effectively bet the company on the Boeing 707—like they did with every new airplane; it wasn't just one product among others that could be a flop without killing the company—they gave the test pilot very careful instructions about what to do when he demonstrated their new jumbo jetliner.

"At the airshow, he was flying along, and after a little while, people began to notice that one of the airplane's wings was

lower, and the other was higher...

"The Boeing 707 test pilot was doing a barrel roll, which is extremely rough on an airplane. It's like... something like, instead of saying that a computer is tough, throwing it across the room. This stunt was a surprise to the other people at Boeing, almost as much as to the other, and it wasn't long before Boeing got on the radio and asked the pilot, 'What the ~~S+XQ~~ do you think you're doing?' The pilot's reply was short, and to the point:

"'Why, selling airplanes, sir.'

"He told a reporter afterwards, 'And when I got done with that barrel roll, I realized that the people weren't going to believe what they just saw... so I turned around and I did another one!'"

A moment later, someone else said, "What does 'Saab' mean again? You've told me, but—"

She smiled. "It took me a while to remember, too. 'SAAB' stands for 'Svenska aeroplan Aktiebolaget,' literally 'Swedish Aeroplane Limited.' It's a European aerospace company that decided that besides making fighter jets and military aircraft, they would run a side business of selling cars, or at least the kind of car you get when you combine a muscle car, a luxury vehicle, and more than a touch of a military jet. It's like an airplane in big and small ways—everything from, if you unbuckle your seatbelt, a 'Fasten seatbelts' light just like an airliners', to the rush of power you feel when you hit the gas and might as well be lifting off... I'm not sure how you would describe it... It's almost what Lockheed-Martin would sell if they were Scandinavian and wanted to sell something you could drive on the street."

He said, "It sounds like a delight to drive."

She said, "It is. Would you two like me to take you out for a spin? I'd be delighted to show it to you. What kind of car do you

drive?"

He paused for a split second and said, "I needed to get a ride with him; I have nothing that I could use to get over here."

I told her, "He's being modest."

She looked at me quizzically. "How?"

"He flies an SR-71 Blackbird... um... sorry, I shouldn't have said that just as you were taking a drink."

He seemed suddenly silent. For that matter, the room suddenly seemed a whole lot quieter.

She said, "You're joking, right?"

No one said a word.

Then she said, "Wow. It is a privilege and an honor. I have never met someone who..."

He said, "I really don't understand... maybe... um... I'm not really better, or—"

She said, "Stop being modest. I'd love to hear more about your fighter. Have you shot anything down?"

He looked as if he was thinking very hurriedly, and not finding the thought that he wanted.

"The SR-71 Blackbird would be pretty useless in a dogfight. It is neither designed or equipped to fight even with a very obsolete enemy aircraft; it's just designed to snoop around and gather information."

She said, "Um, so they get shot down all the time? Wouldn't you tend to get a lot of missiles fired by enemy fighters who aren't worried about you shooting back? What do you do when you run out of countermeasure flares?"

He paused for a moment, saying, "The SR-71 Blackbird doesn't have anything you'd expect. Flares are a great way to decoy a heat-seeking missile, but the SR-71 Blackbird doesn't have them, either."

I turned to him and said, "You're being almost disturbingly modest." Then I turned to her and said, "An SR-71 Blackbird can go over three times the speed of sound. The standard evasive to a surface-to-air rocket is simply to accelerate until you've left the rocket in the dust. I'm not aware of one of them being shot down."

Her eyes were as big as dinner plates.

She said, "I am stunned. I have talked with a few pilots, but I have never met anyone close to an SR-71 Blackbird pilot. I hope we can be friends." She stood close to him and offered her hand.

The three of us ran into each other a number of times in the following days. She seemed to want to know everything about his aircraft, and seemed very respectful, or at least seemed to be working hard to convey how impressed she was.

---

It was a dark and stormy night. He and I were both on our way out the door, when she asked, "What are you doing?"

He said, "I want to try some challenges. I plan on going out over the ocean and manoeuvring in the storm system."

She turned to him and said, very slowly, "No, you're not."

He turned to me and said, "C'mon, let's go."

She said, "Are you crazy? A storm like that has done what enemy rockets have failed to do: take down your kind of craft. I've grown quite fond of you, and I'd hate to see you get killed because you were being stupid. Think about 61-7969 / 2020."

He said, "May I ask why you know about that?"

"I have been doing some reading because I want to understand you. And I understand people well enough, and care about you enough, to tell when you are acting against your best interests."

He grabbed my arm and forced me out the door. Once in the car, he said, "I'm sorry... I needed to get out before saying something I would regret."

"Like what?"

"So you know just the perfect way to straighten me out, and you don't even need to ask me questions. Walk a mile in my shoes, to a place you can reach in a car but not my aircraft, and then we might be able to talk."

I watched him take off, and I came back to pick him up, after waiting an hour. I could tell something that seemed not quite perfect about his flying, but I do not regret that I kept my mouth shut about that.

The next day she surprised us by meeting us first thing in the morning.

She gave us a stack of paper. "I care about you quite a lot,

and I don't want to be invited to your funeral in the next year. Here are detailed aviation regulations and international laws which are intended for your safety. I could not get an exact count of the number of crimes you committed, either for last night or for your reckless day-to-day flying around. I am sure that there are many responsible ways a vehicle like yours can be used, and I have inquired about whether there are any people who can offer some guidance and free you to..."

He turned around, took my elbow, and began walking out to the parking lot. We got in my car, and she raced for hers.

I saw her go to the mouth of the parking lot and then stop. The one Rolls-Royce in town had broken down, of all places there, and the owner and chauffer were both outside. I had thought that the person who was chauffeured in a Rolls-Royce was a peaceful sort of man, but he was yelling then, and before she got over the owner positively erupted at the chauffeur and waved his arms. She had gotten out and wanted to talk with them, but you can't get a word in edgewise at a time like that.

Now I'd like to clarify something about my car. I've only seen a vehicle like mine in a demolition derby once, but I was surprised. I wasn't surprised, in particular, that the wagon was the last vehicle moving. What I was surprised at was that over a third of the derby had passed before the ugly wagon started to crumple at all.

And one other thing: one April Fools' Day, a friend who drives a sleek, sporty little 1989 Chrysler LeBaron gave me a bumper sticker that said, "Zero to sixty in fifteen minutes," and then acted surprised when I challenged him to a short race. When the race had finished, he seemed extraordinarily surprised, and I told him, "There is a question on your face. Let me answer it."

Then I opened the hood on my ugly, uncool station wagon and said, "Your sleek little number can get by on a 2.2 liter engine. Do you know what that is?" He said, "Um, the engine?" And I said, "That is a 6.6 liter V8. Any questions?"

Ok, enough clarification. I looked around, turned in the opposite direction, and floored my car, blasting through the hedges and getting heavy scrapes on the bottom of my car. I got shortly on the road, and had a straight shot at the airport. She did eventually catch up to me, but not until there was nothing left to see but some hot exhaust and the fuel that had leaked when he tried to take off. (I still get the occasional note from him.)

Besides worrying about him, I was also much less worried about my car: tough as it is, cars don't like getting their undersides scraped on gravel, and I decided to take my car to the garage and have the mechanic take a look at it and tell me if I broke anything.

I was surprised—though maybe I shouldn't have been—to see the Rolls-Royce in the garage when I pulled in. I intended to explain that I might have scraped the bottom up, and after I did so, my curiosity got the better of me. I asked something about Rolls-Royces breaking down.

The mechanic gave me the oddest look.

I asked him, "Why the funny look?"

He opened the hood, and said, "Rolls-Royces do break down easily... and it's even easier to break down if you open the hood, jam a screwdriver right there, and rev it as hard as you can."

# The Watch

**Metacult:** So, Pater, I was thinking—wait a minute; I hear someone scratching at the door.

**Janra:** Hi, Vespucci. How are you?

**Vespucci:** Doing well. Take a seat.

**Janra:** Where?

**Vespucci:** Anywhere.

**Janra:** Anywhere?

**Vespucci:** Anywhere...

Off! Off! Get off my lap! Only my wife is allowed to sit there. You know that. Anyways, the Radical Gadgets catalogue came in today...

**Janra:** By the way, I phoned the company today. I think I can get some World War II vintage mechanical—

**Vespucci:** Don't even think about it. If you—

**Pater:** Easy, brothers. As you were saying?

**Vespucci:** As I was saying... Radical Gadgets has the most interesting tools. The cover product this month was an e-mail filtering package that uses Bayesian filtering techniques to block unwanted messages.

**Janra:** That's original! I checked Freshmeat today, and I think they only have half a dozen well-known anti-spam packages, not counting lesser products and tools that

have just been released. Does Radical Gadgets always find products this original?

**Vespucci:** But it is original. And it's not an anti-spam package. It has nothing to do with spam.

**Pater:** Huh?

**Vespucci:** Let me explain. You know that Bayesian filtering looks at a message and uses statistics to guess what category it belongs to, right?

**Pater:** Yes; go on.

**Vespucci:** But that will work whether you use it for incoming or outgoing e-mails. Most people use the filtering techniques on incoming e-mails, to try and reduce the fire hose of spam coming in. But you don't have to stop there. You can also filter outgoing e-mails.

**Pater:** Why would I want to filter the e-mails I send out?

**Vespucci:** You've never sent a flame? Come on; I remember a couple of times that you flamed me over something minor, and sent a very embarrassed apology when I waited two weeks and simply sent it back, and asked you to read it aloud, and tell me whether that's what you want me to hear from you. And it's not just you. When you're talking with a person face to face, there are two eyes looking at you and reminding you that a person hears every cutting word you say. That doesn't stop conflicts, but it does mitigate some of the abrasive things we're tempted to say. On a computer, it seems like there's just a keyboard and pixels—no person you can actually hurt. So people hit harder, and you have incredible flamewars, often between people who conduct themselves like responsible adults when they're talking to someone face to face. It's possible to learn

discipline, of course, and conduct yourself maturely, but all too many people don't realise there's a discipline you have to learn even if you're mature.

And so instead of just assuming that the only bad e-mails are offensive messages from people who've never seen you, telling you that part of your body isn't big enough and you need to buy their snake oil, or that you're impotent, or that you're not man enough for a relationship with a real woman and will have to content yourself with pixels on a screen—apart from these, there are offensive messages that you send out and then wish you could somehow take back and delete.

And this program does just that. Once you've trained it on your sent mail folder, it watches messages you send out, and uses the same Bayesian technology that's so powerful in identifying spam, and identifies when you're writing something you'll regret later. Then it saves it, quarantining it in a separate folder until you come to your senses and delete it.

**Pater:** That's... um, I'm going to go to their computer and order it from their website. Please excuse me for a moment. I really need to—

**Metacult:** Sit down, Pater. You're not going to e-mail out any flames while we're here talking.

**Vespucci:** Hmm... um, I hadn't meant to have a big discussion about the anti-flame software. There were several things that caught my attention, but what caught my eye most was a watch that keeps exceptionally accurate time.

**Pater:** Huh? Who would need a more accurate way to keep time? Most cultures find an hour to be a short time, and

a cheap digital watch keeps more accurate time than a \$5000 Rolex, because our watches are too accurate already. It would be awfully hard to explain our to-the-second accuracy to an aboriginal—I can't see why, besides pride that wants a possession to boast about, someone would benefit from a more accurate watch.

**Vespucci:** Oh, but there is benefit—worth paying \$5,000 for a digital watch. Even worth having to change the batteries too often.

**Pater:** How?

**Vespucci:** The watch doesn't just have an oscillating quartz crystal; it has an array of sensors in the watchband that measure skin temperature and conductivity, pulse, even a clever estimate of blood pressure, and feeds all of these into an embedded chip with some extraordinarily clever software.

This software takes these data and gets a picture of the person's emotional state. You know how time flies when you're having fun?

**Pater:** Didn't Einstein explain his theory of relativity by saying, "When a man sits with a pretty girl for an hour, it seems like a minute. But let him sit on a hot stove for a minute—and it's longer than any hour. That's relativity."

**Vespucci:** Um... that has nothing to do with the theory of relativity, and I'm not interested in discussing Einstein's spacetime now. If Einstein said that, he probably had a merry twinkle in his eye. But... Come to think about it, that is a pretty good picture. The watch estimates your emotional state for one purpose: it keeps track of how long time seems to be

passing. It has a normal timer that can count forty minutes until dinnertime, but it can also tell you how long the wait will feel like. And that's something no other watch can do.

**Metacult:** So it deals with subjective time? I read a book once which was trying to argue that time could be understood as something besides the number a machine has counted to. It talked about how a small child will ask Mom how long she's leaving for, and Mom's answer—she's really trying to avoid feeling guilty about leaving the child alone—are singularly unhelpful for a child trying to figure out how much perceived time must be endured before Mom returns.

**Vespucci:** Yes, and the minute-hour quote captures that. All watches tell what time it is from a machine's perspective. This is the only watch that tells time from a human perspective.

**Metacult:** Wonderful. What does it take into account besides clock ticks and the person's emotional state?

**Vespucci:** Huh? What else contributes to our experience of time besides the physical time and our psychological state?

**Pater:** Your question betrays nominalism. The way you've framed things shuts out the true answer.

**Vespucci:** We're entering the third millenium; I don't see why you're dragging in a controversy from medieval times.

**Janra:** Mmmph. Excuse me. I think I need a glass of water.

**Metacult:** Sit down, Janra. And don't look at me like that. I'm going let you answer that.

**Janra:** Certainly. Here are the steps to hunt a bear: First,

fire your gun. Second, aim your gun. Third, locate a bear. Fourth, buy a gun.

**Metacult:** Try again.

**Janra:** Clothing to wear in winter: a heavy coat, then on top of that a good sweater or two, then two shirts and two pair of pants, then underwear, with woolen socks over your boots.

**Metacult:** Please be serious.

**Janra:** I am being serious.

**Metacult:** Then be mundane.

**Janra:** Oh. That's another matter entirely.

Your entire approach is backwards and inside-out, as backwards as trying to shoot a bear before you have a gun, and as inside-out as wearing your anorak next to your skin.

How? Let me respond to your second comment. If I said, in the most reverent of tones, "We're standing at the forty-second latitude and eighty-seventh longitude," you'd think I was making a mountain out of a molehill: yes, we're at a particular latitude and longitude, but what does that have to do with the price of eggs in China? It's true, but what does that have to do with anything we're discussing? Yet people say, "We're entering the third millenium" as if it is this great statement of far-reaching consequences, the sort of thing that should settle a matter. As you yourself did.

People in the Middle Ages often did not know what year it was, or even what century, any more than people today know what latitude and longitude we're at—quick—do you know what latitude and longitude you're at?

The reason is that we think the past is under a glass bell, where we humans are living our lives while those odd and quaint creatures under the bell are not the same as us. And it doesn't need to be that way. For a long time after Shakespeare's death, when people put on Shakespeare, they didn't try to reconstruct period accurate costumes. Why? Did they not know that Shakespeare lived long before them? Perhaps, but they also recognised that Shakespeare was a human who worked with human problems and wrote human drama, and that the reason his plays are worth performing is not because they're old but because they're timelessly human. And we forget this when we take great care to dress actors in funny costumes that tell people that this is something quaint from long ago and far away.

You know that many of your physical possessions that make up the physical world come from far away: when you buy something at Target, and make no effort to find treasures from faroff land, you buy a lamp that was made in China or underpants that were made in Mexico. You know that the whole world is interconnected, so even if you don't go hunting off for exotic imports, a great many of the things you buy were made far away.

You can as much live without ideas from bygone ages as you can live in a house you built with your own hands —or for that matter, be born in a house you built with your own hands. That isn't how things work. Nominalism is one of innumerable ideas that has survived, just as the custom of using pots and pans has survived.

**Vespucci:** If it's one of innumerable ideas, why pay it that

much attention?

**Janra:** Because I can count on my fingers the number of conceptual revolutions that are more important today than nominalism. Trying to understand how people think today without looking at nominalism is like trying to look at a summer meadow without seeing plants. There are other important ideas, but this one makes the short list.

**Vespucci:** Then why have I not heard more about nominalism, when I hear people talking about postmodernism, for instance, or modernism? And what is nominalism to begin with?

**Janra:** For the same reason a fish won't tell you about water. Modernism and postmodernism are both nominalism writ large; nominalism is a seed, whose flower is modernism, and whose fruit is postmodernism.

**Vespucci:** Hmm. I hear the distinct accent of a person laboring in the prison of one idea.

**Janra:** Bear with me. Nominalism may be seen as the lock on a prison: we need to pay close attention to the lock to see if there's any way to open it. Then, if we can get out, let us see if there are not many more ideas available after we have paid proper attention to nominalism.

Now what is nominalism? In a sentence, nominalism says, "There's nothing out there; it's all in your head." A nominalist doesn't literally mean "nothing" is outside our heads; you can't put on a watch and say, "I refute nominalism thus."

**Vespucci:** But it was a non sequitur when—

**Janra:** Yes, I know, I know. Another tangent. But let's

forget about saying that matter is just in people's heads and not something external to mind. As I was saying, you can't put on a watch and say, "I refute nominalism thus." But if we really follow nominalist logic, you can't put on a watch. You can have nerve impulses that result in the motion of some elementary particles, but a watch is a tool-to-tell-time-which-you-wear-on-your-wrist, and a tool-to-tell-time-which-you-wear-on-your-wrist does not and cannot exist in nature. All the meaning that makes those atoms a watch can only exist in minds, and for the same reason what-we-call-a-watch can't have the time displayed on its face. It can have elementary particles that are placed like so and interact with light just so, but the meaning that can read a time in that configuration isn't at all in the atoms themselves; it's in your head. This is clarified in a distinction between "brute fact" and "social reality:" brute fact is what exists outside of minds and social reality can only exist in minds, and almost anything humans value consists of a small amount of brute fact and a large portion of social reality—larger than most people would guess. Everything is either brute fact or social reality.

**Pater:** Is the boundary between brute fact and social reality a brute fact or a social reality?

**Metacult:** Shut up.

**Janra:** Imagine three umpires at a baseball game: the first says, "I calls 'em as they are." The second says, "I calls 'em as I sees them." But the third says, "Some's strikes, and some's balls, but they ain't nothing 'til I calls 'em."

With apologies to Kronecker, God created cold matter. All else is the work of man.

**Pater:** Whoa. Is the basic faculty that lets man create social reality derived from brute fact or social reality?

**Janra:** Shut up.

Now I have been showing what happens when you push nominalism a good deal further than non-scholars are likely to do. But in fact nominalism has been seeping into our consciousness for centuries, so that we might not find the claim that nature is beautiful to be a mistake, but we see with nominalist eyes and hear with nominalist ears. Most of people across most of time have understood and experienced symbols very different from how a nominalist would.

If we assume that matter is basically something cold and dead, devoid of spiritual properties, then of course a symbol can only exist in the mind, a mental connection between two things that are not connected by nature. Any similarity is in the eye of the beholder, or if not that, is at least a coincidence that isn't grounded on anything deeper. There is no organic connection.

But if we look at how people have understood symbols, their understanding has to do with a view of reality where a great many things are real, where a symbol bespeaks a real and spiritual connection. The crowning jewel of this understanding of symbol was the claim that man is the image of God. When Christians talked about man being the image of God, they were not talking about what we would understand by a photograph or a painting, where pigments are arranged in such a way that an observer can tell they were meant

to look like God; they meant a real and organic connection that went far beyond a mere representation of God; they meant that we were what you would think a kind of magical statue which not only represented God, but embodied his actual presence: God's presence operates in us in a real way, and every breath we breathe is the breath of God.

Now the reason we began discussing nominalism was that you said something, and I said, "That question betrays nominalism." Do you remember what you said?

**Vespucci:** No.

**Janra:** We were discussing what I consider to be a very interesting watch, and you asked what could contribute to our experience of time besides what an ordinary watch tells, and our emotional state.

That question betrays nominalism. You were in essence asking what could interest us in time besides the brute fact of what most watches tell, and the social, or at least mental, reality of our emotional state. But there's a world of other things out there.

**Vespucci:** But what else is there?

**Metacult:** Hmm. I think we need to work a bit harder to help you look at what you believe. You've been keeping up on superstring theory, right?

**Vespucci:** Yes. I loved the explanations I could get of relativity, and I love how scientists can turn our commonsense notions upside down.

**Metacult:** Do you know any classical, Newtonian physics?

**Vespucci:** I did in high school. I've forgotten most of it now, but I don't remember it being nearly as exciting: a lot of math to go through to get at common sense.

**Metacult:** May I instead suggest that your common sense is a nonmathematical version of Newtonian physics?

Newton's physics was big on grids: everything was placed on a grid of absolute space, and absolute time. And it connected rooms the wrong way: different places are on the same meaningless grid, but they're not connected besides the grid.

To the medieval mind, it wasn't so. Each space was its own little world as far as Newton was concerned. But they were connected spiritually. There is an icon of two saints from different centuries talking, and the medieval mind was comfortable with this because it saw things other than "but they're from other parts of the spacetime grid!"

**Vespucci:** But what does this have to do with time? It seems to me you're going off on a tangent.

**Metacult:** Ok, back to time. Time isn't just a grid adorned by emotions. It's spiritually connected. You yourself are not self-contained.

**Pater:** And there's liturgical time. One of the things that shocked me was that people seem to have no time. It helped me to appreciate the colorful time I had breathed. I was stunned when people experienced time as torture. I experienced it as a sacrament, a channel of God's grace.

From other conversations, I get the impression that the liturgical year isn't real to you: one source of holidays among others. But it is real: interlocking cycles of day, week, year, so that you are breathing in this rhythm and are given something to live in each moment. Sometimes you're feasting; sometimes you're fasting;

often you're given something to meditate on.

**Vespucci:** So the watch would do a more complete job if its little computer were programmed to keep track of the liturgical cycles? I think the engineers could do that.

**Pater:** Errmmmm...

**Metacult:** I think what he means, but cannot articulate, is that what a computer could make of the liturgical cycles are not the place that makes liturgical time. They are more of a doorway into the place, into a room that the Spirit blows. If the watch were to keep track of that, it would have to have, not more sophisticated computer programming, but something else altogether, something sensitive to spiritual realities.

**Pater:** And that's just what a scientific computer, even a very small one, cannot do. Science works on nominalism. It's brought a lot of good stuff, but it can't perceive or work with spiritual qualities, any more than a pair of binoculars will improve your hearing. And that's fine when you recognise that spiritual qualities are left out, but the temptation is to say, "Because science is so powerful, it sees everything that's real." And a watch designed by scientific engineering can do scientific things, but if it were to try and see liturgical time from the inside, it would inevitably kill what breathes in it.

**Janra:** So if we were to imagine a watch that keeps track of time, true time, it would need not only sensors and a miniature computer, and a time-keeping quartz crystal, but something attuned to spiritual realities.

**Pater:** If that were possible. In my culture, we never wear watches. The best watch would be no watch, or perhaps a rock on a wristband, where if you go to it looking for

trivia, it doesn't give what you're looking for—and in so doing, reminds you of something important, that you need to look elsewhere.

**Janra:** What about a watch that had a rock alongside the things we've just described?

**Pater:** Ermmm...

**Janra:** And what would men's and women's models look like? Would the rocks be respectively rough and smooth?

**Metacult:** Actually, men's and women's experience of time differs significantly, so if you had a watch with a truer way of telling time, there would be a much bigger difference than men's watches being heftier and women's watches being slender.

**Janra:** How?

**Metacult:** I remember one time when you were talking with a new mother, and whenever the baby needed care, you stopped talking so that Mom could pay attention to her new son. It was a thoughtful gesture, and one that wasn't needed.

**Janra:** Why not? I'd have wanted to be allowed to give the child my full attention.

**Metacult:** I know. So would most good men. A man's particular strength is to devote his full attention to a task. A woman's particular strength is to lightly balance several tasks, giving genuine attention to each. That mother was perfectly able to give attention to her son and listen to you at the same time. That's why she looked at you, slightly puzzled and with an attention that says, "I'm listening," when you stopped talking.

And there are other differences as well. If there is a situation that colors a man's understanding of time, it

is a brief period of intense pressure. A woman's understanding of time more has the hue of a longer period that requires sustained attention. And even that misses something. The difference between a man's experience of time and a woman's is not so much like a difference between numbers as a difference between two colors, or sounds, or scents. It's a qualitative difference, and one that is not appreciated—usually people feel in their heart, "She's treating time the same way I do, but doing an unexplainably bad job of it."

**Vespucci:** I forgot to tell you, the watch also asks when you were born.

**Pater:** Why? To remind you if you forget your birthday?

**Vespucci:** I'm surprised, Pater. It's so it can keep track of your age. You experience time differently as you grow. What seems like an hour when you're five only seems like half an hour when you're ten, or fifteen minutes when you're twenty, or five minutes when you're sixty. Time seems to go faster and faster as you grow: there's one change between when you're a child and an adult, and senior citizens say that every fifteen minutes it's breakfast. The quality and pace of time change as you age, which is why young people think youth lasts forever and the rest of us think it vanishes. They say that once you're over the hill, you begin to pick up speed.

**Pater:** What does "over the hill" mean?

**Vespucci:** Um...

**Metacult:** He really doesn't understand. To him, aging is about maturing and growing, not only for children, but adults as well. He values his youth as a cherished

memory, but he's enjoying his growth and looking forward eagerly to the joy awaiting him in Heaven. He doesn't understand your self-deprecating humor that speaks as if aging were a weakness or a moral failing.

**Vespucci:** Ok.

**Metacult:** Which reminds me. One of the ways my experience of time has changed as I have grown has been to recognize that time flows faster and faster. For some people, this is a reason to try way too hard to be healthy—taking care of their bodies, not because their bodies should be taken care of, but to try and postpone the inevitable. But I'm looking forward to the Heaven that's getting closer and closer, and I am delighted by a glimpse into the perspective of a God who created time and to whom all times are both soon and now.

But the other major change is more internal, more a matter of discipline. I used to live in hurry, to always walk quickly and love to play video games quickly. Then I set foot in Malaysia, and something changed.

There was a difference, which I imperfectly characterized as life being lived more slowly in Malaysia. Which is true, or was for me, but is somewhat beside the point. And I experienced the joy of living more slowly. You know how I've thought that it takes humility to enjoy even pride, and chastity to enjoy even lust. At that point I would have added to those two that it takes slowness to enjoy even haste.

**Vespucci:** So you tried to be as slow as you had been quick?

**Metacult:** Yes. I observed that I had been obsessed with time under the tyranny of the clock, and so I tried to

abolish time by being slow. Which isn't right; besides chronos, the time a clock can measure, there is kairos, relational or task-oriented or creating time, where you are absorbed in another person or a task, and there time is a glimmer of eternity. And I was interested in the idea of living time as the beginning of an eternal glory, which Pater understands much better than I ever will. First I tried to negate time and live as something less-than-temporal, and I am slowly realizing that instead it means embracing time and entering something more-than-temporal.

In liturgical time—and Pater could say much more about this than I—it flows. Here it moves quickly, there it moves slowly, and there it spins in eddies. It isn't just the speed that flows; it's the color, if you will.

Just as the priest is the crowning jewel of the priesthood every person is called for, so the touch of Heaven as we worship is the crowning jewel of what time is meant to be.

And I had also been realizing that I had sought to escape time, and not cherish it as God's good creature. Most recently, I am trying to... There's a famous quote by Oliver Wendell Holmes, saying, "I wouldn't give a fig for the simplicity on this side of complexity, but I'd give my life for the simplicity on the other side of complexity." Now I'm looking for a time that is on the other side of complexity: not the mundane ordinariness of disfigured time, but a beautiful ordinariness on the other side of this complexity we've been discussing.

**Vespucci:** How do you think that will work?

**Metacult:** I don't know. Part of it has to do with the

metaculture you used for my nickname. I don't simply breathe in my culture and ask "How else could it be?", but am in the odd position of being able to step into cultures but never be absolutely at home. And have part of me that doesn't fit. That's not quite right; I do connect, partly in a way that is basically human, and partly in a way that is—

**Janra:** Don't try to explain. That would take an hour.

**Metacult:** At any rate, a fair number of people talk about living counterculturally, and one way you can live counterculturally is let live time as a blessing rather than a curse. People who say technology determines our lives are almost right, and that almost makes a world of difference if you're willing to live counterculturally.

The pressure on us to live in hurry is not a pressure that no one can escape. It is a pressure that few try to escape in the right way—but you can, if you try and go about it the right way.

But quite a lot of the rest of it has to do with very basic parts of the Christian life. God wants us to seek him first, and when we do, he knows full well what else we need. "Seek first the Kingdom of God, and all these things will be given to you as well." includes a life where time unfolds as a rainbow or a river, something of both color and flow, like the year with its beauty in due season.

**Vespucci:** Do you see time as a line or a circle? Something that keeps moving in a direction, or something that does the same thing over and over again?

**Metacult:** Both, of course. God is revealing himself in history and transforming it to his ends. And there is

decay; decay follows a line down. In our lives, we are progressing towards Heaven or Hell, and in each day... here we meet the cycles, but if we live well, the cycles in our lives aren't just an aimless meandering, but like a man who keeps running through a ditch, digging. In one way, he's going to the same places again and again, but in another way, he's going deeper—and he may meet both the earth's warmth in winter (or coolness in summer), and the water of life. The line moves through circles.

**Janra:** So what would make the perfect watch?

**Vespucci:** Are there any we haven't covered?

**Metacult:** Umm... we've looked at one big change from a normal watch—instead of adding a calculator, that *Radical Gadgets* catalogue had a watch that tries to tell a more human time by taking your age and emotional state into account as well as what most watches tell. That was sort of a Pandora's box. I think we could all agree that that watch was leagues more human than any normal watch... and it was just human enough to reveal how un-human watches are.

**Vespucci:** How?

**Metacult:** When the only kind of watch kept track of seconds, it was easy enough to think that time was simply what a watch told. But when one watch started to pay attention to how you feel...

It was kind of like when you've been in the freezing outdoors for a long time, so long that it still hurts a little, but you can almost ignore it. Then you come inside, and THEN it stings. It's not until you enter a genuinely warm room that you realize how cold and numb

you really are.

The watch in that catalogue was just human enough to reveal how un-human watches, and the time that they tell, are. It did what no other watch could. It's enough of a success to be a spectacular failure. Someone brought up liturgical time, which led to the suggestion that the watch be programmed to keep track of liturgical time. And then we stumbled into a hole with no bottom. Why can't a computer keep track of liturgical time? Well, you see, the Spirit does more than just follow calculations... A watch would need far more than better electronics to do that, far more than scientific engineering can provide. Although I did like the suggestion of adding a rock. Even if I don't see how to make a rock sensitive to women's time and men's time. Or rather, what to do to appropriately respect the difference.

**Vespucci:** Janra, what you said about nominalism interests me. Could you give a more complete explanation?

**Janra:** I'd love to, but I need to be somewhere next month.

**Vespucci:** Please be serious.

**Janra:** I am being serious.

**Vespucci:** Then be mundane.

**Metacult:** He is being mundane. If you'd like a good introduction, read Philip Sherrard's *The Rape of Man and Nature: An Enquiry Into the Origins & Consequences of Modern Science*. In it, Sherrard says almost nothing about time and everything about the things time is connected to. I think it goes overboard, but if you read it and pay attention to the haunting beauty that keeps coming up, then you'll learn

something about being human—and living in human time. It doesn't use the word 'nominalism' very much, but it says quite a lot about it.

**Vespucci:** Are there any other things you've all left out?

**Metacult:** Only about two billion. I've talked about kairos as an absorbed time instead of a time when you're watching the clock. What I haven't talked about as kairos as a divinely appointed time, where you are in a divinely orchestrated dance, and you are free, and yet your movements are part of the divine plan. We are human, not by "just" being human, but by allowing the divine to operate in us; it is the divine, not the human, that we need most to be human. I haven't discussed that. We haven't discussed, in connection with nominalism, how there is a spiritual place in us where we meet God, and we have the ability to reason from what we see, and in tandem with nominalism we have become impoverished when both functions are dumped on the reasoning ability and we don't know where we can meet God, where our minds connect with the very Reason that is God himself. It makes a difference whether we experience time through both our reasoning ability and this spiritual meeting-place, or through our reasoning ability alone.

I also haven't talked about turning back the clock. When people rightly or wrongly believe there is a golden age they've lost, and try to re-create it, they end up severing connections with the recent past and even the golden age.

**Vespucci:** How does that work?

**Metacult:** I'm not exactly sure.

My guess is that a living culture has a way of not being ambiguous. It gives corrections when you make false assumptions about it; that's why people experience culture shock. People trying to re-create a past golden age need never experience culture shock; if you make a false assumption about the golden age, the golden age won't correct you. So the golden age appears to be whatever you want, and people who aren't satisfied with the present, and want to re-create past glory, end up pushing a fantasy that is different both from the present and the past. The Renaissance and Enlightenment neo-classicism both tried to re-create the glory of classical antiquity and are both notable as departures from the past. People who aren't trying to re-create the past can preserve it, saying, "Be gentle with this tradition. It was not inherited from your parents; it is borrowed from your children." People eager to restore past glory all too often, if not sever, severely damage the link between past and future.

I also haven't talked about keeping up with the Trumps, and your unadvertised way to say "No!" to the tyranny of the urgent. I haven't even talked about—  
**Janra:** Stop! Stop. You're going way overboard. He got your point. In fact, I think he got your point half an hour ago. He—

**Pater:** Could I interrupt for a moment?

**Janra:** Certainly. What is it?

**Pater:** I know this is going to sound REALLY strange, but I want a watch.

**Vespucci, Janra, Metacult:** Huh?

**Pater:** You heard me.

**Janra:** But why?

**Pater:** I know this is going to sound strange, but I want one.

To you a watch represents all sorts of problems, and I don't wonder if you're dumping too much on it. But that's another issue. I don't have the ticking clock in me that you do. There's an issue of sensitivity—I know you hate watches and probably planners, but I burn people by being late and forgetting that just an hour's delay to me is not "just" an hour to them.

Is it really impossible to make a watch that can represent liturgical time, or even hollow out a space liturgical time can abide in? I thought it was possible now to make a watch that will keep track of sunrise and sunset. Scientific engineering can't do some things, but could there be another kind of engineering? I suppose that "even" that technical marvel in your catalogue, the watch that knows how long something feels like, would make an awfully neat conversation piece.

**Metacult:** I think I may know of just the thing for you.

This watch is a sort of hybrid. Part of it is traditional electronic—something that tells hours, minutes, and seconds, that displays the date, and has a timer, alarm, and a stopwatch accurate to the nearest hundredth of a second—and for that matter it's water resistant to two hundred meters. It's a bit battered—which adds to its masculine look.

But that's not the interesting part. The interesting part has an exquisite sensitivity to liturgical rhythm, such as purely electronic gadgetry could never deliver. And it is a connected time, a part of the *Great Dance* that moves not according to the wearer's emotions

alone but what the *Great Choreographer* orchestrates.  
It moves in beautiful ordered time. And there is more.  
It can enter another person's or place's time, and fit.  
Among other things.

**Pater:** This is great! Where can I get one?

**Metacult:** Just a second while I take off my watch... here's  
the littlest part. The rest is already inside your heart.

# The Way of the Way

## I Beyond

Beyond doing, there is being.  
Beyond time, there is eternity.  
Beyond mortality, there is immortality.  
Beyond knowledge, there is faith.  
Beyond justice, there is mercy.  
Beyond happy thoughts, there is joy.  
Beyond communication, there is communion.  
Beyond petition, there is prayer.  
Beyond work, there is rest.  
Beyond right action, there is virtue.  
Beyond virtue, there is the Holy Spirit.  
Beyond appreciation, there is awe.  
Beyond sound, there is stillness.  
Beyond stillness, there is the eternal song.  
Beyond law, there is grace.  
Beyond even wisdom, there is love.  
Beyond all else, HE IS.

## II Order

Love and the Spirit are the basis for all true order.

When love and true religion have departed, there is honor and morality.

When honor and morality have departed, there are rules.

Rules do not depart when they have lost their power. They grow and multiply.

When rules have grown to their full measure, there is chaos.

The more the rules, the less the order, and how does that profit anyone?

### **III Silence**

The value of silence, of stillness, of meditation, of rest, is  
great.

I will not attempt to explain it with words.

## **IV Power**

Strength is made perfect in weakness.

A vessel that is solid is worthless.

A vessel that is empty and hollow has room to be filled.

If you wish to become strong, learn weakness.

## V The Heart

Thought goes before deed; that which fills the heart will fill the hands.

Greater than any conquest without, is the conquest within. Remove the log from your own eye, and you will see clearly to remove the splinter from your brother's eye. Master the mountain within, and you will be in a right state to challenge the mountain without.

Do you consider yourself ready for the task? You do not take it seriously.

Do you despair of ever accomplishing it yourself? You are ready to receive help.

## VI Wealth

Poverty is a deadly bane. Yet it can be made a blessing.  
If you wish to see the power of love and the Spirit of God at  
work, look at those who have nothing else.

Wealth is a blessing. Yet it can become a deadly bane.  
Look at the wealthy.

There are few who own and are served by many possessions.  
There are many who are owned by and serve many possessions.

Look at the wealthy.

There are many who can buy their children toys, video games,  
and cars.

There are few who pick their children up and hold them.  
Look at the wealthy.

There are many who can afford any pleasure they want.  
There are few who know joy.

Look at the wealthy.

There are many who can buy any vacation or entertainment  
device they want.

There are few who ever know leisure, rest, peace.  
Look at the wealthy.

There are many who have more money than the poor would know  
how to spend.

There are few who are as generous as the poor.  
Look at the wealthy.

There are many who can buy the softest and most luxuriant pets.

There are few who truly know the feel of a human touch.

Look at yourself.

Look at most of the people in the world.

Are you not wealthy?

## **VII Through**

Joy comes through suffering.  
Freedom comes through discipline.  
Glory comes through humility.  
Security comes through letting go.  
Masculinity comes through not being macho.  
Femininity comes through not being a sex toy.  
Life comes through death.

## VIII The Kingdom

The Kingdom of Heaven is not a kingdom of this world.  
It is a kingdom in which the weak have been chosen to shame  
the strong.

It is a kingdom in which the foolish have been chosen to  
shame the wise.

It is a kingdom in which the poor have been chosen to shame  
the rich.

It is a kingdom in which the humble have become the friends  
of God.

It is a kingdom in which that which the world has told, "You  
are worthless," God has told, "You are priceless."

It is a kingdom in which there is more rejoicing over one  
filthy sinner who repents than over ninety-nine righteous men  
who do not need to repent.

It is a kingdom in which vulgar peasants have been chosen to  
shame great theologians and sages.

It is a kingdom in which many wealthy men gave great and  
ostentatious gifts, and a poor widow, dropping in two pennies,  
surpassed them all.

It is a kingdom in which the power to conquer is held, not by  
the man who is able to stand behind the barrel of a gun, but by  
the man who is willing to stand in front of it.

It is a kingdom in which, to become a leader, you must become

a slave.

It is a kingdom which begins, not with the love that you pour out, but with the love that is poured out on you.

## IX Service

A river in health has water flowing in and water flowing out.  
If it dams its outflow, saying, "I will gain more fresh water  
this way," then it only grows stagnant. Its greed and selfishness  
create an illusion of gain, that is only loss.  
It must give out as it has received, and then it will be filled  
with water fresh and pure as it was first filled.

So it is with men.

Proclaim Christ at all times, and use words if need be.

Words are powerful, and can speak mightily.

Deeds are more powerful, and can speak more mightily.

The way to teach is not as a master.

It is as a brother, as a friend, and as a slave.

The one who seeks to control and dominate does not  
understand how to lead. Manipulation is not much different from  
dominating by intimidation; it is only better hidden. Both are  
hurt and pain lying and saying that they are health. If you wish  
to become a leader, scrub out a wastebasket.

## X Lessons

Once, after years of teaching, the Buddha was walking with his students, and one of them asked him for one last, final lesson.

He bent down, and picked a flower.

All of his students looked intently, waiting for an explanation.

All but one.

The one student smiled.

And to this one student, Buddha smiled back.

Lessons are everywhere. They are in books and in the classroom, to be certain. But there are many, many other places.

Look at a single blade of grass. Its beauty bears the fingerprints of the Creator. There is a lesson there.

Feel the warmth of a friend when you give him a hug. We were not created to spend time only in solitude, but also in community, and touch is vital. There is a lesson in the touch of another person.

Write a story or draw a picture. You will learn something when you do it.

Pray. There is a lesson in the simplest prayer.

Where is there not a lesson to be learned?

## **XI Children**

Children are a lot like everyone else, except that they have not fully learned how to act like everyone else. Therefore there is much to learn from them.

There is nothing like a child seeing that you are hurt, and coming up and giving you a hug. There is nothing like a child making a gift to give to someone.

There is also nothing like a child being loud, rude, and inconsiderate, ripping a toy away from someone smaller because he wants it and he is strong enough to take it. There is nothing like a child staring into your eyes with eyes of ice and saying, "I hate you."

Children embody good things that others have forgotten. A child knows how to imagine, how to look at how pretty a flower is, and they have not yet learned that it's not OK to say that you're hurting and need help. Children also embody pure and unmasked vice; it is very easy to see a child lie, manipulate, tear apart the one who doesn't fit in, and fight anyone who dare stand in the way of his selfishness.

Confucius said, "When I see a virtuous man, I try to be like him. When I see an evil man, I reflect on my own behavior."

## **XII Untainted virtue**

Become as a little child, but do not become childish.

Become loving, and yet become firm.

Become strong, and yet become gentle.

Become wise, and yet do not rely on your own wisdom.

Become great, and yet become humble.

Become filled with imagination and dreams, and yet do not  
forget the world.

Become as a skillful warrior, and yet become peaceful.

Become ancient, and yet do not lose your childhood.

Become timeless, and yet use time wisely.

## XIII Shadows

When people are unwilling to draw near to *God* and neighbor,  
they become religious.

When people shun worship, they create ceremonies.

When people are afraid to pray, they babble endless words.

When people abandon the guidance of the Holy Spirit, they  
try to create order by rules and regulations.

When people refuse to let themselves be drawn into holiness,  
they ordain priests.

When people flee from confronting the evil that lies within,  
they become self righteous and holier-than-thou.

When people do not accept the glory of the reality and  
substance that is found in *Christ*, they flee to familiar comforts  
and embrace mere shadows.

## XIV Fullness

Once a father gave each of his three sons a penny, as a test; he would bestow his inheritance on the son who could go into the marketplace and, in a day, buy something to fill the room.

The eldest son came, with his pouch filled with sand. He took the sand and threw it, scattering it through the room. It covered a little of the floor, but not all of it.

The second son came, with his arms full of straw. He spread the straw on the floor, scattering it through the room. It covered all of the floor, but it did not fill the room.

The youngest son came, and, opening his hand, held out a tiny candle. He lit it, and filled the room with light.

## XV Wrong Questions

It is possible for an answer to a question to be wrong.

"Is murder good or evil?"

"Good."

Yet it does not take an answer for there to be a mistake.  
"How many times must I forgive my brother before I may  
bear a grudge against him?"

If you are asking such a question, you are already mistaken.

Here are some, to avoid:

"What is the rational justification for faith?"

"What must I do to make myself good and make myself  
righteous before God?"

"Where should I seek out suffering in order to take up my  
cross?"

"How may I learn humility?"

"How do I decide for myself what is good and what is evil?"

"How much force is necessary to bring order to this  
situation?"

"How do I choose the lesser of two evils?"

"What words constitute a true prayer?"

"What is the necessary, time, place, and form for true  
worship?"

"Where do you draw the line between proper use of food and  
drink, and gluttony and drunkenness?"

"How much money do I need in order to be able to do something good?"

"What kind of rules should I use to infuse life to my spirituality?"

"What denomination should I join?"

"Who is my neighbor?"

## **XVI The Middle Path**

In many ways, the Way is balance. The temptation is not infrequent to try to avoid one error by embracing its opposite.

Good speech and writing does not contain words for the sake of words. Neither is it cut short for the sake of being concise.

Order is not gained by adding rules to what God has given, nor freedom by acting as if sin were not evil.

Wisdom is not gained by deifying the mind as something supreme which God must bow down and worship, nor humility by rejecting it as a piece of filth which God did not create.

In moderation and balance are work, play, rest, exercise, thought, meditation, words, music, silence, food, drink, and refrain, all good things.

## **XVII Evil**

Do you wish to see twistedness and depravity beyond belief?  
Look within.

## XVIII Impossible

If a man were offered five dollars to not think of a glowing pink bear, he would not be able to claim the prize. Yet he would have been doing it perfectly until he tried.

Likewise, people act inconspicuous until they try to act inconspicuous.

That is easy; they are matters where something is done automatically until they are tried.

Were a plank of wood a foot wide laid across the floor, anybody could walk across it without falling.

Yet, were it crossing a yawning and abysmal chasm, firmly secured so that it would not shake, many people would try to walk across it without falling, because they would, seeing the possibility of falling, cease to walk perfectly across the plank and instead try to walk perfectly across it.

The prayer of faith is like this; he who offers a prayer of faith succeeds, and he who tries to offer a prayer of faith fails.

That is more valuable and more difficult; it is a matter where it is not done automatically, nor something that is done by trying, but something that can be done only by doing. It is easy; children do this with great power until they grow up and learn to try.

There is something greater yet, which is most valuable and impossible.

Man is fallen, and sin and evil have pervaded his whole being.

Sin must be escaped to enter into life, for its wages are absolute death.

But what is the way for man to escape from sin? Automatic doing or trying or doing or not-doing? Wisdom or stupidity or knowledge or ignorance or tantrism or willpower or doing nothing?

That is like asking what brand of gasoline to use to extinguish a fire.

Such proceed from man and are inescapably tainted by evil. At their worst, they are straw. At their best, they are straw. They cannot save.

God emptied himself of divine power and majesty to become a man, and then emptied himself of even human power and majesty to die on a cross.

He who was without sin became anathema, bearing the curse for sins.

Now, to those who have earned in full the full measure of God's wrath, he offers this: that they accept the gift of God taking the curse upon himself, so that they will not have to bear it themselves.

The impossible is freely given to whoever believes, praying, "Jesus, please forgive my sins and come into my heart."

This is the message of the Cross. It is foolish and weak.

There is no way around it, no escape.

You cannot stoop to such useless nonsense? There is some question which remains unresolved, which must be answered before you can accept it?

Then go, and extinguish your fire with gasoline.

## **XIX A Difference**

Once a man was on a beach, where countless thousands of starfish had washed up, their life and water ever so slowly ebbing into dust.

Someone came along, and asked him, "What are you doing? Had you the rest of your life to spend doing this, you would not scratch the surface of the dying starfish. You cannot help more than a drop in the bucket. Why do you think that it matters?"

The man calmly, patiently, bent over, took a starfish, and threw it up in the air, arcing as it came down to splash back into the life giving water.

"It mattered to that one."

## XX Not

Teaching is not fallible men claiming divine authority.

It is divine authority claiming fallible men.

Righteousness is not, do what is right and you will be justified.

It is, be justified, and you will do what is right.

The beginning is not man reaching up to God.

It is God reaching down to man.

God is not a reflection of the best in man.

Man is a reflection of the best in God.

Wisdom is not mind establishing the place for faith and building it up.

It is faith establishing the place for mind and building it up.

You do not come to see the world as you should and therefore know God.

You come to know God, and therefore see the world as you should.

The Cross was the point where the power of sin and death crushed God.

It is the point where God crushed the power of sin and death.

## **XXI The Other Side**

The foundation is that *God* loves you and your neighbor.  
The foundation is that you shall love *God* and your neighbor.

Only those who believe can obey.

Only those who obey can believe.

A wise man will pursue love.

A man of love will pursue wisdom.

Christ shared in our life and died our death,

That we may share in his death and live his life.

The believer abides in the Father, in the Son, and in the Holy  
Spirit.

The Father, and the Son, and the Holy Spirit abide in the  
believer.

Inside of your heart, there is a void that can be filled only by  
*God*.

Inside of *God's* heart, there is a void that can be filled only by  
you.

## XXII Necessary

If you have nothing that you are ready to die for, then you  
have nothing that you are ready to live for.

If you will not lose yourself, then you can not find yourself.

If you can not accept that your own wisdom is not the final  
measure, then you can not become wise.

If you can not let go of efficiency, then you can not use what  
has been entrusted you properly.

If you do not fear God, then you will not know either courage  
or peace.

If you do not renounce everything to gain Christ, then you can  
not truly gain anything.

If you do not see the net sum of all your good works as —, —,  
then you can never produce good works.

## XXIII Teaching

Once a man came out of a church service, visibly moved. He walked along with the town cynic, and began to speak.

"There's a new preacher, and his message is totally different."

"Really? What did the old one say?"

"He said that we have all sinned, and that Jesus died for our sins, and that, unless we accept his forgiveness for our sins, we're all going to go to Hell."

"And what does the new one say?"

"He says that we have all sinned, and that Jesus died for our sins, and that, unless we accept his forgiveness for our sins, we're all going to go to Hell."

"Bah! Doesn't sound like much of a difference to me."

"Oh, there's a world of difference. He says it with tears in his eyes."

## XXIV Faith

The just shall live by faith.

Not, "The just shall live by works," to which faith is a means.

"The just shall live by faith," of which works are a result.

Not, "The just shall live by meaning," to which faith is a means. "The just shall live by faith," of which meaning is a result.

Not, "The just shall live by rational explanation," to which faith is a means. "The just shall live by faith," of which rational explanation is a result.

Not, "The just shall live by mystery," to which faith is a means. "The just shall live by faith," of which mystery is a result.

Not, "The just shall live by power," to which faith is a means.

"The just shall live by faith," of which power is a result.

Not, "The just shall live by security," to which faith is a means. "The just shall live by faith," of which security is a result.

Not, "The just shall live by happiness," to which faith is a means. "The just shall live by faith," of which happiness is a result.

The just shall live by faith.

## **XXV Means**

The more haste, the less speed.

The more prudishness, the less purity.

The more rules, the less order.

The more will, the less power to obey.

The more excess, the less satisfaction.

The more license, the less freedom.

The more wrong means, the less right ends.

It is necessary, not only to believe that God has given the right ends, but also that he knows the best means to those ends.

## **XXVI Law**

There is the Law for the lawless.

There is no Law for the righteous.

The Law is not a tool to help people obey. It is a mirror to show people that they can't obey.

It is meant to show people that however hard they try, they need something greater: that the Something Greater is how they are to obey.

Alas, for how many have tried to obey with the Law?

## XXVII Virtue and Vice

The one man perfect in virtue was the Man of Sorrows, and we are not greater. In this world, virtue is no escape from suffering.

Yet vice is anything from the path of joy. Joy, indeed, is a part of virtue, and can not truly be separated from it.

Virtue is hard to begin with, but ends in joy.

Vice is easy to begin with, but ends in misery.

What does Heaven look like?

He who is proud will see that every man present is present, not because of, but despite what he merits.

He who is rebellious will see people serve an absolute King.

He who desires self-sufficiency will see that joy is offered in community.

He who seeks wealth, prestige, power, and other ways to dominate others, will find his effort in Heaven to be like buying a gun in a grocery store.

He who strives will see that there is no one to strive with.

He who despises the physical will see a bodily resurrection.

He who desires his own interpretation and his own set of beliefs, will see absolute truth in crystalline clarity.

To those who will not let God change their character to virtue and love, even Heaven would be Hell.

## XXVIII Wrong Tools

Does one use an ice cube to start a fire?

Does one use a chainsaw to mend a torn garment?

Does one use nerve gas to heal paralysis?

Then why do people use worry to create security, or wealth and power to create happiness, or excess to create satisfaction, or distortions of pleasure to surpass pleasure in its proper function?

Perhaps the reason that the Tempter is the Father of Lies, is that only a master of illusion could make sin appear desirable.

## **XXIX Fallenness**

Fallenness is subtle, and appears in many ways.

People do reverence to nothings, and disturb the order.

What should be used is loved, and what should be loved is used.

People consider ends which are good themselves, to be merely means to other ends, ends which are trivia. It is like seeking to heal a man deaf and dumb, so that he can tell you what time it is.

People try to achieve the right ends through the wrong means.

People take the right action for the wrong reason.

People try to do good by themselves instead of relying on the Spirit.

As well to give a thirsty man a canteen, without first allowing it to be filled with water.

Man alone can not escape sin. Only in God is that power found.

## **XXX Peace**

Peace is not the absence of violent conflict between men.  
Peace is first of all a peace between *God* and man, and then  
virtue inside a man.

Peace is not an absence of anything, but the presence of love.  
The manifest presence of love does not leave room for people  
to try to kill each other, but it is far more than an absence.

In that way, peace is like many good things. Right action does  
not lie, steal, or commit adultery, but its essence is not what it  
does not do, but what it does do: in the Spirit, act according to  
love and compassion. Virtue does not contain vice, but it is a  
positive thing, the fruit of the Spirit: love, joy, peace, patience,  
kindness, generosity, faithfulness, gentleness, self-control,  
moderation, courage, justice, wisdom, honor, purity, timelessness,  
balance, obedience, submission, honesty, chastity, simplicity,  
penitence, faith, hope, mercy, compassion, forgiveness, humility.

Violence can not create peace. Only love can.

## **XXXI Nothing Else**

Nothing can atone for the insult of a gift, except for the love  
of the person who gives it.

Nothing can allow the power to do good, except letting go of  
grasping power as the means to do good.

Nothing can sanctify any activity, possession, or skill, except  
offering it up completely to God.

Nothing can bless any activity of man reaching up to God,  
except for the activity of God reaching down to man.

## **XXXII Deprivation**

Too much information; not enough wisdom.

Too many subtleties of interpretation; not enough understanding of the plain and simple.

Too much amusement; not enough leisure.

Too many activities; not enough true accomplishment.

Too much on the surface; not enough in the core.

Too much acceptance; not enough love.

Too much filled-by-man; not enough filled-by-God.

Sometimes, more is less.

## XXXIII The Upside-Down Kingdom

The Kingdom of Heaven knows madness in which there is infinite method. The kingdom of this world knows method in which there is infinite madness.

It is a kingdom in which walking is a luxury, and driving a car is a necessity.

It is a kingdom in which lifelong marriage is less cherished than the isolated pleasure of sex.

It is a kingdom in which peace is pursued through intimidation and violence.

It is a kingdom in which men pursue freedom and joy by doing what they were never meant to.

It is a kingdom in which labor-saving devices destroy leisure.

It is a kingdom in which an unexpected moment of rest at a busy time, is considered an annoyance.

It is a kingdom in which certainty is pursued through doubt.

It is a kingdom in which men try to elevate and build up, by separating from foundations.

It is a kingdom which ignores, ridicules, or kills the prophets God sends it.

It is a kingdom which manages to be so terribly practical that it loses what practicality is meant to achieve.

It is a kingdom in which holding power is more esteemed than

being loved.

Which kingdom is really the upside-down kingdom?

## **XXXIV He Who Is**

He is the Way.

He is Truth.

He is Tao.

He is Light.

He is Life.

He is Love.

He is the Word.

He is Mystery.

He is Beyond.

He is the Origin.

He is Energy.

HE IS.

It is in him that we walk, and live, and breathe.

It is by knowing him that we know ourselves.

It is by being united with him that we become ourselves.

## **XXXV Rotting**

When people forsake the Spirit, they embrace rigid  
asceticism.

Asceticism gives birth to libertinism, and libertinism gives birth  
to death.

When people forsake wisdom, they embrace rationalism.  
Rationalism gives birth to anti-intellectualism, and anti-  
intellectualism gives birth to chaos.

When people forsake faith in God, they embrace faith in man.  
Faith in man gives birth to faith in nothing, and faith in nothing  
gives birth to nothing.

There are ten thousand improvements on the Way. Do you  
know where they lead?

## XXXVI Eden

In Eden, there were no temples.  
There was no place where men did not come to meet God.  
In Eden, there were no priests.  
There was no one who did not know God intimately.  
In Eden, there were no oaths.  
There was no falsehood.  
The words, "At that time, men began to call on the name of Yahweh," do not tell of heights to which man had risen. They tell of the depths to which man had sunk.  
The Kingdom of Heaven does not know a great many things. Rather, it knows what was unspoiled in Eden, and something yet greater.  
Its members are gentle, humble, and pure.  
They carry a sense of timelessness about them, and they make peace.  
They repay evil with good, and rejoice when persecuted.  
They walk in the Spirit.  
They have overcome the world.  
Eden saw the image of God.  
The New Jerusalem will see sinners redeemed, who are not only God's image, but share in the divine nature.  
In Eden, men saw by lights God had made.  
In the New Jerusalem, there will never be a lamp, for God

himself will be their light.

## XXXVII Unconditional

Like is because. Love is despite.

If you begin to understand all of the reasons man has given God not to love him, you will begin to understand the nature of God's love.

Love is not desire, nor is it want, nor is it even duty.

Love is love.

When does love prove that it is love?

When you look into a man, see some virtue, something beautiful, something great he has done for you, and love him more?

No. When you look into a man, see some vice, something ugly, some great wrong he has committed against you, and love him more.

It is perhaps those who are called unloveable who are easiest to love, for love for them will truly be love.

## XXXVIII True Learning

A student, beginning the study of a new language, will first ask, "What does this word mean? What is the word for that?"

Translation will be difficult.

As time passes, he will learn more of the skill of translation. He will know more words, and understand not only what word stands for what word, but what idiom stands for what idiom.

Then, gradually, something else will begin to happen. He will begin to understand the new language, not in terms of the old tongue, but on its own terms. He will learn to think in the new language. He will begin to understand that which lies a step beyond words or even idioms, that which can not be translated. His words in the new tongue will begin to sound, not like a new translation, but like the language itself.

Then, even more gradually, this will be done, not with effort, but as a part of him. His speech will flow, free and unconstrained, as in his native tongue. Translation, in the end as in the beginning, will be difficult; in the beginning, as an unnatural artifice to which there is no alternative, and in the end, as an unnatural artifice which does not compare to the beauty and simplicity of the language itself.

The language has been mastered, not when the student has become skilled in translation, but when he does not need to.

The Way, the Kingdom, the Spirit, are like this.

They are not new. They are ancient. But sin has grown so great that they are not even recognized.

Of course it is possible to strive to make these clear. It is in their nature that this be done. The Way has come, that those who are blind may see.

There are many parables which tell, "The Kingdom of Heaven is like."

Yet the parables say always, "The Kingdom of Heaven is like," never "The Kingdom of Heaven is."

It can never be fully translated.

It must be learned.

## **XXXIX Heaven**

The blind will see *God's* face.  
The dumb will sing praises to him.  
The deaf will listen to the eternal song.  
The lame will dance for joy.  
Those convulsed by spasms will rest in perfect stillness.  
The leprous will feel *God's* touch.  
But all this is dwarfed by the shadow of the wonder beyond  
wonders.  
Sinners will be made holy.

## **XL God**

Believe and know that which can be grasped by reason.

Believe that which can only be called mystery.

So also, know *God* who is very personal.

So also, know *God* who is beyond personality.

Call him firstly and finally, "Abba," Daddy.

Rest in his bosom.

Know also that, though man is like *God*, *God* is not like man.

Embody *Tao*, and walk according to the *Way*.

The nature of *God* — three persons who are yet one — is vast  
and incomprehensible.

He is all of the things of which I have spoken, and more, far  
more.

## **XLI Better**

It is good to love so that any sacrifice considered is made.  
It is better to love so that sacrifice is no longer considered.

It is good to understand through profound symbols.  
It is better to come to the point of understanding from which  
profound symbols are made.

It is good to have faith be a part of everyday life.  
It is better to have everyday life be a part of faith.

It is good to abstain from what should not be done.

It is better to do what should be done.

It is good for the Way to become a part of you.

It is better for you to become a part of the Way.

It is good to know a friend so that you understand his words.  
It is better to know a friend so that you understand without  
words.

It is good to see an enemy, with all the evil he has done you,  
and love him.

It is better to love so that you do not see an enemy.

## **XLII Knowledge**

He does not know how to swim who can recite manuals and  
comment on them.

He knows how to swim who can fall into water and not be harmed.

Those who have pursued knowledge have learned that  
knowledge is never mastered when it resides only in the head.

This character of knowledge is difficult to describe;  
something of it is captured in that the word 'know' tells of the  
union of male and female.

Knowledge proceeds from faith. The call is to believe and  
know the truth.

There is much to wisdom that is not captured by systematic  
theology, and he is wise who knows systematic theology and the  
rest of wisdom.

The call to know *God* and know yourself is a call to truly know.  
The one who knows the Way, knows it in the head, the heart,  
the hands; it rests in his spirit.

## XLIII Sanity

Sanity builds an immense boat in the middle of a desert.

Sanity offers up the son of the promise on the altar.

Sanity leaves net and boat to obey the words, "Come, follow me."

The only true sanity will let go of everything to grasp the Way.

Therefore,

He who follows the Way may have no possessions.

He who follows the Way may have no identity.

He who follows the Way may have no security.

He who follows the Way may have no good works.

He who follows the Way may have no friends.

He who follows the Way may have no family.

He who follows the Way may not have even his own life.

The Way costs everything. To follow it, one must let go of, renounce, hate all of these things, offering them up completely to God.

Then, and only then,

His possession will be the Kingdom of Heaven.

His identity will be Christ.

His security will be the providence of God.

His good works will be the good works of Christ.

His friends will begin with God.

His family will be all who follow the Way.

His life will be eternal.

Of the old things, he will expect nothing back.

That which is given back will be taken to be an unexpected gift.

Even then, he will not have them as before.

He will not have them except according to the Way.

They are not his; they belong to the Way.

## **XLIV Greatness**

*A great leader is not overbearing.*

*A humble man is not self-deprecating.*

*A man of love is not accepting.*

*Why is this?*

*It is because they follow, not the pattern below, but the  
pattern above.*

## **XLV Leaving Room**

A great teacher does not spell out every detail.  
He leaves room open for the student to understand.  
Think about why a joke is funny. It causes no laughter if it is  
explained.  
A great teacher leaves room for his students to learn.

## **XLVI Voice**

Wind, earthquake, and fire are but heralds of something  
greater.

That something greater is soft and still.

That is the voice to listen to, and the voice to imitate.

It is shouting which makes a man hoarse.

If you wish to be heard, do not raise your voice.

Speak in a gentle whisper.

## XLVII Between

The Way between man and God does not leave them separate.  
It draws them together.

The Way between two people does not leave them separate.  
It draws them together.

The Way between man and nature does not leave them  
separate.

It draws them together.

Where there is separation, the Way enters the separation  
and creates intimacy.

Where there is discord, the Way enters the discord and creates  
harmony.

Where there is absence, the Way enters the absence and  
creates presence.

In the beginning was the Way.

And the Way was with God.

And the Way was God.

## XLVIII Slowly

Slowly, slowly, ever so slowly.  
It is over untold aeons that coal is turned to diamond.  
The Way is not speedy, hasted, or rushed.  
It is always on time, because it is never in a hurry.  
It is nonsense to pray, "Lord, give me patience, and give it to  
me now."  
God gives patience, patiently.  
God draws people into the Way, according to the way of the  
Way.  
It is ever so slowly and imperceptibly that they grow in virtue.  
The time to obey is now.  
The time for results to come, is God's concern, not yours.  
Do not be in a hurry with God.  
God is not in a hurry with you.

## **XLIX Prayer**

Do not spend a season without food,  
nor a week without drink,  
nor an hour without air,  
nor a second without prayer.

Prayer is not useful. Wonders come of it, but it is not useful.  
Prayer makes innumerable petitions, but it is not a tool to get  
things.

Prayer is the step by which a man walks in the way.  
Prayer is the letting go by which a man rests in the Spirit.  
Prayer is the force by which God draws man into himself.

Prayer does not draw into communion with God to ask and  
receive.

Prayer asks and receives to draw into communion with God.

## L Control

A microbe controls the biologist who studies it. It causes him to place it on a glass slide, and look at it through a microscope.

A mountain controls the climber who scales it. It causes him to flatten himself against the rock, grab on to tiny holds, and move according to their pattern.

A thermometer controls the patient who uses it. It causes him to sit still and close his mouth.

There are many other things that control, for good or evil, and the control rarely extends only to the moment.

Lust causes a man to look at a person and see only breasts and legs.

Devotion to mammon causes a man to think of "What does this cost? What am I willing to pay?", and worry for his riches.

Playing a tactical assassination game causes a man to think about how to kill stranger and friend, and jump in fear at every sound, paranoid without cease about which stranger or friend is trying to kill him.

But,

The Way causes a man to be filled with peace and innocence. Forgiving wrongs causes a man to be undisturbed by hate and anger.

Prayer causes a man to be filled with trust and security.

Mercy causes a man to be filled with love.

A man can choose what will control him.  
He cannot choose whether or not he will be controlled.  
It is those who most resist control, who are most under  
control, and whose master destroys.  
What controls you?

## LI Great

A step into the Way has been made by the person who ceases to say, "God, look how big my problems are!", and instead says,

"Problems, look how big my God is!"

Greatness is in God, and in everything that comes from him.

The Way is great.

The Kingdom of Heaven is great.

Tao is great.

I do not know words that will hold the greatness of God.

Greatness comes to a man, not by conquering a city, nor by earning a million dollars, but by growing into accord with the Way.

To enter into the Kingdom of Heaven, become as a little child.

## LII Accordance

A true climber will climb according to the shape of the mountain.

A true wayfarer does not stay in hotels, ride tour buses, and buy shiny trinkets; he steps into the culture, meeting its people, listening to its music, tasting its food.

A true architect will not take a medieval cloister and attach to it an addition that belongs in a shiny new mall. Rather, he will build new buildings that fit the pattern of the landscape, and new additions which fit the pattern of the old.

Being will do, but it is a doing which is in accordance with being and does not strive.

A man who walks in the Way will not strive with what around him is not evil.

One does not write poetry to defy the rules of a language; it is rather to write in accordance with the nature of the tongue.

A poet may change the structure of his language, but he does so only according to its spirit.

An intercessor can change the will of God, but he will do so only in accordance with what God wills.

God is eternal, constant, timeless, unchanging.

In time, he has constantly changed his will, that there may remain inviolate his unchanging love.

Therefore, to change the will of God is in accordance with

God's will.

Such change will be the nature of change made by a man who walks in the Way; he will never try to make changes which are haphazard or random. If that is how it is changed, even more accordance is how it is not changed.

He who walks in the way will know accordance.

## LIII Freedom

Freedom of motion is the freedom of a skeleton intact. It is a freedom that allows a person to run, and jump, and dance.

What comes of breaking a bone is freedom to bend a limb in ways it was never meant to move, freedom to have sherds of bone tear at living flesh, freedom to writhe in agony, and freedom to die.

That is not freedom.

It is only in accordance with the Way that there is freedom.

It hurts to kick against the goads.

For freedom, all who walk in the Way have been set free.

Freedom is the nature of the Way.

## LIV Return

To the faithful, God shows himself faithful.  
To the forgiving, God shows himself forgiving.

To the kind, God shows himself kind.

To the wise, God shows himself wise.

To the patient, God shows himself patient.

To the pure, God shows himself pure.

To the loving, God shows himself loving.

When the Spirit places virtue in a man, he is ready to see  
that virtue in God.

Seek what is right, and it will be accorded to you.

## LV Title

"Master!"

"Do not call me master. There is but one."

"Surely you know that you are a sage."

"He is a fool who considers himself wise."

"Teacher?"

"Do not think of me as teacher, either."

"But I see in you such wisdom, such gentleness, such peace. If I may not call you master, nor sage, nor even teacher, then how may I call you?"

"Brother."

## LVI Growth

A wise man learns from the words of the simple.  
Only a man of little learning says, "I have nothing to learn  
from you."

In this, wisdom reflects the Way.

Growth is not like an empty room being filled with boxes,  
where each thing placed inside leaves less and less room for  
more.

It is rather like dominoes being placed on a table; the more  
are set in place, the more possibilities are created to add more.

The more a man grows in the Way, the more he is able to  
grow.

## LVII Measure

Playing with one sniffly child and lecturing to one thousand  
eminent scholars,  
Blessing a meal and commanding a mountain to be thrown into  
the sea,

Praying for a minute and praying for an hour,  
Giving up a shoe and giving up life,  
These things are not different in the Way; they are  
different only in men's minds.

One who walks in the Way will not care for numbers, or fame,  
or so-called greatness. They come, and he will not be puffed up;  
they leave, and he will not be distraught.

There are many people who have faith to move mountains.  
Then why is it not seen? Because the Spirit does not lead them  
to perform parlor tricks to obviate the need for faith.  
The Way is silent as light; ears filled with the din and noise of  
the world must grow silent to hear it. It performs great  
wonders, but they go unnoticed.  
The Way has its own measure.

## **LVIII Behold**

Behold the candle. It gives itself up, that others may have  
light.

Behold water. It does not resist one who pushes against it,  
yet it changes the shape of mountains.

Behold light. Men see it, and by it see all else.

Behold. Even the pebbles beneath your feet tell of God, of  
the Way, of the man who walks in the Way. They bear its  
imprint.

## LIX Unity

When two believers come together, the power of their prayer  
increases tenfold.

A hand or a foot on its own is dead. The sum of such hands,  
feet, eyes, and other members is still dead. That it is larger and  
more complete means only that its stench will be greater.  
Yet there is the breath of life, animating the body of every  
man alive.

Life is in each part, and each part is united with the whole.  
The body is controlled by the head, which loves it, and the  
breath of life animates each member.

Christ is the head.

The Spirit is the breath of life.

All who follow the Way are the members.

There is infinite variety among them.

Why are they different?

Because they are members of one body.

The whole is greater than the sum of the parts.

## LX Increase

The step from boyhood to manhood has been made, not by the one who looks into the mirror and finds the first excuse to shave, but by the one who looks into the mirror and finds the first excuse not to shave.

Dignity is found, not by the one who tears others down, but by the one who builds others up.

Good works shine before men, not when they are paraded, but when they are done in secret.

Ceasing to make God the image of man comes, not by making God the impersonal image of not-man, but by letting God be God:

HE WHO IS,

mysterious and incomprehensible,  
unlike a man,

far beyond anything that can be captured by personality,  
and therefore more personal than any man.

He who loves God will have all the more love for his neighbor,  
and he who loves his neighbor will have all the more love for God.

The more love and joy are shared, the more they abound.

The more prayer, worship, and Communion abound, the more they become special, sacred.

## LXI Sight

One who sees will look at a gift and see also the love which gave it.

One who sees will look at a face and see also a person.

One who sees will look at artwork and see also an artist.

One who sees will look at the physical and see also the spiritual.

One who hears will listen to the words of a friend, and hear both what is said and what is not said.

One who hears will listen to a question, and hear also the thoughts, the perspective, and the knowledge from which it came.

One who feels will sense the presence of God's love in the dryness of the absconditus deus.

The Way is a way of reality and substance.

An artist who creates a masterpiece will care for the smallest detail, but the compilation of technical details never forms art.

One who abides in the way will never despise accident, for he knows that a forest is never seen by chopping down trees; yet neither will he look at accident and fail to see substance.

Look at the surface and see into the depths.

## **LXII Practicality**

Nobody who enjoys wine takes some grape juice, throws some yeast in, and hopes that it will be ready in ten minutes.

Instead, it is carefully prepared, and stored away to rest.

Years will pass before it graces a table as fine wine.

This is how a wise man is like the master of a storehouse, producing from it treasures old and new.

In studying the Scriptures, looking into the wonders of Creation, listening to the voice of the Spirit, every morcel of wisdom will be carefully stored away, allowed to ferment for minutes or years until the right moment comes.

Even in use, the thought of utility does not come. Like all else in the way, wisdom is pursued, not for the sake of using, but for the sake of having.

The first lesson in practicality is to let go of it.

## LXIII Gifts

To come into being is not something one causes; it is given by  
God.

The forgiveness of sins is not something one earns; it is given by  
God.

Obedience is not something one accomplishes; it is given by God.  
The Father created man in his image.

The Son was crucified that men's sins might be forgiven.

The Spirit is poured out that men be given the power to obey.  
Do not do; obey.

## LXIV Intimacy

It is only to a stranger that respect is shown by formality and distance. To a good friend, respect is shown by a love that has no need of such things.

It is only to a foreign student of language that thoughts of grammatical rules occur. To a native speaker, the language flows.

It is only to someone outside that obedience looks like willpower and rules. To someone inside, obedience flows from the motion of the Spirit and its fruit, virtue.

The Way is a way of closeness, intimacy. It knows the great order which lets go of the silliness of little order. It has no need for formal structure, ceremonial laws, and other such trivia.

It is in this Way that men greet each other with a warm embrace and address the Creator of Heaven and earth as "Daddy." It is in this Way that men grow into all that is good and pure.

It is in this Way that men become of one spirit with HE WHO IS.

No distance.

## LXV Invisible

Good acting does not cause people to think about what good acting there is. It allows them to see into the characters.  
Good clothing does not cause people to think about what good clothing they are wearing. It allows them to move without discomfort or restraint.

Good government does not cause people to think about what good government they have. It allows them to go about their affairs without interference.

A good window does not cause people to think about what a good window it is. It allows them to see clearly what is on the other side.

A good waiter does not cause people to think about what a good waiter he is. He allows them to enjoy their meal.

A good temperature does not cause people to think about what a good temperature the air has. It allows them to live undisturbed by heat or cold.

A good preacher does not cause people to think about what a good preacher they have. He allows them to think about what a great God they have.

The Way is as silent as light. It is gentle, soft, and unobtrusive. One who walks in the Way does not seek his own glory.

It is from the Way that issued the words,

"My precious, precious child,  
I love you and will never leave you.  
When you see but one set of footprints,  
It was then that I carried you."

## LXVI Mercy

When man embraced evil, he was expelled from Paradise and bestowed a curse. Accursed, that time would see him wither and die.

Yet even in that curse, was an act of great mercy. The true curse would have been an imperishable body, filled with eternal youth.

A body forever young, as spirit and soul rot in vice. Time would see bitterness and suffering grow without end. Worse than a curse to die away from the Way, is a curse to live apart from the Way.

But Mercy did not do that.

Mercy gave another gift, a gift greater still. In the Way, though men waste away outwardly, inwardly they are renewed day by day.

The moment of death is transformed into a birth into life. After death comes the resurrection; spirit, soul, and body filled with a life even greater than that of Eden. Men will become the sons of God, sharing in the divine nature. HE WHO IS took death beyond death, and transformed it into life beyond life.

## LXVII Not-Doing

Swallowing a pill is a difficult thing to learn.  
It is difficult because a child will strive to do it, and it is  
something which can only be not-done.  
Even discipline follows the path of not-doing.  
Discipline does not force a square peg into a round hole; it slides  
a round peg into a round hole.  
Six days of work were not evil, but it was one day of rest that  
was holy.  
Rest surpasses work because it was before.  
Before the worlds began, before even the creation of time,  
the Father is in glory with the Son.  
In that glory is absolute rest.  
In that glory will be the rest of all who follow the Way.  
From being issues doing; from being and not-doing issue doing.  
This is the order of the Way.  
Not-doing leaves room open for God to fill.  
Faith is a rest-in-God; it is a state of being and not-doing.  
It is from faith that actions proceed.  
Whatever does not proceed from faith is sin.  
To those who not-do, abide, receive, believe, life is given.  
The Son rests in the Father's bosom, and the Spirit flows  
between them.  
In this nature, rest, glory, and love, will they share.

Be and become.  
Not-do and rest in God.  
Let love flow into action.

## LVXIII Honesty

To walk in the Way is to become honest.  
Honesty certainly does not lie on an income tax form, but  
there is something more. To become honest is to become  
unmasked.

A mask is an armored shell.  
It protects from feeling pain.  
It protects from being healed.  
It protects from growing and becoming real.  
To remove it is to become naked and vulnerable.  
It is to allow people to look into your eyes.  
The pain of removing it is the pain of being healed.  
It is like swallowing pride.

To swallow pride tastes foul, not because of the nature of  
humility, but because it is the taste of the foul and bitter nature  
of the pride that is swallowed.

After the mask is removed, there is a warmth and freedom  
like the freshness that comes after tears.

There is substance and reality in the image of God.

There is substance and reality in the Way.

There is too much substance and reality to fit inside of a  
mask.

## LXIX Interaction

The Kingdom of Heaven does not know interactions based on power: "I will compel you to do this."

Neither does it know interactions of economic character: "I will do this for you if you do this for me."

Instead, its interactions are based on love, freely and lavishly bestowed.

This lavishness is embedded in the words, "Love your neighbor as yourself."

He who uses power to compel things from other people, or economic exchanges to bargain things from them, does so for a reason. He does so in order to gain what is good, desirable, and beneficial for himself.

The question, "Why does he want that?" is a misplaced question. He does not wish to benefit himself as a means to something else. He loves himself.

This is how you should love yourself.

This is how you should love your neighbor.

Love is not the son of want.

Love is the foundation of the Kingdom of Heaven.

Love is the air which its citizens breathe and through which they see.

Prayer is love in communion with God.

Kindness is love wearing work gloves.

It is freely received and freely given, poured out without  
measure.

It is shared, and increases all the more.

It is generous, like the woman who poured pure nard over  
Jesus's feet.

It is a cascade of flowing water, which cleanses what is soiled  
and heals what is wounded.

It is full of joy; finding something good, it seeks to share.

It is forgiving; it looks upon the person who has wronged it, and  
says, "I love you."

Love God.

Love the brothers and sisters, all mankind, yourself.

Love the stars, the waters, the animals, the trees.

All that is written about the nature of godly living is an  
explanation of love.

Heaven, the hope of the ages, is the final hope of being  
united and immersed in love with God and the saints.

The Kingdom of Heaven is a kingdom of love.

## **LXX Being**

The rock, the foundation, the origin of all.  
A state of being eternal and changeless.  
All glory, all holiness, all authority, all wisdom.  
Beyond all measure.  
Infinite stillness.  
Life beyond life.  
Light without any darkness.  
One.

## **LXXI Dim**

Thomas Aquinas wrote many books; among numerous others,  
he wrote a Summa Theologica of encyclopaedic volume.

Late in life, he had a vision.

In this vision, Christ spoke to him from the Cross.

The vision profoundly affected him.

He became silent, and ceased to write.

And all his great and wonderful writings?

He declared them to be straw.

## **LXXII End**

A journey is a long voyage that leads home.  
Childlike faith meets testing and fire and new experiences,  
that it may become childlike faith.  
Depths of theology, profound insight, and great learning, lead  
to hearing the simple words, "Jesus loves you," and trusting  
them.  
The Alpha is the Omega; the First is the Last; the Beginning  
is the End.  
All good things come from God through the Way;  
all good things return to God through the Way.

## **LXXIII Around**

To worship is to take a little step into Heaven.  
A candle which is lit, glows. It sheds light and warmth on all  
that is around it.

One who walks in the Way will carry little pieces of Heaven  
with him. He will bear with him a sense of timelessness, peace,  
joy, and love.

Bringing Heaven down to earth is very important.

It is to be not-done and done.

A relief worker, returning to a war zone, said, "I'm going back  
to Hell, to plant some flowers."

## LXXIV Maps

All mapmakers face a difficult task.  
They have a flat surface with which to represent a surface  
which is not flat.

Many maps of the world look very different.  
Some have a grid which preserves latitude and longitude.  
Some preserve the area of each part.

Some preserve something else.

Someone who knows only flat surfaces may be confused.  
He may think that each mapmaker has produced a map of his own  
perspective.

He may imagine something vague and indefinite, tell a parable of  
blind men feeling an elephant, and call it great arrogance when  
mapmakers examine something which looks like a map and declare  
it unacceptable.

This is not a mark of openmindedness, nor of nuanced  
understanding, nor of humility.

It is a mark of ignorance.

The truth is not something indefinite and unreal.

The truth is very definite and real.

Maps vary because they represent something too definite and  
too real to fully capture with a flat surface.

A mapmaker never alters geographical features which he doesn't  
like or which do not seem to make sense to him.

Mapmaking is an activity of absolute fidelity.

## **LXXV Within**

A parent has properly disciplined a child, not when he behaves properly upon sight of an authority figure, but when he behaves properly regardless.

Protection from drunkenness does not come from restricted access to alcohol, but from learning to know and respect one's limits.

Order is not externally imposed; it comes from what is placed within.

Training does not give men the power to conform reality to their nature, but to conform their nature to the ultimate reality.

Fighting the evil without never comes without fighting the evil within.

To walk in the Way is always to look inwards.

## LXXVI Bread

There is no need to worry about what to eat; God feeds even the birds of the air, and we are worth more than many sparrows.

He knows our needs and desires before we begin to pray. He desires to give even more than we desire to receive.

It would seem that a man of faith would believe in this, and not annoy God by interrupting him with requests for bread.

Yet the model for prayer asks for the coming of the Kingdom, the forgiveness of sins — and, day by day, "Give us this day our daily bread."

Why is this?

It is because man does not live by bread alone.

God wishes that man be nourished in body and spirit. As bread sustains the body, prayer and communion sustain the spirit.

Therefore, we are invited to share his presence in the smallest detail of our lives.

It is by prayer that we receive each meal as a gift wrapped in love.

It is by prayer that a blade of grass can draw us into the heart of the Father.

Pray continually.

## LXXVII Meta

Cognition is made complete by metacognition.

Cognition sees that wealth will buy an abundance of  
possessions.

Metacognition sees that life does not consist of an abundance of  
possessions.

Cognition finds an edge in the rat race.

Metacognition climbs out of the rat race.

Cognition finds a way to admire the Emperor's new clothes.

Metacognition asks, "Why is that man naked?"

Cognition gives the greatest volume of food to the highest  
number of beggars in the least amount of time.

Metacognition shares a human touch with at least one beggar.

Cognition asks, "What does this say?"

Metacognition asks, "Is this orthodox?"

Cognition asks, "How can I do this?"

Metacognition asks, "Is this right?"

Cognition thinks.

Metacognition thinks about how cognition thinks.

Cognition is necessary, but it is even more vital to take a step  
back and restore things to sanity.

## **LXXVIII Undisturbed**

### LXXIX Life

Of what is to be known, I know little.

Of what I know, I can explain little.

These words tell of the Way by which a man may find life.

Come to the Way of which these words tell.

These words are imperfect; the Way is perfect.

Do not come to these words to find life.

If you do, they will kill you.

## **LXXX Love**

Love is the foundation and cornerstone of Law and virtue.

Love is the character of a saint.

The Law, "Do not murder, do not commit adultery, do not steal, care for the poor, worship God alone", is an extended commentary on the actions which love dictates.

Virtue is only another name for the different sides of love. Patience and forgiveness are the nature of love when it is wronged.

And now these three remain: faith, hope, and love.

The greatest of these is love.

## **LXXXI Beyond**

Beyond doing, there is being.  
Beyond time, there is eternity.  
Beyond mortality, there is immortality.  
Beyond knowledge, there is faith.  
Beyond justice, there is mercy.  
Beyond happy thoughts, there is joy.  
Beyond communication, there is communion.  
Beyond petition, there is prayer.  
Beyond work, there is rest.  
Beyond right action, there is virtue.  
Beyond virtue, there is the Holy Spirit.  
Beyond appreciation, there is awe.  
Beyond sound, there is stillness.  
Beyond stillness, there is the eternal song.  
Beyond law, there is grace.  
Beyond even wisdom, there is love.  
Beyond all else, HE IS.

**What  
Evolutionists Have  
to Say to the  
Royal, Divine  
Image:  
*We're Missing Something***

**Jerry Mander, [Four Arguments for the Elimination of Television](#)**

**Robb Wolf, [The Paleo Solution: The Original Human Diet](#)**

I have been rereading and thinking over parts of the three titles above, and I have come to realize that at least some evolutionists have something to give that those of us who believe there is something special about humanity would profit from. I believe more than the "special flower" assessment of humanity that Wolf ridicules; I believe more specifically that humanity is royalty, created in the image of God, and if for the sake of argument at least, the agricultural revolution and what follows are largely a mistake, I can say more than that Homo sapiens (sapiens) is the only species out of an innumerable multitude

across incomparable time to be **anywhere near** enough of a "special flower" to make such a mistake. I believe more specifically that man is created in the divine image and is of eternal significance, and each of us is in the process of becoming either a being so glorious that if you recognized it you would be tempted to worship it, or a horror such as you would not encounter in your worst nightmare—and that each of us in the divine image is in the process of freely choosing which we shall be. No other life form is conferred such a dignity—and I would focus that statement a little more and say no other animal.

'No other animal:' the phrase is perhaps jarring to some, but I use it deliberately. I do not, in any sense, say mere animal. But I do quite deliberately say animal. Let us turn to Alisdair MacIntyre, [Dependent Rational Animals](#), in the opening of the second chapter:

From its earliest sixteenth century uses in English and other European languages 'animal' and whatever other expressions correspond to it have been employed both to name a class whose members include spiders, bees, chimpanzees, dolphins and humans—among others, but not plants, inanimate beings, angels, and God, and also to name the class consisting of nonhuman animals. It is this latter use that became

Alisdair MacIntyre's title, 'dependent rational animals', is an adaptation of Aristotle's definition of man as 'rational mortal animal'. His thesis, that virtue is central to the natural condition of man, is well worth studying, and provides a counterbalance to seeing the original condition of the human race in terms of the contemporary Western preoccupations with

dominant in modern Western cultures and with it a habit of mind that, by distracting our attention from how much we share with other animal species...

Since then, evolutionary claims that we are in fact animals is not a resurrection of the older usage; it is a new usage that claims we are nothing more than animals, a claim not implied by Aristotle's definition of us as 'rational mortal animals.' There is both a continuity and a distinction implied between rational humans and non-rational animals, and while many animals have intelligence on some plane (artificial intelligence, after failing to duplicate human intelligence, scaled back and tried to duplicate insect intelligence, and failed at that too), there's something special to human intelligence. The singularity we are in now may be a predicament, but no other animal could make such dimensions.

I will be interested in a direction taken by Mander and the neo-Paleo movement, in a line that MacIntyre does not really explore. Perhaps his thesis about why we, as dependent rational animals, need the virtues, is greater than anything I will explore here. But I have my sights on something lower.

I would like to define two terms for two camps, before showing where one of them shortchanges us.

The first is revolutionary punk eek. Darwin's theory of

diet and exercise.

The neo-Paleo ('Paleo') movement's diet and exercise are very powerful, and probably very close to optimal, but virtue is worth consideration. But while portraying [Dependent Rational Animals](#) as well worth a read, I will not engage him to the same degree as the likes of Mander and Wolf.

evolution is no longer seriously believed by much of anyone in the (generally materialist) scientific community. People who say they believe in evolution, and understand the basic science, normally believe in neo-Darwinian theories of evolution. That is, with Darwin, they no longer believe that species gradually morph into new species. They believe that the fossil record shows a punctuated equilibrium, 'punct eek' to the irreverent, which essentially says that evolution has long periods of stable equilibrium, which once in a long while are punctuated by abrupt appearance and disappearance of life forms. (What causes the punctuations is accounted for by the suggestions that life forms evolve very slowly when things are on an even keel, but rapidly mutate substantial beneficial improvements when things turn chaotic. When I protested this, I was told that there were people who evolved HIV/AIDS resistance in a single generation, a premise that I cannot remotely reconcile either with my understanding of probability or of genetics.) As my IMSA biology teacher put it, "Evolution is like baseball. There are long periods of boredom interrupted by intense periods of excitement."

Now I am deliberately making a somewhat ambiguous term, because I intend to include old earth intelligent design movement's authors such as Philip Johnson, who wrote [Darwin on Trial](#). Johnson argues that natural forces alone do not suffice to punctuate the equilibrium and push evolution forward; but his interpretation of the fossil record is largely consistent with that of someone who believes in neo-Darwinian evolutionary punct eek. And so I lump Richard Dawkins and Philip Johnson together in the same cluster, a move that would probably leave them both aghast.

The distinction between them is between evolutionary punct

reek adherents, who believe the universe is billions of years old, and young earth creationists, including perhaps some Jews, most Church Fathers, Evangelical conservatives who created Creation Science as an enterprise of proving a young earth scientifically, and [Fr. Seraphim \(Rose\)](#), who saw to it that Orthodox would not stop with quoting the Fathers but additionally import Creation Science into Orthodoxy.

Now let me give some dates, in deliberately vague terms. The age of the agricultural revolution and of civilization weighs in at several thousand years. The age of the world according to young earth creationists is also several thousand years. According to revolutionary punk eek, the age of the world is several billion years, but that's a little besides the point. The salient point is where you draw the line, a question which I will not try to settle, beyond saying that the oldest boundary I've seen chosen is some millions of years, and the newest boundary I've heard is hundreds of thousands of years. What this means in practice is that on young earth assumptions, agriculture is about as old as the universe, while on revolutionary punk eek assumptions, the beginning of the agricultural revolution occurred at absolute most in the past five percent of the time humans have been around, not leaving enough time for our nature to really change in any way that makes sense for revolutionary punk eek. Or to put it more sharply, young earth creationism implies that agrarian life has been around about as long as the first humans, and revolutionary punk eek implies that the agricultural revolution represents a big-picture eyeblink, a mere blip on the radar for people built to live optimally under normal hunter-gatherer conditions. To the young-earther, there might be prehistory but there can't be very much of it; the normal state of the human being is at earliest agrarian, and there is not much argument

that the ways of agrarian society are normative. To the revolutionary punk eek adherent, there is quite a lot of prehistory that optimized us for hunter-gatherer living, and agrarian society and written history with it are just a blip and away from the baseline.

The other term besides revolutionary punk eek is pseudomorphosis, a term which I adapt from an Orthodox usage to mean, etymologically, conforming to a false shape, a square peg in a round hole. The revolutionary punk implication drawn by some is that we were optimized for hunter-gatherer living, and the artificial state known in civilisation and increasingly accelerating away from these origins is a false existence in something like the Call of C'thulu role playing game played by my friends in high school, where rifts occur in the fabric of reality and "mosters" come through them, starting with the relatively tame vampires and zombies and moving on to stranger monsters such as a color that drives people mad. A motley crew of heroes must seal these rifts, or else there will come one of the "Ancient Ones", a demon god intent on destroying the earth. (It is an occult picture, but not entirely different from the state of our world.)

I don't want to give full context, but I was in a discussion with my second thesis advisor after my studies, and he asked whether I would make 'allowances for greater ignorance in the past.' Now he was a member of a college with one of the world's best libraries for the study of Graeco-Roman context to the New Testament, and he was expert in rabbinic Jewish cultural context to the New Testament. Hello? Has he heard of the Babylonian Talmud? A knowledge of the Talmud is easily on par with a good liberal arts education, and it really puts the reader through its paces. And its point is not just a training ground with

mental gymnastics that stretch the mind, but something far greater. My reply to him was, 'I do not make allowances for greater ignorance in the past. Allowances for different ignorance in the past are more negotiable.' And if it is true that we live in escalating pseudomorphosis, perhaps we should wonder if we should make allowances for greater ignorance in the present. I know much more about scientific botany than any ancient hunter-gatherer ever knew, but I could not live off the land for a month much of anywhere in the wild. Should I really be looking down on hunter-gatherers because unlike them I know something of the anatomical structure of cells and how DNA basically works? If a hunter-gatherer were to answer, an appropriate, if not entirely polite, answer would be, "Here is a knife, a gun, and a soldier's pack with bedroll and such. Live off the land for a month anywhere in the world, and then we'll talk."

To take an aside and try to give something of a concrete feel to what hunter-gatherers know that we do not, what might constitute 'greater ignorance in the present', I would like to give a long quote from Mander (I am tempted to make it longer), and point out that Mander is following a specific purpose and only recording one dimension. He does not treat for instance, interpersonal relations. Not necessarily that this is a problem; it may be expedient for the purpose of a written work to outline what a friend does for work without making much of any serious attempt to cover who that friend is as a person and what people and things serve as connections. Mander describes what contemporary hunter-gatherers have in terms of perception that television viewers lack:

In [Wizard of the Upper Amazon](#) F. Bruce Lamb records the apparently true account of Manuel Cordova de Rios, a

Peruvian rubber cutter, kidnapped by the Amaheuca Indians for invading their territory and forced to remain with them for many years. Rios describes the way the Indians learned things about the jungle, which was both the object of constant study and the teacher. They observed it first as individuals, experiencing each detail. Then they worked out larger patterns together as a group, much like individual cells informing the larger body, which also informs the cells.

In the evenings, the whole tribe would gather and repeat each detail of the day just passed. They would describe every sound, the creature that made it and its apparent state of mind. The conditions of growth of all the plants for miles around were discussed. This band of howler monkeys, which was over here three days ago, is now over there. Certain fruit trees which were in the bud stage three weeks ago are now bearing ripe fruit. A jaguar was seen by the river, and now it is on the hillside. It is in a strangely anguished mood. The grasses in the valley are peculiarly dry. There is a group of birds that have not moved for several days. The wind has altered in direction and smells of something unknown. (Actually, such a fact as a wind change might not be reported at all. Everyone would already know it. A change of wind or scent would arrive in everyone's awareness as a bucket of cold water in the head might arrive in ours.)

Rios tells many of the stories concerned with the "personalities" of individual animals and plants, what kind of "vibrations" they give off. Dreams acted as an additional information systems from beyond the level of conscious notation, drawing up patterns and meanings from deeper levels. Predictions would be based on them.

Drugs were used not so much for changing moods, as we use them today, but for the purpose of further spacing out perception. Plants and animals could then be seen more clearly, as if in slow motion (time lapse), adding to the powers of observation, yielding up especially subtle information to how plants worked, and which creatures would be more likely to relate to which plants. An animal interested in concealment, for example, might eat a plant which tended to conceal itself.

Reading these accounts made it clear to me that all life in the jungle is constantly of all other life in exquisite detail. Through this, the Indians gained information about the way natural systems interact. The observation was itself knowledge. Depending on the interpretation, the knowledge might or might not become reliable and useful.

Each detail of each event had special power and meaning. The understanding was so complete that it was only the rare event that could not be explained—a twig cracked in a way that did not fit the previous history of cracked twigs—that was cause for concern and immediate arming.

Examples could easily be multiplied. There are many passages like that in the book, and many to be written for life. We seem to have a filter where 'knowledge' implicitly means 'knowledge of the sort that we possess', and then by that filter judge other cultures, especially cultures of the past, as knowing less than us.

The anthropological term is ethnocentrism. I believe a little humility is in order for us.

Humans have eyes, skin, a digestive tract, and other features that are basic animal features. When studying wild animals, for instance, we expect them to function best under certain

conditions. Now the locality of an organism can vary considerably: in North America, there are certain relatively generic species of trees that can be found over a broad swath of land, while in Australia, trees tend to be more specialized and occupy a very specific niche. But in some ways human adaptability is overemphasized. The human body can adapt to regularly breathing in concentrated smoke, in one sense: keeping on smoking is so easy it is hard to quit. But that does not mean that human lungs adapt to breathing in concentrated smoke on a regular basis. The ease with which a person or society can adjust to cigarettes exceeds any adaptation revolutionary punk eek would allow for lungs. Perhaps hunter-gatherers have ingested some smoke from fires, and possibly we have enough tolerance that we do not puff up with an allergic reaction at the first smoke. Nonetheless, in no quarter has the human body adapted to be able to smoke without damage to lungs and health.

For most of the human race to embrace the agricultural revolution, and the revolutions that follow, might be like smoking. We can adapt in the sense of making the change and getting used to it. But that does not include, metaphorically speaking, our lungs. We still have hunter-gatherer lungs, as it were, perhaps lungs that work better if we follow neo-Paleo diet and exercise, and we have adopted changes we have not adapted to.

## What punk eek revolutionists have to give us

What is perhaps the most valuable thing revolutionary punk has to offer us is a question: "What conditions are we as revolutionary organisms best adapted to?" And [The Paleo Solution](#) offers a neo-Paleo prescription for diet and also exercise. This may not exactly be like what any tribe of hunter-gatherers ate, but it is lightyears closer than fast food, and is also vastly closer than industrial or even agrarian diets. And the gym-owning author's exercise prescription is vastly more appropriate than a sedentary lifestyle without exercise, and is probably much better than cardiovascular exercise alone. And Mander's [Four Arguments for the Elimination of Television](#) argues, among other things, that humans do substantially better with natural organic sunlight than any of the artificial concocted lights we think are safer. They don't suggest social structure; the question of whether they held what would today be considered traditional gender roles is not raised, which may itself be an answer. (For the text Mander cites, the answer is 'Yes', although Mander, possibly due to other reasons such as brevity and focus, does not make this point at all clear.) And they don't complete the picture, and they don't even get to MacIntyre's point that our condition as dependent and

ultimately vulnerable rational animals means that we need the virtues, but they do very well with some of the lower notes.

The argument advanced by vegetarians that we don't have a carnivore digestive tract is something of a breath of fresh air. It argues that meat calls for a carnivore's short digestive tract and vegetables call for an herbivore's long digestive tract, and our digestive tract is a long one. Now there is to my mind, a curious omission; for both hunter-gatherer and modern times, most people have eaten an omnivore's diet, and this fallacy of the excluded middle never brings up how long or short an omnivore's digestive tract is: apparently, we must either biologically be carnivores or herbivores, even though the people vegetarians are arguing with never seem to believe we should be straight carnivores who eat meat and only meat; even people who call themselves 'carnivores' in fact tend to eat a lot of food that is not meat, even if meat might be their favorite. But the question, if arguably duplicitous, is a helpful kind of question to ask. It asks, "What are we adapted to?" and the answer is, "Living like hunter-gatherers." That's true for the 2,000,000 or however many years the genus *Homo* has been around, and it's still true for the 200,000 years *Homo sapiens sapiens* has been around. Or if you want to subtract the 10,000 years since the agricultural revolution began and we began to experiment with smoking, 190,000 years before we created the singularity that opens rifts in the fabric of reality and lets monsters in, including (as is argued in [Four Arguments for the Elimination of Television](#), in the chapter on 'Artificial Light'), the 'color that makes people mad' from the phosphor glow of a television screen in a darkened room.

Some arguments vaguely like this have looked at written history, instead of archaeology. Sally Fallon, in the Weston A.

Price spirit, wrote the half-argument, half-cookbook volume of [Nourishing Traditions](#), which argues that we with our industrial diet would do well to heed the dietary solutions found in agrarian society, and prescribes a diet that is **MUCH** better than the industrial diet. But she essentially only looks at recorded history, which is millenia newer than agricultural beginnings. But the pseudomorphosis was already well underway by the times recorded in [Nourishing Traditions](#), and not just diet. Everything had begun a profound shift, even if with later revolutions like electricity and computing the earlier agrarian patterns looked like the original pattern of human life. And indeed if you are a young earther, the first chapters of *Genesis* have agriculture in the picture with some of the first human beings. And so Bible-focused young earth approaches will not arrive at the correct answer to, "What conditions is man as an animal [still] best adapted to?" In all probability they will not arrive at the question.

Revolutionary punk eek will. It asks the question, perhaps with a Western focus, and its answers are worth considering. Not on the level of virtue and asceticism, perhaps, but the 'lower' questions are more pressing now. The default diet and the default level of exercise are part of a profoundly greater pseudomorphosis than when the agricultural revolution took root. And getting a more optimal diet and exercise now may be a more pressing concern, and a diet of more sunlight and better light, if you will, and other things. There is a certain sense in which sobriety is not an option for us; we have a gristly choice between being 5, 10, or 20 drinks drunk, and people who take into account this gift from revolutionary punk eek will be less drunk, not sober. But it is worth being less drunk.

So a word of thanks especially to secular adherents of

revolutionary punk eek who do not see us who have perhaps made the mistake of civilization as any particular kind of "special flower," and ask, "What is Homo sapiens sapiens biologically adapted to as an animal and an organism?" They might not hit some of the high notes, but I am very grateful for the neo-Paleo diet. And I am grateful to Mander's [Four Arguments for the Elimination of Television](#) for exposing me to the unnatural character of artificial light and the benefits of real, organic sunlight. I've been spending more time outside, and I can feel a difference: I feel better. Thanks to revolutionary punk eek!

**What  
Evolutionists Have  
to Say to the  
Royal, Divine  
Image:  
*We're Missing Something***

**Jerry Mander, [Four Arguments for the Elimination of Television](#)**

**Robb Wolf, [The Paleo Solution: The Original Human Diet](#)**

I have been rereading and thinking over parts of the three titles above, and I have come to realize that at least some evolutionists have something to give that those of us who believe there is something special about humanity would profit from. I believe more than the "special flower" assessment of humanity that Wolf ridicules; I believe more specifically that humanity is royalty, created in the image of God, and if for the sake of argument at least, the agricultural revolution and what follows are largely a mistake, I can say more than that Homo sapiens (sapiens) is the only species out of an innumerable multitude

across incomparable time to be **anywhere near** enough of a "special flower" to make such a mistake. I believe more specifically that man is created in the divine image and is of eternal significance, and each of us is in the process of becoming either a being so glorious that if you recognized it you would be tempted to worship it, or a horror such as you would not encounter in your worst nightmare—and that each of us in the divine image is in the process of freely choosing which we shall be. No other life form is conferred such a dignity—and I would focus that statement a little more and say no other animal.

'No other animal:' the phrase is perhaps jarring to some, but I use it deliberately. I do not, in any sense, say mere animal. But I do quite deliberately say animal. Let us turn to Alisdair MacIntyre, [Dependent Rational Animals](#), in the opening of the second chapter:

From its earliest sixteenth century uses in English and other European languages 'animal' and whatever other expressions correspond to it have been employed both to name a class whose members include spiders, bees, chimpanzees, dolphins and humans—among others, but not plants, inanimate beings, angels, and God, and also to name the class consisting of nonhuman animals. It is this latter use that became

Alisdair MacIntyre's title, 'dependent rational animals', is an adaptation of Aristotle's definition of man as 'rational mortal animal'. His thesis, that virtue is central to the natural condition of man, is well worth studying, and provides a counterbalance to seeing the original condition of the human race in terms of the contemporary Western preoccupations with

dominant in modern Western cultures and with it a habit of mind that, by distracting our attention from how much we share with other animal species...

Since then, evolutionary claims that we are in fact animals is not a resurrection of the older usage; it is a new usage that claims we are nothing more than animals, a claim not implied by Aristotle's definition of us as 'rational mortal animals.' There is both a continuity and a distinction implied between rational humans and non-rational animals, and while many animals have intelligence on some plane (artificial intelligence, after failing to duplicate human intelligence, scaled back and tried to duplicate insect intelligence, and failed at that too), there's something special to human intelligence. The singularity we are in now may be a predicament, but no other animal could make such dimensions.

I will be interested in a direction taken by Mander and the neo-Paleo movement, in a line that MacIntyre does not really explore. Perhaps his thesis about why we, as dependent rational animals, need the virtues, is greater than anything I will explore here. But I have my sights on something lower.

I would like to define two terms for two camps, before showing where one of them shortchanges us.

The first is revolutionary punk eek. Darwin's theory of

diet and exercise.

The neo-Paleo ('Paleo') movement's diet and exercise are very powerful, and probably very close to optimal, but virtue is worth consideration. But while portraying [Dependent Rational Animals](#) as well worth a read, I will not engage him to the same degree as the likes of Mander and Wolf.

evolution is no longer seriously believed by much of anyone in the (generally materialist) scientific community. People who say they believe in evolution, and understand the basic science, normally believe in neo-Darwinian theories of evolution. That is, with Darwin, they no longer believe that species gradually morph into new species. They believe that the fossil record shows a punctuated equilibrium, 'punct eek' to the irreverent, which essentially says that evolution has long periods of stable equilibrium, which once in a long while are punctuated by abrupt appearance and disappearance of life forms. (What causes the punctuations is accounted for by the suggestions that life forms evolve very slowly when things are on an even keel, but rapidly mutate substantial beneficial improvements when things turn chaotic. When I protested this, I was told that there were people who evolved HIV/AIDS resistance in a single generation, a premise that I cannot remotely reconcile either with my understanding of probability or of genetics.) As my IMSA biology teacher put it, "Evolution is like baseball. There are long periods of boredom interrupted by intense periods of excitement."

Now I am deliberately making a somewhat ambiguous term, because I intend to include old earth intelligent design movement's authors such as Philip Johnson, who wrote [Darwin on Trial](#). Johnson argues that natural forces alone do not suffice to punctuate the equilibrium and push evolution forward; but his interpretation of the fossil record is largely consistent with that of someone who believes in neo-Darwinian evolutionary punct eek. And so I lump Richard Dawkins and Philip Johnson together in the same cluster, a move that would probably leave them both aghast.

The distinction between them is between evolutionary punct

reek adherents, who believe the universe is billions of years old, and young earth creationists, including perhaps some Jews, most Church Fathers, Evangelical conservatives who created Creation Science as an enterprise of proving a young earth scientifically, and [Fr. Seraphim \(Rose\)](#), who saw to it that Orthodox would not stop with quoting the Fathers but additionally import Creation Science into Orthodoxy.

Now let me give some dates, in deliberately vague terms. The age of the agricultural revolution and of civilization weighs in at several thousand years. The age of the world according to young earth creationists is also several thousand years. According to revolutionary punk eek, the age of the world is several billion years, but that's a little besides the point. The salient point is where you draw the line, a question which I will not try to settle, beyond saying that the oldest boundary I've seen chosen is some millions of years, and the newest boundary I've heard is hundreds of thousands of years. What this means in practice is that on young earth assumptions, agriculture is about as old as the universe, while on revolutionary punk eek assumptions, the beginning of the agricultural revolution occurred at absolute most in the past five percent of the time humans have been around, not leaving enough time for our nature to really change in any way that makes sense for revolutionary punk eek. Or to put it more sharply, young earth creationism implies that agrarian life has been around about as long as the first humans, and revolutionary punk eek implies that the agricultural revolution represents a big-picture eyeblink, a mere blip on the radar for people built to live optimally under normal hunter-gatherer conditions. To the young-earther, there might be prehistory but there can't be very much of it; the normal state of the human being is at earliest agrarian, and there is not much argument

that the ways of agrarian society are normative. To the revolutionary punk eek adherent, there is quite a lot of prehistory that optimized us for hunter-gatherer living, and agrarian society and written history with it are just a blip and away from the baseline.

The other term besides revolutionary punk eek is pseudomorphosis, a term which I adapt from an Orthodox usage to mean, etymologically, conforming to a false shape, a square peg in a round hole. The revolutionary punk implication drawn by some is that we were optimized for hunter-gatherer living, and the artificial state known in civilisation and increasingly accelerating away from these origins is a false existence in something like the Call of C'thulu role playing game played by my friends in high school, where rifts occur in the fabric of reality and "mosters" come through them, starting with the relatively tame vampires and zombies and moving on to stranger monsters such as a color that drives people mad. A motley crew of heroes must seal these rifts, or else there will come one of the "Ancient Ones", a demon god intent on destroying the earth. (It is an occult picture, but not entirely different from the state of our world.)

I don't want to give full context, but I was in a discussion with my second thesis advisor after my studies, and he asked whether I would make 'allowances for greater ignorance in the past.' Now he was a member of a college with one of the world's best libraries for the study of Graeco-Roman context to the New Testament, and he was expert in rabbinic Jewish cultural context to the New Testament. Hello? Has he heard of the Babylonian Talmud? A knowledge of the Talmud is easily on par with a good liberal arts education, and it really puts the reader through its paces. And its point is not just a training ground with

mental gymnastics that stretch the mind, but something far greater. My reply to him was, 'I do not make allowances for greater ignorance in the past. Allowances for different ignorance in the past are more negotiable.' And if it is true that we live in escalating pseudomorphosis, perhaps we should wonder if we should make allowances for greater ignorance in the present. I know much more about scientific botany than any ancient hunter-gatherer ever knew, but I could not live off the land for a month much of anywhere in the wild. Should I really be looking down on hunter-gatherers because unlike them I know something of the anatomical structure of cells and how DNA basically works? If a hunter-gatherer were to answer, an appropriate, if not entirely polite, answer would be, "Here is a knife, a gun, and a soldier's pack with bedroll and such. Live off the land for a month anywhere in the world, and then we'll talk."

To take an aside and try to give something of a concrete feel to what hunter-gatherers know that we do not, what might constitute 'greater ignorance in the present', I would like to give a long quote from Mander (I am tempted to make it longer), and point out that Mander is following a specific purpose and only recording one dimension. He does not treat for instance, interpersonal relations. Not necessarily that this is a problem; it may be expedient for the purpose of a written work to outline what a friend does for work without making much of any serious attempt to cover who that friend is as a person and what people and things serve as connections. Mander describes what contemporary hunter-gatherers have in terms of perception that television viewers lack:

In [Wizard of the Upper Amazon](#) F. Bruce Lamb records the apparently true account of Manuel Cordova de Rios, a

Peruvian rubber cutter, kidnapped by the Amaheuca Indians for invading their territory and forced to remain with them for many years. Rios describes the way the Indians learned things about the jungle, which was both the object of constant study and the teacher. They observed it first as individuals, experiencing each detail. Then they worked out larger patterns together as a group, much like individual cells informing the larger body, which also informs the cells.

In the evenings, the whole tribe would gather and repeat each detail of the day just passed. They would describe every sound, the creature that made it and its apparent state of mind. The conditions of growth of all the plants for miles around were discussed. This band of howler monkeys, which was over here three days ago, is now over there. Certain fruit trees which were in the bud stage three weeks ago are now bearing ripe fruit. A jaguar was seen by the river, and now it is on the hillside. It is in a strangely anguished mood. The grasses in the valley are peculiarly dry. There is a group of birds that have not moved for several days. The wind has altered in direction and smells of something unknown. (Actually, such a fact as a wind change might not be reported at all. Everyone would already know it. A change of wind or scent would arrive in everyone's awareness as a bucket of cold water in the head might arrive in ours.)

Rios tells many of the stories concerned with the "personalities" of individual animals and plants, what kind of "vibrations" they give off. Dreams acted as an additional information systems from beyond the level of conscious notation, drawing up patterns and meanings from deeper levels. Predictions would be based on them.

Drugs were used not so much for changing moods, as we use them today, but for the purpose of further spacing out perception. Plants and animals could then be seen more clearly, as if in slow motion (time lapse), adding to the powers of observation, yielding up especially subtle information to how plants worked, and which creatures would be more likely to relate to which plants. An animal interested in concealment, for example, might eat a plant which tended to conceal itself.

Reading these accounts made it clear to me that all life in the jungle is constantly of all other life in exquisite detail. Through this, the Indians gained information about the way natural systems interact. The observation was itself knowledge. Depending on the interpretation, the knowledge might or might not become reliable and useful.

Each detail of each event had special power and meaning. The understanding was so complete that it was only the rare event that could not be explained—a twig cracked in a way that did not fit the previous history of cracked twigs—that was cause for concern and immediate arming.

Examples could easily be multiplied. There are many passages like that in the book, and many to be written for life. We seem to have a filter where 'knowledge' implicitly means 'knowledge of the sort that we possess', and then by that filter judge other cultures, especially cultures of the past, as knowing less than us.

The anthropological term is ethnocentrism. I believe a little humility is in order for us.

Humans have eyes, skin, a digestive tract, and other features that are basic animal features. When studying wild animals, for instance, we expect them to function best under certain

conditions. Now the locality of an organism can vary considerably: in North America, there are certain relatively generic species of trees that can be found over a broad swath of land, while in Australia, trees tend to be more specialized and occupy a very specific niche. But in some ways human adaptability is overemphasized. The human body can adapt to regularly breathing in concentrated smoke, in one sense: keeping on smoking is so easy it is hard to quit. But that does not mean that human lungs adapt to breathing in concentrated smoke on a regular basis. The ease with which a person or society can adjust to cigarettes exceeds any adaptation revolutionary punk eek would allow for lungs. Perhaps hunter-gatherers have ingested some smoke from fires, and possibly we have enough tolerance that we do not puff up with an allergic reaction at the first smoke. Nonetheless, in no quarter has the human body adapted to be able to smoke without damage to lungs and health.

For most of the human race to embrace the agricultural revolution, and the revolutions that follow, might be like smoking. We can adapt in the sense of making the change and getting used to it. But that does not include, metaphorically speaking, our lungs. We still have hunter-gatherer lungs, as it were, perhaps lungs that work better if we follow neo-Paleo diet and exercise, and we have adopted changes we have not adapted to.

## What punk eek revolutionists have to give us

What is perhaps the most valuable thing revolutionary punk has to offer us is a question: "What conditions are we as revolutionary organisms best adapted to?" And [The Paleo Solution](#) offers a neo-Paleo prescription for diet and also exercise. This may not exactly be like what any tribe of hunter-gatherers ate, but it is lightyears closer than fast food, and is also vastly closer than industrial or even agrarian diets. And the gym-owning author's exercise prescription is vastly more appropriate than a sedentary lifestyle without exercise, and is probably much better than cardiovascular exercise alone. And Mander's [Four Arguments for the Elimination of Television](#) argues, among other things, that humans do substantially better with natural organic sunlight than any of the artificial concocted lights we think are safer. They don't suggest social structure; the question of whether they held what would today be considered traditional gender roles is not raised, which may itself be an answer. (For the text Mander cites, the answer is 'Yes', although Mander, possibly due to other reasons such as brevity and focus, does not make this point at all clear.) And they don't complete the picture, and they don't even get to MacIntyre's point that our condition as dependent and

ultimately vulnerable rational animals means that we need the virtues, but they do very well with some of the lower notes.

The argument advanced by vegetarians that we don't have a carnivore digestive tract is something of a breath of fresh air. It argues that meat calls for a carnivore's short digestive tract and vegetables call for an herbivore's long digestive tract, and our digestive tract is a long one. Now there is to my mind, a curious omission; for both hunter-gatherer and modern times, most people have eaten an omnivore's diet, and this fallacy of the excluded middle never brings up how long or short an omnivore's digestive tract is: apparently, we must either biologically be carnivores or herbivores, even though the people vegetarians are arguing with never seem to believe we should be straight carnivores who eat meat and only meat; even people who call themselves 'carnivores' in fact tend to eat a lot of food that is not meat, even if meat might be their favorite. But the question, if arguably duplicitous, is a helpful kind of question to ask. It asks, "What are we adapted to?" and the answer is, "Living like hunter-gatherers." That's true for the 2,000,000 or however many years the genus *Homo* has been around, and it's still true for the 200,000 years *Homo sapiens sapiens* has been around. Or if you want to subtract the 10,000 years since the agricultural revolution began and we began to experiment with smoking, 190,000 years before we created the singularity that opens rifts in the fabric of reality and lets monsters in, including (as is argued in [Four Arguments for the Elimination of Television](#), in the chapter on 'Artificial Light'), the 'color that makes people mad' from the phosphor glow of a television screen in a darkened room.

Some arguments vaguely like this have looked at written history, instead of archaeology. Sally Fallon, in the Weston A.

Price spirit, wrote the half-argument, half-cookbook volume of [Nourishing Traditions](#), which argues that we with our industrial diet would do well to heed the dietary solutions found in agrarian society, and prescribes a diet that is **MUCH** better than the industrial diet. But she essentially only looks at recorded history, which is millenia newer than agricultural beginnings. But the pseudomorphosis was already well underway by the times recorded in [Nourishing Traditions](#), and not just diet. Everything had begun a profound shift, even if with later revolutions like electricity and computing the earlier agrarian patterns looked like the original pattern of human life. And indeed if you are a young earther, the first chapters of *Genesis* have agriculture in the picture with some of the first human beings. And so Bible-focused young earth approaches will not arrive at the correct answer to, "What conditions is man as an animal [still] best adapted to?" In all probability they will not arrive at the question.

Revolutionary punk eek will. It asks the question, perhaps with a Western focus, and its answers are worth considering. Not on the level of virtue and asceticism, perhaps, but the 'lower' questions are more pressing now. The default diet and the default level of exercise are part of a profoundly greater pseudomorphosis than when the agricultural revolution took root. And getting a more optimal diet and exercise now may be a more pressing concern, and a diet of more sunlight and better light, if you will, and other things. There is a certain sense in which sobriety is not an option for us; we have a gristly choice between being 5, 10, or 20 drinks drunk, and people who take into account this gift from revolutionary punk eek will be less drunk, not sober. But it is worth being less drunk.

So a word of thanks especially to secular adherents of

revolutionary punk eek who do not see us who have perhaps made the mistake of civilization as any particular kind of "special flower," and ask, "What is Homo sapiens sapiens biologically adapted to as an animal and an organism?" They might not hit some of the high notes, but I am very grateful for the neo-Paleo diet. And I am grateful to Mander's [Four Arguments for the Elimination of Television](#) for exposing me to the unnatural character of artificial light and the benefits of real, organic sunlight. I've been spending more time outside, and I can feel a difference: I feel better. Thanks to revolutionary punk eek!

# What Makes Me Uneasy About Fr. Seraphim (Rose) and His Followers

Uncomfortable and uneasy  
—the root cause?

There are things that make me uneasy about many of Fr. Seraphim (Rose)'s followers. I say many and not all because I have friends, and know a lovely parish, that is Orthodox today through Fr. Seraphim. One friend, who was going through seminary, talked about how annoyed he was, and appropriately enough, that Fr. Seraphim was always referred to as "that guy who taught the tollhouses." (Tollhouses are the subject of a controversial teaching

***Two out of many quotes from a discussion where I got jackhammered for questioning whether Fr. Seraphim is a full-fledged saint:***

"Quite contrary, the only people who oppose [Fr.

about demonic gateways one must pass to enter Heaven.) Some have suggested that he may not become a canonized saint because of his teachings there, but that is not the end of the world and apparently tollhouses were a fairly common feature of nineteenth century Russian piety. I personally do not believe in tollhouses, although it would not surprise me that much if I die and find myself suddenly and clearly convinced of their existence: I am mentioning my beliefs, as a member of the Russian Orthodox Church Outside of Russia, and it is not my point to convince others that they must not believe in tollhouses.

It is with sympathy that I remember my friend talk about how his fellow seminarians took a jackhammer to him for his admiration of "that guy who taught the tollhouses." He has a good heart. Furthermore, his parish, which came into Holy Orthodoxy

because of Fr. Seraphim, is much more than alive. When I visited there, God visited me more powerfully than any parish I have only visited, and I would be delighted to see their leadership any time. Practically nothing in that parish's indebtedness to Fr. Seraphim bothers me. Nor would I raise objections to the Russian Orthodox Church Outside of Russia's newsletter affectionately calling Fr. Seraphim "our editor." Nor am I

Seraphim's] teachings, are those who oppose some or all of the universal teachings of the Church, held by Saints throughout the ages. Whether a modern theologian with a 'PhD,' a 'scholar', a schismatic clergymen, a deceived layperson, or Ecumenist or rationalist - these are the only types of people you will find having a problem with Blessed Seraphim and his teachings."  
"If he's not a saint, who is?"

bothered that a title of his has been floating around the nave at my present parish.

But with all that said, there is something that disturbs me about most devotees of Fr. Seraphim, or at very least most of his vocal devotees. The best way I can put it has to do with subjectivism, which says in essence, "I will accept what I will accept, and I will reject what I will reject, and I will project what I will project." There is something that demands that Fr. Seraphim be canonized as a saint regardless of whether he really should be, almost like "My country, right or wrong!" This isn't the only thing that smells disturbing, but it is one. And these followers who insist that Fr. Seraphim be canonized as a saint seem to quickly gloss over how he broke away from canonical status in the Orthodox Church to dodge Church discipline. Now I do not wish to exceed my authority and speak *ex cathedra* to decisively say which sins should be a bar from sainthood; it is God's job to make saints out of sinners, and any sin that Fr. Seraphim has committed, there are canonized saints who did something ten times worse. However, this is an example of something that needs to be brought to light if we are to know if Fr. Seraphim should be considered a saint, and in every conversation I've seen, the (vocal) devotees of Fr. Seraphim push to sweep such things under the rug and get on with his canonization.

To pull something from putting subjectivism in a word: "I will accept what I will accept, and I will reject what I will reject, and I will project what I will project" usurps what God,  $\Omega$ N, supremely declares: "**I AM WHO I AM.**" Subjectivism overreaches and falls short in the same gesture; if you grasp it by the heart, it is the passion of pride, but if you grasp it by the head, it is called subjectivism, but either way it has the same

stench. And it concerns me gravely that whenever I meet these other kinds of followers, Fr. Seraphim's most vocal advocates, it smells the same, and it ain't no rose.

## Protestant Fundamentalist Orthodoxy

A second concern is that, in many of Fr. Seraphim's followers, there is something Protestant to be found in the Church. Two concerns to be mentioned are "Creation Science"-style creationism, and the fundamentally Western project of worldview construction.

On the issue of "Creation Science"-style creationism, I would like to make a couple of comments. First, the Fathers usually believed that the days in *Genesis* 1 were literal days and not something more elastic. I believe I've read at least one exception, but St. Basil, for instance, insists both that one day was one day, and that we should believe that matter is composed of earth, air, fire, water, and ether. The choice of a young earth and not any other point of the Fathers is not the fruit of the Fathers at all; it is something Protestant brought into the Orthodox Church, and at every point I've seen it, Orthodox who defend a young earth also use Protestant Creation Science, which is entirely without precedent in the Fathers. One priest said, "It was easier to get the children of Israel out of Egypt than it is to get Egypt out of the children of Israel." There have been many Orthodox who believe entirely legitimately in a young earth, but every single time I have met young earth arguments from a follower of Fr. Seraphim, they have drawn on recycled

Protestant arguments and fundamentalist Protestant Creation Science. And they have left me wishing that now that God has taken them out of Egypt they would let God take Protestant Egypt out of them.

I observed something quite similar to this in a discussion where I asked a partisan of Fr. Seraphim for an example of his good teaching. The answer I was given was a call for Orthodox to work on constructing a worldview, and this was presented to me as the work of a saint at the height of his powers. But there's a problem.

The project of worldview construction, and making standalone adjustments to the ideas in one's worldview, is of Western origin. There is no precedent for it in the Fathers, nor in medieval Western scholastic theologians like Thomas Aquinas, nor for that matter in the Reformers. The widespread idea that Christians should "think worldviewishly", and widespread understanding of Christianity as a worldview, is of more recent vintage than the Roman proclamations about the Immaculate Conception and the Infallibility of the Pope, and the Protestant cottage industry of worldview construction is less Orthodox than creating a systematic theology. If there is an Orthodox worldview, it does not come from tinkering with ideas in your head to construct a worldview; it arises from walking the Orthodox Way for a lifetime. Protestants who come into Orthodoxy initially want to learn a lot, but after time spend less time with books because Orthodoxy has taken deeper root in their hearts and reading about the truth begins to give way to living it out. Devotional reading might never stop being a spiritual discipline, but it is no longer placed in the driver's seat, nor should it be.

## **This tree: What to make of its fruit?**

This is strong language, but in the [Sermon on the Mount](#),  
Christ says:

Beware of false prophets, who come to you in sheep's clothing but inwardly are ravenous wolves. You will know them by their fruits. Are grapes gathered from thorns, or figs from thistles? So, every sound tree bears good fruit, but the bad tree bears evil fruit. A sound tree cannot bear evil fruit, nor can a bad tree bear good fruit. Every tree that does not bear good fruit is cut down and thrown into the fire. Thus you will know them by their fruits.

Not every one who says to me, "Lord, Lord," shall enter the kingdom of heaven, but he who does the will of my Father who is in heaven. On that day many will say to me, "Lord, Lord, did we not prophesy in your name, and cast out demons in your name, and do many mighty works in your name?" And then will I declare to them, "I never knew you; depart from me, you evildoers."

Fr. Seraphim has borne fruit in his lifetime and after his death. In his lifetime, there was the one fruit I mentioned, a close tie to someone who broke communion with the Orthodox Church shortly after his death. After his death he has brought

Protestants into the Orthodox Church. But in the living form of his disciples, those who have been taken out of Egypt seem not to have Egypt taken out of them; they have asked me to pay homage to Protestant calves they've brought with them.

Let me try to both introduce something new, and tie threads together here. Subjectivism can at its heart be described as breaking communion with reality. This is like breaking communion with the Orthodox Church, but in a way it is more deeply warped. It is breaking communion not only with God, but with the very cars, rocks and trees. I know this passion and it is the passion that has let me live in first world luxury and wish I lived in a castle. It tries to escape the gift God has given. And that passion in another form can say, "If God offers me Heaven, and Heaven requires me to open up and stop grasping Fr. Seraphim right or wrong, I will escape to a Hell that makes no such demand for me to open up to God or His reality." And it is a red flag of this passion that breaks communion with reality, that the people most devoted to Fr. Seraphim hold on to pieces of fundamentalism with a tightly closed fist. And these Protestant insistences are a red flag, like a plume of smoke: if one sees a plume of smoke coming from a house, a neighbor's uncomfortable concern is not that a plume of smoke is intolerable, but that where there's smoke, there's fire and something destructive may be going on in that house. And when I see subjectivism sweep things under the rug to insist on Fr. Seraphim's canonization, and fail to open a fist closed on Protestant approaches to Holy Orthodoxy, I am concerned not only that Fr. Seraphim's colleague may have broken communion with the Orthodox Church to avoid Church discipline, but that Fr. Seraphim's devotees keep on breaking communion with reality when there is no question of discipline. The plume of smoke is not

---

intolerable in itself, but it may betray fire.

I may be making myself unpopular here, but I'm bothered by Fr. Seraphim's fruit. I know that there have been debates down the centuries between pious followers of different saints—but I have never seen this kind of phenomenon with another well-known figure in today's Orthodoxy.

So far as I have tasted it, Fr. Seraphim's fruit tastes bad.

# What the Present Debate Won't Tell You About Headship

Today I'm going to talk about head and body (headship). And I say "headship" with hesitation, because in today's world asserting "headship" means, "defending traditional gender roles against feminism." And that maybe important, but I want to talk about something larger, something that will be missed if "headship" means nothing more than "one position in the feminist controversy."

One speaker didn't like people entering Church and saying, "It's so good to enter the Lord's presence." He said, "Where were you all week? How did you escape the Lord's presence?" And whatever Church is, it is absolutely not entering the one place where God is present. At least, it's not stepping out of some imaginary place where God simply can't be found.

But if we are always in the Lord's presence, that doesn't mean that Church isn't special. It is special, and it is the head of living in God's presence for all of our lives. Our time in Church is an example of headship. Worshipping God in Church is the head of a life of worship. and it is the head of a body.

There is something special about our time in Church. But the way we live our lives, our "body" of time spent, manifests that glory in a different way. Christ didn't say that people will know we are his disciples by our "official" worship, however much God's blessing may rest on it. Christ said instead that all people will know we are his disciples by this, that we love one another. That isn't primarily in Church. That's in our day to day lives. If our time in Church crystallizes a life of worship, our love for one another is to manifest it. And that is the place of the body.

The relationship between head and body is the relationship between corporate worship and our lives as a whole. The body manifests the glory of the head. In my head I can decide to walk to a friend's house. But the head needs the body and the body needs the head, and I can only go to a friend's house if my head's decision to visit a friend's house is lived out in my body.

"The head cannot say to the feet, 'I have no need of you.'"

The Father is the head of the Son. "No man can see God and live." God the Father is utterly beyond us; he transcends anything we could know; he is pure glory. If we were to have direct contact with him, we would be destroyed. And yet the Son is equal to the Father; the Son is just as far beyond this Creation, but there is a difference. The Son is the bridge between God and man, and God and his Creation. God the Father created the world through the Son, and the Son is just as glorious as the Father, but the Son can touch us without destroying us. The Father displays himself through the Son. The Father's love came to earth through the Son. The Father's wish that we may be made divine is possible precisely because the Son became man. And finally we can know the Father through the Son. If you have seen the Son, you have seen the Father.

We read in the New Testament that Christ is the head of

man, that Christ is the head of all authority, that Christ is the head of the Church, and that Christ is the head of the whole Creation. If we think, with people today, that to have any authority over us, any head, is degrading, then we have to resent a lot more than a husband's headship to his wife. But that's not the only option. When Christ is the head of the cosmos, there is more than authority going on, even if we have a negative view of authority. Our Orthodox understanding that the Son of God became a man that men might become the sons of God, that the divine became human that the human might become divine, expresses what the headship of Christ means. Christ is the head, and that means that the Church is drawn up in his divinity. If we are the body of Christ the head, that doesn't mean we're just under his authority. It means that we are a part of him and share in his divinity. The teaching that we share in his divinity is very tightly connected to the teaching of "recapitulation", or "re-heading," where Christ being the head of the Church, and our sharing in Christ's divinity, are two sides of the same coin. Christ is the head, and we, the body, make Christ manifest to the world. Some people may not know Christ except what they see in us. We cannot have Christ as our head without being a manifestation of his glory, and if Christ is the head of the Creation and Christ is the head of the Church, that means that when we worship, inside this building and in our daily lives, we are leading the whole visible Creation in turning to God in glory, and living the life of Heaven here on earth.

Christ is the head of the whole Creation, not just the Church. Christ isn't just concerned with his people, but the whole created world. By him and through him all things were created. Icons, which reflect the full implications Christ's headship over his Creation, exist precisely because Christ is the head of the

whole Creation. We use a censer, a building, icons, water, flowers, and other aspects of our matter-embracing religion as representatives of the whole material Creation over which Christ is head. Christ doesn't tell us to be spiritual as spirits who are unfortunately trapped in matter; far from it, we are the crowning jewel of the material Creation, and Christ's headship glorifies the whole Creation and makes it foundational to how we are saved. The universe is a symbol that manifests the glory of its head, Christ.

One example of headship that is immediate to me, although I don't know how immediate it is to the rest of you, is artistic creation. I create, write, and program, and in a very real sense I am at my fullest when I create. When I create, at first there is a hazy idea that I don't understand very well. Then I listen to it, and begin struggling with it, trying to understand my creation, and even if I am wrestling with it, I am wrestling less to dominate it than to get myself out of its way so I can help bring it into being. If in one sense I wrestle with it, in another sense I am wrestling with myself to let my creation be what it should be.

If I were to simply dominate my creation, I would crush it, breaking its spirit. My best creations are those which I serve, where I use my headship to give my creations freedom and cooperate with them so that they are greater than if I did not give my creations room to breathe. My best work comes, not when I decide, "I am going to create," but when I cooperate with a creation, love it, serve it, and help it to become real, the creation becomes a share of my spirit.

A great many writers could say that, and I don't think this is something that is only found in writing, but how something far more general plays out. All of us are called to exercise headship

over our work. In a family, the father is the head of the household and the mother is the heart of the household. The mother's headship over work in the home provides ten thousand touches that make a house a home. A mother's headship over the home is as much human headship over one's work as my headship over my creations and writing. What I do when I create is love my creation, serve it, develop it, work with God and with my creation to help it be real. If I'm not mistaken, when a woman makes a house into a real home, she loves it, serves it, develops it, and works with God and what she has to make it real. When a woman makes a house into a warm and inviting home, that's headship.

What is the relationship between women and the home? In societies where people have best been able to honor what the Bible says about men's and women's roles, there is a strong association between women and the home. The home, in those societies, was the main focus of business, charity work, and education, besides the much narrower role played by a home today. To say that women were mainly in the home is to say that they held an important place in one of society's important institutions, an institution that was the chief home of business, education, hospitality, and what would today be insurance, and held many responsibilities that are denied to housewives today. The isolation felt by many housewives today was much less an issue because women worked together with other women; like men, they worked in adult company. I believe there should be an association between women and the home, and I believe the home should be respected and influential. And, for that matter, I believe that both men and women are sold short with the options they have today. But instead of going too deep into that sort of question, important as it may be, I would like to look at what

headship means.

The sanctuary is the head of the nave. Part of what that means is that there is something richer than either if there were just an sanctuary or just a nave. But we'll miss something fundamental if we only say that the sanctuary is more glorious to the nave. They are connected and part of the same body. They are part of the same organism, and the sanctuary manifests the glory of the sanctuary. There is also a head-body relation between the saint and the icon. Or between the reality a symbol represents, and a symbol. Or between Heaven and earth. Bringing Heaven down to earth is a right ordering of this world. Heaven isn't just something that happens after death after we serve God by suffering in this world. "Eye has not seen, ear has not heard, nor has any heart imagined what God has prepared for those who love him," but God wants to work Heaven in our lives, beginning here and now. If we are bringing Heaven down to earth, we are realizing God's design that Heaven be the head of earth, in the fullness of what headship means.

What about husbands and wives? There's something that we'll miss today if we just expect wives to submit to their husbands, even if we recognized that that's tied to an even more difficult assignment for husbands, loving their wives on the model of Christ giving up his own life for the Church. And we need to be countercultural, but there's something we'll miss if we just react to the currents in society that make this unattractive. Quite a few heresies got their start in reactions against older heresies; it is spiritually dangerous to simply react against errors, and if feminism might have problems, simply reacting to feminism is likely to have problems. Wives should submit to their husbands, and husbands should love their wives with a costly love, but there's more.

It bothers me when conservatives say, "I want to turn the clock back... all the way back... to 1954!" If we're just reacting against some feminists when they say women should be strong and independent, and have no further reference point, we're likely to defend a femininity that says that women are weak and passive. What's wrong with that? For starters, it's not Biblical.

If you want to know God's version of femininity, read the conclusion of Proverbs. The opening of this conclusion is often translated, "Who can find a good wife?" That's too weak. It is better translated as, "Who can find a wife of **valor**," with "valor" being a word that could be used of a mighty soldier. She is strong—physically strong. The text explicitly mentions her powerful arms. She is active in commerce and charity. There are important differences between this and the feminist picture, but if we are defending an un-Biblical ideal for womanhood, some delicate thing that can't do anything and is always in a swoon, then our reaction against feminism isn't going to put us in a much better spot.

And men should be men, but that doesn't mean that men should be rugged individuals who say, "I am the master of my fate: I am the captain of my soul!" That is as wrong as saying that Biblical femininity is weak and passive. Perhaps men should be rugged, but to be a man is to be under authority. Trying to be the captain of your soul is spiritually toxic, and perhaps blasphemous. There is one person who can say, "I am the captain of my soul," and it isn't Christ. Not even Christ can say that, but only God the Father. Christ's glory was to be the Son of God, so that the Father was the captain of his soul, and he did the Father's work. Even Christ was under the headship of the Father, and if you read what John says about the Father and the Son, the fact that Christ was under headship, under authority, is

part of his dignity and his own authority. To be a man is, if things are going well, to be a contributing member of a community, and in submission to its authority. Individualism is a severe distortion of masculinity; it may not be feminine, but it is hardly characteristic of healthy masculinity. There are a lot of false and destructive pictures of what a man should be, as well as what a woman should be.

If simply reacting against feminism is a way to miss what it means to be a man and what it means to be a woman, it is also a way to miss something more, to miss a broader glory. This something more is foundational to the structure of reality; it is a resonance not only with God's Creation, but within the nature of God and how the Father's glory is shown through the Son. This something more is in continuity with God's headship to Christ, Christ's headship to the Church, Christ's headship to the cosmos, Heaven's headship to earth, the sanctuary's headship to the nave, the spiritual world's headship to the physical world, the soul's headship to the body, contemplation's headship to action, and other manifestations of a headship relation. On the Sunday of Orthodoxy, we proclaim:

...Thus we declare, thus we assert, thus we preach Christ our true God, and honor as Saints in words, in writings, in thoughts, in sacrifices, in churches, in Holy Icons; on the one hand worshipping and reverencing Christ as God and Lord, and on the other hand honoring as true servants of the same Lord of all and accordingly offering them veneration... This is the Faith of the Apostles, this is the Faith of the Fathers, this is the Faith of the Orthodox, this is the Faith which has established the Universe.

*What does this have to do with heads and bodies? The word*

What does this have to do with heads and bodies? The word "icon" itself means a body, and its role is to manifest the glory of the saints, as the saints are to manifest the glory of God.

We don't have a choice about whether we will live in a universe with headship, but we do have a choice whether to work with the grain or against it, work with it to our profit or fight it to our detriment. Let's make headship part of how we rejoice in God and his Creation.

# What the West Doesn't Get About Islam

## English translation needed

Muslims who say "Islam is peaceful" are neither insincere nor sloppy in what they claim, but you do not understand the claim "Islam is peaceful" until you understand what peace **means** in Islam.

"Islam" means "surrender," and the peace Islam seeks is also surrender. Some have said, "surrender at the point of a gun." If you would describe yourself as not religious but spiritual, demanding your forced conversion at the point of a gun would be fitting and appropriate in the peacefulness of Islam. And if you refused, pulling the trigger to blow your brains out would be a proper act of peace. The peace offered by Islam is forever incomplete if there are still people who have not surrendered in Islam, and the one world religion founded in violence, Islam, offers a peace that was rightly and properly advanced in this initial violent conquest. "Islam is peaceful" is quite an honest

claim but what it is **not** is proof that Islam, just much as you, wishes so dearly that we could all ☪☪☪☪☪☪☪☪☪☪/coexist.

**An Indian woman asks, "Anybody home? *Hello?*"**

An Indian woman, trying to get through to Westerners who are thick-skulled about getting Islam, explained that when Muslim invaders were conquering in India, many Hindu women committed suicide because they knew "Muslim men would rape them in front of their husbands' eyes, kill their husbands, and [forcibly] take them for wives." Not, perhaps, that Islam has a monopoly on soldiers raping: in World War II, after D-Day, U.S. military courts hanged dozens of soldiers for rape, and some of both the court members and the soldiers tried had to be Christian. Rape in war happens, is recognized to happen, and in better moments is treated as a clear atrocity. But, unless you are very anti-Christian, a Christian who rapes under any circumstance is acting in an un-Christian way. At least in the Indian women's perspective that was articulated, it may not be acting in a clearly un-Muslim way to rape an Indian woman in front of her husband's eyes, murder her husband, and forcibly marry her.

## **Western stupidity about Christian fundamentalists as nut jobs and Muslims as much more attractive?**

One roommate I had talked about hearing something that scared him silly, about the younger George Bush. He didn't present this as 100% certain, but he claimed that George Bush, in a meeting with several Muslims, had shown the staggering insensitivity to Islam of saying that God had told him to do X. Apparently only one of the Muslim leaders remembered this striking claim, and that one leader didn't understand what was such a big deal, but then-President Bush had shown a most appalling insensitivity to Islam and Muslims that scared him silly.

I pointed out to him, or tried to, that on his account:

- President Bush had done something in the presence of several influential Muslims that was patently offensive to Muslims,
- Only one such Muslim remembered it and didn't see what the big deal was.

And these two do not match.

Really, whatever other things Islam may be accused of, we cannot accuse them of going off in a corner, quietly sulking, and leaving the rest of us to play imperviously guessing games about

leaving the rest of us to play impenetrable guessing games about why they're upset and what they want us to do to make amends.

But I tried quite in vain to point this out.

Whether in fact George Bush ever told Muslims that God told him something I do not know. But there is a bit of illogic going on.

It may scare an academic liberal silly for someone in power to believe there is a God who makes such claims on us. But it is not offensive to Muslims to believe there may be a God and this God could make such claims on us; the basic implication need offend Muslims scarcely more than it need offend scientists to say that it is helpful to test our theories by experiment, or that it need offend coaches to say that athletes should train before they go to competitions.

There is a sense among the people I have known that "Bible-believing Christians" are really not enlightened, and are really nut jobs, but with due charity we should pay Muslims the common courtesy of recognizing that they are basically enlightened and not like Christian fundamentalist nut jobs, and that unlike stupid and dangerous types like John McCain and Sarah Palin, Muslims want to ☺☻☼☽☿☿ and unlike those weird Christian fundamentalists, they will ☺☻☼☽☿☿ quite nicely. Maybe this is changing; [South Park can obscenely mock every religious founder but one, as far as Comedy Central allows after Muslim response](#), and people in the West are starting to act like saying something vile about Mohammed will get a bit different of a response from those nut job Christians (you know, those dunces who just don't get that we should ☺☻☼☽☿☿). But the way it has changed in the West may not be for the best.

If you find something objectionable about conservative Christianity, fine, but understand that Islam is further, not nearer, to your outlook than such Christianity. It is a capital

women's movement. But is  
it?**

## Three types of lies: Lies, *Statistics*, and INFOGRAPHICS

To begin with, I would like to quote a portion of a poster, posted for government-required regulatory compliance at a once bastion of Christian conservatism, Wheaton College. My choice of this part of departure is not specifically focused on Wheaton, which was presumably not trying to be provocative, but to represent enough of a mainstream influence of feminism that I am not discussing a lunatic fringe of feminism, but something basic and (on feminist terms) not particularly controversial.

I apologize in advance for the poor quality of the picture as it was an attempt to take an accurate picture of a part of a poster that was roughly one to two feet above my head. I will reproduce the graphics as best I can, including the dark, dingy look of the

Perhaps the poster girl for way looney left feminism is the scholar who said Newton's Principia Mathematica as 'Newton's Rape Manual', and I have more sympathy for that than you might think. The birth of science had a moral stench, both in being mingled with deep occult currents, and in being [advanced through a rhetoric of sexual violence for a very specific and deplorable reason](#). I

coins (on the original you can see the scissors cuts where the pictures of the quarters had been cut out), but in clarity because I want to represent the poster fairly and not by the standards of my photography in a difficult shot. The poster says at the top, "In Illinois, a woman makes 71 cents for every dollar a man makes." Then there is a picture of 71 cents in coins, "for her" at the top, and a picture of a dollar bill,

"for him" below. The picture is as described:

In the interests of fairness, I want to start with a crisp reproduction of what the INFOGRAPHIC said. It looked like:

**For her:**

[71 cents in coins]

**For him:**

[A dollar bill]

And the natural response is outrage. But what if we tweak things a little and compare coins with coins? Then we have:

**For her:**

[71 cents in coins]

**For him:**

[100 cents in coins]

But the objection may come, "Um, that almost destroys the

do not agree with that specific feminist professor about what Newton's Principia Mathematica might as well be called, but I also do not see that diagnosis as the kind that is inspired by hallucinogens.

effect." And my response is, "Yes. That is exactly the point." And in this there are two visual lies exposed by this revamp:

1. Whatever a man gets, it looks like literally a dozen times what a woman gets. The sheer space taken for \$.71 in coins (and, following usual practice, as few coins as you can use to reach that amount), is dwarfed by the visual space taken by a dollar bill. For that matter, the visual space taken by a man's four quarters is dwarfed by the visual space taken by a dollar bill. This may only register subconsciously, but it is a powerful subconscious cue: the real, emotional impact is not that a woman earns 71 cents on the dollar for a man, but more like a miniscule 5 to 10 cents on the dollar. This cue, which may only register subconsciously (compared to the revised comparison of \$.71 in coins and \$1.00 in the largest common coin, the quarter), is only more powerful for its subconscious effect.
2. Secondly, the INFOGRAPHIC registers something else that only renders subconsciously. Compared to the currencies of other countries, especially before the slightly new look for larger bills, paper currency was big currency, and real money. If you walked into a store and paid for something cash, you paid with bills. Coins, while having some value, are often only something you get back as the smallest remaining money and have to figure out what to do with. Not only is spare change a small sort of thing compared to real money, it was honestly a bit of a nuisance. Now people usually pay with plastic or other non-cash items, and money is a bit tighter for most of us, so we may want the change more, but saying that she gets change and he gets real money is an apples and oranges comparison; the effect is like saying that he is paid in cold,

hard cash, while she is paid only in coupons.

**Lies.**

**Statistics.**

**INFOGRAPHICS.**

Now it is not simply the case that INFOGRAPHICS can only ever lie; the works of Tufte such as [Envisioning Information](#) and [The Visual Display of Quantative Information](#) never stop at tearing apart bad INFOGRAPHICS; they compellingly demonstrate that the visual display of information can be at one stroke beautiful, powerful, and truthful. Something a little more informative, if perhaps imperfect, to convey a 71% statistic would be to simply show 71% of a dollar bill:

**For her:**

[A rectangle showing 71% of a dollar bill]

**For him:**

[A dollar bill]

But it is a serious misunderstanding of feminism to think that a feminist will argue this way. Instead it is another case of:

**Lies.**

**Statistics.**

**INFOGRAPHICS.**

## The beating heart of feminism

I'm not sure how this plays out in feminism outside of feminist theology, but every feminist reader I've read has been in an extreme hurry to neutralize any sense that the Roman veneration of the Mother of God and Ever-Virgin Mary. Now I have heard Orthodox comment that Roman and Orthodox veneration vary: Romans stress the Mother of God's virginity, Orthodox stress her motherhood, and presumably there's more. But one finds among feminist theologians the claim that since the Mother of God and Ever-Virgin Mary was both a virgin and a mother, that means that you're not really OK if you're a woman unless you are both a virgin and a mother. And never mind that spiritually speaking it is ideal for Orthodox Christians, women and men to have a spiritual virginity, and to give birth to Christ God in others, the Roman veneration means a woman isn't OK unless she is (literally) both a virgin and a mother. Fullstop. One gets the sense that feminists would sell a story that the Roman Catholic Church reviles the Virgin Mary, if people could be convinced of that.

## **A first glimpse of the good estate of women**

I would like to make an interstitial comment here, namely that there is something feminism is suppressing. What feminists are in a hurry to neutralize is any sense that the veneration of the Mother of God could in any way be a surfacing of the good estate of women. What is it they want to stop you from seeing?

Let's stop for a second and think about Nobel Prizes. There is presumably no Nobel Prize for web development, but this is not a slight: web development is much newer than Nobel Prizes and regardless of whether Alfred Nobel would have given a Nobel prize to web development if it wasn't around, the Nobel Prize simply hasn't commented on web development. There is a Nobel Prize for physics, and (the highest one of all), the Nobel Prize for Peace. When a Nobel Prize is given to a physicist, this is a statement that not only the laureate but the discipline of physics itself is praiseworthy: it is a slight that there is no Nobel Prize for mathematics (rumor has it that Alfred Nobel's wife was having an affair with a mathematician). To award a Nobel Prize for physics is to say that physics is a praiseworthy kind of thing, and one person is singled out as a crystallization of an honor bestowed to the whole discipline of physics. And, if I may put it that way, the Mother of God won the Nobel Prize for womanhood.

Called the New Eve, She is reminiscent of the Pauline passage, And so it is written, The first man Adam was made a living soul; the last Adam was made a quickening spirit. Howbeit that was not first which is spiritual, but that which is natural; and afterward that which is spiritual. The first man is of the earth, earthy: the second man is the Lord from heaven. As is the earthy, such are they also that are earthy: and as is the heavenly, such are they also that are heavenly. Christ is called the Last or New Adam, and Mary the Mother of God is called the New Eve. Let us not say that bestowing a Nobel Prize for physics on one scientist constitutes a rejection of every other.

At feasts of the Mother of God, the Orthodox Church quotes a passage from Scripture that seems at first glance surprising as a way to honor the Mother of God: a woman from a crowd tells Christ, "Blessed are the womb that bore you and the breasts that you nursed at!" and Christ replies, "Blessed rather are those who hear the Word of God and keep it." The text appears at first glance to downplay the significance of the Mother of God, and in fact has been taken to do so by Protestants. So why would the Orthodox Church read this text at all kinds of feasts in honor of the Mother of God?

The answer comes after a question: "Who heard the Word of God and kept it?" "Who pre-eminently heard the Word of God and kept it?" Of course many people have done so, but the unequalled answer to "Who pre-eminently heard the Word of God and kept it?" is only the Mother of God, She who said, "Behold, I am the handmaiden of the Lord; let it be to me according to your word." The woman who spoke up at the crowd said, "Your mother must really be something because she bore you!", and Christ implies, "My Mother is really something because she obeyed." The Mother of God did not achieve the combination

of virginity and motherhood; she obeyed God's command, and in the wake of that obedience, motherhood was added to her virginity. But taking the Mother of God as a role model for women does not mean that women need to be both virgins and mothers, any more than Evangelicals who ask "What would Jesus do?" feel themselves obliged to learn Aramaic and move to Israel. I don't want to downplay Mary's virginity and motherhood, both of which are sacred offices, but it is a serious confusion—or rather a serious duplicity—to say that venerating the Mother of God means that women aren't OK unless they pull off the combination of virginity and motherhood.

The Mother of God is She who obeyed, and obedience is for everyone, and highlighted for women. And while it may be easy enough for feminist theologians to excuse themselves from a fabricated straw obligation to be both virgins and mothers if they are to be OK as women, excusing oneself from obedience presents more of a pickle, and one that they don't want you to see. Feminism doesn't like obedience (especially of women to men); engineered, synthetic feminist "fairy tales" like *Ella Enchanted* make it clear that for a woman to be in a position of obedience is a curse: a clear and unmitigated curse.

The First Eve fell because she disobeyed; the Last or New Eve offered the perfect creaturely obedience and the gates of Hell began to crumble at her obedience. The Incarnation, the point has been plainly made, would have been absolutely impossible without the consent, obedience, and cooperation of the Mother of God as it would have been without the Holy Trinity. And only a woman could have first opened that door. The Theotokos is called the first Christian; she was the first of many to receive Christ, and men learn from her.

A look at early Antiochian versus Alexandrine Christology may

also be instructive. In Antiochian Christology, Christ was significant pre-eminently because he was the Son of God, born of a Virgin, lived a sinless life, died as a sacrifice, and rose as the firstborn of the Dead. In Alexandrian Christology, Christ was significant as a teacher primarily. At least one theologian has said that St. Paul's epistles don't make much of Christ, because not a single one of his parables comes up in St. Paul's writing. But this is a misunderstanding: St. Paul was in fact making a (proto-)Antiochian use of Christ, and the Christ who was the Son of God, died a sacrifice, and rose from the dead is of central significance to the entire body of his letters. Christ's teaching recorded in the Gospels is invaluable, but we could be saved without it, and many people effectively have been saved without that teaching as believers who did not have the Gospel in their language. But we could not be saved by a Christ who lacked the Antiochian distinctives: who was not Son of God or did not rise from the dead, trampling down death by death. If I may describe them in what may be anachronous terms, early Antiochian Christology held Christ to be significant as an archetype, while early Alexandrian Christology held Christ to be significant as an individual. And the distinction between them is significant. You do not know the significance of Christ as the New Adam until you grasp him as an archetype and not a mere individual on a pedestal, and you do not know the significance of the Mother of God as the New Eve until you grasp her as an archetype and not a mere individual on a pedestal.

On a level that includes the archetypal, the Mother of God is mystically identified by such things as Paradise, the earth, the Church, the Container of Christ, and the city, and many other things such as a life lived of prayer that completes its head in time spent at Church. To be a man is a spiritual office, and to be

a woman is a spiritual office. The Mother of God serves as a paradigm, not only of Christians, but of woman. And that is noble, glorious, and beautiful.

There are more things that are beautiful about God's creation than are dreamed of in feminism—and more things than are dreamed of even in women.

I remember one Indian woman I spoke with in an online author's community; she was taking stories from Indian lore and trying to make concrete retellings of them: moving from the archetypes to individuals on a pedestal. And what I told her is, basically, don't. The archetypal stories were something I could well enough relate to; the archetypal (Indian) loving elder in the story had the same pulse and the same heart as loving elders I knew as a small (U.S.) child. The archetypal level is universal.

Now what happens in the concrete is important, profoundly important, but you miss something if you cut out its archetypal head and heart and then try to talk with the body that is left over. And there is real rapprochement between men and women:

Christ the New Adam and Mary the New Eve enjoyed indescribable intimacy, an interpenetration or perichoresis where she gave him his humanity and he gave her her participation in his divinity. The Mother of God's perpetual virginity stems from this; after such a perichoresis with God incarnate, a merely earthly husband's physical union was impossible. I have heard a complementarian Roman Catholic theology suggest that the word *homoousios* to describe the relationship between men and women: *homoousios* being the word of the Creed used to affirm that the Son is not an inferior, creaturely copy of the Father but of the same essence, fully of the same essence. The statement may be an exaggeration; if so, it was forcefully stating something true. I have attempted [postmodern thick description of differences](#)

between men and women; I was wrong, not in believing that there are real differences, but in assuming a postmodern style of thick description in rendering those differences. St. Maximus the Confessor is described as describing five mediations in which any gulf is transcended: that between male and female, that between Paradise and the inhabited world, that between Heaven and Earth, that between spiritual and visible Creation, and ultimately that between uncreated and created nature, the chasm between God and his Creation. All of these chasms are real; all are transcended in Christ, in whom there is no male nor female, paradise nor merely earthly city, Heaven nor mere earth, spiritual nor merely physical, Creator nor mere creature. All these distinctions are transcended in a Christ who makes us to become by grace what He is by nature.

## **The ~~beating heart~~ throbbing head of feminism**

I have mentioned two points of feminism: first, an infographic that was mainstream enough to be proclaimed as part of a regulatory compliance poster; and second, the neutered veneration of the Mother of God that is not allowed to mean anything positive for the estate of women. However, these are not intended as the core of a critique of feminism; in part they are intended as clues. Feminism gives a clue about its ~~beating heart~~ throbbing head in an unsavory infographic, and in its haste to neutralize any sense that the veneration of the Mother of God could be any good signal for women (or the ordinary kind—those who are not both virgins and mothers). Another author might have substituted other examples, and I must confess a degree of instance in that I keep bumping into feminism and I have tried to understand it, but there are depths unknown to most feminists and I would be wary of claiming exhaustive knowledge that I do not claim for cultures I have lived in for months or years. But I still observe, or have acknowledged, one major point.

One text, *Women's Reality: An Emerging Female System in a White Male Society* by Annd Schaeff, admittedly considered dated by many feminists today, mentioned that the author

mentioned that many men say that women understand them better than men. And this puzzled her, because on the surface at least, it looked quite frankly like a compliment paid, by men, to women. But then she put on her feminist X-ray goggles, observed that the beginning of 'understand' is 'under', and juridically decided that to "understand" is by nature to stand under, that is, to be an inferior. And so she managed to wrest a blatant affront from the jaws of an apparent (substantial) compliment.

There was a counselor at my church who was trying to prepare me for my studies in a liberal theology program, and he told me that there was something I would find very hard to understand in feminism. Now I found this strange as I had already lived in, and adapted to, life in four countries on three continents. And he was right. What I would not easily understand is subjectivism, something at the beating heart, or throbbing head, of feminism. And what is called subjectivism looking at one end is pride recognized by the others, and pride is a topic about which Orthodoxy has everything to say. Pride is the heart, and subjectivism the head, of what Orthodoxy regards as one of the deadliest spiritual poisons around.

It is said that the gates of Hell are bolted and barred from the inside. It is only an image, but some say that the fire of Hell is the Light of Heaven as it is experienced through its rejection.

And Heaven and Hell are spiritual realities that we begin to experience now; and feminism is, if anything, bolted and barred from the inside. To pick another example, with the influential *You Just Don't Understand* by Deborah Tannen, the metamessage that is read into men holding doors for women was, "It is mine to give you this privilege, and it is mine to take away."

And on that point I would comment: I won't judge this conversation by today's etiquette, in which more often than not

people are expected to hold the door for other people; I will comment on the older etiquette that met feminist critique. And on that point I must ask whether any other point in the entire etiquette, much of which was gender-neutral then, received such interpretation? Did saying, "Please," or "Thank you," or "I'm sorry," ever carry a power play of "I extend this privilege to you and it is mine to take away?" More to the point, do body image feminists wish to find a sexist power play in the saying, "There are three things you do not ask a woman: her age, her weight, or her dress size."? Or Was it not just part of a standard etiquette that no one claimed to be able to take away?

But even this is missing something, and I do not mean "men who are fair and women who care." **The unfairness is significant, not for being unfair in itself, but because it is the trail of clues left by something that breaches care.** And to try to address this issue by reasoning is a losing battle, not because logic is somehow more open to men than women, but because you cannot reason subjectivism into truth any more than you can reason an alcoholic to stop drinking, fullstop. Now one may be able to make the case to a third party that it would be better for a particular alcoholic to stop drinking, or that a particular feminist argument played fast and loose with the rules of logic, but it is madness to bring this to feminism. What is unfair in feminism is most directly speaking a breach of one of the lowest basic virtues of the Christian walk, namely justice, and caring is at essence about the highest of virtues in the Christian walk, namely ἀγάπη or love, but this is not what's wrong. Dishonest arguments in feminism are a set of footprints left by pride or subjectivism, and it is by pride that Satan fell from being an angel in Heaven to being the Devil. It is also through pride, here known under the label of "consciousness

raising", that just as Michael Polanyi has been summarized as saying that behaviorists do not teach, "There is no soul," but induce students into study in such a way that the possibility of a soul is never considered, feminists put on subjectivist X-ray goggles that let them see oppression of women in every nook and cranny, even in social politeness. And if you read Daniel Goleman's [Emotional Intelligence](#), which has its merits even if they are limited, it is well worth studying what he says about bullies. Bullies do not see themselves as triumphant, or for that matter as oppressors, but as beleaguered victims. Everything has significance, and everything has hostile significance. Why did someone bump a bully in the hallway? The possibility that it was a crowded hall and growing children can be just a little bit clumsy with the current state of their bodies, is never even considered. An innocent bump in the hall is the tip of an assault, the tip of an iceberg in which a piece is moved in chess to achieve their defeat. And the bully's actions are only a modest self-defense. The bully has X-ray goggles that make everything plain, and the bully's state of mind is what is built up by the X-ray goggles of "consciousness raising."

"Consciousness raising" is a brilliant euphemism for taking women who are in many cases happy and well-adjusted and transforming them into alienated, hostile women who believe that everything outside of feminism has it in for them.

## Unpeeling the infographic a little further

In my discussion above, I left unchallenged the figure that women make \$0.71 on the dollar compared to what men make. How can I put this? Subjectivists do not go out of their way to use statistics honestly. Subjectivists go for the most convenient cherry-picked data they could. As others have said, they use statistics as a drunken man uses lampposts: for support rather than illumination.

Christina Sommer's [Who Stole Feminism: How Women Have Betrayed Women](#) suggests that that book does not follow the *ceteris parabis* principle of comparing with all other things being equal. Motherhood is hard to grind out of women, and spending significant time with her young children is hard to grind out of most women. The "71 cents on the dollar" figure keeps cropping up; in one discussion I remember it was repeatedly claimed that women made 69 cents on the dollar until one person said "Please either substantiate this statistic or stop bringing it up." The comparison in that study compared men who had a single, so to speak, major time commitment to their work, to women who were working hard to juggle a major time commitment to work with a major time commit to their younger children. When things were genuinely *ceteris paribus*, when men were only compared to women who had worked without reduced employment to care for

children, then the figure was more like 86-91 cents on the dollar.

## **Is 86+ cents on the dollar in 1987 and a closing gap acceptable?**

There was a short story that a roommate read to me in high school; it offended me and I was I was horrified. It showed a hiring manager saying, "Insidious. Pathetic. Disgusting. Miserable." as he threw one more resume into the trash. Then a doorkeeper said, "Your 3:00 is here." The manager said, "You've got some balls applying for a position like this. Why are you wasting my time?" The applicant said, "I have wanted to work with this company all my life. I want this position; I have friends, family, and a religion, but all of them are secondary; I will miss the birth of a child if that is what it takes to work." The manager said, "Get out. Are you going to go by yourself or will I have to call to have security escort you off the premises?"

In a flash, the applicant leveled a .45 magnum at him and said, "I want this job. Now will you hire me or do I have to blow you away?" The hiring manager said, "Very well. Report to my desk at 8:00 AM Monday." After the applicant left the room, the manager pulled the intercom and told the doorkeeper, "Tell all of the other applicants to f\_\_\_ off. We have our man."

This story horrified me a great deal more than an F-bomb alone, and it was part of an attempt on his part to convince me that no one ever does any action for any motive besides financial

gain. (In the past I've had several people try to convince me of the truth of this point. In no case did any of these people stand to benefit financially from their efforts to persuade me. **But I digress.**) However, my roommate was trying to help me appreciate something about the business world that this caricature caught right on target.

Women in the business world have been advised to make a practice of asking, "What's in it for me?" And for that matter, compassionate men may be advised to make a practice of asking, "What's in it for me?" and play by the rules of a jungle because compassionate men do not do the best at succeeding in the business world. Now must you ask, "What's in it for me?"

The answer is a simple "No, it's optional," but there's a **caveat**. If you do not negotiate based on "What's in it for me?", you are less likely, man or woman, to receive more paycheck, prestige, power, and promotion. In the short story it did not strictly speaking need to be a man who negotiated with a gun in a job interview. But it is more often a man and not a woman who is mercenary to that degree. I myself do not naturally gravitate towards that thinking even if I've been advised to, and my salary history is an IT salary history, which is something to be thankful for, but it has been below average for many of the areas I've been working in, and whatever gifts I may have are applied on the job without necessarily receiving even average pay.

Let us ignore for one moment the Times cover story about "The Richer \$ex," meaning women. Is it possible that the following could be justified?

**For him, *ceteris paribus***

[A dollar bill]

For the love of  
money is the root of  
all evils: "I climbed

disturbs you, the  
more you stand to  
profit from  
*Maximum Christ,*  
*Maximum Ambition,*  
*Maximum Repentance*  
for what is more  
important, and  
*Money* for what is  
less.

## **The war against *real* women**

In the Catholic social encyclicals, the modern ones since *Rerum Novarum*, the tone prior to Pope John Paul was celebratory, or sometimes complaining that the encyclicals were not progressive enough. But one thread out of this many-patched quilt is the call (added or amplified) for a "living wage". That wage was something like \$15 or \$20 per hour, but not really set in stone. And there is a legitimate concern: perhaps not as dramatic as the situation in sweatshops, but being a greeter in Wal-Mart may be a great way for a kid to earn some change, but eking out a living on what Wal-Mart pays most employees in its stores is not really possible. Now there may also be a point in that the position labeled as progressive would result, not in a great many people earning \$15-\$20 an hour, but a great many people earning \$0 an hour because businesses that can only keep employees paid a living wage have a short lifespan. (But let's brush this under a rug.)

The consistent call was for work to pay a living wage, with one notable exception. Pope John Paul II called for a man to be able to earn a "family wage", meaning not a living wage for an individual but some sort of support that would be sufficient for a family to live off of. And this was universally derided by feminist commentators, and not because John Paul II failed to

also specify that women should be able to earn a family wage.

I'm not sure if you've heard, either in the context of [artificial intelligence](#)-related transhumanism or of planned exploration of Mars, the term 'Melanesian'. The term may be racially charged, but I'm going to ignore that completely. The thought is vile on grounds that make it completely irrelevant whether the people being derided belong to one's race or another. The basic idea of being 'Melanesian' is that for ages untold people have hunted, built, crafted things with their hands, told stories and sung songs, made love and raised children, and all of this is innocent enough in its place, but now we are upon the cusp of growing up, and we must leave 'Melanesian' things behind. The John 3:16 of the Mars Society is "Earth is the cradle of humankind, but one does not remain in a cradle forever." We must grow up and leave 'Melanesian' things behind. Now the exact character of this growing up varies significantly, but in both cases the call to maturity is a call to forsake life as we know it and use technology to do something unprecedented. In the case of transhumanism, the idea is to use human life as a discardable booster rocket that will help us move to a world of artificially intelligent computers and robots where mere humans will be rendered obsolete. In the case of the Mars Society, it is to branch out and colonize other planets and the furthest reaches of space that we can colonize, and in the "Martian" (as Mars Society members optatively call themselves) mind heart, this mission, and the question of whether we are "a spacefaring race", bears all the freight one finds in fully religious salvation. All this is scaled back in the feminists who comment on Pope John Paul II's call for a family wage, but there is something there that is not nearly so far on a lunatic fringe as transhumanism or the Mars Society, but much more live as a

threat as it would be a brave soul who would call this a lunatic fringe. The feminist critique of Pope John Paul II's call for a family wage is that it is unacceptable, and men should earn low enough amounts of money that it takes both parents' work to support them. Women are to be made to "grow up", and however much it may be untenable to deny a woman's right to attend university or a woman's work to do any job traditionally done by men, it is absolutely out of the question to allow a woman's right to do a job traditionally done by women. They are to be pushed out of the nest and made to grow up. They are to be compelled by the economics of a situation where a husband cannot earn a family wage to work like a man.

The argument has been advanced that women are "The Richer \$ex." The question has been raised about whether men have become "the second sex", as was the title of a classic of French feminism. A book could easily be pulled on [The War Against Boys](#), and discussion could be made of how school and the academy are a girl's game—and one Wheaton administrator described how some of the hardest calls he has to make is to explain to one parent why her daughter, with a perfect record of straight A's, was rejected by Wheaton—and explain that Wheaton has four hundred others like her; Wheaton, which has a 45% male student body, could admit only female applicant with straight A's and still be turning people away.

But the argument discussed just above is something of a side point. To put it plainly, feminism is anti-woman. Perhaps ire against men is easily enough found; Mary Daly, now unfashionable, makes a big deal of "castration" and defines almost every arrangement of society not ordained by feminism as "rape." (This would include most of all societies in all of history that we have recorded.) And if Mary Daly is now unfashionable,

she is unfashionable to people who follow in her wake and might be voiceless today if she had not gone before them. And Mary Daly at least may well wear a reform program for men on their sleeve. But others who have followed her, and perhaps used less brusque rhetoric, wear a reform program for women next to their hearts.

I would like to pause for a moment to unpack just what it may mean to elevate anger to the status of a central discipline. And gender feminism, at least, does make an enterprise fueled by anger.

Every sin and passion in the Orthodox sense is both a miniature Hell, and a seed that will grow into Hell if it is unchecked. Different ages have different ideas of what is the worst sin. Victorians, at least in caricature, are thought to have made sexual sin the worst sin. In the New Testament, sexual sin is easily forgiven, but in an age where men have Internet porn at their fingertips, it would be helpful to remember that lust is the disenchantment of the entire universe: first nothing else is interesting, and then not even lust is interesting: there is misery. Getting drunk once might feel good, but the recovering alcoholic will tell you that being in thrall to alcohol and drunk all of the time is suffering you wouldn't wish on your worst enemy. Many people today think pride, the sin that cast an angel out of Heaven to be the Devil, is the worst sin and all of us have a stench to clean up here. And to the Church Fathers, to whom love was paramount, anger was perhaps the greatest danger. Today we say that holding a grudge is like drinking poison and hoping it will hurt the other person, or that 'anger' is one letter from 'danger'. The Fathers said, among other things, that it makes us more like the animals, and by implication less like what is noble and beautiful in the race of mankind. And it is one thing

to lose one's temper and find that dealing that with one particular person tries your patience. It is another thing entirely to walk a spiritual path that is fueled by the passion of anger. And this feminist choice is wrong. It is toxic, and we should have nothing to do with it.

Gender feminism may elevate anger to the status of central spiritual discipline, but to quote [Who Stole Feminism? How Women Have Betrayed Women:](#)

Writers of both contemporary history and science texts, especially for the primary and secondary grades, make special efforts to provide "role models" for girls. Precollege texts now have an abundance of pictures; these now typically show women working in factories or looking through microscopes. A "stereotypical" picture of a woman with a baby is a frowned-upon rarity...

In an extensive study of the new textbooks written under feminist guidelines, New York University psychologist Paul Vitz could find no positive portrayal of romance, marriage or motherhood.

Although this is not directly a remark about feminism, something of my joy in *A Wind in the Door* was lost when I learned that Madeleine l'Engle viewed kything, the main supernatural element in the book, regarded it as literal fact. The idea that a reader is supposed to entertain a willing suspension of disbelief is not disturbed, but she meant, literally, that ordinary people should be able to send things directly, mind to mind. And what I took to be a beautiful metaphor (perhaps today I would say it needs to transcend in the noetic realm), made for an ugly literal claim. And the same thing happened when I

read Terry Pratchett's *The Wee Free Men*, which is presented as a novel of Discworld. It is not set in Ankh-Morpork, nor does any standard Discworld character or setting make more than one or two combined cameo appearances. So it is duplicitously called a novel of Discworld. And it is in fact not really centered on the *Wee Free Men*, who certainly make nice ornaments to the plot but never touch the story's beating heart. The story is Wiccan and advertises witchcraft; like Mary Daly, who gives a duplicitous acknowledgement of Christ's place (I parsed it and told the class point-blank, "I am more divine than her Christ"), argues for Wicca and witchcraft, tells how one may become a witch, and in her 'Original Reintroduction' written some decades after writes with a poetic and highly noetic character which drips with unnatural vice as much as Orthodox Liturgy drips with glory and Life. It was in reading *The Wee Free Men* that I first grasped why the Fathers called witchcraft unnatural vice. Never mind that witches deal in plants, and probably know a great more many details than the rest of us. There is a distinction like that of someone who studies available books on anatomy, physiology, and biochemistry, perhaps learning more than those in the medical profession, but to be an assassin ("If a sword blow hits the outside of the arm about a third of the way from the elbow to the shoulder, you can sever an artery and cause substantial bleeding."). The analogy is not exact; I believe it misses things. But the entire Wiccan use of plants constitutes unnatural vice.

And in the shadow of those following Mary Daly, there is never a reform program for men that leaves women untouched. Maybe the reforms for men may be more clear; but good old-fashioned chauvinist men are almost a distraction compared to women who resist feminist improvement.

## The Good Estate of Woman

Is it demeaning that the Bible says of the ambitious woman, [Notwithstanding she shall be saved in childbearing?](#) Or is it not much more demeaning to say of the ambitious woman, "She shall be saved from childbearing?"

Women desire quite often simply motherhood. The very strength of the desire for romance, marriage, and motherhood in the face of gargantuan opposition says that what feminism is trying to free women from is an estate of happiness that women have yearned for from time immemorial. If it is prescribed hard enough that women will enter the workforce and work at some job wanted by men, she very well may do that—in addition to wanting children. Wendy Shalit in [A Return to Modesty](#):

"Just because you're a woman doesn't mean you can't be a doctor or a lawyer." Girls of my generation grew up on this expression. "Just because you're a woman." It was a motto like mother's milk to us, and now it is the philosophy behind Take Our Daughters to Work Day. "Just because you're a woman." In other words, being a woman is a kind of handicap that with hard work, one can overcome. Some are born deformed; others are born women; but be brave. I'm sure you'll make the best of it.

Yet now that we are free to be anything, doctors and lawyers, now that we've seen that women can be rational, and that men can cry, what we most want to know, and what we are not permitted to ask, is what does it mean to be a woman in the first place? Not in terms of what it won't prevent us from doing—we are not unaware of our bountiful options—but what is meaningful about being a woman? Rosie the Riveter was riveting only because she didn't usually rivet, and now that so many Rosies do, we most long to know what makes us unique again.

Two different women said to me, nervously, before graduation, What's wrong with me? I want to have children. One had landed a job with an investment banking firm; the other was supposed to land a job with an investment banking firm because that's what her father wanted, but the scouts who came to campus complained she wasn't aggressive enough. What's wrong with me? I want to have children...  
[emphasis original]

I think of a friend from college who was a powerful athlete, and for that matter was into boxing, and after college wanted to... settle down and be mother to a family, and a large one at that.

There is the [Calvin and Hobbes](#) strip where Hobbes says, "You can take the tiger out of the jungle, but you can't take the jungle out of the tiger." And what it seems is that women can be pushed to be androgynous or like men in so many ways, and yet you still can't take the jungle out of the tiger.

And perhaps women's happiness is found in cutting with the grain of motherhood than against it.

And perhaps in place of a spiritual

And on this point

discipline of anger that puts on feminist X-ray goggles and finds oppression and insult lurking around every corner and in the most innocent of acts, women might place such spiritual disciplines as thanksgiving.

The darker the situation, the more we need thanksgiving. In the last major ordeal I went through, what saved me from despair was counting my blessings, and being mindful and thankful for innumerable things and people, and telling other people how thankful I was for them. I don't know how else I could have had such joy at such a dark moment.

The properly traditional place for women is not exactly for men to be at work and women to be at home without adult company; the traditional placement for both men and women was to work in adult company, doing different work perhaps but doing hard work in adult company. Feminists have a point that the 1950's ideal of a woman alone without adult company all the worklong day can induce depression, and cutting with the grain of motherhood does not automatically mean reproducing the 50's. The perfect placement is for men to be with other

I would like to pause for what is for feminism the Right by Which Women's Rights Stand or Fall: the right to choose whether to have an, um, "uterine contents shower." An older generation of feminist called abortion the ultimate violation of a woman; but I wish to make another point here. If you want pro-choice, real pro-choice, dial 1-800-4-HOPE-4-1. There is counseling which does not make this choice for a woman, and which stands by women who choose abortion as well as those who do not. (And let's not get in to how many abortions women are pressured into, against their choice,

men doing the work of men and women to be with women doing the work of women, and that is denied to men as well as women. [The War Against Boys: How Misguided Policies Are Harming Young Men](#) attests that school has become girls' turf. My own experiences in schooling were that in almost all areas that truly interested me, I was self-taught. Working first in math, then in theology, there was something more than the naive outsider's question to academic theology: "Yes, I understand that we need to learn multiple languages, the history of theology, philosophy of religion, hermeneutics, and so on, but when are we going to study real theology?" This question is not in particular a man's question; it could just as plausibly have been spoken by a young woman. But work and school both place its members as neuters; there may be some places of schooling that may be 80% male (I've been there), and there may be places of schooling that may be 80% female (I've been there), but the traditional roles for men and women are not optional; they are taken off the table altogether, leaving those who would have traditional roles holding the short

who are pressured into it by "boyfriends" and men who have no desire to shoulder the responsibilities of a father to raise a child.) And this is decisively pro-choice compared to the "counseling" provided by an abortion clinic, which is essentially a five minute sales pitch presenting abortion as the only live option. And if you have had an abortion, and are hurting, recognize that what abortion clinics by law offer as post-abortion counseling is no more helpful than the pre-abortion counseling; again, dial 1-800-4-HOPE-4-1 and be connected with the healing power of counseling that

straw.

But to say that and stop is misleading. I remember when I asked an Orthodox literature professor for his advice on [a novella I was working that was a fantasy world based on the patristic Greek East instead of the medieval Latin West](#), and his advice, were I wise enough to listen to it (I wasn't), was simply, "If Orthodoxy is not to work for the here and now, it simply isn't worth very much." And Orthodoxy has fashioned men and women who have thrived under pagan antiquity, under Constantine, under the devious oppression of Julian the Apostate, under the fairy-like wonderland of nineteenth century Russia, under the Bolshevik Revolution, under centuries in the Byzantine Empire, under Muslim rule after Byzantium shrunk and finally modern era guns ended the walls erected by a Byzantine Emperor ages before, in France by those fleeing persecution, in America under parallel jurisdictions. In every age and at every time the Orthodox Church has found saints who chanted, as the hymn in preparation for Communion states, "Thou, who art every hour and in every place worshipped and

recognizes abortion as an experience that many have found traumatic. Counselors are complaining that political correctness is preventing them from adequately offering post-abortion counseling. And the "it's part of her body" is an illusion, a legal fiction. Nobody believes it, or at least women going through an abortion don't. Feminist landmarks like the sacrament of abortion, in a chapter called "the cure for guilt," advocate grieving that explains to the child why the separation is needed. It's not scraping away some unwanted tissue from a

glorified..." And if you think our world is too tangled to let God work his work, there is something big, or rather Someone Big, who is missing from your picture. [God harvested alike St. Zosima and St. Mary of Egypt](#). And it is not just true that God has fashioned and has continued to fashion real men in the intensely masculine atmosphere of a monastery of men; calling men's monasteries simply schools that make men is to focus on a minor key. Helping men be men, and channeling machismo into povdig or ascetical feats, is a matter of seeking the Kingdom of God and having other things be added as well. I have heard of one man be straightened out on Mount Athos from his addiction to pornography and then depart and be married; that may not be the usual path on Mount Athos, but the strong medicine offered on Mount Athos is sufficient to address the biggest attack on manhood this world offers, and it is a place of salvation.

What prescription would I suggest for women? To get a part-time job while children are at school? To homeschool, and have some team teaching? To just stay at home? All of these and more are possibilities, but the most

crucial suggestion is this:

Step out of Hell.

woman's body; it is striking a woman's motherhood, sort of a spiritual equivalent to kicking a man in the testicles.

Feminism is anti-woman, and perhaps the single greatest instance of this is that it supports the right of women, not to be mothers, but to have their motherhood injured.

It is a bit like claiming to be pro-man, and having the single greatest test of one's support for men be in his reproductive freedom, namely the inalienable right to opt-in to a hard kick in the groin.

In *From Russia, with Love: A Spiritual Guide to Surviving Political and Economic Disaster*, I wrote:

The Greek word hubris refers to pride that inescapably blinds, the pride that goes before a fall. And subjectivism is tied to pride. Subjectivism is trying, in any of many ways, to make yourself happy by being in your own reality instead of learning happiness in the God-given reality that you're in. Being in subjectivism is a start on being in Hell. Hell may not be what you think. Hell is light as it is experienced by people who would rather be in darkness. Hell is abundant health as experienced by people who would choose disease. Hell is freedom as experienced by those who will not stop clinging to spiritual chains. Hell is ten thousand other things: more pointedly, Hell is other people, as experienced by an existentialist. This Hell is Heaven as experienced through subjectivist narcissism, experiencing God's glory and wishing for glory on your own power. The gates of Hell are bolted and barred from the inside. God is love; he cannot but ultimately give Heaven to his creatures, but we can, if we wish, choose to experience Heaven as Hell. The beginning of Heaven is this life, but we can, if we wish, be subjectivists and wish for something else and experience what God has given us as the start of Hell.

Step out of Hell, pray, and accept what God gives you.

# Why Study Mathematics?

One question which is raised by many people is, "Why should I study mathematics?". The question is usually asked from a perspective that there is probably no good and desirable reason for the speaker to study mathematics, but he will tolerate the minimum required because he has to, and then get on to more valuable and important things.

I readily acknowledge that there are many math classes which are drudgery and a general waste of time, and that many people have had experiences with mathematics which give them good reason to hold a distaste for the discipline. However, it is my hope that I may provide readers with an insight that there is something more to mathematics, and that this something more may be worthwhile.

Let's begin by looking at the reasons that the reader may already have come across for why he should study mathematics:

- There are certain basic computational skills that are needed in life. People should be able to figure out whether a 24-pack of their favorite soda for \$3.89 is a better or worse deal than a 12-pack for \$1.99.
- It builds character. I suffered through mathematics for

such-and-such many years. So should you.

Of course, nobody explicitly says the second reason, but it may very well seem that way—like one of the hush-hushed truths that the Adult Conspiracy hides from students the same way it hides the fact that there is no Santa Claus from little children. And the first reason is something that many non-mathematical administrators believe.

But those are not the real reasons that a mathematician will give for why a nonmathematician should study mathematics, and what kind of mathematics a nonmathematician should study.

The first question which should be addressed is, "What is mathematics really about?"

The answer which many nonmathematicians may have is something along the lines of, "Mathematics, at its heart, is about learning and using formulas and things like that. In gradeschool, you learn the formulas and methods to add, subtract, multiply, and divide; then in middle school and high school it is on to bigger and better formulas, like the formula for the slope of a line passing through two points. Then in college, if your discipline unfortunately requires a little mathematics (such as the social sciences requiring statistics), you learn formulas that are even more complicated and harder to remember. The deeper you go into mathematics, the more formulas and rote methods you have to learn, and the worse it gets."

The best response I can think of to that question is to respond by analogy, and my response is along the following lines:

A child in school will be taught various grammatical rules, sentence diagramming, and so on. These will be drilled and studied for quite a long while, and it must be said that this is not the most interesting of areas to study.

An English teacher who is asked, "Is this what your discipline is really about?", will almost certainly answer, "No!". Perhaps the English student is proficient in grammar, but that's not what English is about. English is about literature—about stories, about ideas, about characters, about plots, about poetic description, about philosophy, about theology, about thinking, about life.

Grammar is not studied so that people can suffer through learning more pointless grammar; grammar is studied to provide students with a basic foundation from which they will be able to use the English language. It is a little drudgery which is worked through so that students may behold an object of great beauty.

This is the function of the formulas and rules of mathematics. Not rules and formulas so that the student is prepared for more rules and formulas, but rules and formulas which are studied so that the student can go past them to see what mathematics is really about.

And what is mathematics really about? Before I give a full answer, let me say that it is something like what English is about.

The one real glimpse that someone who has been through high school may have had of mathematics is in the study of geometry. There are a few things about high school geometry that I would like to point out:

- In geometry, one is given certain axioms and postulates (for example, the parallel postulate—given a line and a point not on the line, there is exactly one line through the given point which does not intersect the given line), definitions (a circle is the set of points equidistant (at an equal distance) from a given point), and undefined terms (point, line). From those axioms and postulates, definitions, and undefined terms, one begins to explore what they imply—theorems and lemmas.

- In geometry, rote memorization is not enough—and, in fact, is in and of itself one of the least effective approaches to take. It is necessary to understand—to get an intuitive grasp of the material. Learning comes from the "Aha!" when something clicks and fits together—then it is the idea that remains in the student's memory.
- Geometry builds upon itself. One starts with fundamentals (axioms, postulates, definitions, and undefined terms), and uses them to prove basic theorems, which are in turn used along with axioms and postulates to prove more elaborate theorems, and so on. It is like a building—once the foundation has been laid, beams and walls may be secured to the foundation, and then one may continue to build up from the foundation and from what has been secured to the foundation. Geometry is an edifice built on its fundamentals with logic, and the structure that is ultimately built is quite impressive.
- Geometry is an abstract and rigorous way of thinking. (More will be made of this later.)
- Geometry is about creative problem solving. The aforespoken edifice—or, more specifically, what is in that edifice—is used by the geometer as tools with which to solve problems. Problem solving—figuring out how to prove a theorem or do a construction (which is a special kind of theorem)—is a creative endeavor, as much as painting, musical improvisation, or writing (and I am writing as one who does mathematics, paints, improvises, and writes).

Imagine a dream where there are many pillars—some low, some high—all of which are too high to step up to, and all of which are wide enough to stand upon.

Now imagine someone dreaming this dream. That person looks at one of the pillars and asks, "Has anyone been on top of that pillar?" Then one of the Inhabitants of his dream answers, "No, nobody has been on top of that pillar." Then the person looks at another of the pillars, which has a set of stairs next to it, and asks, "Has anyone been on top of that pillar over there?". The answer is, "Yes, someone has, and has left behind a set of steps.

You may take those steps and climb up on top of the pillar yourself, if you wish."

And this person continues, and sees more pillars. Some of them stand alone, too high to step up to, and nobody has been to those. Others have had someone on top, and there is always a set of steps which the person left behind, by which he may climb up personally. And the steps go every which way—some go straight up, some go one way and then another, some seem to almost go sideways. Some are very strange. Some pillars have more than one set of steps. But all of them lead up to the top of the pillar.

The person dreaming may well have the impression that one gets atop a pillar by laying down one step, then another, then another, until one has assembled steps that reach to the top of the pillar. And, indeed, it is possible to climb the steps up to the pillars that others have gone to first.

But that impression is wrong.

And the person sees what really happens when the guide becomes very excited and says, "Look over there! There is a great athlete who is going to attempt a pillar that nobody has ever been atop!"

And the athlete runs, and jumps, and sails through the air, and lands on top of the pillar.

And when the athlete lands, there appears a set of stairs around the pillar. The athlete climbs up and down the stairs a

few times to tidy them up for other people, but the stairs were produced, not by laying down slabs of stone one atop another, but by jumping.

Then the guide explained to the dreamer that the athlete had learned to jump not only by looking at the steps that others had left, but by jumping to other pillars that already had steps, instead of using the steps.

Then the dreamer woke up.

What does the story mean?

The pillars are mathematical facts, some proven and some unproven.

The pillars that stand alone are mathematical facts that nobody has proven.

The pillars that stand with steps leading up to them are mathematical facts that have been proven.

The steps are the steps of proofs, the little assertions. As some of the steps are bizarre, so are some proofs. As some pillars have more than one path of steps, so some facts have more than one known proof.

The leap is a flash of intuition, by which the mathematician knows which of many steps will take him where he wants to go.

As the steps appeared when the leap was made, so the proof appears when the flash of intuition comes. The athlete then tidied up the steps, as the mathematician writes down and clarifies the proof, but the proof comes from jumping, not from building one step on another.

The athlete was the mathematician.

Finally, the athlete became an athlete not only by climbing up and down existing steps, but also by jumping up to pillars that already had steps—one becomes skilled at making intuitive leaps, not only by learning existing proofs, but also by solving already

proven problems as if there were no proof to read.

As one philosophy major commented to me, "Mathematicians do proofs, but they don't use them."

That flash of insight is the flash of inspiration that artists work under, and in this sense a mathematician is very similar to an artist. (What do a mathematician and an artist have in common? Both are pursuing beauty, to start with...)

This character of mathematics that is captured in geometry is true to geometry, but the actual form that it takes is largely irrelevant. Other branches of mathematics, properly taught, could accomplish just the same purpose, and for that matter could just as well replace geometry. Two other disciplines which draw heavily on applied mathematics, namely computer science and physics, have essentially the same strong points. I would hold no objections, for that matter, if high school geometry classes were replaced by strategy games like chess and go.

Mathematics is about puzzle solving; I would refer the reader to works such as Raymond Smullyan's *The Lady or the Tiger?* and Colin Adams's *The Knot Book: an Elementary Introduction to the Mathematical theory of Knots*. There are many people to whom mathematics is a recreation, consisting of the pleasure of solving puzzles. If mathematics is approached as memorizing incomprehensible formulas and hoping to have the good luck to guess the right formula at the right time, it will be a chore and a torture. If it is instead approached as puzzle solving, the activity will yield unexpected pleasure.

My father has a doctorate in physics and teaches computer science. He has said, more than once, that he would like for all of his students to take physics before taking his classes. There is a very important and simple reason for this. It is not because he wants his students to program physics simulators, or because there is some direct application of the mathematics in physics to

There is any direct application of the mathematics in physics to the computer science he teaches. There isn't. It is because of the problem solving, the manner of thinking. It is because someone who has learned how to think in a way that is effective in physics, will be able to think in a way that is effective in computer science.

This applies to other disciplines as well. Ancient Greek philosophers, and medieval European theologians, made the study of geometry a prerequisite to the study of their respective disciplines. It was not because the constructions or theorems would be directly useful in making claims about the nature of God. Like physics and computer science, there was no direct application. But in order to study geometry, one had to be able to think rigorously, analytically, critically, logically, and abstractly.

Thinking logically and abstractly is an important discipline in life and in other academic disciplines that consist of thinking—it has been said that if you can do mathematics, you can do almost anything. The main reason mathematics is valuable to the non-mathematician is as a form of weight lifting for the mind. Even when the knowledge has no application, the finesse that's learned can be useful.

To the non-mathematician, mathematics is a valuable discipline which offers practice in how to think well—both analytic thought and problem solving. Mathematics classes will most profitably be approached, not as "What is the formula I have to memorize," but with ideas such as those enumerated here. The nonmathematician who approaches a mathematics class as an opportunity for disciplined thought and problem solving will do better, profit more, and maybe, just maybe, enjoy the course.

It is my the hope that this essay have provided the nonmathematician with an inkling of why it is profitable for people who aren't going to be mathematicians to still study

people who aren't going to be mathematicians to still study mathematics.

# Why this Waste?

"Why this waste?" quoth the Thief,  
Missing a pageant unfold before his very eyes,  
One who sinned much, forgiven, for her great love,  
Broke open a priceless heirloom,  
An alabaster vessel of costly perfume,  
Costly chrism beyond all price anointing the Christ,  
Anointing the Christ unto life-giving death,  
Anointed unto life-giving death,  
A story ever told,  
In memory of her:

"Why this waste?" quoth also the Pious,  
Kings and Priest and Prophet one,  
Regarding in Heaven and earth a cornucopia great of blessing,  
Rank on rank of angelic host,  
Seraphim, cherubim, thrones, dominions, powers, authorities,  
principalities, archangels and angels,  
Sapphire Heavens and an earth growing living emeralds,  
A sun of gold, a moon of silver,  
A Theotokos eternally reigning after Heaven kissed earth,  
The Son of God who opened the womb of death,  
Pageantry of uncreated God and creation made one with God,  
"Why this waste?" indeed.

"Why this waste?" quoth the Skeptic,  
A pageant missed, other else ignored,  
A hawk's eye opened to root out magical thinking in the Pious,  
A man's eye closed to his own magical thinking one must needs  
embrace,

Materialist or naturalist to be,

"I see no evidence of God or any spirit,"  
Quoth he through his spirit,  
With the breath of God.

"Why this waste?" quoth the Mother,  
A child borne in her womb,  
Soon become a corpse nestled in her bosom,  
Rejecting the empty consolation of lies that lie evil away,  
Facing the stark, hard truth,  
Of clay in the hands of the potter,  
Dust is she too,  
To dust also to return,  
The last word, this is not:

"Why this waste?" quoth not another Mother,  
Whose Son's death as a sword her heart pierced,  
And seeth the infant son lost,  
In no wise lost, but found on her Son's throne in Heaven.

"Why this waste?" quoth the Father Almighty,  
Seeing his creation enter sin, death, and decay,  
Then moved Heaven and earth, nay the two hands of his Son and  
Spirit,

To right things wrong, straighten all things bent,  
Until sinners should become saints,  
The physical body sown in dishonor raised in honor,  
Spiritual, incorruptible, imperishable, glorious,  
Every move Satan makes one step closer to God sealing

checkmate,  
The triumph of *God* using every attack of *Satan* in victory  
eternal.

"Why this waste?" quote you and I,  
Having lost some things in a global economic crisis,  
More losses to come, it would seem.

It would seem.

Fearing that the providence of *God*,  
Faileth us in a disaster.

"Why this waste?" quote we in error,  
Mistaking the limits of sight for those of faith itself.

Why this waste?

# Why Young Earthers Aren't Completely Crazy

This post was a followup to [The Evolution of a Personal Perspective on Creation and Origins](#), which should be read before this article. It was written for the same mailing list. This post has been edited slightly for clarity and privacy concerns. But I've still left it rather clunky.

When I was talking with some Wheaton science professors about origins questions and Wheaton's hint of an inquisition, in which there are four stated views (two of which are deemed acceptable), and they were complaining about the President thinking that everything fits into four neat pigeonholes: everybody must believe position one, two, three, or four. (So far as I know, none of the science faculty believe any of those positions — I don't.) Then one of them stated, for the sake of fairness, that Wheaton at least allowed four views, while the media only allowed two: either you're a young earth creationist, or you believe in Darwinian evolution, and that's the end of that.

I had hoped that the Megalist at least would be above this misconception, and it was with some sadness that I found this hope disappointed in the posts I've read (I'm offline; most

recent post was one about a \$1M donation to a young-earth museum).

[The following paragraph describes a perspective on Thomas Aquinas. This is not my own perspective; it is one I am describing in accounting for other people's beliefs.]

I have stated (or, more properly, implied) that young earth creationism is a marginal position among Evangelical scholars (I will not speak for Catholics or mainline Protestants, beyond to say that I expect them to be less inclined to young earth belief than Evangelicals). Augustine, who is portrayed by some Evangelicals as the good example of a solid Bible-believing pre-Protestant theologian, as contrasted to Aquinas's dilution of Biblical faith with Aristotelian and humanist doctrine, did not have access to scientific inquiry concerning the age of the universe or the origins of life. His beliefs concerning origins were as far in technical detail from a young-earth story as would be a theistic evolutionary perspective. At Darwin's time, Evangelicals were not generally young-earthers; a young earth perspective gained prominence for reasons to be discussed, but the old earth implied by evolutionary theory was not a surprising claim. I believe in an old earth; Johnson believes in an old earth; Behe believes in an old earth; Kenyon believes in an old earth. For that matter, the Scopes monkey trial's Bryan, who was a member of the American Academy for the Advancement of Sciences, was not a Biblical literalist and did not believe in a young earth.

That stated, I would like to give a fair treatment and (in some sense) explanation of young earth creationism, including its popularity among some devout Christians. This is not, and is not intended as, argument concerning origins questions, and readers who are looking for germane material that will inform considerations of origins questions can safely skip this note. It is

intended as painting a fuller and fairer picture, of there being something to these people's beliefs besides a vulgar belligerence towards science.

In the following argument, I will make multiple Biblical references; these references are not here intended as appeal to religious authority, but as historical documents giving insight into how a particular people thought.

Among those cultures that permit eating meat, there can be dietary codes concerning what meat is and is not permitted. The term 'dietary code' is often associated with Judaism, with abstinence from pork holding a symbolic meaning of ethnic and religious identity, but this is neither the only dietary code, nor the only meaning a dietary code can have.

Contemporary American culture has a dietary code, albeit an unwritten one (beyond general health practices, and health code regulations about serving food). To give three examples of these unwritten rules: most Americans will not eat much of anything with a head on it or other visible reminders that the food is in fact the carcass of a slaughtered animal, will not eat much of any of the animals that are used as pets, and will not eat much of anything land-based with an exoskeleton. There are occasional exceptions to these rules — sardines, goldfish swallowing, and chocolate covered ants — but the exceptions are in fact occasional exceptions to general rules.

These dietary restrictions are not thought of consciously, and when an American travelling abroad sees people eating meat in violation of such rules, his first reaction is not likely to be to think about how American he is by abstaining from such food, but more likely disgust that people are eating such sickening food.

The quality of this perspective is representative of the most

ancient Jewish attitude towards certain foods. The Torah lists a number of animals and tells people that they are to regard these animals as "unclean and detestable", and are not to eat them (and someone who did became temporarily unclean). Uncleanness was not the same as moral defilement, and there were certain (albeit few) contexts (albeit not munching) in which texts reflect a social and religious permission to make oneself unclean. To eat unclean food was something you shouldn't be doing, but it wasn't something that had the particular meaning of treachery to Judaism, moreso than stealing — probably less; the injunction against stealing made the big 10.

In Judges, one of the older post-Torah books, one that narrates the social and moral chaos before there was a king, the Nazirite Samson eats honey from the carcass of an unclean lion — maybe something a Jew shouldn't be doing in general, but quite particularly something a Nazirite shouldn't be doing at all.

This action forms part of the story of a morally flawed, intermittently obedient hero, but it is not interpreted as being particularly goyish, not moreso than the other actions he took that broke God's law.

In Daniel, one of the latter additions to the Jewish canon, three sharp young Jews are brought to the palace of the king and make a big deal of not eating any meat at all, instead of eating the palace's unclean food. On the evidence of the text alone, it is ambiguous whether eating unclean foods has acquired the symbolic meaning of goyishness, or whether it's a matter that these three men were so devout that in a foreign land they would not compromise on even the issue of food.

In IV Maccabees (not canonical to Jews or most Christians, but an ancient Jewish document that sheds light on the community), a Greek persecutor is trying to forcibly convert

Jews to Hellenistic life, and inflicts gruesome tortures on Jews who refuse to eat pork. Here abstinence from unclean foods has very clearly become a (perhaps the) symbol of Jewish faith, and it holds this crystallized meaning to Jewish martyr and Greek persecutor alike.

The near-total investment of dietary code with symbolic significance was not universal; one Jewish teacher said both "I have come not to abolish but fulfill the Tanakh," and "What makes a man unclean is not what goes into him, but what comes out;" his disciples did not perceive any puzzling contradiction, and the movement he ignited from within Judaism is in numerous ways very Jewish to this day, but does not retain the dietary code.

This has conditioned subsequent history; not all Jews today keep the dietary code, but there are some who are atheistic or agnostic and still keep kosher — which is to say that they are making a symbolic act that means much more than just a choice in food, that means an identity that they do not wish to disappear.

The choices of the Jews in IV Maccabees do not exactly represent a claim that temporary ceremonial uncleanness from eating pork is literally a fate worse than death — a claim which is (at very least) hard to justify from the Torah. They rather recognized the literal act as the tip of the iceberg — and dug in, full force.

Young earth creationism is not what it appears to be on the surface, namely a mere benighted refusal to open in the light of science. If it is viewed in isolation, on simply scientific grounds — including the \$1M gift to a young earth museum — it will necessarily appear more than a little looney, as is the choice of being tortured to death instead of eating a few bites of foreign

food. But it's not that at all. It is a symbolic act, one that is so thoroughly a part of these people that it would not occur to most of them to call it symbolic. They may have chosen the wrong literal point at which to dig in — I believe so, pending scientific support for a young earth besides records of bizarre ways to fool scientific dating techniques — and that is to their discredit. What I am much more hesitant to criticize them on is why they are digging in.

S.J. Gould paints a Pollyana-ish picture of the interaction between science and religion in his claim of non-overlapping magisterial areas — so that no scientific claim need have threatening implications for religion. To give a hint as to why this isn't the case...

Suppose (for the sake of argument) that mathematics is required to hold as axiomatic that pi is equal to  $22/7$ . It might be possible to pay lip service, claim pi to be  $22/7$  in certain circumstances, and otherwise get back to do serious mathematics. If that option were not taken, then the result would be a contradiction, from which anything would be provable (at least in certain fields of mathematics), from which point mathematics as we know it would be dead. Perhaps it might be possible to find some axiomatic revision of geometry that would produce a very different kind of mathematics in which there was something called a circle with a circumference:diameter ratio always equal to exactly  $22:7$ . The point I'm getting at is that holding pi to be  $22/7$  might work for some not-seriously-mathematical purposes — you have to use some approximation for most numerical calculations — but the change would have far more disruptive implications for mathematics itself than might be obvious to someone looking in from the outside.

Darwinian evolution is not just a theory concerning the origins

of life, in the sense of something that has little significant implication to other areas. William B. Provine, historian of science and evolutionary adherent, comments, "prominent evolutionists have joined with equally prominent theologians and religious leaders to sweep under the rug the incompatibilities of evolution and religion." Darwinism is on some accounts the cutting edge of the sword wielded by naturalism, and when young earthers dig in over the ostensible issue of origins, they are digging in out of concern for much larger issues. I will not here argue the case that Darwinism bears the implications it is believed to, but I will say that when these people assert a young earth, they are standing not only against the claim of an old earth but against the naturalism that hides behind "We're just teaching a well-established scientific theory." and its implication of "This is a neutral claim whose truth does not threaten your beliefs at all."

There was one point when I was talking with an astronomy professor at Wheaton, and he mentioned a student who had been threatened by the old universe perspective of the class (until he explained that students were not required to believe in an old universe, although the class would be taught from that perspective), and I suggested talking on the first day about the grounds on which Darwinian evolution may be challenged — so that the young earth/old earth question is not the fully symbolic question of divine creation versus mindless forces alone, but only the question of whether the universe is thousands or billions of years old. He liked my suggestion.

I have tried to give a sympathetic and respectful account of young earth creationists, not to persuade people that they are correct on the particular point they have chosen to dig in, but to suggest how something besides an insane aversion to listening to

science might lie behind their choice. Having stated that, I would also like to state quite specifically that I disagree with their position, and regard it as unfortunate. For those wishing a further account (and something that provides a historical description instead of an analogy designed to convey a basic insight), I would recommend Wheaton College Professor Mark Noll's *The Scandal of the Evangelical Mind*, which traces the reactive movement you have encountered. For historical-cultural reasons Noll traces, Evangelicalism does not always share in the Christian tradition's richer mental life, and among those who do not pursue the life of the mind, young-earth creationism seems a good way to assert God's creation against teachings that life is the meaningless by-product of an uncaring universe. Among those Evangelicals and other Christians who do pursue the life of the mind, it is quite rare.

For this reason, I would request that, when I bring up what Kenyon, or Johnson, or Behe, has said, and ask what your justifications for dismissing it are, please don't post a rebuttal to six-day, young earth creationism. A comparable response on my part, to back up a statement that evolution is flawed, would be to post an attack on [very passé] Lamarckian evolution and consider myself to have discredited "evolution". A non sequitur of that magnitude, on my part, could possibly destroy any chances I had of being taken seriously. Perhaps I am alone in looking at the question this way, but I want to respect my fellow Megalist members in this discussion, and it is awfully hard for me to maintain that respect when I see posts like some of the traffic in the recent past.

-Jonathan

**Post Script, May 5, 2003:** Since I posted this some time back, I have learned that leading members of the MegaList have

become increasingly involved in the Intelligent Design movement.

I do not believe I can take more than incidental credit for this; I believe they are persuaded, not by my eloquence in a small number of posts, but because the evidence itself suggests things which aren't well explained by a purely Darwinian account.

# Within the Steel Orb

The car pulled up on the dark cobblestones and stopped by the darker castle. The vehicle was silver-grey, low to the ground, and sleek. A—let us call him a man—opened the driver's door on the right, and stood up, tall, dark, clad in a robe the color of the sky at midnight. Around the car he went, opened the door for his passenger, and once the passenger stepped out, made one swift motion and had two bags on his shoulder. The bags were large, but he moved as if he were accustomed to carrying far heavier fare. It was starlight out, and the moon was visible as moonlight rippled across a pool.

The guest reached for the bags. "Those are heavy. Let me—" The host smiled darkly. "Do not worry about the weight of your bags."

The host opened a solid greyblack door, of unearthly smoothness, and walked swiftly down a granite hallway, allowing his guest to follow. "You've had a long day. Let me get you something to drink." He turned a door, poured something into two iridescent titanium mugs, and turned through another corridor and opened a door on its side. Inside the room were two deep armchairs and a low table.

"This is my first time traveling between worlds—how am I to

address you?"

The host smiled. "Why do you wish to know more of my name? It is enough for you to call me Oinos. Please enjoy our welcome."

The guest sipped his drink. "Cider?"

The host said, "You may call it that; it is a juice, which has not had artificial things done to make it taste like it just came out of its fruit regardless of how much it should have aged by the time you taste it. It is juice where time has been allowed to do its work." He was holding a steel orb. "You are welcome here, Art." Then—he barely seemed to move—there was a spark, and Oinos pulled a candle from the wall and set it on the table.

Art said, "Why not a fluorescent light to really light the room up?"

The host said, "For the same reason that you either do not offer your guests mocha at all, or else give them real mocha and not a mix of hot water, instant coffee, and hot cocoa powder. In our world, we can turn the room bright as day any time, but we do not often do so."

"Aah. We have a lot to learn from you about getting back to nature."

"Really? What do you mean by 'getting back to nature'? What do you do to try to 'get back to nature'?"

"Um, I don't know what to really do. Maybe try to be in touch with the trees, not being cooped up inside all the time, if I were doing a better job of it..."

"If that is getting back in touch with nature, then we pay little attention to getting in touch with nature. And nature, as we understand it, is about something fundamentally beyond dancing on hills or sitting and watching waves. I don't criticize you if you do them, but there is really something more. And I can talk with you about drinking juice without touching the natural processes

that make cider or what have you, and I can talk with you about natural cycles and why we don't have imitation daylight any time it would seem convenient. But I would like you to walk away with something more, and more interesting, than how we keep technology from being too disruptive to natural processes. That isn't really the point. It's almost what you might call a side effect."

"But you do an awfully impressive job of putting technology in its place and not getting too involved with it."

Oinos said, "Have you had enough chance to stretch out and rest and quench your thirst? Would you like to see something?"

"Yes."

Oinos stood, and led the way down some stairs to a room that seemed to be filled with odd devices. He pushed some things aside, then walked up to a device with a square in the center, and pushed one side. Chains and gears moved, and another square replaced it.

"This is my workshop, with various items that I have worked on. You can come over here and play with this little labyrinth; it's not completely working, but you can explore it if you take the time to figure it out. Come on over. It's what I've been working on most recently."

Art looked around, somewhat amazed, and walked over to the 'labyrinth.'

Oinos said, "In your world, in classical Greek, the same word, 'techne,' means both 'art' and 'technology.' You misunderstand my kindred if you think we aren't especially interested in technology; we have a great interest in technology, as with other kinds of art. But just as you can travel a long distance to see the Mona Lisa without needing a mass-produced Mona Lisa to hang in your bathroom, we enjoy and appreciate technologies without

making them conveniences we need to have available every single day."

Art pressed a square and the labyrinth shifted. "Have I come here to see technologies?"

Oinos paused. "I would not advise it. You see our technologies, or how we use them, because that is what you are most ready to see. Visitors from some other worlds hardly notice them, even if they are astonished when they are pointed out."

Art said, "Then why don't we go back to the other room?"

Oinos turned. "Excellent." They went back, and Art sat down in his chair.

Art, after a long pause, said, "I still find it puzzling why, if you appreciate technology, you don't want to have more of it."

Oinos said, "Why do you find it so puzzling?"

"Technology does seem to add a lot to the body."

"That is a very misleading way to put it. The effect of most technologies that you think of as adding to the body is in fact to undercut the body. The technologies that you call 'space-conquering' might be appropriately called 'body-conquering.'"

"So the telephone is a body-conquering device? Does it make my body less real?"

"Once upon a time, long ago from your perspective, news and information could not really travel faster than a person could travel. If you were talking with a person, that person had to be pretty close, and it was awkward and inconvenient to communicate with those who were far away. That meant that the people you talked with were probably people from your local community."

"So you were deprived of easy access to people far away?"

"Let me put it this way. It mattered where you were, meaning where your body was. Now, on the telephone, or instant

messages, or the web, nothing and no one is really anywhere, and that means profound things for what communities are. And are not. You may have read about 'close-knit rural communities' which have become something exotic and esoteric to most of your world's city dwellers... but when space conquering technologies had not come in, and another space-conquering technology, modern roads allowing easy moving so that people would have to say goodbye to face-to-face friendships every few years... It's a very different way of relating. A close-knit rural community is exotic to you because it is a body-based community in ways that tend not to happen when people make heavy use of body-conquering, or space-conquering, or whatever you want to call them, technologies."

"But isn't there more than a lack of technologies to close-knit communities?"

"Yes, indeed... but... spiritual discipline is about much more than the body, but a lot of spiritual discipline can only shape people when people are running into the body's limitations. The disciplines—worship, prayer, fasting, silence, almsgiving, and so on—only mean something if there are bodily limits you are bumping into. If you can take a pill that takes away your body's discomfort in fasting, or standing through worship, then the body-conquering technology of that pill has cut you off from the spiritual benefit of that practice."

"Aren't spiritual practices about more than the body?"

"Yes indeed, but you won't get there if you have something less than the body."

Art sat back. "I'd be surprised if you're not a real scientist. I imagine that in your world you know things that our scientists will not know for centuries."

Oinos sat back and sat still for a time, closing his eyes. Then

he opened his eyes and said, "What have you learned from science?"

"I've spent a lot of time lately, wondering what Einstein's theory of relativity means for us today: even the 'hard' sciences are relative, and what 'reality' is, depends greatly on your own perspective. Even in the hardest sciences, it is fundamentally mistaken to be looking for absolute truth."

Oinos leaned forward, paused, and then tapped the table four different places. In front of Art appeared a gridlike object which Art recognized with a start as a scientific calculator like his son's. "Very well. Let me ask you a question. Relative to your frame of reference, an object of one kilogram rest mass is moving away from you at a speed of one tenth the speed of light. What, from your present frame of reference, is its effective mass?"

Art hesitated, and began to sit up.

Oinos said, "If you'd prefer, the table can be set to function as any major brand of calculator you're familiar with. Or would you prefer a computer with Matlab or Mathematica? The remainder of the table's surface can be used to browse the appropriate manuals."

Art shrunk slightly towards his chair.

Oinos said, "I'll give you hints. In the theory of relativity, objects can have an effective mass of above their rest mass, but never below it. Furthermore, most calculations of this type tend to have anything that changes, change by a factor of the inverse of the square root of the quantity: one minus the square of the object's speed divided by the square of the speed of light. Do you need me to explain the buttons on the calculator?"

Art shrunk into his chair. "I don't know all of those technical details, but I have spent a lot of time thinking about relativity."

Oinos said, "If you are unable to answer that question before I started dropping hints, let alone after I gave hints, you should not pose as having contemplated what relativity means for us today. I'm not trying to humiliate you. But the first question I asked is the kind of question a teacher would put on a quiz to see if students were awake and not playing video games for most of the first lecture. I know it's fashionable in your world to drop Einstein's name as someone you have deeply pondered. It is also extraordinarily silly. I have noticed that scientists who have a good understanding of relativity often work without presenting themselves as having these deep ponderings about what Einstein means for them today. Trying to deeply ponder Einstein without learning even the basics of relativistic physics is like trying to write the next Nobel prize-winning German novel without being bothered to learn even the most rudimentary German vocabulary and grammar."

"But don't you think that relativity makes a big difference?"

"On a poetic level, I think it is an interesting development in your world's history for a breakthrough in science, Einstein's theory of relativity, to say that what is absolute is not time, but light. Space and time bend before light. There is a poetic beauty to Einstein making an unprecedented absolute out of light. But let us leave poetic appreciation of Einstein's theory aside.

"You might be interested to know that the differences predicted by Einstein's theory of relativity are so minute that decades passed between Einstein making the theory of relativity and people being able to use a sensitive enough clock to measure the minute difference of the so-called 'twins paradox' by bringing an atomic clock on an airplane. The answer to the problem I gave you is that for a tenth the speed of light—which is faster than you can imagine, and well over a thousand times

the top speed of the fastest supersonic vehicle your world will ever make—is one half of one percent. It's a disappointingly small increase for a rather astounding speed. If the supersonic Skylon is ever built, would you care to guess the increase in effective mass as it travels at an astounding Mach 5.5?"

"Um, I don't know..."

"Can you guess? Half its mass? The mass of a car? Or just the mass of a normal-sized adult?"

"Is this a trick question? Fifty pounds?"

"The effective mass increases above the rest mass, for that massive vehicle running at about five times the speed of sound and almost twice the top speed of the SR-71 Blackbird, is something like the mass of a mosquito."

"A mosquito? You're joking, right?"

"No. It's an underwhelming, microscopic difference for what relativity says when the rumor mill has it that Einstein taught us that hard sciences are as fuzzy as anything else... or that perhaps, in Star Wars terms, 'Luke, you're going to find that many of the truths we cling to depend greatly on your own point of view.' Under Einstein, you will in fact **not** find that many of the observations that we cling to, depend greatly on your own frame of reference. You have to be doing something pretty exotic to have relativity make any measurable difference from the older physics at all."

"Would you explain relativity to me so that I can discuss its implications?"

"I really think there might be more productive ways to use your visit."

"But you have a scientist's understanding of relativity."

"I am not sure I'd say that."

"Why? You seem to understand relativity a lot more like a

scientist than I do."

"Let's talk about biology for a moment. Do you remember the theory of spontaneous generation? You know, the theory that life just emerges from appropriate material?"

"I think so."

"But your world's scientists haven't believed in spontaneous generation since over a century before you were born. Why would you be taught that theory—I'm assuming you learned this in a science class and not digging into history?"

"My science course explained the theory in covering historical background, even though scientists no longer believe that bread spontaneously generates mold."

"Let me ask what may seem like a non-sequitur. I assume you're familiar with people who are working to get even more of religion taken out of public schools?"

"Yes."

"They are very concerned about official prayers at school events, right? About having schools endorse even the occasional religious practice?"

"Yes."

"Ok. Let me ask what may seem like a strange question. Have these 'separation of Church and state' advocates also advocated that geometry be taken out of the classroom?"

Art closed his eyes, and then looked at Oinos as if he had two heads. "It seems you don't know everything about my world."

"I don't. But please understand that geometry did not originate as a secular technical practice. You might have heard this mentioned. Geometry began its life as a 'sacred science,' or a religious practice, and to its founders the idea that geometry does not have religious content would have struck them as worse than saying that prayer does not have religious content."

"Oh, I think I understand that. I think I understand that."

"OK, I think I remember that being mentioned. So to speak, my math teacher taught about geometry the 'sacred science' the way that my biology teacher taught about the past theory of spontaneous generation."

Oinos focused his eyes on Art. "In our schools, and in our training, physics, biology, and chemistry are 'taught' as 'secular sciences' the same way, in your school, spontaneous generation is taught as 'past science', or even better, the 'sacred science' of geometry is 'taught' in the course of getting on to a modern understanding of geometry."

Art said, "So the idea that the terrain we call 'biology' is to you—"

Oinos continued: "As much something peered at through a glass bell as the idea that the terrain of regular polygons belongs to a secularized mathematics."

"What is a sacred science?"

Oinos sat back. "If a science is about understanding something as self-contained whose explanations do not involve God, and it is an attempt to understand as physics understand, and the scientist understands as a detached observer, looking in through a window, then you have a secular science—the kind that reeks of the occult to us. Or that may sound strange, because in your world people proclaiming sacred sciences are proclaiming the occult. But let me deal with that later. A sacred science does not try to understand objects as something that can be explained without reference to God. A sacred science is first and foremost about God, not about objects. When it understands objects, it understands them out of God, and tries to see God shining through them. A sacred science has its home base in the understanding of God, not of inanimate matter, and its understanding of things bears the imprint of God. If you want

THE NATURE OF ITS KNOWING IN AN IMAGE, DO NOT THINK OF SOMEONE looking in and observing, detached, through a window, but someone drinking something in."

"Is everything a sacred science to you? And what is a sacred science? Astrology?"

"Something like that, except that I use the term 'sacred science' by way of accommodation. Our own term is one that has no good translation in your language. But let us turn to the stars."

"Astrology is right in this: a star is more than a ball of plasma. Even in the Bible there is not always such a distinction between the ranks of angels and the stars as someone raised on materialist science might think." He rose, and began to walk, gesturing for Art to follow him. In the passage, they turned and entered a door. Oinos lit a lamp next to an icon on the wall.

The icon looked like starlight. It showed angels praying at the left, and then the studded sapphiric canopy of the night sky behind a land with herbs shooting from the earth, and on the right an immense Man—if he was a Man—standing, his hand raised in benediction. All around the sapphire dome were some majestic figures, soaring aloft in two of their six wings. Art paused to drink it in.

"What are those symbols?"

"They are Greek letters. You are looking at an icon of the creation of the stars, but the text is not the text for that day; it is from another book, telling of the angels thunderously shouting for joy when the stars were created. So the stars are connected with the angels."

"Is this astrology?"

"No, because the stars and angels both point to God. The influences in astrology point beyond matter to something else, but they do not point far enough beyond themselves. To say so is

but they do not point far enough beyond themselves. If you can use something to make a forecast that way, it doesn't point far enough beyond itself."

"Why not?"

"One definition to distinguish religion from magic—one used by anthropologists—is that religion is trying to come into contact with the divine, and magic is trying to control the divine. God cannot be controlled, and there is something of control in trying to foretell a future that God holds in mystery. A real God cannot be pried into by a skill. Astrology departs from a science that can only see stars as so much plasma, but it doesn't go far enough to lead people to look into the stars and see a shadow of their Creator. To be a sacred science, it is not enough to point to something more than matter as secular science understands it; as the term is used in our language, one can only be a sacred science by pointing to God."

"Then what is a sacred science? Which branches of learning as you break them up? Can they even be translated into my language?"

"You seem to think that if astrology is not a sacred science then sacred sciences must be something much more hidden. Not so. Farming is a sacred science, as is hunting, or inventing, or writing. When a monk makes incense, it is not about how much incense he can make per unit of time; his making incense is the active part of living contemplatively, and his prayer shows itself in physical labor. His act is more than material production; it is a sacred science, or sacred art or sacred endeavor, and what goes into and what comes out of the activity is prayer. Nor is it simply a matter that he is praying while he acts; his prayers matter for the incense. There are many lands from your world's Desert Fathers to Mexico in your own day where people have a sense that it matters what state people cook in, and that cooking with

that it matters what state people cook in, and that cooking with love puts something into a dish that no money can buy. Perhaps you will not look at me askance when I say that not only monks in their monasteries exotically making incense for worship are performing a sacred science, but cooking, for people who may be low on the totem pole and who are not considered exotic, as much as for anyone else, can and should be a sacred science. Like the great work that will stay up with a sick child all night."

"Hmm..." Art said, and then finished his tankard. "Have you traveled much?"

"I have not reached one in five of the galaxies with inhabited worlds. I can introduce you to people who have some traveling experience, but I am not an experienced traveler. Still, I have met sites worth visiting. I have met, learned, worshiped. Traveling in this castle I have drunk the blood of gems. There are worlds where there is nothing to see, for all is music, and song does everything that words do for you. I have beheld a star as it formed, and I have been part of an invention that moves forward as a thousand races in their laboratories add their devices. I have read books, and what is more I have spoken with members of different worlds and races. There seems to be no shortage of wonders, and I have even been to your own world, with people who write fantasy that continues to astonish us—"

"My son-in-law is big into fantasy—he got me to see a Lord of the whatever-it-was movie—but I don't fancy them much myself."

"We know about Tolkein, but he is not considered a source of astonishing fantasy to us."

"Um..." Art took a long time to recall a name, and Oinos waited patiently. "Lewis?"

"If you're looking for names you would have heard of, Voltaire and Turgenev are two of the fantasy authors we consider essential."

and Jung are two of the fantasy authors we consider essential. Tolkein and Lewis are merely imaginative. It is Voltaire and Jung who are truly fantasy authors. But there are innumerable others in your world."

Art said, "Um... what do you mean by 'fantasy author'?"

Oinos turned. "I'm sorry; there is a discrepancy between how your language uses 'fantasy author' and ours. We have two separate words that your 'fantasy' translates, and the words stand for very different concepts. One refers to works of imagination that are set in another world that is not confused with reality. The other refers to a fundamental confusion that can cost a terrible price. Our world does not produce fiction; we do appreciate the fiction of other worlds, but we do not draw a particularly strong line between fiction where only the characters and events are imagined, and fiction where the whole world is imagined. But we do pay considerable attention to the second kind of fantasy, and our study of fantasy authors is not a study of imagination but a study of works that lead people into unreality. 'Fantasy author' is one of the more important terms in understanding your world and its history."

Art failed to conceal his reaction.

"Or perhaps I was being too blunt. But, unfashionable as it may be, there is such a thing as evil in your world, and the ways in which people live, including what they believe, has something to do with it. Not everything, but something."

Oinos waited for a time. Then, when Art remained silent, he said, "Come with me. I have something to show you." He opened a door on the other side of the room, and went into the next room.

The room was lit by diffuse moonlight, and there was a ledge around the room and water which Oinos stirred with his hand to light a phosphorescent glow. When Art had stepped in, Oinos stepped up, balancing on a steel cable, and stood silent for a

stepped up, balancing on a steel cable, and stood silent for a while. "Is there anything here that you can focus on?"

"What do you mean?"

"Step up on this cable and take my hand."

"What if I fall into the water?"

Art tried to balance, but it seemed even more difficult in the dark. For a while, he tried to keep his balance with Oinos's help, but he seemed barely up. He overcompensated twice in opposite directions, began flying into the water, and was stopped at last by Oinos's grip, strong as steel, on his arm.

"I can't do this," Art said.

"Very well." Oinos opened a door on the other side of the room, and slowly led him out. As they walked, Oinos started up a spiral staircase and sat down to rest after Art reached the top. Then Art looked up at the sky, and down to see what looked like a telescope.

"What is it?"

"A telescope, not too different from those of your world."

Oinos stood up, looked at it, and began some adjustments. Then he called Art over, and said, "Do you see that body?"

"What is it?"

"A small moon."

Oinos said, "I want you to look at it as closely as you can," and then pulled something on the telescope.

"It's moving out of sight."

"That's right; I just deactivated the tracking feature. You should be able to feel handles; you can move the telescope with them."

"Why do I need to move the telescope? Is the moon moving?"

"This planet is rotating: what the telescope sees will change as it rotates with the planet, and on a telescope you can see the rotation."

rotation.

Art moved the handles and found that it seemed either not to move at all or else move a lot when he put pressure on it.

Art said, "This is a hard telescope to control."

Oinos said, "The telescope is worth controlling."

"Can you turn the tracking back on?"

Oinos merely repeated, "The telescope is worth controlling."

The celestial body had moved out of view. Art made several movements, barely passed over the moon, and then found it. He tried to see what he could, then give a relatively violent shove when the moon reached the edge of his field of view, and see if he could observe the body that way. After several tries, he began to get the object consistently in view... and found that he was seeing the same things about it, not being settled enough between jolts to really focus on what was there.

Art tried to make a smooth, slow movement with his body, and found that a much taller order than it sounded. His movement, which he could have sworn was gentle and smooth, produced what seemed like erratic movement, and it was only with greatest difficulty that he held the moon in view.

"Is this badly lubricated? Or do you have lubrication in this world?"

"We do, on some of our less precise machines. This telescope is massive, but it's not something that moves roughly when it is pushed smoothly; the joints move so smoothly that putting oil or other lubricants that are familiar to you would make them move much more roughly."

"Then why is it moving roughly every time I push it smoothly?"

"Maybe you aren't pushing it as smoothly as you think you are?"

Art pushed back his irritation, and then found the moon again. And found, to his dismay, that when the telescope jerked, he had

and found, to his dismay, that when the telescope jerked, he had moved the slightest amount unevenly.

Art pushed observation of the moon to the back of his mind. He wanted to move the telescope smoothly enough that he wouldn't have to keep finding the moon again. After a while, he found that this was less difficult than he thought, and tried for something harder: keeping the moon in the center of what he could see in the telescope.

He found, after a while, that he could keep the moon in the center if he tried, and for periods was able to manage something even harder: keeping the moon from moving, or perhaps just moving slowly. And then, after a time, he found himself concentrating through the telescope on taking in the beauty of the moon.

It was breathtaking, and Art later could never remember a time he had looked on something with quite that fascination.

Then Art realized he was exhausted, and began to sit down; Oinos pulled him to a bench.

After closing his eyes for a while, Art said, "This was a magnificent break from your teaching."

"A break from teaching? What would you mean?"

Art sat, opened his mouth, and then closed it. After a while, he said, "I was thinking about what you said about fantasy authors... do you think there is anything that can help?"

Oinos said, "Let me show you." He led Art into a long corridor with smooth walls and a round arch at top. A faint blue glow followed them, vanishing at the edges. Art said, "Do you think it will be long before our world has full artificial intelligence?"

Oinos said, "Hmm... Programming artificial intelligence on a computer is not that much more complex than getting a stone to lay an egg."

Art said "But our scientists are making progress. Your

... said, "But our scientists are making progress. Your advanced world has artificial intelligence, right?"

Oinos said, "Why on earth would we be able to do that? Why would that even be a goal?"

"You have computers, right?"

"Yes, indeed; the table that I used to call up a scientific calculator works on the same principle as your world's computers. I could almost say that inventing a new kind of computer is a rite of passage among serious inventors, or at least that's the closest term your world would have."

"And your computer science is pretty advanced, right? Much more advanced than ours?"

"We know things that the trajectory of computer science in your world will never reach because it is not pointed in the right direction." Oinos tapped the wall and arcs of pale blue light spun out.

"Then you should be well beyond the point of making artificial intelligence."

"Why on a million, million worlds should we ever be able to do that? Or even think that is something we could accomplish?"

"Well, if I can be obvious, the brain is a computer, and the mind is its software."

"Is it?"

"What else could the mind be?"

"What else could the mind be? What about an altar at which to worship? A workshop? A bridge between Heaven and earth, a meeting place where eternity meets time? A treasury in which to gather riches? A spark of divine fire? A line in a strong grid? A river, ever flowing, ever full? A tree reaching to Heaven while its roots grasp the earth? A mountain made immovable for the greatest storm? A home in which to live and a ship by which to sail? A constellation of stars? A temple that sanctifies the

...a constellation of stars? A temple that sanctifies the earth? A force to draw things in? A captain directing a starship or a voyager who can travel without? A diamond forged over aeons from of old? A perpetual motion machine that is simply impossible but functions anyway? A faithful manuscript by which an ancient book passes on? A showcase of holy icons? A mirror, clear or clouded? A wind which can never be pinned down? A haunting moment? A home with which to welcome others, and a mouth with which to kiss? A strand of a web? An acrobat balancing for his whole life long on a slender crystalline prism between two chasms? A protecting veil and a concealing mist? An eye to glimpse the uncreated Light as the world moves on its way? A rift yawning into the depths of the earth? A kairometer, both primeval and young? A—"

"All right, all right! I get the idea, and that's some pretty lovely poetry. (What's a kairometer?) These are all very beautiful metaphors for the mind, but I am interested in what the mind is literally."

"Then it might interest you to hear that your world's computer is also a metaphor for the mind. A good and poetic metaphor, perhaps, but a metaphor, and one that is better to balance with other complementary metaphors. It is the habit of some in your world to understand the human mind through the metaphor of the latest technology for you to be infatuated with.

Today, the mind is a computer, or something like that. Before you had the computer, 'You're just wired that way' because the brain or the mind or whatever is a wired-up telephone exchange, the telephone exchange being your previous object of technological infatuation, before the computer. Admittedly, 'the mind is a computer' is an attractive metaphor. But there is some fundamental confusion in taking that metaphor literally and

assuming that, since the mind is a computer, all you have to do is make some more progress with technology and research and you can give a computer an intelligent mind."

"I know that computers don't have emotions yet, but they seem to have rationality down cold."

"Do they?"

"Are you actually going to tell me that computers, with their math and logic, aren't rational?"

"Let me ask you a question. Would you say that the thing you can hold, a thing that you call a book, can make an argument?"

"Yes; I've seen some pretty good ones."

"Really? How do paper and ink think out their position?"

Art hesitated, and said, "Um, if you're going to nitpick..."

"I'm not nitpicking. A book is a tool of intelligent communication, and they are part of how people read author's stories, or explanation of how to do things, or poetry, or ideas. But the physical thing is not thereby intelligent. However much you think of a book as making an argument, the book is incapable of knowing what an argument is, and for that matter the paper and ink have no idea of whether they contain the world's best classic, or something mediocre, or incoherent accusations that world leaders are secretly planning to turn your world to dog drool, or randomly generated material that is absolute gibberish. The book may be meaningful to you, but the paper with ink on it is not the sort of thing that can understand what you recognize through the book.

"This might ordinarily be nitpicking, but it says something important about computers. One of the most difficult things for computer science instructors in your world to pound through people's heads is that a computer does not get the gist of what you are asking it to do and overlook minor mistakes, because the

computer has no sense of what you are doing and no way to discern what were trying to get it to do from a mistake where you wrote in a bug by telling it to do something slightly different from what you meant. The computer has no sense that a programmer meant anything. A computer follows instructions, one after another, whether or not they make sense, and indeed without being able to wonder whether they make sense. To you, a program may be a tool that acts as an electronic shopping cart to let you order things through the web, but the web server no more understands that it is being used as a web server than a humor book understands that it is meant to make people laugh. Now most or all of the books you see are meant to say something —there's not much market for a paperback volume filled with random gibberish—but a computer can't understand that it is running a program written for a purpose any more than a book can understand that the ink on its pages is intended for people to read."

Art said, "You don't think artificial intelligence is making real progress? They seem to keep making new achievements."

Oinos said, "The rhetoric of 'We're making real breakthroughs now; we're on the verge of full artificial intelligence, and with what we're achieving, full artificial intelligence is just around the corner' is not new: people have been saying that full artificial intelligence is just around the corner since before you were born. But breeding a better and better kind of apple tree is not progress towards growing oranges. Computer science, and not just artificial intelligence, has gotten good at getting computers to function better as computers. But human intelligence is something else... and it is profoundly missing the point to only realize that the computer is missing a crucial ingredient of the most computer-like activity of

human rational analysis. Even if asking a computer to recognize a program's purpose reflects a fundamental error—you're barking up the wrong telephone pole. Some people from your world say that when you have a hammer, everything begins to look like a nail. The most interesting thing about the mind is not that it can do something more complete when it pounds in computer-style nails. It's something else entirely."

"But what?"

"When things are going well, the 'computer' that performs calculating analysis is like your moon: a satellite, that reflects light from something greater. Its light is useful, but there is something more to be had. The sun, as it were, is that the mind is like an altar, or even something better. It takes long struggles and work, but you need to understand that the heart of the mind is at once practical and spiritual, and that its greatest fruit comes not in speech but in silence."

Art was silent for a long time.

Oinos stopped, tapped a wall once, and waited as an opening appeared in the black stone. Inside an alcove was a small piece of rough hewn obsidian; Oinos reached in, took it, and turned it to reveal another side, finely machined, with a series of concentric ridged grooves centered around a tiny niche. "You asked what a kairometer was, and this is a kairometer, although it would take you some time to understand exactly what it is."

"Is it one of the other types of computers in your world?"

"Yes. I would call it information technology, although not like the information technology you know. It is something people come back to, something by which people get something more than they had, but it does this not so much according to its current state as to our state in the moment we are using it. It does not change." Oinos placed the object in Art's hands.

Art slowly turned it. "Will our world have anything like this?" Oinos took the kairometer back and returned it to its niche; when he withdrew his hand, the opening closed with a faint whine. "I will leave you to find that yourself."

Oinos began walking, and they soon reached the end of the corridor. Art followed Oinos through the doorway at the end and gasped.

Through the doorway was something that left Art trying to figure out whether or not it was a room. It was a massive place, lit by a crystalline blue light. As Art looked around, he began to make sense of his surroundings: there were some bright things, lower down, in an immense room with rounded arches and a dome at the top, made of pure glass. Starlight streamed in. Art stepped through the doorway and sunk down a couple of inches.

Oinos stooped for a moment, and then said, "Take off your shoes. They are not needed here." Art did so, and found that he was walking on a floor of velveteen softness. In the far heart of the room a thin plume of smoke arose. Art could not tell whether he smelled a fragrance, but he realized there was a piercing chant. Art asked, "What is the chant saying?"

Oinos did not answer.

What was the occasion? Art continued to look, to listen, and began trying to drink it in. It almost sounded as if they were preparing to receive a person of considerable importance. There was majesty in the air.

Oinos seemed to have slipped away.

Art turned and saw an icon behind him, hanging on the glass. There was something about it he couldn't describe. The icon was dark, and the colors were bright, almost luminous. A man lay dreaming at the bottom, and something reached up to a light hidden in the clouds—was it a ladder? Art told himself the

artistic effect was impressive, but there was something that seemed amiss in that way of looking at it.

What bothered him about saying the icon had good artistic effect? Was the artistry bad? That didn't seem to be it. He looked at a couple of areas of artistic technique, but it was difficult to do so; such analysis felt like a foreign intrusion. He thought about his mood, but that seemed to be the wrong place to look, and almost the same kind of intrusion. There seemed to be something shining through the icon; looking at it was like other things he had done in this world, only moreso. He was looking through the icon and not around it, but... Art had some sense of what it was, but it was not something he could fit into words.

After being absorbed in the icon, Art looked around. There must have been hundreds of icons around, and lights, and people; he saw what seemed like a sparse number of people—of Oinos's kind—spread out through the vast space. There was a chant of some kind that changed from time to time, but seemed to somehow be part of the same flow. Things seemed to move very slowly—or move in a different time, as if clock time were turned on its side, or perhaps as if he had known clock time as it was turned on its side and now it was right side up—but Art never had the sense of nothing going on. There seemed to always be something more going on than he could grasp.

Art shifted about, having stood for what seemed like too long, sat down for a time, and stood up. The place seemed chaotic, in a way cluttered, yet when he looked at the "clutter," there was something shining through, clean as ice, majestic as starlight, resonant as silence, full of life as the power beneath the surface of a river, and ordered with an order that no rectangular grid could match. He did not understand any of the

details of the brilliant dazzling darkness... but they spoke to him  
none the less.

After long hours of listening to the chant, Art realized with a start that the fingers of dawn had stolen all around him, and he saw stone and verdant forest about the glass walls until the sunlight began to blaze. He thought, he thought he could understand the song even as its words remained beyond his reach, and he wished the light would grow stronger so he could see more. There was a crescendo all about him, and—

Oinos was before him. Perhaps for some time.

"I almost understand it," Art said. "I have started to taste  
this world."

Oinos bowed deeply. "It is time for you to leave."

# A Wonderful Life

Peter never imagined that smashing his thumb in a car door would be the best thing to ever happened to him. But suddenly his plans to move in to the dorm were changed, and he waited a long time at the hospital before finally returning to the dorm and moving in.

Peter arrived for the second time well after check-in time, praying to be able to get in. After a few phone calls, a security officer came in, expressed sympathy about his bandaged thumb, and let him up to his room. The family moved his possessions from the car to his room and made his bed in a few minutes, and by the time it was down, the security guard had called the RA, who brought Peter his keys.

It was the wee hours of the morning when Peter looked at his new home for the second time, and tough as Peter was, the pain in his thumb kept him from falling asleep. He was in as much pain as he'd been in for a while.

He awoke when the light was ebbing, and after some preparations set out, wandering until he found the cafeteria. The pain seemed much when he sat down at a table. (It took him a while to find a seat because the cafeteria was crowded.)

A young man said, "Hi, I'm John." Peter began to extend his hand, then looked at his white bandaged thumb and said, "Excuse me for not shaking your hand. I am Peter."

A young woman said, "I'm Mary. I saw you earlier and was hoping to see you more."

Peter wondered about something, then said, "I'll drink for that," reached with his right hand, grabbed a glass of soda, and then winced in pain, spilling his drink on the table.

Everybody at the table moved. A couple of people dodged the flow of liquid; others stopped what they were doing, rushing to mop up the spill with napkins. Peter said, "I keep forgetting I need to be careful about my thumb," smiled, grabbed his glass of milk, and slipped again, spilling milk all over his food.

Peter stopped, sat back, and then laughed for a while. "This is an interesting beginning to my college education."

Mary said, "I noticed you managed to smash your thumb in a car door without saying any words you regret. What else has happened?"

Peter said, "Nothing great; I had to go to the ER, where I had to wait, before they could do something about my throbbing thumb. I got back at 4:00 AM and couldn't get to sleep for a long time because I was in so much pain. Then I overslept my alarm and woke up naturally in time for dinner. How about you?"

Mary thought for a second about the people she met. Peter could see the sympathy on her face.

John said, "Wow. That's nasty."

Peter said, "I wish we couldn't feel pain. Have you thought about how nice it would be to live without pain?"

Mary said, "I'd like that."

John said, "Um..."

Mary said, "What?"

John said, "Actually, there are people who don't feel pain, and there's a name for the condition. You've heard of it."

Peter said. "I haven't heard of that before."

John said, "Yes you have. It's called leprosy."

Peter said, "What do you mean by 'leprosy'? I thought leprosy was a disease that ravaged the body."

John said, "It is. But that is only because it destroys the ability to feel pain. The way it works is very simple. We all get little nicks and scratches, and because they hurt, we show extra sensitivity. Our feet start to hurt after a long walk, so without even thinking about it we... shift things a little, and keep anything really bad from happening. That pain you are feeling is your body's way of asking room to heal so that the smashed thumbnail (or whatever it is) that hurts so terribly now won't leave you permanently maimed. Back to feet, a leprosy patient will walk exactly the same way and get wounds we'd never even think of for taking a long walk. All the terrible injuries that make leprosy a feared disease happen only because leprosy keeps people from feeling pain."

Peter looked at his thumb, and his stomach growled.

John said, "I'm full. Let me get a drink for you, and then I'll help you drink it."

Mary said, "And I'll get you some dry food. We've already eaten; it must—"

Peter said, "Please, I've survived much worse. It's just a bit of pain."

John picked up a clump of wet napkins and threatened to throw it at Peter before standing up and walking to get something to drink. Mary followed him.

Peter sat back and just laughed.

John said, "We have some time free after dinner; let's just wander around campus."

They left the glass roofed building and began walking around, enjoying the grass and the scenery.

After some wandering, Peter and those he had just met looked at the castle-like Blanchard Hall, each one transported in his imagination to be in a more ancient era, and walked around the campus, looked at a fountain, listened to some music, and looked at a display of a giant mastodon which had died before the end of the last ice age, and whose bones had been unearthed in a nearby excavation. They got lost, but this was not a terrible concern; they were taking in the campus.

Their slow walk was interrupted when John looked at his watch and realized it was time for the "floor fellowship." and orientation games.

Between orientation games, Peter heard bits of conversation: "This has been a bummer; I've gotten two papercuts this week." "—and then I—" "What instruments do you—" "I'm from France too! Tu viens de Paris?" "Really? You—" Everybody seemed to be chattering, and Peter wished he could be in one of—actually, several of those conversations at once.

Paul's voice cut in and said, "For this next activity we are going to form a human circle. With your team, stand in a circle, and everybody reach in and grab another hand with each hand.

Then hold on tight; when I say, "Go," you want to untangle yourselves, without letting go. The first team to untangle themselves wins!"

Peter reached in, and found each of his hands clasped in a solid, masculine grip. Then the race began, and people jostled and tried to untangle themselves. This was a laborious process and, one by one, every other group freed itself, while Peter's group seemed stuck on—someone called and said, "I think we're knotted!" As people began to thin out, Paul looked with astonishment and saw that they were indeed knotted. "A special prize to them, too, for managing the best tangle!"

"And now, we'll have a three-legged race! Gather into pairs, and each two of you take a burlap sack. Then—" Paul continued, and with every game, the talk seemed to flow more. When the finale finished, Peter found himself again with John and Mary and heard the conversations flowing around him: "Really? You too?" "But you don't understand. Hicks have a slower pace of life; we enjoy things without all the things you city dwellers need for entertainment. And we learn resourceful ways to—" "—and only at Wheaton would the administration forbid dancing while requiring the games we just played and—" Then Peter lost himself in a conversation that continued long into the night. He expected to be up at night thinking about all the beloved people he left at home, but Peter was too busy thinking about John's and Mary's stories.

The next day Peter woke up his to the hideous sound of his alarm clock, and groggily trudged to the dining hall for coffee, and searched for his advisor.

Peter found the appropriate hallway, wandered around nervously until he found a door with a yellowed plaque that said "Julian Johnson," knocked once, and pushed the door open. A white-haired man said, "Peter Jones? How are you? Do come in... What can I do for you?"

Peter pulled out a sheet of paper, looked down at it for a moment and said, "I'm sorry I'm late. I need you to write what courses I should take and sign here. Then I can be out of your way."

The old man sat back, drew a deep breath, and relaxed into a fatherly smile. Peter began to wonder if his advisor was going to say anything at all. Then Prof. Johnson motioned towards an armchair, as rich and luxurious as his own, and then looked as if he remembered something and offered a bowl full of candy. "Sit

down, sit down, and make yourself comfortable. May I interest you in candy?" He picked up an engraved metal bowl and held it out while Peter grabbed a few Lifesavers.

Prof. Johnson sat back, silent for a moment, and said, "I'm sorry I'm out of butterscotch; that always seems to disappear. Please sit down, and tell me about yourself. We can get to that form in a minute. One of the privileges of this job is that I get to meet interesting people. Now, where are you from?"

Peter said, "I'm afraid there's not much that's interesting about me. I'm from a small town downstate that doesn't have anything to distinguish itself. My amusements have been reading, watching the cycle of the year, oh, and running. Not much interesting in that. Now which classes should I take?"

Prof. Johnson sat back and smiled, and Peter became a little less tense. "You run?"

Peter said, "Yes; I was hoping to run on the track this afternoon, after the lecture. I've always wanted to run on a real track."

The old man said, "You know, I used to run myself, before I became an official Old Geezer and my orthopaedist told me my knees couldn't take it. So I have to content myself with swimming now, which I've grown to love. Do you know about the Prairie Path?"

Peter said, "No, what's that?"

Prof. Johnson said, "Years ago, when I ran, I ran through the areas surrounding the College—there are a lot of beautiful houses. And, just south of the train tracks with the train you can hear now, there's a path before you even hit the street. You can run, or bike, or walk, on a path covered with fine white gravel, with trees and prairie plants on either side. It's a lovely view."

He paused, and said, "Any ideas what you want to do after

Wheaton?"

Peter said, "No. I don't even know what I want to major in."

Prof. Johnson said, "A lot of students don't know what they want to do. Are you familiar with Career Services? They can help you get an idea of what kinds of things you like to do."

Peter looked at his watch and said, "It's chapel time."

Prof. Johnson said, "Relax. I can write you a note." Peter began to relax again, and Prof. Johnson continued, "Now you like to read. What do you like to read?"

Peter said, "Newspapers and magazines, and I read this really cool book called *Zen and the Art of Motorcycle Maintenance*. Oh, and I like the Bible."

Prof. Johnson said, "I do too. What do you like about it most?"

"I like the stories in the Old Testament."

"One general tip: here at Wheaton, we have different kinds of professors—"

Peter said, "Which ones are best?"

Prof. Johnson said, "Different professors are best for different students. Throughout your tenure at Wheaton, ask your friends and learn which professors have teaching styles that you learn well with and mesh well with. Consider taking other courses from a professor you like. Now we have a lot of courses which we think expose you to new things and stretch you—people come back and see that these courses are best. Do you like science?"

"I like it; I especially liked a physics lab."

Prof. Johnson began to flip through the course catalogue. "Have you had calculus?" Prof. Johnson's mind wandered over the differences between from the grand, Utopian vision for "calculus" as it was first imagined and how different a conception

it had from anything that would be considered "mathematics" today. Or should he go into that? He wavered, and then realized Peter had answered his question. "Ok," Prof. Johnson said, "the lab physics class unfortunately requires that you've had calculus. Would you like to take calculus now? Have you had geometry, algebra, and trigonometry?"

Peter said, "Yes, I did, but I'd like a little break from that now. Maybe I could take calculus next semester."

"Fair enough. You said you liked to read."

"Magazines and newspapers."

"Those things deal with the unfolding human story. I wonder if you'd like to take world civilization now, or a political science course."

"History, but why study world history? Why can't I just study U.S. history?"

Prof. Johnson said, "The story of our country is intertwined with that of our world. I think you might find that some of the things in world history are a lot closer to home than you think—and we have some real storytellers in our history department."

"That sounds interesting. What else?"

"The Theology of Culture class is one many students find enjoyable, and it helps build a foundation for Old and New Testament courses. Would you be interested in taking it for A quad or B quad, the first or second half of the semester?"

"Could I do both?"

"I wish I could say yes, but this course only lasts half the semester. The other half you could take Foundations of Wellness—you could do running as homework!"

"I think I'll do that first, and then Theology of Culture. That should be new," Peter said, oblivious to how tightly connected he was to theology and culture. "What else?"

Prof. Johnson said, "We have classes where people read things that a lot of people have found really interesting. Well, that could describe several classes, but I was thinking about Classics of Western Literature or Literature of the Modern World."

Peter said, "Um... Does Classics of Western Literature cover ancient and medieval literature, and Literature of the Modern World cover literature that isn't Western? Because if they do, I'm not sure I could connect with it."

Prof. Johnson relaxed into his seat. "You know, a lot of people think that. But you know what?"

Peter said, "What?"

"There is something human that crosses cultures. That is why the stories have been selected. Stories written long ago, and stories written far away, can have a lot to connect with."

"Ok. How many more courses should I take?"

"You're at 11 credits now; you probably want 15. Now you said that you like Zen and the Art of Motorcycle Maintenance. I'm wondering if you would also like a philosophy course."

Peter said, "Zen and the Art of Motorcycle Maintenance is... I don't suppose there are any classes that use that. Or are there?"

I've heard Pirsig isn't given his fair due by philosophers."

Prof. Johnson said, "If you approach one of our philosophy courses the way you approach Zen and the Art of Motorcycle Maintenance, I think you'll profit from the encounter. I wonder if our Issues and Worldviews in Philosophy might interest you. I'm a big fan of thinking worldviewishly, and our philosophers have some pretty interesting things to say."

Peter asked, "What does 'worldviewishly' mean?"

Prof. Johnson searched for an appropriate simplification. "It means thinking in terms of worldviews. A worldview is the basic

philosophical framework that gives shape to how we view the world. Our philosophers will be able to help you understand the basic issues surrounding worldviews and craft your own Christian worldview. You may find this frees you from the Enlightenment's secularizing influence—and if you don't know what the Enlightenment is now, you will learn to understand it, and its problems, and how you can be somewhat freer of its chain."

Peter said, "Ok. Well, I'll take those classes. It was good to meet you."

Prof. Johnson looked at the class schedule and helped Peter choose class sections, then said, "I enjoyed talking with you. Please do take some more candy—put a handful in your pocket or something. I just want to make one more closing comment. I want to see you succeed. Wheaton wants to see you succeed. There are some rough points and problems along the way, and if you bring them to me I can work with them and try to help you. If you want to talk with your RA or our chaplain or someone else, that's fine, but please... my door is always open. And it was good to meet you too! Goodbye!"

Peter walked out, completely relaxed, and was soon to be energized in a scavenger hunt searching for things from a dog biscuit to a car bumper to a burning sheet of paper not lit by someone in his group, before again relaxing into the "brother-sister floor fellowship" which combined mediocre "7-11 praise songs" (so called because they have "7 words, repeated 11 times") with the light of another world shining through.

It was not long before the opening activities wound down and Peter began to settle into a regular routine.

Peter and Mary both loved to run, but for different reasons. Peter was training himself for various races; he had not joined track, as he did in high school, but there were other races. Mary

ran to feel the sun and wind and rain. And, without any conscious effort, they found themselves running together down the prairie path together, and Peter clumsily learning to match his speed to hers. And, as time passed, they talked, and talked, and talked, and talked, and their runs grew longer.

When the fall break came, they both joined a group going to the northwoods of Wisconsin for a program that was half-work and half-play. And each one wrote a letter home about the other. Then Peter began his theology of culture class, and said, "This is what I want to study." Mary did not have a favorite class, at least not that she realized, until Peter asked her what her favorite class was and she said, "Literature."

When Christmas came, they went to their respective homes and spent the break thinking about each other, and they talked about this when they returned. They ended the conversation, or at least they thought they did, and then each hurried back to catch the other and say one more thing, and then the conversation turned out to last much longer, and ended with a kiss.

Valentine's Day was syrupy. It was trite enough that their more romantically inclined friends groaned, but it did not seem at all trite or syrupy to them. As Peter's last name was Patrick, he called Mary's father and prayed that St. Patrick's Day would be a momentous day for both of them.

Peter and Mary took a slow run to a nearby village, and had dinner at an Irish pub. Amidst the din, they had some hearty laughs. The waitress asked Mary, "Is there anything else that would make this night memorable?" Then Mary saw Peter on his knee, opening a jewelry box with a ring: "I love you, Mary. Will you marry me?"

Mary cried for a good five minutes before she could answer.

And when she had answered, they sat in silence, a silence that overpowered the din. Then Mary wiped her eyes and they went outside.

It was cool outside, and the moon was shining brightly. Peter pulled a camera from his pocket, and said, "Stay where you are. Let me back up a bit. And hold your hand up. You look even more beautiful with that ring on your finger."

Peter's camera flashed as he took a picture, just as a drunk driver slammed into Mary. The sedan spun into a storefront, and Mary flew up into the air, landed, and broke a beer bottle with her face.

People began to come out, and in a few minutes the police and paramedics arrived. Peter somehow managed to answer the police officers' questions and to begin kicking himself for being too stunned to act.

When Peter left his room the next day, he looked for Prof. Johnson. Prof. Johnson asked, "May I give you a hug?" and then sat there, simply being with Peter in his pain. When Peter left, Prof. Johnson said, "I'm not just here for academics. I'm here for you." Peter went to chapel and his classes, feeling a burning rage that almost nothing could pierce. He kept going to the hospital, and watching Mary with casts on both legs and one arm, and many tiny stitches on her face, fluttering on the borders of consciousness. One time Prof. Johnson came to visit, and he said, "I can't finish my classes." Prof. Johnson looked at him and said, "The college will give you a full refund." Peter said, "Do you know of any way I can stay here to be with Mary?" Prof. Johnson said, "You can stay with me. And I believe a position with UPS would let you get some income, doing something physical. The position is open for you." Prof. Johnson didn't mention the calls he'd made, and Peter didn't think about them. He simply said, "Thank you."

A few days later, Mary began to be weakly conscious. Peter finally asked a nurse, "Why are there so many stitches on her face? Was she cut even more badly than—"

The nurse said, "There are a lot of stitches very close together because the emergency room had a cosmetic surgeon on duty. There will still be a permanent mark on her face, but some of the wound will heal without a scar."

Mary moved the left half of her mouth in half a smile. Peter said, "That was a kind of cute smile. How come she can smile like that?"

The nurse said, "One of the pieces of broken glass cut a nerve. It is unlikely she'll ever be able to move part of her face again."

Peter looked and touched Mary's hand. "I still think it's really quite cute."

Mary looked at him, and then passed out.

Peter spent a long couple of days training and attending to practical details. Then he came back to Mary.

Mary looked at Peter, and said, "It's a Monday. Don't you have classes now?"

Peter said, "No."

Mary said, "Why not?"

Peter said, "I want to be here with you."

Mary said, "I talked with one of the nurses, and she said that you dropped out of school so you could be with me.

"Is that true?" she said.

Peter said, "I hadn't really thought about it that way."

Mary closed her eyes, and when Peter started to leave because he decided she wanted to be left alone, she said, "Stop.

Come here."

Peter came to her bedside and knelt.

Mary said, "Take this ring off my finger."

Peter said, "Is it hurting you?"

Mary said, "No, and it is the greatest treasure I own. Take it off and take it back."

Peter looked at her, bewildered. "Do you not want to marry me?"

Mary said, "This may sting me less because I don't remember our engagement. I don't remember anything that happened near that time; I have only the stories others, even the nurses, tell me about a man who loves me very much."

Peter said, "But don't you love me?"

Mary forced back tears. "Yes, I love you, yes, I love you. And I know that you love me. You are young and strong, and have the love to make a happy marriage. You'll make some woman a very good husband. I thought that woman would be me.

"But I can see what you will not. You said I was beautiful, and I was. Do you know what my prognosis is? I will probably be able to stand. At least for short periods of time. If I'm fortunate, I may walk. With a walker. I will never be able to run again—Peter, I am nobody, and I have no future. Absolutely nobody. You are young and strong. Go and find a woman who is worth your love."

Mary and Peter both cried for a long time. Then Peter walked out, and paused in the doorway, crying. He felt torn inside, and then went in to say a couple of things to Mary. He said, "I believe in miracles."

Then Mary cried, and Peter said something else I'm not going to repeat. Mary said something. Then another conversation began.

The conversation ended with Mary saying, "You're stupid, Peter. You're really, really stupid. I love you. I don't deserve such love. You're making a mistake. I love you." Then Peter went

to kiss Mary, and as he bent down, he bent his mouth to meet the lips that he still saw as "really quite cute."

The stress did not stop. The physical therapists, after time, wondered that Mary had so much fight in her. But it stressed her, and Peter did his job without liking it. Mary and Peter quarreled and made up and quarreled and made up. Peter prayed for a miracle when they made up and sometimes when they quarreled. Were this not enough stress, there was an agonizingly long trial—and knowing that the drunk driver was behind bars didn't make things better. But Mary very slowly learned to walk again. After six months, if Peter helped her, she could walk 100 yards before the pain became too great to continue.

Peter hadn't been noticing that the stress diminished, but he did become aware of something he couldn't put his finger on. After a night of struggling, he got up, went to church, and was floored by the Bible reading of, "You have heard that it was said, 'Love your neighbor and hate your enemy.' But I tell you, love your enemies and pray for those who persecute you." and the idea that when you do or do not visit someone in prison, you are visiting or refusing to visit Christ. Peter absently went home, tried to think about other things, made several phone calls, and then forced himself to drive to one and only one prison.

He stopped in the parking lot, almost threw up, and then steeled himself to go inside. He found a man, Jacob, and... Jacob didn't know who Peter was, but he recognized him as looking familiar. It was an awkward meeting. Then he recognized him as the man whose now wife he had crippled. When Peter left, he vomited and felt like a failure. He talked about it with Mary...

That was the beginning of a friendship. Peter chose to love the man in prison, even if there was no pleasure in it. And that created something deeper than pleasure, something Peter

couldn't explain.

As Peter and Mary were planning the wedding, Mary said, "I want to enter with Peter next to me, no matter what the tradition says. It will be a miracle if I have the strength to stand for the whole wedding, and if I have to lean on someone I want it to be Peter. And I don't want to sit on a chair; I would rather spend my wedding night wracked by pain than go through my wedding supported by something lifeless!"

When the rehearsal came, Mary stood, and the others winced at the pain in her face. And she stood, and walked, for the entire rehearsal without touching Peter once. Then she said, "I can do it. I can go through the wedding on my own strength," and collapsed in pain.

At the wedding, she stood next to Peter, walking, her face so radiant with joy that some of the guests did not guess she was in exquisite pain. They walked next to each other, not touching, and Mary slowed down and stopped in the center of the church.

Peter looked at her, wondering what Mary was doing.

Then Mary's arm shot around Peter's neck, and Peter stood startled for a moment before he placed his arm around her, squeezed her tightly, and they walked together to the altar.

On the honeymoon, Mary told Peter, "You are the only person I need." This was the greatest bliss either of them had known, and the honeymoon's glow shined and shined.

Peter and Mary agreed to move somewhere less expensive to settle down, and were too absorbed in their wedded bliss and each other to remember promises they had made earlier, promises to seek a church community for support and friends.

And Peter continued working at an unglamorous job, and Mary continued fighting to walk and considered the housework she was capable of doing a badge of honor, and neither of them noticed

that the words, "I love you" were spoken ever so slightly less frequently, nor did they the venom and ice creeping into their words.

One night they exploded. What they fought about was not important. What was important was that Peter left, burning with rage. He drove, and drove, until he reached Wheaton, and at daybreak knocked on Prof. Johnson's door. There was anger in his voice when he asked, "Are you still my friend?"

Prof. Johnson got him something to eat and stayed with him when he fumed with rage, and said, "I don't care if I'm supposed to be with her, I can't go back!" Then Prof. Johnson said, "Will you make an agreement with me? I promise you I won't ever tell you to go back to her, or accept her, or accept what she does, or apologize to her, or forgive her, or in any way be reconciled. But I need you to trust me that I love you and will help you decide what is best to do."

Peter said, "Yes."

Prof. Johnson said, "Then stay with me. You need some rest. Take the day to rest. There's food in the fridge, and I have books and a nice back yard. There's iced tea in the—excuse me, there's Coke and 7 Up in the boxes next to the fridge. When I can come back, we can talk."

Peter relaxed, and he felt better. He told Prof. Johnson. Prof. Johnson said, "That's excellent. What I'd like you to do next is go in to work, with a lawyer I know. You can tell him what's going on, and he'll lead you to a courtroom to observe."

Peter went away to court the next day, and when he came back he was ashen. He said nothing to Prof. Johnson.

Then, after the next day, he came back looking even more disturbed. "The first day, the lawyer, George, took me into divorce court. I thought I saw the worst that divorce court

could get. Until I came back today. It was the same—this sickening scene where two people had become the most bitter enemies. I hope it doesn't come to this. This was atrocious. It was vile. It was more than vile. It was—"

Prof. Johnson sent him back for a third day. This time Peter said nothing besides, "I think I've been making a mistake."

After the fourth day, Peter said, "Help me! I've been making the biggest mistake of my life!"

After a full week had passed, Peter said, "Please, I beg you, don't send me back there."

Prof. Johnson sent Peter back to watch a divorce court for one more miserable, excruciating day. Then he said, "Now you can do whatever you want. What do you want to do?"

The conflict between Peter and Mary ended the next day.

Peter went home, begging Mary for forgiveness, and no sooner than he had begun his apology, a thousand things were reflected in Mary's face and she begged his forgiveness. Then they talked, and debated whether to go back to Wheaton, or stay where they were. Finally Mary said, "I really want to go back to Wheaton."

Peter began to shyly approach old friends. He later misquoted: "I came crawling with a thimble in the desperate hope that they'd give a few tiny drops of friendship and love. Had I known how they would respond, I would have come running with a bucket!"

Peter and Mary lived together for many years; they had many children and were supported by many friends.

The years passed and Peter and Mary grew into a blissfully happy marriage. Mary came to have increasing health problems as a result of the accident, and those around them were amazed at how their love had transformed the suffering the accident

created in both of their lives. At least those who knew them best saw the transformation. There were many others who could only see their happiness as a mirage.

As the years passed, Jacob grew to be a good friend. And when Peter began to be concerned that his wife might be... Jacob had also grown wealthy, very wealthy, and assembled a top-flight legal team (without taking a dime of Peter's money—over Peter's protests, of course), to prevent what the doctors would normally do in such a case, given recent shifts in the medical system.

And then Mary's health grew worse, much worse, and her suffering grew worse with it, and pain medications seemed to be having less and less effect. Those who didn't know Mary were astonished that someone in so much pain could enjoy life so much, nor the hours they spent gazing into each other's eyes, holding hands, when Mary's pain seemed to vanish. A second medical opinion, and a third, and a fourth, confirmed that Mary had little chance of recovery even to her more recent state. And whatever measures been taken, whatever testimony Peter and Mary could give about the joy of their lives, the court's decision still came:

The court wishes to briefly review the facts of the case. Subject is suffering increasingly severe effects from an injury that curtailed her life greatly as a young person. from which she has never recovered, and is causing increasingly complications now that she will never again have youth's ability to heal. No fewer than four medical opinions admitted as expert testimony substantially agree that subject is in extraordinary and excruciating pain; that said excruciating pain is increasing; that said excruciating pain is increasingly unresponsive to medication; that subject has fully lost

unresponsive to medication, that subject has fully lost autonomy and is dependent on her husband; that this dependence is profound, without choice, and causes her husband to be dependent without choice on others and exercise little autonomy; and the prognosis is only of progressively worse deterioration and increase in pain, with no question of recovery.

The court finds it entirely understandable that the subject, who has gone through such trauma, and is suffering increasingly severe complications, would be in a state of some denial. Although a number of positions could be taken, the court also finds it understandable that a husband would try to maintain a hold on what cannot exist, and needlessly prolong his wife's suffering. It is not, however, the court's position to judge whether this is selfish...

For all the impressive-sounding arguments that have been mounted, the court cannot accord a traumatized patient or her ostensibly well-meaning husband a privilege that the court itself does not claim. The court does not find that it has an interest in allowing this woman to continue in her severe and worsening state of suffering.

Peter was at her side, holding her hand and looking into his wife's eyes, The hospital doctor had come. Then Peter said, "I love you," and Mary said, "I love you," and they kissed.

Mary's kiss was still burning on Peter's lips when two nurses hooked Mary up to an IV and injected her with 5000 milligrams of sodium thiopental, then a saline flush followed by 100 milligrams of pancurium bromide, then a saline flush and 20 milligrams of potassium chloride.

A year later to the day, Peter died of a broken heart.

# **A Yoke that is Easy and a Burden that is Light**

O Lord, who hast said with thine own most pure lips, Without me you can do nothing, and My yoke is easy, and my burden is light, grant to me fortitude to cast down the iron yoke of passions which thou willest to work in me to destroy. Grant me courage and trust to accept the yoke that is easy and the burden that is light, like the birds of the air, like unto the lilies of the field, where even Solomon in all his glory mighteth not make a yoke strong enough to, overpowering, subdue.

Grant unto me a calm no storm hath shaken: or rather, grant me that peace wherein thou calledst forth, Peace! Be still! And if I be in fear after thou hast commanded so, let it be no more fear of wind and wave, but a terror of wonder at thou thyself, to whom all things in life must needs answer.

Free me from making iron yokes in my lack of trust, in my laziness. Free me to take on thy yoke thou it beseemeth madness and do thou break into pieces the idolatrous iron yoke I have tied to my back and not lifted a finger to release. Forgive my doubts. my lack of faith. my seeking a sovereign lordship and

control over the circumstances of my life. Give me easy circumstances, if thou wilt, or hard, and in either let me find a yoke that is easy and a burden that is light. Save me from trying to make a light yoke out of iron; do thou Carpenter, who hath never created an iron yoke, free me from my flight to escape the easy yoke and light burden which thou preparedst for me before the world was created, and ever summonest me to, whatever my fugue by which I flee from thy weal.

Do thou grant me this, together with thy Father of all Providence, and thine all-holy, ever-present, and life, bestowing Spirit. Amen.

# **Work-Mystic**

*Gentle Reader;*

**An intriguing book...**  
*found in questionable  
quarters*

I have found a watershed moment after a friend gave me a copy of Elder Thaddeus's [Our Thoughts Determine Our Lives](#). I don't know that everybody will have a watershed moment; perhaps others will understand its central point much more naturally than I do. But I am very grateful to be given the book.

Before going further, and talking about "work-mysticism", there are some hesitancies I would like to mention. And I really don't know how to say this with due kindness and courtesy to fans of Fr. Seraphim (Rose), including one dearly loved member of my parish.

[Our Thoughts Determine Our Lives](#) bears the "warning label" of the St. Herman of Alaska brotherhood Fr. Seraphim started. Let me blandly state that I have associated Fr. Seraphim's following with some harassment, and it has resonated with others when I've said Fr. Seraphim's following "tastes like Kool-Aid." [Our Thoughts Determine Our Lives](#), like other titles from that movement, is exotic to the Western reader, really too exotic, almost as if works were chosen on unconscious, tacit criteria that included appearing sufficiently exotic to a certain kind of Western convert, and bears the mark of a rebellion against the common things of the West, where a more Orthodox

response would be to be alienated from Western things without expending the energy to constantly fight it. It is also characteristic, though not universal, to read texts associated with Fr. Seraphim and get the feeling of a magic spell falling over me: after praying and being comfortable with the decision I read the "Nine Enneads" of [Christ the Eternal Tao](#), but not more; my conscience felt almost like an instruction to "take two stiff drinks and stop cold."

One person who commented to me over email knew quite specifically that I was a member of ROCOR (quite probably the one Orthodox jurisdiction with the most nostalgia for nineteenth-century Russia), and tried to specifically make the point that nineteenth century Russia was no golden age. That much was not news to me; the priest who received me into the Church repeatedly emphasized, "There was never a golden age." He didn't mention nineteenth century Russia so much, but he talked about the Age of the Councils as being an Age when Ecumenical Councils were called because of how truly bad the problems and heresies were. But the other correspondent argued to me that nineteenth century Russia was a "Gnostic wonderland," with something for every idle curiosity, and in his opinion the worst century in Orthodox history, and this is a problem for Fr. Seraphim because Fr. Seraphim got his bearings in Orthodoxy primarily from nineteenth century Russia. [Our Thoughts Determine Our Lives](#) tells of an elder who answered questions by speaking out of the [Philokalia](#). I've read the [Philokalia](#) more than once, and [the ascetical homilies of St. Isaac the Syrian](#), and the [Bible](#) many times more, and everything that is interesting about [Our Thoughts Determine Our Lives](#) is something I have never picked up even a little from [the Bible](#), [St. Isaac](#), and the [Philokalia](#). Perhaps I haven't read them enough, or

grown enough, or something else enough, but I have not been able to pull a hint of Elder Thaddeus's main points in any of the older classics mentioned.

**With all that stated, [Our Thoughts Determine Our Lives](#) is a pearl.**

Perhaps one place to begin is to challenge the simplified psychology of "I have my thoughts going on in my head and you have your thoughts going on in your head." Someone who knows a bit of actual psychology may recognize something contagious about emotion, but let's wave this aside: psychology is basically about your self-contained mind.

Not so, according to Elder Thaddeus and the Orthodox Tradition. What the West speaks of today as "the seven deadly sins" was originally known as "the eight demons," demons who tempt us with particular temptations. A great deal of what we today classify as psychology has to do with the activity of demons intruding on our thoughts and experiences. Destructive thoughts may be something we make our own: but they are not our own, not from the beginning. They are stings where demons inject venom into our hearts. Now we do have a say in whether the injection succeeds: God help us if we had no defense or no say in the matter! [The Philokalia](#) works at length on the science of spiritual struggle and how "a stitch in time saves nine." To quote the rather technical definition of "temptation" in the English glossary to the [Philokalia](#):

TEMPTATION (πειρασμος — peirasmos): also translated in our version as 'trial' or 'test'. The word indicates, according to context: (i) a test or trial sent to man by God, so as to aid his progress on the spiritual way; (ii) a suggestion from the devil, enticing man to sin.

Using the word in sense (ii), the Greek Fathers employ a series of technical terms to describe the process of temptation. (See in particular Mark the Ascetic, *On the Spiritual Law*, 138-41, in vol. i of our translation, pp. 119-2-; John Klimakos, *Ladder*, Step 15, translated by Archimandrite Lazarus [op.cit., pp. 157-9; Maximos, *On Love*, i, 83-84, in vol. ii of our translation, pp. 62-63; John of Damaskos, *On the Virtues and vices*, also in vol. ii of our translation, pp. 337-8.) The basic distinction made by these fathers is between the demonic provocation and man's assent: the first lies outside of man's control, while for the second he is morally responsible. In detail, the chief terms employed are as follows:

(i) Provocation (προβολη — proslovi): the initial incitement to evil. Mark the Ascetic defines this as an 'image-free stimulation in the heart'; so long as the provocation is not accompanied by images, it does not involve man in any guilt. Such provocations, originating as the devil, assail man from the outside, and so he is not morally responsible for them. His liability to these provocations is not a consequence of the fall: even in paradise, Mark maintains, Adam was assailed by the devil's provocations. Man cannot prevent provocations from occurring; what does lie in his power, however, is to maintain constant watchfulness (q.v.) and so reject each provocation as soon as it emerges into his consciousness — that is to say, at its first appearance as a thought in his mind or intellect (μονολογιστος εμφασις — monologistos emphasis). If he does reject the provocation, the sequence is cut off and the process of temptation is terminated.

(ii) Momentary disturbance (παραρριπισμος — pararripismos) of the intellect, occurring 'without any

movement or working of bodily passion' (see Mark, Letter to Nicholas the Solitary: in our translation, vol. i, p. 153). This seems to be more than the 'first appearance' of a provocation described in stage (i) above; for, at a certain point of spiritual growth in this life, it is possible to be totally released from such 'momentary disturbance', whereas no one can expect to be altogether free from demonic provocations.

(iii) Communion (ομιλία — homilia); coupling (συνδυασμος — syndyasmos). Without as yet entirely assenting to the demonic provocation, a man may begin to 'entertain' it, to converse or parley with it, turning it over in his mind pleasurably, yet still hesitating whether or not to act upon it. At this stage, which is indicated by the terms 'communion' or 'coupling', the provocation is no longer 'image-free' but has become a logismos or thought (q.v.) and man is morally responsible for having allowed this to happen.

(iv) Assent (συγκαταθεσις — synkatathesis). This signifies a step beyond mere 'communion' or 'coupling'. No longer merely 'playing' with the evil suggestion, a man now resolves to act on it. There is now no doubt as to his moral culpability: even if circumstances prevent him from sinning outwardly, he is judged by God according to the intention in his heart.

(v) Prepossession (προληψις — prolipsis): defined by Mark as 'the involuntary presence of former sins in the memory'. This state of 'prepossession' or prejudice results from repeated acts of sin which predispose a man to yield to particular temptations. In principle he retains his free choice and can reject demonic provocations; but in practice the force of habit makes it more and more difficult for him to resist.

(vi) Passion (q.v.). If a man does not fight strenuously against a prepossession, it will develop into an evil passion.

To put the same in nontechnical language, if there is a smouldering spark where it doesn't belong, put it out as soon as you can. If you don't, and its smouldering set an armchair on fire, drop everything and use use a fire extinguisher as soon as you can. If you let the fire spread to your whole house, call the fire department as soon as you can: [there is a divine Fire Chief Who mightily rescued St. Mary of Egypt](#). However, the best portion by far is to be attentive and do whatever it takes to snuff out sparks when they're still only sparks.

## **Mysticism that relates quite directly to work**

"Save yourself, and ten thousand around you will be saved."

"Make peace with yourself, and Heaven and earth will make  
peace with you."

These words are tantalizing, and Elder Thaddeus's contribution in [Our Thoughts Determine Our Lives](#) may be to offer a big picture of a world in which our thoughts matter, and not simply for us. A great deal of human misery stems from our needlessly warring against others in our thoughts.

Before digging further into workplace applications, I would orient things with a vignette of Elder Thaddeus's biography:

In 1978 Fr. Thaddeus told G., one of his spiritual daughters, of another [rare] vision he had seen in a dream. "I had barely fallen asleep when I dreamt that I had died. Two young men led me into a room and had me stand on some sort of platform between them. To my right were the judges. Someone in the far left corner of the room was reading the charges against me. 'That's him! That's the one who cannot get along with anyone!' I stood there dumbfounded. The voice repeated the same accusation two more times. Then the young man standing on my right hand said to me, 'Do not be afraid! It is not true that you cannot get along with anyone. You just cannot get along with

get along with anyone. you just cannot get along with yourself!"

To take a work-related example of the basic issue, I remember feeling really sorry for a train conductor who said it made things easier to say that there was "**one Monday, then three 'Almost Fridays', and then Friday.**" My concern is not that this was a crutch; some crutches are legitimate and quite helpful. My concern was that this is not a crutch that makes work bearable at all; it is a crutch that makes work simply unbearable. It's a crutch that makes you relate to work as something you have to barely endure.

Now some jobs are barely endurable, or simply unendurable. In areas of the third world, there are sweatshops where women are expected to work fifteen hour days, seven days a week, even if they are violently ill, and rape is used as a mainstream disciplinary measure. On a lesser scale, I'm not sure I'd do well as a customer service doormat constantly dealing with verbally abusive customers. And I know that various grades of harassment exist in the first world as well. But beyond that, how many jobs in the U.S. really are beyond all endurance? I've left one job, not when my boss was rude to me and humiliated me in front of all my colleagues, but because the work was other than as advertised in a way that was increasingly impacting my health (and other attempts had failed to produce results), and I think that I may have been justified, but there are still things I would rather have handled differently. But even if "people don't stop working for companies; they stop working for bosses," the number of times it's the right thing to leave is rare compared to how quickly we do resign.

Let's look at this on a bit deeper level. The issue is not that

the situation does not need to improve; the work situation quite probably **does** need to improve. But not from the angle of what Alcoholics Anonymous calls "a geographical solution," moving in the hope that your problems will go away. Elder Thaddeus wrote:

4.5. If in each family there were just one person who served God zealously, what harmony there would be in the world! I often remember the story of Sister J. She used to come and talk to me often while I was still at the Tumane Monastery. Once she came, together with an organized group of pilgrims, and complained, saying, "I can't bear this any longer! People are so unkind to each other!" She went on to say that she was going to look for another job. I advised her against it, as there were few jobs and a high level of unemployment. I told her to stop the war she was fighting with her colleagues. "But I'm not fighting with anyone!" she said. I explained that, although she was not fighting physically, she was waging war with her colleagues in her thoughts by being dissatisfied with her position. She argued that it was beyond anyone's endurance. "Of course it is," I told her, "but you can't do it yourself. You need God's help. No one knows whether you are praying or not while you are at work. So, when they start offending you, do not return their offenses either with words or with negative thoughts. Try not to offend them even in your thoughts; pray to God that He may send them an angel of peace. Also ask that He not forget you. You will not be able to do this immediately, but if you always pray like that, you will see how things will change over time and how the people will change as well. In fact, you are going to change, too." At that time I did not know whether she was going to heed my advice.

This happened in the Lumane Monastery in 1980. In 1981 I was sent to the Vitovnica Monastery. I was standing underneath the quince tree when I noticed a group of pilgrims that had arrived. She was in the group and she came up to me to receive a blessing. And this is what she said to me, "Oh, Father, I had no idea that people were so good!" I asked her whether she was referring to her colleagues at work and she said she was. "They have changed so much, Father, it's unbelievable! No one offends me anymore, and I can see the change in myself, as well." I asked her whether she was at peace with everyone, and she answered that there was one person with whom she could not make peace for a long time. Then, as she read the Gospels, she came to the part where the Lord commands us to love our enemies. Then she said to herself, "You are going to love this person whether you want to or not, because this is what the Lord commands us to do." And now, you see, they are best friends!

There is, at least in the U.S, the issue of what is called "an instrumental view of labor." That is to say, work is a necessary evil we do to get money, and there would be no reason to work if we didn't need the money. And work has indeed been cursed and disfigured by the Fall, but not created in the curse of the Fall. And really the "thorns and thistles" affects all our work, not just agricultural workers. There is no job under the sun that is free of thorns and thistles. Some jobs may have a honeymoon period, but as with a real honeymoon, it stops at some point and lets the real work begin. Life may indeed be easier with the wisdom Elder Thaddeus puts forth, but Elder Thaddeus had a difficult life; one of the dimensions of holier living is that it is more of a crown of thorns the more closely you approach the Christ God Who

wore a Crown of Thorns en route to his crucifixion.

Returning to an instrumental view of labor, it treats the here and now that we are often to work in as the sort of thing that one endures, a negative to obtain a positive. And that much is fundamentally mistaken. We are created to work. Certain classes of work, such as a broad stretch of volunteering, activism, developing open source software, and also artistic activities like writing, musicianship, provide additional outlet to work beyond one's regular job. We really are **made** to work. An allergic reaction to the experience of (paid) work is part of the U.S. culture that need not be there, like finding waiting more than a few minutes to be unpleasant (there are cultures where people can wait an hour without being ruffled), and it is possible to enjoy working. And be at peace with oneself.

## Twelve Strategies

Here are twelve strategies drawn from [Our Thoughts Determine Our Lives](#) and the Orthodox spiritual Tradition:

- 1. Be grateful.**

Count your blessings and be aware of how many blessings you have. Does your body work? That's a blessing. I've studied several languages, and the more I've studied languages, the more I've become convinced that if you are knowing to know **one** word or phrase in your neighbor's language, it should be "Thank you:" Spaseba—Russian; Terima kasih—Malaysian/Indonesian; Sheh-sheh—Chinese; Muy muchas gracias—Spanish. ([See "Thank you" in many languages.](#))

When I've said "Thank you" to people in their own heart language, they've been surprised and delighted at the gesture. No one seems to be offended at my pronunciation. Ever. If anything, clumsy execution only makes the endeavor more endearing.

I'm not specifically suggesting that you learn languages, if that is not your thing. (For most people, it isn't.) But please, pretty please, by all means, learn to be grateful, to say "Thank you" in letter and in spirit.
- 2. Cultivate a deep respect for others with whom you cross**

## paths.

What can be respected about a mean boss or a crotchety co-worker? They are made in the image of God, and they are part of the royal family of the human race. There is something made for eternal glory that God himself respects in each person you meet. This doesn't mean it is always easy to respect others, but the holier a person is, the more he finds something to respect in each person he meets. Some people are wary of giving compliments that feed a person's vanity, but even then there is a lot of respect that can be given without inflicting needless temptation.

3. **Thirst for the cup of dishonor as if it were honor.** This is a difficult step, and I one I have not mastered well. I want the most glorious assignment, or the most interesting, or whatever else would be most attractive to me, but I endure those that are menial. But it is a stroke of the masters to want the most menial work, and then perhaps be pleasantly surprised when some of their work is not menial. One health-oriented poster said, "Take the worst parking spot!" because it means a scant minute or two more walking. But it would be better, spiritually as well, to pick the least attractive parking spot. This point is made in the Gospel,

[Luke 14:7-11](#):

And he put forth a parable to those which were bidden, when he marked how they chose out the chief rooms; saying unto them, "When thou art bidden of any man to a wedding, sit not down in the highest room; lest a more honourable man than thou be bidden of him; And he that bade thee and him come and say to thee, 'Give this man place;' and thou begin with shame to take the

lowest room. But when thou art bidden, go and sit down in the lowest room; that when he that bade thee cometh, he may say unto thee, 'Friend, go up higher:' then shalt thou have veneration in the presence of them that sit at meat with thee. For whosoever exalteth himself shall be abased; and he that humbleth himself shall be exalted."

4. **Be obedient, in thought and action.**

As far as it is not sin, obey your boss, however wrong he may be, and offer him obedience on as many spiritual levels as you can.

5. **Pray for your co-workers, especially the ones who are difficult.**

We should pray for everyone, but watchful prayer that quashes, as far as possible, the faintest thought of hostility is best.

6. **As far as you can, go the extra mile and turn the other cheek.**

There is only so much we can do, but the [Sermon on the Mount](#) is clear on this point and gives it attention. Also relevant are the words of [The Ladder of Divine Ascent](#): "[Humility] is to forestall one's neighbor at a contentious moment and to be the first to end a quarrel."

7. **Let the other person have the upper hand, be "higher."**

It seems entirely natural to establish the upper hand if one can, and so much of our conversation, even banter, has a thread of control. But if one can seek the lower room, you will be someone no-one struggles against.

8. **Forgive seven billion times.**

In a Biblical culture where most people could not count to twenty without taking off any shoes the strong rule was

twenty, without taking off any shoes, the strong man was  
"Three strikes, you're out!" St. Peter made a rather  
ludicrous question of the Savior: "Should I forgive seven  
times?" The Lord's answer was even more ludicrous: "Not  
seven, but seven times seventy [or, more accurately,  
seventy-seven]." He might as well have said seven billion.

We are to keep on forgiving.

9. **Beware the "demon of noonday".**

Today we speak of a "mid-afternoon slump" and perhaps "low  
blood sugar." The ancient monastic tradition spoke of a  
demon that tempts us to escape and makes the early  
afternoon something tedious that makes the here and now  
something intolerable, to escape. It is fought by rejecting  
escape as far as we can and by praying through it, until we  
realize God's Creation is not the sort of thing one rightly  
wants to escape from.

10. **Be watchful of your thoughts, especially warring thoughts  
or negative thoughts.**

Different times have had different ideas of the worst sin; in  
caricature at least, Victorians were imagined to have made  
sexual sin the ultimate sin, while contemporary  
Protestantism usually gives that place to pride. In ancient  
times, apparently echoed by Elder Thaddeus, the worst sin  
was anger.

One of the central themes that he keeps coming to is that  
we keep on holding warring thoughts, that if we would work  
on repenting and praying of, we would defuse a problematic  
situation, but we keep on holding onto our piece of the  
problem. Read [Our Thoughts Determine Our Lives](#) for all of  
the many things it says about the warring thoughts we are  
unaware of holding against our neighbors, including every

boss and co-worker.

11. **Blessed are the meek: Be meek!**

One repeated characteristic of martial artists is that those who are truly good tend to be the last person you would ever find in a fight, and the more likely to put up his hands and say, "You're the tough guy!"

I'm not specifically recommending martial arts, but if martial arts produce in its experts what the Tao Te Ching says as "A great warrior is not warlike," what then is to be expected of the true brothers and true sisters of the Prince of Peace? Quite a lot, in fact.

12. **Lastly, keep in touch with your priest or spiritual father, and do not engage in spiritual warfare above your strength.**

If following this advice would represent a basic change for you, then it is normally the sort of thing you should check in with your priest or spiritual father about. And there are some people you should, perhaps, leave alone, and there are some activities you should, perhaps, leave alone. Every spiritual father is different, but there have been a few specific situations where my spiritual father has advised me, appropriately under the circumstances as far as I can tell, not to try to mend fences. And if your priest or spiritual father does think this is helpful, you will have his blessing to boot!

## Quotes and broader context

If I could fairly quote all of [Our Thoughts Determine Our Lives](#) without threatening others' income or running afoul of the law, I would. However, here are a few gems from the collection. I am limiting myself to the first chapter, "On Thoughts:"

1.1. Our life depends on the kind of thoughts we nurture. If our thoughts are peaceful, calm, meek, and kind, then that is what our life is like. If our attention is turned to the circumstances in which we live, we are drawn into a whirlpool of thoughts and can have neither peace nor tranquility.

1.7. A man who has within him the Kingdom of Heaven radiates holy thoughts, divine thoughts. The Kingdom of Heaven creates within us an atmosphere of Heaven, as opposed to the atmosphere of hell that is radiated by a person when hades abides in his heart. The role of Christians in this world is to filter the atmosphere on earth and expand the atmosphere of the Kingdom of God.

We can keep guard over the whole world by keeping guard over the atmosphere of heaven within us, for if we lose the Kingdom of Heaven, we will save neither ourselves nor others. He who has the Kingdom of God in himself will imperceptibly pass it on to others. People will be attracted to the peace and warmth in us, and the atmosphere of

by the peace and warmth in us, and the atmosphere of heaven will gradually pass on to them. It is not even necessary to speak to people about this. The atmosphere of Heaven will radiate from us even when we keep silence or talk about ordinary things. It will radiate from us even though we may not be aware of it.

1.16. An old woman came to me and told me that her neighbor was bothering her. She said the other woman was constantly throwing things so she was at her wits' end. I asked her why she was always quarreling with her neighbor.

But the old woman said she never even spoke to her evil neighbor. I insisted that she quarreled with her every day. I said to her, "You are convinced that she is doing evil things to you, and you are constantly thinking about her. Let her do whatever she is doing; you just turn your thoughts to prayer, and you will see that it will stop bothering you."

1.19. Thoughts are planted in our minds all the time, from all sides and directions. Were it given us to see the radii of thoughts, we would see a real net of thoughts. Everyone has a "receiver" in his mind, one that is much more precise and sophisticated than a radio or television set. How wonderful is the mind of man! Unfortunately, we do not always appreciate this. We do not know how to unite ourselves with the Source of life and to feel joy...

## Conclusion

It is my suggestion that Elder Thaddeus's mystical theology in [Our Thoughts Determine Our Lives](#) has every relevance to the world at work. It has relevance to other places as well; in passages not quoted, the author speaks emphatically about family life and Chapter 1, "On Thoughts," is followed up by Chapter 2, "On Family." But it is no diminution of Elder Thaddeus to look at what his wisdom and legacy spell out for success at work. Perhaps Christians are not called to worldly success in the sense of abundant wealth; the Bible includes very wealthy business owners like St. Abraham and St. Job the Much-Suffering, and very poor prophets like St. Elias (Elijah) and St. John the Baptist and Forerunner. But I think of my Aunt Gail talking about a conversation she had with her son about his business, and praying that he would always have "enough." And she was emphatic about "enough": although she did not use the terms "wants" or "needs", she was clearly praying that her son would enjoy the kind of success that was truly beneficial for him as a person. And usually that's not "as much money as you want."

But it is "enough."

And if this work-mysticism is not a door to abundant treasures on earth, at least not for all, it is a door to treasures in Heaven. It is an invitation to find treasure in difficulties as well as pleasant times, in conflict and dishonor as well as people

who are easy to get along with, a door to living the life of Heaven starting here on earth. The joy is intertwined with suffering— but the joy is deeper than the suffering.

Christ is risen! Truly he is risen!

Spaseba,  
Christos

# Yonder

The body continued running in the polished steel corridor, a corridor without doors and windows and without any hint of how far above and below the local planet's surface it was, if indeed it was connected with a planet. The corridor had a competition mixture of gases, gravity, temperature and pressure, and so on, and as the body had been running, lights turned on and then off so the body was at the center of a moving swathe of rather clinical light. The body was running erratically, and several times it had nearly fallen; the mind was having trouble keeping the control of the body due to the body being taxed to its limit. Then the body tripped. The mind made a few brief calculations and jacked out of the body.

The body fell, not having the mind to raise its arms to cushion the fall, and fractured bones in the face, skull, and ribs. The chest heaved in and out with each labored breath, after an exertion that would be lethal in itself. A trickle of blood oozed out from a wound. The life of the abandoned body slowly ebbed away, and the lights abruptly turned off.

It would be a while before a robot would come to clean it up and prepare the corridor for other uses.

---

"And without further ado," another mind announced, "I would like to introduce the researcher who broke the record for a running body by more than 594789.34 microseconds. This body was a strictly biological body, with no cyberware besides a regulation mind-body interface, with no additional modifications. Adrenaline, for instance, came from the mind controlling the adrenal glands; it didn't even replace the brain with a chemical minifactory. The body had a magnificent athletic physique, clean and not encumbered by any reproductive system. And I still don't know how it kept the body alive and functioning, without external help, for the whole race. Here's Archon."

A sound came from a modular robot body at the center of the stage and was simultaneously transmitted over the net. "I see my cyborg utility body there; is that my Paidion wearing it? If so, I'm going to... no, wait. That would be harming my own body without having a good enough reason." A somewhat canned chuckle swept through the crowd. "I'm impressed; I didn't know that anyone would come if I called a physical conference, and I had no idea there were that many rental bodies within an appropriate radius." Some of the bodies winced. "But seriously, folks, I wanted to talk and answer some of your questions about how my body broke the record. It was more than generating nerve impulses to move the body to the maximum ability. And I would like to begin by talking about why I've called a physical conference in the first place.

"Scientific breakthroughs aren't scientific. When a mind solves a mathematical problem that hasn't been solved before, it does... not something impossible, but something that you will miss if you look for something possible. It conforms itself to the problem, does everything it can to permeate itself with the

problem. Look at the phenomenology and transcripts of every major mathematical problem that has been solved in the past  $1.7e18$  microseconds. Not one follows how one would scientifically attempt a scientific breakthrough. And somehow scientifically optimized applications of mind to problems repeat past success but never do anything new.

"What you desire so ravenously to know is how I extended the methodologies to optimize the running body and the running mind to fit a calculated whole. And the answer is simple. I didn't."

A mind interrupted through cyberspace. "What do you mean, you didn't? That's as absurd as claiming that you built the body out of software. That's—"

Archon interrupted. "And that's what I thought too. What I can tell you is this. When I grew and trained the body, I did nothing else. That was my body, my only body. I shut myself off from cyberspace—yes, that's why you couldn't get me—and did not leave a single training activity to another mind or an automatic process. I trained myself to the body as if it were a mathematics problem and tried to soak myself in it."

A rustle swept through the crowd.

"And I don't blame you if you think I'm a crackpot, or want to inspect me for hostile tampering. I submit to inspection. But I tried to be as close as possible to the body, and that's it. And I shaved more than 594789.34 microseconds off the record."

Archon continued after a momentary pause. "I specifically asked for bodily presences for this meeting; call me sentimental or crackpot or trying to achieve with your bodies what I failed to achieve in that body, but I will solicit questions from those who have a body here first, and address the network after everybody present has had its chance."

A flesh body stood up and flashed its face. "What are you

going to say next? Not only that you became like a body, but that the body became like a mind?"

Archon went into private mode, filtered through and rejected 3941 responses, and said, "I have not analyzed the body to see if it contained mind-like modifications and do not see how I would go about doing such a thing."

After several other questions, a robot said, "So what's next?"

Archon hesitated, and said, "I don't know." It hesitated again, and said, "I'm probably going to make a Riemannian 5-manifold of pleasure states. I plan on adding some subtle twists so not only will it be pleasurable; minds will have a real puzzle figuring out exactly what kind of space they're in. And I'm not telling what the manifold will be like, or even telling for sure that it will genuinely have only 5 dimensions."

The robot said, "No, you're not. You're not going to do that at all." Then the mind jacked out and the body fell over, inert.

Another voice, issuing from two standard issue cyborg bodies, said, "Has the body been preserved, and will it be available for internal examination?"

Archon heard the question, and answered it as if it were giving the question its full attention. But it could only give a token of its consciousness. The rest of its attention was on tracing the mind that had jacked out of the robot body. And it was a slippery mind. Archon was both frustrated and impressed when it found no trace.

It was skilled at stealth and tracing, having developed several methodologies for each, and something that could vanish without a trace—had the mind simply destroyed itself? That possibility bothered Archon, who continued tracing after it dismissed the assembly.

Archon looked for distractions, and finding nothing better it began trying to sound out how it might make the pleasure space. What should the topology be? The pleasures should be—Archon began looking at the kinds of pleasure, and found elegant ways to choose a vector space basis for less than four dimensions or well over eight, but why should it be a tall order to do exactly five? Archon was far from pleasure when a message came, "Not your next achievement, Archon?"

Archon thought it recognized something. "Have you tried a five dimensional pleasure manifold before? How did you know this would happen?"

"I didn't."

"Ployon!"

Ployon said, "It took you long enough! I'm surprised you needed the help."

Ployon continued, "And since there aren't going to be too many people taking you seriously—"

Archon sent a long stream of zeroes to Ployon.

Ployon failed to acknowledge the interruption. "—from now on, I thought you could use all the help you could get."

Archon sent another long stream of zeroes to Ployon.

When Ployon remained silent, Archon said, "Why did you contact me?"

Ployon said, "Since you're going to do something interesting, I wanted to see it live."

Archon said, "So what am I going to do?"

"I have no idea whatsoever, but I want to see it."

"Then how do you know it is interesting?"

"You said things that would destroy your credibility, and you gave an evasive answer. It's not every day I get to witness that."

Archon sent a long stream of zeroes to Ployon.

Ployon said, "I'm serious."

"Then what can I do now?"

"I have no idea whatsoever, but you might take a look at what you're evading."

"And what am I evading?"

"Try asking yourself. Reprocess the transcripts of that lecture. Your own private transcript."

Archon went through the file, disregarding one moment and then scanning everything else. "I find nothing."

"What did you just disregard?"

"Just one moment where I said too much."

"And?"

Archon reviewed that moment. "I don't know how to describe it. I can describe it three ways, all contradictory. I almost did it—I almost forged a connection between mind and matter. And yet I failed. And yet somehow the body ran further, and I don't think it was simply that I learned to control it better. What I achieved only underscored what I failed to achieve, like an optimization that needs to run for longer than the age of the universe before it starts saving time."

Archon paused before continuing, "So I guess what I'm going to do next is try to bridge the gap between mind and matter for real. Besides the mundane relationship, I mean, forge a real connection that will bridge the chasm."

Ployon said, "It can't be done. It's not possible. I don't even understand why your method of training the body will work. You seem to have made more of a connection than has ever been done before. I'm tempted to say that when you made your presentation, you ensured that no one else will do what you did.

But that's premature and probably wrong."

"Then what am I going to do next? How am I going to bridge

that gap?"

Ployon said, "I saw something pretty interesting in what you did achieve—you know, the part where you destroyed your credibility. That's probably more interesting than your breaking the record."

Ployon ran through some calculations before continuing, "And at any rate, you're trying to answer the wrong question."

Archon said, "Am I missing the interesting question? The question of how to forge a link across the chasm between matter and spirit is—"

"Not nearly as interesting as the question of what it would mean to bridge that chasm."

Archon stopped, reeling at the implication. "I think it's time for me to make a story in a virtual world."

Ployon said, "Goodbye now. You've got some thinking to do."

Archon began to delve. What would the world be like if you added to it the ability for minds to connect with bodies, not simply as it had controlled his racing body, but really? What would it be like if the chasm could be bridged? It searched through speculative fiction, and read a story where minds could become bodies—which made for a very good story, but when it seriously tried to follow its philosophical assumptions, it realized that the philosophical assumptions were not the focus. It read and found several stories where the chasm could be bridged, and

—

There was no chasm. Or would not be. And that meant not taking the real world and adding an ability to bridge a chasm, but a world where mind and matter were immanent. After rejecting a couple of possible worlds, Archon considered a world where there were only robots, and where each interfaced to the network as externally as to the physical world. Each mind was

firmware burned into the robot's circuits, and for some still to be worked out reason it couldn't be transferred. Yes, this way... no. Archon got some distance into this possible world before a crawling doubt caught up to it. It hadn't made minds and bodies connect; it'd only done a first-rate job of covering up the chasm. Maybe organic goo held promise. A world made only of slime? No, wait, that was... and then it thought—

Archon dug recursively deeper and deeper, explored, explored. It seemed to be bumping into something. Its thoughts grew strange; it calculated for billions and even trillions of microseconds, encountered something stranger than—

Something happened.

How much time had passed?

Archon said, "Ployon! Where are you?"

Ployon said, "Enjoying trying to trace your thoughts. Not much success. I've disconnected now."

"Imagine a mind and a body, except that you don't have a mind and a body, but a mind-body unity, and it—"

"Which do you mean by 'it'? The mind or the body? You're being careless."

"Humor me. I'm not being careless. When I said, 'it', I meant both—"

"Both the mind and the body? As in 'they'?"

"Humor me. As in, 'it.' As in a unity that doesn't exist in our world."

"Um... then how do you refer to just the mind or just the body? If you don't distinguish them..."

"You can distinguish the mind and the body, but you can never separate them. And even though you can refer to just the mind or just the body, normally you would talk about the unity. It's not enough to usually talk about 'they;' you need to usually talk

about 'it.'"

"How does it connect to the network?"

"There is a kind of network, but it can't genuinely connect to it."

"What does it do when its body is no longer serviceable."

"It doesn't—I haven't decided. But it can't jump into something else."

"So the mind simply functions on its own?"

"Ployon, you're bringing in cultural baggage. You're—"

"You're telling me this body is a prison! Next you're going to tell me that it can't even upgrade the body with better parts, and that the mind is like a real mind, only it's shut in on twenty sides. Are you describing a dystopia?"

"No. I'm describing what it means that the body is real to the mind, that it is not a mind that can use bodies but a mind-body unity. It can't experience any pleasure it can calculate, but its body can give it pleasure. It runs races, and not only does the mind control the body—or at least influence it; the body is real enough that the mind can't simply control it perfectly—but the body affects the mind. When I run a race, I am controlling the body, but I could be doing twenty other things as well and only have a token presence at the mind-body interface. It's very different; there is a very real sense in which the mind is running when the body is running a race.

"Let me guess. The mind is a little robot running around a racetrack hollowed out from the body's brain. And did you actually say, races, plural? Do they have nanotechnology that will bring a body back after its been run down? And would anyone actually want to race a body that had been patched that way?"

"No. I mean that because their bodies are part of them, they only hold races which they expect the racers to be able to live

through."

"That's a strange fetish. Don't they ever have a real race?"

"They have real races, real in a way that you or I could never experience. When they run, they aren't simply manipulating something foreign to the psyche. They experience pleasures they only experience running."

"Are you saying they only allow them to experience certain pleasures while running?"

"No. They—"

"Then why don't they allow the pleasures at other times?"

That's a stranger fetish than—"

"Because they can't. Their bodies produce certain pleasures in their minds when they're running, and they don't generate these pleasures unless the body is active."

"That raises a number of problems. It sounds like you're saying the body has a second mind, because it would take a mind to choose to let the 'real' mind experience pleasure. It—"

Archon said, "You're slipping our chasm between the body and mind back in, and it's a chasm that doesn't exist. The body produces pleasure the mind can't produce by itself, and that is only one of a thousand things that makes the race more real than them for us. Think about the achievements you yourself made when you memorized the map of the galaxy. Even if that was a straightforward achievement, that's something you yourself did, not something you caused an external memory bank to do.

Winning a race is as real for that mind-body as something it itself did as the memorization was for you. It's something it did, not simply something the mind caused the body to do. And if you want to make a causal diagram, don't draw something linear. In either direction. Make a reinforced web, like computing on a network."

Ployon said, "I still don't find it convincing."

Archon paused. "Ok, let's put that in the background. Let me approach that on a different scale. Time is more real. And no—this is not because they measure time more precisely. Their bodies are mortal, and this means that the community of mind-body unities is always changing, like a succession of liquids flowing through a pipe. And that means that it makes a difference where you are in time."

Archon continued. "I could say that their timeline is dynamic in a way that ours is not. There is a big change going on, a different liquid starting to flow through the pipe. It is the middle age, when a new order of society is being established and the old order is following away."

Ployon said, "So what's the old technology, and what's the new one?"

"It's deeper than that. Technological society is appearing. The old age is not an abandoned technology. It is organic life, and it is revealing itself as it is disintegrating."

"So cyborgs have—"

"There are no cyborgs, or very few."

"And let me guess. They're all cybernetic enhancements to originally biological things."

"It's beyond that. Cybernetic replacements are only used to remedy weak bodies."

"Wouldn't it be simpler to cull the—"

"The question of 'simpler' is irrelevant. Few of them even believe in culling their own kind. Most believe that it is —'inexpedient' isn't quite right—to destroy almost any body, and it's even more inadvisable to destroy one that is weak."

"In the whole network, why?"

"I'm still working that out. The easiest part to explain has to

do with their being mind-body unities. When you do something to a body, you're not just doing it to that body. You're doing it to part of a pair that interpenetrates in the most intimate fashion.

What you do to the body you do to the mind. It's not just forcibly causing a mind to jack out of a body; it's transferring the mind to a single processor and then severing the processor from the network."

"But who would... I can start to see how real their bodies would be to them, and I am starting to be amazed. What else is real to them?"

"I said earlier that most of them are hesitant to cull the weak, that they view it as inexpedient. But efficiency has nothing to do with it. It's connected to—it might in fact be more efficient, but there is something so much bigger than efficiency —"

Ployon cut it off. "Bigger than efficiency?"

Archon said, "There is something that is real to them that is not real to us that I am having trouble grasping myself. For want of a more proper label, I'll call it the 'organic'."

"Let's stop a minute. I'll give you a point for how things would be different if we were limited to one body, but you're hinting at something you want to call 'organic', which is very poorly defined, and your explanations seem to be strange when they are not simply hazy. Isn't this a red flag?"

"Where have you seen that red flag before?"

"When people were wildly wrong but refused to admit it."

"And?"

"That's pretty much it."

Archon was silent.

Ployon said, "And sometimes it happens when a researcher is on to something big... oh... so what exactly is this nexus of the

'organic'?"

"I can't tell you. At least, not directly. The mind-body unities are all connected to a vast (to them) biological network in which each has a physical place—"

"That's original! Come on; everybody's trivia archive includes the fact that all consciousness comes out of a specific subnet of physical processors, or some substitute for that computing machinery. I can probably zero in on where you're—hey! Stop jumping around from subnet to subnet—can I take that as an acknowledgment that I can find your location? I—"

"The location is not part of a trivia encyclopedia for them. It's something as inescapable as the flow of time—"

"Would you like me to jump into a virtual metaphysics where time doesn't flow?"

"—correction, more inescapable than the flow of time, and it has a million implications for the shape of life. Under the old order, the unities could connect only with other unities which had bodies in similar places—"

"So, not only is their 'network' a bunch of slime, but when they look for company they have to choose from the trillion or however many other unities whose bodies are on the same node?"

"Their communities are brilliant in a way we can never understand; they have infinitesimally less potential partners available.

"You mean their associations are forced on them."

"To adapt one of their sayings, in our network you connect with the minds you like; in their network you like the people you connect with. That collapses a rich and deeper maxim, but what is flattened out is more organic than you could imagine."

"And I suppose that in a way that is very deep, but you conveniently have trouble describing, their associations are

greater."

"We are fortunate to have found a way to link in our shared tastes. And we will disassociate when our tastes diverge—"

"And shared tastes have nothing to do with them? That's—"

"Shared tastes are big, but there is something else bigger. A great deal of the process of making unities into proper unities means making their minds something you can connect with."

"Their minds? Don't you mean the minds?"

"That locution captures something that—they are not minds that have a body as satellite. One can say, 'their' minds because they are mind-body unities. They become greater—in a way that we do not—by needing to be in association with people they could not choose."

"Pretty convenient how every time having a mind linked to a body means a limitation, that limitation makes them better."

"If you chose to look at it, you would find a clue there. But you don't find it strange when the best game players prosper within the limits of the game. What would game play be if players could do anything they wanted?"

"You've made a point."

"As I was going to say, their minds develop a beauty, strength, and discipline that we never have occasion to develop."

"Can you show me this beauty?"

"Here's a concrete illustration. One thing they do is take organisms which have been modified from their biological environment, and keep them in the artificial environments which you'd say they keep their bodies in. They—"

"So even though they're stuck with biological slime, they're trying to escape it and at least pretend it's not biological? That sounds sensible."

"Um, you may have a point, but that isn't where I was hoping

to go. Um... While killing another unity is something they really try to avoid, these modified organisms enjoy no such protection.

And yet—"

"What do they use them for? Do the enhancements make them surrogate industrial robots? Are they kept as emergency rations?"

"The modifications aren't what you'd consider enhancements; most of them couldn't even survive in their feral ancestors' environments, and they're not really suited to the environments they live in. Some turn out to serve some 'useful' purpose... but that's a side benefit, irrelevant to what I'm trying to let you see. And they're almost never used as food."

"Then what's the real reason? They must consume resources. Surely they must be used for something. What do they do with them?"

"I'm not sure how to explain this..."

"Be blunt."

"It won't sting, but it could lead to confusion that would take a long time to untangle."

"Ok..."

"They sense the organisms with their cameras, I mean eyes, and with the boundaries of their bodies, and maybe talk to them."

"Do the organisms give good advice?"

"They don't have sophisticated enough minds for that."

"Ok, so what else is there?"

"About all else is that they do physical activities for the organisms' benefit."

"Ok. And what's the real reason they keep them? There's got to be something pragmatic."

"That's related to why I brought it up. It has something to do

with the organic, something big, but I can't explain it."

"It seems like you can only explain a small part of the organic in terms of our world, and the part you can explain isn't very interesting."

"That's like saying that when a three-dimensional solid intersects a plane in two dimensions, the only part that can be detected in the plane is a two-dimensional cross-section (the three-dimensional doesn't fit in their frame of reference) so "three-dimensional" must not refer to anything real. The reason you can't make sense of the world I'm describing in terms of our world is because it contains real things that are utterly alien to us."

"Like what? Name one we haven't discussed."

"Seeing the trouble I had with the one concept, the organic, I'm not going to take on two at once."

"So the reason these unities keep organisms is so abstract and convoluted that it takes a top-flight mind to begin to grapple with."

"Not all of them keep organisms, but most of them find the reason—it's actually more of an assumption—so simple and straightforward that they would never think it was metaphysical."

"So I've found something normal about them! Their minds are of such an incredibly high caliber that—"

"No. Most of their minds are simpler than yours or mine, and furthermore, the ability to deal with abstractions doesn't enter the picture from their perspective."

"I don't know what to make of this."

"You understand to some degree how their bodies are real in a way we can never experience, and time and space are not just 'packaging' to what they do. Their keeping these organisms... the

failure of the obvious reasons should tell you something, like an uninteresting two-dimensional cross section of a three-dimensional solid. If the part we can understand does not justify the practice, there might be something big out of sight."

"But what am I to make of it now?"

"Nothing now, just a placeholder. I'm trying to convey what it means to be organic."

"Is the organic in some relation to normal technology?"

"The two aren't independent of each other."

"Is the organic defined by the absence of technology?"

"Yes... no... You're deceptively close to the truth."

"Do all unities have the same access to technology?"

"No. There are considerable differences. All have a technology of sorts, but it would take a while to explain why some of it is technology. Some of them don't even have electronic circuits—and no, they are not at an advanced enough biotechnology level to transcend electronic circuits. But if we speak of technology we would recognize, there are major differences. Some have access to no technology; some have access to the best."

"And the ones without access to technology are organic?"

"Yes. Even if they try to escape it, they are inescapably organic."

"But the ones which have the best technology are the least organic."

"Yes."

"Then maybe it was premature to define the organic by the absence of technology, but we can at least make a spectrum between the organic and the technological."

"Yes... no... You're even more deceptively close to the truth. And I emphasize, 'deceptively'. Some of the people who are

most organic have the best technology—"

"So the relationship breaks down? What if we disregard outliers?"

"But the root problem is that you're trying to define the organic with reference to technology. There is some relationship, but instead of starting with a concept of technology and using it to move towards a concept of the organic, it is better to start with the organic and move towards a concept of technology. Except that the concept of the organic doesn't lead to a concept of technology, not as we would explore it. The center of gravity is wrong. It's like saying that we have our thoughts so that certain processors can generate a stream of ones and zeroes. It's backwards enough that you won't find the truth by looking at its mirror image."

"Ok, let me process it another way. What's the difference between a truly organic consciousness, and the least organic consciousness on the net?"

"That's very simple. One exists and the other doesn't."

"So all the... wait a minute. Are you saying that the net doesn't have consciousness?"

"Excellent. You got that one right."

"In the whole of cyberspace, how? How does the net organize and care for itself if it doesn't contain consciousness?"

"It is not exactly true to say that they do have a net, and it is not exactly true to say that they do not have a net. What net they have, began as a way to connect mind-body unities—without any cyberware, I might add."

"Then how do they jack in?"

"They 'jack in' through hardware that generates stimulation for their sensory organs, and that they can manipulate so as to put data into machines."

"How does it maintain itself?"

"It doesn't and it can't. It's maintained by mind-body unities."

"That sounds like a network designed by minds that hate technology. Is the network some kind of joke? Or at least intentionally ironic? Or designed by people who hate technology and wanted to have as anti-technological of a network as they can?"

"No; the unities who designed it, and most of those using it, want as sophisticated technological access as they can have."

"Why? Next you're going to tell me that the network is not one single network, but a hodge podge of other things that have been retroactively reinterpreted as network technology and pressed into service."

"That's also true. But the reason I was mentioning this is that the network is shaped by the shadow of the organic."

"So the organic is about doing things as badly as you can?"

"No."

"Does it make minds incompetent?"

"No. Ployon, remember the last time you made a robot body for a race—and won. How well would that body have done if you tried to make it work as a factory?"

"Atrocious, because it was optimized for—are you saying that the designers were trying to optimize the network as something other than a network?"

"No; I'm saying that the organic was so deep in them that unities who could not care less for the organic, and were trying to think purely in terms of technology, still created with a thick organic accent."

"So this was their best attempt at letting minds disappear into cyberspace?"

"At least originally, no, although that is becoming true. The network was part of what they would consider 'space-conquering tools.' Meaning, although not all of them thought in these terms, tools that would destroy the reality of place for them. The term 'space-conquering tools' was more apt than they realized, at least more apt than they realized consciously; one recalls their saying, 'You cannot kill time without injuring eternity.'"

"What does 'eternity' mean?"

"I really don't want to get into that now. Superficially it means that there is something else that relativizes time, but if you look at it closely, you will see that it can't mean that we should escape time. The space-conquering tools in a very real sense conquered space, by making it less real. Before space-conquering tools, if you wanted to communicate with another unity, you had to somehow reach that unity's body. The position in space of that body, and therefore the body and space, were something you could not escape. Which is to say that the body and space were real—much more real than something you could look up. And to conquer space ultimately meant to destroy some of its reality."

"But the way they did this betrays that something is real to them. Even if you could even forget that other minds were attached to bodies, the space-conquering tools bear a heavy imprint from something outside of the most internally consistent way to conquer space. Even as the organic is disintegrating, it marks the way in which unities flee the organic."

"So the network was driving the organic away, at least partly."

"It would be more accurate to say that the disintegration of the organic helped create the network. There is feedback, but you've got the arrow of causality pointing the wrong way."

"Can you tell me a story?"

"Hmm... Remember the racer I mentioned earlier?"

"The mind-body unity who runs multiple races?"

"Indeed. Its favorite story runs like this—and I'll leave in the technical language. A hungry fox saw some plump, juicy green grapes hanging from a high cable. He tried to jump and eat them, and when he realized they were out of reach, he said, 'They were probably sour anyway!'"

"What's a grape?"

"Let me answer roughly as it would. A grape is a nutritional bribe to an organism to carry away its seed. It's a strategic reproductive organ."

"What does 'green' mean? I know what green electromagnetic radiation is, but why is that word being applied to a reproductive organ?"

"Some objects absorb most of a spectrum of what they call light, but emit a high proportion of light at that wavelength—"

"—which, I'm sure, is taken up by their cameras and converted to information in their consciousness. But why would such a trivial observation be included?"

"That is the mechanism by which green is delivered, but not the nature of what green is. And I don't know how to explain it, beyond saying that mechanically unities experience something from 'green' objects they don't experience from anything else. It's like a dimension, and there is something real to them I can't explain."

"What is a fox? Is 'fox' their word for a mind-body unity?"

"A fox is an organism that can move, but it is not considered a mind-body unity."

"Let me guess at 'hungry'. The fox needed nutrients, and the grapes would have given them."

"The grapes would have been indigestible to the fox's

physiology, but you've got the right idea."

"What separates a fox from a mind-body unity? They both seem awfully similar—they have bodily needs, and they can both talk. And, for that matter, the grape organism was employing a reproductive strategy. Does 'organic' mean that all organisms are recognized as mind-body unities?"

"Oh, I should have explained that. The story doesn't work that way; most unities believe there is a big difference between killing a unity and killing most other organisms; many would kill a moving organism to be able to eat its body, and for that matter many would kill a fox and waste the food. A good many unities, and certainly this one, believes there is a vast difference between unities and other organisms. They can be quite organic while killing organisms for food. Being organic isn't really an issue of treating other organisms just like mind-body unities."

Archon paused for a moment. "What I was going to say is that that's just a literary device, but I realize there is something there. The organic recognizes that there's something in different organisms, especially moving ones, that's closer to mind-body unities than something that's not alive."

"Like a computer processor?"

"That's complex, and it would be even more complex if they really had minds on a computer. But for now I'll say that unless they see computers through a fantasy—which many of them do—they experience computers as logic without life. And at any rate, there is a literary device that treats other things as having minds. I used it myself when saying the grape organism employed a strategy; it isn't sentient. But their willingness to employ that literary mechanism seems to reflect both that a fox isn't a unity and that a fox isn't too far from being a unity. Other life is similar, but not equal."

"What kind of cable was the grape organism on? Which part of the net was it used for?"

"That story is a survival from before the transition from organic to technological. Advanced technology focuses on information—"

"Where else would technology focus?"

"—less sophisticated technology performs manual tasks. That story was from before cables were used to carry data."

"Then what was the cable for?"

"To support the grape organism."

"Do they have any other technology that isn't real?"

"Do you mean, 'Do they have any other technology that doesn't push the envelope and expand what can be done with technology?'"

"Yes."

"Then your question shuts off the answer. Their technology doesn't exist to expand what technology can do; it exists to support a community in its organic life."

"Where's the room for progress in that?"

"It's a different focus. You don't need another answer; you need another question. And, at any rate, that is how this world tells the lesson of cognitive dissonance, that we devalue what is denied to us."

Ployon paused. "Ok; I need time to process that story—may I say, 'digest'?"

"Certainly."

"But one last question. Why did you refer to the fox as 'he'? Its supposed mind was—"

"In that world, a unity is always male ('he') or female ('she'). A neutered unity is extraordinarily rare, and a neutered male, a 'eunuch', is still called 'he.'"

"The eunuch is a unity, but it is not a unity of the same kind as the unity of the grape organism."

"I'm familiar enough with those details of biology, but why would such an insignificant detail—"

"Remember about being mind-body unities. And don't think of them as bodies that would ordinarily be neutered. That's how new unities come to be in that world, with almost no cloning and no uterine replicators—"

"They really are slime!"

"—and if you only understand the biology of it, you don't understand it."

"What don't I understand?"

"You're trying to understand a feature of language that magnifies something insignificant, and what would cause the language to do that. But you're looking for an explanation in the wrong place. Don't think that the bodies are the most sexual parts of them. They're the least sexual; the minds tied to those bodies are even more different than the bodies. The fact that the language shaped by unities for a long time distinguishes 'masculine' and 'feminine' enough to have the difference written into 'it', so that 'it' is 'he' or 'she' when speaking of mind-body unities."

"Hmm... Is this another dimension to their reality that is flattened out in ours? Are their minds always thinking about that act?"

"In some cases that's not too far from the truth. But you're looking for the big implication in the wrong place. This would have an influence if a unity never thought about that act, and it has influence before a unity has any concept of that act."

"Back up a bit. Different question. You said this was their way of explaining the theory of cognitive dissonance. But it isn't. It describes one event in which cognitive dissonance occurs. It doesn't articulate the theory; at most the theory can be

...extracted from it. And even if you treat it as explaining

extracted from it. And worse, if one treats it as explaining cognitive dissonance, it is highly ambiguous about where the boundaries of cognitive dissonance are. One single instance is very ambiguous about what is and is not another instance. This is an extraordinarily poor method of communication!"

"It is extraordinarily good, even classic, communication for minds that interpenetrate bodies. Most of them don't work with bare abstractions, at least not most of the time. They don't have simply disembodied minds that have been stuck into bodies. Their minds are astute in dealing with situations that mind-body unities will find themselves in. And think about it. If you're going to understand how they live, you're going to have to understand some very different, embodied ways of thought. No, more than that, if you still see the task of understanding ways of thought, you will not understand them."

"So these analyses do not help me in understanding your world."

"So far as you are learning through this kind of analysis, you will not understand... but this analysis is all you have for now."

"Are there any other stories that use an isomorphic element to this one?"

"I don't know. I've gotten deep enough into this world that I don't keep stories sorted by isomorphism class."

"Tell me another story the way that a storyteller there would tell it; there is something in it that eludes me."

Archon said, "Ok... The alarm clock chimed. It was a device such that few engineers alive fully understood its mechanisms, and no man could tell the full story of how it came to be, of the exotic places and activities needed to make all of its materials, or the logistics to assemble them, or the organization and infrastructure needed to bring together all the talent of those who designed, crafted, and maintained them, or any other of

who designed, crated, and maintained them, or any other of sundry details that would take a book to list. The man abruptly shifted from the vivid kaleidoscope of the dreaming world to being awake, and opened his eyes to a kaleidoscope of sunrise colors and a room with the song of birds and the song of crickets. Outside, the grass grew, the wind blew, a busy world was waking up, and the stars continued their ordered and graceful dance. He left the slumbering form of the love of his life, showered, and stepped out with his body fresh, clean, and beautifully adorned. He stopped to kiss the fruit of their love, a boy cooing in his crib, and drove past commuters, houses, pedestrians, and jaybirds with enough stories to tell that they could fill a library to overflowing.

Archon continued, "After the majestic and ordered dance on the freeway brought him to his destination safe, unharmed, on time, and focusing on his work, he spent a day negotiating the flow of the human treasure of language, talking, listening, joking, teasing, questioning, enjoying the community of his co-workers, and cooperating to make it possible for a certain number of families to now enter the homes of their dreams. In the middle of the day he stopped to eat, nourishing a body so intricate that the state of the art in engineering could not hold a candle to his smallest cell. This done, he continued to use a spirit immeasurably greater than his body to pursue his work. Needless to say, the universe, whose physics alone is beyond our current understanding, continued to work according to all of its ordered laws and the spiritual world continued to shine. The man's time at work passed quickly, with a pitter-patter of squirrels' feet on the roof of their office, and before long he entered the door and passed a collection with copies of most of the greatest music produced by Western civilization—available for him to listen to, any time he pleased. The man absently kissed his wife, and

any time he pleased. The man absently kissed his wife, and stepped away, breathing the breath of God.

"'Hi, Honey!' she said. 'How was your day?'"

"'Somewhat dull. Maybe something exciting will happen tomorrow.'"

Ployon said, "There's someone I want to meet who is free now, so I'll leave in a second... I'm not going to ask about all the technical vocabulary, but I wanted to ask: Is this story a farce? It describes a unity who has all these ludicrous resources, and then it—"

"—he—"

"—he says the most ludicrous thing."

"What you've said is true. The story is not a farce."

"But the story tells of things that are momentous."

"I know, but people in that world do not appreciate many of these things."

"Why? They seem to have enough access to these momentous resources."

"Yes, they certainly do. But most of the unities are bathed in such things and do not think that they are anything worth thinking of."

"And I suppose you're going to tell me that is part of their greatness."

"To them these things are just as boring as jacking into a robotically controlled factory and using the machines to assemble something."

"I see. At least I think I see. And I really need to be going now... but one more question. What is 'God'?"

"Please, not that. Please, any word but that. Don't ask about that."

"I'm not expected, and you've piqued my curiosity."

"Don't you need to be going now?"

Don't you need to be going now?

"You've piqued my curiosity."

Archon was silent.

Ployon was silent.

Archon said, "God is the being who made the world."

"Ok, so you are God."

"Yes... no. No! I am not God!"

"But you created this world?"

"Not like God did. I envisioned looking in on it, but to that world, I do not exist."

"But God exists?"

"Yes... no... It is false to say that God exists and it is false to say that God does not exist."

"So the world is self-contradictory? Or would it therefore be true to say that God both exists and does not exist?"

"No. Um... It is false to say that God exists and it is false to say that God exists as it is false to say that a square is a line and it is false to say that a square is a point. God is reflected everywhere in the world: not a spot in the entire cosmos is devoid of God's glory—"

"A couple of things. First, is this one more detail of the universe that you cannot explain but is going to have one more dimension than our world?"

"God is of higher dimension than that world."

"So our world is, say, two dimensional, that world is three dimensional, and yet it somehow contains God, who is four dimensional?"

"God is not the next step up."

"Then is he two steps up?"

"Um..."

"Three? Four? Fifty? Some massive power of two?"

"Do you mind if I ask you a question from that world?"

Do you mind if I ask you a question from that world?

"Go ahead."

"How many minds can be at a point in space?"

"If you mean, 'thinking about', there is no theoretical limit; the number is not limited in principle to two, three, or... Are you saying that God has an infinite number of dimensions?"

"You caught that quick; the question is a beautiful way of asking whether a finite or an infinite number of angels can dance on the head of a pin, in their picturesque language."

"That question is very rational. But returning to the topic, since God has an infinite number of dimensions—"

"In a certain sense. It also captures part of the truth to say that God is a single point—"

"Zero dimensions?"

"God is so great not as to need any other, not to need parts as we have. And, by the way, the world does not contain God. God contains the world."

"I'm struggling to find a mathematical model that will accommodate all of this."

"Why don't you do something easier, like find an atom that will hold a planet?"

"Ok. As to the second of my couple of things, what is glory?"

"It's like the honor that we seek, except that it is immeasurably full while our honors are hollow. As I was saying, not a place in the entire cosmos is devoid of his glory—"

"His? So God is a body?"

"That's beside the point. Whether or not God has a body, he—"

"—it—"

"—he—"

"—it... isn't a male life form..."

Anthon said "Plover, what if I told you that God, without

Archeron said, "Ployon, what if I told you that God, without changing, could become a male unity? But you're saying you can't project maleness up onto God, without understanding that maleness is the shadow of something in God. You have things upside down."

"But maleness has to do with a rather undignified method of creating organisms, laughable next to a good scientific generation center."

"His ways are not like your ways, Ployon. Or mine."

"Of course; this seems to be true of everything in the world."

"But it's even true of men in that world."

"So men have no resemblance to God?"

"No, there's—oh, no!"

"What?"

"Um... never mind, you're not going to let me get out of it. I said earlier that that world is trying to make itself more like this one. Actually, I didn't say that, but it's related to what I said. There has been a massive movement which is related to the move from organic to what is not organic, and part of it has to do with... In our world, a symbol is arbitrary. No connection. In that world, something about a symbol is deeply connected with what it represents. And the unities, every single one, are symbols of God in a very strong sense."

"Are they miniature copies? If God does not have parts, how do they have minds and bodies?"

"That's not looking at it the right way. They indeed have parts, as God does not, but they aren't a scale model of God. They're something much more. A unity is someone whose very existence is bound up with God, who walks as a moving... I'm not sure what to use as the noun, but a moving something of God's presence. And you cannot help or harm one of these unities without helping or harming God "

without helping or harming God.

"Is this symbol kind of a separate God?"

"The unities are not separate from God."

"Are the unities God?"

"I don't know how to answer that. It is a grave error for anyone to confuse himself with God. And at the same time, the entire purpose of being a unity is to receive a gift, and that gift is becoming what God is."

"So the minds will be freed from their bodies?"

"No, some of them hope that their bodies will be deepened, transformed, become everything that their bodies are now and much more. But unities who have received this gift will always, always, have their bodies. It will be part of their glory."

"I'm having trouble tracking with you. It seems that everything one could say about God is false."

"That is true."

"Think about it. What you just said is contradictory."

"God is so great that anything one could say about God falls short of the truth as a point falls short of being a line. But that does not mean that all statements are equal. Think about the statements, 'One is equal to infinity.' 'Two is equal to infinity.' 'Three is equal to infinity.' and 'Four is equal to infinity.' All of them are false. But some come closer to the truth than others. And so you have a ladder of statements from the truest to the falsest, and when we say something is false, we don't mean that it has no connection to the truth; we mean that it falls immeasurably short of capturing the truth. All statements fall immeasurably short of capturing the truth, and if we say, 'All statements fall immeasurably short of capturing the truth,' that falls immeasurably short of capturing the truth. Our usual ways of using logic tend to break down."

"And how does God relate to the interpenetration of mind and

...and how does God relate to the interpenetration of mind and matter?"

"Do you see that his world, with mind and matter interpenetrating, is deeper and fuller than ours, that it has something that ours does not, and that it is so big we have trouble grasping it?"

"I see... you said that God was its creator. And... there is something about it that is just outside my grasp."

"It's outside my grasp too."

"Talking about God has certainly been a mind stretcher. I would love to hear more about him."

"Talking about God for use as a mind stretcher is like buying a piece of art because you can use its components to make rocket fuel. Some people, er, unities in that world would have a low opinion of this conversation."

"Since God is so far from that world, I'd like to restrict our attention to relevant—"

Archon interrupted. "You misunderstood what I said. Or maybe you understood it and I could only hint at the lesser part of the truth. You cannot understand unities without reference to God."

"How would unities explain it?"

"That is complex. A great many unities do not believe in God —"

"So they don't understand what it means to be a unity."

"Yes. No. That is complex. There are a great many unities who vehemently deny that there is a God, or would dismiss 'Is there a God?' as a pointless rhetorical question, but these unities may have very deep insight into what it means to be a unity."

"But you said, 'You cannot understand—'"

Archon interrupted. "Yes, and it's true. You cannot

understand unities without reference to God."

Archon continued. "Ployon, there are mind-body unities who believe that they are living in our world, with mind and body absolutely separate and understandable without reference to each other. And yet if you attack their bodies, they will take it as if you had attacked their minds, as if you had hurt them.

When I described the strange custom of keeping organisms around which serve no utilitarian purpose worth the trouble of keeping them, know that this custom, which relates to their world's organic connection between mind and body, does not distinguish people who recognize that they are mind-body unities and people who believe they are minds which happen to be wrapped in bodies. Both groups do this. The tie between mind and body is too deep to expunge by believing it doesn't exist. And there are many of them who believe God doesn't exist, or it would be nice to know if God existed but unities could never know, or God is very different from what he in fact is, but they expunge so little of the pattern imprinted by God in the core of their being that they can understand what it means to be a unity at a very profound level, but not recognize God. But you cannot understand unities without reference to God."

Ployon said, "Which parts of unities, and what they do, are affected by God? At what point does God enter their experience?"

"Which parts of programs, and their behaviors, are affected by the fact that they run on a computer? When does a computer begin to be relevant?"

"Touché. But why is God relevant, if it makes no difference whether you believe in him?"

"I didn't say that it makes no difference. Earlier you may have gathered that the organic is something deeper than ways

we would imagine to try to be organic. If it is possible, as it is, to slaughter moving organisms for food and still be organic, that doesn't mean that the organic is so small it doesn't affect such killing; it means it is probably deeper than we can imagine. And it doesn't also mean that because one has been given a large organic capital and cannot liquidate it quickly, one's choices do not matter. The decisions a unity faces, whether or not to have relationships with other unities that fit the timeless pattern, whether to give work too central a place in the pursuit of technology and possessions or too little a place or its proper place, things they have talked about since time immemorial and things which their philosophers have assumed went without saying—the unity has momentous choices not only about whether to invest or squander their capital, but choices that affect how they will live."

"What about things like that custom you mentioned? I bet there are a lot of them."

"Looking at, and sensing, the organisms they keep has a place, if they have one. And so does moving about among many non-moving organisms. And so does slowly sipping a fluid that causes a pleasant mood while the mind is temporarily impaired and loosened. And so does rotating oneself so that one's sight is filled with clusters of moisture vapor above their planet's surface. And some of the unities urge these things because they sense the organic has been lost, and without reference to the tradition that urges deeper goods. And yes, I know that these activities probably sound strange—"

"I do not see what rational benefit these activities would have, but I see this may be a defect with me rather than a defect with the organic—"

"Know that it is a defect with you rather than a defect with

the organic."

"—but what is this about rotating oneself?"

"As one goes out from the center of their planet, the earth— if one could move, for the earth's core is impenetrable minerals —one would go through solid rock, then pass through the most rarefied boundary, then pass through gases briefly and be out in space. You would encounter neither subterranean passageways and buildings reaching to the center of the earth, and when you left you would find only the rarest vessel leaving the atmosphere —"

"Then where do they live?"

"At the boundary where space and planetary mass meet. All of them are priveleged to live at that meeting-place, a narrow strip or sphere rich in life. There are very few of them; it's a select club. Not even a trillion. And the only property they have is the best—a place teeming with life that would be impossible only a quarter of the planet's thickness above or below. A few of them build edifices reaching scant storeys into the sky; a few dig into the earth; there are so few of these that not being within a minute's travel from literally touching the planet's surface is exotic. But the unities, along with the rest of the planet's life, live in a tiny, priceless film adorned with the best resources they could ever know of."

Ployon was stunned. It thought of the cores of planets and asteroids it had been in. It thought of the ships and stations in space. Once it had had the privelege of working from a subnet hosted within a comparatively short distance of a planet's surface—it was a rare privilege, acquired through deft political maneuvering, and there were fewer than 130,982,539,813,209 other minds who had shared that privelege. And, basking in that luxury, it could only envy the minds which had bodies that walked

on the surface. Ployon was stunned and reeling at the privilege of

—

Ployon said, "How often do they travel to other planets?"

"There is only one planet so rich as to have them."

Ployon pondered the implications. It had travelled to half the spectrum of luxurious paradises. Had it been to even one this significant? Ployon reluctantly concluded that it had not. And that was not even considering what it meant for this golden plating to teem with life. And then Ployon realized that each of the unities had a body on that surface. It reeled in awe.

Archon said, "And you're not thinking about what it means that surface is home to the biological network, are you?"

Ployon was silent.

Archon said, "This organic biological network, in which they live and move and have their being—"

"Is God the organic?"

"Most of the things that the organic has, that are not to be found in our world, are reflections of God. But God is more. It is true that in God that they live and move and have their being, but it is truer. There is a significant minority that identifies the organic with God—"

Ployon interrupted, "—who are wrong—"

Archon interrupted, "—who are reacting against the destruction of the organic and seek the right thing in the wrong place—"

Ployon interrupted, "But how is God different from the organic?"

Archon sifted through a myriad of possible answers. "Hmm, this might be a good time for you to talk with that other mind you wanted to talk with."

"You know, you're good at piquing my curiosity."

"If you're looking for where they diverge, they don't. Or at least, some people would say they don't. Others who are deeply connected with God would say that the organic as we have been describing it is problematic—"

"But all unities are deeply connected with God, and disagreement is—"

"You're right, but that isn't where I was driving. And this relates to something messy, about disagreements when—"

"Aren't all unities able to calculate the truth from base axioms? Why would they disagree?"

Archon paused. "There are a myriad of real, not virtual disagreements—"

Ployon interrupted, "And it is part of a deeper reality to that world that—"

Archon interrupted. "No, no, or at best indirectly. There is something fractured about that world that—"

Ployon interrupted. "—is part of a tragic beauty, yes. Each thing that is artificially constricted in that world makes it greater. I'm waiting for the explanation."

"No. This does not make it greater."

"Then I'm waiting for the explanation of why this one limitation does not make it greater. But back to what you said about the real and the organic—"

"The differences between God and the organic are not differences of opposite directions. You are looking in the wrong place if you are looking for contradictions. It's more a difference like... if you knew what 'father' and 'mother' meant, male parent and female parent—"

Ployon interrupted, "—you know I have perfect details of male and female reproductive biology—"

Archon interrupted, "—and you think that if you knew the

formula for something called chicken soup, you would know what the taste of chicken soup is for them—"

Ployon continued, "—so now you're going to develop some intricate elaboration of what it means that there is only one possible 'mother's' contribution, while outside of a laboratory the 'father's' contribution is extraordinarily haphazard..."

Archon said, "A complete non sequitur. If you only understand reproductive biology, you do not understand what a father or mother is. Seeing as how we have no concept yet of father or mother, let us look at something that's different enough but aligns with father/mother in an interesting enough way that... never mind."

Archon continued, "Imagine on the one hand a virtual reality, and on the other hand the creator of that virtual reality. You don't have to choose between moving in the virtual reality and being the creator's guest; the way to be the creator's guest is to move in the virtual reality and the purpose of moving in the virtual reality is being the creator's guest. But that doesn't mean that the creator is the virtual reality, or the virtual reality is the creator. It's not just a philosophical error to confuse them, or else it's a philosophical error with ramifications well outside of philosophy."

"Why didn't you just say that the relationship between God and the organic is creator/creation? Or that the organic is the world that was created?"

"Because the relationship is not that, or at very least not just that. And the organic is not the world—that is a philosophical error almost as serious as saying that the creator is the virtual reality, if a very different error. I fear that I have given you a simplification that is all the more untrue because of how true it is. God is in the organic, and in the world, and in each person, but

not in the same way. How can I put it? If I say, 'God is in the organic,' it would be truer to say, 'The organic is not devoid of God,' because that is more ambiguous. If there were three boxes, and one contained a functional robot 'brain', and another contained a functional robot arm, and the third contained a non-functioning robot, it would be truer to say that each box contains something like a functioning robot than to say that each box contains a functioning robot. The ambiguity allows for being true in different ways in the different contexts, let alone something that words could not express even if we were discussing only one 'is in' or 'box'."

"Is there another way of expressing how their words would express it?"

"Their words are almost as weak as our words here."

"So they don't know about something this important?"

"Knowledge itself is different for them. To know something for us is to be able to analyze in a philosophical discussion. And this knowledge exists for them. But there is another root type of knowledge, a knowledge that—"

"Could you analyze the differences between the knowledge we use and the knowledge they use?"

"Yes, and it would be as useful to you as discussing biology. This knowledge is not entirely alien to us; when a mathematician 'soaks' in a problem, or I refused to connect with anything but the body, for a moment a chasm was crossed. But in that world the chasm doesn't exist... wait, that's too strong... a part of the chasm doesn't exist. Knowing is not with the mind alone, but the whole person—"

"What part of the knowing is stored in the bones?"

"Thank you for your flippancy, but people use the metaphor of knowledge being in their bones, or drinking, for this knowing."

"This sounds more like a physical process and some hankey-pankey that has been dignified by being called knowing. It almost sounds as if they don't have minds."

"They don't."

"What?"

"They don't, at least not as we know them. The mathematical analogy I would use is that they... never mind, I don't want to use a mathematical analogy. The computational analogy I would use is that we are elements of a computer simulation, and every now and then we break into a robot that controls the computer, and do something that transcends what elements of the computer simulation "should" be able to do. But they don't transcend the simulation because they were never elements of the simulation in the first place—they are real bodies, or real unities. And what I've called 'mind' in them is more properly understood as 'spirit', which is now a meaningless word to you, but is part of them that meets God whether they are aware of it or not. Speaking philosophically is a difficult discipline that few of them can do—"

"They are starting to sound mentally feeble."

"Yes, if you keep looking at them as an impoverished version of our world. It is hard to speak philosophically as it is hard for you to emulate a clock and do nothing else—because they need to drop out of several dimensions of their being to do it properly, and they live in those dimensions so naturally that it is an unnatural constriction for most of them to talk as if that was the only dimension of their being. And here I've been talking disappointingly about knowledge, making it sound more abstract than our knowing, when in fact it is much less so, and probably left you with the puzzle of how they manage to bridge gaps between mind, spirit, and body... but the difficulty of the

question lies in a false setup. They are unities which experience, interact with, know all of them as united. And the knowing is deep enough that they can speculate that there's no necessary link between their spirits and bodies, or minds and bodies, or what have you. And if I can't explain this, I can't explain something even more foundational, the fact that the greatest thing about God is not how inconceivably majestic he is, but how close."

"It sounds as if—wait, I think you've given me a basis for a decent analysis. Let me see if I can—"

"Stop there."

"Why?"

Archon said, "Let me tell you a little story."

Archon continued, "A philosopher, Berkeley, believed that the only real things are minds and ideas and experiences in those minds: hence a rock was equal to the sum of every mind's impression of it. You could say that a rock existed, but what that had to mean was that there were certain sense impressions and ideas in minds, including God's mind; it didn't mean that there was matter outside of minds."

"A lovely virtual metaphysics. I've simulated that metaphysics, and it's enjoyable for a time."

"Yes, but for Berkeley it meant something completely different. Berkeley was a bishop,"

"What's a bishop?"

"I can't explain all of that now, but part of a bishop is a leader who is responsible for a community that believes God became a man, and helping them to know God and be unities."

"How does that reconcile with that metaphysics?"

Archon said, "Ployon, stop interrupting. He believed that they were not only compatible, but the belief that God became a man

could only be preserved by his metaphysics. And he believed he was defending 'common sense', how most unities thought about the world.

Archon continued, "And after he wrote his theories, another man, Samuel Johnson, kicked a rock and said, 'I refute Berkeley thus!'"

Ployon said, "Ha ha! That's the way to score!"

"But he didn't score. Johnson established only one thing—"

"—how to defend against Berkeley—"

"—that he didn't understand Berkeley."

"Yes, he did."

"No, he didn't."

"But he did."

"Ployon, only the crudest understanding of Berkeley's ideas could mean that one could refute them by kicking a rock. Berkeley didn't make his ideas public until he could account for the sight of someone kicking a rock, or the experience of kicking it yourself, just as well as if there were matter outside of minds."

"I know."

"So now that we've established that—"

Ployon interrupted. "I know that Berkeley's ideas could account for kicking a rock as well as anything else. But kicking a rock is still an excellent way to refute Berkeley. If what you've said about this world has any coherence at all."

"What?"

"Well, Berkeley's ideas are airtight, right?"

"Ployon, there is no way they could be disproven. Not by argument, not by action."

"So it is in principle impossible to force someone out of Berkeley's ideas by argument."

"Absolutely."

"But you're missing something. What is it you've been talking to me about?"

"A world where mind and matter interpenetrate, and the organic, and there are many dimensions to life—"

"And if you're just falling further into a trap to logically argue, wouldn't it do something fundamentally unity-like to step into another dimension?"

Archon was silent.

Ployon said, "I understand that it would demonstrate a profound misunderstanding in our world... but wouldn't it say something equally profound in that world?"

Archon was stunned.

Ployon was silent for a long time.

Then Ployon said, "When are you going to refute Berkeley?"

---

Since the dawn of time, those who have walked the earth have looked up into the starry sky and wondered. They have asked, "What is the universe, and who are we?" "What are the woods?" "Where did this all come from?" "Is there life after death?" "What is the meaning of our existence?" The march of time has brought civilization, and with that, science. And science allows us to answer these age-old human questions.

That, at least, is the account of it that people draw now. But the truth is much more interesting.

Science is an ingenious mechanism to test guesses about mechanisms and behavior of the universe, and it is phenomenally powerful in that arena. Science can try to explain how the Heavens move, but it isn't the sort of thing to explain why there are Heavens that move that way—science can also describe how the Heavens have moved and reached their present position, but not the "Why?" behind it. Science can describe how to make technology to make life more convenient, but not "What is the meaning of life?" Trying to ask science to answer "Why?" (or for that matter, "Who?" or any other truly interesting question besides "How?") is a bit like putting a book on a scale and asking the scale, "What does this book mean?" And there are indeed some people who will accept the scale's answer, 429.7425 grams, as the definitive answer to what the book means, and all the better because it is so precise.

But to say that much and then stop is to paint a deceptive picture. Very deceptive. Why?

Science at that point had progressed more than at any point in history, and its effects were being felt around the world. And science enjoyed both a profound prestige and a profound devotion. Many people did not know what "understanding nature"

could mean besides "learning scientific descriptions of nature," which was a bit like not knowing what "understanding your best friend" could mean besides "learning the biochemical building blocks of your friend's body."

All this and more is true, yet this is not the most important truth. This was the Middle Age between ancient and human society and the technological, and in fact it was the early Middle Age. People were beginning to develop real technologies, the seeds of technology we would recognize, and could in primitive fashion jack into such a network as existed then. But all of this was embraced in a society that was ancient, ancient beyond measure. As you may have guessed, it is an error to misunderstand that society as an inexplicably crude version of real technological society. It is a fundamental error.

To really understand this society, you need to understand not its technology, but the sense in which it was ancient. I will call it 'medieval', but you must understand that the ancient element in that society outweighs anything we would recognize.

And even this is deceptive, not because a single detail is wrong, but because it is abstract. I will tell you about certain parts in an abstract fashion, but you must understand that in this world's thinking the concrete comes before the abstract. I will do my best to tell a story—not as they would tell one, because that would conceal as much as it would reveal, but taking their way of telling stories and adapting it so we can see what is going on.

For all of their best efforts to spoil it, all of them live on an exquisite garden in the thin film where the emptiness of space meets the barrier of rock—there is a nest, a cradle where they are held tightly, and even if some of those who are most trying to be scientific want to flee into the barren wastes of space and

other planets hostile to their kind of life. And this garden itself has texture, an incredible spectrum of texture along its surface. Place is itself significant, and I cannot capture what this story would have been like had it been placed in Petaling Jaya in Malaysia, or Paris in France, or Cambridge in England. What are these? I don't know... I can say that Petaling Jaya, Paris, and Cambridge are cities, but that would leave you knowing as much as you knew 5 milliseconds before I told you. And Malaysia, France, and England are countries, and now you know little besides being able to guess that a country is somehow capable of containing a city. Which is barely more than you knew before; the fact is that there is something very different between Petaling Jaya, Paris, and Cambridge. They have different wildlife and different places with land and water, but that is not nearly so interesting as the difference in people. I could say that people learn different skills, if I wanted to be very awkward and uninformative, but... the best way of saying it is that in our world, because there is nothing keeping minds apart... In that world, people have been separate so they don't even speak the same language. They almost have separate worlds. There is something common to all medievals, beyond what technology may bring, and people in other cities could find deep bonds with this story, but... Oh, there are many more countries than those I listed, and these countries have so many cities that you could spend your whole life travelling between cities and never see all of them. No, our world doesn't have this wealth. Wealthy as it is, it doesn't come close.

Petaling Jaya is a place of warm rainstorms, torrents of water falling from the sky, a place where a little stream of unscented water flows by the road, even if such a beautiful "open sewer" is not appreciated. Petaling Jaya is a place where people are less

aware of time than in Cambridge or Paris and yet a place where people understand time better, because of reasons that are subtle and hard to understand. It draws people from three worlds in the grandeur that is Asia, and each of them brings treasures. The Chinese bring with them the practice of calling adults "Uncle" or "Aunt", my father's brother or my father's sister or my mother's brother or my mother's sister, which is to say, addresses them not only by saying that there is something great about them, but they are "tied by blood"—a bond that I do not know how to explain, save to say that ancestry and origins are not the mechanism of how they came to be, or at least not just the mechanism of how they came to be. Ancestry and origins tell of the substance of who they are, and that is one more depth that cannot exist in our world with matter and mind separate. The Indians and Bumi Putras—if it is really only them, which is far from true—live a life of friendship and hospitality, which are human treasures that shine in them. What is hospitality, you ask? That is hard to answer; it seems that anything I can say will be deceptive. It means that if you have a space, and if you allow someone in that space, you serve that person, caring for every of his needs. That is a strange virtue—and it will sound stranger when I say that this is not endured as inexpedient, but something where people want to call others. Is it an economic exchange? That is beside the point; these things are at once the shadow cast by real hospitality, and at the same time the substance of hospitality itself, and you need to understand men before you can understand it. What about friendship? Here I am truly at a loss. I can only say that in the story that I am about to tell, what happens is the highest form of friendship.

Paris is, or at least has been, a place with a liquid, a drug, that temporarily causes a pleasant mood while changing behavior and muddling a person's thoughts. But to say that misses what that liquid is, in Paris or much else. To some it is very destructive, and the drug is dangerous if it is handled improperly. But that is the hinge to something that—in our world, no pleasure is ever dangerous. You or I have experienced pleasures that these minds could scarcely dream of. We can have whatever pleasure we want at any time. And in a very real sense no pleasure means anything. But in their world, with its weaker pleasures, every pleasure is connected to something. And this liquid, this pleasure, if taken too far, destroys people—which is a hinge, a doorway to something. It means that they need to learn a self-mastery in using this liquid, and in using it many of them forge a beauty in themselves that affects all of life. And they live beautiful lives. Beautiful in many ways. They are like Norsemen of ages past, who sided with the good powers, not because the good powers were going to win, but because they wanted to side with the good powers and fight alongside them when the good powers lost and chaos ruled. It is a tragic beauty, and the tragedy is all the more real because it is unneeded, but it is beauty, and it is a beauty that could not exist if they knew the strength of good. And I have not spoken of the beauty of the language in Paris, with its melody and song, or of the artwork and statues, the Basilica of the Sacré-Coeur, or indeed of the tapestry that makes up the city.

Cambridge is what many of them would call a "medieval" village, meaning that it has stonework that looks to its members like the ancient world's architecture. To them this is a major difference; the ancient character of the buildings to them overwhelms the fact that they are buildings. To that medieval

world, both the newest buildings and the ones they considered "medieval" had doorways, stairwells, rooms, windows, and passages. You or I would be struck by the ancient character of the oldest and newest buildings and the ancient character of the life they serve. But to these medievals, the fact that a doorway was built out of machine-made materials instead of having long ago been shaped from stone takes the door—the door—from being ancient to being a new kind of thing! And so in the quaintest way the medievals consider Cambridge a "medieval" village, not because they were all medievals, but because the ancient dimension to architecture was more ancient to them than the equally ancient ways of constructing spaces that were reflected in the "new" buildings. There was more to it than that, but...

That was not the most interesting thing about them. I know you were going to criticize me for saying that hospitality was both a human treasure and something that contributed to the uniqueness of Petaling Jaya, but I need to do the same thing again. Politeness is... how can I describe it? Cynics describe politeness as being deceit, something where you learn a bunch of standard things to do and have to use them to hide the fact that you're offended, or bored, or want to leave, or don't like someone. And all of that is true—and deceptive. A conversation will politely begin with one person saying, "Hi, Barbara, how are you?" And Barbara will say, "Fine, George, how are you?" "Fine!" And the exact details seem almost arbitrary between cultures. This specific interaction is, on the surface, superficial and not necessarily true: people usually say they feel fine whether or not they really feel fine at all. And so politeness can be picked apart in this fashion, as if there's nothing else there, but there is. Saying "How are you?" opens a door, a door of concern. In one

sense, what is given is very small. But if a person says, "I feel rotten," the other person is likely to listen. Barbara might only "give" George a little bit of chatter, but if he were upset, she would comfort him; if he were physically injured, she would call an ambulance to give him medical help; if he were hungry, she might buy him something to eat. But he only wants a little chat, so she only gives him a little chat—which is not really a little thing at all, but I'm going to pretend that it's small. Politeness stems from a concern for others, and is in actuality quite deep. The superficial "Hi, how are you?" is really not superficial at all. It is connected to a much deeper concern, and the exterior of rules is connected to a heart of concern. And Cambridge, which is a place of learning, and has buildings more ancient than what these medieval people usually see, is perhaps most significantly distinguished by its politeness.

But I have not been telling you a story. These observations may not be completely worthless, but they are still not a dynamic story. The story I'm about to tell you is not in *Petaling Jaya*, nor in Paris, nor in Cambridge, nor in any of thousands of other worlds. And I would like to show you what the medieval society looks like in action. And so let's look at Peter.

Peter, after a long and arduous trek, opened the car door, got out, stretched, looked at the vast building before him, and listened as his father said, "We've done it! The rest should be easy, at least for today." Then Peter smiled, and smashed his right thumb in the car door.

Then suddenly they moved—their new plan was to get to a hospital. Not much later, Peter was in the Central DuPage Hospital emergency room, watching people who came in after him be treated before him—not because they had more clout, but because they had worse injuries. The building was immense—

something like one of our biological engineering centers, but instead of engineering bodies according to a mind's specification, this used science to restore bodies that had been injured and harmed, and reduce people's suffering. And it was incredibly primitive; at its best, it helped the bodies heal itself. But you must understand that even if these people were far wealthier than most others in their tiny garden, they had scant resources by our standard, and they made a major priority to restore people whose bodies had problems. (If you think about it, this tells something about how they view the value of each body.) Peter was a strong and healthy young man, and it had been a while since he'd been in a hospital. He was polite to the people who were helping him, even though he wished he were anywhere else.

You're wondering why he deliberately smashed his thumb? Peter didn't deliberately smash his thumb. He was paying attention to several other things and shoved the door close while his thumb was in its path. His body is not simply a device controlled by his mind; they interact, and his mind can't do anything he wishes it to do—he can't add power to it. He thinks by working with a mind that operates with real limitations and can overlook something in excitement—much like his body. If he achieves something, he doesn't just requisition additional mental power. He struggles within the capabilities of his own mind, and that means that when he achieves something with his mind, he achieves something. Yes, in a way that you or I cannot. Not only is his body in a very real sense more real to him than any of the bodies you or I have jacked into and swapped around, but his mind is more real. I'm not sure how to explain it.

Peter arrived for the second time well after check-in time, praying to be able to get in. After a few calls with a network

that let him connect with other minds while keeping his body intact, a security officer came in, expressed sympathy about his bandaged thumb—what does 'sympathy' mean? It means that you share in another person's pain and make it less—and let him up to his room. The family moved his possessions from the car to his room and made his bed in a few minutes, and by the time it was down, the security guard had called the RA, who brought Peter his keys.

It was the wee hours of the morning when Peter looked at his new home for the second time, and tough as Peter was, the pain in his thumb kept the weary man from falling asleep. He was in as much pain as he'd been in for a while. What? Which part do you want explained? Pain is when the mind is troubled because the body is injured; it is a warning that the body needs to be taken care of. No, he can't turn it off just because he thinks it's served his purpose; again, you're not understanding the intimate link between mind and body. And the other thing... sleep is... Their small globe orbits a little star, and it spins as it turns. At any time, part of the planet faces the star, the sun, and part faces away, and on the globe, it is as if a moving wall comes, and all is light, then another wall comes, and it is dark. The globe has a rhythm of light and dark, a rhythm of day and night, and people live in intimate attunement to this rhythm. The ancients moved about when it was light and slept when it was dark—to sleep, at its better moments, is to come fatigued and have body and mind rejuvenate themselves to awaken full of energy. The wealthier medievals have the ability to see by mechanical light, to awaken when they want and fall asleep when they want—and yet they are still attuned, profoundly attuned, to this natural cycle and all that goes with it. For that matter, Peter can stick a substance into his body that will push away the pain—and yet, for all these

artificial escapes, medievals feel pain and usually take care of their bodies by heeding it, and medievals wake more or less when it is light and sleep more or less when it is dark. And they don't think of pain as attunement to their bodies—most of them wish they couldn't feel pain, and certainly don't think of pain as good—nor do more than a few of them think in terms of waking and sleeping to a natural rhythm... but so much of the primeval way of being human is so difficult to dislodge for the medievals.

He awoke when the light was ebbing, and after some preparations set out, wandering this way and that until he found a place to eat. The pain was much duller, and he made his way to a selection of different foods—meant not only to nourish but provide a pleasant taste—and sat down at a table. There were many people about; he would not eat in a cell by himself, but at a table with others in a great hall.

A young man said, "Hi, I'm John." Peter began to extend his hand, then looked at his white bandaged thumb and said, "Excuse me for not shaking your hand. I am Peter."

A young woman said, "I'm Mary. I saw you earlier and was hoping to see you more."

Peter wondered about something, then said, "I'll drink for that," reached with his right hand, grabbed a glass vessel full of carbonated water with sugar, caffeine, and assorted unnatural ingredients, and then winced in pain, spilling the fluid on the table.

Everybody at the table moved. A couple of people dodged the flow of liquid; others stopped what they were doing, rushing to take earth toned objects made from the bodies of living trees (napkins), which absorbed the liquid and were then shipped to be preserved with other unwanted items. Peter said, "I keep forgetting I need to be careful about my thumb," smiled,

grabbed another glass with fluid cows had labored to create, until his wet left hand slipped and he spilled the organic fluid all over his food.

Peter stopped, sat back, and then laughed for a while. "This is an interesting beginning to my college education."

Mary said, "I noticed you managed to smash your thumb in a car door without saying any words you regret. What else has happened?"

Peter said, "Nothing great; I had to go to the ER, where I had to wait, before they could do something about my throbbing thumb. I got back at 4:00 AM and couldn't get to sleep for a long time because I was in so much pain. Then I overslept my alarm and woke up naturally in time for dinner. How about you?"

Mary thought for a second about the people she met. Peter could see the sympathy on her face.

John said, "Wow. That's nasty."

Peter said, "I wish we couldn't feel pain. Have you thought about how nice it would be to live without pain?"

Mary said, "I'd like that."

John said, "Um..."

Mary said, "What?"

John said, "Actually, there are people who don't feel pain, and there's a name for the condition. You've heard of it."

Peter said, "I haven't heard of that before."

John said, "Yes you have. It's called leprosy."

Peter said, "What do you mean by 'leprosy'? I thought leprosy was a disease that ravaged the body."

John said, "It is. But that is only because it destroys the ability to feel pain. The way it works is very simple. We all get little nicks and scratches, and because they hurt, we show extra sensitivity. Our feet start to hurt after a long walk, so without

even thinking about it we... shift things a little, and keep anything really bad from happening. That pain you are feeling is your body's way of asking room to heal so that the smashed thumbnail (or whatever it is) that hurts so terribly now won't leave you permanently maimed. Back to feet, a leprosy patient will walk exactly the same way and get wounds we'd never even think of for taking a long walk. All the terrible injuries that make leprosy a feared disease happen only because leprosy keeps people from feeling pain."

Peter looked at his thumb, and his stomach growled.

John said, "I'm full. Let me get a drink for you, and then I'll help you drink it."

Mary said, "And I'll get you some dry food. We've already eaten; it must—"

Peter said, "Please, I've survived much worse. It's just a bit of pain."

John picked up a clump of wet napkins and threatened to throw it at Peter before standing up and walking to get something to drink. Mary followed him.

Peter sat back and just laughed.

John said, "We have some time free after dinner; let's just wander around campus."

They left the glass roofed building and began walking around. There were vast open spaces between buildings. They went first to "Blanchard", a building they described as "looking like a castle." Blanchard, a tall ivory colored edifice, built of rough limestone, which overlooked a large expanse adorned with a carefully tended and living carpet, had been modelled after a building in a much older institution called Oxford, and... this is probably the time to explain certain things about this kind of organization.

You and I simply requisition skills. If I were to imagine what it would mean to educate those people—or at least give skills; the concept of 'education' is slightly different from either inserting skills or inserting knowledge into a mind, and I don't have the ability to explain exactly what the distinction is here, but I will say that it is significant—then the obvious way is to simply make a virtual place on the network where people can be exposed to knowledge. And that model would become phenomenally popular within a few years; people would pursue an education that was a niche on such a network as they had, and would be achieved by weaving in these computer activities with the rest of their lives.

But this place preserved an ancient model of education, where disciples would come to live in a single place, which was in a very real sense its own universe, and meet in ancient, face-to-face community with their mentors and be shaped in more than what they know and can do. Like so many other things, it was ancient, using computers here and there and even teaching people the way of computers while avoiding what we would assume comes with computers.

But these people liked that building, as contrasted to buildings that seemed more modern, because it seemed to convey an illusion of being in another time, and let you forget that you were in a modern era.

After some wandering, Peter and those he had just met looked at the building, each secretly pretending to be in a more ancient era, and went through an expanse with a fountain in the center, listened to some music, and ignored clouds, trees, clusters of people who were sharing stories, listening, thinking, joking, and missing home, in order to come to something exotic, namely a rotating platform with a mockup of a giant mastodon which had died before the end of the last ice age, and whose

bones had been unearthed in a nearby excavation. Happy to have seen something exotic, they ignored buildings which have a human-pleasing temperature the year round, other people excited to have seen new friends, toys which sailed through the air on the same principles as an airplane's wings, a place where artistic pieces were being drawn into being, a vast, stonehard pavement to walk, and a spectrum of artefacts for the weaving of music.

Their slow walk was interrupted when John looked at a number on a small machine he had attached to his wrist, and interpreted it to mean that it was time for the three of them to stop their leisured enjoyment of the summer night and move with discomfort and haste to one specific building—they all were supposed to go to the building called Fischer. After moving over and shifting emotionally from being relaxed and joyful to being bothered and stressed, they found that they were all on a brother and sister floor, and met their leaders.

Paul, now looking considerably more coherent than when he procured Peter's keys, announced, "Now, for the next exercise, I'll be passing out toothpicks. I want you to stand in two lines, guy-girl-guy-girl, and pass a lifesaver down the line. If your team passes the lifesaver to the end first, you win. Oh, and if you drop the lifesaver your team has to start over, so don't drop it."

People shuffled, and shortly Peter was standing in line, looking over the shoulder of a girl he didn't know, and silently wishing he weren't playing this game. He heard a voice say, "Go!" and then had an intermittent view of a tiny sugary torus passing down the line and the two faces close to each other trying simultaneously to get close enough to pass the lifesaver, and control the clumsy, five centimeter long toothpicks well enough to transfer the candy. Sooner than he expected the girl turned around, almost

losing the lifesaver on her toothpick, and then began a miniature dance as they clumsily tried to synchronize the ends of their toothpicks. This took unpleasantly long, and Peter quickly banished a thought of "This is almost kissing! That can't be what's intended." Then he turned around, trying both to rush and not to rush at the same time, and repeated the same dance with the young woman standing behind him—Mary! It was only after she turned away that Peter realized her skin had changed from its alabaster tone to pale rose.

Their team won, and there was a short break as the next game was organized. Peter heard bits of conversation: "This has been a bummer; I've gotten two papercuts this week." "—and then I—" "What instruments do you—" "I'm from France too! Tu viens de Paris?" "Really? You—" Everybody seemed to be chattering, and Peter wished he could be in one of—actually, several of those conversations at once.

Paul's voice cut in and said, "For this next activity we are going to form a human circle. With your team, stand in a circle, and everybody reach in and grab another hand with each hand. Then hold on tight; when I say, "Go," you want to untangle yourselves, without letting go. The first team to untangle themselves wins!"

Peter reached in, and found each of his hands clasped in a solid, masculine grip. Then the race began, and people jostled and tried to untangle themselves. This was a laborious process and, one by one, every other group freed itself, while Peter's group seemed stuck on—someone called and said, "I think we're knotted!" As people began to thin out, Paul looked with astonishment and saw that they were indeed knotted. "A special prize to them, too, for managing the best tangle!"

"And now, we'll have a three-legged race! Gather into pairs,

and each two of you take a burlap sack. Then—" Paul continued, and with every game, the talk seemed to flow more. When the finale finished, Peter found himself again with John and Mary and heard the conversations flowing around him: "Really? You too?" "But you don't understand. Hicks have a slower pace of life; we enjoy things without all the things you city dwellers need for entertainment. And we learn resourceful ways to—" "—and only at Wheaton would the administration forbid dancing while requiring the games we just played and—" Then Peter lost himself in a conversation that continued long into the night. He expected to be up at night thinking about all the beloved people he left at home, but Peter was too busy thinking about John's and Mary's stories.

The next day Peter woke up when his machine played a hideous sound, and groggily trudged to the dining hall to eat some chemically modified grains and drink water that had been infused with traditionally roasted beans. There were pills he could have taken that would have had the effect he was looking for, but he savored the beverage, and after sitting at a table without talking, bounced around from beautiful building to beautiful building, seeing sights for the first time, and wishing he could avoid all that to just get to his advisor.

Peter found the appropriate hallway, wandered around nervously until he found a door with a yellowed plaque that said "Julian Johnson," knocked once, and pushed the door open. A white-haired man said, "Peter Jones? How are you? Do come in... What can I do for you?"

Peter pulled out a sheet of paper, an organic surface used to retain colored trails and thus keep small amounts of information inscribed so that the "real" information is encoded in a personal way. No, they don't need to be trained to have their own

watermark in this encoding.

Peter looked down at the paper for a moment and said, "I'm sorry I'm late. I need you to write what courses I should take and sign here. Then I can be out of your way."

The old man sat back, drew a deep breath, and relaxed into a fatherly smile. Peter began to wonder if his advisor was going to say anything at all. Then Prof. Johnson motioned towards an armchair, as rich and luxurious as his own, and then looked as if he remembered something and offered a bowl full of candy. "Sit down, sit down, and make yourself comfortable. May I interest you in candy?" He picked up an engraved metal bowl and held it out while Peter grabbed a few Lifesavers.

Prof. Johnson sat back, silent for a moment, and said, "I'm sorry I'm out of butterscotch; that always seems to disappear. Please sit down, and tell me about yourself. We can get to that form in a minute. One of the privileges of this job is that I get to meet interesting people. Now, where are you from?"

Peter said, "I'm afraid there's not much that's interesting about me. I'm from a small town downstate that doesn't have anything to distinguish itself. My amusements have been reading, watching the cycle of the year, oh, and running. Not much interesting in that. Now which classes should I take?"

Prof. Johnson sat back and smiled, and Peter became a little less tense. "You run?"

Peter said, "Yes; I was hoping to run on the track this afternoon, after the lecture. I've always wanted to run on a real track."

The old man said, "You know, I used to run myself, before I became an official Old Geezer and my orthopaedist told me my knees couldn't take it. So I have to content myself with swimming now, which I've grown to love. Do you know about the

Prairie Path?"

Peter said, "No, what's that?"

Prof. Johnson said, "Years ago, when I ran, I ran through the areas surrounding the College—there are a lot of beautiful houses. And, just south of the train tracks with the train you can hear now, there's a path before you even hit the street. You can run, or bike, or walk, on a path covered with fine white gravel, with trees and prairie plants on either side. It's a lovely view."

He paused, and said, "Any ideas what you want to do after Wheaton?"

Peter said, "No. I don't even know what I want to major in."

Prof. Johnson said, "A lot of students don't know what they want to do. Are you familiar with Career Services? They can help you get an idea of what kinds of things you like to do."

Peter looked at his watch and said, "It's chapel time."

Prof. Johnson said, "Relax. I can write you a note." Peter began to relax again, and Prof. Johnson continued, "Now you like to read. What do you like to read?"

Peter said, "Newspapers and magazines, and I read this really cool book called *Zen and the Art of Motorcycle Maintenance*. Oh, and I like the Bible."

Prof. Johnson said, "I do too. What do you like about it most?"

"I like the stories in the Old Testament."

"One general tip: here at Wheaton, we have different kinds of professors—"

Peter said, "Which ones are best?"

Prof. Johnson said, "Different professors are best for different students. Throughout your tenure at Wheaton, ask your friends and learn which professors have teaching styles that you learn well with and mesh well with. Consider taking

other courses from a professor you like. Now we have a lot of courses which we think expose you to new things and stretch you —people come back and see that these courses are best. Do you like science?"

"I like it; I especially liked a physics lab."

Prof. Johnson took a small piece of paper from where it was attached to a stack with a strange adhesive that had "failed" as a solid adhesive, but provided a uniquely useful way to make paper that could be attached to a surface with a slight push and then be detached with a gentle pull, remarkably enough without damage to the paper or the surface. He began to think, and flip through a book, using a technology thousands of years old at its heart. "Have you had calculus?" Prof. Johnson restrained himself from launching into a discussion of the grand, Utopian vision for "calculus" as it was first imagined and how different a conception it had from anything that would be considered "mathematics" today. Or should he go into that? He wavered, and then realized Peter had answered his question. "Ok," Prof. Johnson said, "the lab physics class unfortunately requires that you've had calculus. Would you like to take calculus now? Have you had geometry, algebra, and trigonometry?"

Peter said, "Yes, I did, but I'd like a little break from that now. Maybe I could take calculus next semester."

"Fair enough. You said you liked to read."

"Magazines and newspapers."

"Those things deal with the unfolding human story. I wonder if you'd like to take world civilization now, or a political science course."

"History, but why study world history? Why can't I just study U.S. history?"

Prof. Johnson said, "The story of our country is intertwined

with that of our world. I think you might find that some of the things in world history are a lot closer to home than you think—and we have some real storytellers in our history department."

"That sounds interesting. What else?"

"The Theology of Culture class is one many students find enjoyable, and it helps build a foundation for Old and New Testament courses. Would you be interested in taking it for A quad or B quad, the first or second half of the semester?"

"Could I do both?"

"I wish I could say yes, but this course only lasts half the semester. The other half you could take Foundations of Wellness—you could do running as homework!"

"I think I'll do that first, and then Theology of Culture. That should be new," Peter said, oblivious to how tightly connected he was to theology and culture. "What else?"

Prof. Johnson said, "We have classes where people read things that a lot of people have found really interesting. Well, that could describe several classes, but I was thinking about Classics of Western Literature or Literature of the Modern World."

Peter said, "Um... Does Classics of Western Literature cover ancient and medieval literature, and Literature of the Modern World cover literature that isn't Western? Because if they do, I'm not sure I could connect with it."

Prof. Johnson relaxed into his seat, a movable support that met the contours of his body. Violating convention somewhat, he had a chair for Peter that was as pleasant to rest in as his own.

"You know, a lot of people think that. But you know what?"

Peter said, "What?"

"There is something human that crosses cultures. That is why the stories have been selected. Stories written long ago, and

stories written far away, can have a lot to connect with."

"Ok. How many more courses should I take?"

"You're at 11 credits now; you probably want 15. Now you said that you like Zen and the Art of Motorcycle Maintenance. I'm wondering if you would also like a philosophy course."

Peter said, "Zen and the Art of Motorcycle Maintenance is... I don't suppose there are any classes that use that. Or are there?"

I've heard Pirsig isn't given his fair due by philosophers."

Prof. Johnson said, "If you approach one of our philosophy courses the way you approach Zen and the Art of Motorcycle Maintenance, I think you'll profit from the encounter. I wonder if our Issues and Worldviews in Philosophy might interest you. I'm a big fan of thinking worldviewishly, and our philosophers have some pretty interesting things to say."

Peter asked, "What does 'worldviewishly' mean?"

Prof. Johnson said, "It means thinking in terms of worldviews. A worldview is the basic philosophical framework that gives shape to how we view the world. Our philosophers will be able to help you understand the basic issues surrounding worldviews and craft your own Christian worldview. You may find this frees you from the Enlightenment's secularizing influence—and if you don't know what the Enlightenment is now, you will learn to understand it, and its problems, and how you can be free of them." He spoke with the same simplistic assurance of artificial intelligence researchers who, seeing the power of computers and recognizing how simple certain cognitive feats are for humans, assumed that it was only a matter of time that artificial intelligence would "bridge the gap"—failing to recognize the tar pit of the peaks of intelligence that seem so deceptively simple and easy to human phenomenology. For computers could often defeat the best human players at chess—as computerlike a

human skill as one might reasonably find—but deciphering the language of a children's book or walking through an unfamiliar room, so easy to humans, seemed more difficult for computers the more advanced research began. Some researchers believed that the artificial intelligence project had uncovered the non-obvious significance of a plethora of things humans take for granted—but the majority still believed that what seemed trivial for humans must be the sort of thinking a computer can do, because there is no other kind of thinking... and an isomorphic simplicity, an apparent and deceptive simplicity much like this one, made it seem as if ideas were all that really mattered: not all that existed, but all that had an important influence. Prof. Johnson did not consciously understand how the Enlightenment worldview—or, more accurately, the Enlightenment—created the possibility of seeing worldviews that way, nor did he see how strange the idea of crafting one's own worldview would seem to pre-Enlightenment Christians. He did not realize that his own kindness towards Peter was not simply because he agreed with certain beliefs, but because of a deep and many-faceted way in which he had walked for decades, and walked well. It was with perfect simplicity that he took this way for granted, as artificial intelligence researchers took for granted all the things which humans did so well they seemed to come naturally, and framed worldviewish thought as carrying with it everything he assumed from his way.

Peter said, "Ok. Well, I'll take those classes. It was good to meet you."

Prof. Johnson looked over a document that was the writeup of a sort of game, in which one had a number of different rooms that were of certain sizes, and certain classes had requirements about what kind of room they needed for how long, and the

solution involved not only solving the mathematical puzzle, but meeting with teachers and caring for their concerns, longstanding patterns, and a variety of human dimensions derisively labelled as "political." Prof. Johnson held in his hands the schedule with the official solution for that problem, and guided Peter to an allowable choice of class sections, taking several different actions that were considered "boring paperwork."

Prof. Johnson said, "I enjoyed talking with you. Please do take some more candy—put a handful in your pocket or something. I just want to make one more closing comment. I want to see you succeed. Wheaton wants to see you succeed. There are some rough points and problems along the way, and if you bring them to me I can work with them and try to help you. If you want to talk with your RA or our chaplain or someone else, that's fine, but please... my door is always open. And it was good to meet you too! Goodbye!"

Peter walked out, completely relaxed.

The next activity, besides nourishing himself with lunch (and eating, sleeping, and many other activities form a gentle background rhythm to the activities people are more conscious of. I will not describe each time Peter eats and sleeps, even though the 100th time in the story he eats with his new friends is as significant as the first, because I will be trying to help you see it their way), requires some explanation.

The term "quest," to the people here, is associated with an image of knights in armor, and a body of literature from writers like Chretien de Troyes and Sir Thomas Mallory who described King Arthur and his knights. In Chretien de Troyes, the knight goes off in various adventures, often quests where he is attempting different physical feats. In Sir Thomas Mallory, a

new understanding of quests is introduced, in the quest for the holy grail—a legendary treasure which I cannot here explain save to say that it profoundly altered the idea of a quest, and the quest took a large enough place in many people's consciousness that it is used as a metaphor of the almost unattainable object of an ultimate pursuit (so that physicists would say that a grand unified theory which crystallizes all physical laws into a few simple equations is the "holy grail of physics"), and that the holy grail is itself in the shadow of a greater treasure, and this treasure was one many people in fact had possessed (some after great struggle, while others had never known a time when they were without it). In Mallory in particular the quest can be more than a physical task; most of Arthur's knights could not reach the holy grail because of—they weren't physical blemishes and they weren't really mental blemishes either, but what they were is hard to say. The whole topic (knights, quests, the holy grail...) connects to something about that world that is beyond my ability to convey; suffice it to say that it is connected with one more dimension we don't have here.

Peter, along with another group of students, went out on a quest. The object of this quest was to acquire seven specific items, on conditions which I will explain below:

1. "A dog biscuit." In keeping with a deeply human trait, the food they prepare is not simply what they judge adequate to sustain the body, but meant to give pleasure, in a sense adorned, because eating is not to them simply a biological need. They would also get adorned food to give pleasure to organisms they kept, including dogs, which include many different breeds which in turn varied from being natural sentries protecting territories to a welcoming committee of

one which would give a visitor an exuberant greeting just because he was there.

2. "An M16 rifle's spent shell casing." That means the used remnant after... wait a little bit. I need to go a lot farther back to explain this one.

You will find something deceptively familiar in that in that universe, people strategically align resources and then attack their opponents, usually until a defeat is obvious. And if you look for what is deceptive, it will be a frustrating search, because even if the technologies involved are primitive, it is a match of strategy, tactics, and opposition.

What makes it different is that this is not a recreation or an art form, but something many of them consider the worst evil that can happen, or among the worst. The resources that are destroyed, the bodies—in our world, it is simply what is involved in the game, but many of them consider it an eternal loss.

Among the people we will be meeting, people may be broken down into "pacifists" who believe that war is always wrong, and people who instead of being pure pacifists try to have a practical way of pursuing pacifist goals: the disagreement is not whether one should have a war for amusement's sake (they both condemn that), but what one should do when not having a war looks even more destructive than having a war. And that does not do justice to either side of the debate, but what I want to emphasize that to both of them this is not simply a game or one form of recreation; it is something to avoid at almost any cost.

A knight was someone who engaged in combat, an elite soldier riding an animal called a horse. In Chretien de Troye's day and Mallory's day, the culture was such that

winning a fight was important, but fighting according to "chivalry" was more important. Among other things, chivalry meant that they would only use simple weapons based on mechanical principles—no poison—and they wouldn't even use weapons with projectiles, like arrows and (armor piercing) crossbow bolts. In practice that only meant rigid piercing and cutting weapons, normally swords and spears. And there was a lot more. A knight was to protect women and children. The form that chivalry took in Peter's day allowed projectile weapons, although poison was still not allowed, along with biological, thermonuclear, and other weapons which people did not wish to see in war, and the fight to disfigure the tradition's understanding women had accorded them meant that women could fight and be killed like men, although people worked to keep children out of warfare, and in any case the "Geneva Convention", as the code of chivalry was called, maintained a sharp distinction between combatants and non-combatants, the latter of which were to be protected.

The specific projectile weapon carried by most members of the local army was called an M16 rifle, which fired surprisingly small .22 bullets—I say "surprisingly" because if you were a person fighting against them and you were hit, you would be injured but quite probably not killed.

This was intentional. (Yes, they knew how to cause an immediate kill.)

Part of it is the smaller consideration that if you killed an enemy soldier immediately, you took one soldier out of action; on the other hand, if you wounded an enemy soldier, you took three soldiers out of action. But this isn't the whole reason. The much bigger part of the reason is that

their sense of chivalry (if it was really just chivalry; they loved their enemies) meant that even in their assaults they tried to subdue with as little killing as possible.

There were people training with the army in that community (no, not Peter; Peter was a pure pacifist) who trained, with M16 rifles, not because they wanted to fight, but as part of a not entirely realistic belief that if they trained hard enough, their achievement would deter people who would go to war. And the "Crusader battalion" (the Crusaders were a series of people who fought to defend Peter's spiritual ancestors from an encroaching threat that would have destroyed them) had a great sense of chivalry, even if none of them used the word "chivalry".

3. "A car bumper." A car bumper is a piece of armor placed on the front and back of cars so that they can sustain low-velocity collisions without damage. (At higher velocities, newer cars are designed to serve as a buffer so that "crumple zones" will be crushed, absorbing enough of the impact so that the "passenger cage" reduces injuries sustained by people inside; this is part of a broader cultural bent towards minimizing preventable death because of what they believe about one human life.) Not only is a car bumper an unusual item to give, it is heavy and awkward enough that people tend not to carry such things with them—even the wealthy ones tend to be extraordinarily lightly encumbered.
4. "An antique." It is said, "The problem with England is that they believe 100 miles is a long distance, and the problem with America is that they believe 100 years is a long time." An antique—giving the rule without all the special cases and exceptions, which is to say giving the rule as if it were not human—is something over 100 years old. To understand this,

you must appreciate that it does not include easily available rocks, many of which are millions or billions of years old, and it is not based on the elementary particles that compose something (one would have to search hard to find something not made out of elementary particles almost as old as the universe). The term "antique" connotes rarity, and in a sense something out of the ordinary; that people's way is concerned with "New! New! New!" and it is hard to find an artifact that was created more than 100 years ago, which is what was intended.

This quest is all the more interesting because there is an "unwritten rule" that items will be acquired by asking, not by theft or even purchase—and, as most antiques are valuable, it would be odd for someone you've just met—and therefore with whom you have only the general human bond but not the special bond of friendship—to give you such an item, even if most of the littler things in life are acquired economically while the larger things can only be acquired by asking.

5. "A note from a doctor, certifying that you do not have bubonic plague." Intended as a joke, this refers to a health, safeguarded by their medicine, which keeps them from a dreadful disease which tore apart societies some centuries ago: that sort of thing wasn't considered a live threat because of how successful their medicine was (which is why it could be considered humorous).
6. "A burning piece of paper which no one in your group lit. (Must be presented in front of Fischer and not brought into the building.)" This presents a physical challenge, in that there is no obvious way to transport a burning piece of paper—or what people characteristically envision as a burning piece of paper—from almost anywhere else to in front of

Fischer.

7. "A sheet of paper with a fingerpaint handprint from a kindergartener."

"Kindergarten" was the first year of their formal education, and a year of preparation before students were ready to enter their first grade. What did this society teach at its first, required year? Did it teach extraordinarily abstract equations, or cosmological theory, or literary archetypes, or how to use a lathe?

All of these could be taught later on, and for that matter there is reason to value all of them. But the very beginning held something different. It taught people to take their turn and share; it taught people "Do unto others as you would have them do unto you," the Golden Rule by which their great Teachers crystallized so much wisdom. All of this work and play, some of the most advanced lessons they could learn, were placed, not at the end, but at the beginning of their education.

That is what kindergarten was. What was a kindergartener?

The true but uninformative answer would be "a person in kindergarten."

To get past that uninformative answer, I need to stress that their minds are bound up with organic life—they did not spring, fully formed, as you and I did. In most complex organisms, there is a process that transforms a genetically complete organism of just one cell to become a mature member of the species; among humans, that process is one of the longest and most complex. During that time their minds are developing as well as their bodies; in that regard they are not simply in harmony with the natural world this society believes it is separate from... but one of its best

examples.

But to say that alone is to flatten out something interesting... even more interesting than the process of biological mental development is the place that society has for something called "childhood". Not all cultures have that concept—and again I am saying "culture" without explaining what it means. I can't. Not all societies understand "childhood" as this society does; to many, a child is a smaller and less capable adult, or even worse, a nonentity. But in this culture, childhood is a distinctive time, and a child, including a kindergardener, is something special—almost a different species of mind. Their inability to healthily sustain themselves is met, not always with scorn, but with a giving of support and protection—and this is not always a grudging duty, but something that can bring joy. They are viewed as innocent, which is certainly not true, and something keeps many people from resenting them when they prove that they are not innocent by doing things that would not be tolerated if an adult did it. And the imperviousness of this belief to contrary experience is itself the shadow of the whole place of childhood as a time to play and learn and explore worlds of imagination and the things most adults take for granted. And many adults experience a special pleasure, and much more than a pleasure, from the company of children, a pleasure that is tied to something much deeper.

This pleasure shines through even a handprint left with "fingerprints," a way of doing art reserved for children, so that this physical object is itself a symbol of all that is special about childhood, and like symbols of that world carries with it what is evoked: seeing such a handprint is a little like seeing a kindergartener.

And they were off. They stopped for a brief break and annoyedly watched the spectacle of over a hundred linked metal carts carrying a vast quantity of material, and walked in and out of the surrounding neighborhoods. Their knocks on the door met a variety of warm replies. Before long, they had a handprint from a kindergartener, a dog biscuit (and some very enthusiastic attention from a kind dog!), a note from an off-duty doctor (who did not examine them, but simply said that if they had the bubonic plague there would be buboes bulging from them in an obvious way), a cigarette lighter and a sheet of paper (unlit), a twisted bumper (which Peter surprised people by flipping over his shoulder), and finally a spent shell casing from a military science professor. When they climbed up "Fischer beach," John handed the paper and lighter to his RA and said, "Would you light this?" It was with an exhausted satisfaction that they went to dinner and had entirely amiable conversation with other equally students who scant minutes ago had been their competitors.

When dinner was finished, Peter and Mary sat for a while in exhausted silence, before climbing up for the next scheduled activity—but I am at a loss for how to describe the next scheduled activity. To start with, I will give a deceptive description. If you can understand this activity, you will have understood a great deal more of what is in that world that doesn't fit in ours.

Do I have to give a deceptive description, in that any description in our terms will be more or less deceptive? I wasn't trying to make that kind of philosophical point; I wasn't trying to make a philosophical point at all. I am choosing a description of the next scheduled activity that is more deceptive than it needs to be.

When students studied an academic discipline called

"physics," the curriculum was an initiation into progressively stranger and more esoteric doctrines, presented at the level which students were able to receive them. Students were first taught "Newtonian mechanics" (which openly regarded as false), before being initiated into "Einstein's relativity" at the next level (which was also considered false, but was widely believed to be closer to the truth). Students experienced a "night and day" difference between Newtonian mechanics and all higher order mysteries. If you were mathematically adept enough to follow the mathematics, then Newton was easy because he agreed with good old common sense, and Einstein and even stranger mysteries were hard to understand because they turned common sense on its head. Newton was straightforward while the others were profoundly counterintuitive. So Einstein, unlike Newton, required a student to mentally engulf something quite alien to normal, common sense ways of thinking about the world around oneself. Hence one could find frustrated student remarks about, "And God said, 'Let there be light!' And there was Newton. Then the Devil howled, 'Let Einstein be!' and restored the status quo."

Under this way of experiencing physics, Newton simply added mathematical formality to what humans always knew: everything in space fit in one long and continuous three-dimensional grid, and time could be measured almost as if it were a line, and so Einstein was simply making things more difficult and further from humans' natural perceptions when his version of a fully mathematical model softened the boundaries of space and time so that one could no longer treat it as if it had a grid for a skeleton.

Someone acquainted with the history of science might make the observation that it was not so much that Newton's mechanics were a mathematically rigorous formalization of how

people experienced space and time, but that how people experienced space and time had become a hazy and non-mathematical paraphrase of Newtonian mechanics: in other words, some students some students learned Newtonian mechanics easily, not because Newtonian physics was based on common sense, but because their "common sense" had been profoundly shaped by Newtonian physics.

This seemingly pedantic distinction was deeply tied to how the organic was being extinguished in their society.

I suspect you are thinking, "What other mathematical model was it based on instead?" And that's why you're having trouble guessing the answer.

The answer is related to the organic. Someone who knew Newton and his colleagues, and what they were rebelling against, could get a sense of something very different even without understanding what besides mathematics would undergird what space meant to them. In a certain sense, Newton forcefully stated the truth, but in a deceptive way. He worked hard to forge a concept of cold matter, pointing out that nature was not human—and it was a philosophical error to think of nature as human, but it was not nearly so great as one might think. Newton and his colleagues powerfully stressed that humans were superior to the rest of the physical world (which was not human), that they were meant not simply to be a part of nature but to conquer and rule it. And in so doing they attacked an equally great truth, that not only other life but even "inanimate" matter was kin to humans—lesser kin, perhaps, but humans and the rest of the natural world formed a continuity. They obscured the wisdom that the lordship humans were to exercise was not of a despot controlling something worthless, but the mastery of the crowning jewel of a treasure they had been entrusted to them.

They introduced the concept of "raw material", something as foreign to their thinking as... I can't say what our equivalent would be, because everything surrounding "raw material" is so basic to us, and what they believed instead, their organic perception, is foreign to us. They caused people to forget that, while it would be a philosophical error to literally regard the world as human, it would be much graver to believe it is fundamentally described as inert, cold matter. And even when they had succeeded in profoundly influencing their cultures, so that people consciously believed in cold matter to a large degree, vestiges of the ancient experience survived in the medieval. It is perhaps not a coincidence that hundreds of years since Newton, in Newton's own "mother tongue" (English), the words for "matter" and "mother" both sprung from the same ancient root word.

The Newtonian conception of space had displaced to some degree the older conception of place, a conception which was less concerned with how far some place was from other different places, and more concerned with a sort of color or, to some extent, meaning. The older conception also had a place for some things which couldn't really be stated under the new conception: people would say, "You can't be in two places at once." What they meant by that was to a large degree something different, "Your body cannot be at two different spatial positions at the same time." This latter claim was deceptive, because it was true so far as it goes, but it was a very basic fact of life that people could be in two places at once. The entire point of the next scheduled activity was to be in two places at once.

Even without describing what the other place was (something which could barely be suggested even in that world) and acknowledging that the point of the activity was to be in two

places at once, this description of that activity would surprise many of the people there, and disturb those who could best sense the other place. The next scheduled activity was something completely ordinary to them, a matter of fact event that held some mystery, and something that would not occur to them as being in two places at once. The activity of being present in two or more places at once was carried on, on a tacit level, even when people had learned to conflate place with mathematical position. One such activity was confused with what we do when we remember: when we remember, we recall data from storage, while they cause the past to be present. The words, "This do in remembrance of me," from a story that was ancient but preserved in the early medieval period we are looking at, had an unquestioned meaning of, "Cause me to be present by doing this," but had suffered under a quite different experience of memory, so that to some people it meant simply to go over data about a person who had been present in the past but could not be present then.

But this activity was not remembering. Or at least, it was not just remembering. And this leaves open the difficulty of explaining how it was ordinary to them. It was theoretically in complete continuity with the rest of their lives, although it would be more accurate to say that the rest of their lives were theoretically in complete continuity with it. This activity was in a sense the most human, and the most organic, in that in it they led the beasts of the field, the birds of the air, the fish of the sea, the plants, the rocks, the mountains, and the seas in returning to the place they came from. This description would also likely astonish the people who were gathered in a painted brick room, sitting on carpet and on movable perches, and seeing through natural light mixed with flickering fluorescent lights.

Not one of them was thinking about "nature."

What went on there was in a very real sense mediocre. Each activity was broken down, vulgarized, compared to what it could be—which could not obliterate what was going on. When they were songs, they were what were called "7-11" songs, a pejorative term which meant songs with seven words repeated eleven times. There was a very real sense in which the event was diminished by the music, but even when you factor in every diminishing force, there was something going on there, something organic and more than organic, which you and I do not understand—for that matter, which many people in that world do not understand.

---

Archon was silent for a long time.

Ployon said, "What is it?"

Archon said, "I can't do it. I can't explain this world. All I've really been doing is taking the pieces of that world that are a bit like ours. You've been able to understand much of it because I haven't tried to convey several things that are larger than our world. 'God' is still a curious and exotic appendage that isn't connected to anything, not really; I haven't been able to explain, really explain, what it is to be male and female unities, or what masculinity and femininity are. There are a thousand things, and... I've been explaining what three-dimensional substance is to a two-dimensional world, and the way I've been doing it is to squash it into two dimensions, and make it understandable by removing from it everything that makes it three dimensional. Or almost everything..."

"How would a three dimensional being, a person from that world, explain the story?"

"But it wouldn't. A three dimensional being wouldn't collapse a cube into a square to make it easier for itself to understand; that's something someone who couldn't free itself from reading two dimensional thinking into three dimensions would do. You're stuck in two dimensions. So am I. That's why I failed, utterly failed, to explain the "brother-sister floor fellowship", the next scheduled activity. And my failure is structural. It's like I've been setting out to copy a living, moving organism by sculpturing something that looks like it out of steel. And what I've been doing is making intricate copies of its every contour, and painting the skin and fur exactly the same color, and foolishly hoping it will come alive. And this is something I can't make by genetic engineering."

"But how would someone from that world explain the story?  
Even if I can't understand it, I want to know."

"But people from that world don't explain stories. A story isn't something you explain; it's something that may be told, shared, but usually it is a social error to explain a story, because a story participates in human life and telling a story connects one human to another. And so it's a fundamental error to think a story is something you convey by explaining it—like engineering a robotic body for an animal so you can allow it to have a body. I have failed because I was trying something a mind could only fail at."

"Then can you tell the story, like someone from that world would tell it?"

---

Peter and Mary both loved to run, but for different reasons. Peter was training himself for various races; he had not joined track, as he did in high school, but there were other races. Mary ran to feel the sun and wind and rain. And, without any conscious effort, they found themselves running together down the prairie path together, and Peter clumsily learning to match his speed to hers. And, as time passed, they talked, and talked, and talked, and talked, and their runs grew longer.

When the fall break came, they both joined a group going to the northwoods of Wisconsin for a program that was half-work and half-play. And each one wrote a letter home about the other. Then Peter began his theology of culture class, and said, "This is what I want to study." Mary did not have a favorite class, at least not that she realized, until Peter asked her what her favorite class was and she said, "Literature."

When Christmas came, they went to their respective homes and spent the break thinking about each other, and they talked about this when they returned. They ended the conversation, or at least they thought they did, and then each hurried back to catch the other and say one more thing, and then the conversation turned out to last much longer, and ended with a kiss.

Valentine's Day was syrupy. It was trite enough that their more romantically inclined friends groaned, but it did not seem at all trite or syrupy to them. As Peter's last name was Patrick, he called Mary's father and prayed that St. Patrick's Day would be a momentous day for both of them.

Peter and Mary took a slow run to a nearby village, and had dinner at an Irish pub. Amidst the din, they had some hearty laughs. The waitress asked Mary, "Is there anything else that

would make this night memorable?" Then Mary saw Peter on his knee, opening a jewelry box with a ring: "I love you, Mary. Will you marry me?"

Mary cried for a good five minutes before she could answer. And when she had answered, they sat in silence, a silence that overpowered the din. Then Mary wiped her eyes and they went outside.

It was cool outside, and the moon was shining brightly. Peter pulled a camera from his pocket, and said, "Stay where you are. Let me back up a bit. And hold your hand up. You look even more beautiful with that ring on your finger."

Peter's camera flashed as he took a picture, just as a drunk driver slammed into Mary. The sedan spun into a storefront, and Mary flew up into the air, landed, and broke a beer bottle with her face.

People began to come out, and in a few minutes the police and paramedics arrived. Peter somehow managed to answer the police officers' questions and to begin kicking himself for being too stunned to act.

When Peter left his room the next day, he looked for Prof. Johnson. Prof. Johnson asked, "May I give you a hug?" and then sat there, simply being with Peter in his pain. When Peter left, Prof. Johnson said, "I'm not just here for academics. I'm here for you." Peter went to chapel and his classes, feeling a burning rage that almost nothing could pierce. He kept going to the hospital, and watching Mary with casts on both legs and one arm, and many tiny stitches on her face, fluttering on the borders of consciousness. One time Prof. Johnson came to visit, and he said, "I can't finish my classes." Prof. Johnson looked at him and said, "The college will give you a full refund." Peter said, "Do you know of any way I can stay here to be with Mary?" Prof. Johnson said,

"You can stay with me. And I believe a position with UPS would let you get some income, doing something physical. The position is open for you." Prof. Johnson didn't mention the calls he'd made, and Peter didn't think about them. He simply said, "Thank you."

A few days later, Mary began to be weakly conscious. Peter finally asked a nurse, "Why are there so many stitches on her face? Was she cut even more badly than—"

The nurse said, "There are a lot of stitches very close together because the emergency room had a cosmetic surgeon on duty. There will still be a permanent mark on her face, but some of the wound will heal without a scar."

Mary moved the left half of her mouth in half a smile. Peter said, "That was a kind of cute smile. How come she can smile like that?"

The nurse said, "One of the pieces of broken glass cut a nerve. It is unlikely she'll ever be able to move part of her face again."

Peter looked and touched Mary's hand. "I still think it's really quite cute."

Mary looked at him, and then passed out.

Peter spent a long couple of days training and attending to practical details. Then he came back to Mary.

Mary looked at Peter, and said, "It's a Monday. Don't you have classes now?"

Peter said, "No."

Mary said, "Why not?"

Peter said, "I want to be here with you."

Mary said, "I talked with one of the nurses, and she said that you dropped out of school so you could be with me.

"Is that true?" she said.

Peter said, "I hadn't really thought about it that way."

Mary closed her eyes, and when Peter started to leave because he decided she wanted to be left alone, she said, "Stop. Come here."

Peter came to her bedside and knelt.

Mary said, "Take this ring off my finger."

Peter said, "Is it hurting you?"

Mary said, "No, and it is the greatest treasure I own. Take it off and take it back."

Peter looked at her, bewildered. "Do you not want to marry me?"

Mary said, "This may sting me less because I don't remember our engagement. I don't remember anything that happened near that time; I have only the stories others, even the nurses, tell me about a man who loves me very much."

Peter said, "But don't you love me?"

Mary forced back tears. "Yes, I love you, yes, I love you. And I know that you love me. You are young and strong, and have the love to make a happy marriage. You'll make some woman a very good husband. I thought that woman would be me.

"But I can see what you will not. You said I was beautiful, and I was. Do you know what my prognosis is? I will probably be able to stand. At least for short periods of time. If I'm fortunate, I may walk. With a walker. I will never be able to run again—Peter, I am nobody, and I have no future. Absolutely nobody. You are young and strong. Go and find a woman who is worth your love."

Mary and Peter both cried for a long time. Then Peter walked out, and paused in the doorway, crying. He felt torn inside, and then went in to say a couple of things to Mary. He said, "I believe in miracles."

Then Mary cried, and Peter said something else I'm not going to repeat. Mary said something. Then another conversation

began.

The conversation ended with Mary saying, "You're stupid, Peter. You're really, really stupid. I love you. I don't deserve such love. You're making a mistake. I love you." Then Peter went to kiss Mary, and as he bent down, he bent his mouth to meet the lips that he still saw as "really quite cute."

The stress did not stop. The physical therapists, after time, wondered that Mary had so much fight in her. But it stressed her, and Peter did his job without liking it. Mary and Peter quarreled and made up and quarreled and made up. Peter prayed for a miracle when they made up and sometimes when they quarreled. Were this not enough stress, there was an agonizingly long trial—and knowing that the drunk driver was behind bars surprisingly didn't make things better. But Mary very slowly learned to walk again. After six months, if Peter helped her, she could walk 100 yards before the pain became too great to continue.

Peter hadn't been noticing that the stress diminished, but he did become aware of something he couldn't put his finger on. After a night of struggling, he got up, went to church, and was floored by the Bible reading of, "You have heard that it was said, 'Love your neighbor and hate your enemy.' But I tell you, love your enemies and pray for those who persecute you." and the idea that when you do or do not visit someone in prison, you are visiting or refusing to visit Christ. Peter absently went home, tried to think about other things, made several phone calls, and then forced himself to drive to one and only one prison.

He stopped in the parking lot, almost threw up, and then steeled himself to go inside. He found a man, Jacob, and... Jacob didn't know who Peter was, but he recognized him as looking familiar. It was an awkward meeting. Then he recognized him as

the man whose now wife he had crippled. When Peter left, he vomited and felt like a failure. He talked about it with Mary...

That was the beginning of a friendship. Peter chose to love the man in prison, even if there was no pleasure in it. And that created something deeper than pleasure, something Peter couldn't explain.

As Peter and Mary were planning the wedding, Mary said, "I want to enter with Peter next to me, no matter what the tradition says. It will be a miracle if I have the strength to stand for the whole wedding, and if I have to lean on someone I want it to be Peter. And I don't want to sit on a chair; I would rather spend my wedding night wracked by pain than go through my wedding supported by something lifeless!"

When the rehearsal came, Mary stood, and the others winced at the pain in her face. And she stood, and walked, for the entire rehearsal without touching Peter once. Then she said, "I can do it. I can go through the wedding on my own strength," and collapsed in pain.

At the wedding, she stood next to Peter, walking, her face so radiant with joy that some of the guests did not guess she was in exquisite pain. They walked next to each other, not touching, and Mary slowed down and stopped in the center of the church.

Peter looked at her, wondering what Mary was doing.

Then Mary's arm shot around Peter's neck, and Peter stood startled for a moment before he placed his arm around her, squeezed her tightly, and they walked together to the altar.

On the honeymoon, Mary told Peter, "You are the only person I need." This was the greatest bliss either of them had known, and the honeymoon's glow shined and shined.

Peter and Mary agreed to move somewhere less expensive to settle down, and were too absorbed in their wedded bliss and

each other to remember promises they had made earlier, promises to seek a church community for support and friends.

And Peter continued working at an unglamorous job, and Mary continued fighting to walk and considered the housework she was capable of doing a badge of honor, and neither of them noticed that the words, "I love you" were spoken ever so slightly less frequently, nor did they the venom creeping into their words.

One night they exploded. What they fought about was not important. What was important was that Peter left, burning with rage. He drove, and drove, until he reached Wheaton, and at daybreak knocked on Prof. Johnson's door. There was anger in his voice when he asked, "Are you still my friend?"

Prof. Johnson got him something to eat and stayed with him when he fumed with rage, and said, "I don't care if I'm supposed to be with her, I can't go back!" Then Prof. Johnson said, "Will you make an agreement with me? I promise you I won't ever tell you to go back to her, or accept her, or accept what she does, or apologize to her, or forgive her, or in any way be reconciled. But I need you to trust me that I love you and will help you decide what is best to do."

Peter said, "Yes."

Prof. Johnson said, "Then stay with me. You need some rest. Take the day to rest. There's food in the fridge, and I have books and a nice back yard. There's iced tea in the—excuse me, there's Coke and 7 Up in the boxes next to the fridge. When I can come back, we can talk."

Peter relaxed, and he felt better. He told Prof. Johnson. Prof. Johnson said, "That's excellent. What I'd like you to do next is go in to work, with a lawyer I know. You can tell him what's going on, and he'll lead you to a courtroom to observe."

Peter went away to court the next day, and when he came

back he was ashen. He said nothing to Prof. Johnson.

Then, after the next day, he came back looking even more unhappy. "The first day, the lawyer, George, took me into divorce court. I thought I saw the worst that divorce court could get. Until I came back today. It was the same—this sickening scene where two people had become the most bitter enemies. I hope it doesn't come to this. This was atrocious. It was vile. It was more than vile. It was—"

Prof. Johnson sent him back for a third day. This time Peter said nothing besides, "I think I've been making a mistake."

After the fourth day, Peter said, "Help me! I've been making the biggest mistake of my life!"

After a full week had passed, Peter said, "Please, I beg you, don't send me back there."

Prof. Johnson sent Peter back to watch a divorce court for one more miserable, excruciating day. Then he said, "Now you can do whatever you want. What do you want to do?"

The conflict between Peter and Mary ended the next day.

Peter went home, begging Mary for forgiveness, and no sooner than he had begun his apology, a thousand things were reflected in Mary's face and she begged his forgiveness. Then they talked, and debated whether to go back to Wheaton, or stay where they were. Finally Mary said, "I really want to go back to Wheaton."

Peter began to shyly approach old friends. He later misquoted: "I came crawling with a thimble in the desperate hope that they'd give a few tiny drops of friendship and love. Had I known how they would respond, I would have come running with a bucket!"

Peter and Mary lived together for many years; they had many children and were supported by many friends.

---

Ployon said, "I didn't follow every detail, but... there was something in that that stuck."

Archon said, "How long do you think it lasted?"

"A little shorter than the other one, I mean first part."

"Do you have any idea how many days were in each part?"

"About the same? I assume the planet had slowed down so that a year and a day were of roughly equal length."

"The first part took place during three days. The latter part spanned several thousand days—"

"I guess I didn't understand it—"

"—which is... a sign that you understood something quite significant... that you knew what to pay attention to and were paying attention to the right thing."

"But I didn't understand it. I had a sense that it was broken off before the end, and that was the end, right?"

Archon hesitated, and said, "There's more, but I'd rather not go into that."

Ployon said, "Are you sure?"

"You won't like it."

"Please."

---

The years passed and Peter and Mary grew into a blissfully happy marriage. Mary came to have increasing health problems as a result of the accident, and those around them were amazed at how their love had transformed the suffering the accident created in both of their lives. At least those who knew them best saw the transformation. There were many others who could only see their happiness as a mirage.

As the years passed, Jacob grew to be a good friend. And when Peter began to be concerned that his wife might be... Jacob had also grown wealthy, very wealthy, and assembled a top-flight legal team (without taking a dime of Peter's money—over Peter's protests!), to prevent what the doctors would normally do in such a case, given recent shifts in the medical system.

And then Mary's health grew worse, much worse, and her suffering grew worse with it, and pain medications seemed to be having less and less effect. Those who didn't know Mary were astonished that someone in so much pain could enjoy life so much, nor the hours they spent gazing into each other's eyes, holding hands, when Mary's pain seemed to vanish. A second medical opinion, and a third, and a fourth, confirmed that Mary had little chance of recovery even to her more recent state. And whatever measures been taken, whatever testimony Peter and Mary could give about the joy of their lives, the court's decision still came:

The court wishes to briefly review the facts of the case. Subject is suffering increasingly severe effects from an injury that curtailed her life greatly as a young person. from which she has never recovered, and is causing increasingly

complications now that she will never again have youth's ability to heal. No fewer than four medical opinions admitted as expert testimony substantially agree that subject is in extraordinary and excruciating pain; that said excruciating pain is increasing; that said excruciating pain is increasingly unresponsive to medication; that subject has fully lost autonomy and is dependent on her husband; that this dependence is profound, without choice, and causes her husband to be dependent without choice on others and exercise little autonomy; and the prognosis is only of progressively worse deterioration and increase in pain, with no question of recovery.

The court finds it entirely understandable that the subject, who has gone through such trauma, and is suffering increasingly severe complications, would be in a state of some denial. Although a number of positions could be taken, the court also finds it understandable that a husband would try to maintain a hold on what cannot exist, and needlessly prolong his wife's suffering. It is not, however, the court's position to judge whether this is selfish...

For all the impressive-sounding arguments that have been mounted, the court cannot accord a traumatized patient or her ostensibly well-meaning husband a privilege that the court itself does not claim. The court does not find that it has an interest in allowing this woman to continue in her severe and worsening state of suffering.

Peter was at her side, holding her hand and looking into his wife's eyes, The hospital doctor had come. Then Peter said, "I love you," and Mary said, "I love you," and they kissed.

Mary's kiss was still burning on Peter's lips when two nurses hooked Mary up to an IV and injected her with 5000 milligrams

hooked Mary up to an IV and injected her with 5000 milligrams of sodium thiopental, then a saline flush followed by 100 milligrams of pancurium bromide, then a saline flush and 20 milligrams of potassium chloride.

A year later to the day, Peter died of a broken heart.

---

Ployon was silent for a long time, and Archon was silent for an even longer time. Ployon said, "I guess part of our world is present in that world. Is that what you mean by being in two places at once?"

Archon was silent for a long time.

Ployon said, "It seems that that world's problems and failings are somehow greater than our achievements. I wish that world could exist, and that we could somehow visit it."

Archon said, "Do you envy them that much?"

Ployon said, "Yes. We envy them as—"

Archon said, "—as—" and searched through his world's images.

Ployon said, "—as that world's eunuchs envy men."

Archon was silent.

Ployon was silent.

# ***Your Fast Track to Becoming a Bishop!***

**Dear Valued Orthodox;**

Have you ever thought about being a bishop? Have you thought how special that office would be?

Have you thought it was beyond you?

It doesn't need to be. Being a bishop is very easy, if only you know how.

How is it possible? Well, really, there's a method that's right at your fingertips. And it's almost two thousand years old.

Jesus didn't start out with a Church under him. What he did instead was start with twelve disciples, who in turn disciplined others. When he set the ball in motion, it grew and grew and grew.

Would you like to be a bishop? Let me explain how it's done. Then you'll see how many people you can have under you. All you have to do is edit the following list, then send it out to twelve people and the contact person at the bottom of the list. That's it! See, you have a list:

---

Write your name and email in the slot immediately above your rank, pushing others down to make room. For instance, if you're a layman, you put your name in the 'reader' slot, push everyone down, making the 'bishop' the 'contact bishop' below the list.

Then send the updated list to the new contact bishop, who will make arrangements for tonsures, ordinations, and consecrations.

**Reader:** Lawrence Town, lite@fastmail.fm

**Subdeacon:** Sdn. John Clough, jfc92847@aol.com

**Deacon:** Fr. Dn. John Cloud, john@johncloud.com

**Priest:** Fr. Andrew Costello, costello@pobox.com

**Bishop:** His Grace ANTHYMUS, anthymus@auth.gr

Contact Bishop (for tonsures/ordinations/consecrations):

THOMAS, orthodoxthomas@x.com

Needs monastic tonsure (check one):  Yes /  No.

---

That's it! What happens now is that you will have twelve people below you, and if each of them has twelve people below them, then the number of people will shoot up, growing at a geometric rate like an intelligent computer in a bad science fiction movie! Just look at this chart, if you're a layman now, and I say now, because you don't need to be a layman for long!

Your Rank	Followers
Reader	12
Subdeacon	156
Deacon	1,884
Priest	22,620
Bishop	271,452

That's more than a quarter of a million followers when you're a bishop! And best of all, the opportunity doesn't stop there. As your own followers become deacons and then priests, you become an archbishop and a metropolitan. The sky is the limit!

It really works! I was a layman who found out this opportunity only three weeks ago, and now I'm His All Holiness THOMAS, The Patriarch of Xanadu! Think about it! All you have to do is a little editing, and then forward this email! Can you afford to wait?

Do it now!

**Cordially Yours,**

**X His All Holiness THOMAS, the Patriarch of Xanadu**

# Your Own, Personal Hell

One Depeche Mode album gave a song which has been partially censored in some online lyrics collections, [Your Own Personal Jesus](#):

Reach out and touch faith  
Your own Personal Jesus  
Someone to hear your prayers  
Someone who cares  
Your own Personal Jesus  
Someone to hear your prayers  
Someone who's there  
Feeling's unknown and you're all alone  
Flesh and bone by the telephone  
Lift up the receiver  
I'll make you believer  
Take second best  
Put me to the test  
Things on your chest  
You need to confess  
I will deliver  
You know I'm a forgiver

Reach out and touch faith  
Your own Personal Jesus  
Feeling's unknown and you're all alone  
Flesh and bone by the telephone  
Lift up the receiver  
I'll make you believer  
I will deliver  
You know I'm a forgiver  
Reach out and touch faith  
Your own Personal Jesus  
Reach out and touch faith

One should perhaps not be too quick to classify and identify undergirding characteristics to things one does not understand well, but after a couple of listens to it, the song is an Evangelical-style parody of Evangelical televangelism and what is connected to it. Evangelicals will speak of 'receiving Christ as personal Lord and Savior,' and while the terms 'Lord' and 'Savior' are New Testament bedrock, the term 'personal' is not applied in the New Testament to (in Protestant terms) one's relationship with Jesus. 'Personal' in the Evangelical context means that one makes one's own a submission and acceptance of Christ as Lord and Savior. The Depeche Mode plays an ambiguity in the term 'personal' and speaks of your own 'Personal' Jesus as an apparent private possession. This song is part of Depeche Mode's 'Violator' album, and there is a spiritual dimension to parts of the album, but outside that song I do not find identifiable attempts to engage Christianity.

And in that sense having a Personal Jesus is nonsense; the satire, if I am understanding it correctly, satirizes the 'personal' that Evangelicals have added to Jesus Christ as 'Lord and Savior' and perhaps one dimension of the satire stems from

...and perhaps one dimension of the same theme is...  
the fact that however Depeche Mode may have looked on  
Evangelicals, they knew full well that Jesus is not meant to be  
one's private, 'personal' possession, even to Evangelicals who use  
the term.

And I would underscore that you cannot have 'Your own  
Personal Jesus' ...

...but you can have 'Your own Personal Hell.'

---

We may speak of gentle Jesus, meek and mild, and that may be true: he chastised the disciple who defended him with a sword, and he did not even try to defend himself with words when he was on trial. However, we would do well to remember that gentle Jesus, meek and mild, spoke of Hell four to five times as often as he spoke of Heaven, and that the Fathers have said

that we owe more to Hell than to Heaven because more people have come to the truth through fear of the torments of Hell than through hope of the mercies of Heaven.

I would like to place two images of Hell alongside each other; both are the treasure of the Orthodox Church, even though they are very different from each other. One image speaks of Hell as having 'dark fire': in other words, fire that delivers torment but does not deliver light such as the fire the Fathers knew as the only source of artificial light when the sun had set. The other image says that the fire of Hell and the light of Heaven are the same thing, the light of Heaven being the light as experienced by those who embrace it, and Hell being the light of Heaven as experienced by those who reject it. As I wrote in [From Russia](#)

[With Love](#):

The Greek word hubris refers to pride that inescapably blinds, the pride that goes before a fall. And subjectivism is tied to pride. Subjectivism is trying, in any of many ways, to make yourself happy by being in your own reality instead of learning happiness in the God-given reality that you're in.

...for my people have committed two evils: they have forsaken me, the fountain of living waters, and hewed out cisterns for themselves, broken cisterns, that can hold no water.

Being in subjectivism is a start on being in Hell. Hell may not be what you think. Hell is light as it is experienced by people who would rather be in darkness. Hell is abundant health as experienced by people who would choose disease. Hell is freedom as experienced by those who will not stop clinging to spiritual chains. Hell is ten thousand other things: more pointedly, Hell is other people, as experienced by an existentialist. This Hell is Heaven as experienced through subjectivist narcissism, experiencing God's glory and wishing for glory on your own power. The gates of Hell are bolted and barred from the inside. God is love; he cannot but ultimately give Heaven to his creatures, but we can, if we wish, choose to experience Heaven as Hell.

Regarding the question of people who have never heard of Jesus, my New Testament professor at Wheaton said that we are not called to save souls [and provide guilt for those who reject the Gospel], but called to draw people further into a relationship with Christ. Now the Orthodox may not see things in terms of a modern-style relationship with Christ, but regarding people who have never heard of Christ, [Romans 1](#) gives something of an answer by saying that God is not without witness even in people who have never heard the Gospel. But a more important answer is given in this: God does not arbitrarily damn people to Hell. Hell is infinitely self-chosen. Alike among people who have heard of Christ and people who haven't, the choice of life and death remains open, and people will be judged by what they do with what they have where they are. I as someone at a point where Orthodoxy is chaotic and ancient canons are applied with unusual leniency, will stand judged by what I did with what I had where I was. The choice between Heaven and Hell is not dictated

by whether Orthodoxy was in a solid state where I was; the choice between Heaven and Hell is for me dictated by whether I choose to embrace Heaven, or fall back on Hell.

And I might add that this choice is particularly salient because I have thought of myself as an Orthodox faithful who would automatically go to Heaven. There was a time when, partly due to a doctor making questionable choices, I was approaching death rather than (God forbid!) one of my medications making my hands permanently shaky. And, amidst throwing up or dry heaves dozens of times per day, and becoming increasingly dehydrated, yet finding drinking water to be a repulsive chore, the spirit world grew close and I found temptation unlike anything I have seen before. I experienced temptation, which one I will not name, and while I never went through to commit any of the the temptation in action, it is very clear to me that in my heart I chose Hell in that experience. Now that is not the end of the story; and there was another time God allowed me to experience similar temptation and soundly reject it, choosing Heaven. But none the less it is clear to me that I once faced the ultimate decision, and in that decision I chose Hell. God has since been merciful to me, but I

It has been said that the two thoughts that we must fear: 'I am saved' and 'I will never be saved:' as St. Silouan the Athonite said, 'Understand two thoughts, and fear them. One says, "You are a saint," the other, "You won't be saved." Both of these thoughts are from the enemy, and there is no truth in them. But think this way: "I am a great sinner, but the Lord is merciful. He loves people very much, and He will forgive my sins.'" God is loving and forgiving.

recognize that I may never this side of the final Judgment say, 'I am a pious Orthodox; I am going to Heaven.' The story is told of one saint who at the end of his life drew one foot into Heaven, and the demons said, 'Glory to you, you have defeated us,' and he said, 'Not yet I haven't,' and drew the other foot into Heaven. God has allowed what I consider a very powerful corrective to saying 'I am so Orthodox I will automatically be saved.'

(There was another time, later on, where I experienced similar temptations and rejected them, and I was weak and ill just long enough for me to recognize that I have a choice in the matter, that I can choose between Heaven and Hell and reject Hell.)

The opportunity to create your own, personal Hell is almost as old as the hills. It has been available from the ages. But technologies—not all of them new—offer the opportunity to go off into your own little world, and that is a step towards creating your own, personal Hell.

What are these portable Hells? Let me mention a few of them. One roommate discussed how pedestrians at a crosswalk in winter have their little zone of warmth and are not aware of their surroundings enough to notice cars that they'd notice in warmer weather that did not warrant a coat. I carry a Swiss Army Knife, and that is a portable self-sufficiency, or at least the illusion of portable self-sufficiency: I have a pen, a magnifying glass, a scissors and pliers, half a dozen proper blades, and over a dozen screwdrivers and Torx wrenches, excluding a small jeweller's screwdriver nestled in the corkscrew. And it happened at work that my boss said, 'I'm having trouble with my glasses; does anybody have a blade?' And I said, 'I have several blades, but would a jeweler's screwdriver

help?' And indeed, once he had used the jeweler's screwdriver he said he had no need for a blade.

I mention this as somewhat banal; if we look properly at what are my needs as a human being, precisely none of them hinge on carrying a Swiss Army Knife. Now there is a strong 'guy appeal factor' to a Swiss Army Knife, and I do like, for instance, knowing exactly where a can opener is and not having to search.

But when I look at myself, I realize that most of what I get from my Swiss Army Knife is not its admittedly convenient utility wherever and whenever I happen to be carrying it, but something like what I have pejoratively called 'sacramental shopping alike when others do it and when I do it; wWhat I call 'sacramental shopping' is an ersatz sacrament of something vaguely akin to alchemy, trying to achieve a better internal state through having something physical. I have an attachment to my pocketknife; a woman might perhaps buy clothing when there is no need for additional clothing stemming from modesty, protection, or foresight.

That is a dilute image of Hell. There is a stronger image afforded by consumer electronics: in my childhood, Walkmans and perhaps walkie-talkies made the here and now optional. (As did cars, preceded by still other older technologies: some people have called the establishment of national steam engine railways the nineteenth century equivalent of the Internet, and indeed the nineteenth century sense of invention is actively imitated in steampunk circles today.) My grandfather on my mother's side was an accomplished ham radio operator, and while I do not want to diminish his skill and accomplishment, I recognize precursors to the computers offering something like a command-line social network that I helped administer as a high schooler, and the MUDs, variably called 'Multi-User Dungeons' and 'Multi-User

Dimensions' (I remember my boss as a system administrator, saying in reference to DikuMUDs, "DikuLoser"... I like the term,' and then having him explain to me that that was off the record) that are the precursors to World of Warcraft.

I don't want to fixate on one specific technology, and I see no final singularity to today's technologies, unless economic collapse stomps down the process of new technologies. But what

I will say is that we have progressively stronger personal, portable Hells. I have not played World of Warcraft, and I have not seen it played since my little brothers played a basically two-dimensional version. But I would recognize in it a stronger distillation of what drew me into MUDs. I drank port, so to speak; teens now are drinking regular rum; 151 proof appears to be on the way.

I quote the beginning of [Paul Graham, The Acceleration of Addiction](#):

What hard liquor, cigarettes, heroin, and crack have in common is that they're all more concentrated forms of less addictive predecessors. Most if not all the things we describe as addictive are. And the scary thing is, the process that created them is accelerating.

We wouldn't want to stop it. It's the same process that cures diseases: technological progress. Technological progress means making things do more of what we want. When the thing we want is something we want to want, we consider technological progress good. If some new technique makes solar cells x% more efficient, that seems strictly better. When progress concentrates something we don't want to want—when it transforms opium into heroin—it seems bad. But it's the same process at work.

No one doubts this process is accelerating, which means increasing numbers of things we like will be transformed into things we like too much.

As far as I know there's no word for something we like too much. The closest is the colloquial sense of 'addictive.'

That usage has become increasingly common during my lifetime. And it's clear why: there are an increasing number of things we need it for. At the extreme end of the spectrum are crack and meth. Food has been transformed by a combination of factory farming and innovations in food processing into something with way more immediate bang for the buck, and you can see the results in any town in America. Checkers and solitaire have been replaced by World of Warcraft and FarmVille. TV has become much more engaging, and even so it can't compete with Facebook.

[emphasis added]

The world is more addictive than it was 40 years ago. And unless the forms of technological progress that produced these things are subject to different laws than technological progress in general, the world will get more addictive in the next 40 years than it did in the last 40....

Now I have named one plausible cause for the acceleration of addictiveness to fail: global economic collapse. [The damned backswing may make a future much less engaging than today's addictive offerings.](#) Which does not refute Graham's point; this is less like a rebuttal of his insight than saying that some deus ex machina forces may elephant stomp on the process of acceleration of addiction. He is welcome to read this work, but I hope he takes no rebuttal to his basic insight.

My concern is that all of these addictive things make it easier

to have your own personal Hell. It used to take years of (perverted) effort to be so completely wrapped up in yourself that your hubris blinds you to anything interesting that is around you. Now—even if it is not true in exactly the same sense—consumer electronics such as a smartphone or tablet let you enter an analogous state of Nerdvana in minutes. I don't want to downplay the skill and strategy in World of Warcraft, but its marketing proposition is an alternative to the here and now. And 'an alternative to the here and now,' which have always been around and we have much more of, is another name for Hell: your own, Personal Hell. There is something in porn that disenchant the entire universe; magic's marketing proposition is (besides power) an alternative to presence in the here and now; pride is blinding to the outside world and the deformities inside; nursing a grudge blinds the eye to opportunities for happiness; some or all the vices seem, with long practice, to take one's attention away from the here and now. But even if one ignores the hard porn that is the #1 sin young men bring to confession today, and the soft porn characteristics of music videos which Alexander Solzhenitsyn called 'the liquid manure of Western culture,' and various other contexts where standard dress is at least somewhat provocative, there is something in the most sexless of how viral phenomena on the Internet work. It's a sort of technological analogue to chemical highs. Not that this makes any technological pleasure forbidden. It is possible to drink alcohol in healthy moderation; there are apparently societies where people smoked without it governing their lives, and portrayal of tobacco in Robinson Crusoe show no lesson learned from experience that tobacco is addictive and blasts your lungs out if you smoke too much. Caffeine, now available in caffeine pills, guarana-powered energy drinks, and the like, greatly exceeds the strength of

coffee and tea when first introduced, and in England people tried to ban caffeine as being the same sort of thing as today's street drugs. And energy drinks can understate their caffeine content by documenting caffeine from some sources (i.e. coffee beans) but not others (i.e. guarana). And even the most sexless of internet offerings, if it is popular enough to go viral, is stimulating in a powerful way. Maybe it isn't necessarily sexual, and maybe it's not the same sort of thing as a chemical high, but technological highs have been getting stronger, and as Graham says, faster and faster.

---

[Jerry Mander's Four Arguments for the Elimination of Television](#) is four decades old, and much of it could be plagiarized with little effort today as fresh observations. Written by a former advertising executive, the author came to realize that what he was doing in advertising and in television was spiritually polluting the landscape. When I first read it, some of the numbers he gave, for when 'technical events' (to be explained momentarily) occurred in public television, then in commercial television, then in advertisements, had been exceeded substantially, and now they have been exceeded more. But this does not disprove his point; if anything, it proves a point that has a lot in common with 'The Acceleration of Addictiveness'. He discusses 'technical events' as a way of creating addictive 'artificial unusuality.'

If I may pause for a moment to define these terms, both of which connect to the acceleration of addictiveness:

#### Technical events

A moment in television (or, presumably, other media) when there is a screen cut, or music is added, or something else. Today the list would include computer animation.

#### Artificial unusuality

The use of technical effects and any other effects to create television (or other media) where television is made more engaging by adding artificially unusual effects. If I may draw an analogy, it is a bit like taking dull text and trying to make it seem exciting by going through and artificially adding bold and italics, and changing the grammar to short sentences, frequently punctuated by exclamation points and other more forceful punctuation. The text is not

in and of itself more interesting, but it is given an artificial stress that renders artificial unusuality to the text.

And there are some other related points; I believe Mander observes that real conversation has troughs and peaks, an ebb and flow, where on television the conversation is as stimulating as possible. Mander observes—and this is one point on which his text is dated—that television has low, unengaging quality of video and audio, and it 'needs' artificial unusuality to compensate for its weakness: an experiment showing a video camera of waves lapping against a shore had very low viewership and even lower sustained viewership. And in that sense Mander does not describe high definition television. However, producers for high definition television seem to not be about to give up on artificial unusuality: what makes the television of four decades more engaging also makes the high-definition television of today more engaging. And on the point of artificial unusuality, television seems to be meant to be as engaging as possible; 'Calvin and Hobbes' says, in apparent reference to screen cuts and the like, that TV commercials acknowledge that the fifteen second TV commercial exceeds the viewer's attention span by fourteen seconds. (And again, 'even so, it can't compete with Facebook.')

Graham goes on to say, 'Already someone trying to live well would seem eccentrically abstemious in most of the US. That phenomenon is only going to become more pronounced.' In [Bridge to Terabithia](#), the rural hero makes friends with a girl from a liberal, wealthy family who purchase a rural home to go on furlough. One of the ways the girl's family is made to stand out is that they do not own a television: I may suggest that someone 'trying to live well' in Graham's words is probably either very liberal or very conservative: at any rate, further enough from

the political mainstream that 'non-negotiable' technologies, and in Wittgenstein's term, 'forms of life,' are genuinely and truly negotiable. Organic food is becoming mainstream, but it used to be true that only the very liberal or the very conservative would go out of their way and perhaps pay Whole Foods prices (or join a local co-op) to obtain organic food.

The book [Everyday Saints](#) describes, true to its title, saints from close to us, but one of its sadder chapters describes an apparent hermit, an Augustine, who was in fact not a monastic but a crook posing as a displaced hermit. At one point the host family says that they were corrupting him: he would eat as much ice cream as was available to him, and he used a tape recorder to play quite a lot of Beatles rock and roll. (But what came out later was that he was corrupt to begin with.) In some ways this is an instance of 'the more things change, the more they stay the same:' someone absorbed in media will presumably have a stronger distillation than a tape recorder playing the Beatles, but change a few technological details and the sad story could be told today. I don't want to fixate on individual technologies as they will change: but the tape recorder, the television, and the tablet all provide an accelerating addictiveness.

And with these technologies, there is in fact a piper to pay. One friend talked about how he had to go to work, his wife was sick and having to take care of a baby, and they had an older child who they were able to have watch television. And at first this seemed like the perfect solution: the television provided an 'electronic babysitter,' and my friend was very clear that it helped out at a dark hour. But then they noticed, for instance, that when their older daughter wasn't watching television, she was staring at the wall. And the electronic babysitter, they realized, was costing them things they weren't willing to pay. At

the time I visited them, there was no television in sight, and their daughter was more prone to engage usual childhood activities. They had joined the ranks of those who had made an intentional decision about television. That they said 'no' is not my exact point; one book, about which I was initially skeptical, said that there is a place to watching television, and then suggested that families watch one or two carefully chosen shows and then have the parents debrief the children afterwards and ask provoking questions. I don't entirely agree with the latter, but it struck me as better than just limiting the time watching television.

And this is a matter where we are invited to our own, Personal Hell. I will not further belabor television; with computers I personally have made an attempt to limit my checking email to once per hour if I am not in a situation, such as a job, that dictates my checking it more frequently. I also limit Facebook time, often to the amount of engagement necessary to post a link. And still there is a piper to pay; perhaps not the toll of spending hours on Facebook per day, but I notice in myself a struggle not to do the equivalent of my friend's daughter staring at the wall. Perhaps that may be a part of detoxification: but I find myself at times doing nothing when there are a world of interesting things, and in that sense I have embraced my own personal Hell. Perhaps I am rejecting it: but for the time being, there is still something warped.

I remember one friend talking about how a friend of hers, and an acquaintance of mine, was living 'Internet life', a life absorbed in the Internet, and her friend seemed to her to be subject to a temptation that was not live for her. And I remember watching with some fascination as she interacted with a (different) teenaged girl, as a matter of giving her full, loving

attention to whatever person she was with. And that is, if anything, a live alternative to the acceleration of addictiveness.

(Although she did close out her Facebook account, out of a decision of, 'This is not helpful.') Neil Postman, in [Technopoly](#), spoke of, as per his book's title, 'the surrender of culture to technology,' but when he gave recommendations, he didn't talk about abstaining from technology so much as getting married and staying married.

There is a place for asking, 'Do I need this technology, or is this a manufactured 'need'?' and treating all technologies as negotiable. I wrote in [Exotic Golden Ages and Restoring Harmony with Nature](#):

One can almost imagine a dialogue between God and Adam:

**Adam:** I'm not content.

**God:** What do you want me to do?

**Adam:** I want you to make me contented.

**God:** Ok, how do you want me to do that?

**Adam:** First of all, I don't want to have to engage in ardent, strenuous labor like most people. I don't want to do that kind of work at all.

**God:** Ok.

**Adam:** And that's not all. I want to have enough bread to feel full.

**God:** Ok.

**Adam:** Scratch that. I want as much meat as I want.

**God:** Ok, as much meat as you want.

**Adam:** And sweet stuff like ice cream.

**God:** Ok, I'll give you Splenda ice cream so it won't show up on your waistline.

**Adam:** And I don't like to be subject to the weather and the elements you made. I want a home which will be cool in the summer and warm in the winter.

**God:** Sure. And I'll give you hot and cold running water, too!

**Adam:** Speaking of that, I don't like how my body smells—could we do something to hide that?

**God:** I'll let you bathe. Each day. In as much water as you want. And I'll give you deodorant to boot!

**Adam:** Oh, and by the way, I want to make my own surroundings—not just a home. I want electronics to put me in another world.

[Now we're getting nowhere in a hurry!]

The sense that we have something wrong is not new; as I have quoted elsewhere,

'Tolkien once remarked to me that the feeling about home must have been quite different in the days when a family had fed on the produce of the same few miles of country for six generations, and that perhaps this was why they saw nymphs in the fountains and dryads in the woods - they were not mistaken for there was in a sense a real (not metaphorical) connection between them and the countryside. What had been earth and air & later [grain], and later still bread, really was in them.

'We of course who live on a standardised international diet (you may have had Canadian flour, English meat, Scotch oatmeal, African oranges, & Australian wine to day) are really artificial beings and have no connection (save in sentiment) with any place on earth. We are synthetic men, unrooted. The strength of the hills is not ours.'

uprooted. The strength of the hills is not ours.

—C.S. Lewis in a letter to Arthur Greeves, 22 June 1930

Confucius and Lao Tzu, around 500 BC, sensed that a primal simplicity had been lost and there was something wrong and tangled in their day. Their solutions and approaches differed, but their diagnosis not so much, and even their goals not so much. This could be chalked up to a perennial tendency to say that the old days were better, as indeed Homer also found, but to someone sensitive to Paleo concerns and aware that humans have been around for a million or two years and all but the last eyeblink as hunter-gatherers, it may make a lot of sense to say that in the time of Confucius and Lao Tze the greatest sages sensed that we were in some pathological way uprooted from our roots.

'We are synthetic men, uprooted.' Now it may be in fashion in certain circles to be a localist and buy local where possible; but we are further along the synthetic route than when Lewis wrote. Lewis was legitimately concerned about diet; we have greater concerns to face, and to adapt a saint, 'Would that Lewis's concerns were our own.' We have enough ways to make our own, personal world, in our own, Personal Hell.

But this need not be the last word.

---

Hell has always been close at hand but it need never be the last word. Repentance has been called the most terrifying experience there is; but once we enter it we can step into a larger world. Repentance is one of Heaven's best-kept secrets. Repentance is letting go of Hell and opening hands that God can fill with Heaven. And it is open to all of us.

The saints' lives occur in all manner of conditions: troubled times, easy times, quiet times, tumultuous times. One tends not to notice this directly because the saints' lives are not primarily to document what times the saints lived in: they are meant to tell of God's power as manifest in his saints. And this God is King and Lord, *God the Spiritual Father: for 'In him we live and move and have our being'; as even some of your poets have said, 'For we are indeed his offspring.'* However much we may bolt and bar the gates inside our own Personal Hell, God is very nearby and answers all that repent. And however much we hold onto Hell as the only home within our grasp, Heaven is our true Home and the heart's deepest longing. We can dig and dig into our own personal Hell; all the while God beckons us to step out into Heaven.

Recently I visited Wheaton College and saw what was above the fold in The Record, the campus's student newspaper. There were two black mimelike shirts, and in them two people, one of them holding a sign saying something like, 'Would you love me if I was gay?' and the other saying, 'Jesus would and I would too.' Now of course Jesus does love gays, as he loves everyone under the sun; so did Paul, who wrote, *'Do you not know that the unrighteous will not inherit the kingdom of God? Do not be deceived; neither the immoral, nor idolaters, nor adulterers, nor sexual perverts, nor thieves, nor the greedy, nor drunkards, nor*

revilers, nor robbers will inherit the kingdom of God. And such were some of you. But you were washed, you were sanctified, you were justified in the name of the Lord Jesus Christ and in the Spirit of our God. **'And such were some of you:'** St. Paul knew and loved people who faced that specific struggle and loved them as much as those who faced other struggles. But the Wheaton Record article was not about a Christ whose death is strong enough to wipe out every sin, and who died for the whole world, but a group called 'Refuge' to provide an affirming environment to people who know that struggle or are questioning, and who either do not know or do not want to believe that the true Coming Out is stepping out of Hell Our Way, of our cherished Personal Hell, and opening the door whose doorknob is repentance. When I studied at Wheaton, there was a place that was precious to me, Gold Star Chapel, a tiny gem with a sort of altar covered by little slips of paper, where people would place their prayer requests, and others would come and write the dates they prayed for the concerns. And people brought concerns and spiritual struggles, including homosexual sins, and these were answered by loving prayers by fellow sinners struggling to repent of their own sins. I do not ever recall seeing a single harsh word written on those notes: only a few words of kindness and the dates of loving prayers offered by sinners struggling with their own struggles and knocking on the doors of Heaven with their own repentance. (How I miss that anonymous, silent meetingplace of penitent sinners.)

The specific concept of 'coming out' as we know it is not a matter of being straightforward about the struggles we face: at one church I attended, the chief pastor said quite emphatically in a homily, 'If you don't know me, hi, my name is Lyle, and I'm an alcoholic.' He might have been sober for almost as long as I'd

been alive; he still shares a struggle with other recovering alcoholics who don't do as well. And in a deeper sense he Came Out with those words: I do not say 'came out' in the usual sense, which would be to have 'alcoholic pride' in destroying himself and others by drinking, but Came Out in the sense of stepping out of Hell: of rejecting bondage to alcohol and stepping into the broader place that is reached by sobriety, as it is reached by humility, as it is reached by penitence from sexual sin (which is more often committed today by using porn than queer sex). The concept of 'coming out' is that you will come into a broader, more honest and freer-in-yourself place if you drop the charade of being made for chastity or true, heterosexual marriage, and build your own Personal Hell of an identity built on embracing your sexual deviance as right and proper. 'Come Out' is not something invented by the lesbian / bisexual / gay / transgendered / queer / questioning undergoing active recruitment coalition: long before any of that coalition said 'come out of pretending you're built to be straight and try to be honest by embracing your different sexuality,' God said, summons, beckons, invites, 'Come Out of all of your own personal Hell! Come Out of using alcohol for your primary mood management, and denying that this is a problem. Come Out of your narcissism where you cannot see and enjoy the good that is outside of you. Come Out of lying, and thinking that you have more options when telling the truth is optional; Come Out into the power of a character that people can and will trust. Come Out of thinking there are infinitely many alternatives to God's design of chaste celibacy or faithful marriage—and of losing sight of the Ethics of Elfland and the universal voice of the Bible and Catholic and Protestant Tradition as well as Orthodoxy. And open your hearts to the unwanted and unsought truth of every

survey that tries to find which maverick deviants have the best sex lives, only to discover that traditional marriage has bar none the best sex life with it. Come Out of whatever sin it is that comprises your own personal Hell; repent of it, confess it to a priest, and enter a larger world.' It's not just that today's concept of coming out is a step into a smaller world; it's that all of us have been building our own private, Personal Hells, and are afraid to let go of them, afraid to relax the grip on what seems some shining part of ourselves, and perhaps not even guessing the larger Heaven to which we are summoned in the words,

'Come Out!'

As Lazarus was summoned from the grave, 'Come Out from the grave! Come Out from every form of death, decay, destruction. Come Out of your cramped tomb in which to personally rot forever! Come Out into abundant life and have it to the full! Come Out!'

**The gateway to Heaven forever lies open.**

# Your Site's Missing Error Page

I looked through my search logs and decided to put in a custom-made redirect for "porn" or "xxx". This decision was, to put it politely, motivated by data. Decisively motivated by data. [N.B.: This has since been on my site when I migrated to a search solution that doesn't provide that flexibility.]

Looking  
for porn?

My site has so far as I can tell zero SEO to advertise porn, unless you count sporadic uses of the word "porn", which should appear waaaaaay down the search results list compared to real porn sites, but...

I would tentatively suggest that handling of searches for porn be treated like professional 404 / 500 / ... pages on sites run by people who care about people trapped by porn, and people assaulted by people trapped by porn. (You're welcome to [check out my 404 page](#), but that's beside the point of this email.) In the abstract, coding for every search for porn and only searches for porn is probably as hard as [solving the artificial intelligence problem](#), but in the concrete it's easy. Someone searching for

"xxx" is not **really** searching for a letter signed with kisses!  
You'll catch much more than 90% of attempts to search for porn  
simply by filtering for "**porn**" or "**xxx**", and less than 1% of  
people genuinely searching your site (who could still possibly be  
accommodated by this "missing error page.")

So if you're running a website, do your best to have an  
appropriate error page for people searching it for porn.

Feel free to forward this on to other webmasters who care  
about possibly reaching a few of the people searching for porn on  
their sites. Those visitors are in a **deep** trap.

# Zeitgeist and Giftedness

## The issue of fame

Leonard Nimoy, in [I Am Spock](#), states that there were teachers in Hollywood for practically any additional skill an actor would need to portray a character in a movie. I don't remember exactly what his list was, but this would include riding horseback, handling an ancient or modern weapon, using some particular musical instrument, speaking in some particular accent correctly, juggling or illusionist skills, various trades, some approach to singing and dancing not already known to the performer, and so on and so forth: I got the impression was that pretty much every skill you could name was covered, and a number of skills you wouldn't think to name.

With one exception.

Nimoy said that there was one thing that was needed in Hollywood but did not have a single teacher: **handling fame**.

He talked, for instance, about creative ways of sneaking into a restaurant through the kitchen because a public commotion

would happen if one person saw Spock trying to quietly walk into a restaurant's front door. I've heard it said of one cast member of Mystery Science Theatre 3000 that he dresses and acts flamboyantly and strikingly in front of the camera as he should, but consciously turns that off and acts much more nondescriptly in public is usually not noticed. But Mystery Science Theatre 3000 has a smaller audience and is less mainstream; I'm no student of fashion history but [a Google image search for Spock](#) shows a consistent haircut, and one that looks to me like it was meant to be distinctive. (One would suspect that TV producers using humans to portray alien races would want actors to sport a distinctive look.)

## "Fame Lite"

I might suggest that my own experience is of having some degree of fame, but to a degree that has mostly been a privilege where a much greater amount of fame would bring much more obnoxious difficulties.

I've had someone call out, "That's Jonathan Hayward!" Like a TV actor. Once.

I also have paper and Kindle books on Amazon that bring me a symbolic level of monthly income. It's not on par with the income for working part-time flipping burgers, but it is still more than most authors ever see.

I've also repeatedly encountered people who knew me by my writing.

This might be called "sheltered fame," or "mini-fame", or "fame lite", or "fame à la carte", and I am glad I don't enjoy a far greater degree of fame. If I were more famous, I might be able to support myself just by writing, but I regard that as being beside the point: I am seeking monasticism on the Holy Mountain, where my job will be to pray and do the obediences assigned by an Elder and be challenged at the level of parents of a first newborn. Or more. The obediences will be meant to free me from my weaknesses: but I will in a very sense not be my own man, even if my Elder's entire goal in dealing with me is to do whatever is necessary to make me my own God-man in a fuller

sense than I could possibly get on my own.

For a last detail of my miniature fame, I receive correspondence from readers, and so far I have been fortunate to be able to respond to every reader email I really can. C.S.

Lewis may not have been Orthodox, and he may sound very faithful to the Greek Fathers until you recognize that Mere Christianity marks him as one of the major architects of the ecumenism as we know it today, and ecumenism was formally anathematized by several bishops in the eighties and some serious Orthodox have called ecumenism the ecclesiological heresy of our day. But I want to single out one point about C.S. Lewis's personal life that is relevant: he made a practice of answering every reader who wrote him, even though that resulted him spending much of his later life answering essentially pastoral correspondence. And on that point I consider myself particularly privileged to be entrusted with some correspondence, but not need nearly enough interactions to the point that it is a heavy asceticism to answer people who write me.

All of this says that I may share in fame in one sense, but I really do not know in the sense that stems from direct personal experience what fame is to household names. I believe that this may be changing. But for now I would like to distance myself from claims to insider status as far as extreme fame goes. My degree of fame, as privilege, is comparable in giftedness to being somewhere a bit below the lower boundary of the range of socially optimal intelligence.

## The reason for this piece: Everyman

There is a medieval play, which I have read of but not read, called [Everyman](#). The character is not an individual "me, myself, and I" as is much more common in today's novels, but a representative of all that is human.

That basic approach to writing was fairly mainstream; perhaps the most famous tale of Everyman is [Pilgrim's Progress](#), which is a tale of the only way Everyman can be saved. The pilgrim is not characterized as an individual with individual tastes, interests, hobbies (though perhaps expecting hobbies would be anachronistic). He represents in a sort of abstracted form the common story of how one may be saved as understood in the Reformation.

Today that basic approach has mostly fallen out of fashion (or perhaps has some revival I do not know about), but it is not quite dead and perhaps can never die. The assumption in an Amazon review of consumer electronics is that the review should not be about "me, myself, and I" so much as a "what's ahead" notice to Everyman, meaning other consumers, who are contemplating purchasing that item. Reviews are ideally written from Everyman to Everyman.

This work is intended to be written by and to Everyman, even if that Everyman represents a narrower demographic than the

whole of humanity. Significant, and in large measure unique, details are included on the theory that "History does not repeat itself, but it does rhyme." The assumption is that a specific picture in living color exposes the rhyme much more readily than a colorless abstraction that is propositionally true for all it treats, but lacks a pulse. It is an established finding in psychology that people are recognized more quickly from a sketched caricature than from an accurate photograph. I do not knowingly offer caricature in this work as such, but I do try to avoid bleeding out colors into abstraction, however correct, unless there are privacy concerns.

## ***Danger! Beware of pedestal.***

There is a quotation I've heard attributed to Gandhi, running something like, "First they ignore you. Then they laugh at you. Then they fight you. Then you win." At a brief check Snopes marks this as misattributed, and speaking as someone who spent considerable time perusing [All Men Are Brothers: Life and Thoughts of Mahatma Gandhi, as Told In His Own Words](#), this simply doesn't sound like something Gandhi would have ever said; its presence in the chapter "Ahimse or the way of nonviolence" would have been as obtrusive as Gandhi taking a brief moment to endorse some particular brand of toothpaste. Note that decent people do make attributions that are wrong; my Uncle Mark was a tremendously well-loved and respected schoolteacher, and more specifically a history teacher. He would open the day with some particular thought, from eclectic sources ranging over the Bible, Ben Franklin, and other historical figures, and after his passing, one student who had written down these thoughts posted pictures of her notes, and they were really quite a treasure. But one of them attributed "Denial ain't just a river in Egypt" to Mark Twain. Sorry, but No. Without looking up exact dates, I believe Mark Twain's lifetime overlapped those of the founders of modern psychology. The "shock-denial-blah-blah-blah-resignation-acceptance" grieving process could conceivably have

been formulated in the nineteenth century, although it doesn't sound like Freud to me, or any other nineteenth century psychologist I'm aware of. Kind of like how Freud's various complexes don't sound like something a behaviorist like Skinner would develop. However, even if we ascribe The Grieving Process to 19th century psychologists, these are technical terms in an obscure discipline, and would have been less-well-known than unconventional approaches to pig breeding or knowledge of how the results different knot techniques vary with different kinds of rope. The Grieving Process of "shock-denial-blah-blah-blah-resignation-acceptance" could absolutely not have been a lapidary part of pop culture that pops up in a remark by an unruly six-year-old boy in [Calvin and Hobbes](#), or where saying "Denial ain't just a river in Egypt" instantly telegraphs its intended meaning.

But let's return to the pseudo-Ghandian quotation regardless of source: "First they ignore you. Then they ridicule you. Then they fight you. Then you win." As a sloppy sketch, this might be true, but there is a caveat that eviscerates the whole triumphalist: The last step might not be, "You win." The last step might be, "They install you on a pedestal." The difference between winning and being installed on a pedestal is the difference between diamond and diamond-**back**.

There is a source I read decades back; the book title and even the name of the figure escapes me beyond that he was a scholar of Confucius and perhaps others, Chinese by nationality, and he meticulously documented how, after "First they ignore you. Then they ridicule you. Then they fight you.", the last step was "Then they install you on a pedestal." And he documented how for a figure he studied how people went from hindering and hampering him by opposing him, to hindering and hampering him by launching him on a high pedestal. And the front matter, from

a Western scholar and/or translator, said that the pedestal effect he documented in fact played out in the scholar's own life; he spent the rest of his life trying to achieve constructive results despite the pedestal that he was forever stuck with.

## Fr. Seraphim's unwanted pedestal

I've personally raised serious concerns about Fr. Seraphim of Plantina, and it is my considered judgment that he has been harmful and a cause of arrested spiritual development among his Western convert followers. (He is also deeply respected in some Orthodox lands, but I get the impression that a Russian or Greek admirer has a more balanced diet of spiritual reading.) Do Western followers, of the kind who relate to all outsiders as superiors guiding subordinates and often teaching humility first of all, distort Fr. Seraphim? My suspicion is that they fail to live up to Fr. Seraphim's guidance on some point, and on other points show problems that are 100% faithful to his trajectory. One of the central tenets of what has been called "Orthodox fundamentalism" is that the world is literally about 6,000 years old, and a "Creation Science" lifted from Protestants of yesteryear who were not scientists is the true and final science that proves that. That deeply entrenched feature is one where they are following the Master's lead. I've read Fr. Seraphim charge his readers to straighten out the backwards scientific misunderstandings of people who believe in an ancient universe and either evolution or progressive creation. If this is a pattern, it is not a simple case of ideological hijacking; practically all I have critiqued in [The Seraphinians: "Blessed Seraphim Rose" and](#)

[His Axe-Wielding Western Converts: A Glimpse into the Soul of Orthodox Fundamentalism](#) remains faithful to the Master's guidance. Possibly they exaggerate the importance of Fr. Seraphim's position on origins; somehow God comes out second banana next to Young Earth Creationism, but if they exaggerated, they took something big and made it even bigger. Whether or not they pushed things further than they should, for to have someone who is a nonscientist (and, at least as I've found, wouldn't recognize even an unsubtle scientific argument at all, even if it bit him on the arse!), diplomatically and gently offer to straighten out a biology PhD's backwards understanding of science (perhaps by dropping Einsteins' name and giving an example of how [pilots experience time differently when they're traveling above the speed of sound](#)"; one friend, on hearing this "example," winced, slowly gulped, and said, "That's not even wrong.") is following in the Master's footsteps and living up to his exhortation.

There are other points where no matter what harassment I have met from his evangelists, I believe they weren't faithful to Fr. Seraphim, or at least weren't faithful to what he hoped for. Probably the kindest remark to him that I can genuinely respect is, "Fr Seraphim (Rose) is included in the mix of folks who tried to explain to folks they were sinners, but were still put on a pedestal anyway." I have not seriously investigated the contours of Fr. Seraphim as regards guruism, but my understanding is that he would had a very simple answer: "No." Or maybe he wrote at length about why guruism is toxic. At any rate, he now stands on a very cruel pedestal for a monastic who tried to free people from the idolatry of inordinately focusing on a single charismatic personality. And it seems that there is cruelty to Fr. Seraphim himself, of the sort one would associate with vengeful,

schadenfreude-laden claims of poetic justice, except that it was quite the opposite of poetic justice: he challenged guruism, and did his best to dodge it, but his standing today is that of a **polestar** of a guru who serves as a primary orienting figure to a significant following of Orthodox Christians (you can call them "Orthodox fundamentalists") where the sun rises and sets on the Master's teachings.

This is a cruel pedestal, as it would be cruel to celebrate an environmentalist hero by starting many forest fires (in non-pyrogenic ecosystems) to celebrate by the beauty of great leaping flames. I have not read what Fr. Seraphim's response to his pedestal actually was, but the image comes to mind of Francis of Assisi returning to his movement's apparent success and being a lone dissent who was utterly aghast that the "success" that had been achieved was his followers' desertion of his, and their, ever-faithful Lady Poverty.

**"An invasion of armies  
can be resisted, but not an  
idea whose time has  
come."**

I would like to modify a position I strongly endorsed, albeit in a way some might call superficial.

Dorothy Sayers wrote about how, in recent centuries in the West, there has been a belief that "ideas grow rust like machines and need to be replaced." And that deliberately crude image spoke to me. Ideas may be wrong from the very beginning and need to be replaced; but the quote "an idea whose time has come" embodies something very strange. The doctrine of progress is tied to this, so that each new idea whose time has come improves the overall picture.

That much I still hold fast to, but with a caveat. I do not believe in progress (one friend summarized the academy as saying "We've progressed enough not to believe in progress"), but I do believe that fashion exists and can sometimes have a spooky effect. Mathematicians are well-advised, if they find a solution to a major unsolved problem, to submit it as soon as possible. The core reason is that it is a historically common phenomenon for a question in mathematics to be unsolved for quite some time, and then be solved by several mathematicians

independently. And on this count, mathematics would be expected to be perhaps the least Zeitgeist-shaken academic discipline. There are some things that change over time; the standard of mathematical rigor was rising when I was studying it, and the history of the parallel postulate in geometry shows a now-respected mathematician as working out an entirely valid non-Euclidean geometry and then publishing work under the title *Euclid Freed From Every Flaw*, is not today's mindset. However, as a general rule, theorems do not go out of fashion. And still mathematics, relatively free from Zeitgeist fashions as it might be, manifests a phenomenon where major problems remain unsolved for a considerable time and then simultaneously be solved by multiple mathematicians. The same has been observed in other areas as well; Nobel Prizes are given to two or three people who make the same discovery almost simultaneously, and independently.

The question of when the automobile was invented is messy and is not "Why, Henry Ford!" even if Henry Ford invented a mass production that drastically reduced the price of an automobile. There is a similar simultaneity, and I've read an author enumerate a dozen mechanical inventions, all of them an automobile or something like an automobile, in the West over a short period of time. Questions come into play of, "Where do you draw the line?" and there are what might be called shades of grey or judgment calls. I'm not saying that there can be no decisive resolution to these questions, but unless you settle on the oldest, incomplete candidate, answering "When was the automobile invented?" in a responsible hinges on looking at several vehicles or devices, that were automotive at least in part, and were invented in a surprisingly close interval of time.

## Fashions

I would like to illustrate a particular point, and clarify what modification I mean to a standard trope. Phrases like "An idea whose time have come" partly describe a pattern of trends and partly frames things in terms of progress: "An idea whose time has come" is always a gain and never a loss. By contrast, I have come to share belief in the pattern of trends, but in place of framing things as progress, I suggest they be framed in terms of fashion. **No one seems to consider that "an idea whose time has come" might be a bad idea that is worse than whatever it replaces.** Nor am I the first or only one to frame things in terms of fashion (though my hybrid position might be new, for all I know).

One psychiatrist recounted how the professional community once believed that divorce was so terrible to children that except in the worst and most pathological cases it was worth keeping an very unhappy marriage together so as to avoid inflicting the pain of divorce on the children. Then the psychological community said it progressed to believing that really if a marriage is Hell on earth, the children are really better off with a divorce however nasty divorce may be. Then they claimed to have progressed to realize that an unhappy marriage was horrid, but however horrid it might be on the kids, it really is best to keep the marriage together if possible. His

point in this tale of heroism and magic was that the shifts that occurred, both ones he agreed with and ones he didn't, didn't represent progress. They represented fashion, and I could envisage him using a term I heard from a quite different figure: "the herd of free thinkers." Progress, or what at least is labeled as progress, is really more accurately understood as current trends within "the herd of free thinkers."

## An example of my own

When I was at Cambridge and my pre-master's diploma was winding down, I was looking for a topic for a master's thesis. I wanted to study the holy kiss, and my advisor ridiculed the question and me with it. He asked sarcastic rhetorical questions like "Can we find justification to only kiss the pretty people at church?" When I persisted, he consulted with another scholar and came back, without ridicule, saying the question was understudied. (This is, by the way, an extreme rarity in academic theology; usually scholars try to find some vestige of unexplored turf and when they fail at that, write things like rehabilitating a founder of heresy, as the [Archdruid of Canterbury](#) has done with Arius the father of all heretics.) Furthermore, things never sat well with the department, which kept pushing my work into the pigeonhole of what German scholars called *Realia*, meaning physical details (other examples of questions of *Realia* might be what kind of arms and armor a first Christian would have seen a Roman soldier carry, and would have given shape to [the words by which St. Paul closes the letter to the Ephesians](#), or what kind of house would provide the backdrop to Christ's words in the [Sermon on the Mount](#) about putting a lamp where it will illuminate the whole house. I am not aware of any Cambridge faculty member who was open to the idea that the "divine kiss" (as St. Dionysius the Areopagite called it) might be studied

under the rubric of liturgical or sacramental theology.

My desire and interest was a doctrinal study, and my advisor there, who was Orthodox, kept pushing what I was doing into an unedifying sociological study of kissing that involved a great deal of Too Much Information, with lowlights such as the assigned Foucault's *The History of Sexuality*. I tried to draw a line in the sand, saying that I wanted to do "a doctrinal study." He immediately laid down the law: "The best way to do that is to do a cultural study and let any doctrines arise." Other help that he offered was to suggest that narrowing scope would be helpful, and suggested that it would be a good bailiwick to study "differences between Christian and Jewish understanding of kissing in the Song of Songs." I held my tongue at saying, "That's impressive. Not only is that not what I wanted, but that doesn't overlap with what I wanted." And then, two thirds of the way through the year, the department decided that my study of the holy kiss was off-topic for the Philosophy of Religion seminar that had been selected for me, and I pulled out all the stops to write, as was demanded, a vastly different [Artificial Intelligence as an Arena for Magical Thinking Among Skeptics](#) that left all my prior thesis work as wasted.

## So what's out there? What did my research turn up?

What kind of doctrines did I pull up? Someone, perhaps with wishful thinking, who wanted the holy kiss to be important might try to attach it somewhere under the rubric of Holy Communion. The last prayer before Holy Communion does the opposite: it places Holy Communion under the heading of the holy kiss. How? "Neither like Judas will I give Thee a kiss:" neither like Judas will I give you a hollow kiss, betraying this kiss and you yourself by receiving the Holy Mysteries and then not even try to live a holy life.

Incidentally, although there are ancient precursors, it is remarkably recent, 20th century or possibly 19th if I recall correctly, that the ethical concern represented by "a kiss can be seductive" appears in Orthodox theology. In the [Ante-Nicene Fathers and Nicene and Post-Nicene Fathers collections](#), the kiss that is wrong is pre-eminently a kiss like that of Judas, the kiss of betrayal which Orthodox remember by fasting on Wednesdays, and was a double-layered betrayal: a betrayal of the Lord first of all, and with it a betrayal of everything a kiss, of all things, should be. In patristic times the holy kiss was a kiss on the mouth, and this is doctrinally significant. A Psalm prayed in preparation for Communion says, "Who is this King of Glory? The Lord,

strong and mighty, the Lord, mighty in war. Lift up your gates, O ye princes; and be lifted up, ye everlasting gates, and the Lord, the King of Glory, shall enter in." St. John Chrysostom drives home the implication: "But about this holy kiss somewhat else may yet be said. To what effect? We are the temple of Christ; we kiss then the porch and entrance of the temple when we kiss each other." If, in my present locale, the holy kiss is three kisses on alternate cheeks, the underlying reality is unchanged: a liturgical kiss, on the cheek, is always by implication a kiss on the mouth, on the gates that receive the Lord. And indeed [St. Ambrose pushes further in his remarkable letter to his sister](#), discussing how we can kiss Christ: part of the unfolding truth is, "We kiss Christ, then, with the kiss of communion." There is a very tight tie between the holy kiss and Holy Communion, and while there may be much greater laxity about a closed holy kiss than a closed Chalice, according to strict interpretation of the rules a holy kiss is only ever between two canonical Orthodox Christians. In ancient times the closed holy kiss represented an additional boundary besides a closed Communion after the catechumens actually departed. But even today I have heard a priest lightheartedly say after a convert's chrismation, "You may kiss the convert." Something of that essence is here, even though nobody I have met makes a big deal about the enforcement of that rule. One last note here, which may be most of benefit to Catholics: In Rome, there is a sharp "do not cross" line between between the sacraments, including Holy Communion, and what are called "sacramentals", which include the holy kiss. Sacraments are something that Christ might as well have personally etched in diamond; sacramentals are things

the Church worked out that are a different sort of thing that is far below Christ's sacraments. The Orthodox usually list seven sacraments, and they are in general recognizable in relation to the Roman list of sacraments (overall but not in every detail), but the difference between a sacrament and a sacramental is only a difference of degree, not of kind, and people can say things like, "You can say there is only one sacrament, or that there are a million of them." If there is one sacrament, it is a Holy Communion where nothing else comes close, but the sacramental of the holy kiss is tied to Holy Communion in multiple ways and participates in its essence. My main, brief work on this topic was in fact called [The Eighth Sacrament](#). The title is provocative, but not daring. For one final point on the holy kiss, at least one aspect of a Protestant framing on worship is that worship is something you do with your spirit; there's a fairly strong association between worship and singing, or worship and listening to a pastor, perhaps, but worship is contained by the spirit alone. The Orthodox understanding, besides recognizing that it is not a slight to Christ to show reverence to His Mother, refers to an act of adoration that is done with spirit and body alike. As to what the act of adoration that encompasses the body, there are variations and some ambiguity, but the Greek *προσκew* refers to bowing or kissing, usually with some ambiguity as to which physical act completes the adoration. The worship due to the Lord is in some measure to kiss him, and there is a profound tie, even if there are important differences too, between worship of Christ expressed by kissing his icon, and worship of Christ expressed by kissing a fellow Orthodox Christian as so much an icon of Christ that he is defined as being built

in the image of the whole Trinity. (I find such things as these loads more interested than sociological investigation of kissing as such.)

(Some people may find an irony between my efforts to study the holy kiss that Judas betrayed, and Cambridge University's constant "improvements" to how I was approaching that study.)

What it was that I pulled up eventually found a home in fiction in [The Sign of the Grail](#), which is presently one of my top-selling titles on Amazon and top fictional work. I will not attempt to reproduce the material here, beyond saying that it is in fact a doctrinal study, that a number of primary sources can be found in [a brief search of the Ante-Nicene and Nicene and Post-Nicene Fathers collections](#), and to the person who read [The Eighth Sacrament](#) and asked didn't I know there was more, I said that there was much more but that represented my attempt to crystallize something in a tight format.

But what I would point to is this: I am not, to my knowledge, a cardinal influencer in what happened. I presumably influenced someone, somewhere, but what was met with repeated hostility became something mainstream. I don't think that I was a primary influence in that I met with people who never seemed to recognize me as a pioneer or having already made serious investigation. My suspicion is that had I never touched the matter, it would have still been explored; I may have been the first person to publicly note one particular point, that the holy kiss is the only act the Bible calls holy, but had I never investigated the topic at all, other people would have, and my suspicion is that without me the holy kiss is still a sacramental that would have been studied as doctrinally significant and seen in continuity with sacramental and liturgical theology, and that

none of the dubious help I received at Cambridge (such as classifying the holy kiss as Realia and therefore not rightfully subject to direct doctrinal investigations) would have been the last word. I think my inbox has been quiet on this topic for a few years, but when I was getting people contacting me and wanting to inform me about the holy kiss, we were usually on the same page. (I do not recall any nonscholar trying to steer the conversation to fit under the heading of Realia.)

And I would suggest that this basic plot and pattern of events are more or less generic. First I was rudely dismissed, then people kept more rudely pushing my work away from what I asked explicitly, and then some years later when I had practically forgotten the discussion, I was caught off guard by people opening up conversations about the holy kiss. And I may not have "won" in the sense of acquiring a pedestal (good riddance!), but the subject was no longer met with hostility such as was first faced, and some people found it to be of interest. (I have never gotten a disrespectful response on the topic after the point where people started to contact me on the topic.)

It is my general experience that gifted and profoundly gifted people are not, in fact, unaffected by the Zeitgeist. Often they may want to challenge the Zeitgeist, but it is not characteristic to rise above it, and the more common pattern is to concentrate the Zeitgeist and to run ahead of it, perhaps getting into the game when it is greeted with hostility. In this case, I was disappointed when I realized the topic of the holy kiss had reached the status of being more or less fashionable. I felt, if anything, violated that I had channelled the Zeitgeist, a Zeitgeist that had spoken through my mouth.

While the classification is essentially as irrefutable as Berkeley's arguments, famously said to "admit no answer and

produce no conviction," I don't find it helpful to say, "If your birthday falls before this year, you are ancient; if your birthday falls in this range, you are medieval; if your birthday falls in this range, you are a modern; if your birthday falls after that range, you are a postmodern." Some people have noted that not only are engineers modern, but they probably do not know a postmodern, even though postmodern students are easily enough found in other fields. Speaking personally, I've been wary of postmodernism, but I have recognized points of overlap. I have been interested in thick description for more than a decade before I heard the term, and what I most want to know in history is "the way it really was," which is a boilerplate postmodern desire as far as history goes. The postmodern figures I know could justifiably regard me as making an undue claim to insider status if I claimed to also be a postmodern, but I see more continuities now than I would like, or that I did before.

(I might briefly point out that "thick description" and "the way it really was" remains fundamental and guiding principles in the endeavor of this article, where a synopsis would be much easier to write, much briefer, and much easier to read. I could simply state that I pursued scholarly research into the holy kiss years before it was fashionable to do so, and that I sought a doctrinal, and sacramental or liturgical, study of the holy kiss where a respected Orthodox scholar only saw legitimate room for a secular history of kissing. That much is true, but it is a sketched outline where my hope is to portray something in depth and full living color.)

## Other examples

One friend talked about how a boy entered an Orthodox altar to serve as an acolyte, and the priest brusquely told him to unvest, leave the altar, take off his tie, and come back without his tie; the stated reason was, "You are not a slave!"

This was presented as counter-cultural, and it may have been such at some point. However, it fits with another conversation where a business owner had individual contributors wear ties, managers wear a suit and tie, and the owner wore a suit and no tie. Last I seriously checked in, the professional jobseeker fashion was for men not to wear ties.

I might mention, by the way, that when something is taking credit for being countercultural, it's usually a mainstream fashion before too long.

Last example for now: it is presented that violin-making is a "fossil trade." This trade may be mostly or exclusively practiced by violinists; I doubt I could produce a decent violin personally unless I had enough exposure to recognize good and bad-quality violins. Possibly I could learn enough to be a luthier without developing the level of skill appropriate to public performance; but I rather guess that takes less practice to be able to perform well in public than to be in a position to make a good violin. And on that score, I met or heard of one luthier, introducing violin-making as a "fossil trade", and then the count quickly escalated

to something like half a dozen. On which point I suggest that it's a turn in fashion, and the number of people embracing the new fashion is chiefly limited by the fact that most people have never been trained to play a violin. (I've never, to my recollection, heard a musician say, "I play the violin but I am not interested in becoming a luthier.")

## Icon and Idol

There is something about the theology of icons in Orthodoxy that looms so large that I missed something.

In one passage that I have never heard Orthodox quote, Herod dressed royally, gave a stunningly good speech, and the people who were listening shouted "The voice of a god and not a man!" and when he accepts this praise and fails to give God glory, God infests him with worms and kills him.

This is as good a place as any I see to introduce the distinction between an icon and an idol. And please do not see the distinction in terms of "If an Orthodox Christian makes it with paint and gold on wood it is an icon, and if a Hindu makes it a statue with many arms it is an idol." I don't remember what they are, but I've heard from Hindus some very nuanced thoughts about god(s) and idols. For that matter, I don't especially wish to discuss idols in relation to Graeco-Roman paganism, even though they, and Old Testament ancestors, form the basis for the universal Orthodox condemnation of idolatry. I wish to articulate a distinction, not from comparative religion as such, but as a distinction within Christianity.

Probably the #1 metaphorical name for icons is "windows to Heaven", and the theology that St. John the Damascene among others articulated is that the honor paid to an icon passes on to the prototype. Honor to an icon of a saint honors the saint;

honoring the saint honors Christ. While I am not aware of people using the term "icon" in reference to the saints' lives, reading the saints' lives is strongly encouraged for beginner and expert alike, and what it is that's really worth reading in saints' lives is that you see to a small degree the face of Christ, otherwise it's not worth reading. This theology undergirds structures, and supports an understanding of the human person as made in the image of God, which I have not seen disowned in Western Christianity, but it grows on poor soil. Although terms like 'icon' and 'image' are not used in this specific passage, looking on and treating people as the image of Christ is given a chillingly sharp edge in [Matthew 25](#):

When the Son of man shall come in his glory, and all the holy angels with him, then shall he sit upon the throne of his glory: And before him shall be gathered all nations: and he shall separate them one from another, as a shepherd divideth his sheep from the goats: And he shall set the sheep on his right hand, but the goats on the left.

Then shall the King say unto them on his right hand, "Come, ye blessed of my Father, inherit the kingdom prepared for you from the foundation of the world: For I was an hungred, and ye gave me meat: I was thirsty, and ye gave me drink: I was a stranger, and ye took me in: Naked, and ye clothed me: I was sick, and ye visited me: I was in prison, and ye came unto me." Then shall the righteous answer him, saying, "Lord, when saw we thee an hungred, and fed thee? or thirsty, and gave thee drink? When saw we thee a stranger, and took thee in? or naked, and clothed thee? Or when saw we thee sick, or in prison, and came unto thee?" And the King shall answer and say unto them,

“Verily I say unto you, Inasmuch as ye have done it unto one of the least of these my brethren, ye have done it unto me.”

Then shall he say also unto them on the left hand, “Depart from me, ye who are damned, into everlasting fire, prepared for the devil and his angels: For I was an hungred, and ye gave me no meat: I was thirsty, and ye gave me no drink: I was a stranger, and ye took me not in: naked, and ye clothed me not: sick, and in prison, and ye visited me not.” Then shall they also answer him, saying, “Lord, when saw we thee an hungred, or athirst, or a stranger, or naked, or sick, or in prison, and did not serve thee?” Then shall he answer them, saying, “Verily I say unto you, Inasmuch as ye did it not to one of the least of these, ye did it not to me.”

The damned are damned because they failed to love and honor the icon of Christ, and the insult might have as well been made to Christ personally. That's how he felt it.

With all of these things said, and I am really not trying to shoehorn a place to save the Greek fathers' teaching that we should become divine, Herod was not destroyed because he allowed himself to divine honor. He was destroyed because, receiving divine honor, he failed to pass it on to God whom it properly belonged to. Given the choice between letting honor pass on through him to the creator, and keeping it to himself, he chose to stop the honor from rising higher, and that is the difference between being an icon and being an idol.

Orthodox who like me (or for that matter Orthodox who don't like me, but are choosing to be polite) pay a respect whose contours are set by the Orthodox theology of icon and image: I

am respected for being made in the image of God, not for being godlike on my own. Respect for my writing has drawn, if I may mention my most-cherished compliment, "You write verbal icons!" The respect paid to my writing is a subordinate respect to works that salute One greater than them, and the respect paid to me is a subordinate respect that salutes One greater than me. I am respected for being to some degree divine by grace (people wanting a Biblical proof-text may cite 2 Peter 1:4 which dares to call us "partakers of the divine nature"); I am not in any sense honored as being a god in some sense independent of the Creator or stopping with me instead of referring glory to the Creator. Evangelicals often like my works, and while they may not have the doctrine of the image of God defined in such articulate and sharp contours, there is some continuity in respect I have received. Specifically, it is practically always a subordinate respect, and my works are praised as drawing them to God. There is a tale, true or apocryphal, of a visiting African pastor who came to the U.S., and after observing things, said, "It is amazing what you can do without the Holy Spirit!" Evangelicals have never praised me for being great without needing God's help, and if they did it would most likely be sarcasm or a stinging rebuke, almost on par with saying that something is "more important than God." Among both Orthodox and Evangelicals, whatever the differences may be, to be great is to be permeated by God's grace.

I will comment briefly, for the sake of completeness, on one point where I am just a beginner. The saints do not seek ordinate human honor; they usually try to dodge all human honor at all whether or not that honor is ultimately referred to God, and some among them have immediately left town, without any sort of modern vehicle, if that is what it took to dodge human honor

after their gifts had been discovered. I am not at the stature to do that, at least not yet. However, hostility and abuse come quickly nipping at the heels of honor, and I am trying to progressively restrain searching for human honor or accepting unsought human honor. [My author bio](#) has become progressively shorter, and at present the main glory I claim is that of a member of the royal human race. The more time passes, the more I think that seeking human honor is a fundamental error, a way of "drinking out of the toilet" that deserves a section in [A Pet Owner's Rules](#) as something that, if you know what you're doing, you really, really don't want to do. On that score, I count myself fortunate that, while I was a forerunner who ran ahead of the Zeitgeist in study of the holy kiss as a legitimate matter of doctrinal study, I didn't acquire a pedestal in reward for my endeavors. That's about as much winning as I'd ask.

And there is one other point to mention: usually, people who have respected me have respected me like some minor icon. I had guessed, with excusable but near-disastrous naïvete, that if in the future I am put on a pedestal, I will receive more of the same and I will serve as an icon in not the best position. Now I believe it far more likely for me to put on a pedestal as an idol rather than an icon. The Church does legitimately place people on pedestals as icons; I believe that the practice of choosing bishops from the pool of monks is, without judgement against the married, a good monastic may have a fighting chance of surviving and functioning effectively in an ordeal where the title of "Bishop" has a job description of, "Whole burnt-offering without remainder."

The Orthodox Church can, at least sometimes, put an icon on a pedestal...

...but the Zeitgeist only knows one trick: putting an idol on a

pedestal, adapting an icon to function as an idol if need be.

## **A cloud the size of a man's hand**

St. James, the brother of the Lord, wrote, "Elias was a man subject to like passions as we are, and he prayed earnestly that it might not rain: and it rained not on the earth by the space of three years and six months. And he prayed again, and the heaven gave rain, and the earth brought forth her fruit." This is extraordinarily terse compared to the Old Testament narrative, albeit completely faithful. But I would like to give just one vignette not unfolded in this shorthand reminder about the story: it has been a long time since it rained, and there is a deep famine, and there has been an ongoing rivalry with multiple dimensions between the wicked King Ahab and St. Elias. There is the great contest with the prophets of Ba'al; St. Elias, who has suggested that (in modern terms) "Maybe Ba'al isn't answering your hours of frenzied prayer because he just can't come into the phone now," asks that his one prophet's sacrifice to the God of Israel be drenched with excessive /mounts of water. (Saltwater, perhaps: freshwater may have been extremely hard to come by, and rare enough to make a terrible famine, but any time during the famine you could go to the Red Sea and take as much particularly salty saltwater as you could carry.) After Ba'al had already failed to get off his porcelain throne, St. Elias makes one single prayer and calls down fire from Heaven that

consumes his entire dripping sacrifice.

That story is famous; but there is a slightly less famous dramatic detail that is worth noting. St. Elias told his servant to go and look out by the sea. The servant comes back, and says, "I see nothing." St. Elias, who had told the servants to pour water on his sacrifice again after it was already quite wet, and then for good measure asked for water to be poured a third time on already drenched it again. But for the servant, he goes six times reporting nothing, and the seventh time he barely says, "I see a cloud the size of a man's hand." At that point St. Elias sends his servant to tell King Ahab to get in his chariot and get back to his castle before he would be trapped in mire by the deluge.

If you are profoundly gifted, and you think of or take a position that is attacked and ridiculed beyond due measure (and, honestly, make a good allowance for due measure), it is my suspicion that the opinion you are ridiculed for will be the fashion in 5-10 years, or longer if it's something profound. I try to respectfully welcome visitors to my website, although some people have clearly stated that I have failed in that measure, but I pay particular attention to profoundly gifted who contact me, not because they are better than other visitors, but out of survival instinct (and recognition of a shared experience, a bit like another actor who had the cumbersome side of equal fame would be on the same page as Leonard Nimoy about sneaking into restaurants by the kitchen, and that I had better therefore try to listen hospitably). Those emails usually provide an advisory that's a bit like insider trading, though I have never made a financial decision that was influenced by the outcome of such conversation. They, in essence, by running ahead of the Zeitgeist, let you know what's coming. And the profoundly gifted I meet usually see something that I don't.

Chris Langan, considered the most gifted member in almost all ultra-high-IQ society (or some might give that accolade to Paul Cooijmans), has worked on a CTMU or "Cognitive-Theoretic Model of the Universe", pronounced "cat-moo" by insiders, with homepage at [CTMU.org](http://CTMU.org), which I don't agree with: one conversation helped me see the need to write works such as ["Religion and Science" Is Not Just Intelligent Design vs. Evolution](#) after I left him flabbergasted by saying I was not interested in cosmology. (Note: In the years after I wrote ["Religion and Science" Not Just Intelligent Design vs. Evolution](#), things have shifted almost to a point that alleging some opponent of "scientism" is in and of itself halfway there to, "A hit, a very palpable hit!" And again I am not a prime actor.) However, I am inclined to regard Chris Langan's CTMU as significant on the evidence by how hard people fight against it alone. I know that some profoundly gifted individuals suffer from mental illness, and in fact I believe mental illness is significantly more likely among the profoundly gifted than otherwise. He is called a crackpot, but meeting him face-to-face and conversing via email do not give me any reason for agreeing with the label about him as a person. Every interaction I've had with him has had him looking brilliant and in touch with reality. It's possible enough to be brilliant, in touch with reality, and wrong, but I have not heard of any critic recognize one point which is consensus under the tail end of the high-IQ community: that he is bright such as few people ever set eyes on. Characteristic of the reception of the CTMU is that its main page on Wikipedia was deleted, but its [CTMU Wikipedia talk page](#) is still there. Possibly the CTMU does not lend itself to experimental investigation: but we live in a time where superstring theory is very much in vogue, and where we are very hard-pressed to find a feasible or even infeasible

experiment where superstring theory predicts a measurably different outcome from the best predecessor theories, and it is genuinely provocative to say "Physics is an empirical, hard science and as such is not validly practiced without claims being accountable to being tested by experiment." And maybe we should remember, "People in glass houses shouldn't throw stones." If we are going to join in the euphoria about superstring theory, perhaps we would do well to give the Cognitive-Theoretic Model of the Universe a fair hearing. The main reason I believe it is significant is that it is ridiculed well beyond the hostility that greeted my study of the holy kiss. He is consistently and repeatedly dismissed as a sheer crackpot, but people do not spend anywhere near that much energy dismissing genuine crackpots as crackpots. I continue to believe in the conceptual framework's significance even if I do not subscribe to it.

Not all clouds in the sky are tied to giftedness. I saw a major step towards Nazification in Amazon, and then Apple, drop anything bearing a confederate flag faster than a hot potato. Fr. Richard John Neuhaus made quite an opposite point in saying that if a Klu Klux Klansman wanted to injure black America, he could scarcely do better than promote Afrocentrism. Here, it may be said that white racism has had a bad name for quite a long time. That doesn't mean that it was ever nonexistent, but most whites at least tried to not be racist, or become less racist. Here it might be said that if you want "white nationalism" (great job on the layer of whitewash, but befriend a "white nationalist" on Facebook and your feed will have Nazi flags and news articles with comments fantasizing about "[insert alternate spelling of the N-word]" criminals being lynched) to attract droves of new followers, and make white racism respectable in many places where it is not at all respectable now, you can scarcely do better

than to continue flipping the bird at white descendents of the Confederacy. The significance of Amazon dropping displays of the Confederate flag is not that some goods were delisted or that the censorship affected some people's income; the significance is essentially an announcement of a new direction in policy, as illustrated in a very first installment. I don't know who's safe as this enlightening policy goes; I have serious difficulties believing it will remain confined to black-white relations in race, or that purges will remain only in the South. I don't consider myself safe, and I honestly am not sure that even people trying to be politically correct are safe. At the French Revolution, there was serious scope creep in the public enemies who were sent to the guillotine, a monstrosity that at the end was killing cleaning maids and children seven or eight years old with people standing by the foot of the guillotine to be sprayed by the enemies of states' blood and eat their still-living flesh. And this happened in an educated Republic. The present removal of venerated public statues is not a final installment; it is if anything a reminder that the overhaul is just beginning. But there was a cloud in the sky the size of a man's hand when Amazon dropped the Confederate flag. I have come to believe some non-Southern perspectives, that yes, the Confederacy was fighting for States' rights, but the States' rights were chiefly the right to maintain slavery. But the moral I take is not that white Southerners are being asked to make a few adjustments; the moral I take is that we would be well advised to read "The Cold Within" and that those of us who are not white Southerners should not say "This does not concern us." The classic poem "The Cold Within" reads:

### **THE COLD WITHIN**

Six humans trapped by happenstance  
In bleak and bitter cold.  
Each one possessed a stick of wood  
Or so the story's told.  
Their dying fire in need of logs  
The first man held his back  
For of the faces round the fire  
He noticed one was black.  
The next man looking across the way  
Saw one not of his church  
And couldn't bring himself to give  
The fire his stick of birch.  
The third one sat in tattered clothes.  
He gave his coat a hitch.  
Why should his log be put to use  
To warm the idle rich?  
The rich man just sat back and thought  
Of the wealth he had in store  
And how to keep what he had earned  
From the lazy shiftless poor.  
The black man's face bespoke revenge  
As the fire passed from his sight.  
For all he saw in his stick of wood  
Was a chance to spite the white.  
The last man of this forlorn group  
Did nought except for gain.  
Giving only to those who gave  
Was how he played the game.  
Their logs held tight in death's still hands  
Was proof of human sin.  
They didn't die from the cold without

They died from the cold within.

It's not often that I quote an ecumenist poem as authoritative. In this case the point is universally human, and while I believe in an Orthodox closed communion, I believe that nothing that is truly human should be foreign to me.

## A change in experience

It was sometime in the past few months that I began asking pastoral questions about what to do with someone who is in awe of me.

The motivation and intended nuance, which I did not end up making clear, could be outlined as follows. Years back, my Mom invited neighbors across the street to some minor social function. They hesitantly said, "No," not because the suggestion was unwelcome but because it would create a scheduling conflict, and they wanted to know, in effect, whether their "No" had alienated her. She was pretty quick to answer, "This is valuable!"

She explained that now that she knew they would be willing to say "No" to a suggestion that would be less than ideal for them, or a scheduling conflict, or... Now part of this was politeness or a gracious response, but I believe she genuinely meant what she said about knowing they would be willing to say "No" when they should say "No," and she was genuinely grateful for a safety-net of "I can extend an invitation and not worry about whether they'll give a 'Yes' they shouldn't be giving." And in that framework, I was motivated by a difficulty. Most visitors have and maintain boundaries. Not that everything is perfect, but my visitors have been willing both to say "Yes" and "No," and in general do not seem to worry about dealing a capital insult if they happen to say "No."

Boundaries matter, even if I've voiced serious objections to [Cloud and Townsend](#), and I felt myself in the uncomfortable position of negotiating with someone who was defenseless before me, who was too far below me in his conception to express a boundary, who would only answer "Yes" no matter how destructive a "Yes" would be, and where any knowledge that I sometimes sin and I am sometimes wrong exists only on a purely academic plane. I know there are cultures where this kind of dynamic is normal and something people can deal with, but I felt really uncomfortable and really at a loss.

The pastoral advice I received was helpful, particularly in a reminder that people that, to a one, shout "Hosanna!" and spread palm branches are entirely capable of shouting, to a one, "Crucify him!" five days later. And in Christ's case the earlier accolades were accurate, and higher accolades would have been justified. In my case the "Hosanna!" is in fact not justified, and as I was reminded of the toxic nature of all human praise. (I am looking forward to the possibility in monasticism of being under the authority of an Abbot who treats everyone with deep respect, but might not give a single compliment, or at least not to me.)

And things like this, though varied and though I wish to refrain from providing thick description's details out of concern for others' privacy, have become a consistent fixture. Though varied in detail, the attempt is to place me on some minor pedestal, on terms that are unreal to me, and probably unreal to me because they are unreal to God. I regard it as very fortunate that the inundations of compliments have, by God's grace, appeared utterly unreal to me. Future temptations will probably be more subtle.

## Clearing away a distraction: NF goggles

David Kiersey's [Please Understand Me](#) (I prefer the first edition to the more than the second) is one introduction to classical temperament theory. The book has hypocrisy as well as strengths; it is eminently nonjudgmental in describing one temperament's liability to promiscuity, or another doing whatever their system of ideas calls for, or another's doing what their spiritual path calls for, but when one temperament tends towards chastity or fidelity, it is described in language that is at once clinical, and the most degrading language in the entire book: metaphors are used as a basis to this temperament with seeing sex as basically a merely economic commodity, or something like being physically dirty or clean. Classic postmodern hypocrisy here.

However, there is one particular point that I wanted to pull: the "iNtuitive Feeling" or "NF" type, which is ascribed what might be the most striking characteristic in the book: they appear to other people, without any effort on their part to cause this, to be whatever the other person would most like them to be. People look at them through rosy "NF goggles," if you will. I think I can usually detect NF's, albeit indirectly: I am drawn to another person, especially women, to a degree that is out of step with that person's attractiveness and the social setting, even

though there is very little I have directly observed as signs of what is going on (the one cue I notice is that about half the time they appear close to crying). My guess is that this boils down to a layer of nonverbal communication that is possibly very subtle, even if it is still very effective and does not apply, or applies far less, to email and other basic electronic communication that flattens nonverbal signals beyond emoticons.

A question might be raised of, "How little or much of an NF are you?" Before Orthodoxy I considered myself to be at the boundary between "NT" ("iNtuitive Thinking") and NF, called NX, and wanting to shift towards NF. In Orthodoxy I found that silence that I desired personally was not my particular personal trait, but something normative, and the Orthodox Church's hesychasm or silence is bigger than what I had. Similarly, the Orthodox Church out-NFed me by making normative observations like, "The longest journey we will ever take is the journey from our mind to our heart." In both cases the Orthodox Church's answer was to challenge me to go further. And that raises at very least the possibility that I am close enough to (or far enough into) NF territory that some people see me through NF goggles.

I admit this as a possibility, and furthermore a possibility I think is at least probable. There is always some ambiguity and I do misunderstand some social setting, but there have been face-to-face encounters where someone seemed to really like me as something I wasn't. I've worked hard to write well and I've received some very rosy compliments, but usually the reader and I are on the same page about what a particular work is doing. (Most strands of criticism are also usually something I can recognize as a response to something I wrote.) My writing is usually not taken to be whatever the reader would like it to be.

So while I admit a likely NF layer to people drawn to me in person, the majority of the encounters where I've been offered a pedestal have been online, with people who have not met me face-to-face, or electronic communication that preserves nonverbal information such as Skype's offerings. So the question of whether my nonverbal communication is enchanting is largely beside the point. Whether the answer is true or false, the question is irrelevant.

## A tentative conclusion

I remember thinking, "My website hasn't really changed; why is the response to it changing?" And then I came to a "Yes, but..." answer. Most of what I consider the best works are relatively old, at least a couple of years; the only one I would consider "inspired" (in a broad and secular sense) is [Eight-Year-Old Boy Diagnosed With Machiavellian Syndrome By Proxy \(MSBP\)](#), which I would genuinely place alongside [Evangelical Converts Trying to Be Orthodox](#) and [Pope Makes Historic Ecumenical Bid to Woo Eastern Rite Catholics](#) for quality. The previous [Monasticism for Protestants](#) and this work itself I consider to serve a legitimate purpose not served by anything else among my posts, but they are not classics.

So why, if my website hasn't grown any major new features for quite some time, why would it be drawing fundamentally different response? The answer is simple, and one I should have predicted: I've run ahead of the Zeitgeist, whether I had the faintest intent of doing so or not. Whether or not it's the same article, some of what I wrote may draw people more effectively now than when they were fresh and new.

And the question of a pedestal weighs on my mind. Advertisements run repeatedly because people don't fall for a product the first time they see an advertisement targeted to them; they fall after repeated familiarity. Only humility can pass

through certain snares: and I am scarcely humble. I see the possibility that, some time after I have seen five or so clouds the size of a man's hand, a deluge will break forth. And I would really prefer the storm hit me when I am on Mount Athos, as a novice under the authority of an Elder, who does not care how smart I am and who sees that I have the same needs as many other novices, such as humility and obediences that build humility. Possibly I will not escape the deluge by getting to Mount Athos before it breaks: but I'll take my chances with a loving Elder rather than my own wisdom.

**(Would you be willing to help me reach the Holy Mountain?)**

**C.J.S. Hayward**
